If the level divides by three (i.e. level 3,6,9,etc.) add 1 point to STR, DEX or MIND. The character also gains one more aspect.

Check each class for other level advancement features.

Example

The 1st level adventurers have just completed an adventure, and defeated 5 EL1 encounters, an EL2 trap and the EL3 leader. That's a total of EL10, so they all advance to level 2. They need to defeat another 20 Encounter Levels to reach Level 3.

Weapons and Armor

Shields are not used. Instead, the Tessen can be used as a shield conferring AC +1 if not used for attacking.

If wielding a weapon designed for disarming or tripping, do a contest of skills using PHYS+DEX against that of your opponent.

Light Weapons

Samurai, Bushi, Sohei, Ninja and Nusutto can use light weapons with their DEX bonus instead of their STR bonus. All five classes can use two light weapons at the same time and make two attacks per round (taking -2 on their attack rolls), or attack with both ends.

Name	Damage
Neko-te (spiked gauntlets, "tiger claws", used in pairs)	1d4
Jitte (unsharpened dagger with a special hand guard for disarming)	1d4
Kama (sickle, used in pairs)	1d6
Kunai (multipurpose knife, throwing knife, trowel, grappling hook, used by ninja)	1d3
Kusarigama (sickle + morning star, two-handed, also used to trip)	1d6
Manrikigusari (two weights on a long chain, two-handed, also used to trip & disarm)	1d4
Nunchaku (two sticks connected with a short chain, two-handed, can be used for two attacks when taking -2 on your roll)	1d4
Ono (handaxe)	1d6
Sai (unsharpened dagger with two special hand guards for disarming)	1d4

Tambo (club, often used in pairs)	1d4
Tanto (knife)	1d4
Tessen (war fan, AC +1 if not attacking)	1d4
Tonfa (short stick with handle, used in pairs)	1d6
Wakizashi (1'-2' short sword)	1d6
Wakizashi as part of a Daisho (masterwork +1)	1d6+1

Other Melee Weapons

Some of these weapons are polearms that grant users a +2 bonus to initiative. These are all two-handed weapons.

Name	Damage
Bo (6' staff, polearm)	1d6
Jo (4' staff)	1d6
Katana (sword) can be used one handed -1/-1	1d10
Katana as part of a Daisho (masterwork +1)	1d10+1
Masakari (battle axe)	1d8
Naginata (polearm)	1d10
Nodachi (rare, oversized sword)	2d6
Sasumata (man catcher used for tripping, polearm)	1d4
Takujo (6' staff with metal rings and wards on one end)	1d6
Tetsubo (huge mace)	1d8
Yari (spear)	1d8

Ranged Weapons

Name	Damage
Fukiya (blowgun, 20 needles)	1
Fukimi-bari (mouth darts)	1
Shuriken	1d3
Sling (10 Bullets)	1d4
Daikyu (longbow, composite, 20 Arrows)	1d8
Hankyu (shortbow, composite, 20 Arrows)	1d6

Armor

		Armor	Maximum	Armor	Notes
Armor	Cost	Bonus	Dex Bonus	Check Penalty	
Light armor					
Padded	Low	+1	+8	0	
Tatami Do	Medium	+3	+5	-1	
Medium armor					
Do Maru	High	+4	+4	-3	
Tanko	Very High	+5	+3	-4	Samurai armor
Heavy armor					
O-Yoroi	Extremely High	+7	+2	-5	Samurai armor

Adventuring Gear and Starting Items

All characters will start with basic tools of the trade for their respective classes. In addition, characters will have the following items based on their class:

Bushi will have a yari and tatami do

Ninja will have a wakizashi, shuriken, a kunai, thieves tools and caltrops.

Nusutto will have a wakizashi, tatami do, thieves tools and caltrops.

Sohei, Shugenja and Yamabushi will have Buddhist, Shinto and/or Shugendo holy symbols and texts as appropriate.

Sohei will have a do maru, a daikyu and a naginata

Samurais will have a do Maru, daikyu and a katana.

Yamabushi will have a bo.

Gear Aspect: "Travels Light", "Have Everything I need", "Travels Heavy" or variations thereof. Use these aspects to

resolve questions such as whether or not a character has extra rope, or if they can easily make it over rocky terrain. This is much easier than keeping a huge list of items.

Wealth

Since Yamato m20 is more about attaining honor and performing feats of heroism rather than money, instead of keeping track of every yen that a character has to their name, simply use an Aspect - Poor, Has Enough to Get By, Frugal, Comfortable, Wealthy, Very Wealthy, Yen poor but land rich, Lives off the kindness of others, etc.

The GM will need to approve the choice and fit it into the campaign. Note that having more money will draw much attention to the character, something that some such as Ninjas will want to avoid.

Sample Characters

Yoshikage, Samurai Level 1

STR 17 (+3), DEX 14 (+2), MIND 10 (+0)

PHYS +5, SUB +1, KNOW +1, COMM +1

HP 21, AC 16 (Do Maru),

Katana +2/+3, d10

Hankyu +2/+2

All other weapons +1/+1

Aspects: Taira Clan, Bushido, Gear - Travel Heavy, Religion - Buddhist, Wealth - Frugal, Grew up in a Buddhist monastery, Loves old maps and books.

Hokke, Bushi Level 1

STR 16 (+3), DEX 13 (+1), MIND 11 (+0)

PHYS +4, SUB +2, KNOW +1, COMM +1

HP 19, AC 12 (Padded Armor)

Aspects: Commoner (+1 to SUB), Wealth - Poor, Gear -

Reasonable amount. Religion - Shinto, Protector of village he

grew up in. Raised many animals on his parents' farm. Hates Oni because they ransacked his village.

Yari +1/+1 1d8

All other weapons +1/+1

Padded armor

Murasaki, Ninja Level 1

STR 11 (+0), DEX 15 (+2), MIND 14 (+2)

PHYS +1, SUB +5, KNOW +1, COMM +1

HP 16, AC 12 (No Armor)

Bare Hands 1d4

Wakizashi 1d6

Shuriken 1d3

Kunai 1d3

Aspects: Loyalty to My Master, Wealth - Poor, Religion - Shinto,

Gear - Travels light, Clan - Tachibana, Very secretive about her

ninja abilities, Writing a novel about life in the imperial Court.

Hideie, Shugenja Level 1

STR 12 (+1), DEX 14 (+2), MIND 15 (+2)

PHYS +1, SUB +1, KNOW +2, COMM +4

HP 14, AC 12 (Robes)

Jo d6

Spells: All 0 and 1st level Shugenja spells.

Element: Fire. Prohibited Element: Water

Can turn undead 5 times/day

Aspects: Wealth - Poor, Gear - Travels Light, Clan - Religious

Order, Religion - Shugenja, Extensive knowledge of plants,

Thinks it is fun to set things on fire, Wishes he were in the

Tachibana clan.

Setsu, Yamabushi Level 1

STR 14 (+2), DEX 17 (+3), MIND 10 (+0)

HP 17, AC 14,

PHYS +5, SUB +1, KNOW +1, COMM +1

Fists: 1d6

Can turn undead 3 times/day

Aspects: Wealth - Lives of the generosity of others, Religion:

Shugenja, Honor, Gear - Travels light, Clan - Religious Order,

Musician (hochiku and shamisen), Really wants to be left alone to

meditate.

Combat

Armor Class (AC) = 10 + DEX bonus + Armor bonus.

Hit Points = STR Stat + 1d6/Level.

If HP reaches 0, unconscious and near death. Further damage

directly reduces STR. If STR reaches 0, death results.

Roll d20 + DEX bonus for initiative order. Everyone can do one

thing each turn; move, attack, cast a spell, etc.

Melee attack bonus = STR bonus + Level

Missile attack bonus = DEX bonus + Level

Magic attack bonus = MIND bonus + Level

Add STR bonus to Melee damage, x2 for 2-handed weapons.

Add attack bonus to d20 roll. If higher than your

opponent's Armor Class (AC), it's a hit. Natural 20 is

automatically a critical doing maximum damage.

Bushi, Samurai, Sohei, Ninja and Nusutto can use DEX bonus + Level as Melee attack bonus instead if wielding a light weapon. Bushi, Samurai, Sohei, Ninja and Nusutto can wield 2 light weapons and attack with both in a round if they take a -2 penalty on all attack rolls that round.

If the total bonus is +6 or more a second attack can be made with a -5 penalty. If the total bonus is +11 or more a third attack can be made at -10. For example, if the total bonus is +12, three attacks can be made at +12/+7/+2.

Magic

Casting a spell of any kind costs Hit Points. The cost to cast a spell is (2 x level of the spell + 1):

Spell Level	0	1	2	3	4	5	6	7	8	9
HP Cost	1	3	5	7	9	11	13	15	17	19

This loss cannot be healed normally but is recovered after 8 hours rest. There is no need to memorize spells in advance.

Just because a character can cast any spell, doesn't mean that they should. Choose spells that suit the character. Select one favored element. Spells from this element are easier to cast, costing 1 less HP to use. If Air is the favored element, Earth is the prohibited element and vice-versa. If Fire is the element then Water is the prohibited element and vice-versa. Shugenja can cast spells from the Void element starting at 5th level. A Shugenja must

be without Taint to cast Void spells. Spells from the prohibited elements cannot be cast.

Since magic involves channeling Kami, a shugenja or sohei can to use an Unmei point to affect their spell roll. The spell must be from their favored element and the element must be present nearby in a substantial non-trivial manner: a strong wind for Air, rubble for Earth, torches for Fire, a stream for Water.

The Difficulty Class (DC) for all spells is

10 + Caster Level + Caster's MIND bonus

Shugenja's Spell List

Spell lists for Shugenja and Sohei are listed in the SRD, Oriental Adventures (OA), Rokugan Campaign Setting (RoK) and Magic of Rokugan (MoR).

Summon Nature's Ally IX*

- Shugenja may only cast Summon Nature's Ally spells to summon elementals of a size appropriate to the spell level.

Monsters

Monsters are described in the SRD, Creatures of Rokugan and Oriental Adventures (3rd edition). A few are listed here.

Skills: All creatures have a bonus to all skills equal to their number of Hit Dice. If the creature is intelligent, add +3 to one skill. Add stat bonuses to suit and as logic dictates. This is intentionally kept open – if you need a sneaky oni, assign the +3 bonus to Subterfuge; if a warrior, give +3 to Physical; for a spell-caster assign the +3 to Knowledge or Communication and give levels of shugenja (see below).

Monster Advancement: To make a tougher monster, add more Hit Dice; each additional HD adds one to their skill and

combat bonuses. For each doubling of the Hit Dice, increase the dice size for attacks (ie, d4->d6, d6->d8, etc).

Alternatively, add class levels to intelligent monsters. Start with the base Hit Dice and add levels of Bushi, Nusutto, Shugenja as required.

Name	Hit Dice	Armor Class	Attack
Animal (small) eBadger	HD 1d8+2 (6 hp)	AC 15	Claw +4 (1d2-1)
Aranea	HD 3d8+6 (19 hp)	AC 13	Bite +4 (1d6 &p); poison (DC13, 1d6/2d6 Str)
Demon, Bebilith	HD 12d8+48 (102 hp)	AC 25	Bite +19 (2d6+9 &p), 2 claws +14 (2d4+4 & armor damage); poison (DC20, 1d6/2d6 Con), web; DR 30/+3, protective aura, plane shift, scent, telepathy
Dire Rat	HD 1d8+1 (5 hp)	AC 15	Bite +4 (1d4 plus disease)
Dragon (young Azure)	HD 13d12+39 (123 hp)	AC 21	Bite +20 (2d6+7), can fly
Akki (Goblin)	HD 1d8+1 (5 hp)	AC 15	Morningstar +2 (1d6) or javelin +3 (1d4)
Inugami (vengeful dog spirit)	HD 4d8+4 (22 hp)	AC 16	Bite +5 (1d10+2)
Human Commoner	HD 1d8+1 (5 hp)	AC 12	Dagger +1 (1d6+1) or sling +1 (1d4)
Ghoul	HD 2d12 (13 hp)	AC 14	Bite +3 (1d6+1 &par), 2 claws +0 (1d3 &par); paralysis (DC14), create spawn; undead, +2 turn resistance
Insect (small) eg Spider	HD 1d8 (4 hp)	AC 14	Bite +4 (1d4-2 plus poison)
Merfolk	HD 1d8+1 (5 hp)	AC 13	Trident +1 (1d8), heavy crossbow +2 (1d10); low-light vision.
Octopus, Giant	HD 8d8+8 (44 hp)	AC 18	8 tentacles +10 (1d4+5), bite +5 (1d8+2);
Ogre	HD 4d8+11 (29 hp)	AC 16	Great club +8 (2d8+7) or javelin +1 (1d8+5)
Ogre Mage	HD 5d8+15 (37 hp)	AC 18	Huge greatsword +7 (2d8+7), or huge longbow +2 (2d6)
Shadow	HD 3d12 (19 hp)	AC 13	Incorporeal touch +3 (1d6 Str)
Skeleton Warrior	HD 1d12 (6 hp)	AC 15	Scimitar +1 (1d6+1) or claw +1 melee (1d4+1)
Troll	HD 6d8+36 (63 hp)	AC 16	Claw +9 (1d6+6)
Wolf	HD 2d8+4 (13 hp)	AC 14	Bite +3 (1d6+1)
Zombie	HD 2d12+3 (16 hp)	AC 11	Slam +2 (1d6+1) or club +2 (1d6+1)

DISEASE

Diseases have various symptoms and are spread through a number of ways. Several typical diseases are summarized below. The entries for diseases include the following information:

Name of the disease: Type, DC, incubation, damage.

Type lists the disease's method of delivery (contact, inhaled, or injury). DC lists the phys+STR check DC needed to prevent infection. Incubation lists the time before damage begins. Damage lists the ability damage the character takes after incubation and each day afterward.

Cackling Fever: Inhaled, DC 16, 1day, -1d6 MIND.

Filth Fever: Injury, DC 12, 1d3 days, -1d3 DEX and 1d3 STR.

Mindfire: Inhaled, DC 12, 1day, -1d4 MIND.

Red Ache: Injury, DC 15, 1d3 days, -1d6 STR.

Shakes: Contact, DC 13, 1day, -1d8 DEX.

EXTREME HEAT & COLD

If not wearing suitable protection, a character must make a Phys+STR check once every 10 minutes (DC 15, +1per previous check), taking 1d6 damage on each failed save.

FALLING DAMAGE

A falling character takes 1d6 hp of damage per 10 feet fallen. If the character makes a successful Phys+DEX roll, he takes only half damage. The DC for the phys+DEX roll is equal to the depth fallen in feet. In the event that the fall ends in an area laden with spikes or jagged rocks, add +1hp of damage to falling damage per 10' fallen (with a maximum of +10 hp).

POISON

Characters can possibly take damage from a weapon that has been poisoned, be attacked by a creature whose natural attacks feature poison, consume poison hidden in

food or drink, or be poisoned in some other way. Any character that uses poison will gain and/or increase their Taint. Several typical poisons are summarized below. The entries for poisons include the following information:

Name of the poison: Type, DC, damage, price.

Type lists the poison's method of delivery (contact, ingested, inhaled, or injury). DC lists the phys+STR check DC needed to avoid the poison's damage. Damage is expressed as "xdx/xdx." The first number is the initial damage, taken immediately upon failing the phys+STR check against the poison.

The second number is the secondary damage, taken one minute after exposure to the poison if a second phys+STR check is failed. Ability damage is temporary unless marked with an asterisk(*), in which case the loss is permanent. Unconsciousness lasts 1d3 hours. Price lists the cost for one dose of the poison. It can usually only be obtained through less- than-reputable sources, as the possession of poisons are commonly illegal.

Arsenic: Ingested, DC 13, -1 STR/-1d8 STR, 120 gp.

Burnt Pieris Fumes: Inhaled, DC 18, -1 STR*/-3d6 STR, extremely expensive

Deathblade: Injury, DC 20, -1d6 STR/-2d6 STR, extremely expensive

Insanity Mist: Inhaled, DC 15, -1d4 MIND/-2d6 MIND, extremely expensive

Oil of Fugu: Ingested, DC 15, O/unconsciousness

Urushi Paste: Contact, DC 16, -1 DEX/-2d4 DEX, Very Expensive

Monstrous Scorpion (tiny): Injury, DC 12, -1 STR/-1 STR, inexpensive

Monstrous Scorpion (small): Injury, DC 12, -1d2 STR/-1d2 STR.

Monstrous Spider (tiny): Injury, DC 10, -1d2 STR/-1d2 STR.

Monstrous Spider (small): Injury, DC 10, -1d3 STR/-1d3 STR.

Sassone Leaf Residue: Contact, DC 16, -2d12 hp/- 1d8 STR.

Sleep Poison: Injury, DC 13, unconsciousness/
unconsciousness for 2d4 hours, inexpensive.

Snake (medium viper): Injury, DC 11, -1d6 STR/- 1d6
STR.

Snake (large viper): Injury, DC 11, -1d6 STR/-1d6 STR.

Snake (huge viper): Injury, DC 14, -1d6 STR/-1d6 STR.

Challenges & Champions

Revised Rules Guide

Alexander Falone

10/7/2011

The Revised Rules Guide to the Challenges & Champions Role Playing Game, a middle ground in terms of “rules heavy-ness” between Microlite20 and Primary Fantasy SRD rules.

Introduction

What is Challenges & Champions?

Challenges & Champions is a semi-rules-light role-playing game based on the Microlite20 system and the D20 Primary Fantasy System Reference Document, and attempts to find a middle ground between the two systems.

What is this document?

This is the Challenges & Champions Rules Guide. It contains all the rules necessary to create and play a character in Challenges & Champions.

A note about fractions...

Unless otherwise noted, all fractions should be rounded down even if they are greater than one half. Hit points and damage are the exceptions to this; rolls for such are always at least one.

A note about pronouns...

The masculine forms of third person pronouns are used exclusively throughout this text. This is done solely for ease of use. It is not meant to imply that women cannot play Challenges & Champions or that men are somehow better than women.

Chapter 1: Attributes

Attributes

There are four attributes in Challenges & Champions: Might, Agility, Intellect, and Spirit.

Might: Might is the measure of a character's physical power and heartiness.

Agility: Agility is the measure of a character's physical grace and fine motor skills.

Intellect: Intellect is the measure of a character's mental capacity and critical thinking skills.

Spirit: Spirit is the measure of a character's attentiveness and force of personality.

You have 4 points to divide among your character's attributes, which all start at 0. Each point put into an attribute raises it by 1. You cannot put more than 4 points into a single attribute, even with bonus points (though attributes can go higher than +4 through other factors). If you choose to have a negative value in an attribute, you gain bonus points to assign to your other attributes. For example, if you give your character a Might of -1, you have 1 more point to assign to another attribute (such as Intellect). If your character has a Might of -2, you have 2 bonus points. Heroes cannot lower any attribute below -2 in this way.

At every level that divides evenly by three (3rd, 6th, 9th, 12th, etc.) a character permanently gains +1 to the attribute of his choice. However, no attribute may be raised in this way so that it is more than 7 points higher than another. So if your character has a +5 Might, and a -2 Spirit, you may not raise his Might until his Spirit is raised to at least -1.

Chapter 1: Races

There are eight player character races in Challenges & Champions: Human, Drow, Dwarf, Elf, Gnome, Half-Elf, Half-Orc, and Halfling. Note that any modifiers to attributes are applied AFTER base attribute scores are generated.

Humans

Humans are a very adaptable race that can be found just about anywhere.

- Humans gain +1 to all skill checks.
- Humans speak Common and 1 other language of their choice (in addition to any bonus languages for a high Intellect).

Drow

Physically, drow are very similar to elves, but have dark purple to black skin with white or silvery hair, and they are often found in cities hidden underground. Their society emphasizes physical and mental grace, but at the cost of physical power.

- Drow lose -1 from their Might.
- Drow gain +1 to their Agility.
- Drow gain +1 to their Intellect.
- Drow speak Drowish and Common.

Dwarves

Dwarves are a thick, stout race who make their homes mostly in mountainous regions and have developed a noticeable hardiness because of it.

- Dwarves gain +1 to their Might.
- Dwarves speak Dwarven and Common.

Elves

Elves are widely hailed as the fairest race, and are most commonly found in forests and other wooded areas. Because of their extensive experience navigating through thick foliage, elves are notably more graceful than other races.

- Elves gain +1 to their Agility
- Elves speak Elven and Common.

Gnomes

Gnomes are a short, portly race who can be found in hilly areas. Gnomes tend to be very

curious and investigative, which allows them to think about problems laterally with relative ease.

- Gnomes gain +1 to their Intellect.
- Gnomes cannot use large weapons and must use medium weapons with two hands
- Gnomes speak Gnomish and Common.

Half-Elves

Half-elves are the offspring of human and elven parents, and can have characteristics of both.

- Half-Elves gain EITHER +1 to their Agility OR +1 to all checks made involving any two skills of their choice (chosen at 1st level)
- Half-Elves speak Elven and Common.

Half-Orcs

Half-Orcs are the unfortunate result of a human mating with an orc. They gain the strength of their orcish blood, but also some of its negative aspects.

- Half-Orcs gain +2 to their Might.
- Half-Orcs lose -1 from their Intellect.
- Half-Orcs lose -1 from their Spirit.
- Half-Orcs speak Orcish and Common.

Halflings

Halflings are the smallest race, standing roughly half the height of humans with similar proportions. Halflings tend to be very light-hearted and jovial, and are very hard to demoralize.

- Halflings gain +1 to their Spirit.
- Halflings cannot use large weapons and must use medium weapons with two hands.
- Halflings speak Common.

Languages

Each character can speak and read one or more languages. A character knows his racial language as well as the Common tongue (Common is the racial language of humans and halflings). A character also knows a number of bonus languages equal to his Intellect; though a negative Intellect does not reduce the number of languages he knows (Common and his racial language do NOT count toward this total).

Chapter 2: Classes & Levels

There are 7 classes in Challenges & Champions: Bard, Cleric, Fighter, Paladin, Ranger, Rogue, and Wizard. All classes are proficient with all weapons.

Bard

Bards are story tellers and Jacks-of-All-Trades.

- Skill Bonus: +1 Communication, Knowledge, and Subterfuge
- Primary Skill: Communication
- Wear light armor and use bucklers
- **Bardic Knowledge:** A bard adds his class level to skill checks involving the Knowledge skill.
- **Counter Song:** At 1st level, a bard can counter sound-based effects within 30'. To do this he either sings, chants, or plays a musical instrument. He can maintain the counter song so long as he does nothing but sing/chant/play. This ability cannot be used to disrupt the casting of a spell.
- **Bardic Music:** At 1st level, a bard may inspire himself and allies within earshot, or hinder enemies within 30'. He sings a song that grants a bonus or penalty equal to his Sprit (if positive) to attack and damage rolls, skill checks, or saving throws. He may use this ability a number of times per day equal to 2 + Class Level + Sprit (if positive). He may maintain the song while performing other actions (such as attacking) so long as they do not prevent him from singing. The effect lasts until he stops singing.
- **Linguistics:** At 4th level, a bard has become proficient in Linguistics. He may make a Com + Intellect check (vs DC 20) to speak and understand simple words and phrases in any language he does not already know.
- **Bard Spells:** At 6st level, a bard is able to cast spells. See **Chapter 7: Magic & Spells**.
- **Sublime Performance:** At 20th level, a bard may put on a Sublime Performance. By sacrificing a use of his Bardic Music ability, a bard plays a song that either creates an effect equivalent to a Mass Cure Critical Wounds spell or kills one enemy within 30' (DC = 10 + Class Level + Sprit, Fort negates).

Cleric

Clerics are priests who strive to carry out the tenants of their faith and to do the work of whichever deity they worship.

- Skill Bonus: +3 Communication
- Primary Skill: Communication
- Wear light or medium armor and use most shields (not tower shields)
- **Divine Spells:** At 1st level, a cleric casts divine spells. See **Chapter 7: Magic & Spells**.
- **Turn Undead:** At 1st level, a cleric can Turn Undead. The cleric makes a Magic Attack vs. DC = the current Hit Points (HP) of the Undead. For multiple undead, the cleric makes only one attack roll and compares it to each undead's HP. If the check is successful (roll \geq DC), the undead flees the cleric as fast as possible (or cowers if unable to flee, losing any positive Agility modifier to AC) for ten rounds. If the roll \geq DC + 10, the undead is destroyed. This can be used a number of times per day equal to 2 + Class Level + Sprit (if positive).
- **Divine Savant:** At 20th Level, a cleric has become a Divine Savant. By sacrificing a use of his Turn Undead ability, a cleric emits a burst of light that heals him, and all allies within 20', for 300 points of damage.
- **Code of Conduct:** A cleric who behaves in a manner contradicting his deity's ethos too strongly or too often (GM's fiat) loses all his class special abilities and may not gain new levels as a cleric until he repents and atones for his misdeeds.

Fighter

Fighters are true warriors, masters of weapons and (if they are clever) strategy and tactics.

- Skill Bonus: +3 Physical
- Primary Skill: Physical
- Wear any armor and use all shields (including tower shields)
- **Weapon Training:** At 1st level, a fighter has Weapon Training. He adds +1 to attack and damage rolls with all weapons. This bonus increases by +1 at 5th level and every five

levels thereafter (+1 at 1st level, +2 at 5th, +3 at 10th, +4 at 15th, +5 at 20th).

- **Power Attack:** At 1st level, a fighter can Power Attack. Before making attack rolls for a round, a fighter may choose to subtract a number from all melee attack rolls and add the same number to all melee damage rolls. This number may not exceed the fighter's Class Level. The penalty on attacks and bonus on damage apply until his next turn.
- **Cleave:** At 4th level, a fighter can Cleave. Once per round, if he slays a foe with a melee attack, the fighter may immediately make one extra melee attack against an adjacent foe at the same attack bonus.
- **Combat Reflexes:** At 8th level, a fighter has developed Combat Reflexes, which grant him a +2 bonus to all Reflex saving throws.
- **Iron Will:** At 12th level, a fighter has developed an Iron Will, which grants him a +2 bonus to all Will saving throws.
- **Focused Strike:** At 16th level, a fighter can make a Focused Strike. Twice per day, when he attacks, the fighter may ignore his target's armor and shield bonuses to AC for one attack. The fighter must declare he is using this ability before the attack roll is made.
- **Weapon Mastery:** At level 20, a fighter has attained Weapon Mastery. All incoming weapon damage dealt to him is reduced by 5; and whenever he scores a critical hit, the damage is multiplied by x3 instead of x2.

The Paladins' Code

Protect the weak and defenseless
Live by honor and for glory
Tithe to the church of thy deity
Fight for the welfare of all
Obey those placed in authority
Guard the honor of fellow knights
Keep faith
At all times speak the truth
Persevere to the end in any enterprise begun
Respect the honor of women
Never refuse a challenge from an equal
Never turn thy back to a foe

Paladin

Paladins are holy crusaders who strive to help those in need and to rid the world of evil.

- Skill Bonus: +2 Communication, +1 Physical
- Primary Skill: Communication
- Wear any armor and use most shields (not tower shields)
- **Holy Bulwark:** At 1st level, a paladin has a Holy Bulwark. He adds +1 to all saving throws. This bonus increases by +1 at 5th level and every five levels thereafter (+1 at 1st level, +2 at 5th, +3 at 10th, +4 at 15th, +5 at 20th).
- **Lay on Hands:** At 1st level, a Paladin can Lay on Hands, allowing him to heal himself or another for an amount equal to his Class Level x Sprit (if positive). This amount can be divided among multiple targets and need not be used all at once.
- **Paladin Immunities:** At 4th level, a paladin becomes immune to fear effects and all diseases. Certain afflictions, like Mummy Rot, Lycanthropy, and Vampirism are not diseases, but are curses.
- **Smite:** At 8th level a paladin can Smite his enemies. Once per day, a paladin may add his Class Level to one attack roll and its corresponding damage roll. The Smite must be declared before the attack roll. If the attack misses, the Smite is wasted.
- **Righteous Aura:** At 12th level, a paladin may emit a Righteous Aura, granting him and all allies within 10' a bonus to all saving throws equal to the paladin's Sprit (if positive). This ability can be used once per day and lasts a number of rounds equal to the paladin's class level.
- **Extra Smite:** At 16th level, a paladin can use his Smite ability twice per day instead of just once.
- **Holy Vessel:** At 20th level, a paladin has become a Holy Vessel. All weapons used by the paladin, in addition to any other effects they possess, are treated as Holy Burst (+2d6 Holy damage, and an additional +1d10 Holy damage on critical hits).

- **Code of Conduct:** Paladins must follow the Paladins' Code. A paladin who strays from the code too far or too often (GM's fiat) loses all his class special abilities and may not gain new levels as a paladin until he repents and atones for his misdeeds.

Rangers

Rangers are woodsmen and trackers who live by their sword, bow, and wits.

- Skill Bonus: +3 Survival
- Primary Skill: Survival
- Wear light or medium armor and use most shields (not tower shields)
- **Ranged Weapon Training:** At 1st level, a ranger has Ranged Weapon Training. He adds +1 to hit and damage with ranged weapons. This bonus increases by +1 at 5th level and every five levels thereafter (+1 at 1st level, +2 at 5th, +3 at 10th, +4 at 15th, +5 at 20th).
- **Ambidexterity:** At 1st level, a ranger is Ambidextrous. When using the Akimbo Fighting Style, a ranger's penalties to attack rolls are reduced by 1.
- **Rapid Shot:** At 4th level, a ranger can make a Rapid Shot. When making a Full Attack with a ranged weapon, he may make one extra ranged attack at his highest ranged attack bonus if he takes a -2 penalty on all ranged attacks that round.
- **Improved Akimbo Fighting:** At 8th level, a ranger has developed Improved Akimbo Fighting skills. While using the Akimbo Fighting Style, he may make a second extra attack (with the second weapon). This attack is made immediately after the first attack with the second weapon and suffers a -5 penalty in addition to any other penalties suffered by using two weapons.
- **Evasion:** At 12th level, a ranger has become proficient in Evasion. If he would take half damage for succeeding a Reflex save, he instead takes no damage.
- **Greater Akimbo Fighting:** At 16th level, a ranger has developed Greater Akimbo Fighting skills. When using the Akimbo Fighting Style, his penalties to attack rolls are

reduced by 1. This ability stacks with his Ambidexterity ability.

- **Ranged Weapon Mastery:** At 20th level, a ranger has attained Ranged Weapon Mastery. All incoming ranged weapon damage dealt to him is reduced by 5; he adds his Might (if positive) to damage rolls made with any ranged weapon; when using his Rapid Shot ability, he may make a second extra attack (which is at an additional -5 penalty); and whenever he scores a critical hit with a ranged weapon, the damage is multiplied by x3 instead of x2.

Rogue

Rogues are masters of stealth and espionage, and can be anything from common pick-pockets to deadly assassins.

- Skill Bonus: +3 Subterfuge
- Primary Skill: Subterfuge
- Wear light armor and use bucklers
- Rogues are the only class that can pick locks and find/disarm traps.
- **Sneak Attack:** At 1st level, a rogue can perform a Sneak Attack with a melee weapon. A rogue may only perform a Sneak Attack if he successfully sneaks up on a foe (usually Sub + Agility vs. Sub + Spirit) or if the target is already engaged in melee. A successful Sneak Attack does +2d6 points of damage at 1st level. This increases by +2d6 at 5th level and every five levels thereafter (+2d6 at 1st level, +4d6 at 5th, +6d6 at 10th, +8d6 at 15th, +10d6 at 20th).
- **Evasion:** At 1st level, a rogue is proficient in Evasion. If he would take half damage for succeeding a Reflex save, he instead takes no damage.
- **Lightning Reflexes:** At 4th level, a rogue has developed Lightning Reflexes, which grant him a +2 bonus to all Reflex saving throws.
- **1st Skill Focus:** At 8th level, a rogue has developed a 1st Skill Focus, which grants him a permanent +2 bonus in a skill of his choice.
- **Improved Evasion:** At 12th level, a rogue has become proficient in Improved Evasion. If he

would take damage for failing a Reflex save, he instead takes half damage.

- **2nd Skill Focus:** At 16th level, a Rogue has developed a 2nd Skill Focus, which grants him a permanent +2 bonus in another skill of his choice. This cannot be the skill he chose for his First Skill Focus.
- **Masterful Strike:** At 20th level, a rogue can make a Masterful Strike. After a successful sneak attack, a rogue may choose one of the following three effects to inflict upon his target. The target makes a Fortitude save vs. Rogue Level + Intellect (if positive) to avoid this effect.
 - Sleep for 1d4 hours
 - Paralyzed for 2d6 rounds
 - Death

Wizard

Wizards are masters of the arcane, who manipulate the very fabric of reality.

- Skill Bonus: +3 Knowledge
- Primary Skill: Knowledge
- Wear no armor and use no shields
- **Arcane Spells:** At 1st level, a wizard casts Arcane spells. **See Chapter 7: Magic & Spells.**
- **Mana Reserve:** At 1st level, a wizard can tap into a Mana Reserve. Once per day, a wizard may regain lost Mana Points (MP) equal to 2 + Class Level + Intellect (if positive).
- **Arcane Savant:** At 20th level, a wizard has become an Arcane Savant. He casts all of his 1st through 9th level arcane spells as if they were signature spells.

Level Advancement

In Challenges & Champions, characters advance to higher levels by gaining Encounter Levels (EL's). Encounter Levels (EL's) are awarded to characters that defeat monsters and perform certain skill checks (such as disarming a trap) successfully.

Generally, a defeated monster is worth as many EL's as it has Hit Dice. The EL value for a trap is determined by the GM.

When your character has accrued 10 x your current level in Encounter Levels, you have advanced to the next level. Once you have advanced to the next level, reset your EL total back to 0. When you gain a new level you gain:

- Increased Maximum Hit Points
- Increased Skill Ranks
- Increased Attack Bonuses
- Possible increased Save Bonuses
- Possible special abilities based on your class
- If your new character level divides evenly by 3 (3rd, 6th, 9th, etc.), add +1 to the attribute of your choice.

Chapter 4: Skills

There are five skills in Notsolite20: Communication (Com), Knowledge (Know), Physical (Phys), Subterfuge (Sub), and Survival (Surv).

Communication (Com): Communication is used for interacting with the Game Master's characters or monsters when you are trying to be diplomatic, convincing or proving a point.

Knowledge (Know): Knowledge is broad, covering everything from geography and history to obscure arcane rituals and can be used to identify monsters, recognize religious symbols or heal someone.

Physical (Phys): Physical covers any activity where the body plays a part in deciding the outcome such as jumping, bashing, swimming, etc.

Subterfuge (Sub): Subterfuge is used for anything requiring stealth, deception, or thievery such as hiding, moving silently or picking a lock.

Survival (Surv): Survival is used for tracking, foraging (in the woods or a city), hunting, determining direction or anything that helps a character to survive in their surroundings.

Training

How adept a character is in a given skill is determined by his race, class, and how he's chosen to train.

Class Skill Bonus

Every class has a Skill Bonus listed in its class description. This bonus is only applied if the class was a character's first class.

Ranks

Every level (including 1st) a character gets 1 rank in the primary skill for his class. He then gets 2 ranks to spend however he likes, including on his primary skill. No skill can receive more than 2 ranks per level. Any skill with 10 or more total ranks can only be raised by 1 per level. This reflects the greater difficulty in training.

Skill Checks

Make a skill check whenever you try to accomplish something that has a chance of failure. For example, a character would not (usually) have trouble jumping up and down in place (no check needed), but he might not be able to jump across a pit in a dungeon (a Phys + Might check would be appropriate). Roll \geq DC to succeed the skill check.

Skill Check = 1d20 + Total Ranks + Class and/or Racial Modifiers + Relevant Attribute + Situational Modifiers

Some examples of situations where skill checks would be needed would be: climbing a wall, spotting a hidden enemy, or disabling a trap.

Difficulty Class

Most checks are made against a Difficulty Class (DC). The DC is a number that you must equal or exceed with your skill check in order to succeed.

Opposed Checks

An opposed check is a check whose success or failure is determined by comparing the check result to another character's check result. In an opposed check, the higher result succeeds, while the lower result fails. In case of a tie, the higher skill modifier wins. If these scores are the same, roll again to break the tie.

Trying Again

In general, you can try a skill check again if you fail, and you can keep trying indefinitely. Some skills, however, have consequences of failure that must be taken into account. A few skills are virtually useless once a check has failed on an attempt to accomplish a particular task. For most skills, when a character has succeeded once at a given task, additional successes are meaningless.

D20 Fantasy SRD Skills and Their *Challenges & Champions* Equivalents

D20 Fantasy SRD Skill	Challenges & Champions	D20 Fantasy SRD Skill	Challenges & Champions
Appraise	Com + Intellect	Knowledge	Know + Intellect
Balance	Phys + Agility	Listen	Sub + Spirit
Bluff	Sub + Spirit	Move Silently	Sub + Agility

Chapter 5: Equipment & Wealth

The most common coin is the gold piece (gp). Each gold piece is worth 10 silver pieces (sp), and each silver piece is worth 10 copper pieces (cp). In addition to copper, silver, and gold pieces, there are also platinum pieces (pp), which are worth 10gp each. Every character begins play with a certain amount of accumulated wealth, determined by his character class. The character uses this accumulated wealth to purchase his initial weapons, armor, and adventuring equipment using the prices shown on the tables below.

Exchange	CP	SP	GP	PP
CP	1	1/10	1/100	1/1000
SP	10/1	1	1/10	1/100
GP	100/1	10/1	1	1/10
PP	1000/1	100/1	10/1	1

Starting Wealth

Class	Starting Wealth
Bard or Rogue	125
Cleric	120
Fighter or Paladin	150
Wizard	75

Fast Packs

Fast packs are pre-compiled and pre-calculated equipment packages, designed to help new players get started quickly. These packs provide a way for a player to quickly equip his PC or for a GM to equip an NPC or hireling on the fly. Additionally, these optional kits can be used to give a starting point from which to customize

new characters. Simply choose a pack or roll 1d6 to select one randomly. Each costs 50gp.

Weapons

Weapon: This is the name of the weapon.

Cost: This value is the price for purchasing the weapon, including miscellaneous gear that goes with the weapon.

Dmg: This column gives the damage dealt by the weapon on a successful hit.

Range: Any attack at less than this distance is not penalized for range. However, each full range increment imposes a cumulative -2 penalty on the attack roll. A thrown weapon (indicated by superscript "TH") has a maximum range of five range increments. A projectile weapon (indicated by superscript "PROJ") can shoot out to ten range increments.

Armor & Shields

Armor: This is the name of the armor or shield.

Cost: This value is the price for purchasing the armor.

AC: Indicates the Armor Class (AC) bonus provided by the armor.

Adventuring Equipment

Name: This is the name of the piece of equipment.

Cost: This value is the price for purchasing the piece of equipment.

Fast Pack A (1 or 2 on d6)

Backpack, Belt Pouch, Bedroll, Lantern (hooded), 10 Oil Flasks, Flint & Steel, Shovel, 2 sets of Caltrops, Signal Whistle, Waterskin, Rations (4 days)

Fast Pack B (3 or 4 on d6)

Backpack, Belt Pouch, Bedroll, 10 Torches, 4 Oil Flasks, Flint & Steel, 10 pieces of chalk, 10' Pole, Mirror, Crowbar, Waterskin, Rations (4 days)

Fast Pack C (5 or 6 on d6)

Backpack, Belt Pouch, Bedroll, Tent, 10 Torches, 5 Oil Flasks, Flint & Steel, 50' Rope, Grappling Hook, 10' Pole, Waterskin, Rations (4 days)

Chapter 6: Combat

Initiative

At the start of a battle, each combatant rolls for initiative. To determine initiative, each character rolls a d20 and applies his Agility to the roll. Characters act in order, counting down from highest result to lowest. In every round that follows, the characters act in the same order (unless a character takes an action that results in his initiative changing, such as waiting for another character to act). One round is 6 seconds.

If two or more combatants have the same initiative check result, the combatants who are tied act in order of total initiative modifier (highest first). If there is still a tie, the tied characters should roll again to determine which one of them goes before the other.

Surprise

When a combat starts, if you are not aware of your opponents and they are aware of you, you're surprised.

Determining Awareness

Sometimes all the combatants on a side are aware of their opponents, sometimes none are, and sometimes only some of them are. Sometimes a few combatants on each side are aware and the other combatants on each side are unaware. Determining awareness may call for Sub + Intellect checks or other checks.

The Surprise Round: If some but not all of the combatants are aware of their opponents, a surprise round happens before regular rounds begin. Any combatants aware of the opponents can act in the surprise round, so they roll for initiative and act in order (highest to lowest). However, creatures who are able to act in the surprise round may only perform one standard action, and no full actions during the surprise round. If no one or everyone is surprised, no surprise round occurs.

Unaware Combatants: Combatants who are unaware at the start of battle don't get to act in

the surprise round. After the surprise round, unaware combatants roll for initiative and all combatants act in initiative order (highest to lowest).

On Your Turn

During a combat round, when it is your turn, you can perform either two **Standard Actions**, or one **Full Action**.

Possible standard actions include: moving, making a partial attack, casting a spell, using a skill, drinking a potion, retrieving an item stored in a backpack, and activating a magic item.

Even though casting a spell is classified as a standard action, you may only cast one spell per round (the exception to this is Feather Fall, you may cast this spell once in a round, and still cast another spell).

Making a partial attack means attacking once. Even though making a partial attack is classified as a standard action, you may not make two partial attacks in one round.

All characters have a base speed of 30'. This means that if a character uses one of his standard actions to move across the battle field, he can move up to 30' as part of the action. You may use both of your standard actions to move, allowing you to move up to 60'.

Possible full actions include: running all out, making a full attack, and casting a spell using a Meta-Magic.

When a character uses a full action to run all out, he can move up to 4x his base speed, but he loses and positive Spirit modifier to his AC until his next turn.

If you want to do something that is not listed above, your GM decides whether it counts as a standard or full action (or even not an action).

Attacking & Defending

There are three types of attacks in Challenges & Champions: melee, ranged, and magic.

Melee Attacks

When you attack with a melee weapon, you roll a d20 and add your Melee Attack Bonus and compare this number to your target's Armor Class (AC). If your modified roll is equal to or higher than your target's AC, you hit and deal damage. If your modified roll is lower than your target's AC, you miss and deal no damage. A natural 1 (the d20 comes up a 1) is always a miss, and a natural 20 (the d20 comes up a 20) is always a hit.

Melee Attack Bonus = Character Level + Might + Relevant Miscellaneous Modifiers

Ranged Attacks

When you attack with a ranged weapon, you roll a d20 and add your Ranged Attack Bonus and compare this number to your target's Armor Class (AC). If your modified roll is equal to or higher than your target's AC, you hit and deal damage. If your modified roll is lower than your target's AC, you miss and deal no damage. A natural 1 (the d20 comes up a 1) is always a miss, and a natural 20 (the d20 comes up a 20) is always a hit.

Ranged Attack Bonus = Character Level + Agility + Relevant Miscellaneous Modifiers

Magic Attacks

Certain spells and abilities require you to make a Magic Attack roll. To make a Magic Attack roll, roll a d20 and add your Magic Attack Bonus. The number that this roll is compared to varies depending on what you are trying to do. When comparing a Magic Attack roll to a target's Armor Class, do not count that target's armor, shield, or natural armor bonuses to AC. When making a Magic attack vs. a target's AC, a natural 1 (the d20 comes up a 1) is always a miss, and a natural 20 (the d20 comes up a 20) is always a hit.

Magic Attack Bonus = Caster Level + Casting Attribute + Relevant Miscellaneous Modifiers

Full Attacks

You may use a full action to make a full attack if your total attack bonus is high enough. If your

total Melee or Ranged Attack bonus is +6 or higher, you may make a second attack at a -5 penalty. If your total Melee or Ranged Attack bonus is +11 or higher, you may make a third attack at a -10 penalty. If your total Melee or Ranged Attack bonus is +16 or higher, you may make a fourth attack at a -15 penalty. This pattern continues indefinitely. If a character is wielding a weapon in each hand, and gets multiple attacks in a round, he may use the weapons interchangeably at no penalty.

Damage

When you attack a target and hit, roll the appropriate damage die/dice and add any relevant modifiers. Your target's hit points are reduced by this amount. The modifiers for your damage roll depend on the type of attack you are making.

Melee Damage Roll = Weapon Damage + Might* + Relevant Miscellaneous Modifiers

*When using a melee weapon with two hands, (if your Might is positive) add your Might x2.

Ranged Damage Roll = Weapon Damage + Might** + Relevant Miscellaneous Modifiers

** Only include your Might in your ranged damage roll if you are using a thrown weapon or a sling.

Critical Hits

When making a melee or ranged attack, if you roll a natural 20 (the d20 comes up a 20), you score a critical hit. Critical hits deal x2 damage (roll for damage once and multiply the total by 2). Certain creatures may be immune to critical hits.

Hit Points

Hit Points (HP) are an abstract representation of how much physical punishment a character can take and keep going. Every level, a character gains 1d8 + Might Maximum Hit Points. When a character's HP total reaches 0, he falls to the ground, unconscious. When his HP total reaches -10, he dies.

Armor Class

Armor Class (AC) is a measure of how hard it is for a creature to be hit and dealt damage. The formula for determining a character's AC is shown below. Note that characters wearing heavy armor do not add a positive Agility to AC, but do add a negative Agility.

$$AC = 10 + Agility + Armor Bonus + Shield Bonus + Relevant Miscellaneous Modifiers$$

Saving Throws

Generally, when you are subject to an unusual or magical attack, you usually get a saving throw to avoid or reduce the effect. Like an attack roll, a saving throw is a d20 roll plus a bonus based on your level and an attribute. There are three types of Saving Throws: Fortitude, Reflex, and Will.

Fortitude: These saves measure your ability to stand up to physical punishment or attacks against your vitality and health.

$$Fortitude Save Bonus = \frac{1}{2} Character Level + Might$$

Reflex: These saves test your ability to dodge area attacks.

$$Reflex Save Bonus = \frac{1}{2} Character Level + Agility$$

Will: These saves reflect your resistance to mental influence as well as many magical effects.

$$Will Save Bonus = \frac{1}{2} Character Level + Spirit$$

Special Rules for Small Weapons

Fighters, rangers, and rogues may use their Agility instead of their Might when attacking with a small melee weapon.

The Akimbo Fighting Style

Fighters, rangers, and rogues may use a special melee combat style called the Akimbo Fighting Style. While wielding a small melee weapon in each hand, a fighter, ranger, or rogue may choose to gain one extra attack (made with the second weapon) if they take a -2 penalty to all

attack rolls that round. This attack is in addition to any attacks gained from a high attack bonus.

Special Combat Maneuvers

During combat, you can attempt to perform a number of maneuvers that can hinder or even cripple your foe. They are: bull rush, disarm, grapple, overrun, sunder, and trip. Although these maneuvers have vastly different results, they all use a similar mechanic to determine success.

Combat Maneuver Bonus: Each character and creature has a Combat Maneuver Bonus (or **CMB**) that represents its skill at performing combat maneuvers. A creature's **CMB** is determined using the following formula:

$$CMB = Character Level + Might$$

When you attempt to perform a combat maneuver, make an attack roll and add your CMB in place of your normal attack bonus. Add any bonuses you currently have on attack rolls due to spells, feats, and other effects. These bonuses must be applicable to the weapon or attack used to perform the maneuver. The DC of this maneuver is your target's Combat Maneuver Defense. Combat maneuvers are attack rolls, so you must roll for concealment and take any other penalties that would normally apply to an attack roll.

Combat Maneuver Defense: Each character and creature has a Combat Maneuver Defense (or **CMD**) that represents its ability to resist combat maneuvers. A creature's **CMD** is determined using the following formula:

$$CMD = 10 + CMB + Agility$$

Determine Success: If your attack roll equals or exceeds the CMD of the target, your maneuver is a success and has the listed effect. Some maneuvers, such as bull rush, have varying levels of success depending on how much your attack roll exceeds the target's CMD. Rolling a natural 20 while attempting a combat maneuver is always a success (except when attempting to

escape from bonds), while rolling a natural 1 is always a failure.

Bull Rush: A bull rush is a standard action that can be performed while a character is using another standard action to move. It attempts to push an opponent straight back without doing any harm. You can only bull rush an opponent who is no more than twice your size.

When making the attack roll, count bonuses as if you were using an unarmed strike. If your attack is successful, your target is pushed back 5'. For every 5 by which your attack exceeds your opponent's CMD you can push the target back an additional 5 feet. You can move with the target if you wish but you must have the available movement to do so. If your attack fails, your movement ends in front of the target.

Disarm: You can attempt to disarm your opponent in place of any melee attack. Attempting to disarm a foe while unarmed imposes a -4 penalty on the attack.

If your attack is successful, your target drops one item it is carrying of your choice (even if the item is wielded with two hands). If your attack exceeds the CMD of the target by 10 or more, the target drops the items it is carrying in both hands (maximum two items if the target has more than two hands). If your attack fails by 10 or more, you drop the weapon that you were using to attempt the disarm. If you successfully disarm your opponent with an unarmed strike, you may automatically pick up the item dropped.

Grapple: As a standard action, you can attempt to grapple a foe, hindering his combat options. Humanoid creatures without two free hands attempting to grapple a foe take a -4 penalty on the combat maneuver roll.

When making the attack roll, count bonuses as if you were using an unarmed strike. If successful, both you and the target are grappled. If you successfully grapple a creature that is not adjacent to you, move that creature to an adjacent open space (if no space is available, your grapple fails). Although both creatures are

grappled, you can, as the creature that initiated the grapple, release the grapple as a free action, freeing both you and the target. If you do not release the grapple, you must continue to make a check each round, as a standard action, to maintain the hold. If your target does not break the grapple, you get a +5 circumstance bonus on grapple checks made against the same target in subsequent rounds. Once you are grappling an opponent, a successful check allows you to continue grappling the foe, and also allows you to perform one of the following actions (as part of the standard action spent to maintain the grapple).

Move: You can move both yourself and your target up to half your speed. At the end of your movement, you can place your target in any square adjacent to you. If you attempt to place your foe in a hazardous location, such as in a *wall of fire* or over a pit, the target receives a free attempt to break your grapple with a +4 bonus.

Damage: You can inflict damage to your target equal to your unarmed strike, a natural attack, or an attack made with armor spikes or a small or medium weapon (so long as you can wield it in one hand).

Pin: You can pin your opponent to try to tie him up. A pinned creature loses any positive Agility to AC and takes an additional -4 penalty to AC. Despite pinning your opponent, you still only be grappled, but you lose any positive Agility to AC.

Tie Up: If you have your target pinned, otherwise restrained, or unconscious, you can use rope to tie him up. This works like a pin effect, but the DC to escape the bonds is equal to 20 + your Combat Maneuver Bonus (instead of your CMD). The ropes do not need to make a check every round to maintain the pin. If the DC to escape from these bindings is higher than 20 + the target's CMB, the target cannot escape from the bonds, even with a natural 20 on the check. If you are grappling the target (but not pinning him), you can attempt to tie him up in ropes, but doing so requires a combat maneuver check at a -10 penalty.

When You Are Grappled: If you are grappled, you can attempt to break the grapple as a standard action by making a combat maneuver check (DC equal to your opponent's CMD) or Phys + Agility check (with a DC equal to your opponent's CMD). If you succeed, you break the grapple and can act normally. Alternatively, if you succeed, you can become the grappler, grappling the other creature (meaning that the other creature cannot freely release the grapple without making a combat maneuver check, while you can). Instead of attempting to break or reverse the grapple, you can take any action that requires only one hand to perform, such as cast a spell or make an attack with a small or medium weapon against any creature within your reach, including the creature that is grappling you.

Trip: You can attempt to trip your opponent in place of a melee attack. You can only trip an opponent who is no more than twice your size. When making the attack roll, count bonuses as if you were using an unarmed strike. If your attack exceeds the target's CMD, the target is knocked prone. If your attack fails by 10 or more, you are knocked prone instead. If the target has more than two legs, add +2 to the DC of the combat maneuver attack roll for each additional leg it has. Some creatures—such as oozes, creatures without legs, and flying creatures—cannot be tripped.

Other Hazards

Falling: 1d6 damage per full 10', half damage with successful Reflex save (DC = depth fallen in feet).

Spikes: +1 point to falling damage per full 10' fallen, max +10

Poison: Fortitude save to avoid or for half, depending on poison. Effect varies with poison type.

Extreme Heat & Cold: If not wearing suitable protection, Fortitude save once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed check.

Example of Combat

The PCs, Atolycus, Kivon, and Jord, are moving through a dungeon. As they round a corner, the heroes see a pair of Orcs a short ways down the corridor. The Orcs, upon seeing the intruding heroes, draw their weapons.

The DM rules that neither side has surprise, so everyone makes an initiative check by rolling a d20 and adding his Agility. Atolycus rolls 9+4 for an initiative score of 13; Kivon rolls a 10+1 for a score of 11; Jord rolls an 18+1 for a score of 19; and the Orcs roll 2+0 for a score of 2. The initiative order is as follows: Jord first, Atolycus second, Kivon third, and the Orcs last.

Jord, a 1st level Wizard, spend 3 MP to cast a Sleep spell on the Orcs. Since the Orcs are 1 HD creatures, Jord can affect both. Each Orc attempts a Will Save vs. DC 15 (10 + CL 1 + 4 Intellect) to try to resist the spell. The first gets a 17 (18 – 1 Spirit), a success, but the second only get a 9, a failure. The first remains awake, while the other falls asleep.

Atolycus, a 1st level Rogue, throws a dagger at the Orc who's still awake. He makes a Ranged Attack roll and gets 12 (8 + 3 Agility + 1 Level Bonus). Since the Orc's AC is 13, Atolycus misses.

Kivon, a 1st level Fighter, declares that he want to use his Power Attack ability and charges at the Orc that's still awake. He makes a Melee Attack roll and gets 15 (11 + 3 Might + 1 Level Bonus + 1 for being a 1st level Fighter – 1 for Power Attack). Since his roll is higher than the Orc's AC, Kivon scores a hit. He rolls 1d10+6 (Bastard Sword + 3 Might +1 Fighter bonus +1 Power Attack) for damage and gets 12, enough to slay the Orc.

The remaining Orc is asleep, and therefore cannot act. Since all of the PCs' enemies are either slain or incapacitated, combat ends. The PCs decide to tie up the sleeping Orc and interrogate him when it wakes.

Conditions Summary Table

Below is a list of Conditions which a character may be subjected to while out adventuring.

Condition	Effect
Attribute Damaged	Temporarily loss of 1 or more attribute points.
Attribute Drained	Permanently loss of 1 or more attribute points.
Blinded	-2 AC, no positive Agility to AC, Move ½, -4 to Skill checks involving Might or Agility. All checks and activities that rely on vision automatically fail. Blinded characters miss all opponents 50% of the time.
Blown Away	Prone, blown 1d4x10' round, and takes 1d4/10' damage.
Confused	Roll 1d20: 1-2, attack caster; 3-4, act normally; 5-10, babble incoherently; 11-14, flee; 16-20, attack nearest creature.
Cowering	No move, -2 AC, no positive Agility to AC.
Dazed	No Move.
Dazzled	-1 attack, search/spot checks.
Dead	The character's hit points are reduced to -10.
Deafened	-4 Initiative, automatically fail skill checks where hearing is involved.
Disabled	0 HP. Action beyond a ½ move results in Stable condition.
Dying	Losing 1 HP/round until healed or dead.
Energy Drained	Character loses 1 or more levels, along with the HP's, attack bonus, etc. gained with the level.
Entangled	½ move, -2 attack rolls, casting requires DC15 + spells level check or spell lost.
Exhausted	½ move, -3 Might and Agility.
Fascinated	No actions, condition broken if attacked.
Fatigued	No run or charge, -1 Might and Agility.
Frightened	Flees, -2 all rolls.
Grappling	No positive Agility to AC vs. non-grappled attackers.
Helpless	Unable to move, at opponent's mercy, death blows possible.
Incorporeal	Harmed only by other incorporeal creatures, +1 or better magic weapons, spells, or spell-like effects.
Invisible	+2 attack rolls and no positive Agility to AC for target.
Knocked Down	Prone.
Nauseated	Move action only.
Panicked	Drop items in hand, flee, -2 all rolls.
Paralyzed/Petrified	Helpless.
Pinned	Held immobile (but not helpless) in a grapple suffering a -4 penalty to AC.
Prone	-4 attack rolls, +4 AC vs. ranged, -4 AC vs. melee.
Shaken	-2 all rolls.
Sickened	-2 all rolls.
Stable	Unconscious, no longer losing HP.
Stunned	Drops items in hand, -2 AC, no positive Agility to AC.
Turned	Affected by a turn undead attempt. Turned undead flee for 10 rounds (1 minute) by the best and fastest means available to them. If they cannot flee, they cower.
Unconscious	Helpless.

Chapter 7: Magic & Spells

Magic

Bards cast bard spells. A bard's caster level is his class level – 5. The maximum spell level he can cast is ½ his caster level (rounded up) up to 6th-level spells. Bards do not have their own spell list, but instead choose spells from both the Arcane and Divine spell lists. A bard chooses a total of 4 spells per spell level that he is able to cast. These decisions are not final; whenever he gains a new maximum spell level, he may “switch out” one spell for another of equal spell level. Bards cast all their spells at will, and therefore need not prepare them ahead of time. Casting a spell requires a bard to audibly speak an incantation and make specific gestures with his hands. Bucklers and light armor do not affect a bard's ability to cast spells (even if a spell is from the Arcane spell list), however, a bard is unable to cast spells if he is wearing medium or heavy armor or using a shield (other than a buckler). A bard's casting attribute is Spirit.

Clerics cast divine spells. A cleric's caster level is equal to his class level. The maximum spell level a Cleric can cast is ½ his caster level, rounded up (up to 9th-level spells). A Cleric knows all the spells of any spell level he can cast, however the GM may rule that a Cleric cannot cast any spell that is against his deity's ethos. This should be discussed ahead of time, as to avoid any sudden conflict between player and GM. Clerics cast all their spells at will, but must spend one hour each day praying in order to cast them. Casting a spell requires a cleric to audibly speak an incantation and present his holy symbol. Wearing armor or a shield does not affect a Cleric's ability to cast spells. A cleric's casting attribute is Spirit.

Wizards cast arcane spells. A wizard's caster level is equal to his class level. The maximum spell level a wizard can cast is ½ his caster level, rounded up (up to 9th-level spells). A Wizard knows all the spells of any spell level he can cast. Wizards cast all their spells at will, and therefore need not prepare them ahead of time. Casting a

spell requires a wizard to audibly speak an incantation and make specific gestures with his hands. A Wizard is unable to cast spells if he is wearing armor or a shield. A wizard's casting attribute is Intellect.

The Difficulty Class (DC) to resist a spell is 10 + Caster Level + Caster's casting attribute.

Casting any kind of spell costs Mana Points (MP). A caster's total MP = (1d8 + casting attribute) per caster level. The MP cost of casting a spell is 1 + (spell level x 2).

Spell Level	0	1	2	3	4	5	6	7	8	9
MP Cost	1	3	5	7	9	11	13	15	17	19

For each spell level, 1st through 9th, a cleric or wizard chooses one spell to be his signature spell. Signature spells cost 1 MP fewer than normal. A signature spell is chosen as soon as the caster is able to cast that level of spell and the choice is permanent. Bards cast all of their 1st through 6th level spells as signature spells.

Meta-Magics

Using Meta-Magics is a way for spell casters to add a little more variety to their repertoire. Each modifies a spell in a given way, and each doubles the casting time of the spell so modified (most spells become full round actions instead of standard actions, for example).

Also, each requires an additional expenditure of mana points, added to the standard cost of the spell at the time it is cast.

Extending a spell makes it last twice as long as it normally would. An **Extended** spell costs an additional 2MP.

Empowering a spell makes it do 50% more damage than it normally would. An **Empowered** spell costs an additional 4MP.

Widening a spell makes its area of effect twice as big as it would normally be. A **Widened** spell costs an additional 6MP.

Spells

The spells in Challenges & Champions are divided into two lists, arcane and divine and further divided by spell levels. Arcane spells are used by the Wizard Class and divine spells are used by the Cleric Class. Bards choose spells from both lists. Below are explanations of the headings for the spell lists.

Note that the spells listed below are what a wizard or cleric knows automatically upon reaching an appropriate level. This does not mean these are the only spells he may ever know. It is quite possible that he may find a scroll or tomb containing a spell not found on these lists.

Name

The first line of every spell description gives the name by which the spell is generally known.

Reversible Spells

If a spell's name is *italicized*, the spell is reversible. If a spell would normally target yourself and/or allies, heal, grant a bonus, or grant some other positive effect; the reverse instead targets an enemy/enemies, deals damage, grants a penalty, or grants a detrimental effect and vice versa.

Effect and Descriptive Text

This portion of the spell description details what the spell does and how it works. If one of the entries in the description included "see text," this is where the explanation is found. Unless otherwise stated, the term "level" in this section refers to the appropriate class level of the caster.

Range

A spell's range indicates how far from you it can reach, as defined in the Range entry of the spell description. A spell's range is the maximum distance from you that the spell's effect can occur, as well as the maximum distance at which you can designate the spell's point of origin. If any portion of the spell's area would extend beyond this range, that area is wasted. Standard ranges include the following:

Personal: This spell affects only you.

Touch: You must touch a creature or object to affect it. To touch an unwilling target, make a Magic Attack roll against the target's AC. Remember that the target does not include armor, shields, or natural armor when calculating AC vs a Magic Attack. A spell requiring a Magic Attack roll that deals damage can score a critical hit just as a weapon can. Some touch spells allow you to touch multiple targets. You can touch as many willing targets as you can reach as part of the casting, but all targets of the spell must be touched in the same round that you finish casting the spell.

Close: The spell reaches as far as 25' + 5' per 2 full caster levels.

Medium: The spell reaches as far as 100' + 10' per caster level.

Long: The spell reaches as far as 400' + 40' per caster level.

Unlimited: The spell reaches anywhere on the same plane of existence.

Range Expressed in Feet: Some spells have no standard range category, just a range expressed in feet.

Duration

A spell's Duration entry tells you how long the magical energy of the spell lasts.

Timed Durations: Many durations are measured in rounds, minutes, hours, or some other increment. When the time is up, the magic goes away and the spell ends. If a spell's duration is variable the duration is rolled secretly (the caster doesn't know how long the spell will last).

Instantaneous (instant): The spell energy comes and goes the instant the spell is cast, though the consequences might be long-lasting.

Permanent: The energy remains as long as the effect does. This means the spell is vulnerable to dispel magic.

Concentration: The spell lasts as long as you concentrate on it. Concentrating to maintain a spell is a standard action. You can't cast a spell while concentrating on another one. If you take damage while concentrating on a spell, make a Magic Attack roll vs DC = total damage taken. If you fail, you stop concentrating on the spell. Sometimes a spell lasts for a short time after you cease concentrating.

Saving Throw

Usually a harmful spell allows a target to make a saving throw to avoid some or all of the effect. The Saving Throw entry in a spell description defines which type of saving throw the spell allows and describes how saving throws against the spell work.

Negates: The spell has no effect on a subject that makes a successful saving throw.

Partial: The spell causes an effect on its subject. A successful saving throw means that some lesser effect occurs.

Half: The spell deals damage, and a successful saving throw halves the damage taken.

None: No saving throw is allowed.

Disbelief: A successful save lets the subject ignore the effect.

A creature that successfully saves against a spell that has no obvious physical effects feels a hostile force or a tingle, but cannot deduce the exact nature of the attack. Likewise, if a creature's saving throw succeeds against a targeted spell you sense that the spell has failed. You do not sense when creatures succeed on saves against effect and area spells.

A natural 1 (the d20 comes up 1) on a saving throw is always a failure and a natural 20 (the d20 comes up 20) is always a success.

Spell Resistance

Spell Resistance is a special defensive ability. If your spell is being resisted by a creature with spell resistance, you must make a Magic Attack roll (1d20 + caster level + casting attribute) at least equal to the creature's spell resistance for the spell to affect that creature. The defender's spell resistance is like an Armor Class against magical attacks. Include any adjustments to your caster level to this caster level check.

SR: The spell resistance entry tells you whether spell resistance protects creatures from the spell.

Arcane Spells

0-Level Spells

Name	Effect	Range	Duration	Save	SR
Arcane Mark	Inscribes a personal rune (visible or invisible)	0'	Permanent	None	No
Detect Magic	Detects spells and magic items within 60' radius	Personal	Concentration (up to 1 minute/level)	None	No
Light	Object emits light in a 20' radius	Touch	10 minutes /level	None	No
Mage Hand	5-pound telekinesis	Close	Concentration	None	No
Prestidigitation	Performs minor tricks	10'	1 hour	None	No
Read Magic	Read scrolls and spell books	Personal	10 minutes /level	--	--

1st Level Arcane Spells

Name	Effect	Range	Duration	Save	SR
Burning Hands	Deals 1d4/level (max 5d4) fire damage in a 10' radius ½ circle in front of caster	10' radius ½ circle in front of caster	Instantaneous	Reflex half	Yes

Mage Armor	Gives subject +4 armor bonus to AC; counts against Magic Attacks	Touch	1 hour/level	Will negates	Yes
Magic Missile	A missile deals 1d4+1 damage; +1 missile/two levels above 1st (max 5 missiles)	Medium	Instantaneous	None	Yes
Ray of Enfeeblement	Magic Attack reduces Might by 1d3 points +1 point/4 levels	Close	1 minute/level	Fortitude negates	Yes
Sleep	Puts 4 HD of creatures within a 10' radius into a comatose slumber	Medium	1 minute/level	Will negates	Yes

2nd Level Arcane Spells

Name	Effect	Range	Duration	Save	SR
Acid Arrow	Magic Attack deals 2d4 damage each round	Long	1 round +1/three levels	None	Yes
Heroic Ability	Subject gains +2 to one attribute	Touch	1 hour/level	Will negates	Yes
Hideous Laughter	Subject begins laughing and can do nothing else	Close	1d3 rounds	Will negates	Yes
Invisibility	Subject is invisible for duration or until it attacks	Touch	10 minutes /level	Will negates	Yes
Knock	Opens one locked or magically sealed door, box, or chest within a 10'/level radius	Medium	Instantaneous	None	No
Levitate	Willing subject moves up and down at your direction at 20'/round	Close or personal	10 minutes /level	None	No

3rd Level Arcane Spells

Name	Effect	Range	Duration	Save	SR
Dispel Magic	Cancels magical spells and effects (Magic Attack vs DC of each spell or effect)	Medium	Instantaneous	None	No
Fireball	Deals 1d6/level (max 10d6) fire damage in a 20' radius	Long	Instantaneous	Reflex half	Yes
Fly	Subject flies at speed of 90'	Touch	10 minutes /level	None	Yes
Haste	1 creature/level, no two of which can be more than 30' apart, gains 1 extra action and +1 on attack rolls, AC, and Reflex saves	Close	1 round/level	Fortitude negates	Yes
Lightning Bolt	Deals 1d6/level (max 10d6) electrical damage to creatures in a line	120' line from caster	Instantaneous	Reflex half	Yes
Vampiric Touch	Deals 1d6 damage/2 levels; caster gains damage as temporary HP	Touch	Instantaneous; 1 hour	None	Yes

4th Level Arcane Spells

Name	Effect	Range	Duration	Save	SR
Animate Dead	Creates 2 HD/level of undead skeletons or zombies from touched corpses	Touch	Instantaneous	None	No
Arcane Eye	Invisible floating eye moves 30'/round	Unlimited	1 minute/level	None	No
Black Tentacles	Tentacles (Might +10) grapple all within 20' radius, dealing 1d6+4 each round	Medium	1 round/level	None	No
Dimension Door	Teleports you and up to 1 touched creature/3 levels	Long and touch	Instantaneous	Will negates	Yes
Polymorph	Gives one willing subject a new form	Touch	1 minute/level	None	No
Stoneskin	Stops 10 damage/physical attack; discharged after 100 damage is stopped	Touch	10 minutes /level or until discharged	Will negates	Yes

5th Level Arcane Spells

Name	Effect	Range	Duration	Save	SR
Baleful Polymorph	Transforms subject into harmless animal	Close	Permanent	Fortitude negates	Yes
Cloudkill	20' radius cloud Kills 3 HD or less; 4-6 HD save or die; 6+ HD take 1d2 Might damage/round	Medium	1 minute/level	Fortitude - see text	Yes
Contact Other Plane	Ask 1 question/2 levels of an extra planar entity and get one-word answers	Personal	Concentration	--	--
Feeblemind	Subject's Intellect and Spirit scores drop to -5	Medium	Instantaneous	Will negates	Yes
Passwall	Breaches walls 1' thick/level	Close	1 hour/level	None	No
Teleport	Instantly transports you and up to 1 touched creature/3 levels anywhere	Touch and unlimited	Instantaneous	Will negates	Yes

6th Level Arcane Spells

Name	Effect	Range	Duration	Save	SR
Antimagic Field	Suppresses magic within a 10' radius of you	Personal	10 minutes /level	None	Yes
Chain Lightning	Deals 1d6/level damage to primary target, ½ damage to one secondary target/level (each of which must be within 30' of the primary target)	Long	Instantaneous	Reflex half	Yes
Contingency	Sets a trigger condition for another spell	Personal	1 day/level or until discharged	--	--
Disintegrate	Magic Attack deals 2d6 damage/level; if target is brought to 0 HP, it is disintegrated	Medium	Instantaneous	None	Yes
Geas	Commands any creature, binding it to a specific task	Close	1 day/level or until discharged	None	Yes
True Seeing	You see all things as they really are	Touch	1 minute/level	Will negates	Yes

7th Level Arcane Spells

Name	Effect	Range	Duration	Save	SR
Delayed Blast Fireball	Deals 1d6/level in 20' radius; can delay up to 1 round	Long	Instantaneous	Reflex half	Yes
Ethereal Jaunt	You become ethereal	Personal	1 round/level	--	--
Finger of Death	Kills one subject; successful save deals 3d6 damage + 1/level	Close	Instantaneous	Fortitude partial	Yes
Plane Shift	Up to eight linked subjects travel to another plane	Touch	Instantaneous	Will negates	Yes
Power Word Blind	Blinds a creature with 200 HP or less	Close	1d4+1 minutes	None	Yes
Spell Turning	Reflect 1d4+6 spell levels back at caster	Personal	10 minutes /level or until discharged	--	--

8th Level Arcane Spells

Name	Effect	Range	Duration	Save	SR
Clone	Duplicate awakens when original dies	0'	Instantaneous	None	No
Horrid Wilting	Deals 1d6/level damage within 30' radius	Long	Instantaneous	Fortitude half	Yes
Incendiary Cloud	20' radius cloud deals 4d6 fire damage/round	Medium	1 round/level	Reflex half	No
Irresistible Dance	Forces subject to dance	Touch	1d4+1 rounds	None	Yes
Power Word Stun	Stuns a creature with 150 HP or less	Close	2d4 rounds	None	Yes
Trap the Soul	Imprisons subject within gem	Close	Permanent or until gem is destroyed	Will negates	Yes

9th Level Arcane Spells

Name	Effect	Range	Duration	Save	SR
Etherealness	As Ethereal Jaunt plus 1 touched creature/3 levels	Touch	1 minute/level	None	Yes
Gate	Connects two planes for travel, or to summon several creatures with total HD up to your level or 1 creature with HD up to twice your level	Medium	Concentration (travel; up to 1 round /level) or Instantaneous (summoning)	None	No
Meteor Swarm	Four 2' radius spheres each explode in a 40' radius; each deals 8d6 fire damage	Long	Instantaneous	Reflex half	Yes
Power Word Kill	Kills a creature with 100 HP or less	Close	Instantaneous	None	Yes
Soul Bind	Traps newly dead soul to prevent resurrection	Close	Permanent	Will negates	No
Wail of the Banshee	Kills one creature/level within a 40' radius	Close	Instantaneous	Fortitude negates	Yes

Divine Spells

0-Level Divine Spells

Name	Effect	Range	Duration	Save	SR
Create Water	Creates 2 gallons/level of pure water	Close	Instantaneous	None	No
Detect Poison	Detects poison in one creature or object	Close	Instantaneous	None	No
Guidance	+1 on one attack roll, saving throw, or skill check	Touch	1 minute or until discharged	Will Negates	Yes
Light	Object emits light in a 20' radius	Touch	10 minutes /level	None	No
Purify Food & Drink	Purifies 1 cu. ft./level of food or water	10'	Instantaneous	None	No
Resistance	Subject gains +1 on saving throws	Touch	1 minute	Will negates	Yes
Virtue	Subject gains 1 temporary HP	Touch	1 minute	Fortitude negates	Yes

1st Level Divine Spells

Name	Effect	Range	Duration	Save	SR
Bless	You, and allies within range, gain +1 on attack rolls and saves against fear	50'	1 minute/level	None	Yes
Bless Water	Makes holy water	Touch	Instantaneous	None	No
Command	One subject obeys a single, one-word command	Close	1 round	Will negates	Yes
Cure Light Wounds	Cures 1d8 damage +1/level (max +5), damages undead	Touch	Instantaneous	Will half	Yes
Divine Favor	You gain +1 per 3 levels on attack and damage rolls	Personal	1 minute	--	--
Shield of Faith	Subject gains a +2 deflection bonus to AC, +1 per 6 levels	Touch	1 minute/level	Will negates	Yes

2nd Level Divine Spells

Name	Effect	Range	Duration	Save	SR
Aid	+1 on attack rolls and saves against fear, 1d8 temporary HP +1/level (max +10)	Touch	1 minute/level	None	Yes
Cure Moderate Wounds	Cures 2d8 damage +1/level (max +10), damages undead	Touch	Instantaneous	Will half	Yes
Delay Poison	Stops poison from harming subject	Touch	1 hour/level	Fortitude negate	Yes
Gentle Repose	Preserves one corpse	Touch	1 day/level	None	No
Lesser Restoration	Dispels magical attribute penalty or repairs 1d4 attribute damage	Touch	Instantaneous	Will negates	Yes
Remove Paralysis	Frees one or more creatures from paralysis or slow effect	Close	Instantaneous	Will Negates	Yes

3rd Level Divine Spells

Name	Effect	Range	Duration	Save	SR
Create Food & Water	Feeds three humans (or one horse)/level	Close	1 day (Food); Permanent (Water)	None	No
Cure Serious Wounds	Cures 3d8 damage +1/level (max +15), damages undead	Touch	Instantaneous	Will half	Yes
Prayer	You, and allies within 40', gain +1 bonus to attacks, weapon damage, saves, and skills, enemies gain a -1 penalty to such rolls	40'	1 round/level	None	Yes
Remove Disease	Cures all diseases affecting subject	Touch	Instantaneous	Fortitude negates	Yes
Searing Light	Magic Attack deals 1d8/two levels damage (max 5d8), or 1d6/level (max 10d6) vs undead	Medium	Instantaneous	None	Yes
Speak with Dead	Corpse answers one question/two levels	10'	1 minute/level	Will negates	No

4th Level Divine Spells

Name	Effect	Range	Duration	Save	SR
<i>Cure Critical Wounds</i>	Cures 4d8 damage +1/level (max +20), damages undead	Touch	Instantaneous	Will half	Yes
Discern Lies	Reveals deliberate falsehoods from 1 creature/level/round, no two of which can be more than 30' apart	Close	Concentration (max 1 round/level)	Will negates	No
Freedom of Movement	Subject moves normally despite impediments	Touch	10 minutes /level	Will negates	Yes
Neutralize Poison	Immunizes subject against poison, detoxifies venom in or on subject	Touch	10 minutes /level	Will negates	Yes
Restoration	As Lesser Restoration , except that it also dispels negative levels and restores one experience level to a creature who has had a level drained	Touch	Instantaneous	Will negates	Yes
Tongues	Subject can speak and understand any spoken language	Touch	10 minutes /level	Will negates	No

5th Level Divine Spells

Name	Effect	Range	Duration	Save	SR
Atonement	Removes burden of misdeeds from subject	Touch	Instantaneous	None	Yes
Commune	Your deity answers one yes-or-no question/level at a rate of 1/round	Personal	1 round/level	--	--
Flame Strike	Divine fire deals 1d6/level damage within 10' radius, 40' high cylinder	Medium	Instantaneous	Reflex half	Yes
<i>Mass Cure Light Wounds</i>	One creature/level, no two of which can be more than 30' apart, is cured 1d8 damage +1/level (max +25), damages undead	Close	Instantaneous	Will half	Yes
Raise Dead	Restores life to willing subject, most of whose remains are present, who died up to 1 day/level ago	Touch	Instantaneous	None	Yes
True Seeing	You see all things as they really are	Touch	1 minute/level	Will negates	Yes

6th Level Divine Spells

Name	Effect	Range	Duration	Save	SR
Banishment	Banishes one or more extraplanar creature with total 2 HD/level creatures, no two of which can be more than 30' apart	Close	Instantaneous	Will negates	Yes
Blade Barrier	Creates a wall of blades up to 20' long/ level, or a ringed wall of blades with up to 5' radius/2 levels; either form is 20' high	Medium	1 minute/level	Reflex half (or negates if cast on)	Yes
Heal	Cures 10 points/level of damage (max 150), all diseases and mental conditions, or deals damage to undead	Close	Instantaneous	Will half	Yes
Heroes' Feast	1 hour long feast for 1 creature/level cures diseases, sickness, and nausea, and grants poison and fear immunity, 1d8 temporary HP +1/two levels (maximum +10), and +1 to attack rolls and Will saves	Close	1 hour plus 12 hours; see text	None	No
Mass Cure Moderate Wounds	One creature/level, no two of which can be more than 30' apart is cured 2d8 damage +1/level (max +30), damages undead	Close	Instantaneous	Will half	Yes
Quest	Commands any creature, binding it to a specific task	Close	1 day/level or until discharged	None	Yes

7th Level Divine Spells

Name	Effect	Range	Duration	Save	SR
Ethereal Jaunt	You become ethereal	Personal	1 round/level	--	--
Greater Restoration	As Restoration , plus restores all levels and attributes	Touch	Instantaneous	Will negates	Yes
Mass Cure Moderate Wounds	One creature/level, no two of which can be more than 30' apart is cured 3d8 damage +1/level (max +35), damages undead	Close	Instantaneous	Will half	Yes
Regenerate	Subject's severed limbs grow back, cures 4d8 damage +1/level (max +35), doesn't affect nonliving objects or creatures	Touch	Instantaneous	Fortitude negates	Yes
Repulsion	An invisible, mobile field (up to 10' radius/level) surrounds you and prevents creatures from approaching you	Personal	1 round/level	Will negates	Yes
Resurrection	As Raise Dead but requires very little remains and the subject may have been dead for up to 10 years/level	Touch	Instantaneous	None	Yes

8th Level Divine Spells

Name	Effect	Range	Duration	Save	SR
Antimagic Field	Suppresses magic within a 10' radius of you	Personal	10 minutes /level	None	Yes
Dimensional Lock	20' radius emanation, centered on a point in space, blocks teleportation and interplanar travel	Medium	1 day/level	None	Yes
Discern Location	Reveals exact location of a creature or object; to find a creature with the spell, you must have seen the creature or have some item that once belonged to it; to find an object, you must have touched it at least once	Unlimited	Instantaneous	None	No
Fire Storm	Two 10' cubes/level are shot through with flames that deal 1d6/level (max 20d6) of fire damage	Medium	Instantaneous	Reflex half	Yes
Holy Aura	1 creature/level in a 20' radius burst centered on you gains +4 to AC, +4 to saves, immunity to possession and mental influence, and SR 25	20'	1 round/level	None	Yes
Mass Cure Moderate Wounds	One creature/level, no two of which can be more than 30' apart is cured 4d8 damage +1/level (max +40), damages undead	Close	Instantaneous	Will half	Yes

9th Level Divine Spells

Name	Effect	Range	Duration	Save	SR
Etherealness	As Ethereal Jaunt plus 1 touched creature/3 levels	Touch	1 minute/level	None	Yes
Gate	Connects two planes for travel, or to summon several creatures with total HD up to your level or 1 creature with HD up to twice your level	Medium	Concentration (travel; up to 1 round /level) or Instantaneous (summoning)	None	No
Implosion	Kills one corporeal creature/round; cannot target the same creature twice/casting	Close	Concentration (max 4 rounds)	Fortitude negates	Yes
Mass Heal	As Heal but affects 1 or more creatures in ranges, no two of which can be more than 30' apart	Close	Instantaneous	Will half	Yes
Miracle	Requests a deity's intercession, though it may cost EL's	--	--	--	Yes
Soul Bind	Traps newly dead soul to prevent resurrection	Close	Permanent	Will negates	No

Chapter 8: GM's Section

Disease

Diseases have various symptoms and are spread through a number of ways. Several typical diseases are summarized below. The entries for diseases include the following information:

Name of the disease: Type, DC, incubation, damage.

Type: The disease's method of delivery (contact, inhaled, or injury).

DC: The Fortitude save DC needed to prevent infection. Make a Fortitude save after the initial infection; success means you have not been infected, failure means you have been infected and will take attribute damage after the incubation period and every day afterward until you are cured.

Incubation: The time before damage begins.

Damage: The attribute damage the character takes after incubation and each day afterward.

Cackle Fever: Inhaled, DC 16, 1 day, -1d3 Intellect.

Filth Fever: Injury, DC 12, 1d3 days, -1d2 Agility and -1d2 Agility.

Mindfire: Inhaled, DC 12, 1 day, -1d2 Intellect.

Red Ache: Injury, DC 15, 1d3 days, -1d3 Might

Shakes: Contact, DC 13, 1 day, -1d4 Agility.

Extreme Heat & Cold

If not wearing suitable protection, a character must make a Fortitude saving throw once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed save.

Falling

A falling character takes 1d6 points of damage per 10' fallen.

If the character makes a successful Reflex save vs DC = the depth fallen in feet.

In the event that the fall ends in an area laden with spikes or jagged rocks, add +1 point of

damage to falling damage per 10' fallen (max of +10).

Poison

Characters can possibly take damage from a weapon that has been poisoned, be attacked by a creature whose natural attacks feature poison, consume poison hidden in food or drink, or be poisoned in some other way.

Several typical poisons are summarized below. The entries for poisons include the following information:

Name of the poison: Type, DC, damage, price.

Type: The poison's method of delivery (contact, ingested, inhaled, or injury).

DC: The Fortitude save DC needed to avoid the poison's damage.

Damage: Expressed as "xdx/xdx." The first number is the initial damage, taken immediately upon failing the Fortitude save against the poison. The second number is the secondary damage, taken one minute after exposure to the poison if a second Fortitude save is failed. Attribute damage is temporary unless marked with an asterisk(*), in which case the loss is permanent. Unconsciousness lasts 1d3 hours.

Price: The cost for one dose of the poison. It can usually only be obtained through less-than-reputable sources, as the possession of poisons are commonly illegal.

Arsenic: Ingested, DC 13, -1 Might/-1d4 Might, 120gp

Blue Whinnis: Injury, DC 14, -1 Might / unconsciousness, 120gp

Burnt Othur Fumes: Inhaled, DC 18, -1 Might*/-3d3 Might, 2,100gp

Deathblade: Injury, DC 20, -1d3 Might/-2d3 Might, 1,800gp

Insanity Mist: Inhaled, DC 15, -1d2 Intellect/-2d3 Intellect, 1,500gp

Nitharit: Contact, DC 13, 0/-3d3 Might, 650gp

Oil of Taggit: Ingested, DC 15, 0/ unconsciousness, 90gp

Malys Root Paste: Contact, DC 16, -1 Agility/- 2d2 Agility, 500gp

Monstrous Scorpion (tiny): Injury, DC 12, -(1d2-1) Might /-(1d2-1) Might, 50gp

Monstrous Scorpion (small): Injury, DC 12, -1 Might/-1 Might, 100gp

Monstrous Scorpion (large): Injury, DC 14, -1d2 Might/-1d2 Might, 200gp

Monstrous Scorpion (huge): Injury, DC 18, -1d3 Might/-1d3 Might, 400gp

Monstrous Spider (tiny): Injury, DC 10, -1 Might/-1 Might, 85gp

Monstrous Spider (small): Injury, DC 10, -1d2 Might/-1d2 Might, 125gp

Monstrous Spider (large): Injury, DC 13, -1d3 Might/-1d3 Might, 250gp

Monstrous Spider (huge): Injury, DC 16, -1d4 Might/-1d4 Might, 500gp

Sassone Leaf Residue: Contact, DC 16, -2d12HP/-1d4 Might, 300gp

Sleep Poison: Injury, DC 13, unconsciousness/ unconsciousness for 2d4 hours, 75gp

Snake (medium viper): Injury, DC 11, -1d3 Might/-1d3 Might, 120gp

Snake (large viper): Injury, DC 11, -1d3 Might / -1d3 Might, 120gp

Snake (huge viper): Injury, DC 14, -1d3 Might/ -1d3 Might, 250gp

Wyvern: Injury, DC 17, -2d3 Might/-2d3 Might, 3,000gp

Traps

Whether inside a dungeon or a nobleman's manor house, adventurers can often be hurt, or even killed, without ever encountering a monster of any kind, as many dungeons are filled with debilitating or lethal traps set to keep wayward hands off of fantastic treasures.

Several typical traps of varying *Encounter Levels* are summarized below.

The entries for traps include the following information:

Type of trap: Attack (damage), Save DC, Search DC, Disable DC.

Type lists the trap used and the effect it has.

Attack shows the traps attack bonus or type of effect.

Damage shows the amount and type of damage the trap deals.

Save DC lists the Reflex save DC needed to either avoid the trap entirely, or to take only ½ the listed damage (if this is possible).

Search DC lists the DC for the Sub + Intellect check necessary to find the trap without triggering it.

Disable DC lists the DC for the Sub + Agility check necessary to disarm the trap safely. Failing this check by 10 or more triggers the trap.

EL1 Traps

Basic Arrow Trap: Atk +10 (1d6, arrow); Search DC 20, Disable DC 20

Camouflaged Pit Trap: 10 ft. deep (1d6, fall); Save DC 15 to avoid; Search DC 24, Disable DC 20

Poison Dart Trap: Atk +8 (1d4 plus poison, dart); Search DC 20, Disable DC 18

EL2 Traps

Burning Hands Trap: spell effect (1d4, fire); Save DC 11 for ½ damage; Search DC 26, Disable DC 26

Large Net Trap: Atk +5 (—); Save DC 14 to avoid; Search DC 20, Disable DC 25

Pit Trap: 40' deep (4d6, fall); Save DC 20 to avoid; Search DC 20, Disable DC 20

EL3 Traps

Fire Trap: spell effect (1d4+3, fire); Save DC 13 for ½ damage; Search DC 27, Disable DC 27

Pit Trap: 60' deep (6d6, fall); Save DC 20 to avoid; Search DC 20, Disable DC 20

Poisoned Arrow Trap: Atk +12 (1d8 plus poison, arrow); Search DC 19, Disable DC 15.

EL4 Traps

Lightning Bolt Trap: spell effect (5d6, electricity); Save DC 14 for ½ damage; Search DC 28, Disable DC 28

Spiked Pit Trap: 60' deep (6d6, fall), Atk +10 (1d4 each, 1d4 spikes); Save DC 20 to avoid; Search DC 20, Disable DC 20

Wall Scythe Trap: Atk +20 (2d4+8, scythe); Search DC 21, Disable DC 18.

EL5 Traps

Falling Block Trap: Atk +15 (6d6, slam); Search DC 25, Disable DC 17

Fireball Trap: spell effect (1d4+7, fire); Save DC 16 for ½ damage; Search DC 29, Disable DC 29

Poisoned Wall Spikes: Atk +16 (1d8+4 plus poison, spikes); Search DC 17, Disable DC 21

EL6 Traps

Compacting Room Trap: walls move together (12d6, crush); Search DC 20, Disable DC 22

Lightning Bolt Trap: spell effect (10d6, electricity); Save DC 14 for ½ damage; Search DC 28, Disable DC 28

Spiked Pit Trap: 100' deep (10d6, fall), Atk +10 (1d4+5 each, 1d4 spikes); Save DC 20 to avoid; Search DC 20, Disable DC 20

EL7 Traps

Black Tentacles Trap: spell effect (tentacles) Atk +7 (1d6+4 each, 1d4+7 tentacles); Search DC 29, Disable DC 29

Chain Lightning Trap: spell effect (11d6 to nearest target +5d6 each to up to 11 secondary targets, electricity); Save DC 19 for ½ damage; Search DC 31, Disable DC 31

Well-camouflaged Pit Trap: 70 ft. deep (7d6, fall); Save DC 25 to avoid; Search DC 27, Disable DC 18

EL8 Traps

Destruction Trap: spell effect (death); Save DC 20 (Fortitude negates) for 10d6 damage; Search DC 32, Disable DC 32

Power Word Stun Trap: spell effect (stun 2d4 rounds); Search DC 32, Disable DC 32

Well-camouflaged Pit Trap: 100' deep (10d6, fall); Save DC 20 to avoid; Search DC 27, Disable DC 18

EL9 Traps

Dropping Ceiling: ceiling moves down (12d6, crush); Search DC 20, Disable DC 16

Incendiary Cloud Trap: spell effect (4d6/round for 15 rounds, fire); Save DC 22 for ½ damage; Search DC 33, Disable DC 33

Wide-mouthed Spiked Pit with Poisoned Spikes: 70' deep (7d6, fall), Atk +10 (1d4+5 plus poison each, 1d4 spikes); Save DC 20 to avoid; Search DC 20, Disable DC 20

EL10 Traps

Crushing Room: walls move together (16d6, crush); Search DC 22, Disable DC 20

Crushing Wall Trap: Atk automatic (18d6, crush); Search DC 20, Disable DC 25

Energy Drain Trap: Atk +8 (2d4 negative levels for 24 hours); Save DC 23 to avoid; Search DC 34, Disable DC 34

Awarding EL's

When a player character or group of player characters defeat a creature or group of creatures, they should each be awarded a number of EL's equal to the total HD of all the creatures. So if three PC's defeat three 1 HD orcs, each PC gets 3 EL's.

When a PC or group of PC's successfully disable or consciously bypass a trap, they should each be awarded the trap's assigned number of EL's. So if five PC's disable and bypass a 4EL Lightning Bolt trap, they each receive 4 EL's.

1. Definitions: (a) "Contributors" means the copyright and/or trademark owners who have contributed Open Game Content; (b) "Derivative Material" means copyrighted material including derivative works and translations (including into other computer languages), potation, modification, correction, addition, extension, upgrade, improvement, compilation, abridgment or other form in which an existing work may be recast, transformed or adapted; (c) "Distribute" means to reproduce, license, rent, lease, sell, broadcast, publicly display, transmit or otherwise distribute; (d) "Open Game Content" means the game mechanic and includes the methods, procedures, processes and routines to the extent such content does not embody the Product Identity and is an enhancement over the prior art and any additional content clearly identified as Open Game Content by the Contributor, and means any work covered by this License, including translations and derivative works under copyright law, but specifically excludes Product Identity. (e) "Product Identity" means product and product line names, logos and identifying marks including trade dress; artifacts; creatures characters; stories, storylines, plots, thematic elements, dialogue, incidents, language, artwork, symbols, designs, depictions, likenesses, formats, poses, concepts, themes and graphic, photographic and other visual or audio representations; names and descriptions of characters, spells, enchantments, personalities, teams, personas, likenesses and special abilities; places, locations, environments, creatures, equipment, magical or supernatural abilities or effects, logos, symbols, or graphic designs; and any other trademark or registered trademark clearly identified as Product identity by the owner of the Product Identity, and which specifically excludes the Open Game Content; (f) "Trademark" means the logos, names, mark, sign, motto, designs that are used by a Contributor to identify itself or its products or the associated products contributed to the Open Game License by the Contributor (g) "Use", "Used" or "Using" means to use, Distribute, copy, edit, format, modify, translate and otherwise create Derivative Material of Open Game Content. (h) "You" or "Your" means the licensee in terms of this agreement.

2. The License: This License applies to any Open Game Content that contains a notice indicating that the Open Game Content may only be Used under and in terms of this License. You must affix such a notice to any Open Game Content that you Use. No terms may be added to or subtracted from this License except as described by the License itself. No other terms or conditions may be applied to any Open Game Content distributed using this License.

3. Offer and Acceptance: By Using the Open Game Content You indicate Your acceptance of the terms of this License.

4. Grant and Consideration: In consideration for agreeing to use this License, the Contributors grant You a perpetual, worldwide, royalty-free, non-exclusive license with the exact terms of this License to Use, the Open Game Content.

5. Representation of Authority to Contribute: If You are contributing original material as Open Game Content, You represent that Your Contributions are Your original creation and/or You have sufficient rights to grant the rights conveyed by this License.

6. Notice of License Copyright: You must update the COPYRIGHT NOTICE portion of this License to include the exact text of the COPYRIGHT NOTICE of any Open Game Content You are copying, modifying or distributing, and You must add the title, the copyright date, and the copyright holder's name to the COPYRIGHT NOTICE of any original Open Game Content you Distribute.

7. Use of Product Identity: You agree not to Use any Product Identity, including as an indication as to compatibility, except as expressly licensed in another, independent Agreement with the owner of each element of that Product Identity. You agree not to indicate compatibility or co-adaptability with any Trademark or Registered Trademark in conjunction with a work containing Open Game Content except as expressly licensed in another, independent Agreement with the owner of such Trademark or Registered Trademark. The use of any Product Identity in Open Game Content does not constitute a challenge to the ownership of that Product Identity. The owner of any Product Identity used in Open Game Content shall retain all rights, title and interest in and to that Product Identity.

8. Identification: If you distribute Open Game Content You must clearly indicate which portions of the work that you are distributing are Open Game Content.

9. Updating the License: Wizards or its designated Agents may publish updated versions of this License. You may use any authorized version of this License to copy, modify and distribute any Open Game Content originally distributed under any version of this License.

10 Copy of this License: You MUST include a copy of this License with every copy of the Open Game Content You Distribute.

11. Use of Contributor Credits: You may not market or advertise the Open Game Content using the name of any Contributor unless You have written permission from the Contributor to do so.

12 Inability to Comply: If it is impossible for You to comply with any of the terms of this License with respect to some or all of the Open Game Content due to statute, judicial order, or governmental regulation then You may not Use any Open Game Material so affected.

13 Termination: This License will terminate automatically if You fail to comply with all terms herein and fail to cure such breach within 30 days of becoming aware of the breach. All sublicenses shall survive the termination of this License.

14 Reformation: If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable.

MICROLITE 20 ELF LORDS

by Dr Bull

I have observed that there are very few role playing games for children and young adults, so I decided to make M20 Elf Lords. It's a world that captures the flavors of Harry Potter, Narnia, Brothers Grimm and The Hobbit. Please feel free to alter to your taste...

CHARACTER STATS

Strength (STR), Dexterity (DEX), and Mind (MIND). Split 5 stat bonuses between the three stats.

RACES

Dwarves have +1 STR, Elves have +1 MIND, Gnomes have +1 to DEX, Half-Elves have +1 to MIND, Halflings have +1 DEX, Humans have +1 to each skill, Pixies have -1 STR, but have wings.

SKILLS

There are 4 skills : Move, Sneak, Know and Talk. At first level, characters start with 1 rank in each skill, plus 4 ranks to distribute as they please. Skill ranks can also be spent on Words of Power (see below). Skill roll = d20 + Skill Rank + most applicable ability stat.

Fortitude Saves are STR + Level. Reflex Saves are DEX + Level. Will Saves are MIND + Level.

Hit Points = (STR x 2) + 10 + 1d6/Level. If HP reach 0, the individual is dying.

Healing = 2 + STR in Hit Points per day.

Armor Class (AC) = 10 + DEX bonus + Armor bonus.

COMBAT

Roll d20 + DEX bonus for initiative. Everyone can do one thing each turn; move, attack, cast, etc. Melee attack bonus = STR bonus + Level. Missile attack bonus = DEX bonus + Level. Magic attack bonus = MIND + Level. Add attack bonus to d20 roll. If higher than your opponent's Armor Class (AC), it's a hit. Natural 20 is a critical hit, doing maximum damage. Add STR bonus to Melee damage.

MAGIC

Magic is created by speaking of two (or more) Words of Power in the Divine Tongue. Characters can spend 2 skill rank points to learn a single word of power. Spells are cast by combining an Action with a Realm and successfully making a Magical Attack. The DC for the check is dependent on the target DC of the spell. Each spell cast that day increases the DC by +2. Spells that affect inanimate objects are generally permanent. Transformations end over time. Healed damage stays healed. Every 5 (or part) points of success is equal to 1d8 effect. This can take the form of damage, healing or transformation. The effect's damage must overcome the target's hit points in order to force a transformation.

TARGET DC

Self = 10, Willing = 15, Organic Object = 20, Unwilling = 25, Inorganic Object = 30.

ACTIONS:

Augeo = Enhance, Strengthen, Heal, Enlarge, Repair, Sharpen, etc.

Infirmitas = Diminish, Weaken, Damage, Injure, Reduce, Break, Dull, etc.

Defero = Communicate with, Sense, Read, Seek, Inform, Determine, etc.

Tempero = Control, Shape, Hold, Command, Form, Direct, Dictate, etc.

REALMS:

Corpus = body - living body of sentient beings, animals, plants.

Mentis = mind - that which normally inhabits and animates a body.

Animus = spirit - the essence or soul. Animus is difficult and must be learned last.

Navitas = energy - fire, water, air, magic, electricity, etc.

Materia = matter - solid material with no mind - stone, metal, wood, leather, etc.

HAZARDS

Falling: 1d6 damage per 10', half damage on Phys + DEX save. Poison: Phys + STR save to avoid or for half, depending on poison. Extreme Heat & Cold: If not wearing suitable protection, Phys + STR save once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed save.

LEVEL ADVANCEMENT

After 10 encounters (facing a monster, overcoming a difficulty, solving a puzzle, etc.) the character gains a level. Each level adds: +1d6 to Hit Points, +1 to all attack rolls, +1 to all skills (2 of the 4 new skill points can be spent on a magic word, if desired). If the level divides by six (i.e. level 6, 12, 18, etc.) add 1 point to STR, DEX or MIND.

ANIMALS

Bear 8d8+32 (68 HP) AC 15, Claw +13 (1d8+8), Bite +8 (2d8+4)

Crocodile 7d8+28 (59 HP) AC 16, Bite +11 (2d8+12), Tail Slap +11 (1d12+12)

Hawk 1d8 (4 HP) AC 17, Claw +5 (1d4-2)

Horse 3d8+6 (19 HP) AC 13, Hoof +2 (1d4+1)

Octopus 8d8+8 (44 HP) AC 18, Tentacle +10 (1d4+5), Bite +5 (1d8+2)

Rat, Dire 1d8+1 (5 HP) AC 15, Bite +4 (1d4+ disease FORT DC 12)

Shark 3d8+3 (16 HP) AC 15, Bite +4 (1d6+1)

Snake, Boa 11d8+14 (63 hp), AC 15, Bite +13 (1d8+10), Constrict (1d8+10)

Snake, Viper 3d8+6 (19 hp), AC 15, Bite +4 (1d4 plus poison)

Spider, Giant 4d8+4 (22 HP) AC 14, Bite +4 (1d8+3 plus Poison)

Tiger 6d8+18 (45 HP) AC 14, Claw +9 (1d8+6), Bite +4 (2d6+3)

Wolf 2d8+4 (13 HP) AC 14, Bite +3 (1d6+1)

CREATURES

Basilisk 6d10+12 (45 HP) AC 16, Bite +8 (1d8+3) or Petrifying Gaze (Reflex DC 18)

Dragon 12d12+40 (120 HP) AC 21, Bite + 20 (2d6+7) or Breath (10d10, Reflex DC 24)

Elemental 4d8+12 (26 HP) AC 18, Slam +9 (1d6+1), Energy Resistance

Gargoyle 4d8+19 (37 HP) AC 16, DR 5, Claw +6 (1d6+2), Flight

Ghoul 2d12 (13 HP) AC 14, Bite +2 (1d6+1 plus ghoul fever)

Giant 12d8+48 (102 HP) AC 20, Club +16 (2d6+10) or Thrown Rock +8 (2d6+7)

Goblin 1d8+1 (5 HP) AC 15, Weapon +1

Hag 8d8+8 (44 HP) AC 20, Bite +12 (2d6+6) + 5 Magic Words of Power (MA = +11)

Hell Hound 4d8+4 (22 HP) AC 16, Bite +5 (1d8+1 plus 1d6 fire)

Hobgoblin 1d8+2 (7 HP) AC 16, Weapon +2

Nymph 6d6+6 (27 HP) AC 17, Weapon +6 or Stunning Glance (FORT DC 18)

Ogre 4d8+11 (30 HP) AC 16, Club +8 (2d8+7)
Satyr 5d8+5 (27 HP) AC 15, Gore +2 (1d6+1) or Weapon +3
Skeleton 1d12 (6 hp), AC 15, Scimitar +1 (1d6+1) or claw +1 melee (1d4+1)
Vampire 4d12+3 (30 hp), AC 15, Bite +5 (1d6+4 plus 1d6 STR drain, DC 15 v. FORT to resist)
Were-Wolf 3d8+7 (20 HP) AC 17, DR 10/silver, Bite +5 (1d6+3)
Wraith 5d12 (32 HP) AC 15, Incorporeal Touch +5 (-1d6 STR, DC 20 v. FORT to resist)
Treant 7d8+35 (66HP) AC 20, Slam +12 (2d6+9), Animate Trees
Troll 6d8+36 (63 HP) AC 17, Claw +9 (1d6+6), Regenerate 3 HP per round
Unicorn 4d8+20 (42 HP) AC 18, Horn +11 (1d8+8), Protected from Evil

Author's Note and Preface

So... I claim to not be very drawn to rules and systems. But, I've tinkered with a ton of them to represent the DARK•HERITAGE setting over the last few years, including heavily house-ruled d20 D&D, *d20 Modern*, Pathfinder, DARK•HERITAGE HACK (based on Old School Hack), and my so-called Anti-d20 system that was a kind of hybrid of Savage Worlds lite plus The Window. All of this, of course, makes my claim about system indifference seem kind of phony.

But I will point out that mostly I like using d20 style games, because they're so easy, familiar, and there's so much material in print for them that it makes it easy to grab whatever I need and have it available without having to go very far into house-ruling.

That said, there are some things about d20 that I never really have liked, and other things that are not a problem necessarily for me personally, but which I see commonly brought up as complaints. They are only not a problem because I happen to have gamers who accommodate my eccentricities. This is part of the reason that I'm still tempted frequently by the siren song of another system which I hope will match my tastes better than d20 which, let's face it, is really much more complicated than it ever needs to be. I'm not really a fan of the OSR style games either, because they tend to cater to an old-school taste vibe (unsurprisingly.) I could modify an OSR type game into being one that better matched both my tastes and my setting, but... I'm honestly not familiar enough with the OSR games to know which one I should bother starting with. Nor am I curious enough to find out.

But, and this is a big but (I like those, I cannot lie), that doesn't mean that I'm out of alternatives. I've kind of recently (and belatedly) discovered Microlite20, or m20, a system that dramatically streamlines the d20 rule set, *while maintaining near full compatibility with all products released for it!*

Sound too good to be true? Quite frankly, yes, it does. But I'm extremely intrigued nonetheless. And clearly it's working for someone, because there's a lot of variants of it out there, made by folks who want their m20 applied like a template to d20 type games. Quite honestly, it sounds right up my alley. This document is my first attempt at creating a fully complete and operational game using the m20 system, but optimized for play in the DARK•HERITAGE setting. And *then*, I'll want to try it out to see how well it works.

This document would be impossible without the work of the writers of the d20 game, as presented in the System Reference Document (SRD) and the brave businessmen who agreed to apply the Open Source concept to the rules of a roleplaying game. It also is indebted to various other fans and designers who have modified those rules over time, also in the open source space, especially those who have played within the m20 subset of open game rules. While no one has created a game that really fits my needs exactly (hence my writing of this document) there is very little here that is truly scratch-built by me; rather, I've "kit-bashed" existing elements from numerous other games or versions of games, cherry-picking the options that work for my setting, and putting them all together in a new combination.

Introduction

m20 DARK•HERITAGE is a fully complete roleplaying game, ready for you (and a few of your friends or family members) to sit down and play, that is fully compatible with the DARK•HERITAGE fantasy setting, a development of yours truly.

Wait, what? You may ask. What does all that mean? First off, a roleplaying game is a game that is designed to allow you to assume the role of a fictional character, and then, along with an "ensemble cast" of some other characters, undertake adventures and other excitement under the direction of a director, or Game Master. The Game Master, like a director in a movie or play, is in charge of the entire production, and will provide both the environments in which you adventure, as well as many other supporting characters with whom you may interact. It's his responsibility to make sure that there is, in fact, a game to play, and interesting things to do, and to make sure the game is fun and consistent. To do this, he will use the rules presented here and ensure that they are followed (more or less) correctly. He can, of course, modify them if he feels it is necessary to achieve the feel or result that he wants, but this should never be arbitrary, and you as a player probably shouldn't ever be surprised by the fact that he's done so. While I don't favor necessarily a play style that is strict and by the book, I do favor consensus and understanding by everyone involved of what's being done and why at a basic system level. Otherwise, the chance of the game being less than ideal for the players rises dramatically.

However, that's not your responsibility unless you are the Game Master (GM) yourself. More likely, you are a player, and your responsibility is about your character, a so-called Player Character (PC). You determine what this PC does, and how he reacts to things that the GM presents you with, as well as what

other PCs in your gaming group may do. It is also your responsibility to understand the rules sufficiently that you can play your PC without being told how to, ideally—although of course, any self-respecting GM and player group is more than happy to lend a newbie a hand while he figures the game out. This shouldn't be difficult, as the rules for m20 DARK•HERITAGE are relatively brief and simple, by design.

So that's what a roleplaying game is. A fusion of collaborative storytelling, impromptu "acting" via dialogue and in-character choices that you make in behalf of your PC, using a set of rules that use funny-shaped dice and a few other tools to generate a bit of randomness to inject the game with a bit of tension, since there's always a chance that things you attempt to do will fail. Hopefully you recognize that bad things happening to *your character* are not equivalent to bad things happening to *you personally* and come to enjoy the often entertaining antics of PCs who fail dramatically and spectacularly from time to time, but who also achieve interesting and challenging goals. Roleplaying games are one of my favorite hobbies, and one on which I spend a fair bit of resources and intellectual capital.

Many players approach the game with different goals, and different aspects of the game that they enjoy the most. While it's primarily the GM's responsibility to deliver a game that is fun for all players (which means he needs to pay attention to what's working for whom and tailor the experience to fit the needs and expectations of his players) it is also incumbent on all of the players to enable a collaborative and fun experience for all. Don't hog the spotlight, don't insist things be done your way, help the GM out (he's definitely got the most difficult job of the group) and work together. Note that this doesn't mean that your PCs must always work together; sometimes conflict amongst the members of an ensemble cast makes for the most interesting episodes of a movie, TV show or novel, and the same can be true for your game. But be respectful and thoughtful of the other players, and be mature, and things will tend to go well for you and your game.

You may have heard of roleplaying games before. Most likely, if you've discovered this file, it's because you already play them and are looking for a new alternative. If not, there's a really famous fantasy roleplaying game that you've almost certainly heard of. Although I don't believe it to be a violation of the fair use doctrine of trademark law to mention it by name, it's traditional in the industry to side-step around it and avoid doing so, so I will do so as well. This game, and its rules, is heavily based on that famous game, the third (and "third and a half") edition of which was released into the open source domain via the Open Game License (or OGL), included at the end of this document. This system is sometimes called d20 because of the importance of the twenty-sided dice in playing the game. This specific document, however, is more specifically based on a variant to d20 called m20, or Microlite20, which was specifically designed to work basically like d20, but significantly less complicated in scope. This lessened complexity enables the play style that I best enjoy; a bit fast and loose, and focused on more "authorial" concerns rather than focus on rules or tactics.

You are less likely to have heard of DARK•HERITAGE, a fantasy setting of my own devising, however. DARK•HERITAGE's Hollywood pitch goes something like this: "*The Black Company* and *The Godfather* meet spaghetti westerns and *Pirates of the Caribbean*." If the initial pitch sounds intriguing enough, and the Hollywood agent says, "let's do lunch and you can tell me more about this project," then I can start getting a bit more into the details.

DARK•HERITAGE is firmly rooted in the fantasy genre, and has some of the typical fantasy conventions you'd expect, especially if you're a fan of either old school Sword & Sorcery or this newer type of dark fantasy featuring criminals and anti-heroes as protagonists. But it also has a strong vibe of supernatural horror and Yog-Sothothery—magic exists, of course, but it's never a good thing, and kindly or wise wizards are replaced with terrifying and post-human (or human, but who aspire to transcend that state) sorcerers which are thankfully quite rare. Rather than save the world quests to stop the machinations of dark lords, or restore glorious kingdoms, DARK•HERITAGE is often about the skulduggery and intrigue of amoral movers and shakers--corrupt rulers, powerful sorcerers who pull the strings from behind the scenes, organized crime, and nihilistic cultists. Or, more accurately, it's about how Joe Blow fantasy characters (player characters) get caught up in that skulduggery and intrigue, and find their lives buffeted by forces beyond their control, and their attempts to take the reins and successfully navigate through them with their lives and sanity intact. Their motives are rarely altruistic or heroic and their personalities are often cynical, pragmatic or even world-weary. They're like *noir* characters who find themselves in a dark fantasy-horror hybrid setting.

The setting is fairly wild—part Arabian Nights, part Spanish Main, part Crown of Aragon, part Old West, part Lovecraft, part *Clan of the Cave Bear*. But most DARK•HERITAGE adventures will take place in one of three places: out in the wild, that's like Cowboys & Indians type settings except with much more dangerous wildlife all over the place, or the high seas, with Barbary and Spanish Main type pirates, or deep in Spanish or Italian style picaresque cities with thieves guilds, assassins, spies and cultists roaming the streets after dark.

The elements from the previously mentioned famous fantasy game are fairly muted; magic is more Lovecraftian in nature, characters don't become powerful, god-like superheroes, or adventure for experience and profit, and the palette of character options (especially races) is a more sword & sorcery like human and mostly human yet exotic "touched by dark magic of some kind or another" variants. There are no lordly elves, dour dwarves or cozy hobbits here. Villains are like more dangerous versions of the main characters—there are no conveniently cartoon-like always evil races; no orcs, goblins or whatever. No dark lords in the traditional sense.

The setting will not really be enumerated in this document. That said, this system will work well for any setting that features swashbuckling action sprinkled with supernatural in a fantasy setting. And the setting can be further explored in my blog and on my campaign wiki, links listed at the end of this document.

What You Need to Play

You need this book, and its rules. You should have read it all the way through, especially if you're running the game. If there are changes, or "house rules", you should know them and have them with you as well, hopefully spelled out and written down (although if there aren't many and they are simple, you can probably get away without that.) You need a set of funny-shaped dice. These can usually be picked up at most game stores, or online. These dice include a twenty-sided dice, numbered 1 through 20 (and nicknamed a d20), a twelve-sided dice numbered 1 through 12 (a d12), and a d10, a d8, a d6 and a d4. If you buy a complete set, you may also have a d10 that counts by tens. Rolling the two d10s together will give you an effective d100, with a result of 00 and 0 being 100.

You'll also need a character sheet on which to write down the details of your character. One is provided at the end of this book, or you can do just fine writing them down on a piece of notebook paper, a 3x5 index card, as a text file on your smartphone, or numerous other methods. The details aren't extensive, but they are important. If you use "old-fashioned" paper, you'll probably also need a pencil or pen. You may want this anyway to take notes as the game progresses, so you can remember clues that your characters discover, and remember the names of important characters or locations that you've crossed over the course of your adventures.

And finally, you'll need some kind of tokens. Almost anything will do—poker chips, pennies, garbanzo beans, etc. Personally, I prefer plastic pirate gold coins that I picked up at a party favor store. You'll need a good stash—at the beginning of the game, only a couple per player character is sufficient, but as the game advances, you may need more than a dozen per player characters.

Other than that, at the risk of sounding hokey, you just need your imagination, and a willingness to work together and respect the rulings of the GM.

m20 DARK•HERITAGE Characters

Creating a character for an m20 game is a simple step-by-step process. Most of these steps apply to any character, although steps involving magic only involve characters who are capable of using magic, naturally. You might want to refer to the character sheet at the end of this document as you read this so you can follow along with the various elements of an m20 character as I describe them.

1. Header

First off, spell out some of the very basic details of your character at the top of the sheet. What's his name? What does he look like? How old is he? At this early stage of character creation, you probably also want to think about the concept of who your character is, much as an author coming up with a quick and dirty profile of a character he will use in a novel or screenplay. You don't have to come up with a long or detailed backstory (I certainly don't necessarily encourage it, although if you like to do that kind of thing, you certainly can) but these kinds of early thoughts should also lead you towards what the race and class choices you will make are likely to be, as well as getting you to think about how you will assign your stats.

2. Generate Stats.

"Stats" is a short-hand term for three scores that your character will have. These basic scores give a quick, simple and abstract number that quantifies some of your innate traits and capabilities. The three stats are Strength (abbreviated STR), Dexterity (DEX) and Mind (MND.) Your STR score describes how tough and strong you are physically, while your DEX score describes your reflexes, hand-eye coordination,

agility and speed. Your MND score speaks to your intelligence, wisdom, personal magnetism, and other traits that have less to do with your physical body and more to do with your presence or wits.

Stats are, by design, quite generic and abstract, and describe innate traits. Skills, on the other hand, while also fairly generic and abstract, will describe abilities that you have learned, practiced and developed. If the GM decides that there is some inherent risk in a task you have elected to do, he will have you make a "check" to see if you are successful. Most of the time, these checks will consist of rolling a d20, taking the result of that roll, adding to it your Stat bonus and your Skill bonus, and comparing the result to a target number, which by tradition is called a Difficulty Class (DC.) There will be a few exceptions, but that is basically the significance of stats in the game as you play it.

Generating the score of a stat is a little bit convoluted, but the process (and range of numbers) is traditional, and I have elected not to buck tradition here. Roll a d6 four times (4d6) or better yet, roll four of them at once if you have them. Ignore the lowest roll on the four dice. Take the remaining three scores and add them together. This will give you a number from 3 to 18. Write this number down on a piece of scrap paper. Do this again two more times. You will have three scores between 3 and 18, and the average score should be around 10-11. If your average is quite a bit lower than that (lower than about 7 or so), talk to your GM. If you're not whiney about it, he may elect to allow you to reroll them and try for a better score. Some GMs, on the other hand, feel that playing with the hand the dice deal you is part of the fun.

For these scores, higher is better. Assign the scores to your stats as you see fit, to best fit the concept of your character (for example, if you envision your character as a scholarly or quick-witted fellow, put your highest score in MND—if you picture instead a big, athletic bruiser, you probably want to put your highest score in STR.) Next to the box where you put the score is a box for your modifier, or mod. The mod associated with each score is determined by taking your score minus 10, and then dividing the result by 2 and dropping the half (if any.) This means that you should be able to convert your scores, which range from 3 to 18, to mods which range from -4 to +4. The mod is the number that you actually use to make a check, as described above, not the score. The score itself is *mostly* superfluous, but as I said, it's traditional.

In some cases, your stats can take damage from certain attacks or conditions (such as poison, disease, or certain attacks.) If this happens, your stat *score* is reduced by the amount of the attack, and your stat *modifier* is updated to reflect the new score. Stat damage will heal and return to normal at a rate of 2 points of damage removed for every overnight rest taken. If, for example, a character takes 3 points of STR damage after being slipped a poison, one night of overnight rest will restore 2 points to his score, and his modifier will be updated as such. He will have to operate the entirety of the next day with a lingering -1 penalty to his score, but a second night of rest will restore the last point of damage and his STR score will be back to normal on the second day.

If your STR score ever falls to 0, your character dies. If your DEX score ever falls to 0, your character is completely immobile and cannot move at all. If your MND score ever falls to 0, then your character also dies.

3. Pick Race.

Your race refers to a fantasy "species" to which your character belongs. You may be familiar with concepts like orcs, dwarves, elves or hobbits (in addition, of course, to human) that are somewhat common in the fantasy genre. DARK•HERITAGE does not use any of those (except human.) Every race (including human) is at once both a roleplaying hook as well as a mechanical one, since each race will modify some of the other scores on your character sheet, or give you a special ability or two that you can use in game. The following races belong in the DARK•HERITAGE setting:

Humans are the baseline. Everyone knows what a human is, right? They also are the most common race to be found in the DARK•HERITAGE setting. Humans come in a lot of variety but from a game rules perspective, this is all transparent and cosmetic. In the DARK•HERITAGE setting, the following ethnic groups are common, and can be applied to a human character:

- *Terrasans*. Terrasans are Mediterranean types. Give these guys Spanish or Italian like names, olive skin and dark hair and you're good to go.
- *Northlanders*. Northlanders are taller, broader and fairer than the Terrasans. These guys can have Viking or Slavic names.
- *Tarushans*. These mysterious "Gypsies" hail from Tarush Noptii, the kingdom of vampires. Those who leave are often mistrusted by other folks. Hungarian names.
- *Qazmiros*. Qazmiros are from the nation of al-Qazmir, these guys are subjects of the conquering jann, but they often wear their yokes pretty lightly. Arabic or Persian names, *Arabian Nights* like culture.

- *Drylanders*. Either tribesmen or city-dwellers, these are the humans who live in the remnants of the Baal Hamazi Empire. Ascendant after centuries of domination by the hamazin, they are often fierce and proud. Give them ancient Egyptian, Babylonian or Sumerian names, or "Barsoom"-like names.

- *Kurushi*. From the very southwest area of the setting map, these militant, expansionist peoples have a khaganate that would be poised to take over the world... if it weren't a bit out of the way, that is. Tall, rangy, with dark hair, tanned skin, and modest epicanthic folds framing shockingly pale eyes, the Kurushi have names that sound a little bit Japanese, a little bit American Indian.

Humans all gain a +1 to all skill points as a racial ability.

Kemlings, (including hamazin) are human-like, but have, deep in their in their ancestry, some kind of fiendish progenitor. Others are exposed to infernal magic and can become kemlings as such, as well as their descendants. Kemlings come in a variety of forms, most of them are subtly daemonic humanoids. The hamazin are a specific variety of kemling who ruled the Empire of Baal Hamazi. The empire is in decline (some say it has ended) as the various city-states that formerly made it up are all wrangling for influence and control. Is it the end of the Empire, or just a period of inter-dynastic chaos? Who can say? One of the effects of the chaos is that the drylander humans, who made up an oppressed underclass, are ascendant, while the hamazin are wary. Many, in fact, are now expatriates, having fled their homeland for more secure environments elsewhere.

Hamazin have skin color ranging from obsidian black to sooty gray, with dark hair and golden yellow eyes. Small horns adorn their heads—the classic pattern being 4-inch horns making a circle like a crown, but other patterns are common as well. Think of a combination (visually, at least) of Darth Maul and Nightcrawler, and you're on the right track.

Kemlings, including hamazin, gain a +1 to DEX and Night Vision as racial abilities. Night Vision allows the character to see as well in darkness as in regular light, except in absolute darkness as in a cave or the radius of a spell of absolute darkness. There isn't a range increment beyond which it works, but in reality, you can't make out details far away as easily with night vision as you can with normal vision. Think of it as the same kind of green night vision technology used by the military; except they can do it naturally and biologically at any time.

The *jann* are like kemlings in many ways, but their antecedents are not fiendish but rather are ifrit from the fabled City of Brass (or at least, so they claim. There actually is a movement among some academics that sees them as just another variety of kemling.) The jann themselves came from far across the ocean, blown off course many generations ago. Nobody has repeated the feat of crossing the ocean (in either direction) since, but now their vigorous state, the al-Qazmir caliphate, isn't interested in re-assimilating into the big empire from which they came anyway. The jann rule with a loose yoke over native humans, who are now fairly well acculturated to the jann way of life and language. They also have expanded throughout the Mezzovian Sea region, and live in many places in significant numbers, including Porto Liure, Terrasa, and especially Sarabasca. Their numbers compared to the human population of their caliphate are low, but their profile is high.

Jann, like kemlings, gain a +1 to DEX. However, instead of night vision, they gain the Fire Strike ability, a relic of their ifrit heritage, they claim. For all of your damage rolls in *one* battle only per day, jann do an additional 1d6 fire damage, as heat from their otherworldly heritage burns their foes.

Neanderthals are, as you'd probably expect, tough, outdoorsy, shaggy humanoids with a primitive culture who live in a few isolated parts of the setting. A little bit shorter (on average) than humans, but much more robustly built and stronger, Neanderthals interact rarely with the other races, but some do serve as scouts, mercenaries and hirelings for those who need to travel overland, and they also engage in territorial conflict with Kurushi praetorians from time to time. Others live in forests nearer to Terrasa, and some even live in ghettos in Terrasan cities. These urban Neanderthals are viewed as savage and uncouth by their neighbors, but this is nothing compared to their wild brethren, who are effectively obligate carnivores, and who think nothing of hunting and eating regular humans if they come across them. Because of this, many of the forests where they still hold forth are places of very ill-repute, and it is considered dangerous to the point of suicidal to travel therein. Although Neanderthals are, of course, the same as Neanderthals from our world, the label Neanderthal is based on the geography of our world; their first remains having been discovered in the Neander Thal, or Neander river valley. Most commonly, these creatures are referred to as woses (or wood-woses), sasquatches, man-apes, wildmen or wildlings.

Neanderthals gain a +4 to their STR stat and -2 to their MND stat. They also gain as well as a +1 to their Survival skill, and -1 to their Communication skill.

Nephilim are the last race to be discussed here. The word nephilim is both plural and singular. Nephilim have no homeland of their own, since they are so rare. They are the descendants of humans, mixed in with the DNA of fallen angels. They tend to be physically very beautiful—well-formed and even

majestic, with bronzed skin, silver-white hair, and silver-chrome eyes. Their undeniable charisma, presence, and often their eloquent wit and sharp minds mean that nephilim characters gain a +2 to their MND stat.

4. Pick Class.

There are four classes in the DARK•HERITAGE campaign setting. Classes represent a character's profession, if you will. They are adventuring archetypes that are iconic, yet flexible enough to enable a wide variety of interpretations. In some games, you can "multi-class"—that is, take abilities from more than one class per character. In m20, on the other hand, the class benefits are not so great that that is necessary, and any character can be competent across multiple activities, making the need for multiclassing obsolete. Class benefits are relatively modest, and apply immediately at character creation, but do not lock your character into an archetypical strait-jacket from which they cannot evolve or develop as the game unfolds. The four classes are Fighter, Rogue, Outdoorsman and Sorcerer.

- **Fighter:** Can wear any type of armor, and can use any weapon or shield, by training. Fighters add +3 to their Athletics skill, and +1 to all Attack and Damage rolls. This increases to +2 at 5th level, +3 at 10th level.
- **Rogue:** Can wear light armor and use light, medium, or ranged weapons. Rogues add +3 to their Subterfuge skill, and can (usually) make a Sneak Attack by making a successful Subterfuge + DEX roll to add their Subterfuge bonus to their attack and damage at the beginning of a combat. This can only be done when the opponent is unaware of the location of the rogue, and the DC is usually the result of an Awareness + MND check by the opponent. If the rogue is clearly seen before a combat starts, this will obviously be problematic, and the rogue will have to attempt to hide or something and then re-sneak up on the combat to use this ability.
- **Outdoorsman:** Many folks in the DARK•HERITAGE setting make their living in the wilderness. Outdoorsmen can wear light or medium armor and use light, medium, or ranged weapons. An outdoorsman gains +3 to his Survival skill, and gains a +1 to hit with ranged weapons. They can also gain an animal companion of HD 1 or less. At 4th level, they can upgrade this to an animal companion of HD 2 or less, at 8th level to HD 3. (For an explanation of HD, see below in the **Monsters** section of this document.) This animal is not just an extension of the character, and although you can usually tell it to do what you want, occasionally the GM will intercede if you're attempting to have the animal do something unreasonable. Note that this doesn't mean that animals can't display loyalty, including risking their lives for their master.
- **Expert:** Can wear light armor and use light, medium, or ranged weapons. Experts get one Affinity and +3 to their Knowledge skill. An affinity is a broad area of expertise, and any task (subject to GM approval) that falls under the heading of this affinity can be re-rolled if it fails the first time. A number of sample Affinities is listed here: Healing, Craftsmanship, Ride, Investigation, Nobility, Deception, Stealth, Sorcery, Wilderness Survival, Acrobatics. Others could be devised too, but this list already runs the risk of being a bit too specialized—I wouldn't recommend it. At 3rd level, Experts gain another Affinity, and then again at 6th and 9th. Normally, an Expert would take a new Affinity, but if for some reason a player wants to take the same Affinity again (thus giving himself a *second* chance to reroll it) then there's no reason not to let him. He's sacrificing the ability to be more flexible to increase his chance of being successful on something that's obviously very important to him. You will notice that there is no Combat Affinity. You can never use an Affinity to reroll an attack or damage roll. This is true even for spell attack and damage rolls and the Sorcery Affinity. It can be used to reroll the checks to save against Sanity loss (MND damage), or any number of other rolls, but not magical attack or damage rolls. Affinities also can only be used to reroll rolls that the Expert character with the Affinity makes. They cannot be used to force rerolls that another character or the GM makes that affect the character with the affinity.

Note that there is no requirement that all characters be from different classes, or that the group of characters overall form a "balanced party" with at least one of each type of character. It is the GM's responsibility to provide a game that is appropriate for the characters he gets, not one that passively-aggressively penalizes the players for using their inviolable right to control their own characters, or define them (within the constraints of the setting and theme of the game) as they wish.

5. Calculate hit points.

Your maximum hit point score for all characters, regardless of class, is generated by using the STR score (not modifier) plus 1d6 for every level (including first.) The d6 may be rolled twice, and the best result used, discarding the poorer result (nobody likes being stuck with a crooked roll, but if you get a crooked roll twice, the dice have clearly spoken their will.) Hit points indicate how much damage a character can take before being too injured to continue. Your maximum hit points, when uninjured, can never be surpassed, except possibly under the influence of a magical effect (which will usually be temporary.) However, when injured, you will lose hit points. If, for example, your character is hit by a duelist against whom he is fighting and takes 7 points of damage, your current hit points will be reduced to 7 below maximum.

Characters who, for whatever reason, reach 0 hit points or lower, collapse into unconsciousness and shock, and are at risk of dying. Every round his hit point total drops by one. On reaching -10, the character must succeed on a check of his STR + character level, DC 20 *every round* or die. Naturally, it behooves the rest of the group to "stabilize" the character before he is at risk of dying, while he is still unconscious and in shock. Another character can attempt to administer quick and dirty first aid by taking a round, while adjacent to wounded character, and making a MND + Knowledge check, DC 15. This represents very minimal bandaging or other first aid, and will halt the countdown of rounds until a check vs. death is required, the character will be stabilized, and will no longer be at risk of near-term death (unless, of course, he takes *more* damage while unconscious and starts the process over again) but the character will not at this point regain any lost hit points, and he remains unconscious.

When not in combat or other stressful environment, a character can attempt more deliberate medical treatment, or surgical treatment. The character attempting to heal another one makes a MND + Knowledge check (DC 15) and if successful, heals 1d6 + 5 hit points instantly. *NOTE:* This can only be done *once*. You can't perform back to back surgeries and expect to be restored to full hit points instantly. It can be done again if the character takes *new* damage, but otherwise, any remaining missing hit points must be recovered naturally. Natural healing is accomplished by bed rest. While undergoing a full night's rest, characters recover hit points at a rate of their level x 2 every night. If they cannot take the time to completely heal naturally, they can still regain hit points every night, but must operate at less than full hit points during the day until they are able to recover all of their hit points via multiple nights' rest.

In reality, nobody likes to sit around recovering from an injury in what is supposed to be an action-packed and exciting game (my biggest pet peeve with the novel and movie of *Ivanhoe* is that he's lying around hurt for at least half the book, maybe more), so borrowing a convention from action movies everywhere, characters heal much more quickly and thoroughly than in real life, so as to avoid excessive down time.

6. Skills.

Skills are trained or learned specialties, less broad than stats, but still fairly generic. As stated earlier, most tasks that a character will undertake are done by combining the stat bonus that is most applicable and the skill bonus that is most applicable, adding that total to the result of a d20 roll, and comparing it to a target difficulty class (DC). If you match or beat the DC, you are successful, if you do not, you fail the check and the results are determined by the GM. A standard difficulty task has a target of 15, while a more difficult task can be 20, 25 or even higher. There is no "system" for determining DCs, the GM makes one up that he feels is appropriate for the task at hand, accounting for any conditions or factors that might make it easier or more difficult (for example, poor visibility, poor footing, etc.)

In some situations, rather than applying a skill, a level check might be made. In this case, the bonus that you apply is simply the character level. This is done in somewhat unusual situations in which none of the five skills really apply, but generic experience should provide some kind of bonus (a good example is resisting the effects of a magic spell, which is usually a MND + level check.)

Which skill applies in all given situations is impossible to determine in a brief rulebook, so GM interpretation will feature heavily. The five skills are as follows:

- *Athletics* – the ability of the character to perform physical feats, such as running, throwing something, maintaining balance, etc. Most often combined with either STR or DEX in task resolution, depending on which is more applicable.
- *Communication* – the ability of the character to interact with other non-player characters (NPCs) successfully. This could involve giving a rousing speech or debate, the use of diplomacy to

convince someone to give you what you want, or the ability to write a revolutionary pamphlet that will inflame the passion of the populace. Usually combined with MND in task resolution.

- **Knowledge** – the ability of a character to demonstrate esoteric knowledge. This isn't necessarily conferred via formal education, but it does represent how well the character has accumulated facts, techniques and details about the world around him, and how well the character is able to *retain* this information and access it when needed. Usually combined with MND to accomplish a variety of non-physical tasks.
- **Subterfuge** – the ability of the character to operate without another NPC or monster being aware of them and their intentions. While this includes sneaking around quietly (Subterfuge + DEX) it can also include a variety of Subterfuge + MND checks to do things like create a forgery or disguise. A Subterfuge + MND check can also indicate how aware a character is, and if they are able to spot hidden details, or someone else trying to sneak up on them!
- **Survival** – the ability of the character to fend for himself in the environment. This is especially applicable in the wild, where a character may want to do things like track the spoor of something he is hunting, forage for berries and nuts (or other edible plants), build shelter and fires, cover the tracks of his own group so that they're not easily followed, or even interact successfully with potentially dangerous wildlife (i.e., intimidate a lion into not attacking, etc.) This wide variety of tasks means that Survival can be paired with any of the three stats, depending on the situation. Many of these outdoorsy tasks can also be adapted to life in urban environments, of course, as needed, in which case this same skill would still be used.

The character's skill bonus for every skill is equal to his character level + any skill bonus granted by class or race. For example, a 4th level Human fighter would have an Athletics skill of 4 (because he's 4th level) + 1 to all skills as a human racial trait, and +3 as a Fighter class trait, for a +8 total.

7. Sanity.

Sanity is a special application of the MND stat that comes into play because the DARK•HERITAGE setting is as much a horror setting as an adventuring fantasy setting. Sanity checks come into play when your characters are faced by intrusions into your mind or particularly horrible sights or revelations. Sanity also comes into effect when casting spells, since doing so is a perversion of natural law, and the human mind is ill-equipped to use magic.

If your GM requests a Sanity check, roll 1d20. If the result is greater than or equal to your current MND score, you take 1d4 points of damage to your MND score, and roll a d4 plus the amount of MND damage you took, and consult the following table:

Roll	Result
1	Going to be okay, but noticeably shaken up. No mechanical effect.
2	Affected by a -2 to all d20 rolls for 1d6 rounds.
3	Affected as if by a <i>Seeping of Kadath on the Mind</i> spell for 1d6 rounds.
4	Afflicted with hysterical laughter and/or crying. Unable to attack or cast spells for 2d4 rounds.
5	Faints out of shock for 2d6 rounds.
6+	Catatonic with despair. Cannot attack, speak, or cast spells, and must be led around by allies for 1d4 hours.

The main reason that a character would make a Sanity check involves the use of magic, although some extremely unearthly monsters or other unusual circumstances can spark a Sanity check as well.

8. Equipment.

Adventurers live and die by their equipment. Equipment comes in three categories: weapons, armor and other. Weapons and armor have specific qualities that impact the character's performance in combat. Other equipment can be used mostly in ways that are self-explanatory. Weapons and armor can only be used by members of a class that grants training in their use, i.e., a sorcerer will not be able to use heavy armor.

All equipment has a cost. For simplicity, all of the various coins of the various realms in DARK•HERITAGE are simplified to gold pieces (or gp.) Some of the equipment on the **Other** section is really cheap; in those cases you can use silver pieces (sp) or even copper pieces (cp). Each gold piece is worth

ten silver pieces, and each silver piece is worth 10 copper pieces. In terms of current US currency, that makes copper pieces equivalent to pennies, silver pieces equivalent to dimes, and gold pieces equivalent to dollars.

Weapons also have a damage type, which indicates which dice you would roll when determining damage if you hit an opponent with that weapon. Armor has a bonus to Armor Class that it confers. Other equipment has only a cost and occasionally any specific comments on its use that may be necessary to clarify how it works.

Both weapons and armor are simplified into categories, and all armor of a given category behaves identically in terms of game rules. This may be more streamlined than you are used to in other games, but I don't see the value of bogging down what is meant to be a brief document with simple rules with long equipment lists. Some examples of typical varieties of armor or weapons in each category is given, but by and large, you can use any type of weapon you can imagine, and with the buy-in of your GM, you can categorize it as you see fit. All of the game information related to it (cost, damage, etc.) will be unchanged. Some few weapons (such as daggers) can be light weapons or thrown weapons, but the cost and damage should be the same. Any thrown weapons can no longer be used in any given combat unless the character has a chance to retrieve it.

Ranged weapons also have a range listed in their description. Any distance beyond this range is considered long range, and any To Hit rolls will be assessed with a penalty of at least -2 by your GM, depending on how far away it is. Some targets are simply too far away for there to be *any* chance at hitting them, in which case, all attempts to attack automatically fail.

Although characters may find equipment, or be given equipment by patrons or friends, throughout the course of the game, mostly they have to buy what they want. Most of the items listed here are reasonably common and can be assumed that any type of town or city larger than a small farming or fishing hamlet will accommodate the entire list of equipment in some shop or specialist vendor's stall somewhere. As always, the GM may rule that in certain environments this is not the case.

In addition to whatever money a character finds throughout his career as an adventurer, all characters start with 120 + (3d6 x 5) gp with which to equip the character before the game begins. Take a moment as part of creating your character to equip him with whatever gear you feel you need to start.

Some games also feature weight and encumbrance rules. I've elected to ignore that, and assume that you are able to utilize some common sense in terms of what you are able to carry on your person at any given time. There are also no wealth per level guidelines, or anything else like that. It is not a feature of any DARK•HERITAGE game that the acquisition of vast amounts of wealth is likely to be a major goal or activity anyway.

Weapon Type

- *Unarmed* - cost is free, damage is 1d3
- *Light* (daggers, rapiers, etc.) - cost is 5 gp, damage is 1d6
- *Medium* (swords, axes, etc.) - cost is 15 gp, damage is 1d8
- *Heavy* (two-handed swords, two-handed ax, etc.) - cost is 20 gp, damage is 1d10. Cannot use shields with this size weapon, as they typically take both hands to use properly.
- *Thrown* (daggers, tomahawks, etc.) - cost is 5 gp, damage is 1d6. Range is 50 feet (no increments; it's either in range or not.)
- *Ranged* (Bow and arrows, crossbow, etc.) - cost is 40 gp, damage is 1d8. Range is 500 ft. Assume unlimited ammunition (as per most action movies!)
- *Pistol* - cost is 150 gp. Damage is 2d6, range is 100 ft. Must take an entire turn to reload after firing.
- *Rifle* - cost is 200 gp. Damage is 2d8, range is 300 ft. Must take an entire turn to reload after firing.

Armor Type

- *Light* (padded cloth, leather, etc.) - cost is 10 gp, Armor bonus to AC is +2.
- *Medium* (chainmail or breastplate) - cost is 50 gp, Armor bonus to AC is +4
- *Heavy* (full suit of plate armor) - cost is 250 gp, Armor bonus to AC is +6
- *Light shield* (buckler or wooden shield) - cost is 10 gp, Armor bonus to AC is +1
- *Heavy shield* (kite shield or fully metal shield) - cost is 15 gp, Armor bonus to AC is +2

- Waterskin—1 gp

Characters may also buy other goods and services, such as mounts, animals, hirelings, meals, stays at inns, etc. In general, these costs are either relatively ephemeral transactions (drinks, meals, stays at inns) in which case they should be fairly cheap—very rarely even as much as a single gp—or they are unusual and unique (a horse to ride, legal services, a porter to carry your stuff, etc.) in which case they should be “quoted” to you uniquely by the GM rather than spelled out here.

9. Heroism Points.

Heroism points represent a character's determination and their importance to the plans of the gods or the forces of fate (i.e., the game and the GM.) A character gets three heroism points per session to start with. Heroism points can be used to add a +10 to any d20 roll that the character makes. It can also be used as a “healing surge;” to instantly heal 2d6+2 hit points as needed.

When your Heroism points are completely spent, they are gone for the rest of game session. A character's Heroism points are restored to their starting amount at the beginning of a game session. However, the GM may (and should!) decide to give extra “reward” Heroism points to characters who do something particular exciting, interesting, harrowing, or entertaining. These points can be saved to be used later during the session, or spent immediately. Heroism points do not carry over from session to session; they must be used in the session in which they are granted, or they are lost (although the next session will give you a new evening's worth of Heroism points to spend again.)

Heroism points can be noted any way that works for you, but my preference is with counters that are returned to the GM when spent. Any type of counter will work—small paper chits, poker chips, potato chips, pennies, etc. My favorite are plastic pirate coins which I bought at a party favor store for a buck or two. They're cheap, utilitarian and yet evocative at the same time.

Combat.

Combat is the ultimate challenge in most roleplaying games. As such, the rules for it are more involved than the rules for other task resolution scenarios, which typically involve making a check of your stat modifier plus your skill bonus plus a d20 roll, which must meet or beat a target number (DC) to succeed. However, combat does follow a similar pattern. At its heart, a character makes a To Hit roll that is similar to a check, against a target number (AC) and if you meet or beat it, you have hit and may roll damage, which your target must then take. The To Hit roll is usually a STR modifier + character level + any

class modifier + the result of a d20 roll. When using a light weapon you may use your DEX modifier instead of your STR modifier if you choose. When making an attack with a ranged weapon (instead of a close-combat, melee weapon) you *must* use your DEX modifier instead of your STR modifier.

Combatants take turns in initiative order. You determine initiative order by rolling a d20 and adding the DEX modifier to that roll for all combatants. The highest result goes first, and then the second highest, and then the third, etc. until all combatants have had a chance to take a turn. With any ties, the opponent with the highest DEX modifier should go first. For simplified opponents who do not have a listed DEX score, the PC will always go first in the case of a tie. This entire cycle of every opponent taking a turn is called a combat round. In theory, a round lasts a several seconds, and the actions you take during the round are somewhat abstracted (i.e., making an attack roll does not mean one swing of the sword. It includes abstracted back and forth of blows for a few seconds, feinting and trying to find a way past the opponent's guard). On his turn, your opponent may also attempt to attack you. He will make a check vs. his To Hit score against your Armor Class (AC). Your AC is determined by adding 10 + your DEX modifier + your armor bonus + half of your level (rounded down). If, for example, you were playing a 3rd level Outdoorsman, who can use (and owns) medium armor, and had a DEX bonus of +2, your AC would be 10 + 2 (your DEX bonus) + 4 (the armor bonus for wearing medium armor) + 1 (your character level divided by two and rounded down) for a total of 17—a respectable AC that will protect you from the attacks of many opponents.

The To Hit and AC scores for your opponents are not necessarily calculated according to the same scheme as for player characters, as the game rule information for opponents is greatly simplified compared to characters.

If you successfully hit your opponent, you get to roll damage. Damage is determined by the weapon type; for example, a medium weapon does 1d8 damage. Add to this your STR modifier if it is a melee attack, or a ranged attack where your strength would have an impact (such as a thrown weapon attack) but not one in which you attack with a bow or firearm. This is how many hit points worth of damage you have done to your opponent. If your attack brings the current hit point total of your opponent to 0 or lower, then the combatant is in shock and falls unconscious (see the **Hit Points** section for further details). Combatants are not in any way incapacitated after being hit unless their hit point total is 0 or lower. If your roll on a To Hit check is a natural 20, then a successful attack is a critical hit, and automatically does double damage. Do not simply multiply your damage, double your STR modifier, and roll the damage twice (so, for example, a critical hit with a medium weapon would do 2d8 damage rather than simply 1d8.)

While there is no technical limit to what you can do in a combat round, keep in mind that it's only a few seconds long. Your GM may rule that certain combatants are far enough away that you can't reach them in a single round, or that if you're attempting too many things, that you won't be able to do them all and you'll have to cut some back. Rather than specify that you can have one or two (or whatever) actions per round and get into defining what kinds of actions you can do, we'll leave this up to GM interpretation. In many combats, if the group are all standing relatively close, it is assumed that they can move around within the combat area and still attack the foe of their choice. If opponents are specifically trying to protect another combatant (like several fighters blocking access to a sorcerer, for example) then you may have to either sneak past, or fight past any such obstacles. Other obstacles, such as terrain, bushes, fruit carts, etc. that may infringe upon your freedom of movement are similarly up to the GM to adjudicate. He may require using the task resolution system by making checks to do certain things that you attempt.

Sorcerers may wish to cast spells in combat, since that is often their best weapon. Targeting an opponent with a spell works exactly like targeting one with any other kind of attack, although the stat used is not DEX nor STR but MND. However, many spells do not require a targeted attack to be cast—this only applies for spells in which a To Hit roll is required.

Combat continues until all of the combatants on a given "side" are defeated (0 hit points or less), or they have managed to flee the combat, or one side gives up and surrenders. Position in combat is also abstracted, and there is no combat grid, or tactical positioning supported by the rules. The GM should describe the scene, including answering any questions, such that questions of positioning or tactics are clear to all participants (i.e., if you can't reach an opponent in melee because he's behind a wall of protectors, that should be apparent from positioning, so you don't attempt to attack that person with a melee weapon.) Players are also similarly encouraged to find solutions more interesting than "I attack it with my sword." Because the solutions can be anything from, "I swing in to engage the baron on a hanging chandelier," to "I splash a bucket of oil across the floor and set it alight with my torch," it is impossible and in fact undesirable to give too much proscriptive guidance on how to handle these types of situations. GM's are encouraged to use the task resolution system to determine the effects of such actions—pick the appropriate stat modifier,

pick the appropriate skill bonus, and tell the player to make a check. Make a judgment call on the effects of a success or failure, either one.

If a character, NPC or monster attempts to flee a combat, their opponent may let them, or may choose to give chase. To break away from combat and initiate a chase, first the one running away must beat an opposed Athletics + DEX check. If the one running away does not beat the result of the check of the one who is trying to prevent him from running away, he is not able to break away from the combat. If he succeeds, then he runs away, and the pursuer may choose to give chase. If he does, then both opponents make opposed Athletics + DEX checks. Terrain or other hazards may present a situational modifier to the check of one or more of the opponents. For example, if the character running away attempts to knock a pile of barrels into the path of his pursuer, that may create up to a -3 or -4 modifier to the opposed chase roll of his pursuer.

After five rounds of chasing, each combatant must make an Athletics + STR check (DC 15) or become fatigued from all that running. A fatigued character can still make opposed chase rolls, but will suffer a -5 penalty to the roll. If the character is successful on the check, he may continue the chase as normal, but will still have to roll to avoid becoming fatigued every round thereafter. Once a character is fatigued, he will remain fatigued for the remainder of the chase. If the chase ends in combat, a fatigued character will suffer a -2 to all To Hit and Damage rolls as well. The fatigued condition ends when the "action scene" is over and the character has a chance to catch his breath. Other modifiers can apply as well, determined by the GM. For example, if one character manages to mount a willing horse, he will gain a significant bonus (probably +10 or so) to his opposed check.

The chase is over when either the character fleeing manages to get away, or the character pursuing catches up to his opponent and the chase scene becomes, again, a combat scene between the two of them. Normally this will happen when one of the participants in a chase scene "wins" the opposed check by a difference of 10 or more. If the character fleeing beats the pursuer by more than 10, then he manages to break away and escape. If the pursuer, on the other hand, wins, then he has caught up to the one fleeing and the chase becomes a combat, following all of the rules of combat detailed above.

There are a few exceptions to this. If the environment allows, the one being chased might manage to duck into an alley, or into a barrel, or otherwise hide and lose his pursuer by making a Subterfuge + DEX check vs. the pursuer's Subterfuge + MND check. Again; use the Skill + stat task resolution system, interpreting the stated actions by assigning which stat and skill best apply to resolve any other attempted actions. Apply and bonuses or penalties that the situation and environment may suggest. It is not meant that the rules be comprehensive in how to do this, as GM ruling and interpretation is the final arbiter in terms of how to resolve tasks.

Other Hazards.

While entering into combat with deadly weapons is clearly a hazardous endeavor to those involved, adventurers may encounter a number of other situations on a semi-regular basis that may be perilous to their health. By design, this m20 system gives GMs tools with which to make rulings as he best sees fit, but here's a few examples:

- Falling : A character takes 1d6 damage per 10 feet fallen. This can be reduced to half damage with an Athletics + DEX check with a DC equal to the height fallen in feet.
- Spikes : Add +1 point to falling damage per 10 feet fallen, max +10.
- Poison : Make a character level + STR check to avoid or for half, depending on poison. A DC of 15 is a standard poison, while a more potent one may 20, 25, or even more. The effect of the poison varies with poison type. Most do either regular damage (i.e., they attack your hit points as if it was a successful attack) or they attack one of your stat scores. A mild poison that leaves you feeling sick and woozy might do 1d4 STR damage, for instance, while a much more dangerous poison might do 3d8 points of damage.
- Extreme Heat & Cold : If not wearing suitable protection, make a character level + STR check once every 10 minutes of exposure to extreme temperature (DC 15, +1 per previous check), taking 1d6 damage on each failed save. This applies to weather—if you are hit by a fireball, for instance, you will burn no matter what.

Level Advancement.

Characters normally start at 1st^t level, but they may not at the GM's discretion, and in any case, one hopes that characters who survive their adventures get better at having them after a time. One of the fun things about playing after a time is improving your character, which due to legacy and tradition issues is

done through levels. Gaining a level, or leveling up happens at the GM's discretion, based on the pace that he wants the game to have. Personally, I prefer a pace of about 1 level for every 8-10 play sessions.

Each level adds the following to a character: 1) The maximum hit points of the character increases by 1d6. Feel free to roll this number twice and discard the lowest number, as described during character creation. 2) +1 to all To Hit rolls. 3) +1 to all Skill modifiers. In addition, if the level divides by three (i.e. level 3, 6, 9) add 1 point to STR, DEX or MND. Don't forget, if you play a Fighter, you gain +1 to their attack and damage rolls at levels 5 and 10. Experts gain new Affinities at 3rd, 6th and 9th level.

Although there's no reason why you can't go on from a mechanical perspective, this game is not meant to support levels above level 10. On average, at my pace, that's a good 80-100 play sessions or more—about as long as I can stand to run a single campaign and deal with the same character anyway.

Magic.

In DARK•HERITAGE there isn't a spellcasting class--any individual can learn to cast spells. Spells must be "discovered" by the character in order to be used, however, and are usually uncovered in ancient tomes and blasphemous texts. One side effect of this is that GMs have complete control over which spells appear in a game, because characters can't just go out and learn any spell that they want; they can only learn ones that the GM allows them to find. That said, if a player wants to learn spells, or even a specific spell, you should think long and hard about not allowing him to find it with some effort. The concept is one of "just say yes"--GMs tend to run games that players enjoy more if they get to indulge the things that they came to the table hoping to do, after all.

Casting a spell of any kind costs Hit Points, i.e. it physically tires or even damages the spellcaster. The cost is 1 + double the level of the spell being cast. A 5th level spell (the highest normal level in the game) would therefore cause 11 points of damage to the sorcerer upon casting. Casting spells is also damaging to the minds of sorcerers, since it involves breaking the fundamental laws of reality; a task for which the man of mankind is not suited. Upon successfully casting a spell, a sorcerer must also make a MND + character level check, DC 12 + the level of the spell, or take MND damage equal to the level of the spell. This MND damage heals the same as any other type of stat damage, at a rate of 2 per night of rest. Therefore, for a 5th level spell, a sorcerer would need to make a MND + character level check with a DC of 17 or take 5 points of damage to his MND score. Ouch! Keep in mind that certain spells might have secondary MND damage as well--summoning a horrifying daemon causes MND damage as normal to cast the spell, but the sight of the daemon could well be a sanity rending event in its own right.

Any time a sorcerer rolls a natural 1 on this MND damage check, they take double MND damage, and have a 50% chance of attracting the attention of 1d4 hounds of Tindalos who attack them in three rounds.

More than one sorcerer can attempt to cast a spell together, and both the hit point and MND damage cost are spread equally between the casters (although in most cases, the maximum number of sorcerers who can join together this way is three.) Sorcerers can also attempt to channel a portion of the hit point and sanity cost to a sacrifice or proxy. Up to 50% of the cost (rounded down) can be transferred this way if a sacrifice or proxy is included as an element of the ritual. This sacrifice is another character—either a player character, or a GM-run non-player character. The sacrifice makes a MND + level check, DC 15 + the spell level to resist this, although a willing sacrifice can willingly fail this saving throw. If the saving throw is successful, the sacrifice does not take any hit point or sanity damage, and it all reverts to the caster (or casters.) If the sacrifice fails, he takes 50% of both the Sanity and hit point damage and only the remainder is suffered by the caster (or casters.)

Some spells allow the "victim" to make a check to avoid or mitigate the effects of the save. Whenever this happens, the check that the spell victim must make has a DC of 10 + the spell's level + the caster's MND bonus.

The following is a list of tomes, texts, codices and books in which spells may be found. The list is not meant to be exhaustive, and you can follow the same format to create your own. To learn the spells included in such a source, a character must study the book for the length of time indicated and then succeed on MND + Knowledge check of the DC indicated. The character then takes MND (or Sanity) damage as indicated whether or not he is successful. If the check is successful, the character learns the spells that the book contains (the entries that follow give an idea of how many each book should contain) and can add the spells to his character sheet as spells that he can now cast. If the character is unsuccessful, he doesn't learn any spells and must repeat the entire process (although he still pays the Sanity cost.)

The Necronomicon. The most infamous of the blasphemous tomes available. Written by the mad Qazmيران Abdul Alhazred, this book comes in various translations of varying quality and faithfulness to the original.

- Study period: 2d10 weeks

- DC 24
- MND damage 2d6
- Contains 3d4 spells

Nameless Cults. Written by the balshatoi scholar known only by the partial name of von Junzt, this is often called "the Black Book."

- Study period: 2d8 weeks
- DC 23
- MND damage 1d10
- Contains 3d4 spells

The Book of Eibon. Claimed to have been penned by a prehistoric sorcerer from a legendary land that is unidentifiable today, the earliest verified version still available is no more than 600 years old now. This book was never printed, so only hand-copied versions are known.

- Study period: 1d12+1 weeks
- DC 22
- MND damage 2d6
- Contains 2d6 spells

Cultes des Ghoules. Written by the notorious Comte d'Erlette, who was burned at the stake as a heretic in Terrasa, this foul manuscript survives in a few moldy copies here and there, although possession of it is highly illegal.

- Study period: 1d8+2 weeks
- DC 22
- MND damage 2d4
- Contains 1d8 spells

The Eltdown Shards. A questionable translation of mysterious heiroglyphs found on clay fragments near the small town of Eltdown on the borders of Tarush Noptii.

- Study period: 1d8 weeks
- DC 21
- MND damage 2d4
- Contains 1d6 spells

Pnakotic Manuscripts. Also known as the *Book of the Black Prince*, this volume was transcribed by a scholar from Razina named Heironim Castellata. Along with an entire expeditionary group funded by the Academy, he went from Pnakot into the Forbidden Lands. Seven years later, he returned alone and delirious to Pnakot, clutching the book to his chest, written in his own blood. He died shortly after under mysterious circumstances. The Shazada of Pnakot ordered everyone (besides himself) who heard Castellata's last words put to death to ensure they would never plague future generations, yet somehow copies of his book were smuggled out of Pnakot to plague the lands around them for centuries. Only a few copies are rumored to exist still.

- Study period: 2d6 weeks
- DC 23
- MND damage 2d6
- Contains 2d4+1 spells

The following is the list of spells available to sorcerers, sorted by spell level. R: is for the range of the spell and D: is duration. The ranges are quite specific, and lacking detailed combat grids and tactical positioning, they may be much more specific than you need, but they do serve to give a good idea of what to expect the spell to do when viewed through the lens of GM interpretation.

Spells that are in play can be dispelled by a sorcerer by making a MND + level check with a DC of 10 + twice the spell level.

1st Level

Peal of Clanging Woe: Sounds a mental or audible alarm (caster's choice) each time a creature enters the warded area (about the size of a standard bedroom in a house) without speaking the password (set at casting). R: 60 feet. D: 2 hours/caster level.

Cackling Breath of Moloch: A fan of flame shoots from caster's hands, doing 1 hp/caster level damage to all hit. R: 3 feet. D: instant but effects permanent.

Mind Grab of Shaggai: Puts one living humanoid totally under your influence, although it does 1d4 point of MND damage to both the caster and the victim each hour. R: 120 feet. D: until dispelled or the caster releases the spell.

Eye of the Mi-Go: Caster can perceive, in places, people, or things, the presence of a magical spell or enchantment. R: 60 feet. D: 20 minutes.

Cushion of the Shantaks: Target creature or object falls slowly and takes no damage from landing. R: 60 feet. D: 1 minute/caster level.

Banishment of Passing: Holds door/gate shut. R: 10 feet. D: 2d6 x 10 minutes.

Sickly Illumination of Tuma: Embues an object with illumination that lights a circle with about the same radius and brightness as a lantern. R: 120 feet. D: 1 hour+10 min/caster level.

Withering Blast of the Lliogor: Creates a magical attack which automatically hits its target for 1d6+1 damage. R: 150 feet. D: instant.

Voice of the Ghost: Caster points to any creature in range and whispers a short message that the creature (and only that creature) will hear. R: 60 feet + 10/caster level. D: 20 seconds.

Strength of the Gug: One target per caster level instantly recovers 20% of their Hit Points. No effect on targets in combat or other heavy activity. This spell can only affect a specific target once per day. R: touch. D: instant but effects permanent.

Cryptic Circle of Itrito: +2 to AC and checks against mind control, keeps out elementals and enchanted monsters. R: shell around caster. D: 1 hour.

Understanding of Cadazzo: Read any written language. R: touch. D: 1 or 2 readings.

Benevolence of Timar: Repairs a broken or torn small object. It does not restore expended or lost magic. R: 30 feet. D: instant but effects permanent.

Shield of the Angels: Improves caster's armor class by +4 versus thrown weapon attacks and to +2 versus melee attacks. R: caster. D: 20 minutes.

Dormius Major: Puts 4d6 minion or guard type beings into magical slumber. Creatures with more than 4 hit dice are not affected. Range: 240 feet. D: GM's discretion.

Binding of the Poltergeist: Summons an invisible spirit that obeys the caster and is able to perform simple tasks and exert light amounts of force. It cannot attack and is ineffective beyond 30 feet from caster. R: caster. D: 1 hour + 10 minutes/caster level.

False Voice of the Wisp: allows caster to "throw his voice" absolutely convincingly. R: 60 feet. D: 20 minutes.

2nd Level

Light of Kuranos: Like the *sickly illumination of Tuma* spell, but it lasts until dispelled or cancelled. R: 120 feet. D: permanent.

Blight of Alhazred: Magical absolute darkness which even blocks the night vision of kemlings. R: 120 feet. D: 1 hour.

Vision of the Tcho-tcho: Detect invisible items and beings within 10 feet per caster level. D: 1 hour.

Stealth of Selvans: Subject is invisible until spell broken by caster, some outside force, or until subject attacks. R: 240 feet.

Glance of Yog-Sothoth: Unlocks/unbars all locked or magically sealed doors or other door-like barriers. R: 60 feet. D: instant.

Movement of the Byakhee: Caster floats up and down as he desires. Speed: 6 feet/minute. R: 20 feet up/down per level. D: 10 minute/caster level.

Unerring Vision of Istaria: Senses direction toward an object (specific or generic type) D: level minutes. R: 60 + 10/caster level feet.

Voice of Vencança: Mouth appears on a target object and delivers a message of up to 30 words when conditions set by caster are met. R: touch. D: permanent until triggered or dispelled.

Phantasmal Mirage of Gaziyat: Vivid illusions of nearly anything the caster envisions, lasts as long as the caster concentrates. Damage caused is real if target believes illusion. R: 240 feet.

Burning Effects of the Witch: Caster creates either fireworks or blinding smoke from a normal fire. R: 240 feet. D: 1 hour.

Withering From the Haunter: Target is temporarily weakened, and will lose 1d4 from his To Hit and Damage rolls. The target also feels weak and dizzy. R: 10 feet. D: 1 minute/caster level.

Hayaz's Rupturing: Causes one normal item (up to 10 pounds/caster level) to shatter into pieces. R: 60 feet. D: instant but effects permanent.

Grip of the Bloodspawned: Allows the character to cling walls and ceilings and move across them as easily as he can walk. R: touch. D: 1 minute/caster level.

Breath of Cthulhu: Creatures within 20 foot cloud must succeed on a STR + level check or be unable to act for 1d4+1 minutes. Those unaffected must save every round they are within cloud. R: 60 feet. D: 1 minute/caster level.

Power of the Gug's Arms: Adds 1d6+1 to a single character's STR temporarily. Maximum Strength is 21. R: touch D: 8 hours.

Arachnidan detritus: Sticky webs fill a 10x10x20 foot area. Burning through the webs takes 6+1d4 minutes. Large creatures push through in 14+1d6 minutes. Human-sized creatures take 20+3d6 minutes. R: 30 feet. D: 8 hours.

Invocation of the Dweller in the Gate: Locks a door magically. Permanent until dispelled. The *knock* spell opens without dispelling. The caster can pass through without lifting spell, and the door can still be broken open. R: 10 feet.

3rd Level

Perception of the Yith: See and hear events at a distance for 2 hours. R: 60 feet.

Vaktu's Unraveling: Cancels magic effects and spells. (MND + Knowledge vs. the spell's DC for success) Duration: instant but effects permanent for spells or 10 minutes/caster level for items. Range: 120 feet.

Moloch's Word: Deals 1d6 + character level damage when read. D: instantaneous. R: touch

Breath of the Ancient Star: All subjects within a 20 foot burst take 1d6/caster level fire damage. R: 240 feet. D: instant.

Nightgaunt's Mobility: Subject can fly at a speed of 120 feet per minute. R: Touch. D: 1d6 x 10 minutes plus 10 minutes/caster level. (GM rolls secretly.)

Tsatvii's Horror: Subject can run extraordinarily fast. When involved in any chase actions, the subject gains a +7 to the opposed rolls made. R: touch. D: 10 minutes per caster level.

Glance of the Gorgon: Paralyzes a human (or humanoid) target. R: 120 feet. D: 1 hour plus 10 minutes/caster level.

Eyes of Lucifer: See in the dark as per the kempling's night vision racial ability. R: touch. D: 1 day.

Peronte's Smite: 1d6/caster level electrical damage. R: 240 feet, bolt is 10 feet wide, 60 feet long. D: instant.

Invocation of Ahm I: Caster summons monster(s) of a combined hit die of 3 or less (i.e., one 3 HD monster, or three 1 HD monsters, etc.) who appear 10 minutes after casting. They will then serve until slain or the spell expires. D: 60 minutes.

Leaden Limbs of the Gnophkeh: Subject becomes extraordinarily slow. All subjects involved in any chase scene suffer a -5 penalty to opposed chase rolls, and may take longer to accomplish other actions as well. R: 240 feet. D: 30 minutes.

Will of the Shan: Caster makes 1-2 sentence hypnotic suggestion to a target. If the resist check is failed, the target will carry out suggestion for as long as the duration of the spell. Only 1% chance target will obey suggestion that obviously would result in target's death/extreme injury. R: 30 feet. D: 1 week.

Tongue of Cadazzo: Grants the target the ability to speak and understand the language of any intelligent creature. R: touch. D: 10 minutes/caster level.

Dagon's Breath: Subject can breathe water. R: 30 feet. D: 2 hours.

4th Level

Greater Invocation of Shaggai: Makes one monster (or NPC) of 3+ hit dice (or 3d6 monsters of less than 3 hit dice) believe they are the caster's strong ally. May attempt to resist every day or when asked to do something obviously against the being's interest. R: 60 feet.

Seeping of Kadath on the Mind: Subjects (up to 2d6 hit dice) behave oddly/cannot act effectively. Roll 1d4; on a 1, the target attacks the nearest other creature, even if it's an ally, on a 2, the target flees the scene as quickly as he is able, on a 3, the target attempts to harm himself, and on a 4, the target simply babble incoherently. R: 120 feet. D: 2 hours.

Door of Susnacco: Teleports subject a short distance (up to 360 feet). D: instant. R: 10 feet.

Blasphemous Piping of Azathoth: Creates an aura of fear around the caster that extends about 100 ft. Creatures within the aura must resist or flee in horror for 1 hour. R: as above. D: 1 hour of fear.

Summoning of Ithaqua: 30 foot cubic vortex of ice, snow, and hail appears doing 5d6 damage to all within. R: 120 feet. D: 1 minute.

Invocation of Ahm II: Caster summons monster(s) of a combined hit dice of 5 or less (i.e., one 5 HD monster, or five 1 HD monsters, etc.) who appear 10 minutes after casting. They will then serve until slain or the spell expires. D: 60 minutes.

Vaaktuka's Cancerous Growth: Plants in an area up to 30x30 yards become overgrown and nearly impassable. Lasts until dispelled or plants killed. R: 120 feet.

Curse of the Damned Ones: Change the target into the form of another being, both visually and vocally. The change is complete but does not include gaining special abilities or memories of creature. R: 60 feet. D: until dispelled.

Invocation of the Damned Ones: Change yourself into the form of another being, both visually and vocally. The change is complete but does not include gaining special abilities or memories of creature. R: self. D: until dispelled.

Hejaz's Cleansing Touch: Frees subject from a curse. R: touch. D: instant but effects permanent.

Mind-bond of Shaggai: Caster can speak mind-to-mind with any intelligent being he is in eye contact with. R: 30 feet D: 10 minutes plus 1 minute/caster level.

Moloch's Arms: Creates a wall of flame that deals 2d4 fire damage out to 10 ft. and 1d4 out to 20 ft. Passing through the wall deals 2d6 damage +1point/caster level. The wall lasts as long as caster concentrates on it. R: 60 feet.

Ithaqua's Arms: Creates wall of ice with 15 hp +1hp /caster level. Wall lasts as long as caster concentrates on it. R: 60 feet.

5th Level

Vaaktuka's Cancerous Swelling: 1d6 normal animals grow to giant size. R: 120 feet. D: 2 hours.

Command of Naggazz: Create undead skeletons or zombies under control of caster from dead bodies, 1d6 creatures/caster level. R: GM discretion. D: permanent.

Summon the Colour Out of Space: Creates a moving, poisonous cloud of vapor which is deadly to all creatures with less than five hit dice (except those not truly alive, such as elementals, undead or constructs.) 30 feet in diameter, moves with wind or 6 feet per minute. D: 1 hour.

Servant of Nodens: Conjures one 8 HD elemental who will serve the caster until dispelled or dismissed or the caster no longer concentrates. Caster can only summon one of each type in a day. R: 240 feet.

Alhazred's Folly: Lets Caster ask yes/no question of otherworldly entity, 1 question/caster level. The chance of correct answer is 8%/caster level, maximum 80%.

Mindspike of the Mi-Go: Subject's MND score drops to 1. R: 240 feet. D: until dispelled.

Sight of the Gorgon: As *glance of the Gorgon*, but any creature. R: 120 feet. D: 1 hour plus 10 minutes/caster level.

Horcrux of the Great Race: Moves caster's soul to a fixed object from which caster can try to possess others. Target may attempt to resist. R: 30 feet. D: until dispelled, the target makes his save (a new saving throw is allowed every caster level days), or the caster ends spell.

Invocation of Ahm III: Caster summons monster(s) of a combined hit dice of 7 or less (i.e., one 7 HD monster, or seven 1 HD monsters, etc.) who appear 10 minutes after casting. They will then serve until slain or the spell expires. D: 60 minutes.

Burrowing of the Dhole: Creates a human-sized passage up to 10 feet long through a wood or stone wall. R: 30 feet. D: 30 minutes.

The Hand of Nyarlathotep: Moves object by mental power. Up to 50 pounds/caster level. R: 120 feet. D: 1 hour.

Mind Link of the Shan: Caster forms a telepathic connection with up to one other willing intelligent being/3 caster levels. Those so linked can communicate via mental speech regardless of distance. Mental attacks on one member of the link does not affect others. R: touch. D: 1 hour/caster level.

The Gate of Yog-Sothoth: Instantly transports subject up to 100 miles/caster level. Caster must know target location exactly.

Armor of Chernavog: Creates a wall of iron in any shape. 1000 square feet (3 inches thick). R: 60 feet. D: 2 hours.

Flanks of Shug-Niggurath: Creates a wall of stone in any shape. 1000 square feet (2 inches thick). R: 60 feet. D: until destroyed or dispelled.

Ritual Only spells

Ritual spells do not have a normal level, although for purposes of figuring MND damage and DC, they are effectively 7th level spells. Ritual spells cannot be cast during combat, as their casting time is measured in hours (however long the GM needs.) They are usually cast in groups, and often with a sacrifice to absorb MND and physical damage from casting the spell.

Invocation of Kadashman: Summons a powerful outsider or servitor from Outside of existence. The spell provides no protection against the summoned creature, so the magic user should use other spells or items of protection. As the summoned creature is not forced to aid or obey the caster, that is a matter of negotiations and threats between the caster and the fiend. R: 10 feet. D: variable.

Flesh of Shimut: This spell allows a piece of flesh, taken from a living person, to grow into an exact duplicate of the person at the time the flesh was removed. If a clone is created while its parent creature still lives, the clone will seek to kill its original if it becomes aware of his existence.

Amrruk's Fist: Caster can adjust weather. D: GM decision.

Nefererkare's Wrath: Makes one creature or non-magical object vanish, turning it to fine dust. R: 60 feet. D: permanent.

Gullet of Yog-Sothoth: Creates an opening to other dimensions or worlds that can either be used to travel through or can be used to summon a specified, tremendously powerful being from the other plane, including gods and daemon-princes. The caster must know the name of the creature he is attempting to summon, or the spell will fail. There is a 5% chance that the wrong being may be summoned, and (regardless whether the summoned being is the right one or not) there is a 5% chance that it will lack interest in the situation and return through the gate. The summoned being is not necessarily friendly to the caster, and may be extremely annoyed. R: 20 feet. D: 10 minutes.

Mennefer's Curse: Force a creature to obey one long-term order. R: 30 feet. D: until order completed.

The Many-Angled Assassin: Summons an invisible stalker, an extra dimensional monster, under the control of the sorcerer who may give it a single mission which it will carry out until it is finished.

Kefte's Void: Makes the target immune to any form of detection by magic including *the perception of Yith* or any other form of scrying), etc. R: 10 feet. D: 1 day.

Arzana's Shaping of the Earth: Move small hills, dig ditches and moats, other surface features, etc. Land moves at 6 feet per minute. R: 240 feet. D: permanent.

Path of Dagon: Parts bodies of water up to 10 feet deep. R: 240 feet. D: 1 hour.

Denial of Azathoth's Entropy: This spell makes the effect of another spell permanent -- unless a sorcerer of twice the caster's level dispels it. No more than one permanency is ordinarily possible on any one object, and no more than two upon a creature. GM discretion required: many spells should not be subject to being made permanent. R: 10 feet.

Susnacco's Secret Passage: Creates an invisible door that can only be opened by the caster. Similar to a *burrowing of the dhole* but invisible and only the caster can open the door. R: 10 feet. D: 7 uses

Change of Culsans: Spell allows any object to be turned into another object, animal, vegetable, or mineral. The degree of change will affect the spell's duration. Animal-to-animal changes, vegetable-to-vegetable changes, and mineral-to mineral changes are all likely to remain permanent until dispelled. Thus, turning a human into a jann, or turning a wall into a pile of sand, would both result in a permanent change. On the other hand, turning a shrub into a thinking human being would last only a small number of turns. R: 240 feet. D: GM decides.

Taraam's Theft of the Soul: Restores dead person to life in a random (usually humanoid) form. R: touch. D: instant.

Huudrazai's Names: Creates a magical trap in the shape of an arcane symbol. The rune's magic is activated when any person or creature hostile to the caster reads it, or passes over, under, or past it.

Various different runes are known, and others may be possible:

- Symbol of Death: Deals 80 hit points of damage
- Symbol of Discord: Causes all creatures in the hostile group to begin arguing, and possibly fighting amongst themselves with lethal intent.
- Symbol of Fear: Casts a Fear spell.
- Symbol of Insanity: Up to 100 HD of creatures are driven insane by a curse.
- Symbol of Sleep: Casts a Sleep spell affecting double the normal number of creatures and with double the normal duration.
- Symbol of Stunning: 150 hit dice (HD) of creatures are completely stunned (unable to act) for 1d4 hours.

Monsters.

Monsters are any creatures that serve as opponents to the PCs (although some spells may summon them as allies on occasion.) Monsters have a very limited of information provided in terms of game data. This is deliberate to keep this section from ballooning out of control (in the famous game on which this document is loosely based, it forms an entire 300+ page book, which then spawned more than half a dozen spin-offs or sequels, not to mention tons of third party alternatives.) Rather than trying to post a "complete" list of monsters, this is a reasonably robust list, and can be expanded upon with a minimum of effort as needed. Most likely, I'll eventually add other supplemental guys to this from time to time anyway.

The following rules are also necessary to understand how to read the monster entries and use them effectively. First, all creatures have a bonus to all skills equal to their number of Hit Dice (HD), which is effectively equivalent to their level in most respects. Add stat bonuses to suit if needed and as logic dictates. Secondly, if you need a tougher version of a monster, for whatever reason, you can add more hit dice. Each additional HD adds one to their skill and combat bonuses. Thirdly, you can create your own monsters as needed as well. Assign HD (d8 for most things, d12 for dragons or undead). Attack bonus and skill level is equal to the number of hit dice. Create an AC that is sensible giving the size and toughness (or quickness) of the creature. Add stat bonuses to suit.

To read the entries, AC is Armor Class, HD is Hit Dice, AT is attacks, and S is special abilities. Undead creatures are immune to the *sleep*, *charm* and *fear* spells. All monsters that have the ability to cast spells do so without needing to make a Sanity check, and they never suffer the risk of MND damage. The effective caster level for spell DCs is equal to the monster's HD.

ANGEL: AC: 25 HD: 20d8 (100 hp) AT: 2 weapon + 20 (2d8), S: Immune to all spells less than 5th level, Cast spells up to 5th level with no risk of MND damage, teleport at will, special powers as granted by patron deity.

BOAR, WILD: AC: 12 HD: 3d8 (15 hp) AT: gore +3 (3d4) S: attacks for 2 rounds after death.

BYAKHEE: AC: 15, HD: 4d8 (20 hp) AT: Talons +4 (1d8) or Bite +4 (1d4), S: Flies, can carry medium creatures, telepathic.

DARK YOUNG OF SHUB-NIGGURATH: AC: 12, HD: 8d8 (45 hp) AT: 4 tentacles +8 (2d4) or trample +8 (4d8) S: On successful tentacle attack automatic 1d3 damage every round thereafter until either victim or Dark Young is dead.

DAEMON, BAAL-ROG: AC: 17 HD: 10d8 (40 hp) AT: sword or flaming whip +10 (2d6) S: flies, flaming (3d6 damage to all in contact), 75% that spells cast at the Baal-Rog have no effect, immune to non-silver weapons. Casts spells up to 4th level with no risk of MND damage.

DAEMON, SERVITOR: AC: 17 HD: 3d6 (12 hp) AT: claws +3 (1d6) S: regenerate 1 HP/minute.

DAEMON, SUCCUBUS: AC: 10 HD: 6d6 (24 hp) AT: claws +6 (1d6) or kiss (2d4 STR damage per round) S: immune to non-silver weapons, 70% that spells cast at the succubus have no effect, casts spells as a up to 2nd level with no MND damage risk.

DEEP ONE: AC: 14, HD: 2d8 (10 hp) AT: Spear +2 (1d8), S: Swims, Attacks that miss by 2 or less start a grapple thanks to sticky slime coating, 1 in six chance to act randomly as if under the effects of a *seeping of Kadath on the mind*, -1 to attacks in bright light.

ELEMENTAL, AIR: AC: 19 HD: 12d6 (48 hp) AT: slam +12 (2d6) S: can cause a whirlwind that makes movement impossible and carries away lighter objects, extra damage against foes in the air (1d6)

ELEMENTAL, EARTH: AC: 19 HD: 12d6 (48 hp) AT: slam +12 (2d6) S: can cause stone to disintegrate into sand at a rapid rate (2 rounds to create a hole large enough to pass through), extra damage against foes standing on the ground (1d6).

ELEMENTAL, FIRE: AC: 19 HD: 12d6 (48 hp) AT: slam +12 (2d6) S: all characters hit by fire elemental must make a DEX + Athletics check (DC 15) or be set on fire, which deals an additional 1d6 damage each round. Flammable materials can be set alight by the elemental at will on contact.

ELEMENTAL, WATER: AC: 19 HD: 12d6 (48 hp) AT: slam +12 (2d6) S: overturn boats, extra damage against swimming foes (1d6).

FURY: AC: 13 HD: 6d8 (30 hp) Attack: Sword +6 (1d6+poison) or Lasso +6, S: Flies, Knockout poison on sword causes characters to fall immediately unconscious if they fail a STR + level check (DC 13), 30% spells cast at the Fury fail, Furies can see invisible characters or objects at will, can cast up to 2nd level spells with no risk of MND damage.

GARGOYLE: AC: 14 HD: 4d6 (16 hp) AT: claws or bite +4 (1d6), horns +4 (1d6) S: fly, ignores the first 2 points of damage from all attacks.

GHOUL: AC: 13 HD: 2d6 (8 hp) AT: claws or bite +2 (1d6) S: touch paralyzes, humans wounded by ghouls are cursed if they fail a MND + level check (DC 10) and will slowly turn into ghouls themselves. This process involves taking 1 point of MND damage every day (which does not heal overnight) until they reach 0, at which point the conversion is complete. GM may provide antidote/remedy to counter this curse.

GUG: AC: 15, HD: 10d8 (50 hp) AT: 4 claws +10 (2d6) or bite +10 (1d8)

HELL HOUND: AC: 15 HD: 5d6 (20 hp) AT: bite +5 (1d6) S: breathe fire (10 HP damage)

HORSE, RIDING: AC: 12 HD: 2d6 (8 hp) AT: bite or kick +2 (1d6)

HORSE, WAR: AC: 12 HD: 3d6 (12 hp) AT: bite +3 (1d6) or kick +3 (2d6)

HOUND OF TINDALOS: AC: 15, HD: 4d8 (20 hp) AT: Tongue +4 (special), S: Teleport through time and space to any sharp angle, tongue attack causes curse that does 1d4 damage to all stats.

HUMAN, BANDIT/SOLDIER: AC: 12 HD: 1d6 (4 hp) AT: weapon +1 (1d6)

HUMAN, COMMON MAN: AC: 11 HD: 1d6-2 (2 hp) AT: weapon +0 (1d6)

HUMAN, SERGEANT-AT-ARMS: AC: 14 HD: 3d6 (12 hp) AT: weapon +3 (1d6)

HYENA: AC: 12 HD: 2d6 (8 hp) AT: bite +2 (1d6)

IFRIT: AC: 16 HD: 10d6 (40 hp) AT: slam +10 (2d6) S: flies, can turn invisible, immune to silver weapons, and can cast any fire-related spell with no risk of MND damage.

IMP: AC: 18, HD: 2d8 (10 hp) (AT: Tail sting +2 (1d4), S: flies, poison causes paralysis and loss of 1 HP per minute, can assume the form of a specific kind of vermin, can ask 3 questions of demon lords per week and receive correct answer

INVISIBLE STALKER: AC: 16 HD: 8d6 (32 hp) AT: 1 bite +8 (1d6) S: flies, invisible.

LICH: AC: 20 HD: 12d6 (48 hp) AT: touch +HD (1d6) S: undead immunities, touch causes paralysis (no save), cause fear in creatures under 4th level/HD, can cast spells up to 5th level with no risk of MND damage.

LION: AC: 13 HD: 4d8 (20 hp) AT: bite +4 (2d6), claws +4 (2d8)

MUMMY: AC: 16 HD: 6d6 (24 hp) AT: touch +6 (1d6) S: undead immunities, hit only by silver (for half damage), spells, and fire.

NIGHTGAUNT: AC: 15, HD: 4d8 (20 hp) AT: Squeeze +4 (Special), S: Flies, tail caress while being squeezed renders most creatures helpless to react, can cast *Leaden Limbs of the Gnphkeh* spell

RAT, GIANT: AC: 12 HD: 1d6 (4 hp) AT: bite +1 (1d3) S: 25% chance of disease from bite--must succeed on DC 12 STR + level check or take 1d4 DEX damage in 1 day, and 1d4 STR damage in 2 days.

SEA SERPENT: AC: 17 HD: 15d6 (75 hp) AT: bite +15 (4d6) S: swallows whole on roll 4 higher than needed to hit, swallowed creatures take 1d6 automatic damage every turn. Swallowed characters, if they can deal 30 points of damage with a light weapon before dying, can escape.

SHOGGOTH: AC: 5, HD: 12d8 (60 hp) AT: Slam +12 (1d8), S: Immune to critical hits and poison, regenerate 3 HP/round, half damage from fire, cold, electricity, and bludgeoning attacks, amphibious, can imitate any creature's physical structures.

SKELETON: AC: 12 HD: 1d6 (4 hp) AT: weapon or strike +1 (1d6) S: undead immunities, only takes half damage from arrows or bullets.

SNAKE, CONSTRUCTOR: AC: 14 HD: 2d6 (8 hp) AT: constriction (1d3) S: On successful attack, automatic 1d3 damage thereafter until dead.

SNAKE, VIPER: AC: 14 HD: 1d6 (4 hp) AT: bite +1 (1hp + poison) S: Poison bite (DC 14 1d6 STR damage, in one minute another 1d6 STR damage.)

SWARM, BATS: AC: 12, HD: 4d8 (20 hp) AT: 4 bites (1d8), S: Attacks made against the swarm are made at -2 and have a 50% chance of hitting random adjacent creature, flies

SWARM, INSECTS: AC: 13, HD: 3d8 (15 hp) AT: 3 bite (1d3) (double against no armor), S: Unaffected by weapons, may or may not fly, may or may not have poison causing paralysis

SWARM, RATS: AC: 12, HD: 4d8 (20 hp) AT: 1 bite +HD (1d8), S: Attacks made against the swarm are made at -2, bite has 5% chance of causing disease (see RAT, GIANT)

VAMPIRE: AC: 17 HD: 9d6 (36 hp) AT: bite +9 (1d6) S: undead immunities, hit takes half damage from non-silver weapons, regenerate 3 hp per round, on a successful hit (MND + level to resist, DC 19) does 1d4 STR damage, gaseous form at will, shape change into bat, can hypnotize (MND + level check, DC 19), avoids garlic and mirrors, summons bats or wolves, immobilized and apparently dead if a stake is driven through its heart, drowns under water in one round, creatures reduced to 0 STR die and will rise 24 hours later as a vampire under the control of their creator.

WIGHT: AC: 14 HD: 3d6 (12 hp) AT: claw +3 (1d6) S: undead immunities, takes only half damage from non-magical or non-silver weapons, does 1d3 STR damage per hit (MND + level check to avoid, DC 14), creatures reduced to 0 STR will rise 24 hours later as a wight.

WOLF: AC: 12 HD: 2d6 (8 hp) AT: bite +2 (1d6)

WRAITH: AC: 16 HD: 4d6 (16 hp) AT: touch +4 (1d6) S: undead immunities, only hit by magic or silver weapons, arrows do a max 1 HP damage, drains 1d3 DEX on touch, creatures reduced to 0 DEX are immobile and helpless for *coup de grace* attack by wraith that kills them.

NOTES

Player Name: _____

M20 – RESIDENT EVIL by Eric Bullis

STATS

There are 3 character Statistics: Strength (STR), Dexterity (DEX) and Mind (MIND). Heroic characters get a total of 6 STAT bonuses to their Stats (normal people get 4 stat bonuses). +4 is the human maximum for any STAT. A well-rounded character would be STR 2, DEX 2, MIND 2.

SKILLS

Normal people start at 0 level and begin with 4 skill points to distribute. Player Characters start at 1st level and have 8 skill points to distribute (with a minimum of 1 in each skill). Each time a character gains a level, he or she adds 4 points to skills (with a maximum of 4 + Level in any single skill).

The 4 Skills = Physical (PHYS), Subterfuge (SUBT), Knowledge (KNOW) and Communication (COMM).

Roll d20 + SKILL + STAT or higher than the given Difficulty Class (DC) to succeed.

DC 10 = easy, DC 15 = somewhat difficult, DC 20 = difficult, DC 25 = exceedingly difficult, etc.

Climbing or Swimming	=	STR	+	PHYS
Dodging or Tumbling	=	DEX	+	PHYS
Hiding or Sneaking	=	DEX	+	SUBT
Detecting Lies or Traps	=	MIND	+	SUBT
Computer Use	=	MIND	+	COMM
Diplomacy or Bluffing	=	MIND	+	COMM

SAVING THROWS & HIT POINTS

Use STR + PHYS for FORTITUDE saves, DEX + PHYS for REFLEX saves, and MIND + Level for WILL saves.

Hit Points = (STR bonus x 2) + 10 + 1d6/Level. If HP reach 0, the character is unconscious and near death. Characters heal 2+STR in HP per day.

COMBAT

Roll d20 + DEX bonus for initiative order. Everyone can do one thing each turn (run, attack, load a gun, use diplomacy, etc.) The only “free actions” are drawing a handy weapon or speaking.

Melee attack bonus	=	STR + Level
Missile attack bonus	=	DEX + Level

Add attack bonus to d20 roll. If roll is higher than opponent's Armor Class (AC), it's a hit. A natural 20 is automatically a critical doing maximum damage. If the total bonus is +6 or more a second attack can be made with a -5 penalty. Add STR bonus to melee damage. Using a Called Shot (to the head) is frequently required. Called shots suffer a -4 attack penalty.

WEAPONS

Unarmed = 1d2, Dagger = 1d4, Light Weapons = 1d6, Medium Weapons = 1d8, and Heavy Weapons = 1d10. **Firearms:** Small Caliber Pistols = 1d10, Large Caliber Pistols = 2d8, Shotguns = 3d6/2d6/1d6 (depending upon range), Rifles = 2d10, Submachine Guns = 2d8 (burst and/or auto-fire). **Burst Fire:** a burst directed at a single opponent takes a -4 penalty to hit, but success results in a doubling of damage. **Auto-fire:** an automatic weapon can spray a 10'x10' area with bullets. The attack must hit AC 15. If successful, anyone in the area must make a DEX check (DC 15) or be hit.

EXPLOSIVES

Fragmentation Grenades = 3d6 (20' radius), Dynamite = 4d6, +1d6 for each additional stick, (10' radius + 1' per additional stick), Plastic Explosive (C4) = 6d6 (15' radius), Pipe Bomb = 3d6 (15' radius).

ARMOR

Light = +2 AC, Medium = +4 AC, Heavy = +6 AC, Shield = +2 AC.

Armor Class (AC) = 10 + DEX Bonus + Armor Bonus.

HAZARDS

Falling: 1d6 damage per 10', half damage on REFLEX save. DC = depth fallen in feet.

Poison: FORTITUDE save to avoid or for half, depending on poison.

Extreme Heat & Cold: Take 1d6 damage on each failed (FORT DC 15) save, per 10 minutes.

LEVEL ADVANCEMENT

Add up the Encounter Levels (Hit Dice of Enemy or Difficulty of Encounter). When the total = 10 x character's current level, they've advanced to the next level. Reset the total to 0 after advancing. Upon gaining a level, the characters add +1d6 to Hit Points, +1 to attacks, and +1 to all Skills.

ENEMIES

Many enemies are infected with the T-Virus and have attacks that can spread the infection. Please note that mutated enemies do not follow the same guidelines utilized in character generation.

CEREBERUS	(Zombie Dog) 3 rd Level (20 HP), AC 15, Infectious Bite +4 (1d6) STR 1, DEX 2, MIND 0, PHYS 4, SUBT 4.
EXECUTIVE	(Umbrella Corporation) 1 st Level (14 HP), AC 12, Handgun +2 (1d10) STR 1, DEX 1, MIND 2, PHYS 1, SUBT 2, KNOW 3, COMM 2.
LICKER	(Bio-Weapon) 5 th Level (74 HP), AC 18, Claws +5/+5 (1d4+8) or Tongue +10 (2d8+5) STR 5, DEX 5, MIND 1, PHYS 8, SUBT 6, Spider Climb, Infectious.
NEMESIS	(Bio-Weapon) 15 th Level (253 HP), AC 26, Grenade Launcher +16 (3d6) or Slam +24 (2d10+9), STR 9, DEX 1, MIND 1, PHYS 10.
SCIENTIST	(Umbrella Employee) 0 Level (12 HP), AC 11, Handgun +1 (1d10) STR 1, DEX 1, MIND 2, PHYS 0, SUBT 0, KNOW 3, COMM 1.
SOLDIER	(Umbrella Security) 1 st Level (18 HP), AC 15, Submachine Gun +3 (2d12) STR 2, DEX 2, MIND 1, PHYS 4, SUBT 2, KNOW 1, COMM 1.
THUG	(Criminal) 1 st Level (18 HP), AC 12, Handgun +2 (1d10) STR 2, DEX 1, MIND 1, PHYS 3, SUBT 3, KNOW 1, COMM 1.
ZOMBIE	(Animated Corpse) 2 nd Level (20 HP), AC 11, Infectious Bite +2 (1d4+3) STR 2, DEX 0, MIND 0, PHYS 2, SUBT 2
ZOMBIE	(Advanced) 4 th Level (32 hp), AC 14, Infectious Bite +7 (1d4+6) STR 3, DEX 1, MIND 0, PHYS 4, SUBT 4

MUTATIONS

Exposure to the T-Virus causes death within 6 hours and zombie reanimation in 95% of the humans exposed to it. The remaining 5% undergo mutation (if they are injected with the anti-virus during the incubation period, however, the chance of survival and mutation increases to 60%). These unique individuals acquire additional mutations each time they are exposed to a new T-Virus strain (so far, the Umbrella Corporation has invented 8 strains).

1-2	Amazing Fortitude, +6 on Fort saves
3-4	Immunity to Fire
5-6	Amazing Will, +6 on Will saves
7-8	Spider Climb
9-10	Gain 4 Levels
11-12	+2 DEX, +1 Level
13-14	Immunity to Poison
15-16	Immunity to Psychic Attacks
17-18	Immunity to Electricity
19-20	Aquatic Gills and Webbed Feet
21-24	Tentacles and +1 STR
25-27	Claws, 1d6 damage
28-29	Furry, +2 natural armor
30-31	+2 STR, +1 level
32-33	Quills, 1d6 damage
34-35	Tough, +2 hp per level
36-37	Acidic Bite 1d6 bite + 1d6 acid
38-39	Carapace ; +6 natural armor, -1 DEX
40-41	Pinchers ; 1d6 damage
42-43	Regeneration, heal 1 hit point per minute
44-45	+2 KNOW, +1 Level
46-47	Psionic: Telepathy, +1 MIND
48-49	Psionic: Force Field, Absorbs 10 points of damage/level, per day
50-51	Psychic Healing, heal 1d6 damage/level per day
52-53	Rage +4 STR, 1 minute/level each day
54-55	+2 SUBT, +1 Level
56-57	Poison Bite, 1d6 damage + poison (FORT DC 18 or 1d8)
58-59	Psionic: STR 4 Telekinesis for 1 minute/level per day
60-61	+2 MIND, +1 Level
62-63	Wings, Fly for 10mins/level per day
64-65	Brain Bite, Psychic attack vs Will, 2d4 damage
66-67	Displacement, 50% chance of being missed in combat
68-69	Exoskeleton, +5 natural armor
70-71	Growth in Size, +3 STR, -1DEX, +2 Levels
72-73	Tongue, 2d8 damage
74-75	Immunity to Acid
76-77	Can See in the Dark
78-79	Immunity to Radiation
80-81	Prehensile Tail, +2 DEX
82-83	Immunity to Cold
84-85	Psionic: Precognition
86-87	+ 2 PHYS, +1 Level
88-89	Scales ; +3 natural armor
90-91	Horns, 2d4 damage
92-100	Roll 2 times on this table, apply both results

Microlite20 Cthulhu by Eric Bullis

STATS

There are 3 character statistics: Strength (STR), Dexterity (DEX) and Intelligence (INT). Players allocate a total of 6 STAT bonuses to their skills. +4 maximum to any STAT. A well-rounded character would be STR +2, DEX +2 and INT +2. Each character also has a Sanity (SAN) score, described below.

CLASSES

There are no classes or feats in M20 Cthulhu. Instead, each character starts with 1 point in each skill, and gets 4 points to distribute as they wish into the skills, with a maximum of 3 points in each skill. Each character gets +1 to all skills when they level up.

SKILLS

There are 4 skills:

Physical (**PHYS**), Subterfuge (**SUBT**), Knowledge (**KNOW**) and Communication (**COMM**).
Roll d20 + **SKILL** + STAT or higher than the given Difficulty Class (DC) to succeed.
SKILL = Character Level + Skill Bonus

DC 10 = easy, DC 15 = somewhat difficult, DC 20 = difficult, DC 25 = exceedingly difficult, etc.

Examples:	Climbing	=	STR	+	PHYS
	Dodging	=	DEX	+	PHYS
	Hiding	=	DEX	+	SUBT
	Finding Traps	=	INT	+	SUBT
	Diplomacy	=	INT	+	COMM
	Researching	=	INT	+	KNOW

SAVING THROWS

Use STR + PHYS for FORTITUDE saves, DEX + PHYS for REFLEX saves, and INT + Level for WILL saves.

SANITY

Characters begin with $60 + (\text{INT} \times 10)$ in Sanity Points. Whenever a disturbing event is experienced by a character, they make a check, rolling a Will Save (set by the GM) to avoid SAN loss. If the character fails the roll (or sometimes, even if they succeed), Sanity is lost, based upon the following criteria: 1d6 SAN loss = seeing a minor monster or reading an ancient book of TRUTH. 2d6 SAN loss = seeing a significant monster or learning a powerful ritual spell. 3d6 = meeting a huge tentacle monster face-to-face. Any time a character loses more than 5 points of Sanity, the character must make a Will save (DC 20) check or develop a neurosis/psychosis. Characters with 0 or lower SAN are permanently insane.

MAGIC

Magic is only learned through sacrificing Skill Bonuses and SAN. Spells are learned through researching mind-blowing arcane texts. They are rare and are designed by the GM.

COMBAT

Hit Points = $(\text{STR bonus} \times 2) + 10 + 1\text{d}6/\text{Level}$. If HP reach 0, the character is unconscious and near death. Roll $\text{d}20 + \text{DEX bonus}$ for initiative order. Everyone can do one thing each turn (run, attack, load a gun, etc.)

Melee attack bonus	=	STR + Level
Missile attack bonus	=	DEX + Level
Magic attack bonus	=	INT + Level

Add attack bonus to $\text{d}20$ roll. If higher than your opponent's Armor Class (AC), it's a hit. A natural 20 is automatically a critical doing maximum damage. If the total bonus is +6 or more a second attack can be made with a -5 penalty. Add STR bonus to melee damage.

WEAPONS

Unarmed = 1d2, Dagger = 1d4, Light Weapons = 1d6, Medium Weapons = 1d8, and Heavy Weapons = 1d10. **Firearms:** small caliber pistols = 1d10, large caliber pistols = 2d8, shotguns = 3d6/2d6/ 1d6, rifles = 2d10, submachine guns = 2d12. **Burst Fire:** a burst directed at a single opponent takes a -4 penalty to hit, but success results in a doubling of damage. **Auto-fire:** an automatic weapon can spray a 10'x10' area with bullets. The attack must hit AC 14. If successful, anyone in the area must make a DEX check (DC 15) or be hit. **Explosives:** fragmentation grenades = 3d6 (20' radius), dynamite = 4d6, +1d6 for each additional stick, (10' radius + 1' per additional stick), Plastic Explosive (C4) = 6d6 (15' radius), Pipe Bomb = 3d6 (15' radius). **Armor:** Light = +2 AC, Medium = +4 AC, Heavy = +6 AC, Shield = +2 AC. Armor Class (AC) = $10 + \text{DEX bonus} + \text{Armor bonus}$.

HAZARDS

Falling: 1d6 damage per 10', half damage on REFLEX save. DC = depth fallen in feet.

Spikes: Add +1 point to falling damage per 10' fallen, max +10.

Poison: FORTITUDE save to avoid or for half, depending on poison. Effects vary.

Extreme Heat & Cold: Take 1d6 damage on each failed (FORT DC 15) save, per 10 minutes.

LEVEL ADVANCEMENT

Encounter Level = Hit Dice of defeated monsters, or the given EL for the trap, solving of a puzzle, neutralization of threat, etc. Add +1 for each doubling of the number of foes. Add up the Encounter Levels (ELs). When the total = 10 x character's current level, they've advanced to the next level. Reset the total to 0 after advancing. **Each level adds:** +1d6 to Hit Points, +1d6 to SAN, and +1 to all Skills.

MONSTERS

Monsters and Minions all have one thing in common... they are dangerous! Most of the monsters have damage reduction and devastating attacks. Minions are just plain crazy and don't respond predictably to injuries or diplomacy. *Many monsters break the rules in terms of stats, skills, etc.*

To weaken or strengthen a monster or minion, simply subtract or add hit dice. This also results in a subtraction or addition to skills. Please note that these monster statistics are guidelines rather than rules. Additional abilities can be added for the sake of flavour, tension or necessity.

BYAKHEE: HD 4d8 (18 hp), AC 15, DR 5, Claws +3/+3 (1d4+3), Fly 60', immune to cold, vacuum, etc., STR +3, DEX +2, INT +0, PHYS + 3, SUBT +7, KNOW +2, COMM +0.

COLOUR OUT OF SPACE: HD 10d8 (45 HP), AC 14, Envelop +12 (1d6 + ability drain – FORT DC 20 or lose 1d3 in each ability/round), incorporeal, disintegrate, immune to cold, vacuum, vulnerable to magnetism. STR +6, DEX +4, INT +1, PHYS + 6, SUBT +14, KNOW +6, COMM +4.

CHTHONIAN: HD 8d10+40 (84 HP), AC 21, fast heal 5, 4 tentacles +12, 2d4+7 each + crush. Immune to heat, cause earthquake, vulnerable to water, STR +8, DEX +1, INT +3, PHYS +10, SUBT + 6, KNOW +6, COMM +2.

CULTIST, NOVICE: HD 1d6+2 (8 HP), AC 9, Pistol +1 (1d10), STR +1, DEX +0, INT -1, PHYS +1, SUBT +1, KNOW +1, COMM + 0.

CULTIST, DANGEROUS: HD 5d6+10 (30 HP), AC 14, Pistol +4 (1d10), STR +1, DEX +1, INT +1, PHYS + 3, SUBT +4, KNOW +6, COMM +2.

CULTIST, GRANDMASTER: HD 10d6+20 (58 HP), AC 14, Pistol +7 (1d10), STR +1, DEX +1, INT + 2, PHYS +6, SUBT +6, KNOW +12, COMM +6.

DEEP ONE: HD 2d8+4 (13 HP), AC 15, 2 Claws +5 (1d4+4) and Bite +0 (2d4+2). STR +4, DEX +2, INT +0, PHYS +3, SUBT +3, KNOW +0, COMM +0.

DARK YOUNG OF SHUB-NIGGURATH: HD 8d8+24 (60 HP), AC 12, DR 20, 4 tentacles +12 (1d6+10 each), constrict, STR drain, STR +10, DEX +3, INT +3, PHYS + 6, SUBT +8, KNOW + 8, COMM +2.

DIMENSIONAL SHAMBLER: HD 3d8+9 (22 HP), AC 12, DR 5, Claw +8 (1d6+6), planar jaunt. STR +4, DEX +1, INT +0, PHYS + 4, SUBT +6, KNOW +2, COMM +0.

FIRE VAMPIRE: HD 2d8, AC 17, DR 20, Touch +1 (1d6, +1 STR drain), Fly 10', STR -4, DEX +3, INT +1, PHYS +1, SUBT +5, KNOW +0, COMM +0.

FORMLESS SPAWN: HD 5d10+25 (53 HP), AC 15, 4 pseudo-pods +8 (1d8+5), ooze qualities, grab, swallow, STR +4, DEX +5, INT -1, PHYS + 8, SUBT +5, KNOW +2, COMM +0.

GHOUL: HD 2d12 (13 HP), AC 14, 2 Claws +4 (1d6+3) & Bite +0 (1d6+1), grab, STR +3, DEX +1, INT +0, PHYS +3, SUBT +3, KNOW +0, COMM +0.

HOUND OF TINDALOS: HD 4d10+4 (26 HP), AC 15, DR 5, Fast Healing 5, 2 Claws +6 (1d4+2) & Tongue +2 (1 STR drain), STR +3, DEX +1, INT +4, PHYS +3, SUBT +5, KNOW +3, COMM +1.

MI-GO: HD 2d8+2 (11 HP), AC 12, DR 10, 2 Claws +1 (1d6) or Lightning Gun + 3 (2d6), immunities, STR +0, DEX + 2, INT + 4, PHYS +1, SUBT +2, KNOW +5, COMM +2.

NIGHTGAUNT: HD 4d8+4 (22 HP), AC 14, DR 15, Grab +7, clutch, tickle, immunities, STR +4, DEX +3, INT +2, PHYS +3, SUBT + 6, KNOW + 2, COMM +1.

RAT-THING: HD 1d6 (3 HP), AC 16, Bite +7 (1), jaw lock, STR -4, DEX +4, INT +1, PHYS +1, SUBT +4, KNOW +0, COMM +0.

SERPENT PEOPLE: HD 2d8+2, AC 15, Bite + 2 (1d4 + poison), STR + 0, DEX +0, INT +3, PHYS +1, SUBT +1, KNOW +4, COMM +0.

SPIDER OF LENG: HD 10d10+30 (85 HP), AC 16, DR 10, Bite +12 (2d6+6+poison), PHYS +14, SUBT +10, KNOW +4, COMM +2.

STAR VAMPIRE: HD 4d8+12 (30 HP), AC 15, DR 5, 4 Claws +6 (1d6+4, +1 STR damage), invisibility, STR +4, DEX +1, INT +1, PHYS +2, SUBT +8, KNOW +2, COMM +0.

ZOMBIE: HD 2d12+3 (16 hp), AC 11, DR 5, Slam +3 (1d6+1), STR +1, DEX -1, INT -4, PHYS +2, SUBT +3, KNOW +0, COMM +0.

Remember that the original game focused upon investigation, discovery and horror. Try to avoid a “hack-and-slash” style of play. It will only get the investigators killed. Instead, steer towards hidden truths, dark secrets, insane cultists, local superstitions, mysterious phenomenon and horrifying endings.

Also remember that a shotgun might make an investigator feel brave, but it won't do much against a Nightgaunt... Actually, a grenade launcher won't do much either...

M20 - VAMPIRES

By Eric Bullis

STATS

There are 3 character Statistics: Strength (STR), Dexterity (DEX) and Mind (MIND). Beginning characters get a total of 6 STAT bonuses to their STATS (normal people get 4 STAT bonuses). +4 is the human maximum for any STAT.

SKILLS

Normal people start at 0 level and begin with 4 skill points to distribute. Player Characters start at 1st level and have 8 skill points to distribute (with a minimum of 1 in each skill). Each time a character gains a level, he or she adds 4 points to skills (with a max of 4 + Level in any single skill).

Skills = Physical (PHYS), Subterfuge (SUBT), Knowledge (KNOW) and Communication (COMM).

Roll d20 + SKILL + STAT or higher than the given Difficulty Class (DC) to succeed.

DC 10 = easy, DC 15 = somewhat difficult, DC 20 = difficult, DC 25 = exceedingly difficult, etc.

Climbing or Swimming	= STR + PHYS
Dodging or Tumbling	= DEX + PHYS
Hiding or Sneaking	= DEX + SUBT
Detecting Lies	= MIND + SUBT
Diplomacy	= MIND + COMM

SAVING THROWS

STR + PHYS for FORTITUDE saves

DEX + PHYS for REFLEX saves

MIND + Level for WILL saves.

HIT POINTS

Hit Points = (STR bonus x 2) + 10 + 1d6/Level. If HP reach 0, the character is unconscious and near death. Characters heal 2+STR in HP per day. Vampires heal more quickly (see below).

COMBAT

Roll d20 + DEX bonus for initiative order. Everyone can do one thing each turn (run, attack, load a gun, use diplomacy, etc.) The only "free actions" are drawing a handy weapon or speaking.

Melee attack bonus	= STR + Level
Missile attack bonus	= DEX + Level

Add attack bonus to d20 roll. If roll is higher than opponent's Armor Class (AC), it's a hit. A natural 20 is automatically a critical doing maximum damage. If the total bonus is +6 or more a second attack can be made with a -5 penalty. Add STR bonus to melee damage. Using a Called Shot (to the heart) is frequently required. Called shots suffer a -4 attack penalty. Damage Reduction: the number is subtracted from damage if the weapon is not made of the prescribed substance.

WEAPONS

Unarmed = 1d2, Dagger = 1d4, Light Weapons = 1d6, Medium Weapons = 1d8, and Heavy Weapons = 1d10. Firearms: Small Caliber Pistols = 1d10, Large Caliber Pistols = 2d8, Shotguns = 3d6/2d6/1d6 (depending upon range), Rifles = 2d10, Submachine Guns = 2d8 (burst and/or auto-fire). Burst Fire: a burst directed at a single opponent takes a -4 penalty to hit, but success results in a doubling of damage. Auto-fire: an automatic weapon can spray a 10'x10' area with bullets. The attack must hit AC 15. If successful, anyone in the area must make a DEX check (DC 15) or be hit.

EXPLOSIVES

Fragmentation Grenades = 3d6 (20' radius), Dynamite = 4d6 (10' radius) +2d6 and + 2' per additional stick), Plastic Explosive (C4) = 6d6 (15' radius) +3d6 and 5' radius for each additional charge, Pipe Bomb = 3d6 (15' radius) +1d6 and +2' for each additional bomb.

ARMOUR

Light = +2 AC, Medium = +4 AC, Heavy = +6 AC, Shield = +2 AC.
Armour Class (AC) = 10 + DEX Bonus + Armour Bonus.

HAZARDS

Falling: 1d6 damage per 10', half damage on REFLEX save. DC = depth fallen in feet.
Poison: FORTITUDE save to avoid or for half, depending on poison.
Extreme Heat & Cold: Take 1d6 damage on each failed (FORT DC 15) save, per 10 minutes.

LEVEL ADVANCEMENT

Add up the Encounter Levels (Hit Dice of Enemy or Difficulty of Encounter). When the total = 10 x character's current level, they've advanced to the next level. Reset the total to 0 after advancing. Upon gaining a level, the characters add +1d6 to Hit Points, +1 to attacks, and +1 to all Skills.

TRUE VAMPIRES

"Vampire" is a template that can be added to any humanoid. Normal people become Vampire Spawn (described below). Those individuals who are 4th level or higher become true vampires (except that they are still under the limited control of their creator). Details of control, conversion and status are left up to the GM. After becoming a true vampire, the base creature gains:

+3 STR, +2 DEX, and +2 MIND. All hit points are maximized for the base creature's hit dice (with the new STR bonus added as well). They gain +6 to armor class and the ability to spider climb at will. They can charm or dominate a victim (Attacker's MIND + Level vs. Defender's MIND + Level). Vampires also gain a grapple attack (1d6 damage). When the grapple is successful, it allows for a secondary blood drain attack. This attack drains 1-2 STR per round, requiring a successful grapple to escape (which is tough, considering how strong vampires can become). Each round a vampire feeds, he or she is healed 5 hit points. Finally, the vampire gains night-vision and damage resistance 10 to all weapons that are not made of silver. If reduced to 0 hit points, a vampire becomes comatose, but can heal with feeding. Over the course of 1 day of rest, a true vampire heals all wounds.

There are some disadvantages to being a vampire, however. Exposure to sunlight causes 2d12 damage per round. A true vampire can be killed by bringing them to 0 hit points and then exposing them to sunlight, driving a stake through their heart, or by cutting off their head. During daylight hours, vampires must rest in a dark location. Finally, all vampires have a strong aversion to garlic.

VAMPIRE SPAWN

Spawn are the most commonly encountered type of vampire. They possess independent minds, but are compelled to obey the commands of their creator. When becoming a vampire spawn, the base creature gains:

+2 STR and +2 DEX, maximized hit points, +4 to armour class, a grapple attack (1d6 + drain 1 STR), spider climb (at will), night vision, and damage resistance 5/silver. Vampire spawn suffer all of the vulnerabilities of true vampires, and can be killed quickly with a called shot to the heart.

WEREWOLVES

Another common theme is the enmity that exists between vampires and werewolves. Here's a template that can be used for the lupine brotherhood:

+3 STR, +3 DEX, add 2 hit dice (character levels) to the base creature and focus skills upon physical and subterfuge. They have a claw or bite attack that causes 1d10 + STR damage (this attack ignores damage reduction if in beast form). Werewolves also have night vision, spider climb, and damage reduction 10/silver. The base creature now has two forms: the beast form has a faster movement rate and the scent ability, while the human form is capable of blending-in with normal society.

HYBRIDS

The creation of hybrids or "day-walkers" can be the central focus of a modern vampire campaign (especially if it defines vampirism as a viral infection rather than a state of religious damnation). Here's an example of a hybrid template:

+2 STR, +2 DEX, +1 MIND, maximized hit points, +6 armour class, immune to charm and domination, slam attack + blood drain, night vision and damage resistance 10/silver. The hybrid cannot spider climb, but is not harmed by sunlight. The only way to kill a hybrid is to reduce him or her to 0 hit points and then destroy the body.

Game Masters should feel free to create new hybrid forms. Some variants could include concepts of 'ancient blood' mixed with genetic engineering. Other variants could create out-of-control killing machines that require extermination...

CAMPAIGN SETTINGS

It is assumed that the characters begin their adventure as normal citizens or as vampire hunters. Eventually, through adventures, accidents and scheming, the characters may themselves become vampires, vampire spawn, werewolves, or even hybrids. A lengthy campaign may result in a series of complex allegiances and rivalries; in this sort of campaign, combat will take a back-seat to character development, interaction and plot. Here are some ideas:

1. Human society discovers the truth about vampires and launches an attack against them.
2. A centuries-long battle between vampires and werewolves spills-over into the "real" world.
3. A religious theme where the powers of faith fight against the damned. Holy water
4. A series of vampire virus mutations upsets the delicate balance of power.
5. A story of how a solitary vampire seeks redemption, revenge, power, or immortality.
6. A plot centralizing around how investigators uncover a vampire conspiracy.
7. A world where vampires and demons are pitted against angels and saints (more templates!)
8. Adventurers must battle ancient vampires who have gone insane through the millennia.
9. A complex web of different vampire clans and their schemes to dominate each other.
10. A hybrid experiment goes awry, resulting in a VERY dangerous new predator.

M2012
by Eric Bullis

The year is 2012. Civilization lies in ruins. The Mayan calendar predicted the cataclysm, but failed to foresee how it would take place. The earth was not destroyed by meteors or cosmic forces. Nor was civilization struck down by global warming or nuclear winter. Instead, humanity encountered a tiny enemy that could not be seen or felt. This tiny foe, a virus, attacked humanity's most precious possession. This virus attacked the mind.

PAN (or the Panic Virus, as it is frequently called) mutated from a strain of Avian Flu in early 2011. It became an airborne pathogen and went undetected for months. People who were infected showed no symptoms. No quarantines were set. No health alerts were posted. By the time the warning-bells were sounded, more than 90% of the world's population was already infected.

The PAN virus lies dormant in various parts of the human brain, particularly in the hypothalamus and the cerebral cortex. After a 2-3 month gestation period, an outbreak takes place, permanently damaging the localized area of the brain. It seems to have produced a wide variety of severe psychological conditions.

The first cases of hysteria and insanity arose in Europe. Suicide rates soared. Homicidal rampages occurred hourly. Business stopped. Schools closed. Government agencies were helpless. By May, 2012, European social services had ground to a halt. Militaries disbanded. Police forces evaporated.

Then Asia exploded... literally.

Soldiers in Korea began a border skirmish that escalated into nuclear war. On April 3rd, 15 high-yield nuclear warheads were detonated over Korea, China, and Taiwan. The rest of the world watched in horror as 200 million people died in one day.

The rest of the world's nations began to fall like dominoes. Everyone went insane, to a greater or lesser degree. A portion of the population became suicidal. Others became homicidal. Some suffer from paranoid delusions, while others turned into cold-hearted sociopaths. Some only suffer from phobias, but many of their fears are justified. Over the course of 4 months, more than 3 billion people have died.

Perhaps the people who died early were the lucky ones. Famine and chaos have become the order of the day. Gangs of sociopaths prowl the streets, while catatonic schizoids drool in the gutters. Enraged psychopaths scream in the night, while paranoid survivalists scheme in their fortified homes...

Welcome to 2012, a modern campaign setting for microlite20. Players take the roles of crazy heroes in an insane world. Money no longer has any value. Survival is the only thing that matters. Survival means clean water, plenty of food, secure shelter and ammo... Lots and lots of ammo!

- Eric Bullis

STATS

There are 3 character Statistics: Strength (STR), Dexterity (DEX) and Mind (MIND). Roll 4d6, drop lowest die. Total remaining 3 dice and allocate to one of the stats. Repeat for remaining stats. Stat bonus = (STAT-10)/2, round down. Subtract 2 points from the MIND statistic and then choose a form of insanity that seems appropriate for your character.

SKILLS

Normal people start at 0 level and begin with 4 skill points to distribute. Player Characters start at 1st level and have 8 skill points to distribute (with a minimum of 1 in each skill). Each time a character gains a level, he or she adds 4 points to skills (with a maximum of 4 + Level in any single skill).

The 4 Skills = Physical (PHYS), Subterfuge (SUBT), Knowledge (KNOW) and Communication (COMM).

Roll d20 + SKILL + STAT or higher than the given Difficulty Class (DC) to succeed.

DC 10 = easy, DC 15 = somewhat difficult, DC 20 = difficult, DC 25 = exceedingly difficult, etc.

Climbing, Jumping or Swimming	=	STR	+	PHYS
Dodging or Tumbling	=	DEX	+	PHYS
Hiding, Sneaking or Picking Locks	=	DEX	+	SUBT
Detecting Lies or Hearing Noise	=	MIND	+	SUBT
Hunting, Farming or Survival	=	MIND	+	PHYS
Interpreting Body Language	=	MIND	+	COMM

SAVING THROWS

Use STR + Level for FORTITUDE saves, DEX + Level for REFLEX saves, and MIND + Level for WILL saves.

HIT POINTS

Hit Points = STR stat + 1d6 per level. If HP reach 0, the character is unconscious and near death. Make a DC 15 FORT save to survive. Characters heal 2 + STR bonus in HP per day.

COMBAT

Roll d20 + DEX bonus for initiative order. Everyone can do one thing each turn (run, attack, load a gun, use diplomacy, etc.) The only "free actions" are drawing a handy weapon or speaking.

Melee attack bonus	=	STR + Level
Missile attack bonus	=	DEX + Level

Add attack bonus to d20 roll. If roll is higher than opponent's Armor Class (AC), it's a hit. A natural 20 is automatically a critical doing maximum damage. If the total bonus is +6 or more a second attack can be made with a -5 penalty. Add STR bonus to melee damage. Using a Called Shot (to the head) is frequently required. Called shots suffer a -4 attack penalty.

WEAPONS

Unarmed = 1d2, Dagger = 1d4, Light Weapons = 1d6, Medium Weapons = 1d8, and Heavy Weapons = 1d10. **Firearms:** Small Caliber Pistols = 1d10, Large Caliber Pistols = 2d8, Shotguns = 3d6/2d6/1d6 (15'/30'/45' range), Rifles = 2d10, Submachine Guns = 2d8 (burst and/or auto-fire). **Burst Fire:** a burst directed at a single opponent takes a -4 penalty to hit, but success results in a doubling of damage.

Auto-fire: an automatic weapon can spray a 10'x10' area with bullets. The attack must hit AC 15. If successful, anyone in the area must make a DEX check (DC 15) or be hit.

EXPLOSIVES

Fragmentation Grenades = 3d6 (20' radius), Dynamite = 4d6, +1d6 for each additional stick, (10' radius + 1' per additional stick), Plastic Explosive (C4) = 6d6 (15' radius), Pipe Bomb = 3d6 (15' radius).

ARMOR

Light (leather jacket) = +2 AC, Medium (flak vest) = +4 AC, Heavy (riot armor) = +6 AC, Shield = +2 AC.
Armor Class (AC) = 10 + DEX Bonus + Armor Bonus.

HAZARDS

Falling: 1d6 damage per 10', half damage on REFLEX save. DC = depth fallen in feet.

Poison: FORTITUDE save to avoid or for half, depending on poison.

Extreme Heat & Cold: Take 1d6 damage on each failed (FORT DC 15) save, per 10 minutes.

LEVEL ADVANCEMENT

Add up the Encounter Levels (Hit Dice of Enemy or Difficulty of Encounter). When the total = 10 x character's current level, they've advanced to the next level. Reset the total to 0 after advancing. Upon gaining a level, the characters add +1d6 to Hit Points, +1 to attacks, and +1 to all Skills. If the level divides by three (i.e. level 3, 6, 9, etc.) add 1 point to STR, DEX or MIND.

ENEMIES

In M2012, almost anyone is a potential enemy. Most of them are 0 level characters with 4 skill points and hit points equal to their STR stat. To create challenging foes, simply give them better statistics and character levels. Finally, assign them a form of insanity from the chart below.

BLUE COLLAR WORKER: LEVEL 0, STR 12, DEX 10, MIND 8, PHYS +2, SUBT +1, KNOW +0, COMM +1. HP 12, AC 12 (leather jacket), Melee Attack +1, Missile Attack +0.

SOLDIER OR POLICE OFFICER: LEVEL 1, STR 12, DEX 12, MIND 8, PHYS +3, SUBT +3, KNOW +1, COMM+1, HP 15, AC 16 (flak vest), Melee Attack +2, Missile Attack +2.

SCIENTIST OR WHITE COLLAR WORKER: LEVEL 0, STR 10, DEX 10, MIND 12, PHYS +0, SUBT +1, KNOW +2, COMM+1, HP 10, AC 10 (no armor), Melee Attack +0, Missile Attack +0.

INSANITY

The PAN virus causes a permanent loss of 2 MIND points in addition to causing insanity. Roll percentage dice to randomly determine insanity type. Each one of these broad categories of insanity can be altered as needed. A mind is a complicated thing; a twisted mind is even more complicated...

- 01-10 Mild Impact; minor phobias, manias, insecurities, and personality disorders
- 10-15 Psychosexual Disorder; a bizarre sexual obsession or compulsion
- 15-30 Severe Depression or Bi-Polar Disorder; suicidal behavior is common
- 30-35 Catatonic; complete immobility, emotional detachment
- 35-55 Paranoid Schizophrenia; hallucinations, illogical thinking, delusions of persecution
- 55-70 Dissociative Fugue (memory loss) or Multiple Personality Disorder
- 70-85 Sociopath; unemotional and without conscience -- a cold-hearted killer
- 85-100 Enraged Psychopath; violent, illogical, paranoid and emotional

SPYLITE

This game is to the spy genre what cotton candy is to your aching, rotten teeth. The goal is to take Greywulf's excellent Microlite system, beat it senseless, and create a game that will do one-tenth of what Spycraft does, but with only one-half the work. And also, world domination.

There are four parts to these rules.

1. **Guts.** The core rules of the game. Character creation and how the system works.
2. **Gear.** The equipment rules, how to build gadgets and vehicles and get hired help.
3. **Foes.** Critters and the various nefarious types you'll be working with and against.
4. **Agencies.** Rules for Agencies, both friendly and otherwise.

The Guts: Core Rules

Stats

SpyLite uses four stats: **Strength**, **Dexterity**, **Intelligence**, and **Charisma**.

Roll 4d6, dropping the lowest die. Total the remaining 3 dice and allocate to one of the stats. Repeat for the remaining stats.

Your stat bonuses are **(STAT-10)/2, rounded down**.

Classes

There are four classes--**Soldier**, **Spy**, **Face**, **Thinker**. Characters begin at Level 1.

All classes can use any weapon, armor or equipment, including vehicles.

Soldiers are the muscle of the group. Goons, thugs, bodyguards--they are tough as hell and good with weapons. They gain +1 to all attack and damage rolls. This increases by +1 at 5th level and every five levels afterwards.

Spies are fast on their feet, sneaky and deceptive. Subterfuge is always their class skill. This is in addition to their first level skill pick.

Faces are the front men of the group. They are charming swindlers, masters of disguise and manipulation. Faces get a +2 to Charisma at 1st level. This increases by +1 at 5th level and every five levels afterwards.

Thinkers are the brains of the outfit. Hackers, inventors, tactical geniuses and masterminds--they are the Hannibal to your B. A. Baracus. Thinkers get a +2 to Intelligence at 1st level. This increases by +1 at 5th level and every five levels afterwards.

Skills

There are five skills : **Communication**, **Knowledge**, **Physical**, **Science**, and **Subterfuge**.

Communication skill covers interaction with other people. Bluffing, seduction, diplomacy, bribery, out-and-out lying, it's all here.

Knowledge is your grasp of the academic arts. It covers everything from languages to archeology, code-breaking to zoology.

Physical. If it's something physical that you do, this skill probably covers it. Jumping, Driving, Climbing and so on.

Science. Mechanical and electronic skills. There's a bit of overlap between this skill and Knowledge--where Knowledge is about **knowing** things, Science is about actually **doing** them. Knowledge will teach the theory behind why your house's electrical wiring works. Science will let you actually wire your house. Covers such things as gadgetry, inventing, rewiring cars and security systems, repairing items and so on.

Subterfuge. The dark side of the skill sheet. Skulduggery, sneaking around, disarming traps and other such things.

Each character must choose 1 skill they are best at (also called your "favored skill"). Your rank in that skill will

be at your level+3. All other skills will be at half your level, rounded down, plus one ((Level/2)+1).

Skill roll = d20 + skill rank + whatever stat bonus is most applicable to the use + situation modifiers

Roll higher than the given Difficulty Class to succeed.

For example, Climbing would use Physical + STR bonus. Dodging a falling rock is Physical + DEX bonus. Finding a trap is Subterfuge + INT bonus. Disabling a trap is either Subterfuge + DEX bonus or Science + MIND, depending on the nature of the trap.

Note that there are no "saving throws" in this game; use Physical + STR or DEX bonus for Fortitude and Reflex saves. Will saves are usually INT bonus + your level.

Skill Challenges

Some skill checks should be broken into parts to maintain tension. Examples would be searching an office for files while in a patrolled area, sneaking across a mine field, attempting to build a complex machine.

Break the task into several steps. Each step has a required skill check and a DC. If you blow the roll, something bad happens. If you make the roll, a bit of time passes, and you go on to the next check. If you roll really well, then you either skip a step or gain some extra benefit. Once you get to the final step, you succeed.

Example: Felicity is undercover at a fancy dinner party at Doctor Terror's mansion. Using the old "I have to powder my nose" excuse, she slips off to do some investigating. She enters Doctor Terror's office and searches through his file cabinets for the plans to his secret death ray.

Felicity's challenge would look this:

Where is it in the office? Subterfuge + Int, DC 15. Success = Finds the proper cabinet. Failure = takes time, must roll to see if Doctor Terror is suspicious (see step #3) and then roll again to find the right cabinet.

Which file is it in? Subterfuge + Int, DC 20. Success = Finds the proper folder. Failure = takes a lot more time and then roll to see if Doctor Terror is suspicious...and then roll again to find the right folder.

Is Doctor Terror Suspicious? The Doctor yells down the hall to see if you're okay. Subterfuge + Cha vs Doctor Terror's Subterfuge + Int. Success = the Doctor buys your excuse. Failure = the Doctor comes to investigate. The more times this step has been rolled,

the more of a bonus Terror will have on his roll to figure out what you're doing.

Secret Death Ray Plans! You've found the file's folder, now you have to pull it, photograph it and replace it surreptitiously. Subterfuge + Int, DC 15. Success = you slip back to the party with no one the wiser. Failure = you're caught, either in the act or later on that evening. Or you've photographed the wrong file. Or you've fumbled the camera, making suspicious noises...

More than one character can contribute to these challenges. For example, one person back at the party could take care of checks to allay the Doctor's suspicions while Felicity continues to ransack his office.

Contests

Occasionally, two or more characters will directly compete with another outside of a combat situation. Perhaps they're chasing each other, maybe they're debating a topic, trying to seduce a bureaucrat, play a game of chess, or even run for political office. It all boils down to the following:

- One character is the Hunter, one is the Prey.
- There are 10 points of Lead. If the Lead increases to 10 or higher, the Prey wins. If the Lead reaches 0, the Hunter wins. The Lead usually starts out at 5, but the GM can decide to use a different number as starting Lead if one side has an advantage.
- Both sides make skill checks each round. Usually these skill checks will be versus static DC's, representing maneuvers.

Note: a "round" in this case does not necessarily have to be a combat round—it could be any length of time that would be dramatically appropriate.

The highest successful skill check total wins 1 pt of Lead, either towards the Hunter's or the Prey's advantage.

Depending on what these maneuvers are, additional benefits or penalties may accrue in the following round.

If neither skill check passes, the Lead remains unchanged and additional unpleasant effects may ensue as expected for a failed skill roll of that type (crashing, falling, losing the audience's interest, whatever).

If only one side fails their check, one or more extra points of Lead may accrue to the other side depending on how badly the roll failed by.

Risky Maneuvers: For a DC penalty, you can attempt to change the Lead in one attempt by 2 or more points. Describe what you're doing, then take a +5 DC penalty for every extra point of Lead you want. Failure will usually have pretty serious consequences.

Example: Felicity is pursuing Dr. Terror. Terror has jumped into a motorboat and is charging down the river. Felicity is following along the shore on a motorcycle. Since neither initially has an advantage, the GM sets the initial lead as 5. The first round, Terror decides to drive ahead full speed. Not a complicated maneuver: DC 10. He succeeds, rolling 14 total. Felicity's driving the motorbike along the winding and narrow road by the river. DC 15, she also succeeds, rolling an 18. Felicity gains 1 point of Lead, for a total of 4 (18 > 14).

The next round, Terror has to swerve around a boat of tourists, while Felicity decides to try a risky maneuver. The player decides to take a +10 DC penalty over the normal 15 DC and says she's going to use an upcoming bridge as a ramp, either landing on Terror's boat or at least gain some serious distance on him. Terror fails his roll spectacularly, smashing into the tourist boat. Felicity succeeds again, rolling a 26 vs DC 25. The GM decides that Terror's failed roll loses him a point of Lead (now down to 3). Felicity gains 3 points (1 for the success, 2 for the risky maneuver). The Lead goes from 3 to 0.

Felicity's bike launches off the bridge like a rocket, flies forty feet through the air and smashes into the back of Terror's motorboat, which is still entangled in the tourist boat. Felicity stands up from the wreckage and cocks her gun at the Doctor's head...

Talents

You get 1 Talent at first level and an extra one every 3 levels thereafter. Some Talents may be taken more than once--in that case, the effects stack. If they can be stacked, it will say so in the description. All Talents can be taken by any class.

Action Man. You start each adventure with 1 more Action Point than usual. Each time you take this Talent, you gain another Action Point.

Agile. You are excellent at dodging attacks. +1 AC, can be taken multiple times.

Bluff. You have a knack for fighting dirty. If you can communicate with an opponent, you can attempt a Cha+Comm roll vs the opponent's resisting skill roll. If successful, you can use your Charisma bonus as either a bonus to hit, damage or AC for one attack. How this looks can vary from cheap shots all the way up to out and out trickery ("Hey, look! The Goodyear Blimp!").

Brawler. Your unarmed attacks are upgraded from 1d4 to 1d6 damage. You can take this one more time to upgrade your unarmed damage to 1d8.

Command. Once per day, you can give an order to someone. Should they choose to follow your command, they get a +1 bonus to achieve that action. At every level evenly divisible by 4, this bonus goes up +1 and an additional order per day can be given.

Confidence Man. If you have Dupe, you can make another subsequent skill vs skill check after you've convinced a target of a "fact". If successful, you can guide the target into performing a specific task. The task has to be at least superficially reasonable. Every subsequent time you do this to the same opponent in an adventure, they get a +2 bonus to resist, cumulative.

Cool Under Pressure. Choose one non-combat task that you're especially good at (e.g. sneaking, computer programming, baking cookies, etc). From now on, whenever you attempt that task, you can take 10 on the roll, no matter how stressful the circumstances. This Talent can be taken multiple times--each time applies to a different task.

Deep Pockets. You always seem to have just the right item on you. You have 1 floating gear point that you may expend at any time during an adventure to reveal an item. This item must be plausibly concealable on your person. Can be taken multiple times--each time this is taken, it gives you another floating gear point.

Double-Tap. If you're using a gun, you can gain an additional attack in exchange for a -2 to hit on all attacks per round.

Dupe. Once per adventure per level, you can make a target believe one "fact" you give them, no matter how implausible, as long as you succeed in a Cha+Comm roll vs the opponent's skill roll (usually Int+Sub, Know or Sci).

Durable. You are a damage sponge. +1 hp per level, can be taken multiple times. Changes in hit points are retroactive.

Exploit Weakness. If you've had at least 1 round to study an opponent, you can designate that opponent, using brains over brawn to find ways to gain an advantage. Make a Sub+Int check (DC 15). If the check

succeeds, for the rest of the combat you can use your Int bonus instead of your Str or Dex bonuses on attack rolls or AC as you try to out-think your opponent. You can only use your Int bonus for one or the other, never both at the same time.

Field Strip. You are a wizard at making gear do things that are technically out of their spec. Once per day, you can take as many of you and your teammates' Gear Points as your GM will let you get away with and reshuffle them into a different configuration.

You must then succeed on a Mind + Sci roll, with a DC equal to 10+the number of Gear Points being shuffled. The original items are lost, but may then be broken down, recombined and/or upgraded to new items which tend to work very well, but aren't quite as pretty.

Gearhead. You've always got the best wheels. When requisitioning vehicles, vehicles cost half as much as they do for anyone else.

Genius. Choose an area of study. Whenever the GM would allow you to take 10 on a skill check in that area of study, substitute your Mind score instead for the d20 roll. Whenever you are allowed to take 20, your die roll is automatically your Mind+10. Taking this talent multiple times gives additional specialties.

Intuition. You have an innate ability to sense trouble in the air. Once per adventure per level, you can make a saving throw (DC 15). On a successful save, you get a hunch that everything is all right, or you get a bad feeling about a specific situation, based on the GM's best guess relating to the circumstances.

Judo. If you successfully grab an opponent, you can perform your next grapple action immediately instead of waiting for the next round.

MacGyver. You've got fifteen minutes, some silly string, some bubble gum and a piece of tin foil. Time to save the world. With a DC 15 (or occasionally higher) check and a bit of time, you can improvise a rudimentary 1 pt Gadget using anything handy.

Martial Artist. You can flurry your melee attacks (both armed and unarmed). A flurry allows you to gain an additional attack in exchange for a -2 to hit on all attacks per round. You can take this one more time for a total of 3 attacks per round when flurrying.

Master of Disguise. You've got a thousand faces. Not even your friends are exactly sure what you really look like. Any Disguises you requisition are at +5 DC to see through. You can improvise a DC 15 Disguise in less than ten minutes using the most rudimentary materials for no cost.

Plan. If you have time to prepare a plan prior to a dramatic situation, you can grant a bonus on all skill checks and attack rolls made by you and your allies. Make a skill check vs DC 10, using Int plus whatever skill is appropriate to the situation (usually Knowledge).

If successful, the bonus will be +1, plus another +1 for every 10 points the roll was over the DC (i.e., whatever you rolled divided by 10, rounded down). This bonus lasts for the first 3 rounds of the situation and then goes down by 1 every following round (minimum 0) as entropy slowly unravels your plans.

Power Attack. You can take a penalty to your attack roll and add the same amount to your damage roll, assuming you hit. Up to one-half your total attack bonus can be transferred this way.

Risk Taker. Your character lives on the edge—designate one kind of task that you are good at. When performing a risky maneuver during a Contest under those circumstances, you only take a +4 DC penalty for each Lead point attempted. Taking this Talent multiple times allows you to choose different tasks this Talent applies to.

Specialist. Describe one task that you're especially good at. From now on, you get a +2 on all skill checks dealing with that task. *Examples: Sneaky, Languages, Bribery, Eavesdropping, Shooting Pistols.* Specialties should be fairly narrow. Taking this Talent multiple times gives you different specialties--the effects never stack.

Trap Monkey. Traps are 1 point cheaper for you, with a minimum final cost of 1 pt. You can also improvise a DC 15 Trap in less than ten minutes using the most rudimentary materials for no cost, with the trap's effects limited to what you can justify to the GM.

Well-Connected. You've got friends everywhere. When requisitioning NPC's to help you, you only pay half the cost.

Well-Equipped. You have better Gear than most. +3 gear points, can be taken multiple times.

Combat

Hit Points = STR Stat + 1d6/Level. If HP reaches 0, you are unconscious and near death. Further damage directly reduces STR. If that reaches 0, you are dead.

Roll d20 + DEX bonus for initiative order. Everyone can do one thing each turn; move, attack, dodge, operate a vehicle, etc. Only roll once, on the first round of combat--the order stays the same for

subsequent rounds.

Melee attack bonus = STR bonus + Level

Ranged attack bonus = DEX bonus + Level

Armor Class (AC) = 10 + one-half your level, rounded down + DEX bonus.

Add attack bonus to d20 roll. If higher than your opponent's Armour Class (AC), it's a hit. Natural 20 is automatically a critical, doing maximum damage.

Soldiers and Spies can use DEX bonus + Level as their Melee attack bonus instead if wielding a light weapon.

This version of Microlite does not use iterative attacks. If you want to make more than one attack per round, use a Maneuver (see below). All additional attacks through maneuvers occur more or less simultaneously.

Add STR bonus to Melee damage, x2 for 2-handed weapons.

Ranged Combat. Shooting a gun into a crowded melee is not a good idea—if you don't take a -4 to hit, there's a 50% chance you'll hit a friendly instead of an opponent.

Ranged Penalties. If your target is relatively close, there is no penalty to hit for range. If it's mid-range for the weapon you're using (judgment call), take a -2. If it's farther out than that, the GM will assign a -4 to -10 penalty to hit, depending on his judgment of how far away the target is.

Maneuvers

Maneuvers are things you can do in combat in lieu of a normal attack.

Aim. Taking a full round to aim with a ranged weapon will add +2 to hit, but while doing so your AC will be at 10 because you can't move around.

Autofire. Allows you to make iterative attacks with an automatic weapon. In other words, if your total bonus is +6 or more, a second attack can be made with a -5 penalty. If the total bonus is +11 or more, a third attack can be made at -10. For example, if the total bonus is +12, three attacks can be made when autofiring at +12/+7/+2. All of these attacks occur simultaneously and can be split amongst multiple targets, if desired.

It will, however, burn a number of rounds equal to twice the attacks you take.

If you are not high enough level to have iterative attacks, then you merely gain one extra attack at -5 while burning 4 rounds.

Dodge. You can forgo your next attack at any time and dodge out of the way. Roll d20 + Dex + Phys. The total is your effective AC until your next attack comes up. If it's lower than your real AC, well, you zigged when you should've zagged.

The GM may modify your check by +2 or -2 (or more) to reflect the amount of cover in the area and how the local terrain affects your mobility.

Grab. Make a hit roll on your target. If successful, the target and attacker make opposed Phys+Str rolls. If the attacker wins, the target is grappled and loses his Dex bonus to AC. If the target wins, the grapple fails. Every time the target's action comes up he can make another opposed roll to either throw off the grapple or reverse the grapple.

Every time the attacker's action comes up, he can do something, such as inflict unarmed damage, strip an item from them, or move or throw the target somewhere (potentially also doing unarmed damage). It's the GM's judgment call if an action is reasonable or not.

Sneak attack. If you successfully sneak up on someone, or otherwise catch them unawares, the first hit adds your ranks in Subterfuge as bonus damage.

Take Cover. If you duck behind an object, you can gain +2 to +10 to your AC depending on the extent of the cover (light cover = +2 all the way to nearly complete = +10). Half this AC bonus may also apply to saves if the GM allows it.

Throw an explosive. These weapons (usually grenades) require the attacker to make a Missile Attack (no penalty) targeting a particular 5 foot by 5 foot area, which is a DC 10 roll. Anyone caught within the blast radius (see the explosives details in the SRD) can make a Dexterity Check (DC is listed with the explosive) and only take half damage.

Two weapons. You can wield two light weapons and attack with both in a round if they take a -2 penalty on all attack rolls that round. It's up to the GM what counts as a light weapon. For example, in some campaigns, shotguns might be appropriate for dual-wielding, in others, they might not. Pistols are always appropriate, as are the usual light melee weapons.

Action Points

Characters begin each session with 3 Action Points (more if they have the Action Man Talent). Each Action Point can be used in several ways:

- Add +5 to any roll, but only before the GM declares the results of the roll.
- Add +5 to AC for one round.
- Recover half your lost hit points instantly. You spend your current action catching your breath.
- Bring your character back from the dead...in the next adventure.

Only 1 Action Point can be spent per round.

Recovering Action Points

- Every time your character does something particularly impressive or achieves a goal of some sort, the GM may award one or more Action Points.
- Every time you roll a natural 20, you gain 1 Action Point.
- Every time you start a new session, the Action Point pool is fully refreshed. Any unused Action Points from the previous session will be lost.

Don't hoard your Action Points--they're meant to be used!

Other Hazards

Falling: 1d6 damage per 10', half damage on Phys+DEX save. DC=depth fallen in feet

Extreme Heat & Cold: If not wearing suitable protection, Phys+STR save once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed save.

Lava: 2d6 damage per round exposed; much more if completely immersed. Damage continues until lava is removed or quenched.

Poison: Phys+STR save to avoid or for half, depending on poison. Effect varies with poison type.

Radiation: Lose 1d3-1 STR per round, DC 20 STR+Phys save for half (round down). Damage is potentially much higher in very hard radiation. STR recovers at a point per day if properly treated.

Spikes: add +1 point to falling damage per 10' fallen, max +10.

Level Advancement

Encounter Level = Hit Dice of defeated monsters, or the given EL for the trap, situation, etc. Add +1 for each doubling of the number of foes. e.g.: 1 Goon = EL1. 2 Goons = EL2. 4 Goons = EL3, etc.

Add up the Encounter Levels (EL's) of every encounter you take part in. When the total = 10 x your current level, you've advanced to the next level. Reset the total to 0 after advancing.

Each level adds:

+1d6 to Hit Points
 +1 to all attack rolls
 +1 to your primary skill(s)
 +1/2 to all other skills

If the level divides by four (i.e. level 4, 8, 12, etc.) add 1 point to STR, DEX, INT or CHA.

A new Talent is gained at levels 4, 7, 10, 13, 16, 19, etc.

Soldiers gain +1 to their attack and damage rolls at levels 5,10,15, etc.

Faces and Thinkers gain +1 to their Charisma and Intelligence statistics at 5, 10, 15, 20, etc.

Example: The 1st level adventurers have just completed a mission, and defeated 5 EL1 encounters, an EL2 trap and the EL3 leader. That's a total of EL10, so they all advance to level 2. They need to defeat another 20 Encounter Levels to reach Level 3.

Gear: Equipment, Vehicles and Hired Help

The Basics

You start out each mission with 5 gear points plus 1 pt per level. In other words, 6 gear points for a 1st level character. You can have more gear points if you've taken the Well-equipped Talent.

With gear points, you can buy weapons, armor, gadgets, traps, vehicles, or requisition help.

If you'd rather not deal with the complexity, just turn to the end of this section and you'll find several gear packages there, one of which is bound to be useful.

Equipment is deliberately kept rather generic--you can call your items whatever you want to within reason. A "handgun" could be a Colt.45, a Beretta or a Glock. It's all up to player preference.

Basic Equipment

1 pt will get you one of the following...

- One basic firearm
- One exotic weapon
- One melee weapon
- 6 thrown weapons
- 6 grenades
- One Armor
- One Disguise
- One Gadget
- One Trap

Weapons not on the list. More powerful weapons cost more gear points. Satchel charges, rocket launchers, and so on cost at least 3 gear points. See the d20 Modern SRD for more details.

Item Descriptions

Ammunition. Missile weapons, such as guns and crossbows, come with a couple extra clips worth of ammo, enough not to worry about running out over the course of a few encounters. For an extra point, you can get enough spare ammo for every missile weapon you've brought to not worry about running out of ammo during that session.

Armor. In SpyLite, Armor behaves differently than in other d20 games. When you requisition it, you can describe it however you like, usually as a bullet proof vest.

Instead of providing an AC bonus or damage reduction, Armor gives you a certain number of charges. When you're hit and take damage, you can say that your armor stopped it and burn one charge.

If you make a (STR + Phys + the armor's bonus) save vs DC (equal to the damage taken), you take no damage but are knocked down until your next action. If you run out of charges, you're out of luck--the armor is useless. A failed save still uses a charge.

Basic armor before applying upgrades has 1 charge and adds +2 to the save.

Basic Firearms. There are hundreds, if not thousands, of variations of handguns and rifles out there. Instead of statting out each one, SpyLite uses an abstracted system.

Pistols do 2d6 damage, Rifles do 2d8. Each are upgradeable (see the section on "Upgrades" for more information). When you requisition a firearm, simply write it down on your sheet and call it what you want.

Basic Firearms:

Handgun	2d6
Rifle	2d8

How many shots your weapon can fire before needing to reload varies depending on what you decide to call it. Typically, this will range from 7 - 17 shots for pistols, 1 - 12 for single shot rifles and shotguns and anywhere from 15-30 for autofire-capable firearms.

If your weapon has fewer shots than that range, then take a "free" gear point and place it in an upgrade (for example, "Big" or "Concealed"). If you really don't care how many rounds there are in your gun's clip (recommended), then use 12 rounds per clip for pistols, 5 for single shot rifles and 25 for autofire-capable rifles and pistols.

Compound Bows, Blowguns and Crossbows.

Obsolete in most other military services, these items have a special place in espionage operations because they are silent and can take a variety of specialized ammunitions.

You can have **either** 10 normal arrows, darts or quarrels or a similar amount of special ammunition. An extra gear point will get you both regular and one type of special ammunition (as per the "alternate ammo type" upgrade). The effects of special ammunition will vary, but minor explosions, tranquilizer darts, tracking

darts, incendiary rounds, tear gas, smoke bombs are all appropriate.

See the entries on grenades and traps for more information on how they might work.

Disguises. Includes any makeup, hair or clothing changes needed to make you appear to be a different person (within reason) and is complete with a superficially plausible cover ID.

Normally, going undercover is a matter of role-playing the situation and your Cha (or Int) + Subterfuge vs any observers' skill rolls, but sometimes a situation will come up that no amount of lying or acting will cover up, such as background checks, direct physical examination, etc. In that case, the thoroughness of your disguise will come directly under fire.

If someone has reason to doubt your disguise, it's DC 15 to penetrate. The "Potent" upgrade can be used to increase this DC by +5. It's also affected by the "Master of Disguise" Talent.

Exotic Weapons. For more information, refer to the individual entry of the item.

Some examples:

Compound Bow	1d8 for normal ammunition
Crossbow	1d10 for normal ammunition
Crossbow, Hand	1d6 for normal ammunition
Blowgun	1d4 for normal darts
Speargun	1d8
Stun Gun/Taser	1d3 damage + STR + Phys save vs DC 15 to avoid being stunned for 1d6 rounds

Gadgets. A gadget is something that is designed to do something specific. It will usually either...

- Get you past an obstacle not usually resolvable by a skill roll (distract guard dogs, allow you to breathe underwater for a while, etc) or...
- Do something useful but not necessarily quantifiable in game terms, or...
- Give a +2 skill bonus to a certain skill or class of skill rolls when performing a task

Some examples of Gadgets: spy cameras, code breakers, welders, lock picks, bugs, low-light goggles, camera disablers, grappling hooks, scuba gear, magnetic watches, laser pens.

Mundane gadgets. Some items are so basic that no points should ever be spent for them: rope, for example. The GM is the final arbiter of whether or not an item applies.

Grenades. Grenades come in a variety of flavors. Explosive grenades do 3d6, have a 10' burst radius, and require a 15 Dex DC to avoid damage.

There are also grenades that use tear gas, sleeping gas, smoke bombs...the sky's the limit, pretty much. If a grenade has a non-damaging effect, assume the DC to resist is 15. Effects will last a varying amount of time, usually 1d6 rounds up to an hour or two.

Grenade launchers are an extra item, but allow you to toss grenades much farther than you can throw them.

Melee Weapons. Melee weapons usually do 1d6, 1d8, 1d10 or 2d6 depending on size and how many hands required to use them. Use your imagination or a copy of the SRD. If you don't have a melee weapon, unarmed damage is 1d4. Chairs, barstools, and other improvised weapons usually do around 1d6 damage but will break if they do maximum damage.

Some examples:

Big Knife	1d6
Brass Knuckles	1d6
Chloroform	STR + Phys save vs DC 15 or be knocked out for a while. Target must be grappled to apply. An alternate version of this item would be a syringe loaded with drugs.
Katana	2d6
Nightstick	1d6
Sap	1d6
Sledge	1d10

Speargun. Operates underwater as well as on land. Compared to other ranged weapons, it's fairly unwieldy.

Thrown Weapons. Thrown weapons do 1d4 damage, plus the thrower's strength bonus.

Trap. A Trap can be set by someone using the Subterfuge skill. Roll Int+Sub. That total is the DC that anyone encountering the Trap must roll to avoid its effects.

When you requisition the Trap, you can describe it as anything you like, within reason—land mines, bear traps, caltrops, banana peels, it's up to you.

The effects of the trap also vary, but grenade-like explosions, sleeping gas, knocking the target down or

restraining them for a few rounds (or until freed)...the possibilities are endless. If a trap has a non-damaging effect, assume the DC to resist is 15. Effects will last a varying amount of time, usually 1d6 rounds up to an hour or two.

The "disguised" and "concealable" upgrades do not apply in the usual way to Traps. If you'd like your traps to be harder to find once set, use "Potent". "Potent" can also refer to resisting the effects of the trap itself, so be sure to specify which part of the trap you are applying the "Potent" upgrade to. A Trap with the "disguise" or "concealable" upgrade will be harder to find **before** it's set.

*Example: A Trap with no disguise upgrade might look like your "normal" suitcase bomb, seen in thousands of action movies. A trap **with** the disguise upgrade might appear to be an innocuous can of shaving cream or a scattered collection of harmless-seeming items. After they are both set, they'd both be equally difficult to find, depending on the user's skill level.*

Upgrades

You can spend additional gear points on your items to improve them. The cost of an upgrade applies directly to an item's cost. For example, a pistol costs 1 pt. Apply the "Big Weapon" upgrade and the pistol now costs 2pts, but does 2d8 damage.

Alternate Ammo Type. +1 pt. Weapon can fire a different type of ammo in addition to normal rounds (acid, stun, sleeping, tracking darts).

Armor Upgrade. +1 pt. Adds one more charge and +2 to the armor save value. Can be taken 3 times for a total value of 4 charges, +8 to the armor save.

Autofire. +1 pt. Gun can autofire.

Big Weapon. +1 pt. Upgrades damage to next higher die type. Can only be taken once.

Concealable. +1 pt. The object is easily concealable. Efforts to find the object are at a +5 DC penalty. Can only be taken twice.

Disguised. +1 pt. Object is disguised as something innocuous--a lipstick taser, for example. An INT + Sub or Sci check vs DC 20 will reveal the object's true purpose. No skill check is required to do this if the object is seen in use.

Gadget Upgrade. +1 pt. Upgrades a gadget's skill bonus by +2. Can be taken up to 3 times, for a total of +8 gadget bonus.

Potent. +1 pt. More Potent. +5 DC to resist effects. Can be taken 4 times total.

Scope. +1 pt. When taking the Aim maneuver, range penalties can be ignored.

Silencer. +1. Makes gun shots much quieter, but only for the first few rounds.

Vehicles

1 pt gets you a basic, no frills vehicle with enough room for one passenger and fast enough to get on the highway, but that's it.

The following upgrades apply:

Sexiness

0 pt = Not Sexy
1 pt = Upscale
2 pt = Stylish
3 pt = Luxurious

Passenger and Cargo Capacity

1 pt = 1 passenger (motorcycle-sized)
2 pt = 3 passengers, a few suitcases (family car)
3 pt = 10 passengers, a few crates (pick-up truck)
4 pt = 20 passengers, fair amount of cargo (a bus)

Speed

0 pt = Unimpressive
1 pt = Sporty
2 pt = Fast
3 pt = Blazing Fast

Additional capabilities:

Armor. +1 pt. Any attacks on the occupants or the car have to penetrate DR 5. Any attack that does more than 5 points damage over the DR reduces the DR by 1 point. When it reaches 0, there's no armor left. Taking this multiple times adds +5 DR, maximum 20.

Can Fly. +1 pt.

Can Hover. +1 pt, requires Flight.

Sealed Cabin. +1 pt. Occupants are unaffected by outside environmental conditions such as low air pressure or underwater environments. For another point, vehicle can also handle extreme heat, radiation, the vacuum of space and poisonous gases.

Submersible. +1 pt.

Complex Items

You can combine several pieces of gear into one item. Simply total up the cost and divide by 2, with a minimum cost of the most expensive item component+1.

It is entirely up to the GM to veto or approve complex items.

Example #1: Gun Leg

- 1 pt - Rifle
 - +1 pt Automatic
 - +1 pt Disguised as prosthetic leg
 - +1 pt Scope
- 1 pt Underslung Grenade Launcher
 - +1 pt Can also fire Tear Gas Rounds
 - +1 pt Disguised as prosthetic leg

Total = 5 gear points (4 pts for the Rifle component +1).

You now have a prosthetic leg that can be removed and used as an automatic rifle with a scope and underslung grenade launcher...which can fire either explosive grenades or tear gas grenades.

Here's another example:

Example #2: Rigged Attache Case From "From Russia With Love"

- 1 pt Locked Attache Case
- 1 pt Trap (tear gas, DC 15 or spend 1d6 rounds coughing and hacking, triggered by opening case incorrectly, DC to detect most likely Int+Sub roll of the guy at Q Department who made it).
 - +1 pt More Potent (+5 DC, total DC 20)
- 1 pt Additional places to conceal things (knives, money, folding sniper rifle)

Total = 3 gear points (2 for the Trap +1).

The agent now has a locked attache case with plenty of room to hide things. If someone tries to open it without knowing the trick, they'll trigger a tear gas trap with a DC 20 to resist.

Example #3: The Car From "Goldfinger"

Want the car from "Goldfinger"? The breakdown of costs would go like this:

- 5 pts, Aston Martin (Stylish +2, Family Car-sized +1, Fast +2)
- 6 pts, Two Rifles, Fully Automatic, disguised as

- headlights (3 pts each)
- 2 pts, Oil Slick, concealed
- 2 pts, Ejector Seat, concealed
- 4 pts, Retractable blades in the hub caps, concealed (2 pts each)
- 2 pts, Vehicle Armor DR 5, concealed
- 2 pts, Radio Telephone, concealed
- 2 pts, Radar scanner and tracking screen, concealed
- 2 pts, Caltrops from rear light cluster, disguised as rear headlights
- 2 pts, Smoke screen from exhaust pipes, disguised as exhaust pipes
- 1 pts, Revolving number plates
- 1 pts, Concealed storage for guns

Total = 16 gear points (31/2 points).

Helper NPC's

Gear points can also get you a helping hand with your mission, ranging from getting someone to distract the guards at the front gate all the way up to commandeering a full tactical assault squad.

Ability

- 1 pt = 1st level
- 2 pt = 1/2 your level, rounded up*
- 3 pt = Your level-1*

* Obviously, at 1st and 2nd levels, these point values are somewhat useless.

Number of NPC's

- 0 pt = 1
- 1 pt = 1d3
- 2 pt = 1d4+2
- 3 pt = 2d6

Duration

- 0 pt = There for one task only, after performing that, they leave.
- 1 pt = 1 encounter
- 2 pt = The full adventure

Equipment

- 0 pt = the skin on their backs
- 1 pt = basic equipment--standard gear for their profession
- 2 pt = specialized equipment or a vehicle

Morale

- 0 pt = Surly
- 1 pt = Friendly/Professional
- 2 pt = Enthusiastic
- 3 pt = Frothing at the mouth

Gear: Gear Packages

These are all 6 pt packages, appropriate for beginning play.

The Archer

- Crossbow (1d10 with normal rounds, scope)
- 10 Tranquilizer Bolts (DC 15 to resist)
- McAllister .32acp Pistol (2d6, 9 round clip)

Pick one of the following:

- Lipstick Camera (disguised), **OR**
- Mascara Taser (disguised, DC 15 to resist) **OR**
- Explosive Trap disguised to look like a kitten (potent: +5 DC to resist)

The Bond

- Walther PPK (2d6, silenced, 7 round clip)
- Sports Car (upscale, car-sized, sporty)

Pick one of the following:

- Wristwatch (welding laser, disguised), **OR**
- Cigarette Case (tear gas bomb when activated, DC 15 to resist, disguised) **OR**
- Ballpoint Pen (dart gun, drugged, 15 DC to resist, disguised)

Home Alone

- Handgun (2d6)
- 3 Traps
- 6 Grenades
- Toolkit (+2 to handyman types of things)

John Woo

- 2 Beretta 92F (2d6, 15 round clip)
- Bulletproof Vest (1 charge, +2)
- Motorcycle (upscale, bike-sized, fast)

The Mafioso

- Brass Knuckles (1d6)
- Tommy Gun (2d8 damage, autofire)
- Bulletproof Vest (1 charge, +2)
- Knows A Guy (hired help, 1 1st level guy shows up for one task, basic equipment, surly)

Merc

- Body Armor (2 charges, +4)
- Machine Gun, (2d10, Automatic)
- Rambo Knife (1d6)

Sniper

- Sniper Rifle (2d10, scope, silencer)
- Pistol (2d6)
- Gilly Suit (+2 to hiding)

Trench Coat Ninja

- Katana (2d6)
- Wakizashi (1d8)
- Trench Coat (+2 to concealing items on person)

Pick two of the following:

- Blowgun w/tranquilizer darts (DC 15 to resist)
- Climbing Claws (+2 to climbing)
- 6 Smoke Bombs (DC 15 to resist + obscures sight)
- Throwing Stars (6, 1d4 each)

Undercover Agent

- Disguise (DC 20 to penetrate)
- Camera (disguised as innocuous item)
- One bug
- Listening device

Wheel Man

- Handgun (2d6, autofire)
- Getaway Car (not sexy, car-sized, fast, armored at DR 5)

Foes: Animals and Supporting Cast Members

Animals

Type	HD	HP	AC	Damage, Notes
Ape	4d8+8	(26 HP)	14	Claw +7 (1d6+5), Bite +2 (1d6+2)
Bear	6d8+24	(51 HP)	15	Claw +11 (1d8+8), Bite +6 (2d8+4)
Crocodile	3d8+9	(22 HP)	14	Bite +6 (1d8+6), Tail Slap +6 (1d12+6)
Dog	2d8+4	(13 HP)	13	Bite +3 (1d6+3)
Dolphin	2d8+2	(11 HP)	15	Slam +4 (1d8)
Eel, Electric	2d8	(9 HP)	16	Bite +4 (1d4) + Electric Shock (1d6)
Herd Animal	3d8+9	(22 HP)	13	Butt +3 (1d8+6), Trample +3 (1d12)
Horse	3d8+6	(19 HP)	13	Hoof +2 (1d4+1)
Lion	5d8+10	(32 HP)	15	Bite +2 (1d8+2), Claw +7 (1d4+5)
Monkey	1d8	(4 HP)	14	Bite +4 (1d3-4)
Piranha	1d2	(1 HP)	16	Bite +4 (1d3-1)
Rat	1d2	(1 HP)	14	Bite +4 (1d3-4)
Shark	3d8+3	(16 HP)	15	Bite +4 (1d6+1)
Snake, Boa	3d8+6	(19 HP)	15	Bite +5 (1d3+4), Grabs (Str 14) and squeezes for 1d3+4 per round after hitting with Bite until killed or target breaks free
Snake, Viper	1d8	(4 HP)	17	Bite +4 (1d2-2) + Poison (1d6 Str damage, DC 10 for half)

For something higher up on the gonzo scale...

Type	HD	HP	AC	Damage, Notes
Plant, Carnivorous	8d8+40	(76 HP)	14	Melee +13/+8 Grabs opponent (Str 20), bites for 1d6+10 next round
Robot, Tiny	1/2d10	(2 HP)	13	Ranged +3
Robot, Man-sized	2d10	(11 HP)	15	DR 3, Melee +2 (1d6+2) or +3 Ranged (by weapon)
Tyrannosaurus Rex	18d8+99	(180 HP)	14	Bite +20 (3d6+13)
Zombie	2d12+3	(16 HP)	11	Slam +1 (1d6+1)

All creatures have a bonus to all skills equal to their number of Hit Dice, if appropriate. For skill areas a creature is well-known for being good at, give them +3 skill ranks for that task. Examples would be panthers sneaking, monkeys climbing, dogs tracking by scent, etc.

Huge. +4 HD. +4 to attack, +8 Str (don't forget to factor this into the critter's HP, damage and to hit bonus), +4 AC (tough hide), damage increases to next higher die type.

Fucking Laser On Head. Animal gains a ranged attack at its normal attack bonus: Laser (2d8, equivalent to scope and silencer).

Templates

Want to upgrade an animal? Pick a base animal from the chart, select a template, add in the template's bonuses and, voila, upgrades.

Big. +2 HD. +2 to attack, +4 Str (don't forget to factor this into the critter's HP, damage and to hit bonus), +2 AC (tough hide).

Supporting Cast

There are two types of NPC's: **Ordinaries** and **Heroics**. Both are built using the standard classes (Soldier, Spy, Face, Thinker).

Ordinaries

Ordinaries are important enough to have stats, but not important enough to have any significant screen time.

They have 1d6 (average 3.5) hit points per level, adjusted by their Str bonus (or penalty). They gain all special abilities of their class, but do NOT usually gain Talents or Action Points.

If you're in a rush, use average stats except for whichever stat the Ordinary uses most, which will get a 12-14. Use level 1 for the lowest rung in their professions. If you need a more seasoned Ordinary, add levels. 2-4 would be appropriate for more experienced types.

In some cases, it may be appropriate to give Talents to Ordinaries, but don't go overboard with it.

Example: the PC's are jumped by a squad of ninjas. The GM doesn't have any prepared, so he decides to make them Spies with Physical and Subterfuge as their skill picks. These ninjas are level 2.

The GM gives them 10 in all their stats save for Dex, which gets a 14. They get average hit points, for a total of 7 (3.5 times 2 levels, with no Strength modifiers). Their AC is 13 (10 + 1/2 Level + Dex bonus). They get a +4 attack bonus (2nd level + Dex bonus) and are equipped with katana (2d6 damage).

Some typical examples of Ordinaries follow. These are meant to be background characters or cannon-fodder.

Typical Ordinaries:

Assassin. Soldier-3. Str 12 (+1), Dex 12 (+1), Int 10 (+0), Cha 10 (+0). HP 13. AC 12. Silenced Handgun +5 (2d6+1) or Knife +5 (1d6+2). Physical +2, Subterfuge +6, Communications +2, Knowledge +2, Science +2.

Civilian. Level 0. Str 10 (+0), Dex 10 (+0), Int 10 (+0), Cha 10 (+0). HP 3. AC 10. Punch +0 (1d4) or Grab +0 or Improvised Blunt Weapon +0 (1d6). One skill at +2 all other skills at +1.

Criminal. Spy-2. Str 12 (+1), Dex 10 (+0), Int 10 (+0), Cha 12 (+1). HP 9. AC 11. Pistol +2 (2d6) or Knife +3 (1d6+1). Physical +5, Subterfuge +5, Communications +2, Knowledge +2, Science +2.

Government Agent. Spy-3. Str 10 (+0), Dex 12 (+1), Int 12 (+1), Cha 10 (+0). HP 10. AC 12. Pistol +4 (2d6) or Hand-to-Hand +4 (1d4). Physical +2, Subterfuge +6, Communications +2, Knowledge +6, Science +2.

Eye Candy. Face-1. Str 10 (+0), Dex 12 (+1), Int 8 (-1), Cha 16 (+3). HP 3. AC 11. Punch +1 (1d4) or Grab +1 or Improvised Blunt Weapon +1 (1d6). Physical +1, Subterfuge +1, Communications +4, Knowledge +1, Science +1.

Ninja. Spy-2. Str 10 (+0), Dex 14 (+2), Int 10 (+0), Cha 10 (+0). HP 7. AC 13. Katana +4 (2d6) or Hand-to-Hand +4 (1d4) or Throwing Stars +4 (1d4). Physical +5, Subterfuge +5, Communications +2, Knowledge +2, Science +2.

Police Officer. Soldier-2. Str 12 (+1), Dex 12 (+1), Int 10 (+0), Cha 10 (+0). HP 9. AC 12. Pistol +4 (2d6+1) or Hand-to-Hand +4 (1d4+2). Physical +2, Subterfuge +2, Communications +2, Knowledge +5, Science +2.

Politician. Face-3. Str 10 (+0), Dex 10 (+0), Int 12 (+1), Cha 12 (+1). HP 10. AC 11. Punch +3 (1d4) or Grab +3 or Improvised Blunt Weapon +3 (1d6). Physical +2, Subterfuge +2, Communications +6, Knowledge +2, Science +2.

Professional. Thinker-2. Str 10 (+0), Dex 10 (+0), Int 14 (+2), Cha 10 (+0). HP 7. AC 11. Punch +2 (1d4) or Grab +2 or Improvised Blunt Weapon +2 (1d6). Knowledge or Science +5, other skills at +2.

Scientist. Thinker-4. Str 8 (-1), Dex 8 (-1), Int 16 (+3), Cha 10 (+0). HP 10. AC 11. Punch +3 (1d4-1) or Grab +3 or Improvised Blunt Weapon +3 (1d6-1). Physical +3, Subterfuge +3, Communications +3, Knowledge +7, Science +3.

Soldier. Soldier-2. Str 14 (+2), Dex 10 (+0), Int 10 (+0), Cha 10 (+0). HP 11. AC 11. Automatic Rifle +3 (2d8+1) or Pistol +3 (2d6+1) or Combat Knife +5 (1d6+3). Physical +5, Subterfuge +2, Communications +2, Knowledge +2, Science +2.

Squad Leader. Soldier-5. Str 14 (+2), Dex 12 (+1), Int 12 (+1), Cha 10 (+0). HP 27. AC 13. Automatic Rifle +8 (2d8+2) or Pistol +8 (2d6+2) or Combat Knife +9 (1d6+4). Physical +8, Subterfuge +3, Communications +3, Knowledge +3, Science +3.

Terrorist. Spy-3. Str 10 (+0), Dex 14 (+2), Int 12 (+1), Cha 10 (+1). HP 10. AC 13. Rifle +5 (2d8) or Knife +5 (1d6). Physical +2, Subterfuge +6, Communications +2, Knowledge +2, Science +6.

Thug. Soldier-2. Str 14 (+2), Dex 12 (+1), Int 10 (+0), Cha 10 (+0). HP 11. AC 12. Fists +5 (1d4+3) or Club +5 (1d6+3). Physical +5, Subterfuge +2, Communications +2, Knowledge +2, Science +2.

Heroic NPC's

Heroic NPC's are built almost exactly the same way as player characters. They get Talents and may or may not get an Action Point or two, depending on how important they are to the plot.

A heroic NPC is important enough to get significant screen time, so they should have at least one "hook" to them. For example, "sumo wrestler with deadly hat boomerang" or "sinister wheelchair-bound Russian with white cat".

Here are a few examples, all level 5:

Heroic Assassin. "An assassin with a passion for gambling and a penchant for berserker rages." Spy-5. Str 12 (+1), Dex 16 (+3), Int 11, Cha 8 (-1). HP 29. AC 16. Handgun +8 or +6/+6 (2d6, silenced), Two Big Scary Knives +8 or +6/+6 (1d8+1), Garrote (1d6+1 per round, must grapple from behind). Physical +8, Subterfuge +8, Communications +3, Knowledge +3, Science +3. Agile, Double-tap.

Hulking Bodyguard. "Hulking granite slab with fewer words than a dictionary with blank pages." Soldier-5. Str 18 (+4), Dex 10, Int 10, Cha 6 (-2). HP 35. AC 12. Fists +11 (1d6+6), Rifle +7 (2d10+2, Automatic). Physical +8, Communications +3, Subterfuge +3, Knowledge +3, Science +3. Brawler, Power Attack.

Corrupt Politician. "On more terrorist organizations' payrolls than he has fingers. Or toes. Has an engaging smile and twinkling eyes." Face-5. Str 10, Dex 10, Int 12 (+2), Cha 17 (+3). HP 27. AC 12. Pistol +5 (2d6). Communications +8, Physical +3, Subterfuge +3, Knowledge +3, Science +3. Specialist: Political Maneuvering (+2), Well-Connected.

Evil Mastermind. "Irish woman with eye patch and penchant for moray eels." Thinker-5. Str 12 (+1), Dex 12 (+1), Int 18 (+4), Cha 13 (+1). HP 29. AC 13. Two Pistols +6 or +4/+4 or Autofire (2d6, Autofire). Science +8, Communications +3, Physical +3, Subterfuge +3, Knowledge +3. Trap Monkey, Well-Connected.

Master Ninja. "Has a gravelly voice and goes by the name of 'Shredder'." Soldier-5. Str 14 (+2), Dex 15 (+2), Int 11, Cha 7 (-1). HP 36. AC 14. Two Katana +9 or +7/+7 or +5/+5/+5 (2d6+4) or Throwing Stars +9 (1d4+4). Subterfuge +8, Physical +3, Communications +3, Knowledge +3, Science +3. Martial Artist, Durable. Wears spiked body armor (2 charges, +4).

Agencies: Enemy And Otherwise

Every agent needs to belong somewhere, whether it's the SPECTRE to your British Secret Service, the UNITY to your HARM, an international espionage agency like UNCLE, or even the United Nations itself.

Agencies are usually generated by the GM, but the players' Agency could just as well be created by group consensus at the beginning of play. There could even be some campaigns where the players don't even belong to an Agency at all.

Creating An Agency

Choose A Name. If you don't have an idea handy, a time-tested method is to grab a dictionary, flip through it until you find a likely word and then use that as your Agency's acronym.

White hat Agencies will have acronyms with positive connotations; Black hat Agencies will have more

sinister-sounding acronyms. Examples: HAMMER, ALPHA, SHARK, TRUTH, MALICE.

Don't worry if you can't decide what the acronym stands for. If a player calls you on it, you can always just say it's Russian for something really complicated.

Brief Description. Much like important NPC's, Agencies should have a brief hook that makes them memorable. "Hidden counter-terrorist unit formed by Winston Churchill in the darkest days of WWII" or "International criminal organization of ex-Spetsnaz operatives based out of a hollowed out volcano in the Maldives."

Goals. Every Agency is here for a reason. "Fight evil", "protect world stability", "world domination", "destabilize the global economy". These goals may even occasionally change over time.

Typical Operatives. When the Agency sends in help, what type of help typically shows up? Soldiers? Men in black? Ninjas? Thugs?

Enemies. Who are your Agency's enemies? Does it have any long-standing nemeses?

Allies. Does the agency have any major allies? Is it affiliated with any governments or civilian organizations?

Allies, Pulling Strings. Agencies can pull strings, calling in favors for additional help from their allies. Use the highest Cha + Comm of all the players currently in the group to roll vs a variable DC. If successful, the connections come through with help.

The time that this takes depends on the favor—information might take only a few minutes. Manpower may take hours or days. In addition, the help requested must be something the allies can reasonably provide.

Unless noted otherwise, this can be done only once per mission. Also note that your allies are doing this as a favor—they might expect something in return.

DC	Favor
15	Minor information, 1 pt worth of Hired Help, Very minor resource commitment
20	Detailed information, 3 pts worth of Hired Help, Average resource commitment
25	Exacting information, 6 pts worth of Hired Help, Deep resource commitment
30	Direct intervention from the ally, pulling out the stops.

Qualities. Every Agency is slightly different. The way this is expressed is through Qualities, which work like Talents. Choose 3 from the list below:

Qualities

Criminal Ties. When dealing with other criminals and criminal organizations, your Agency gains a +2 to all social rolls that might benefit from having criminal ties. When pulling strings, the Agency can pull strings from a vast number of criminals and not just official allies—criminals will do anything for the right amount of money/leverage.

Deep Funding. Your Agency has deep resources. When gearing up, the group has an additional 1d8 gear points they can split amongst the players' inventories as they see fit.

Fearful. The Agency's reputation is fearsome enough that all known agents gain +4 on any social rolls which would benefit from having a fearful reputation.

Government Sanctioned. Working directly for the government opens many doors. You can gain writs and warrants for just about anything, but need to follow the rules (usually). You also gain a +2 bonus when dealing with friendly government, military and law enforcement, along with the previously-mentioned government support.

Hidden. Your Agency is hidden from public view. While occasionally causing problems (“You say you have a warrant? The FBI's never heard of you!”), it also means your enemies have to do more work to find out information.

Any Disguises requisitioned will automatically be at +5 due to your Agency's skill at building deep cover stories. Any attempts to research the Agency or any of the Agency's employees will be at -2.

Intelligence. Your Agency has spies everywhere. They know things about your enemies even before they do. At any time during a mission, players can request additional information from headquarters, using the same system as listed under “Pulling Strings”. Every time past the first, the DC will be at +3.

Mondo Headquarters. Other Agencies have their headquarters in military bases, modern skyscrapers or even just standard off-the-rack office buildings. Your Agency gets to be based out of something far more fun: moon bases, enormous yachts, a gigantic zeppelin, hollowed-out volcano, whatever you want. This also includes the means to get there, if necessary.

Multinational. Your Agency has resources everywhere. No matter where you are, there's a local office, safe house or headquarters for you to use. The resource might not be large or public, but it will be there.

R&D Department. Your Agency has its own R&D department which produces equipment noticeably more advanced than anywhere else. The first upgrade point on any piece of equipment will be free, including complex items and vehicles.

Think Tank. Your Agency specializes in staffing itself with the best minds in the business. Once per mission the player characters can call in a Helper NPC that can perform any one non-combat-related task. The helper NPC will be a full heroic character at the PC's average level. If he or she dies, he can't be replaced for another 1d6 missions.

Well-Regarded. Anybody who is not specifically an enemy of the Agency reacts to any known agents of that Agency at +2. Agents themselves, once known, are treated as minor celebrities.

Growth And Decline Of Agencies

Successful or failed missions can have an effect on Agencies. Securing an ally over the course of several missions might score your Agency the Deep Funding Quality. Failing multiple missions might make your Agency's "Feared" Quality disappear.

Relatively permanent changes such as these are usually the result of campaign story arcs. There are no hard and fast guidelines, but 3 or missions per change would be typical.

More temporary changes are covered by **Temporary Qualities**.

Temporary Qualities apply to an Agency as a result of a temporary setback or windfall. They typically only last for 1d6 missions and then disappear.

This applies just as much to your enemies as to your own agency. Not all missions may be decisive enough to have either of these effects—only the GM will be able to tell.

Example: UNITY sends the player characters on a mission to prevent the famed saboteur, Le Chacal, from destroying the Louvre. They fail miserably; Le Chacal escapes leaving behind an entire wing of the Louvre filled with flaming pitch and angry chickens.

UNITY gains the "Laughing Stock" Temporary Quality for the next 2 missions. For a similar length of time, Le Chacal's employers, HARM, enjoy "Good Press" (or whatever passes for it amongst the criminal underworld).

Temporary Qualities

Black Eye. Something happened during the last mission to make the Agency suspect your loyalty. Is there a mole or a double agent? Background checks, infighting and psychological interviews abound until the dust settles.

Equipment Shortage. Last mission's toll on the Agency's equipment reserves result in a number of gear shortages. There's a 2 in 6 chance of anything requisitioned to be out of stock. Try something else.

Favor. Your Agency has gained the trust of someone in a position of great power. Until this Quality wears off, it has the benefit of either Criminal Ties, Government Sanctioned or Multinational.

Good Press. The high visibility of the last mission gives the Agency the benefits of the Well-Regarded Quality until things settle back down.

Intelligence Windfall. The last mission uncovered an unexpectedly potent source of intelligence. Until this Quality wears off, your Agency has the benefit of the Intelligence Quality.

Laughing Stock. So much for being respected and feared by...pretty much the entire world. Known agents suffer a -2 penalty to all social rolls that might be penalized by having a reputation for ineptitude until the Agency does something to prove themselves again or the entire world, hopefully, forgets about the whole affair.

Loot. The material gain from the last mission has made a great difference in available materials. Everybody on the team gains 1 additional gear point until this Quality wears off.

Understaffed. Due to the high fatality rate of the last mission, whenever requisitioning hired help, 1d6 less men are available. If none are available, try some other gear choice instead.

Spylite Dossier Generator

Stuck for a mission for your SpyLite game? Grab a handful of dice and roll away! This approach was inspired by the "all the dice" random generators used by Grim (<http://postapocapost.blogspot.com/>) and the Venomous Pao (of <http://www.strangestones.com>). The idea is to take one of each die type and roll them all at once. Once you have the basic idea of the mission, roll for random adventure details in the penultimate step, get a code name and you're done.

Mission Type: Roll d4

- 1 Locate
- 2 Protect
- 3 Rescue or Kidnap
- 4 Sabotage/Modify or Destroy

Object: d6

- 1-2 Person
- 3-4 Place
- 5-6 Thing

What: Roll d8

Choose the column that corresponds to the Object type you rolled with your d6.

	Person	Place	Thing
1	Government Official	Military Asset	Secret Plans
2	Spy	Computer Center	Cutting Edge Technology
3	Military Officer	Listening Post	Enemy Intel
4	Diplomat	Manufacturing Facility	Sensitive Information
5	Civilian	Detention Center	A Valuable Artifact
6	Scientist	Criminal Hotbed	Vast Archives
7	Informant	Espionage Agency	A Stockpile
8	Undercover Spy (roll again for cover)	Headquarters Roll Twice	Roll Twice

Complications: Roll d10

- 1 Your friends are really your enemies.
- 2 Your enemies are really your friends.
- 3 **Expert.** You have an ally who is helpful, but rather fragile. Protect at all costs.
- 4 **Secondary objective.** Roll again on "Mission Type", "Object" and "What".
- 5 **Loose Cannon.** You have an ally for this mission who seems to be the perfect match for your skills. Problem is, he's crazy.
- 6 **Counter-offer.** A friendly agency wants you to do the opposite of your objective and is willing to pay more for it.
- 7 **Ulterior Motives.** It turns out your agency's reasons for this mission aren't as noble as you thought. What do you do?
- 8-9 None
- 10 Roll Twice

Enemies: Roll d12

- 1 Terrorists
- 2 Military, Friendly (countries your country is on good terms with, so keep things low-key...)
- 3 Military, Unfriendly (hostile countries)
- 4 Rogue agents and mercenaries
- 5 Underhanded Businessmen
- 6 Organized Crime
- 7 Rogue Military Unit
- 8 Ninjas
- 9 Government Agents
- 10 Black Ops
- 11 Rebels
- 12 Roll Twice

Locations: Roll d20

- 1 In The Jungle
- 2 Arctic Outpost
- 3 An Oil Rig
- 4 Air Base
- 5 Hidden Underground Bunker
- 6 Corporate Skyscraper
- 7 Run-down Urban Neighborhood
- 8 Remote Island
- 9 Decadent Mansion
- 10 Castle
- 11 Submarine
- 12 Airport
- 13 Train
- 14 In The Desert
- 15 Up In The Mountains
- 16 Sprawling Satellite Dish Array
- 17 Quiet Suburb
- 18 Famous National Monument
- 19 A Bank
- 20 Roll Twice

Adventure Elements: Roll d20, Three Times

You don't have to use any of these—they are merely jumping points to brainstorm interesting things that might happen in the adventure.

- 1 Big Guns
- 2 Bungee Jumping (in other words, needlessly risky stunts as part of the mission plans)
- 3 Chase Sequence
- 4 Complex Security System
- 5 Computer Hacking
- 6 Dangerous Animals
- 7 Dealing With Patrols
- 8 Death Traps
- 9 Departmental Politics
- 10 Destroy All Evidence
- 11 Evil Mirror Universe Spy Team (the enemy has a team just like you!)
- 12 Femme/Homme Fatale
- 13 Hidden Things
- 14 High Fashion
- 15 Impressive Thug (Think Oddjob or Jaws)
- 16 Lasers
- 17 Load-bearing Boss (ie the place starts to fall apart at the climax of the mission)
- 18 Poison
- 19 Skullduggery
- 20 World Domination

Assign A Code Name: Operation (d12 #1) + (d12 #2)

d12	#1	#2
1	None (skip this word)	Justice
2	Rolling	Archer
3	Code Name	Diamond
4	Rising	Tiger
5	Violent	Dragon
6	Secret	Eagle
7	Ice	Sun
8	Burning	Wolf
9	Black	Victory
10	Velvet	Fury
11	Golden	Rain
12	Phoenix	Storm

Examples:

Operation Code Name Wolf

Mission Type: Locate Secret Plans

Complications: Loose Cannon

Enemies: Ninjas

Location: Arctic Outpost

Elements: Chase Sequence, Dangerous Animals, Poison

The team has to acquire secret plans to D.I.R.E.'s new intelligence mainframe. The plans are being held at a training facility far north of the Arctic Circle in Siberia. The place is packed with ninjas in various levels of competence, their instructors and trained wolf packs.

There's probably going to be a snowmobile chase or two when the team tries to escape and the plans themselves are being held in a vault that's flooded with deadly poison gas.

Assisting them will be Jack "One-eyed" Morgan, an agency veteran who's seen more action in the last ten years than most armies have seen in a typical century. Unfortunately, he has a tendency to go off the rails rather frequently and this is his last mission before he's going to be forcibly retired...

GIANT BUG INVASION

by Mike Berkey (michael.berkey@gmail.com), Copyright 2010. For more Microlite20 awesomeness, head over to the Microlite20 website at <http://www.koboldenterprise.com>.

This is more of a tool kit for playing gonzo weird science scenarios than anything else. It's primarily intended as an expansion to the (now absurdly non-micro) SpyLite system, but is fairly compatible with other versions of Microlite20 with a bit of tweaking.

So, here we go. Mad Science and more nasty bugs than you can shake an emergent quantum stick at.

New Talents

Big Chin. You regenerate Action Points more quickly. Not only do you gain an Action Point back on a natural 20, you also get one back on a 19, so long as the roll itself was successful.

Bulletproof Nudity. This Talent is mainly intended to simulate characters who never seem to tote more than a bikini and a machine gun, but since this is an egalitarian game, it's okay for guys to have this Talent as well. If you're baring some skin, then you have a +1 bonus to your AC. The more skin you're showing, the more the bonus, up to a maximum of +3. Wearing clothing or armor negates this effect. At the GM's discretion, the character can take a small hit to skill and to-hit rolls when "over-dressed" or dressed too conservatively.

Field Biologist. By examining the corpses of icky non-human things and using the fruits of modern science, you and your teammates gain combat and skill bonuses. Requires that Knowledge be a Trained Skill. You can examine any new species of critter killed, assuming you have access to sufficient lab equipment (even a field kit will do in a pinch). Make an Int + Know check vs DC 20. If successful, all attacks and skill rolls against these critters will be at +2 by you and the rest of the team for the rest of the adventure. If the check is DC 30 or better, then all damage inflicted is increased by +1d6. The GM may adjust the DC's up or down to reflect the difficulty of the situation or quality of equipment.

If I Had A Hammer. Improvised weapons never break for you and you do an additional +2 damage when using one.

Mad Scientist. Requires that Knowledge be a Trained Skill. Instead of being forced to roll for your Mad Science gadgets, you can create your own. When this Talent is first chosen, choose a Source for your character—from now on all gadgets you make will have that Source. Taking this Talent again allows you to choose an additional Source for your gadgets. This bonus does not necessarily extend to other party members, except with GM permission (in this case, your character designed and built the party's gadgets).

Serious Hate On For (Insert Target). If there's one thing you hate more than traffic jams, it's... Pick one kind of target every time you choose this Talent (bugs, zombies, bus drivers, whatever). When making a damage roll against this kind of target, you can reroll any 1's or 2's that come up. Rock'n'roll.

Weird Science. Requires Mad Scientist. When rolling for Quirks for your own mad gadgets, not only do you always know what the result is, you can roll twice and choose one of the two results. This bonus does **not** extend to other party members, even when they are using gadgets that you have designed.

Mad Science

Mad Science extends the standard SpyLite Gear Point system and produces devices that are slightly more powerful, but weird and unpredictable.

You can declare any item bought through the Gear Point system to be "Mad."

Roll twice, once for a Source and once for a Quirk. You will know ahead of time what the Source is, but it's recommended that the GM roll the gadget's Quirk and let the players find out what it is through experimentation.

Sources (d8)

- 1 **Biological.** The device uses biological engineered components—viruses, specially bred or mutated creatures, tamed insects, what have you. In order to stay working, it must be fed, either through a prepared solution or whatever's handy.
- 2 **Chemical.** The device uses special chemicals which can run out eventually. The device is prone to leakage when it breaks, as well—**roll d6:** 1-3 harmless chemicals, 4-5 inconveniencing (stains, smells bad), 6 hazardous.
- 3 **Electronic.** The device is entirely electronic. And by electronic, we're talking vacuum tubes, Jacob's Ladders, arcs of exposed electricity. Mad Science never takes half measures. **Roll 1d10** after every use—on a 1 or 2, it has run out of power. In addition, anybody within 5 feet of the item when used (besides the operator) must save vs DC 15 or get zapped for 1d6 damage.
- 4 **Radioactive.** The device is highly radioactive. It has an effectively unlimited power supply, but leaks radiation like a rusty Pinto leaks oil. Anybody exposed to the item for more than an hour has a flat 1 in 10 chance per 4 hours to develop a random mutation. The details of any mutations are up to the GM, but they should be embarrassing and unexpected.
- 5 **Robotic.** The device works via advanced robotics—the more implausible and Rube Goldberg-esque, the better. While it never seems to run out of power, sometimes the robots will go on strike and must be convinced to continue working.
- 6 **Quantum.** Nobody knows quite how the thing works, only that it does. It has a tendency to disappear when looked at out of the corner of the eye, only to reappear when looked at squarely. Occasionally it emits weird noises and appears to occupy unexpected dimensions. On any skill or to-hit roll of one, it causes reality to rewrite itself in some way. **Roll 1d6:** 1-3 Superficial, 4-5 Minor, 6 Major.
- 7 **Steampunk.** The device runs on coal and steam or a complex mechanically-wound clockwork mechanism. It is massively complex for its size and usually rather bulky. **Roll 1d10** after every use—on a 1 or 2, the machine makes a loud clattering noise and falls apart. Putting it back together requires an Int + Sci roll vs DC 20 or more.
- 8 **Roll again.**

Quirks (d8)

- 1 **Creepy.** The item is so bizarre that everyone within 30 feet of the item must save vs DC 15 when it's operating or run the hell away (or at least back off to what appears to be a safe distance). This includes friendlies, but not the operator.
- 2 **Efficient.** If the gadget is a weapon, it either uses less ammunition or affects more opponents per use. If not a weapon, it helps out more with the task it was designed for, but not always in the most obvious ways. For example, an Efficient Lockpick might pick the lock you're trying to open and then wander off and pick 1d3 more locks for you. Or it might spray a chemical that weakens the door's material so that if the lock-picking attempt fails, it's easier to batter down the door.

- 3 **Emergent.** The item has a tendency to gain new features after a while. Every time it's used, roll 1d10. On a 1 or 2, the device gains another Gear Point, which can be spent immediately, on anything, so long as it's still physically attached somehow to the item. The new ability can't be directly related to any previously-bought abilities.

This can happen 3 times for a total of 3 extra Gear Points. **Roll d6:** 1-3 the choice of new ability is up to the GM, 4-6 player's choice.
- 4 **Evolving.** Every time a skill or to-hit roll is made by 5 or more than the required number while using the item, add +1, up to a +5 total for the gadget. At +5, roll for another Quirk. If the Quirk is "Evolving", re-roll. After that, no more bonuses are gained.
- 5 **Explosive.** The item works once, extremely well, and then breaks. Weapons inflict maximum damage or affect a very wide area, skill-boosting items give an automatic 20 and other items solve the task in record time. Once the device breaks, the Gear Points are "lost" until the end of the adventure.
- 6 **Foul.** The device constantly emits a nasty stench when in operation. -2 to all skill or to-hit rolls within 20 feet when in use. The smell also stains clothing after a while and attracts vermin.
- 7 **Powerful.** +1d6 more damage or an extra +1d6 to a skill roll (roll each time used). If the device doesn't give an obvious bonus (for example, a rebreather), then you can give it another related special ability. For example, a Powerful Rebreather might give the character a swimming speed boost because the bioengineered pygmy sharks that you're using for gills also help pull you along. In exchange for this, however, fumbles are more potent, too. The details should be left to a sadistic GM.
- 8 **Symbiotic.** Every time it's used, make a Str+Phys roll vs DC 15. If the roll is **failed**, the device becomes a part of you. The good part is that you now have a new intrinsic ability with all the bonuses that the device offers. The device no longer takes up Gear Points to possess. The downside, other than being a mutated freak that scares children and small animals, is that you have all the limitations of the gadget's Source.

Generic Bugs

Rather than listing stats for several million different flavors of bugs, take one of the following templates and add one or more of the following Bug Powers. By doing so, you can stat up a freight train-sized Tarantula quickly by giving a Colossal Generic Bug "Wall-Crawling", "Poison Bite" and "Web Spit." A Large Grasshopper could have "Armored Carapace" and "Jumper."

If you have no specific critter in mind, then roll the Bug Powers randomly.

Bug Type (d8)

- 1 **Generic Bug, Tiny.** Bird-sized. HD 1d8-2 (3 HP), AC 14, Bite +5 (1d6-2). Str 6, Dex 14.
- 2 **Generic Bug, Small.** Dog-sized. HD 2d8-2 (7 HP), AC 11, Bite +4 (1d6-1). Str 8, Dex 12.
- 3 **Generic Bug, Medium.** Man-sized. HD 2d8 (9 HP), AC 11, Bite +2 (1d6). DR 1. Str 10, Dex 10.
- 4 **Generic Bug, Large.** Car-sized. HD 4d8+16 (34 HP), AC 12, Bite +7 (1d8+4). DR 2. Str 18, Dex 9.
- 5 **Generic Bug, Huge.** Cabin-sized. HD 8d8+64 (100 HP), AC 10, Bite +14 (1d10+8). DR 3. Str 26, Dex 6.
- 6 **Generic Bug, Colossal.** Very large. HD 16d8+192 (264 HP), AC 12, Bite +25 (3d6+12). DR 5. Str 34, Dex 4.

7 **Swarm.** Each swarm consists of 2d10 Tiny or smaller bugs and will attack one target at a time. Swarms take half-damage from non-flame based weapons and disperse when their HP are exceeded. HD 2d8 (9 HP), AC 17. A swarm will have multiple bugs buzzing around a target, biting, itching or getting into clothing (causing the target to take -1d4 to hit and AC per round while the swarm is attacking). The swarm will also perform a bite attack for +5 (1d6-4) at the same time.

8 **Roll again.**

Bug Powers

Roll d20, 1d3 times...or choose:

- 1 **Armored Carapace.** Tiny and Small bugs: +1 AC, +1 DR. Medium: +2 AC, +1 DR. Large: +3 AC, +2 DR. Huge: +4 AC, +2 DR. Colossal: +5 AC, +3 DR.
- 2 **Boosted Ability. Roll d6:** 1-2 +2d6 Str, 3-4 +2d6 Dex, 5-6 Intelligence becomes 10. Don't forget to recalculate the monster's abilities!
- 3 **Camouflage.** Whether through an innately camouflaged form or color-changing abilities, the bug has a natural stealth ability that provides +4 to all stealth rolls in the proper settings (e.g. walking sticks in a forest), allowing them to blend into their environment provided. Particularly effective camouflage can provide up to a +8 bonus.
- 4-5 **Fast Breeder.** This type of bug breeds exceptionally fast—every few hours, their numbers double.
- 6-7 **Flier.** Not only can the bug fly, it can also perform a dive bomb attack, given enough maneuvering space (+2 to hit and damage). The creature gains +1 AC when in flight.
- 8 **Grabber.** The bug has pincers like an ant or giant grasping claws. Its strength is effectively 4 higher when grappling.
- 9 **Hive Mind.** The bugs can communicate with each other telepathically, allowing for a preternatural level of teamwork. At the GM's option, the Hive Mind can form a highly intelligent gestalt, even if individual bugs are unintelligent.
- 10-11 **Incredibly Tough.** The bug's resilience gives it +2 hp/hit die.
- 12-13 **Jumper.** The bug gains +2 AC. It can also do a Leap Attack if there's sufficient space (+2 to hit and damage).
- 14 **Nasty Stench.** The bug can spray a foul substance at one or more targets, depending on its size. Save vs 5+(twice the bug's HD) or be nauseated for 1d10 rounds.
- 15 **Pheromones.** The bug has the ability to spray one or more types of pheromones at one or more targets, depending on its size. Save vs 10+(twice the bug's HD) or experience one of the following effects for 1d10 minutes: **Roll d6 (or choose)**—1 Anger, 2 Blissed-out Happiness, 3 Fear, 4 Mild Hallucinations, 5 Intense Confusion, 6 Roll Twice.

16 **Poison bite.** Choose an effect or roll randomly the first time the bug bites someone:

Roll d8:

- 1 **Poison**, (1d6)d6 damage. Half of the damage is taken immediately, the other half after a few minutes. Save vs DC 5 + (1d4x5) to negate.
- 2 **Turns you into a bug** if you don't make the save (DC 15). Effective after 1d10 hours.
- 3 **Digestive enzymes** cause your insides to turn into goo. 1d6 Str drain per round for 1d6 rounds.
- 4 **Paralysis** for 3d6 minutes. Save vs DC 5 + (1d4x5) to negate.
- 5 **Acid.** 1d8+Str bonus damage, also eats through items slowly until cleaned off.
- 6 **Partial paralysis.** As per paralysis, but only affects 1d3 limbs. **Roll d8**—1-2 Left Arm, 3-4 Right Arm. 5-6 Left Leg, 7-8. Right Leg.
- 7 **Intoxication.** Save vs DC 5 + (1d4x5) to avoid.
- 8 **Lays eggs** inside of you (YUCK). Save vs DC 15. Eggs hatch in 1d4 days, killing the host.

17 **Spitter.** Has the effect of **roll d6:** 1-2 Nasty Stench, 3-4 Pheromones or 5-6 Poison Bite, but at range. The area of effect varies, depending on bug size, from a foot across up to 40 or 50 feet.

18-19 **Wall-crawling.** The bug can stick to horizontal and vertical surfaces. In addition, it gains +1 AC.

20 **Web Spit.** Spits a sticky web that can be treated as if the creature was grappling at +4 Str. The area of effect varies, depending on bug size, from a foot across up to 40 or 50 feet. At the GM's option, Swarms can "team up" to do this on swarmed targets.

Cyberpunk

Characters

Characters can choose one of two packages when first generated:

Natural. You have a deep-seated mistrust of cyberware—you start out with 2 more Talents. If you ever gain cyberware, you have to "pay off" the cyberware with earned experience at a rate of 1 xp per new cyberware point before you can continue advancing. In addition, at every 5 levels (e.g. 5, 10, 15, 20), you can either pick one bonus Talent or gain a +1 to an ability score of your choice.

Wired. You have \$10,000 to spend on cybernetic enhancements (or more, depending on how the GM sets up cyberware prices for his campaign setting). You can install new cyberware with no experience penalty. Optionally, you can take \$5000 (or half whatever the GM sets) and take another Talent. The character can bank any left-over money.

Cyberware

Cyberware packages are built with points. These points work in a similar fashion to Gear Points in SpyLite, but are tracked separately. Usually, the point total is used to calculate a dollar cost.

1 point lets you do one thing you couldn't before.

It could give you a +2 to a range of appropriate skill checks or a +5 if it's something very specific/appropriate. It could give you +1 to an attribute (up to +8), or +1 to AC or initiative, or it could mimick the effect of one Talent (if you use these) or some other similar bonus.

Attribute bonuses generally only apply as far as the extent of the modification: a cybernetic arm with a +4 to Str might only give bonuses to grip strength, punching and other such applications, but not apply to jumping or running.

Strength bonuses do NOT apply to hit point totals. If you want your cyberware to make you tougher, then buy an AC upgrade.

No ability score can be boosted by more than +8 total, even with multiple pieces of cyberware.

The final total can be modified with the following:

- +1 pt Inconspicuous technology
- +2 pt Lessened impact on Humanity Meter
- 1 pt Inelegant or very obvious (hydraulic rams, for example)
- 1 pt Comes with a side effect of some sort (e.g. causes headaches when in use)

The two -1's can represent outdated or improvised tech.

The final dollar (eurodollar, credit, yen or whatever) cost is equal to the total pts of the cyberware package multiplied by the type of enhancement.

How much of a multiplier is up to the specifics of the setting, but a good guideline might be \$1000 for prosthetic limbs, \$500 for sensory upgrades, and \$250 for a data jack or other similar low-impact enhancements.

Very difficult/high impact modifications such as wired reflexes or physical skillwire enhancements might go as high as \$2500 per point, or even higher.

It's recommended that the GM build a list of available cyberware rather than allowing PC's direct access to this system.

Examples:

Cyber-arm. +4 Str, +1 AC. Comes with a pistol built into the palm, but is rather large and bulky, since it was built with sturdy Soviet-bloc hydraulics. 5 pts. \$5000.

Datajack. Allows direct neural interface with a machine or computer. 1 point. \$250. Better models are inconspicuous (with a concealed port), but cost more.

Dermal Armor. +3 AC. Includes a medical port connecting to a belt pack that allows emergency injections of various performance-enhancing drugs. Drugs are effective for an hour or so, but are potentially addictive. 4 pts. \$4000 (using the cyberlimb cost).

Optical Upgrade. Includes infra-red enhancements, a built-in HD camera and connects to a nearby computer (probably a cellphone) as a display. Inconspicuous—looks like a normal eye. 4 pts. \$2000.

Retractable Spurs. Adds +1d6 to all unarmed melee damage. 1 point. \$1000.

Rigger Processor, Basic Package. Allows a character with a datajack to connect directly to a vehicle's processor. +2 Dex, +1 initiative, but only while driving or flying. 2 points for the Dexterity, 1 point for the initiative bonus, 1 point for the ability to connect with a vehicle, -1 for the vehicle only limitation on the stat bonuses. 3 points. \$4500.

For balance reasons, I put the base cost for this at \$1500 per point—it's not quite as overpowering as wired reflexes, but it's a more extensive modification than prosthetic limbs, humanity-wise.

Skillwire System. The character can slot in various software chips that mimic knowledge of any skill, ranging from martial arts to obscure academic disciplines. Only 2 chips can be inserted at any given time.

The character is considered to be Trained when making skill checks in that area, or, if they already have that skill Trained, they gain a +2 to appropriate rolls. In other words, if your character is not Trained in Knowledge but is now chipped to speak Chinese, then a skill roll to do so would be at level+3 instead of 1/2 level+1. Any other application of Knowledge would still be at the lower, untrained level, unless you had another chip to cover that situation.

While the chips are inserted, the character gains either +2 Dex or +2 Int, depending on whether the chips are physical or knowledge in nature (player choice), to reflect the added knowledge base or physical assurance that the skillwire programming lends.

Damaging Cyberware

If the character is reduced in hit points to the point that they start taking Str damage, roll for a random piece of cyberware every time they take damage—if a specific system comes up, there's a 50% chance that it is damaged.

Humanity Meter

The more cyberware your character is packing, the more they distance themselves from humanity. The humanity meter is a quick and dirty way of measuring this distance.

It's rated on a scale of 1 through 5, with 1 being the least enhanced to 5 being almost completely detached from humanity.

HL Broad Description Of How Enhanced The Character Is

- 1 Very slightly enhanced—a datajack, for example.
- 3 An artificial limb or two, or an assortment of minor enhancements.
- 5 Full conversion, vast laundry list of minor-to-major enhancements. More metal than meat.

However, there's a side effect—for the first hour a new skill chip is inserted, the character suffers blinding headaches (-2 to all checks until the knowledge is fully integrated). 2 pts for the two separate skill bonuses, 2 pts for the stat bonus, +1 for inconspicuous, -1 for the side effects. 4 points. \$10,000.

Smartlink. Provides a direct interface to the gun's targeting system, which will give varying information depending on the sophistication of the gun's optics and computer.

Gives a +2 with gunfire rolls, might have other benefits depending on how good your gun is. Requires a datajack. Better models are inconspicuous—the basic model assumes there's a communications pad embedded into one or both palms. 1 point. \$250.

Wired Reflexes, Basic Package. +2 Dex, +1 Initiative. 3 points. \$7,500.

Wired Reflexes, Cutting Edge. +4 Dex, +1 AC, +3 Initiative. 8 points. \$20,000.

Wired Reflexes, Outdated. +2 Dex, +1 Initiative. Side effects: character is constantly jittery and on edge. 2 points \$5,000.

Each genre has a different meter—different settings value humanity loss differently and enforce it in different ways.

In a **traditional cyberpunk** setting, as you go up you take a social modifier hit and have a progressively higher chance to rage or weird out in high stress situations.

HL	Social Rolls	Cyber-psychosis
1	No effects	
2	-1 to social rolls	
3	-2 to social rolls	In high stress situations, roll vs DC 10 to avoid snapping
4	-3 to social rolls	In high stress situations, roll vs DC 15 to avoid snapping
5	-4 to social rolls	In high stress situations, roll vs DC 20 to avoid snapping

In a **Shadowrun-style** setting, as you go up you take a social hit (but not as bad as in a cyberpunk setting), and magic becomes harder to use. The magic penalty also applies to the cost of healing spells used on you, so be careful.

HL	Social Rolls	Casting Cost	Maximum Spell Level
1	No effects		Max Spell Level 8
2	No effects	Spellcasting costs: +1 hp	Max Spell Level 7
3	No effects	Spellcasting costs: +25% cost	Max Spell Level 5
4	-1 to social rolls	Spellcasting costs: +50% cost	Max Spell Level 3
5	-2 to social rolls	Spellcasting costs: +100% cost	Max Spell Level 1

And, since it would be really easy to hack in at this point...

ShadowLite

In addition to humans, ShadowLite offers several other possible player races:

All of the following races start out with 2 Talents and 2 Action Points (base SpyLite assumes that humans gain +1 Talent and +1 Action Point as a species bonus):

Dwarf. +2 Str, -2 Dex. Automatically gains the Durable Talent. Can see in the infrared spectrum.

Elf. +2 Dex, +2 Int, -2 Str. Automatically has low-light vision.

Orc. +4 Str, -2 Cha. Automatically has low-light vision.

Troll. +8 Str, -4 Int, -4 Cha. Can see in the infrared spectrum. Their thick skin gives them 1 point of DR.

Finally, when choosing whether to make a character Natural or Wired, players have one more choice:

Arcane. Your character can use one type of magic: Cleric, Wizard, Druid or the like. Spell use works as per Microlite20. If you ever gain cyberware, you have to "pay off" the cyberware with earned experience at a rate of 1 xp per new cyberware point before you can continue advancing.

In all other ways, the game runs like SpyLite, with the cyberware rules in effect.

SUPERLITE

SuperLite is a game of four color comic book action. It's based on Greywulf's excellent Microlite version of the d20 system. The core of its superpower system is loosely inspired by the classic FASERIP ranking system. Using this ranking system has the happy side-effect of making the game kinda-sorta compatible with write-ups available from a large number of classic superhero RPG supplements. Unless otherwise noted, assume all rules are as per Microlite20.

STATS

There are 3 stats : **Strength** (STR), **Dexterity** (DEX) and **Mind** (MIND). Roll 4d6, drop lowest dice. Total remaining 3 dice and allocate to one of the stats. Repeat for remaining stats.

Stat bonus = (STAT-10)/2, round down.

CLASSES

SuperLite only uses two classes: Hero and Ordinary.

Heroes begin at level 1 and start with superpowers (see below). A Hero starts with the total of their attributes (STR + DEX + MIND) in HP, plus 1d6 per level.

Ordinaries are the default NPC class and represent characters with no superpowers or special training. They typically have 1d6 hp per level and average stats. They do not have powers or the ability to spend Action Points. They do, however, get to choose a favored skill.

SKILLS

There are five skills : **Communication**, **Knowledge**, **Physical**, **Science**, and **Subterfuge**.

Communication skill covers interaction with other people. Bluffing, seduction, diplomacy, bribery, out-and-out lying, it's all here.

Knowledge is your grasp of the academic arts. It covers everything from languages to archeology, code-breaking to zoology.

Physical. If it's something physical that you do, this skill probably covers it. Jumping, Driving, Climbing and so on.

Science. Mechanical and electronic skills. There's a bit of overlap between this skill and Knowledge—where Knowledge is about **knowing** things, Science is about actually **doing** them. Knowledge will teach the theory behind why your house's electrical wiring works. Science will let you actually wire your house. Covers such things as gadgetry, inventing, rewiring cars and security systems, repairing items and so on.

Subterfuge. The dark side of the skill sheet. Skulduggery, sneaking around, disarming traps and other such things.

Favored Skill. Each character must choose 1 skill they are best at (called your "**Favored Skill**"). Your rank in that skill will be at your level+3. All other skills will be at your level.

Ordinaries have LVL+3 ranks in however many skills they need to do their job. Other skills will be at LVL.

Skill roll = d20 + skill rank + whatever stat bonus is most applicable to the use + situation modifiers

Roll equal to or higher than the given Difficulty Class to succeed. Difficulty Class (or DC) is a number chosen by the GM to represent the difficulty of a skill roll. It ranges from 10 on the low end (dead easy) to 30 – 40 on the high end (nearly impossible). An average DC would be around 20.

For example, Climbing would use Physical + STR bonus. Dodging a falling rock is Physical + DEX bonus. Finding a trap is Subterfuge + INT bonus. Disabling a trap is either Subterfuge + DEX bonus or Science + INT, depending on the nature of the trap.

Note that there are no "saving throws" in this game; use Physical + STR or DEX for Fortitude and Reflex saves. Will saves are usually Know or Subt + INT.

Taking 10. When your character is not under direct pressure or otherwise being distracted, you can "take 10". Instead of rolling d20 for the skill roll, treat the result as 10 and calculate the skill check accordingly.

Taking 20. If the task in question allows the leisure of repeated attempts and you have plenty of time—at least 5 – 10 times more than usually required to perform a skill and are not under direct pressure or otherwise being distracted, you can "take 20". Instead of rolling d20 for the skill roll, treat the result as a 20—this does not count for regaining Action Points.

CONTESTS

Occasionally, two or more characters will directly compete with another outside of a combat situation. Perhaps they're chasing each other, maybe they're debating a topic, etc. It all boils down to the following:

- One character is the Hunter, one is the Prey.
- There are 10 points of Lead. If the Lead increases to 10 or higher, the Prey wins. If the Lead reaches 0, the Hunter wins. The Lead usually starts out at 5, but the GM can decide to use a different number as starting Lead if one side has an advantage.
- Both sides make skill checks each round. Usually these skill checks will be versus static DC's, representing maneuvers.
The highest successful skill check total wins 1 pt of Lead, either towards the Hunter's or the Prey's advantage.

Depending on what these maneuvers are, additional benefits or penalties may accrue in the following round.

If neither skill check passes, the Lead remains unchanged and additional unpleasant effects may ensue as expected for a failed skill roll of that type (crashing, falling, losing the audience's interest, whatever).

If only one side fails their check, one or more extra points of Lead may accrue to the other side depending on how badly the roll failed by.

Risky Maneuvers: For a DC penalty, you can attempt to change the Lead in one attempt by 2 or more points. Describe what you're doing, then take a +5 DC penalty for every extra point of Lead you want. Failure will usually have pretty serious consequences.

COMBAT

If HP reaches 0, characters are knocked out.

Unlike stock Microlite, death does not happen unless the attacker specifically states that as a goal.

A combat round lasts 6 seconds. The order in which characters and NPC's act is called "initiative order".

Roll d20 + DEX bonus for initiative order.

Highest total acts first, then next highest, etc. Only roll once, on the first round of combat—the order stays the same for subsequent rounds.

Everyone can do one thing each round: move, attack, dodge, operate a vehicle, etc.

Attack bonus = Dex bonus + Level

AC = 10 + Dex bonus + 1/2 Level (rounded down)

Psychic Attack Bonus = Mind bonus + Level

AC for Psychic Attacks = 10 + Mind bonus + 1/2 Level (rounded down)

Unless specifically noted in the description, AC refers to physical AC and not psychic.

Unlike Microlite20, STR does not add to melee attack rolls, only DEX. In addition, SuperLite does **not** use iterative attacks.

Add attack bonus to d20 roll. If equal to higher than your opponent's Armour Class (AC), it's a hit. Natural 20 is automatically a critical doing maximum damage.

A natural 20 also affects the power level a super power will fire at (see the section on super powers for more on this).

Dodge. You can forgo your next attack at any time and dodge out of the way. Roll Dex + Phys. The total is your effective AC until your next attack comes up. If it's lower than your real AC, well, you zipped when you should've zagged.

The GM may modify your check by +2 or -2 (or more) to reflect the amount of cover in the area and how the local terrain affects your mobility.

Grab. Make a hit roll on your target. If successful, the target and attacker make opposed Phys+Str rolls. If the attacker wins, the target is grappled and loses his Dex bonus to AC (if positive). If the target wins, the grapple fails. Every time the target's action comes up he can make another opposed roll to either throw off the grapple or reverse the grapple.

Every time the attacker's action comes up, he can do something, such as inflict unarmed damage, strip an item from them, or move or throw the target somewhere (potentially also doing unarmed damage). It's the GM's judgment call if an action is reasonable or not.

Healing. Characters recover their Strength score in HP per day as long as they get full bed rest and treatment.

LEVEL ADVANCEMENT

Encounter Level = Hit Dice of defeated foes, or the given EL for the trap, situation, etc. Add +1 for each doubling of the number of foes. e.g.: 1 4th level super villain = EL4. A super villain team of 5 L4 villains = EL6.

Add up the Encounter Levels (EL's) of every encounter you take part in. When the total = 10 x your current level, you've advanced to the next level. Reset the total to 0 after advancing.

Each level adds +1d6 to Hit Points, +1 to all attack rolls and +1 to all skills.

Every other level adds +1 to AC.

If the level divides by three (i.e. level 3, 6, 9, etc.) add 1 point to STR, DEX or MIND. Stats that have been replaced by superpowers are not affected. If you don't want to add a point to a stat, you may add +5 HP.

If the level divides by five (i.e. level 5, 10, 15, 20, etc) you can choose one of the following benefits:

- **Acquire a Signature Move.** Name and describe one Signature Move. Whenever you perform that move, you gain +1 to hit and effect and another +1 to hit and effect for every 5 levels you've attained (i.e. a 15th level character would be at +4). Every time you take this, it applies to a different Signature Move.
- **Acquire a Quality.** You gain a new quality, as per the section on character creation.
- **Advance one power by one rank**, with GM approval.
- **Add +1 AC permanently.**
- **Add 10 points to your HP.**
- **Knowledge.** Your experience has taught you about one enemy or common situation (Nazis, fighting fires, robots, whatever). +4 to all non-combat skill rolls in a situation where your knowledge may apply. You also gain a +2 bonus in combat during situations under those circumstances. You can apply this bonus to hit rolls, damage, AC or initiative, but only one at a time. Every time you take this, it applies to something different.

HERO POINTS

Characters begin each session with 3 Hero Points . Each Hero Point can be used in several ways:

- Add +5 to any roll, but only before the GM declares the results of the roll.
- Add +5 to both physic and physical AC for one round.
- Recover half your lost hit points instantly. You spend your current action catching your breath.

- Bring your character back from the dead...in the next adventure.

- Advance a power (see the super powers section).

Except in a few specific circumstances (such as advancing powers), only 1 Hero Point can be spent on a given action.

RECOVERING HERO POINTS

- Every time your character does something particularly impressive or achieves a goal of some sort, the GM may award one or more Hero Points.
- Every time you roll a natural 20, you gain 1 Hero Point.
- Every time you start a new session, the Hero Point pool is fully refreshed. Any unused Hero Points from the previous session will be lost.

Don't hoard your Hero Points--they're meant to be used!

SUPER POWERS

The spirit of this system is improvisation. If you have a choice of several ways to resolve a rules situation, always pick the one that resolves fastest or with the most entertaining or surprising consequences. Handwave anything that will slow the game down or make things less fun. Seriously.

CREATING A SUPERHERO

When you create a character, answer the following questions:

1. From where does your power arise?

Know that not only will this show where your power comes from, it can also show how it can be taken from you.

2. What is(are) your greatest weakness(es)?

Your Achilles' heel. The GM will decide what happens to you when this is called into play.

It can also be a psychological trait or something your character cares about greatly in addition to the usual raft of weird frailties superheroes are often saddled with.

Every time a weakness comes into play, the GM may award you a bonus Hero Point, which may be used later.

3. Call your power something appropriate. The answer to this question is often called your "power set".

Now choose a few things your powers let you do. These will be your starting powers.

How many starting powers you get will depend on what kind of campaign GM is running. In general, each power will either be **broad** or **specific**.

A **broad power** will let you do many things. Superspeed, for example, could (depending on the type of game you play in) let you run fast, vibrate through solid objects, hit many opponents at once, create a tornado, search a building nearly instantly—the limit of the power is your ability to come up with plausible rationalizations.

A **specific** power, in contrast, lets you do only a small number of things. Super strength lets you hit things harder, lift more weight, makes you more durable...maybe jump farther, but that's about it. It's not nearly as flexible as superspeed.

Beyond that, the sky's the limit—describe what your character does. The GM may veto your powers and make you break them apart into several more specific powers.

Making a character with one power called "Super Stuff", for example, would be a bit vague. You might instead list your powers as "Super Strength", "Super Speed", "Invulnerability", "Kryptonian Super Senses", "Flight" and "Heat Ray Vision."

If the name doesn't immediately describe what each power enables you to do, now would also be a good time to jot down a few sentences describing the power's scope and application.

BEGINNING RANKS

Each power is given a Power Rank. The power scale goes (from low to high) Feeble, Poor, Typical, Good, Excellent, Remarkable, Incredible, Amazing, Monstrous, Unearthly, Shift-X, Shift-Y, Shift-Z, Class 1000, Class 3000, Class 5000, Beyond on the classic Marvel scale.

Each rank is associated with a bonus. These are summarized (along with other useful bits of information) on the big Power Chart at the end of this document and on the chart below.

Rank	Bonuses
Fb	-10
Pr	-5
Ty	0
Gd	+5
Ex	+10
Rm	+15
In	+20
Am	+25
Mn	+30
Un	+35
SX	+40
SY	+45
SZ	+50
C1K	+55
C3K	+60
C5K	+65
Beyond	+90

Exactly what ranks you can set your powers at depends on how the GM sets the campaign's power level.

Here are some examples:

High End/Justice League. You can have 2 broad powers with a rank of Unearthly or 1 broad power with

a rank of Shift-X.

Avengers. You can have 2 broad powers with a rank of Monstrous or 1 broad power with a rank of Unearthly.

X-Men. You can have 1 broad power with a rank of Monstrous.

Street Level. You can have 1 broad power with a rank of Remarkable or 3 specific Remarkable powers.

Skip the follow section if you dislike (moderate) complexity and are happy with your character as it stands. Otherwise...

Buying Powers

Once you know the type of campaign you'll be in, you know your starting power levels. You can break down or adjust the number of starting powers in a number of ways.

You can trade down your powers' ranks to gain different abilities. Lowering one of your broad powers to one rank below your campaign start will net you 8 points or 16 for two ranks below campaign start.

Lowering one of your specific powers to one rank below your campaign start will net you 2 points or 4 for two ranks below campaign start.

You can spend these points on the following:

1 point

- **Choose one Quality** that gives you +2 on any rolls where that quality may apply. It might also influence the story in other ways, as the GM deems appropriate. Examples might be: Mysterious, Fearsome, Famous Inventor, Rich Playboy, Super Patriot.
- **+2 to one attribute**—Str, Dex or Mind. This increase is permanent and not affected by any conditions that might negate your powers.
- **Gain 10 hit points, permanently.**

2 points

- Your maximum number of **Hero Points** per adventure increases by 1.
- **One more of your skills is now at LVL+3** instead of simply being at your LVL.

- **Raise 1 specific power by one rank**, up to campaign limits. This only applies to powers bought with points.

4 points

- **Gain 3 specific powers**, starting at Typical, 2 specific powers at Good or 1 specific power at Excellent.
- **Raise 1 broad power by one rank**, up to campaign limits. This only applies to powers bought with points.

8 points

- **Gain one rank in a broad power**, starting at Typical.

The GM can also allocate additional points to help tweak characters. Anywhere from 4 - 8 points would be appropriate.

Any unspent points are converted to experience at a 1:1 ratio.

Things To Think About When Buying Powers

- **Powers can replace attributes.** If a power replaces an attribute, it will do so while that power is active. If a power isn't active, then your character's rolled ability score takes over. When your attribute is boosted, your hit points increase to the new level.

Generally speaking, it's not a good idea to allow more than one attribute to be replaced by one power. Either split the power into two smaller powers or only allow one attribute to be boosted at a time.

If you replace STR, the power at the listed rank bonus becomes your stat (i.e. Unearthly +35 Super Strength = 80 STR). In other words, double the rank bonus plus 10 = the new stat value.

If you replace Dex or Mind take the value listed under the Mod column on the Power Chart, double it and add ten. In other words, Incredible Superspeed lists a 6 under the Mod column, $6 \times 2 + 10 = 22$ Dex. If this is lower than your rolled Dex or Mind, use your rolled Dex or Mind instead.

Note that even though these powers replace an ability score, they are still considered superpowers and should be noted separately—it's still useful to know that your high Dex comes from a Monstrous level of Superspeed or that your character has Amazing Strength.

- **Gadgets.** You can declare any of your powers to be items. They can be separate (e.g. a utility belt filled with gadgets) or all features of one item (say, a power suit). Items automatically gain one power rank but they can be broken, stolen, or lost. An item's material strength is equal to its highest power rank.

This bonus to rank may exceed campaign power levels, unless the GM specifically vetoes it.

Broad powers declared as gadgets could represent items such as a sheaf of trick arrows or a utility belt—the hero has a large array of items, but never has to declare that he has that specific power ahead of time (e.g. “Ah ha! I'll use a glue arrow to slow that speedster down!”).

Specific powers declared as gadgets are noted on the character sheet ahead of time and represent powers that don't change much from adventure to adventure. Iron Man almost always has his power armor available and that power armor usually has repulsor rays and the ability to fly, for example.

If you want your gadget to be made of sterner stuff, you can expend 1 point per rank to increase its material strength if it only contains specific powers or 2 points per rank if broad.

Example: Norse Storm Hammer Guy is an Avenger class super hero. He is immensely strong (Monstrous rank super strength), can summon storms (and other dramatic weather phenomena) at Amazing rank, fly at Good speed and has a Good ability to travel to other dimensions.

The player decides that his storm summoning, flight and dimensional travel should all come from an intimidatingly large hammer. Their values increase to Monstrous, Excellent and Incredible, respectively. The hammer's material strength is Monstrous, should anyone attempt to break it.

Since the hammer itself is an artifact, forged of Uru-metal at the dawn of time, the player feels that it should be more indestructible than that. He spends his remaining 4 points to increase it 2 ranks to Shift-X material strength. It is now a very tough hammer indeed.

- **Powers as skills.** Some heroes are so good at something that it can't be natural. Martial arts, detective work, languages or science are all possibilities. In those cases, take the skill as a power. You gain half the power's rank (rounded down) as a bonus to all skill checks in that power's realm. For these purposes, Typical rank gives a +1 bonus, Poor is worth nothing and Feeble actually

penalizes rolls by -2.

If the skill is something that could conceivably give bonuses to multiple rolls simultaneously, then you have to choose how to split your points at the beginning of your action in a round.

Broad powers give skill bonuses to a wide variety of situations. Specific powers give skill bonuses to a small number of situations—3 or 4 tops as a rule of thumb.

Example: The Dark Avenger has an Incredible +20 level of skill in the martial arts (specific power). He can split his +10 bonus (20 pts, divided by 2) in any number of ways in combat: +5 to hit, +2 to damage, +3 to AC. Or perhaps +1 to hit, +9 to damage and +0 to AC, etc. His Master Detective power, however, can apply to any number of situations ranging from analyzing a crime scene, negotiating with criminals, laboratory work, or various forms of constructive paranoia.

USING SUPERPOWERS

Almost all superpower use falls into the same pattern: Describe, Roll To Hit, Roll For Effect.

1. Which power are you using?

2. Describe it and what you want to do with it.

If it's not a cut and dried case, this is the point where you and the GM will decide how the power works. See the section on “Common Effects And Actions” for some guidelines.

3. The GM assigns mods depending on how reasonable/appropriate the description is to the problem.

4. Roll to hit if the action you're attempting is targeting something elusive.

Rolling to hit is a standard combat to hit roll, with all the usual bonuses and penalties.

5. If the power hits, roll for effect.

To determine the effective power rank, roll 1d20 + Power Rank + modifiers. Refer to the DC column on the Power Chart. Round your total down to the next lowest threshold. This is the effective Power Rank you achieved.

Example #1. *Your cosmic power ring gives you the Remarkable (+15) ability to make objects out of force*

fields. You want to throw a force bubble around your mortal enemy, *The Crimson Plague*. After successfully making a ranged attack roll, you roll a 13 on d20 for effect. $13 \text{ (the d20 die roll)} + 15 \text{ (from your power ring)} = 28 = \text{Remarkable rank}$.

The Crimson Plague will need to break through a Remarkable barrier to escape.

Example #2. *Davey Jones is attempting to send Manhattan to the watery depths. He has Monstrous (+30) control over water. Since he plans on flooding the city with a massive tidal wave, the results will be an attack on all objects in the city and a lot of drowning people.*

Manhattan gets a -14 size modifier (from the modifier table following the Power Chart), but since this is a fairly extreme application of power, the GM doubles that to -28.

Davey Jones rolls 1d20 and gets a 14. $14 + 30 - 28 = 16$, for a Good result. Everything in Manhattan takes Good (+5) damage from the flooding. The GM rules that living creatures will “merely” have to make swim checks (this is a comic book universe after all) if they're in harm's way. Hope everyone remembered to bring a life preserver...

If it's not dramatically important, then you can assume a roll of ten on the effect roll. Most movement falls under this category.

Using Normal Abilities Against Superpowers

Sometimes, a situation will arise when someone with no superpowers could reasonably affect something with a power rank. For example, trying to overcome a force field with your own strength or using your normal senses to detect an invisible girl...

In cases like that, roll for effect as normal, but instead use the bonus from their most appropriate attribute. In some situations, skill bonuses can also be applied.

Example: Captain O'Malley has been imprisoned by Gluemaster in a blob of rubbery goo of Good strength. To resist, O'Malley rolls 1d20, plus his Str bonus of +2. He totals 8, which is Poor. The good cop isn't going anywhere tonight.

COMMON EFFECTS AND ACTIONS

The following situations are intended as guidelines on how to handle superpower effects. Not all situations will be or can be covered. **When in doubt, just pick a column on the Power Chart that returns numbers that look close to what you're looking**

for and run with it—in the end, the important thing is that game play not be slowed down.

Oftentimes when confronted with a new situation, you can pick a similar mechanic and then base the result off that. Your character wants to use his laser blast to blind his opponents without hurting them? Use the mod column instead of damage to give them a penalty on all skill and attack rolls for a short period of time.

Your villain wants to use his magnetic powers to wrap a superhero in steel rebar? Sounds similar to how a force field works, only the material strength will act as a barrier to keep the hero in, rather than keep damage out.

If it's **somewhat different** from the power's usual uses (using weather manipulation to zap someone with lightning), then you might rule that the power is at -1 or -2 ranks for that purpose. You can also require several more skill rolls and extra time as the hero concentrates on getting it “just right”.

If it's **very different** than the power's usual uses (using weather manipulation to fly), you'll want to refer to the section on learning new uses for your powers (Advancing Powers, at the end of this document).

Attacking, Inflicting Damage With Powers. A typical attack will do $1d6 + \text{the effective power rank bonus in damage}$. Armor can subtract from this number (see Defense). The minimum is zero damage.

Attacking, Hitting Things With Other Things. Sometimes, you may want to attack multiple targets at once by throwing a big object at them (or merely swatting them with it).

To do so, you have to have the object in hand, which means you'll have to use an action to pick it up. Then make an attack roll vs the area you're attacking (usually AC 10, plus range modifiers)—if successful, you do damage to all opponents in the area targeted in an area proportional to the size of the object (i.e. if you want to swat a small crowd of evil-doers, you'd better have an object at least the size of a house at hand).

The damage done is equal to $1d6 + \text{your effective strength rank}$. If the effective strength rank is greater than the material strength of your weapon it may break it (see Breaking Things), but it still does damage to the targets.

The GM may allow the targets a chance to make a saving throw for half damage, if he deems they have the movement capability to get out of the way of the object. If they are very fast and roll very well on their save, they make take no damage at all.

Breaking Things. In order to break an object, you must target it (sometimes at a penalty on your to hit roll, varying depending on its size) and beat its material strength (for sample material strengths, see the table below).

If you do so, it's damaged. Hit it again, exceeding its material strength, and it's destroyed. If you exceed the material strength by two ranks or more on the initial attack, it goes straight to destroyed.

Use common sense--if it's a really big object and your attack is relatively small in size, then you just make a hole or render it nonfunctional rather than pulverizing the object.

If a gadget has been hit hard enough to be damaged (either because it has been directly targeted or simply because it is in the way of an attack) 1d3 of the gadget's powers will be reduced by 1d6 ranks each. If a power drops below Feeble rank, then that power is destroyed. Gadgets are repaired automatically after each session, unless there's a good plot reason not to do so.

Rank	Some Sample Material Strengths
Fb	Paper
Pr	Plastic
Ty	Rubber, soft metals
Gd	Brick, light metals
Ex	Concrete, iron, bulletproof glass
Rm	Reinforced concrete, steel
In	Solid stone
Am	Granite
Mn	Diamond, super heavy alloys
Un	Adamantium
C5K	Neutronium

Defense. Defensive powers work in one of several ways. Either your power works like **body armor**, a **force field** or **gives a bonus to your AC**.

Depending on the way your power's described, it might not work at full value against certain types of damage, if at all. For example, metal skin may be great against physical attacks, half value against energy attacks and worthless against electricity.

Defense, Body Armor. Body armor subtracts from any damage you take, with a minimum of 0 points taken. It works at 1/2 rank all the time, rounded down. For the purpose of rating body armor, Typical power ranks have a full bonus of +3, Poor as +1. Feeble defensive powers have no effect.

You can also perform a **total defense**—your character hunkers down and braces himself for damage. It's the only thing you can do in an action save move slowly, but you get to use your full rank as armor.

Defense, Force Fields. Force Fields usually need to be turned on before they start protecting you.

They can work either like Body Armor or they can be expanded to protect a greater area. When expanded (usually to radius = the Prog column in meters as a maximum), they act like a bubble composed of a material of the same strength as your effective power rank.

If the attack is greater than the FF's material strength, the shield goes down and the targets inside are vulnerable and potentially take the excess damage, depending on the situation. If a FF goes down it can't be reestablished for another 1d3 rounds, but it can be reverted to Body Armor on the next action.

Defense, AC Bonus. Some powers make the target harder to hit. While active, use the power rank's bonus from the mod column of the Power Chart as a bonus to AC. The mod column bonus may also be used to modify the roll when performing the Dodge combat maneuver. This bonus can apply to either psychic or physical AC, as appropriate to the power's details.

Mind Control. After hitting with a psychic attack roll vs psychic AC, roll the effective power rank and compare to the highest defensive power active on the target, as long as it would reasonably apply to the situation. Failing that, use the most appropriate stat bonus plus the most appropriate skill to resist (usually Mind + Subt or Knowl). If there's any doubt which is more appropriate, then use the highest total.

Give the defender a +5 bonus if it's something they're not usually inclined to do. If it's something that's completely against their nature, give them +10.

The target gets to roll to resist every round. Each following attempt is at an additional +1. If you fail to mind control a target and try to mind control them in the same way again later that encounter, they get an additional +1 for each extra attempt.

Power vs Power. There are going to be some situations where two superheroes will go head to head, using their powers directly against one another. For example, a villain with magnetic control might try to use his power to throw a school bus off a tall cliff while a hero with telekinesis tries to stop him from doing so.

In cases like this, you can do a quick roll between the characters—1d20 + power rank + appropriate modifiers, with the highest effective power rank winning. A tie means the characters are deadlocked and must roll again next round.

For more involved situations, make it a Contest, as noted under the Skills section on page 1.

For very stressful situations (and the school bus example would qualify), each participant takes 1d6 damage from fatigue and stress for every round they participate in the struggle.

Pushing Powers. You can always use a power at its own rank level. If you need to push your abilities, you have to roll for it. Pushing is a free action and can be combined with other actions, as the GM permits.

You can only attempt to push a power to one rank higher and every round you successfully do so, you take 2d6 damage. It is, however, possible to exceed an Unearthly rank in this manner.

Pushing a power requires a Mind roll vs DC 15. You can add +4 to this roll by taking another +2d6 points of damage, or +8 by taking +4d6 damage.

Example: You have Amazing weather control but for one round, you need to push it to Monstrous. You have a Mind of 13 (+1). Roll 1d20 + 1 (your Mind) vs DC 15. If successful, you take 2d6 damage but can extend your power much farther.

If you **fail** a Push roll, your power is at -2 ranks until you take an action to catch your breath and regroup.

Throwing Things/Jumping/Knockback.

To throw something, your lifting power (strength, telekinesis, whatever) must be equal to or greater than the weight of the object you are throwing. To find out how far they fly, count up the number of ranks your lifting power is in excess of the object's weight and add 1. Count down that many ranks on the Progression column on the Power Chart from the top. Multiply that number by 1 meter.

A successful to-hit roll may be required to get the subject of your toss anywhere near the target.

Example: Norse Storm Hammer Guy has a Monstrous strength. Spying an enemy fleeing across the aircraft field, he grabs one of his team mates and throws him at the enemy. His teammate has a Typical weight. Monstrous is 6 ranks over typical. Looking 7 rows down on the Progression column, he finds a multiplier of 100. He can toss his friend a total of 100 meters.

Jumping is a similar situation, except that you are throwing yourself. Use your own weight to calculate distance. If you can take a running start first, add an additional row to the number of rows you count down.

Again, a to-hit roll may be useful to make sure you wind up in the right spot.

Example: Captain Establishment is an Olympic class athlete with Excellent Strength. His body weight is Typical. Excellent is 2 ranks greater than Typical. With a running start, he can jump 4 rows down the progression column (1 for the throw, 1 for the running start)—10 meters, or 3 down with a standing start—5 meters.

Knockback. Fights between very powerful combatants can be dramatic—a successful hit may cause the target to go flying backwards quite a distance. On a successful hit, treat knockback as a throwing attempt, except subtract 2 from the number of ranks over the target's weight. Use the **effective** strength of the attack instead of the attack's listed ranks. Body armor, force fields and other such defenses have no effect on knockback unless the defender is braced for it.

Some attack powers aren't appropriate for knockback—for example, psychic powers, a lot of martial arts abilities and so on—none of these tend to cause significant knockback in comic books. The GM is the final arbiter on this.

Example: Norse Storm Hammer Guy belts a robot with his hammer. NSHG has a Monstrous strength and the robot weighs 200 kg (Good rank). Normally, his attack strength is Monstrous, but he rolls well, getting an Unearthly result. Unearthly is 6 ranks greater than Good. Subtracting 2, that's 4 levels of knockback, or 10 meters.

Transmutation. Transmutation involves changing something from one form to another: lead into gold, people into bunnies, cars to carrots, whatever. You can only transmute up to your power rank on the weight column on the Power Chart.

Transmutations that affect people must last for a set amount of time—refer to the duration table below the Power Chart at the end of this document for some sample durations. If it's a minor transformation, use the number listed. If it's a major transformation, double the modifier. If the target is inanimate, the duration is as long as the plot requires (no duration penalty required).

After hitting with an attack roll, roll the effective power rank and compare to the highest defensive power active on the target, as long as it would reasonably apply to the situation. Failing that, use the most appropriate stat bonus plus the most appropriate skill to resist (usually Str+Phys). If there's any doubt which is more appropriate, then use the highest total. Objects resist with their material strength rank.

ADVANCING POWERS

You can advance your powers in several ways.

You can gain **new applications of your power** or you can **upgrade the scope** of your current powers. *For example, if your core power is a cosmic ring that lets you form objects out of force fields and blast enemies, a reasonable new application of your power would be to dazzle enemies with flashes of light, or perhaps flight. Turning yourself into a donkey might be out of the realm of possibility, though.*

*Likewise, if one of your powers is turning yourself into electricity and traveling along phone lines, you could attempt to expand your power's scope so that you could travel along **any** conductive surface.*

In order to attempt to expand your powers, you must attempt them in an adventure and succeed on a Mind roll: first, you spend 1 Hero Point. Roll 1d20 + Mind and compare on the table on the following page to see if you have the willpower to push yourself beyond your limits. You can spend another Hero Point to get a bonus on this roll.

DC 5	Fail
DC 10	-3 ranks
DC 15	-2 ranks
DC 20	-1 rank

If you succeed, the new power works and at a power rank equal to the most similar power you already possess, modified by the result on the table above. If that would mean the resulting power would be less than Feeble in rank, then the attempt fails.

If you're expanding the scope of your powers, then a simple Mind roll vs DC 15 succeeds (after spending the Hero point) and your power remains at the same rank.

If you do this successfully 3 times (usually over successive adventures), then you officially have that power permanently. Add it to your sheet, using the most recent result as your new power's rank.

You can also **upgrade the rank of your power** as per the section on Level Advancement earlier.

GM permission is necessary to gain any powers above Unearthly—the gap in power between Unearthly and Shift-X is significant enough that it may be somewhat unbalancing to the campaign.

THE POWER CHART

Rank	Bonus	DC	Mod	Prog	Weight	Flying Speed	Running Speed
Fb	-10	0	0	1	25 kg	50 kph	Normal running speed
Pr	-5	5	1	2	50	100 kph	50 kph
Ty	0	10	2	5	100	150 kph	75 kph
Gd	+5	15	3	10	200	250 kph	100 kph
Ex	+10	20	4	25	400	400 kph	150 kph
Rm	+15	25	5	50	1 ton	600 kph	200 kph
In	+20	30	6	100	10 tons	800 kph	300 kph
Am	+25	35	7	250	50 tons	1000 kph	400 kph
Mn	+30	40	8	500	75 tons	Mach 1	600 kph
Un	+35	45	9	1,000	100 tons	Mach 5	800 kph
SX	+40	50	10	10k	250 tons	Escape velocity	Mach 1
SY	+45	55	11	25k	500 tons	Relativistic	Mach 5
SZ	+50	60	12	50k	1000 tons	Light speed	Mach 10
C1K	+55	65	13	100k	Chunk of continent	Light years per day	Escape Velocity
C3K	+60	70	14	500k	Small planet	Light years per hour	Relativistic
C5K	+65	75	15	1million	Large planet	Light years per minute	Light Speed
BYD	+90	100	20	1billion	Off the scale	Off the scale	Off the scale

MODIFIERS TO ROLL

RANGE

0	Up to a city block (free)
-2	A few miles
-4	Across the city
-6	Across the state
-8	Across the continent
-10	Orbital/intercontinental
-12	To the moon
-14	Across the solar system
-16	Light years
-18	Across the galaxy
-20	Intergalactic

DURATION

-2	Several seconds
-4	Several minutes
-6	Several hours
-8	Several days
-12	Several weeks
-14	Several months
-16	Several years
-18	Centuries
-20	Indefinite

Whether or not a duration is required depends largely on the situation, desired effects and description of the power.

AREA OF EFFECT

-2	2 targets, close together
-4	A small group
-6	A large group
-8	A house
-10	Neighborhood
-12	A town
-14	A city
-16	A state
-18	A country
-20	A planet

Double these mods if something extremely dramatic/draining is happening (e.g. attempting to engulf a planet with fire).

SUPERLITE: THE VILLAIN MACHINE

Need a bad guy fast and have run out of ideas? Below, you'll find a step-by-step series of tables enabling you to randomly generate a near-infinite variety of dastardly villains. Cosmically-powered gorillas, mad scientist robot ninjas, cackling megalomaniacs—it's all here.

The true purpose of The Villain Machine, however, is to break through writer's block. If a roll comes up with something odd or ungameable, feel free to fudge it—much like a diviner reading tea leaves to learn of the future, think of this as a guide, a way to break yourself out of your usual habits. If you get to the end of the process, have a fleshed out villain...but find all but a few details boring, then take the bits you like and cut the boring stuff out.

In other words, feel free to override or fudge any roll if you have an idea that would work better. I'd recommend, however, that you develop a taste for randomness—sticking through a small amount of insanity until you get to the end is a good habit to get into. It can unveil surprising details you wouldn't normally consider and truly enable you to get the drop on those quivering wretches you call player characters.

KIND OF BAD GUY

What is the villain's general approach to crime?

Roll d20

- 1 – 4 **Boss.** Uses helpers to achieve his goals. The helpers will either be (**d6:** 1-2 very weak—almost normal human level, 3-4 several lesser super villains, again in the same theme as the villain or 5-6 be reasonably powerful super villains). Villain is typically charismatic, organized and has good planning skills.
- 5 – 8 **Brute.** The fastest way to any goal is a straight line, littered with rubble.
- 9 – 11 **Planner.** Cerebral, convoluted plans, always with a twist. Tends to recruit other super villains to help out, otherwise uses hired thugs. (**d6:** 1-4: Has 1d6 super villains on his side, 5-6 3d6 hired thugs).
- 12 – 13 **Scientist.** Success through the miracles of science! Scientist's powers are much more likely to come from gadgets (1-4 instead of 1-2 out of d6). Scientists also often have minions (**d8:** 1-2 Robots, lots of them, 3-4 One or two powerful robots, 5 at least one powerful Frankenstein-type monster, 6-8 No helpers).
- 14 – 15 **Sneak.** The best way to succeed is to not get caught—this type of villain is elusive and tricky.
- 16 – 19 **Underhanded.** Fights dirty. Hostages, blackmail, anything goes.
- 20 **Disguised.** Roll twice—seems like the first one, but is actually the second type rolled.

POWER SET

What kind of powers does the villain have?

Roll d20

- 1 – 2 **Animal-Themed Powers (d8:** 1 Lizard or Crocodile, 2 Shark, 3 Bat, 4 Scorpion, 5 Bird Of Prey, 6 Wolf, 7 Cat or Lion, 8 Has access to the entire animal kingdom's powers)
- 3 **Disaster-Themed Powers (d10:** 1 Floods, 2 Quakes, 3 Meteor Showers, 4 Fire, 5 Plague, 6 Storms, 7 Blizzards, 8 Tornadoes/High Winds, 9 Sand Storms, 10 Every kind of disaster)
- 4 – 6 **Control/Manipulation**

d100	Type
1-5	Air
6-10	Earth
11-15	Fire
16-20	Water

21-25	Ice
26-30	All Classical Elements (e.g. Earth, Air, Fire and Water)
31-35	Continuum Control (d6 : 1-2 Time, 3-4 Space, 5-6 Both)
36-40	Darkness/Shadow
41-45	Electricity
46-50	Emotions (d6 : 1-2 Fear, 3-4 Love, 5-6 Any of them)
51-55	Gravity
56-60	Light
61-65	Luck Manipulation (d6 : 1-2 Bad Luck, 3-4 Good Luck, 5-6 Controls The Laws of Probability)
66-70	Magnetism
71-75	Plants
76-80	Radiation
81-85	Technology (d6 : 1-2 Computers only, 3-4 Machines, 5-6 All technology)
86-90	Weather Manipulation
91-100	Roll Twice

- 7 **Evil Genius.** The villain has a towering intellect—set his Intelligence at 30, at the very minimum. Roll one more time on the table to give him a power set. He will most likely have skill bonuses in all things related to this power set, to reflect his life's work and aptitudes.
- 8 **Evil God.** If you don't have any evil or trickster gods in your campaign, such as Loki, Hades, Ares, Shiva and so on, now you do. Pick one that's not being used and introduce it.
- 9 **Gadgets, and lots of them (d6:** 1-2 Magic, 3-6 Technology). Usually strongly themed. For the type of gadgets available to the villain at any given time, **Roll d6:** 1-2 Roll once on this table, 3-4 roll twice on this table, 5-6 roll twice on supplemental powers, ignoring results of "none". This villain has a vast array of equipment available—the next time he's encountered, he may have different gadgets available to him.
- 10 **Magic (d6:** 1 Alchemy, 2 Summoning, 3 Transmutation, 4 Voodoo, 5 Witchcraft, 6 No Specific Theme). **Roll another d6**, on 1-2, it's not magic—it's scientific trickery.
- 11 **No Powers At All** – the villain is abnormally skillful at something. **Roll d8:** 1-2 Spy Stuff, 3 Robotics, 4 Invention, 5-6 Crime, 7-8 Martial Arts). In cases like Martial Arts, the villain may have mystical abilities (1d3 specific ones, perhaps) in addition to their skill bonuses. With other areas of skill, the villain may have a similar number of gadgets.
- 12 **Power Armor.** This power is automatically a gadget. You can go with the classic Iron Man-style power set, or roll again and use that as the power armor's theme. Power armor will also almost always have a defensive power, like Body Armor or a personal Force Field, although usually at a lower rank than the main power.
- 13 **Psychic Powers (d6:** 1-2 Mind Control, 3-4 Illusions, 5-6 Telekinesis)
- 14 **Shapeshifting (d6:** 1-4 limited category—e.g., animals only, 5-6 into anything)
- 15 **Sonic Powers**
- 16 – 17 **Super Strong**
- 18 **Super Fast**
- 19 **Weapon Master**—the villain is not only highly skilled with a certain type of weapons, but also either (**Roll d6**) 1-3 carries around a small arsenal or 4-6 carries around one exceptionally powerful weapon. For type, **roll d8:** 1 Guns, 2 Martial arts weapons, 3 Improvised weapons such as chairs or cards, 4 Medieval weapons, 5 Bows or Crossbows, 6 Whips, 7 Swords, 8 Strongly-themed—flip through a dictionary until something interesting strikes you and base all weapons attacks on that theme.
- 20 **Roll Twice**

Gadgets: **Roll 1d6**, on 1-2 out of 6, all (or at least some of the) powers are gadgets. This step is optional if you already have an idea of what kinds of things the villain does.

SUPPLEMENTAL POWERS

These powers are more limited than the villain's main power set. They're usually specific powers, not broad, and they tend to be at a lower power rank than the main powers. If there's overlap, or you just flat out don't like the result, treat as a result of "none" or reroll.

Supplemental Powers are more likely to be Gadgets: **Roll d6**—each power is a gadget on a result of 1-3.

Roll d20

- | | |
|-------|---|
| 1 – 6 | None |
| 7 | Agile |
| 8 | Body Armor |
| 9 | Can Read Minds |
| 10 | Can Stick To Walls |
| 11 | Energy Blast/Other Ranged Attack |
| 12 | Flight |
| 13 | Invulnerability |
| 14 | Melee Weapons (claws or fangs, a sword if it's a gadget, etc) |
| 15 | Regeneration |
| 16 | Skilled |
| 17 | Strong |
| 18 | Summon Helpers (d8: 1 ninjas, 2 mercenaries, 3 pirates, 4 thugs, 5 robots, 6 zombies, 7 dinosaurs, 8 aliens, or just choose an appropriate type that's in line with the theme of the villain's main power set) |
| 19 | Teleportation |
| 20 | Roll Twice |

POWER LEVELS

Compare the results from below to the campaign's power level. If the campaign's power level gives, for example, 2 broad powers at Monstrous and the villain's higher than the group average, then give him a couple of Unearthly broad powers, or perhaps one Shift-X. If he's supposed to be weaker, give him an appropriate number of Amazing or Incredible powers.

If there aren't that many players in the group, it's a good idea to adjust villain power levels down a bit from here. If there are a lot of players, adjust power levels up or have the villains team up. The villain's experience levels will typically keep the same pattern, but you can roll separately, if desired.

Roll d20

- | | |
|---------|-------------------------------|
| 1 – 5 | Lower than the group average |
| 6 – 12 | Group average |
| 13 – 18 | Higher than the group average |
| 19 – 20 | Vastly higher |

PERSONALITY TYPE – GOALS

What's the villain's motivation?

Roll d20

- 1 – 2 **Collector.** Obsessed with one type of object or a given type of crime. If you don't have any inspiration, randomly flipping through a dictionary might be a good start.
- 3 **Disguised.** Roll twice—seems like the first result, but is actually the second result.
- 4 **Hero In Disguise.** Roll again, but he's actually a good guy. Either **(d6):** 1-3 Can be convinced into reforming his ways or 4-6 actually is a hero, but is undercover while working on a mission.
- 5 – 6 **Irrational/Insane**
- 7 – 8 **Love of money**
- 9 – 11 **Lust for power**
- 12 – 13 **Nihilist**
- 14 – 16 **Patriotism/Dedication to a cause**
- 17 – 19 **Pure, cackling evil**
- 20 **Revenge (d6: 1-2 One of the Heroes, 3-4 An Important NPC, 5-6 The World In General)**

PERSONALITY TYPE – DEMEANOR.

How does the villain come across in person? How does he behave?

Roll d20

- 1 **Accident-prone**
- 2 **Aloof**
- 3 **Brash and Arrogant**
- 4 **Charming and Flamboyant**
- 5 **Child-like**
- 6 **Cynical**
- 7 **Eloquent**
- 8 **Evil**
- 9 **Full of Rage**
- 10 **Naive**
- 11 **Nervous/Edgy**
- 12 **Preachy**
- 13 **Professional**
- 14 **Quiet**
- 15 **Sinister**
- 16 **Sneering**
- 17 **Sophisticated**
- 18 **Thrill Seeker**
- 19 **Verbose**
- 20 **Wild Mood Swings**

QUIRKS

Random last details to flesh out the villain.

Roll d20

- 1 – 5 **No quirks**
- 6 **Abnormal Size. Roll d6:** 1 Doll-sized, 2-3 Child-sized, 4-5 Twice the size of a normal human, 6 the size of a truck.
- 7 **Alien**
- 8 **Alternate universe version of a similar-themed hero**
- 9 **Animal Companion**, usually something like a bear, a hawk or a trained gorilla.
- 10 **Ape.** Villain has increased strength. Intelligence, speaking ability and other traits unaffected.
- 11 **Foreign, Hostile Power.** Communists are the classic example.
- 12 **Foreign, not from a hostile power.**
- 13 **Ghost or otherwise undead**
- 14 **Mad/Insane**
- 15 **Ninja**
- 16 **Obsessed with one type of thing**—as with the Collect motivation, flipping through a dictionary would be a good start for ideas.
- 17 **Rich**
- 18 **Robot.** Villain has increased strength, some level of body armor, other traits usually unaffected. Has a marked tendency to talk like a robot ("Query: What is this thing called 'love'?")
- 19 **Sidekick/Lackey.** Roll as a lesser villain. Usually comic relief—in any case, in no way should a sidekick or lackey be cooler than the main villain.
- 20 **Roll twice**

NAME

Roll d6:

- 1 – 2 **The name is a play on the villain's powers.** For example, a magnetic controller with wild mood swings named "Bipolar Disorder".
- 3 – 4 **The name is a play on the villain's goals**, such as a diamond-obsessed thief named "Blood Diamond".
- 5 – 6 **Roll d20 once for each column on the table below**, arranging the results in a way that sounds good. Reroll or replace with a cooler word if a result still sounds bad.

Roll	Adjective	Noun
1	Baron/Baroness	A deadly animal such as a wolf or a shark
2	Bishop	Anarchy
3	(The) Black	Blood
4	Brother/Sister	Bloodshed
5	Count	Carnage
6	(The) Crimson	Chaos
7	Doctor	Claw
8	The Dread(ed)	Death

9	Father/Mother	Destruction
10	General	Disaster
11	Lord/Lady	Discord
12	King/Queen	Doom
13	Major	Evil
14	Mister/Mistress	Fang
15	Professor	Name of a disease (such as Anthrax or simply "Plague")
16	(The) Red	Scare
17	The Sinister	Pain
18	The Skulking	Skull
19	Roll again on this column and use the result as a noun (don't roll on the next column)	Terror
20	No adjective	War

Microlite 20 Costumes (Superhero Role Playing)

By Andrew Domino (www.dominowriting.com/tabletop-gaming-3/microlite-20)

Last revised May 14, 2016

Creative Commons NonCommercial ShareAlike 3.0 Unported License

Based on the Microlite 20 Purest Essence rules

This is a super hero role playing game blend of Microlite 20, Mutants and Masterminds, ICONS and Marvel Super Heroes, for something a little bit like and a little bit different from each. This document only includes character creation rules. Game play rules are the same as in Microlite 20 Purest Essence.

1. Level and Power Points

In Microlite 20 Costumes, heroes usually don't start at level 1. They typically start at a higher level, appropriate to the kind of characters your game will represent. Each player chooses a level for his character and begins with the listed number of Power Points, which are spent on stats, bonuses and super powers. Any points that are not spent during character creation are lost.

All of the hero characters – and their enemies – don't have to be exactly the same level to be competitive. A level 7 or 8 enemy can still be a challenge to a level 11 or 12 hero. Even though their Power Points aren't the same, a good use of powers and skills can make up for the difference in levels.

<u>Level</u>	<u>Power Points</u>	<u>Notes</u>
1	15	Typical starting non-super-powered Microlite 20 character
2	30	
3	45	
4	60	
5	75	“Pulp” hero: Dick Tracy, Rocketeer
6	90	
7	105	“Street level” hero: Rorschach, Buffy the Vampire Slayer
8	120	
9	135	“Sidekick” hero: Robin, Bucky
10	150	
11	165	Typical starting Microlite 20 Costumes character: Flash, Spider-Man
12	180	
13	195	“Advanced” hero: Batman, Captain America
14	210	
15	225	“Superior” hero: Superman, Thor
16	240	
17	255	“Godlike” hero: Morpheus (Sandman), Thanos
18	270	
19	285	
20	300	

2. Races and Classes

There are no races or classes in Microlite 20 Costumes. Describe your character's origin any way you want: is he a mutant, born with strange powers to a world that fears and hates him? Was she doused in chemicals and transformed into a mighty being? Is he from Atlantis? Outer space? Another time? Did she invent a robotic suit of armor she wears into combat?

The bonuses provided by races and classes in other versions of Microlite 20 will be compensated for in other parts of the character creation process.

3. Stats

There are 3 stats: Strength (**STR**), Dexterity (**DEX**) and Mind (**MIND**). Each has a score, determined by spending Power Points on the chart below. Each stat score also has a related bonus, calculated as $(\text{Stat} - 10)/2$, round down.

Power Point Cost	Stat Score	Stat Bonus
Gain 2 points	8	-1
Gain 1 point	9	-1
0 (zero)	10	+0
1	11	+0
2	12	+1
3	13	+1
4	14	+2
5	15	+2
6	16	+3
7	17	+3

Power Point Cost	Stat Score	Stat Bonus
8	18	+4
10	19	+4
12	20	+5
14	21	+5
16	22	+6
18	23	+6
20	24	+7
22	25	+7
+2	+1	as calculated

4. Powers

The core of Microlite 20 Costumes, of course, is the super powers. Each power is purchased at its listed **base cost** (in parentheses) with Power Points. Each starts with a power rank of 0 (zero), though you can spend more Power Points to increase a power's rank. **1 Power Point gives you +1 to a power rank**, up to a rank equal to your level. Not all powers need ranks, though you can still give those powers ranks, if you wish; some powers are "either you have them or you don't."

The listed powers cover most of the common super abilities found in comic books. Use these as models to create other powers. The base costs of powers can also be shifted up or down (to a minimum of 1 point), to simulate a certain kind of feel for your superhero world. For example, a power might be inexpensive because almost everyone can do it, on this particular planet. You can also easily adjust the amount of damage or number of times a hero can use a power.

As with spells in the Microlite 20 core rules, each power has only a brief description, leaving it up to the player and game master to determine exactly what the character can try and do with the power. It's also up to you exactly how your character uses the power (for example, what color is the beam it creates? What happens to enemies struck by your attack? Does the power come from a part of your body? How long does it last, and what happens when the power's effect ends?).

ADHESION (15): This power enables a character to cling to any surface without falling. It is used to climb vertically and upside down on walls and ceilings. The character may have a penalty to use this power if the surface he is trying to stick to is especially slick (ice, steep slopes, etc.). Roll DEX + Phys + Adhesion to climb.

ANIMATION (30): The character can bring inanimate objects like toys and puppets to life. Up to power rank number of objects can be animated at one time. Each will only perform one simple action the animator gives, like “attack,” “distract,” “search,” etc. Each is controlled by the player with the animator character, and take their turn immediately after the animator. All animated objects have stats, skills, attack bonuses and other character information equal to ½ the original character’s information (round down), but only cause 1 point of damage each. They all last a number of turns equal to ½ the original character’s Animation power rank (round up) before losing their “life.” An animated object will also vanish if any successful attack is made against it. This power can be used power rank times per day.

BAD LUCK (35): This power causes trouble for the hero’s enemies. Once per turn, the character can name one enemy. All dice rolls the target character makes on its next turn will suffer a penalty equal to ½ the Bad Luck power rank (round up). This power can be used power rank times per day.

BINDING (10): This power fires a special barrier (on a successful missile/ranged attack) to restrain an enemy, like a net, a glue ball or a bubble of space. The Binding will imprison the target for a number of turns (in combat) or minutes (outside of combat) equal to the hero’s power rank, though an enemy can try to break free with a STR + Subt roll vs a DC 15.

BODY ARMOR (special): Super heroes often have specially designed armor or enhanced physical endurance. This power is represented by DR: damage resistance (i.e. each time the character takes damage, the amount of damage is reduced by the amount of DR before it is removed from the character’s hit points). The Body Armor power costs 3 Power Points for 1 DR. The character can have a maximum number of DR equal to level (for example, a level 10 character can have 10 DR, costing 30 Power Points).

BREATHE (10): A super character can survive underwater, in a vacuum like outer space or in a

room full of gas without any ill effect for a number of hours equal to the power rank.

CALM (20): The character radiates peace and serenity in an area around him or her equal to power rank yards. The calming effect can be turned “on” or “off” at any time. While it is on, all characters (including the character with this power) have a penalty to any attack, or other activity that causes harm to someone, equal to power rank.

CHANGE SHAPE (30): A character with this power can instantly transform his body and equipment into another shape for up to his Change Shape power rank number of turns in a row. The character has no limit to the number of forms he can take, but he cannot change significantly in size. The hero does gain the new form’s natural abilities (like a cat’s claws or a prince’s handsomeness), and can still speak and use his own other powers.

CONTACTS (15): The character has an intricate network of informants and undercover agents who know what criminals are planning next, and have talents the hero does not. This power may also represent a high-tech computer system with scientific information and profiles of evildoers. Add the Contacts power rank to any appropriate stat + skill roll the character makes. This can be done power rank times per day.

CONTROL CREATURE (20): This power gives a character the ability to give “normal” commands to a creature or creatures of animal-level intellect that the character can see, using MIND + Comm + Control Creature. The character can also speak to the creature or creatures in its own language. This power is active at all times, but creatures will not do anything that is obviously harmful to themselves. A character can control up to power level x 10 creatures at one time.

CONTROL PLANT (15): With this power, a character can boost the growth of vegetable and fungal life, causing vines to hold enemies for a number of turns/minutes equal to power rank, making roots dig tunnels under the ground, etc. There must be plant life growing in the area to use this power; it cannot make flowers step out of their pots and walk, for example (to do that, use the Animation power).

CORRUPT (10): This power enables characters to instantaneously burn, consume or decay objects with a touch, or infect them with disease. Make

a melee/hand to hand attack roll. On a success, you cause 1d6 + power rank damage.

COSMIC POWER (50): A character with this power is a focal point of the universe's essence. He is sensitive to any monumental changes to time and space, and possesses some of the primordial power that is used to form worlds. The character can fly, can fire a bolt of raw organic energy causing 3d10 + power rank damage, and also has a bonus to Armor Class equal to power rank. A cosmic character is responsible for protecting the stability of the universe and may have to use the power in other ways, like healing others, establishing balance between warring races, and so on.

DANGER SENSE (10): The Danger Sense super power gives the character warning of possible threats, like traps and attacking foes, within point-blank or short range via a mental "flash" of awareness. The character cannot be surprised in combat, and gains +1 to Initiative and AC.

DAZE (10): With a flash of light or a loud sound, the character can cause an enemy to pause for a moment. The opponent suffers a -1 penalty to all its rolls (except damage) on its next turn. This power can be used power rank times per day.

DEATH TRANCE (15): A character with this power can slow his body's metabolic functions to a level where others think the character is dead. During the death trance, the character is getting full rest for purposes of healing, but is also fully aware of what is going on around him. The character cannot talk or otherwise act while in the trance, however. It lasts for any amount of time, and the character immediately returns to normal when the power is "turned off."

DENSITY (20): You can make yourself into an immovable mass. You have a bonus to AC equal to ½ power rank (round up). You also stay in place if someone else is trying to move you but you do not want to be moved, no matter how hard they are pushing or pulling.

DRAIN LIFE (20): You can drink blood or absorb life-force. Make a melee/hand-to-hand attack roll. On a success, you cause 1d6 + power rank damage. You immediately regain a number of hit points equal to power rank.

DUPLICATION (40): The character creates one or more body doubles (up to a number equal to his power rank). Each looks and acts just like the original character, but will only perform one simple action the original character gives, like

"attack," "distract," "search," etc. Each is controlled by the player with the original character, and take their turns immediately after the original character. The duplicates cannot create their own duplicates, and the original character cannot create more duplicates if any are already present. All duplicates have stats, skills, attack bonuses and other character information equal to ½ the original character's information (round down). They all last a number of turns equal to ½ the original character's Duplication power rank (round up) and disappear simultaneously. A duplicate will also vanish if any successful attack is made against it.

ELECTRICITY (15): A character with this power can control the flow of electrical energy and can use it to shock others for 2d6 + power rank damage, to increase/decrease the amount of light in a room, etc.

ELEMENT BLAST (20): A character with this power can fire projectiles of one element (rock, ice, water, etc.) from his body, causing 2d8 + power rank damage. Make a missile/ranged attack and add this power rank to the attack roll. This power must be selected once per element.

ELEMENT BODY (25): A character with this power can physically cover his body head-to-toe with an element (stone, flame, lightning, swamp muck, ice, etc.). The character has an Armor Class bonus equal to his power rank while in Element Body form, is naturally immune to the chosen element, and can "join" the element if it is available (a water body character can flow into a river, for example). This power must be selected once per element.

EMPATHY (20): This character can sense and affect the emotions of one other character or creature, but does not know the motivation behind those emotions. This power is mainly used as a lie detector (to sense the true feeling behind what someone says) or as a method of intensifying an emotion (to raise the anger of a person to the point where he attacks, to help ease the pain another is feeling, etc.).

ENERGY BLAST (25): This power sends a beam of pure supernatural force from some part of the character's body toward enemies. The blast can be pure light, evil magic, psychic shock waves, etc. It causes 3d6 + power rank damage. Make a missile/ranged attack and add this power rank to the attack roll.

ENHANCED SENSES (10 each): A character must purchase this power once per sense (sight, hearing, taste, smell, touch). It improves that sense to a supernatural level – the character can feel the ink on a page of print, can see tiny details across a crowded street, etc.

ERASE (15): This power wipes the mind of another creature or character, causing the individual to forget a single moment in time. Roll MIND + Know + Erase; the result is the DC for the target to remember the moment at any point in the future.

EXPLOSION (15): Once per day, the character can release all of its superhuman energy at once, detonating like a living bomb. Every other object and creature (enemy, ally and bystander) suffers damage equal to $\frac{1}{2}$ the exploding character's power rank (round up) in d6, in an area equal to 5 feet per power rank. For example, an exploding character with a power rank of 10 causes 5d6 damage to everything in 50 feet. The exploding character falls out of action until the end of the combat, then returns with $\frac{1}{2}$ his or her Total Hit Points (round up).

EXTRA LIMB (15): The character has another leg, arm, tail or other limb which acts exactly like any body part of its type.

FLIGHT (10): This common power enables a character to fly. This can appear in many ways: wings, anti-gravity field, swinging by jungle vines, floating platform, etc. Having just a few ranks of Flight means the character can keep up with a fast-moving vehicle, while many ranks of this power may enable the character to break the sound barrier.

FORCE FIELD (30): This power sets up a transparent shield of protection around the character and allies. Everyone in the field gains a bonus to Armor Class equal to power rank of the character with this power. It lasts for a number of turns per day equal to power rank. The character with this power determines the force field's size and shape. The force field can be turned on and off instantaneously.

GRAVITY CONTROL (15): The character can boost the gravity of an area equal to power rank yards in every direction. Objects or creatures in the air immediately fall, suffering damage equal to 1d6 + power rank per 10 feet they fall. You also stay in place if someone else is trying to move you but you do not want to be moved, no matter how hard they are pushing or pulling.

GROW (20): Characters can increase in height to any size at will. Add +1 to STR score (not bonus) for every 2 feet of growth.

IMAGE (15): The character can create a mental illusion or nightmare in another's mind. The picture seems completely real (it moves, makes noise, etc.) but cannot cause actual damage. The target of the illusion can attempt to "disbelieve" the image on a MIND + Know roll (the DC is equal to MIND + Know + Image power rank of the character who created the image). It lasts a number of turns/minutes equal to the power rank.

IMMORTAL (40): You cannot be killed, and may have lived for centuries or millenia already. If you are reduced to 0 (zero) hit points or less, you are out of action for the remainder of the battle, but will be fully recovered immediately after the battle. Also, add your level (not rank) to any stat + skill roll you make. This second ability can only be used power rank times per day.

INFRA-RED VISION (10): The character can see into the infra-red spectrum (i.e., see in the dark) as far as the character can see in normal light.

INTIMIDATE (10): The character is especially terrifying or disturbing. Add the power rank to intimidation rolls (usually STR + Phys, MIND + Subt, or STR + Comm).

INVENTING (20): The character is a genius at coming up with a device that solves a problem and saves the day. Make a MIND + Know + Inventing roll, with a DC determined by the game master. On a success, the character has invented a useful device. This power is mostly useful to move the plot forward, so to prevent characters from simply inventing their way out of every problem, inventions made with this power only work once before falling to pieces, and only one invention can be made per day.

INVISIBILITY (15): This power turns a character invisible to the naked eye. Any items or clothing the character is touching will also become invisible. The character will still leave footprints, make noise, etc.

INVULNERABILITY (35): This power makes a character nearly invincible. When a character with this power is created, the player must choose one material for the character to be invulnerable to, such as magic, poison, bullets, lasers, etc. All attacks with the chosen material have no effect on the character. A character can be invulnerable to more than one material, but each must be purchased separately.

JUMP (10): The character can leap the length of a city block and can land with enough force to cause 1d6 + power rank damage, if he wishes.

LEADERSHIP (20): This character has a legion of nameless minions that obey his every order, or is so inspiring he makes his allies better. On this character's turn, the hero can name one type of die roll (a particular skill, a type of attack, damage, etc.). All allies of the character, but not the character himself, gain a bonus to that die roll equal to $\frac{1}{2}$ power level (round up) until the character with Leadership's next turn. This ability can be used a number of turns per day equal to power rank, though the turns do not have to be in a row.

LUCK (45): You are incredibly fortunate, or you are prepared with a tool or idea for any situation. Roll extra dice whenever this character makes any skill, attack or other die rolls (except damage). The extra dice depend on the power rank. 1 to 3: +1d6, 4 to 7: +1d8, 8 to 11: +1d10, 12 to 15: +2d6, 16 to 19: +2d8, 20: +2d10.

MAGNETISM (20): This power gives a character control over magnetic force. Metallic items can be manipulated at will in any direction and at any speed, causing on average 2d8 + power rank damage. A character can make a STR + Phys roll vs a DC of MIND + Phys + Magnetism to resist having their metal objects pulled away from them.

MARTIAL ARTS MASTERY (30): You are trained in dozens of combat forms, or know one martial art so well you can achieve supernatural levels of achievement in it. Add $\frac{1}{2}$ power rank (round up) to Armor Class and Initiative rolls. Add power rank to melee/hand-to-hand and missile/ranged attack rolls when unarmed or using martial arts weapons (ones you have selected using the Weapon or Weapon (Major) powers).

METAL BODY (20): This power enables a character to sheathe his or her entire body in a thick coat of steel, giving the character an Armor Class bonus equal to power rank. The hero can still act as he normally would, as he is not affected by the weight of the metal body.

MIMIC (45): The character can exactly imitate a single skill, super power or other ability of any one creature or character, as long as he or she is able to observe the skill, power or ability for one turn before mimicking it. The mimicked ability uses the mimicking character's Mimic power rank. A character can only mimic one

ability at a time, and only for a number of turns (in combat) or minutes (outside of combat) equal to his power rank.

MIND CONTROL (30): The character can attempt to dominate the mind of a single target of human-level intellect. Roll MIND + Comm + Mind Control. That is the DC for a character's MIND + Know roll to resist or overcome the mind control. On a success, the target is completely under control of the mind controlling character for a number of turns equal to $\frac{1}{2}$ power rank (round up). It can make attacks against allies, though the target will not do anything suicidal, like walk off a bridge. This power can only be used against one target at a time. The character that is mind-controlled can make a MIND + Know roll each turn to end the control, with a penalty equal to the controlling character's power rank to each roll.

OBLIVIOUS (15): The character is unfamiliar with the world's customs, is able to "break the fourth wall" of comic books, or is so thick-headed he doesn't realize what he's doing is wrong or strange. This power can be used to retry a failed attack or a stat + skill attempt, or even to try and avoid suffering the effects of a successful attack against the character. Roll 1d6: on a 4 to 6, the result of the die roll is favorable to the hero (an attack by the character hits after all, or the character fails to be controlled by an enemy who made a successful die roll). On a 2 or 3, the action takes place like it normally would have. On a result of 1, the result of the die roll is utter failure for the hero. This power can be attempted any number of times per day, but only used successfully (with a roll of 4 or better) 3 times per day +1 time every 5 levels (level 5, 10, 15, etc.). This power is useful for silly heroes, or characters from alien worlds.

PARALYZE (40): The character "freezes" an opponent by covering them in ice, turning them to stone, etc. It requires a successful melee/hand-to-hand attack roll. The target is paralyzed for a number of rounds equal to $\frac{1}{2}$ Paralyze power rank (round up), and can take no actions until the paralysis ends.

PHASE (20): A Phasing super character can pass through any and all barriers and walls, including supernatural ones, with no ill effects. The character gains a bonus to AC equal to $\frac{1}{2}$ Phasing power rank (round up).

POWER ABSORPTION (30): This power draws the energy from a super character and gives the absorber one of the target's powers for a number of turns equal to power rank (on a successful MIND + Phys + Power Absorption vs. MIND + Phys roll). The target loses the use of that power while the absorber has it. The character must name the power to be absorbed before any attempt to absorb a power is made. A character can absorb up to power rank number of super powers at one time. The character that absorbed the power can use it at power rank 1.

PRECOGNITION (20): You have knowledge of the immediate future, though circumstances are always changing and your knowledge isn't perfect. Instead of taking your turn, you can declare one event that just happened instead did not happen, and all effects of that action are nullified. In effect, your character sees the results of the activity and realizes the best course of action. This power might be used to "undo" a character's death (so the character does not lose hit points from the most recent attack against him or her), to prevent a character from saying something wrong, or to attempt a skill roll a second time. To attempt to "undo" an event, you lose your turn and roll MIND + Know + Precognition vs a DC of the game master's choice (usually 15). This power can be used, succeed or fail, ½ power rank times per day (round up).

PROTECTED SENSES (10 each): The character can shield his or her eyes, ears or nose and throat from any harmful effects (like poison, blinding light or toxins). This power must be selected once for each of sight, hearing or smell and taste.

PSYCHIC TRAVEL (30): A character using this power can step from his body into the mind of a willing or unconscious target and interact as he would normally with the visions and images he encounters. Alternately, the character can psychically leave his body and travel invisibly anywhere he would like to go. His body remains in place where it was left, but cannot act. If either version of the super character (the psychic form or the inactive physical body) is knocked out of action, the character is entirely knocked out of action. This power is often used to search and battle mental illnesses, or to learn secrets which are otherwise hidden. This power lasts a number of turns (in combat) or minutes (outside of combat) equal to power rank.

REGENERATION (20): The super character can regrow body parts and heal wounds almost instantaneously. He will regain hit points equal to power rank at the beginning of each of his turns, even in the middle of combat.

RESIST ATTACK (15): The character has mental and physical defenses against one specific type of attack (fire, cold, psychic invasion, vampirism, magic, etc.). Any time the character suffers damage from that type of attack, the number of hit points the character loses is reduced by the power rank of Resist Attack. A character can resist more than one type of attack, but each must be purchased separately.

SHRINK (20): Characters can decrease in height to any size at will. Add +1 to DEX score (not bonus) for every 2 feet of size reduction.

SLEEP (20): The character can put another individual to sleep instantly on a successful MIND + Phys + Sleep vs. MIND + Phys roll. The target falls asleep for a number of turns (in combat) or minutes (outside of combat) equal to the power rank, but any physical harm to the target will fully wake them instantly.

SONIC WAVE (15): This power sends a pulse of sound at enemies. It causes 2d6 + power rank damage. Make a melee/hand-to-hand attack (since sound usually requires a strong voice) and add this power rank to the attack roll. Characters injured by the wave are deaf on their next turn.

STEALTH (15): The character is a master of stealth, able to perfectly mimic another's voice and mannerisms, hide in the shadows, and/or slip into or out of somewhere without making a sound. Add power rank to rolls to sneak, hide or pretend to be someone else (usually DEX + Subt, MIND + Subt, or MIND + Comm).

STRETCH (20): The character can physically elongate to reach long distances quickly, capture an enemy by wrapping around the foe, spread into a thin sheet to fit under closed doors, etc. The character can stretch a limb up to power rank x 2 feet at one time.

SUGGESTION (15): Concepts that can be summarized in a phrase can be mentally "hinted" to another ("you are sick," "there were footsteps outside last night," etc.). This power cannot force a character to make an action of any kind, but a failed MIND + Phys roll vs. the character with Suggestion's MIND + Comm + Suggestion will lead the target to fully believe what was suggested. This lasts for another of turns equal to power rank, or until

someone tries to break the Suggestion with a MIND + Comm roll vs. the original MIND + Comm + Suggestion result.

SUMMON (45): The character conjures forth a single powerful creature. It will only perform one simple action the summoner character gives, like “attack,” “distract,” “search,” etc. It is controlled by the player with the summoner character, and takes its turn immediately after the summoner. The summoned creature has stats, skills, attack bonuses and other character information equal to the summoner character’s information. The summoned creature lasts a number of turns equal to ½ the summoning character’s Summon power rank (round up). This power can be used power rank times per day.

SUPER-AGILITY (special): The character is especially flexible and quick. He or she has a DEX score of 19 or more, as purchased above in section 3. Stats.

SUPER-CHARGE (25): The character can draw on his or her life-force and put it all into a single attack. Add the Super-Charge power rank to the attack roll, and if successful, the attack causes extra damage equal to power rank x 2. This power can be combined with any attack and any other attack bonuses. It can only be successfully attempted a number of times per day equal to ½ power rank (round up).

SUPER-CHARISMA (10): The character is naturally charming and seductive, thanks to training or pheromones. Add power rank to attempts to win friends and influence people (usually MIND + Comm).

SUPER-INTELLIGENCE (special): The character is especially smart and clever. He or she has a MIND score of 19 or more, as purchased above in section 3. Stats.

SUPER-SPEED (45): A character with this power can run, swim or fly (if capable) faster than any normal person. Add power rank to Armor Class and Initiative rolls, and add ½ (round up) power rank to DEX score (not bonus). Having just a few ranks of Super-Speed means the character can keep up with a fast-moving vehicle, while many ranks of this power may enable the character to break the sound barrier.

SUPER-STRENGTH (special): The character is especially tough and strong. He or she has a STR score of 19 or more, as purchased above in section 3. Stats.

SWIMMING (10): The character can move underwater as fast as he or she can on land. This power also allows the character to breathe underwater.

TECHNICAL MANIPULATION (10): The character can psychically enter and manipulate computers, vehicles and other mechanical or electronic systems (using MIND + Subt + Technical Manipulation). The character must be able to physically see the target technology before attempting to manipulate it.

TELEKINESIS (20): This power enables a character to lift or move an object with a successful Magic/Supernatural attack + Telekinesis roll. Telekinesis can be used to levitate a character, move something across a hallway, operate a machine, maneuver a weapon away from the character’s body, etc. Throwing items or people causes 1d6 + power rank damage.

TELEPATHY (10): This power connects the mind of the super character to another person through a psychic link. The character can “speak” and respond to messages of any length in complete silence, though the target may choose to ignore them. If a telepathic character is “speaking” with a character who does not have this power, the conversation can only last a number of turns (in combat) or minutes (outside of combat) equal to the telepathic character’s power rank. If all characters in a conversation have the Telepathy power, the conversation can last any amount of time.

TELEPORT (20): Teleporting heroes can move instantly from one place to another. Characters always successfully teleport to destinations visible to the character from the spot where he is starting. Teleporting to locations the character cannot see requires a dice roll (MIND + Phys + Teleport).

TIME STOP (35): This power enables a character to stop and start time in a small area, about power rank x 10 yards in a circle centered on the character. All activity slows down so much it appears to have stopped. The super character can take a second single action (movement or attack or another activity) during the time stop. After this additional turn, time returns to normal. This can be done power rank times per day.

TUNNEL (10): The character can quickly dig a tunnel large enough to fit a human-sized character through any non-supernatural substance (concrete, rock, ice, etc.). The

character can dig as fast as he can walk through the tunnel.

VIBRATE (10): The character can move a hand quickly enough to “saw” through any type of material, causing 1d6 + power rank damage each turn. This power can be used to start small earthquakes if the character is touching a floor or ground.

WEAPON (10): From claws in your fists to a magic battle axe to high-level training with firearms, you’re a master of one particular type of weapon. It causes damage equal to 1d6 + power rank. Add ½ the weapon’s power rank (round up) to the appropriate type of attack bonus when using this power. This power must be purchased once for each signature weapon the character uses.

WEAPON (MAJOR) (20): As Weapon (above), except the damage is equal to 1d12 + power rank. This represents powerful weapons, like rocket launchers or multiple swords used simultaneously.

WEATHER CONTROL (25): This power gives a character complete control over the weather conditions in the area the character can see. The character can make attacks against everyone who can be affected by any severe weather (hurricane-force winds, lightning, drought, etc.), but cannot cause more than 3d6 + power rank damage to any individual foe. The character can also build up or diminish the pre-existing natural weather conditions at will.

X-RAY VISION (10): The character can see through solid structures, such as wood and steel, as well as supernatural barriers.

5. Gadgets, Limits and Magic

Gadgets are powers a character has and can use that are embedded in an item, like a rocket pack with Flight, a customized hat providing Mind Control to the wearer, or a super-car with a pair of machine guns (Weapon) and a single rank of Super-Speed. To put a power or powers in a gadget, *subtract -4* from the base cost of each power, then spend Power Points on power ranks, if you wish. The drawback of gadgets is that they can be lost or damaged. The character must be wearing/using/driving (or whatever) the gadget to use the power.

Some characters have limited powers, like the hero with Control Creature that can only be used with one type of animal (like rats or lions), the fun-loving super with Change Shape who can take the form of any animal but is always colored green, the hero who has Flight only when swinging from a rope or cable, or the space police officer whose Cosmic Power is useless against the color yellow. To have a limited power, *subtract -2* from the base cost of each power, and make sure the game master knows the limits of your character’s power.

Powers represented as magic spells are created the same way, but *subtract -6* from the base cost of each power. Each time the power is used, the hero must spend hit points equal to the power rank +1.

6. Skills

There are four skills. Skill checks called for in other RPGs will fall under the heading of one of these skills.

- *Physical*: athletics and acrobatics, stamina, etc.
- *Subterfuge*: sleight of hand, stealth and tracking, spotting evidence, etc.
- *Knowledge*: science, research and technology, education, etc.
- *Communication*: diplomacy and connections, fast-talk, body language, etc.

Each covers a wide range of abilities. While a stat has a score and a bonus, a skill has a rank.

Skill Rank = Level + Free Bonus + Power Points. A skill’s maximum rank is equal to level +5.

Level: the hero's level.

Free Bonus: each character gets +3 to add to one or more skills. This represents the character's non-super powered background, his work in his "secret identity." You can assign the free bonus all to one skill, +2 to one skill and +1 to another, or +1 to three skills.

Power Points: you can boost your skill rank by spending Power Points, at a rate of **3 points per +1 skill rank**. There's no maximum to the number of Power Points you can spend this way (though remember the maximum skill rank of level +5).

7. Combat

There are several numbers used in Microlite 20 Costumes combat. Each can be improved by spending Power Points.

Hit Points: Add STR, DEX and MIND stat scores together, then add 2 hit points per level. You can boost your hit points by spending Power Points, at a rate of **1 Power Point per +1 Hit Point**. There's no maximum to the number of Power Points you can spend this way — this is a good way to use up the last few Power Points you still have to spend. Characters who can absorb a lot of damage and still stay in the fight often have many hit points. There is no maximum to the number of hit points your character can have.

At 0 (zero) hit points, your character is unconscious. At -10 hit points, your character is dead (at least until the next adventure, when you miraculously come back to life).

After a battle, each hero recovers a number of hit points equal to his or her STR stat score. More hit points have to be regained via rest or medicine.

Initiative: Equal to DEX bonus. You can improve your Initiative by spending Power Points, at a rate of **3 points per +1 to initiative**. The initiative bonus you gain by spending Power Points cannot be greater than your level.

For attack bonuses, you can spend Power Points, at a rate of **10 points per +1 to attack bonus**. The attack bonus you gain by spending Power Points cannot be greater than your level. For example, a level 10 hero with a STR bonus of +3 has a Melee/Hand-To-Hand Attack Bonus of 10 (for level), +3 (for STR bonus) and can spend up to 100 Power Points to add another +10 to attack bonus.

Melee/Hand-To-Hand Attack Bonus: Level + STR bonus + Power Points spent

Missile/Ranged Attack Bonus: Level + DEX bonus + Power Points spent

Magic/Supernatural Attack Bonus: Level + MIND bonus + Power Points spent

Armor Class: 10 + highest single stat bonus + Power Points spent. **2 Power Points gives you +1 to Armor Class**, but the AC bonus you gain by spending Power Points cannot be greater than your level.

A die result of 20 is automatically a hit, no matter what the opponent's Armor Class is. Likewise, a die result of 1 is automatically a miss, no matter what the attacker's attack bonus.

All Microlite 20 Costumes characters have a basic unarmed damage of 1d4 + STR bonus.

Makeshift weapons typically cause less damage than the character's signature weapons (represented by the Weapon or Weapon (Major) powers), which is why characters usually rely on a simple punch or one of their specially crafted items to make an attack.

Small (length of chain, baseball bat): $1d4 + \frac{1}{2}$ STR bonus, round down

Medium (pistol, sword): $1d6 + \frac{1}{2}$ STR bonus (melee weapon), round down, or
 $1d6 + \frac{1}{2}$ DEX bonus (missile weapon), round down

Large (rifle, boulder): $1d8 + \frac{1}{2}$ STR bonus (melee weapon), round down, or
 $1d8 + \frac{1}{2}$ DEX bonus (missile weapon), round down

Huge (car, streetlight): $1d12 + \text{full STR bonus}$ (melee weapon) or
 $1d12 + \text{full DEX bonus}$ (missile weapon)

Heroism Points: Heroism points represent a character's determination, fighting spirit and even a little bit of good fortune. **2 Power Points give you 1 Heroism Point.** There's no limit to the number of heroism points a character can have — like hit points, this is a good way to use up Power Points you haven't spent.

Heroism points can be used to add to any attack, damage or stat + skill roll at a rate of +1 per 1 heroism point spent. You can only spend up to your level in heroism points on one single roll (for example, a level 10 character can only spend up to 10 heroism points, for a +10 bonus). Heroism points do not need to be spent all at once, but when they are completely spent, they are gone for the rest of game session. A character's Heroism points are restored to their starting amount at the beginning of a game session.

Miniatures: If you have miniature figures (about 1 inch to 2 inches, or 25 to 28 mm tall) to represent the characters and their enemies, you'll need a ruler or a battle map covered in spaces (squares or hexes 1 inch or 1 ½ inches in size). Alternately, you can simply measure distances using a ruler, considering each inch a "space."

One space equals 5 feet or 2 yards, and the average character and monster moves 6 spaces per turn, even diagonally. Figures can move through the same space as another character or enemy, but cannot end movement in the same space as another figure. Rubble, darkness, heavy growth and other difficult terrain "costs" 2 spaces of movement for each space the figure moves into.

If there's a question whether a character could see an enemy to hit it, draw an imaginary straight line from the center of the attacker's space to the center of the target's space (or one of its spaces, if it takes up more than one space on the map). If there is no large obstacle or enemy in the path, the character can make the attack. Allies of the attacker do not block its path, nor do obstacles filling less than half a space in the path. Characters can attack through windows and other partial obstacles at a -2 penalty to hit.

Simplified Attacks (Optional): To avoid calculating attack ranges each turn, melee attacks must be made against an enemy in a space adjacent to the character. Thrown and short-range weapon attacks can be made against an enemy up to 10 spaces away. Long-range weapon attacks can be made against an enemy up to 25 spaces away.

Action Figures: If you're using typical superhero action figures (often 3.75 or 7 inches, depending on brand of figure), references to spaces above are doubled. One space is still 5 feet, but the average character

moves 12 spaces per turn. Difficult terrain “costs” 4 spaces of movement. Short-range weapon attacks can be made up to 20 spaces away, and long-range weapon attacks can be made up to 50 spaces away.

8. Financial status and equipment

Super heroes rarely worry about money, transportation, or food, and in fact many are extremely wealthy. In Microlite 20 Costumes, this is represented with status, as shown below. It’s up to the game master to determine what a character possesses, using his or her financial status as a guideline. Equipment the character uses as part of costumed adventuring is represented with gadgets (like vehicles) and powers (like weapons), though some items are simply tools, like lock picks, smoke grenades and grappling hooks. They have no cost.

Ultra-Rich: This character is head of a major multinational corporation or foundation, and has almost unlimited access to funds and technology. Examples: Batman, Iron Man. *Costs 20 Power Points.*

Comfortable: This character has a steady day job that brings in decent pay, or some other way of making ends meet without much worry. Examples: Nightwing, Daredevil. *Costs 0 (zero) Power Points.*

Rich: This character is in charge of a large company, but not one that’s quite as big as the ultra-rich characters. Examples: Blue Beetle, Iron Fist. *Costs 15 Power Points.*

Struggling: This character is always trying to earn a buck, even while fighting off supervillains. Example: Spider-Man. *Gain 10 Power Points.*

Sponsored: This character is an extension of a government agency, army or other organization that takes care of living expenses and gear. Examples: Hellboy, Nick Fury. *Costs 10 Power Points.*

Not Important: This character is from a society that does not care about money. Examples: Aquaman, Thor. *Costs 0 (zero) Power Points, but does require game master approval.*

9. Flaws

Part of the fun of comics is seeing heroes struggle against their flaws. In Microlite 20 Costumes, characters gain 10 Power Points for one flaw or 20 Power Points for two flaws. These can be anything the player wishes, but a few common ones are:

A dependent, like an elderly aunt or child, that must constantly be protected; or

A disability, like blindness or being unable to walk; or

An uncontrollable rage the character slips into whenever angry or upset; or

A vulnerability, like a kind of rock that will prevent the hero from using any of his powers while in its presence.

Simply having a secret identity isn’t significant enough to be a Power Point-earning flaw, but having a secret identity with a deep secret of its own (like, “I used to be a supervillain”) might be.

10. Advancement

Super powered heroes rarely “advance” in levels in the way other adventurers do, but heroes can still gain benefits after fighting bad guys and saving the world. After each game session, each character gains between 1 and 3 Power Points, depending on their performance in the game. These points can be spent right away, or saved up to buy more powers or other bonuses. Keep track of how many Power Points a character has collected; when he gets 15, he’s increased a level, and his skills, attack bonuses and limits on Power Points spent will increase.

11. Mooks

Heroes battle supervillains and giant monsters regularly, but their most common opponents are mooks. These are the nameless crooks and minions who seem to exist just to slow heroes down, like thugs, mobsters, robots and ninja. Normal police and soldiers may be mooks for anti-heroes. Typical statistics for common mooks are listed here.

Low-Quality Mooks (thugs, security guards, police officers, soldiers, karate students, dabblers in magic, etc.)

STR: 13 (+1), DEX: 16 (+3), MIND: 11 (+0)

Physical: 3, Subterfuge: 3, Knowledge: 1, Communication: 1

HP: 10 to 15 (or just 1), AC: 13, Melee/Hand-To-Hand: +2, Missile/Ranged: +4, Magic/Supernatural: +0

Equipment: Weapon (1d4 or 1d6 damage)

High-Quality Mooks (mobsters, newly created super-soldiers, SWAT, war robots, ninja, demon cultists, etc.)

STR: 14 (+2), DEX: 16 (+3), MIND: 11 (+0)

Physical: 6, Subterfuge: 5, Knowledge: 4, Communication: 3

HP: 15 to 20 (or just 1), AC: 15, Melee/Hand-To-Hand: +5, Missile/Ranged: +6, Magic/Supernatural: +3

Equipment: Weapon (1d8 or 1d10 damage), light armor

Innocent Bystanders (construction workers, newspaper reporters, attorneys, scientists, students, damsels in distress, non-combat industrial robots, etc.)

STR: 10 (+0), DEX: 10 (+0), MIND: 10 (+0)

Physical: 1, Subterfuge: 0, Knowledge: 1, Communication: 1

HP: 5 to 10 (or just 1), AC: 10, Melee/Hand-To-Hand: +0, Missile/Ranged: +0, Magic/Supernatural: +0

Equipment: What’s needed to do their jobs; no weapons or armor

12. Character Templates

To get into the game quicker, simply use one of these templates. It provides “average” hero characters, without powers, and the Power Points values for each of their game characteristics. Each template leaves $\frac{1}{2}$ or $\frac{1}{3}$ of the listed level’s Power Points to purchase a few powers at or near the maximum number of power ranks possible.

All you need to do is use the remaining Power Points to improve the listed characteristics and purchase powers and power ranks in the way you wish. Skill ranks already include the Free Bonus, with a +1 assigned to Subterfuge, Knowledge and Communication. A template also has the Financial Status often associated with comic book heroes of that type. “AB” stands for Attack Bonus.

QUICK ROLL CHARACTER GENERATOR

If you want to get a superhero adventure up and running right away, follow the steps below to create a costumed hero with little more than some simple calculations and a few dice rolls. You can simply choose powers, ranks, flaws or any other character elements you like, or use the methods in the standard Microlite 20 Costumes rules to replace any of these steps, but remember that you'll have to determine how many Power Points you've spent up to that point.

Step I: Choose A Level

Select a level for your hero (the typical comic book hero is level 10). Power Points aren't used with the quick roll option.

Step II: Stats

Roll 4d6, dropping the single lowest die result. Do this three times, and apply the three results to your stat scores, in any order you wish. Alternately, assign the dice results in order: Strength, Dexterity and Mind. Also determine the stat bonus for each.

Step III: Powers

This involves dice rolls on several charts found below, or you can simply choose powers you want your character to have. It's also up to you if you want powers in the form of gadgets or magic, or if you want them to have limits.

Roll 1d4 +1 to determine the number of powers your hero has. Each has a power rank equal to your level, if the power needs a power rank.

The powers are separated by base cost. Roll the listed die on each chart to find your powers. If you roll a power twice, roll again, unless it is a power that can be selected more than once.

Step IV: Skills

Your hero's skill rank in each skill is equal to level + $\frac{1}{2}$ level (round up). Add +3 to one skill.

Step V: Combat

To determine *hit points*, add your character's stat scores together, then add 2 hit points per level.

Your *initiative* is equal to your DEX bonus.

Your *melee/hand-to-hand attack bonus* is equal to your level + $\frac{1}{4}$ level (round up) + STR bonus.

Your *missile/ranged attack bonus* is equal to your level + $\frac{1}{4}$ level (round up) + DEX bonus.

Your *magic/supernatural attack bonus* is equal to your level + $\frac{1}{4}$ level (round up) + MIND bonus.

To determine *Armor Class*, add your highest stat bonus to your level + $\frac{1}{2}$ level (round up).

Step VI: Financial Status

Roll 1d10.

1: Ultra Rich

2: Rich

3 to 4: Sponsored

5 to 8: Comfortable

9: Struggling

10: Not Important

Step VII: Flaws

Roll 1d6. On a result of 1, choose a flaw for your hero.

QUICK ROLL CHARACTER GENERATOR POWER CHARTS

Roll 1d10 to determine each power's base cost, then go to the chart for that cost.

- 1 to 3: Base Cost 10
- 4 to 6: Base Cost 15
- 7 to 8: Base Cost 20 or 25
- 9: Base Cost 30 or 35
- 10: Base Cost 40 or more

Base Cost 10

Roll 1d6. On a 1 to 3, roll on List A.
On a 4 to 6, roll on List B.

List A (Roll 1d12)

- 1: Binding
- 2: Body Armor (roll 1d6 to determine Damage Resistance)
- 3: Breathe
- 4: Corrupt
- 5: Danger Sense
- 6: Daze
- 7: Enhanced Senses (choose a sense)
- 8: Flight
- 9: Flight
- 10: Infra-Red Vision
- 11: Intimidate
- 12: Jump

List B (Roll 1d12)

- 1: Protected Senses (choose a sense)
- 2: Super-Agility (roll 1d6 to determine increase to DEX stat)
- 3: Super-Charisma
- 4: Super-Intelligence (roll 1d6 to determine increase to MIND stat)
- 5: Super-Strength (roll 1d6 to determine increase to STR stat)
- 6: Swimming
- 7: Technical Manipulation
- 8: Telepathy
- 9: Tunnel
- 10: Vibrate
- 11: Weapon (choose one)
- 12: X-Ray Vision

Base Cost 15

Roll 1d6. On a 1 to 3, roll on List A.
On a 4 to 6, roll on List B.

List A (Roll 1d8)

- 1: Adhesion
- 2: Contacts
- 3: Control Plant
- 4: Death Trance
- 5: Electricity
- 6: Erase
- 7: Explosion
- 8: Extra Limb (choose one)

List B (Roll 1d8)

- 1: Gravity Control
- 2: Image
- 3: Invisibility
- 4: Oblivious
- 5: Resist Attack (choose a type of attack)
- 6: Sonic Wave
- 7: Stealth
- 8: Suggestion

Base Cost 20 or 25

Roll 1d6. On a 1 to 3, roll on List A.

On a 4 to 6, roll on List B.

List A (Roll 1d12)

- 1: Calm
- 2: Control Creature
- 3: Density
- 4: Drain Life
- 5: Element Body (choose an element)
- 6: Element Blast (choose an element)
- 7: Empathy
- 8: Energy Blast
- 9: Grow
- 10: Inventing
- 11: Leadership
- 12: Magnetism

List B (Roll 1d12)

- 1: Metal Body
- 2: Phase
- 3: Precognition
- 4: Regeneration
- 5: Shrink
- 6: Sleep
- 7: Stretch
- 8: Super-Charge
- 9: Telekinesis
- 10: Teleport
- 11: Weapon (Major) (choose one)
- 12: Weather Control

Base Cost 30 or 35 (Roll 1d10)

- 1: Animation
- 2: Bad Luck
- 3: Change Shape
- 4: Force Field
- 5: Invulnerability (choose a material)
- 6: Martial Arts Mastery
- 7: Mind Control
- 8: Power Absorption
- 9: Psychic Travel
- 10: Time Stop

Base Cost 40 or more (Roll 1d8)

- 1: Cosmic Power
- 2: Duplication
- 3: Immortal
- 4: Luck
- 5: Mimic
- 6: Paralyze
- 7: Summon
- 8: Super-Speed

TUMBLEWEED

by Mike Berkey (michael.berkey@gmail.com), Copyright 2009. For more Microlite20 awesomeness, head over to the Microlite20 website at <http://www.microlite20.net>.

CORE RULES

STATS

Tumbleweed uses three stats: **Strength**, **Dexterity**, and **Mind**.

Roll 4d6, dropping the lowest die. Total the remaining 3 dice and allocate to one of the stats. Repeat for the remaining stats.

Your stat bonuses are **(STAT-10)/2, rounded down**.

CLASSES

There are six classes: **Desperado**, **Grifter**, **Gunslinger**, **Law Man**, **Maverick**, and **Preacher**. Characters begin at level 1.

Desperadoes are wild men who live on the fringes of society. Outlaws, hired thugs, strong men, thieves and murderers all count themselves among their number. They gain a +1 to all attack and damage rolls. This increases by +1 at 5th level and every 5 levels afterwards.

Grifters are con men and swindlers. Always on the road, one step ahead of their victims and the law. Grifters get a +1 to Communications rolls at 1st level. This increases by +1 at 5th level and every 5 levels afterwards.

In addition, once per adventure per level, they can make a target believe one "fact", no matter how implausible, as long as the Grifter succeeds in a MIND +Comm roll vs the opponent's skill roll (usually MIND+Sub or Know).

Gunslingers. Renowned for their lightning fast reflexes, Gunslingers gain a +2 initiative bonus when using firearms. They are also better at certain firearms maneuvers than other classes: see the maneuvers section for more information.

A Gunslinger, however, will always have a preference for either pistols or rifles, never both—they can only use their special abilities (including their initiative bonus) with that type of weapon.

Law Men. Usually out-gunned and under-equipped, Lawmen are what passes for justice on the frontier.

Law Men can use a Tin Star to face down criminals (see the equipment section). They also gain a +1 to hit and damage with either six shooters or rifles, their choice. This bonus increases by +1 at 5th level and every 5 levels thereafter.

Mavericks are fast on their feet, masters of all trades, always with an eye on the brass ring. They can choose two favored skills at first level instead of just one.

Preachers. Holy men, spreading the word of the Lord as far as possible. Preachers get a +1 to Communications rolls at 1st level. This increases by +1 at 5th level and every 5 levels afterwards. Preachers can also use Bibles (see the equipment section).

Other classes. Just write down your profession, give yourself a bonus roughly equal to the ones above and get on with it. If you want to be a 3rd level Showgirl, we're not going to stop you.

Alternatively, feel free to rename classes to fit other concepts. For example, an Indian Brave could be a Maverick with favored skills in Physical and Survival. A Mountain Man could be a Desperado with a favored skill in Survival.

NATIONALITY

Pick a nationality or ethnicity and then choose either a +2 to one stat or a +2 to any type of skill rolls that are a point of national pride.

For example, you could declare yourself to be a Mexican and say that your national pride is your skill with rifle-work. From then on, you'd get a +2 to attack rolls with rifles.

Another person might say that they're an Indian and their tribe has always been good with horses—they'd gain a +2 with rolls involving horsemanship, possibly including to-hit rolls while on horseback.

It's perfectly fine for two people from the same background to have different bonuses since it's all a matter of opinion.

If you have absolutely no opinion on your nationality, call yourself an American, praise the melting pot, and give yourself the +2 bonus anyway.

SKILLS

There are five skills: **Communication, Knowledge, Physical, Subterfuge and Survival.**

Each character must choose 1 skill they are best at (also called your "favored skill"). Your rank in that skill will be at your level+3. All other skills will be at half your level, rounded down, plus one ((Level/2)+1).

Skill roll = d20 + skill rank + whatever stat bonus is most applicable to the use + situation modifiers

Roll higher than the given Difficulty Class to succeed. For example, Climbing would use Phys + STR bonus. Dodging a falling rock is Phys + DEX bonus. Finding a trap is Subt + MIND bonus. Disabling a trap is either Subt + DEX bonus or Know + MIND, depending on the nature of the trap.

Note that there are no "saving throws" as such in this game; use Phys + STR or DEX for Fortitude and Reflex saves. Will saves are usually MIND bonus + your level.

CONTESTS

Occasionally, two or more characters will directly compete with another outside of a combat situation. Perhaps it's a high speed chase on horseback, maybe it's a high stakes game of poker. It all boils down to the following:

- One character is the Hunter, one is the Prey.
- There are 10 points of Lead. If the Lead increases to 10 or higher, the Prey wins. If the Lead reaches 0, the Hunter wins. The Lead usually starts out at 5, but the GM can decide to use a different number as starting Lead if one side has an advantage.
- Both sides make skill checks each round. Usually these skill checks will be versus static DC's, representing maneuvers.

Note: a "round" in this case does not necessarily have to be a combat round—it could be any length of time that would be dramatically appropriate.

The highest successful skill check total wins 1 pt of Lead, either towards the Hunter's or the Prey's advantage.

Depending on what these maneuvers are, additional benefits or penalties may accrue in the following round.

If neither skill check passes, the Lead remains unchanged and additional unpleasant effects may ensue as expected for a failed skill roll of that type (crashing, falling, losing money, whatever).

If only one side fails their check, one or more extra points of Lead may accrue to the other side depending on how badly the roll failed by.

Risky Maneuvers: For a DC penalty, you can attempt to change the Lead in one attempt by 2 or more points. Describe what you're doing, then take a +5 DC penalty for every extra point of Lead you want. Failure will usually have pretty serious consequences. Some examples would be cheating in a hand of black jack, or having your horse jump a gulch to put distance between you and a pursuer.

COMBAT

Hit Points = STR Stat + 1d6/Level. If HP reaches 0, you are unconscious and near death. Further damage directly reduces STR. If that reaches 0, you are dead.

Roll d20 + DEX bonus for initiative order.

Everyone can do one thing each turn; move, attack, dodge, pull a lever, etc. Only roll once, on the first round of combat--the order stays the same for subsequent rounds.

Melee attack bonus = STR bonus + Level

Ranged attack bonus = DEX bonus + Level

Armor Class (AC) = 10 + one-half your level, rounded down + DEX bonus.

Add attack bonus to d20 roll. If higher than your opponent's Armour Class (AC), it's a hit. Natural 20 is automatically a critical, doing maximum damage.

Characters can use DEX bonus + Level as their Melee attack bonus instead if wielding a light weapon.

If the total bonus is +6 or more a second attack can be made with a -5 penalty. If the total bonus is +11 or more a third attack can be made at -10, and a fourth at -15 if the total bonus is +16 or more. For example, if the total bonus is +12, three attacks can be made at +12/+7/+2. No more than four attacks can be made in a round, regardless of bonus (five if two weapons are used).

Add STR bonus to Melee damage, x2 for 2-handed weapons.

Ranged Combat. Shooting a gun into a crowded melee is not a good idea—if you don't take a -4 to hit, there's a 50% chance you'll hit a friendly instead of an opponent.

Ranged Penalties. If your target is relatively close, there is no penalty to hit for range. If it's mid-range for the weapon you're using (judgment call), take a -2. If it's farther out than that, the GM will assign a -4 to -10 penalty to hit, depending on his judgment of how far away the target is. Note that ranges are relative to the weapon used: “far away with a -10 penalty” for a pistol may only be a -4 range penalty for a rifle.

MANEUVERS

Maneuvers are things you can do in combat in lieu of a normal attack.

Aim. Taking a full round to aim with a ranged weapon will add +2 to hit, but while doing so your AC will be at 10 because you can't move around. Gunslingers get an extra +2 to hit while aiming with their preferred type of firearm. You can not dual wield or Fan The Hammer while Aiming. You **can** Aim while taking a Trick Shot.

Dodge. You can forgo your next attack at any time and dodge out of the way. Roll $d20 + \text{DEX} + \text{Phys}$. The total is your effective AC until your next attack comes up. If it's lower than your real AC, well, you zigged when you should've zagged.

The GM may modify your check by +2 or -2 (or more) to reflect the amount of cover in the area and how the local terrain affects your mobility.

Fan the hammer. This requires two hands and a single revolver. In exchange for expending 2 more rounds than usual and a -4 penalty on all attack rolls that round, you gain one extra attack at your highest attack bonus. Gunslingers take only a -2 penalty.

Grab. Make a hit roll on your target. If successful, the target and attacker make opposed $\text{STR} + \text{Phys}$ rolls. If the attacker wins, the target is grappled and loses his Dex bonus to AC. If the target wins, the grapple fails. Every time the target's action comes up he can make another opposed roll to either throw off the grapple or reverse the grapple.

Every time the attacker's action comes up, he can do something, such as inflict unarmed damage, strip an item from them, or move or throw the target somewhere (potentially also doing unarmed damage). It's the GM's judgment call if an action is reasonable or not.

Sneak attack. If you successfully sneak up on someone, or otherwise catch them unawares, the first hit adds your ranks in Subterfuge as bonus damage.

Take Cover. If you duck behind an object, you can gain +2 to +10 to your AC depending on the extent of the cover (light cover = +2 all the way to nearly complete = +10). Half this AC bonus may also apply to saves if the GM allows it.

Throw an explosive. These weapons require the attacker to make a missile attack targeting a particular 5 foot by 5 foot area, which is a DC 10 roll. Anyone caught within the blast radius can make a Dexterity Check (the DC is listed with the explosive) and only take half damage.

Trick Shots. Declare what your shot is going to do—it could be anything from shooting a weapon from your opponent's hand to blowing his hat off to extinguishing a lantern. Make a to-hit roll at -8 (-4 for a Gunslinger using their preferred type of firearm).

If it's against a live opponent, then he makes a save (usually DEX or $\text{STR} + \text{Phys}$) against a DC equal to your attack roll (with the to hit penalty) and either drops the weapon or is intimidated, which could have effects ranging from a -2 to hit on his next action to flat-out surrender, depending on how much he failed by and what, exactly, you did.

If he **makes** the save (i.e. his save roll is **higher** than your to hit roll), then the attack applies against his AC (again with the -8 penalty)—he still might be shot by accident.

Against an inanimate object, use a flat DC, higher for smaller objects or more difficult shots. Aim, range and cover all apply to Trick Shots.

Two weapons. You can wield two light weapons and attack one extra time with the off hand at your highest attack bonus, if you take a -2 penalty on all attack rolls that round. Gunslingers only take a -1 penalty when dual-wielding their preferred type of firearm.

SECOND WIND

Twice per day, a character can catch their Second Wind, restoring half their lost hit points. This takes up a single action.

If you are at 0 hp and losing strength, a Second Wind will put you back at 1 hp.

OTHER HAZARDS

Falling: 1d6 damage per 10', half damage on Phys+DEX save. DC=depth fallen in feet

Extreme Heat & Cold: If not wearing suitable protection, Phys+STR save once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed save.

Poison: Phys+STR save to avoid or for half, depending on poison. Effect varies with poison type, but a good generic deadly poison will do 5d6 damage over the course of a few minutes.

LEVEL ADVANCEMENT

Encounter Level = Hit Dice of defeated monsters, or the given EL for the trap, situation, etc. Add +1 for each doubling of the number of foes. e.g.: 1 Goon = EL1. 2 Goons = EL2. 4 Goons = EL3, etc.

EQUIPMENT

Axe. 1d10 damage, two handed.

Bow and Arrow. 1d6 damage. The character's strength bonus applies to damage rolls if the bow was made for that character.

Bowie Knife. 1d6 damage.

Brawling. Technically not equipment since everyone comes equipped with fists, elbows, feet, knees, teeth, foreheads, etc, but listed here for clarity. 1d4 damage.

Derringer. 1d6 damage. A tiny revolver with abysmal range and damage and with only a 2 round capacity. Highly concealable.

Dynamite. 3d6 for one stick, thrown. Every additional stick adds +1d6. DC 15 to save for half damage.

Hatchet. 1d8 damage.

The Holy Bible. The written words of the Lord, a Preacher's best friend short of the Almighty himself. Works like a Tin Star (see below) in that a character can use it to get an opponent to repent of his sins, possibly resulting in hesitation, surrender or retreat. Only a Preacher may wield the Holy Bible.

The opponent gets a +5 bonus to their save (if not

Loot . \$200 gives you one EL. Every doubling of that gives you another EL. e.g.: \$200 = EL1. \$400 = EL2. \$800 = EL3. \$1600 = EL4. This only applies to Loot gained per adventure, total, per character.

Add up the Encounter Levels (EL's) of every encounter you take part in. When the total = 10 x your current level, you've advanced to the next level. Reset the total to 0 after advancing.

Each level adds:

+1d6 to Hit Points

+1 to all attack rolls

+1 to your primary skill(s)

+1/2 to all other skills

+1/2 to AC

If the level divides by four (i.e. level 4, 8, 12, etc.) add 1 point to STR, DEX, or MIND.

more) if they are not religious or are from another, non-Christian, religion.

If a Preacher is trying to use the Bible on more than one target at a time, there is a -1 penalty to his targets' saves for every 2 people that could be classified as faithful to the Preacher's religion in that group.

Machete. 1d8 damage.

Rifle. 2d8 damage. 18 round capacity before reloading. Impressive range.

Shotgun. 2D10 damage, short range. 2 round capacity if double-barreled, otherwise only 1.

Six-shooter. 2d6 damage. 6 round capacity.

Tin Star. This is a sheriff's badge, and the only law a frontier town may ever see. Only a Law Man can use these.

As an action, the character can present the badge, and make a Comm + MIND roll vs the opponent's Know + MIND (Or STR, if higher). If successful, the criminal hesitates for one action. If successful by 5 points or more, the opponent surrenders. The GM can rule that some opponents will never surrender, only run away, hesitate or retreat.

If the Law Man tries to use his Tin Star on more than one opponent, give them a bonus to their save equal to +1 for every person in the group.

Tomahawk. 1d8 damage.

ANIMALS

Type	HD	HP	AC	Damage, Notes
Bear	6d8+24	(51 HP)	15	Claw +11 (1d8+8), Bite +6 (2d8+4)
Dog / Coyote	2d8+4	(13 HP)	13	Bite +3 (1d6+3)
Donkey	2d8+2	11	13	Bite +1 (1d2)
Herd Animal	3d8+9	(22 HP)	13	Butt +3 (1d8+6), Trample +3 (1d12)
Horse	3d8+6	(19 HP)	13	Hoof +2 (1d4+1)
Rat	1d2	(1 HP)	14	Bite +4 (1d3-4)
Rat, Texas	1d8	(3 HP)	13	Bite +3 (1d4)
Rattlesnake	1d8	(4 HP)	17	Bite +4 (1d2-2) + Poison (3d6 damage, DC 15 for half)
Wolf	2d8+4	(13 HP)	14	Bite +3 (1d6+1)

All creatures have a bonus to all skills equal to their number of Hit Dice, if appropriate. For skill areas a creature is well-known for being good at, give them +3 skill ranks for that task. Examples would be wolves tracking, horses jumping obstacles, etc..

FOES

Whenever you need NPC's, simply choose their profession—that's their class. Either **choose** their level, if it's important, or roll 1d4. If the roll comes up 4, roll d8. If that roll comes up 8, then roll d20 for level.*

* Also known as the "Red" Gurdy Pickens Rule.

If you don't have a preference for statistics, give them a 14 in whatever stat they're good at (if any) and 10 in any other stats. Give them 4 hp (+ STR bonus) per level and favored skill in whatever skills they need to do what they do.

Minor NPC's don't typically get special abilities or Second Winds, which is why it doesn't really matter what you call their profession.

More important NPC's can be created using one of the classes given earlier in this document. These NPC's usually get class abilities and the ability to use Second Wind.

Example: The players run across a band of miners in the wilderness. The miners have a few guards with them and they're being led by "Smiling" Sam Whitmore, the lyingest conman west of the

Mississippi.

The GM decides to roll 3d6 for the number of miners—there's 12 miners in total. Rolling a d4 for the average level of miners, he comes up 1. A typical miner will be Str 14, Dex 10, Mind 10, have 6 hp and +4 in Physical (level +3). All other skills will be at +1.

*The guards, he decides, will be Desperadoes. The d4 comes up 4. He does **not** roll again since that's already plenty tough—the Desperadoes are now all 4th level. He creates them the same way normal player characters would be, assigning them separate nationalities and everything, since they're supposed to be a challenge. There will be exactly as many guards present as needed to make the encounter challenging.*

Smiling Sam himself will be a higher level character, Grifter class, probably a level or two greater than the player characters. He'll have a nationality, the ability to use Second Wind and will probably sneak off before the players can capture him, if they're not careful.

GUNSMOKE & GOBLINS®

A
MICROLITE20
GAME

Well looky here! We got ourselves another rattler brain come out West way aiming fer treasure n' spooking up trouble. Likely you'll git plenty o the latter and scarce the former.

I reckon there ain't no use trying to set you straight, so listen close to what Ah'm telling or you won't live long enough to regret yer daftness.

☆ LINEAMENTS ☆

There are three telltale qualities that measure the calibre of a person in these parts. Best hope you measure up or else you may be leaving with yer boots higher than yer hat.

- **Grit:** You gotta be strong and steady.
- **Tact:** You need to be quick and nimble.
- **Wits:** You gotta be level headed and resolute.

☆ EXPERTISE ☆

Here are the skills that'll keep you alive. If they ain't in yer repertoire, go back wherein ya came from.

Amity: Folks don't much care for grim looks n' fighting words. A bit of neighborliness and a tip o the hat goes a long way to keeping tempers even and information flowing.

Athleticism: Can't much make anything useful of you if you can't roll up yer sleeves and git to work, or ifin ya can't git out of yer own way fer that matter. The borderlands ain't no place fer a dandy.

Learning: Now academicians aren't all too common to the Frontier. That's probably cause the smart ones don't come out here. I reckon though educated folk will find getting along a smidgen easier.

Wile: Sometimes you'll find it prudent to keep yer whereabouts and yer business to yerself, specially when yer getting into other folk's business.

Wilderness: If there's one thing everybody got to be able to do, its stay alive in the wilds. The borderlands an unforgiving place, best stay on its good side.

Fer example, Climbing would use Athleticism + GRIT bonus. Dodging a falling rock is Athleticism + TACT bonus. Finding a trap is Wile + WITS bonus. Disabling a trap is Wile + TACT bonus.

☆ VOCATIONS ☆

Though getting by may be tough out West here, employment comes easy to folks of the following persuasions:

Frontiersman make their homestead wherever they may roam. They gain +3 bonus to Wilderness and a +1 bonus to hit with Far range firearms. At fourth level a frontiersman may find himself a wild animal to tame and be a loyal companion provided he is rough enough to tame it. Frontiersmen use Light and Medium melee weapons, bows and crossbows. They can use all firearms. You've got to have a 12 in GRIT to be a Frontiersman

Gadeteers actually believe their wacky contraptions will tame the West. They gain +3 bonus to Learning. Gadgetry produces effects like those found in a wizard's spellbook, but just can't seem to do all the same things a Prestidigitator can. Gadeteers use Light melee weapons, Crossbows and Whips. They can use one firearm of their liking. You've got to have a 12 in WITS and 10 in TACT to be a Gadeteer.

Gunslingers solve most disputes with bullets. They gain +3 bonus to Athleticism and a +1 bonus to all damage rolls with guns. Damage bonus increases by +1 at 5th level and every five levels. Gunslingers are able to tote a gun in each hand without any hindrance. Gunslingers use Light and Medium melee weapons and any gun that still got a bullet left. You've got to have a 12 in TACT to be a Gunslinger.

Preachers tote the word of the all-mighty the way others tote their shooters. They gain +3 bonus to Amity. Their prayers have a miraculous and clerical effect. Preachers use Light melee weapons and whips. They can use Pistols. You've got to have a 12 in WITS to be a Preacher.

Prestidigitators employ magics of a bewildering nature. They gain +3 bonus to Wile. A Prestidigitator's magic is of the enchanting, illusionary, and mind affecting type. They use Light and Medium melee and can use Short range pistols. You've got to have a 12 in WITS to be a Prestidigitator.

Ruffians can fight with pretty much anything they

GUNSMOKE & GOBLINS®

A
MICROLITE20
GAME

can git their hands on. They gain +3 bonus to Athleticism. A Ruffian's Dirty Fighting does 1d6+GRIT damage, increasing by one die type at 5th level and every five levels. They can fight with anything (kicks, punches, chairs, etc). A Ruffian can be enraged once per day which doubles GRIT but halves WITS, lasting 1 round/level. Ruffians use all melee weapons and can use revolvers. You've got to have a 12 in GRIT to be a Ruffian.

Shaman use their mystics to protect the frontier. They gain +3 bonus to Wilderness. Shamans have some powerful Medicine Magics you may call nature spells. They use Light and Medium melee weapons. They also use Bows and Crossbows and one firearm of choice. You've got to have a 12 in WITS and a 10 in GRIT to be a Shaman.

Wearing Two Hats

Some adventures may see fit wear more than one hat. Ifin you live long enough to be of fourth level you may find yer head big enough to wear a second hat.

☆ KIN-FOLK ☆

Living on the borderland is a dangerous thing and there ain't many folk daft enough to give it a go, so it takes people of all creeds working together to git it done.

Humans were among the first to venture out beyond the safe havens of the East. It's that pioneer-

ing spirit that drives them on. Humans gain +1 to all skill rolls.

Gnomes follow their curiosity wherever it may lead. The borderland's about as curious a place as can be found in the world. Gnomes gain + 1 to TACT and +1 to WITS.

Half-elves have an unquenchable yearning to run free in the wilds. Wide open reaches of the West give them all the room they need. Half-elves gain +1 to TACT and +1 to two skills of their choice.

Half-orcs are no stranger to hardships, in fact I reckon they thrive on it. I'd hate to think of the condition of things without them. Half orcs gain +2 to GRIT.

☆ DISPOSITION ☆

Law-abiding: Most folk understand survival on the borderlands depends on community. So long kindness and decency are the Law o the West, we all have a fighting chance.

Renegade: Some out there ain't too keen on being told how to make their way in the frontier. Now don't git me wrong, most of em are right friendly. Just don't go treading on their claim forcing civil obedience. That's when they ain't so civil.

Dag Nasty: Sometimes, when you roam too long in the borderlands, the borderlands git inside you, twist yer mind till it ain't yer own anymore. You become one of the wicked, wandering the West spreading yer chaos til you're six feet under.

☆ WEAPONS & ARMOR ☆

Used mainly by the military for a time, swords have made a bit of a comeback these days along with axes, long knives, bows, crossbows and some spears. What with all the close up fighting, the more distance you can keep between yerself and a nasty the better. Bullets don't last forever you know.

Melee Weapons

- *Light Weapons:* Damage 1d6
- *Medium Weapons:* Damage 1d8
- *Heavy Weapons:* Damage 1d10

Ranged Weapons

- *Bows:* Medium and Long range, Damage 1d6.
- *Crossbows:* Short and Medium range, Damage 1d10.
- *Whips:* Short range, Damage 1d6.

Armor

Borderlands are so dangerous, folk been acting like knights of old. Adventurers have taken to wearing protective leathers and hides. Helps the claws and bites hurt less.

Armor has an Armor Value (AV). It increases AC by its value and reduces damage by the same number.

- *Padded Hide:* AV-1
- *Padded Leather:* AV-2

GUNSMOKE & GOBLINS®

A
MICROLITE20
GAME

- *Leather Plate: AV-3*

☆ FIREARMS ☆

Everybody, and I mean *EVERYBODY* gets to have a gun. Because if you don't got one, that's why you need one.

- *Pistol*: Short range, Single shot, Holds 2, Damage 1d8.
- *Revolver*: Medium range, Single shot, Holds 6 or 8, Damage 2d6.
- *Lever-action rifle*: Long range, Single shot, Holds 15, Damage 2d8.
- *Sharpshooter rifle*: Far range, Single shot, Holds 1, Damage 2d10.
- *Shotgun*: Long range, Single shot, Holds 1 or 2, Damage 2d12.
- *Drake Tamer*: Long range, Single shot, Holds 1, Damage 2d20.

☆ TRUSTED STEED ☆

Only one thing rates as important as yer gun, and that's yer horse. You ain't got a thing if you ain't got a horse. Sometimes you can find a good steed fer sale, or you can acquire a mount who's rider is...um...no longer needing its services, but most often you need to wrangle one yourself.

Wrangling and breaking a wild stallion is a difficult thing. In fact, all horses have a DC to break. You can use whatever skills you think you got to break the horse, the DC is always the same. When you break them, the DC becomes a special linea-

ment for horses called SPIRIT. This is treated just like yer own GRIT, TACT and WITS. You apply the horse's SPIRIT bonus to all skill checks for riding. Fer example, a horse with a 15 SPIRIT gives its rider a +2 bonus to ride checks.

If you can bond with a horse it'll treat you real good. To do this, you must check yer Amity vs the horse's DC. Try once a week. After four successes, you alone gain an additional +1 bonus to riding yer horse and you add yer Amity to the DC for anybody else to ride it.

☆ THE JUDGE ☆

The Judge is the person to tell you what's what and who's who and how yer gonna die. You might just say the Judge's word is the *Laaaaaaaaw of the Game*.

☆ GADGETRY ☆

Them thar Gadgeteers are always inventing some crazy new gizmo supposed to make life easier fer all us. But between you and me, I wouldn't bet the ranch on it.

Gadgeteers know how to build a number of gadgets equal to their learning score. Each gadget weighs 11b per level. Gadgets run on batteries and drain one battery point per level of gadget for each use. When a battery is out of points a new one must be made. New batteries cost \$10 per point to make, and more to purchase.

☆ BULLSEYE ☆

Remarkable fighting gets remarkable results. On a natural to hit roll of 20, damage dealt is automatically maximum weapon damage plus ability modifier plus a bonus weapon damage roll.

☆ WILD CARD ☆

When the deck seems to be stacked against you or you just can't bare to fail, consider playing a Wild Card. Everybody has 4 Wild Cards to start with and Judges may award further Wild Cards for outstanding play. Play a Wild Card to gain special treatment from the Judge. Examples:

- *Shoot through wall*: Ignore cover when shooting at target.
- *Shot in the belt buckle*: Turn a gunshot wound into a miraculous miss.
- *I ain't dead yet!*: Don't die when you die (recommend once per character).

You can pretty much try any stunt you think of. Judges may require spending more than one Wild Card if the use warrants.

☆ ACES & EIGHTS ☆

Beware the *Dead Man's Hand*. Whenever you roll a 1 or an 8 on a d20, roll again. If a 1 is followed by an 8 or an 8 followed by a 1, something of woeful consequence about to happen to ya. The Judge will inform you of yer sentence. Examples:

- Trip and fall

GUNSMOKE & GOBLINS®

- Drop weapon
- Gun jams
- Shoot yourself in the foot
- Ambushed by goblins
- Eaten by a drake

☆ DAG NASTIES ☆

It seems that there just ain't no end to the kinds of twistedest, creepingest, gnarliest, dag nastiest critters to come crawling form beyond the shimmering dark. Buggers like the tumble weird, cactus tapus, owlbull, prairie worgs. Makes me quiver in my boots, an I ain't afraid of *nuthin*!

There are two particular varmints that have been terrorizing the frontier like all the fires of Blazes; drakes and goblins.

Drakes are them giant reptiles of all shapes and colors, most biting or spitting poison, some acid, lurking in caves, slithering under the sands. Many a rancher has lost their livelihood, not to mention their lives to them critters.

And the goblins, oh the goblins! Swarms of them, like locusts! Gnawing and clawing and eating anything they can sink their teeth into. Almost more goblins than there are bullets.

What kind of nasties gonna make a meal outa you? Only the Judge can tell you that!

☆☆☆☆☆

So what do you say? You think yer the roughest, toughest, meanest gun toting whipper snapper to come yonder yet? 'Heh-he' Well you better hope so, cause its a loooooong way home!

'HAAAAAA-HAH-HAH-HAH- heh-hulf-killlllll...'

a-HEM

HOW TO PLAY

Owl Hoot Trail is a roleplaying game set in a fantasy version of the American Wild West. If you have played *Dungeons & Dragons*, many things about this game will seem familiar.

In this game, the players act out the roles of interesting people in the game world. You might play a rough-ridin' cowboy, a fancy man or lady, a no-good horse thief, a steely-eyed lawman, a mysterious mentalist, or something else.

One person playing this game must be the *Game Master (GM)*. Everyone else is a player who controls one *player character (PC)* in the game. The GM controls all other characters and the environment.

The GM's Job

The GM's job is to prepare and run adventures. You are going to be in charge of everything that goes on in the game world. That doesn't mean that you have to plan out everything happening before you can play. It does mean that you have to have an idea about what the game world is like, some specific places and people within it, and how they will react to the PCs. There's many ways to prepare an adventure and many resources on the Internet to help you. Here it is in a nutshell.

Make up situations. Think up some situations where two people or groups of people want something at odds with each other. Here's some examples.

- ★ Some greedy gold miners want to run off a feral tribe.
- ★ A vampire lord is wanted by the law ... dead or alive!
- ★ An iron dragon lives at the top of a mountain pass and eats anyone who tries to cross.

See the *Running the Game* section for more ideas and help creating situations.

Set up the adventure. Given a situation you've thought up, come up with the creatures and people involved. Write out game statistics for them and think about how they talk and act and react. Imagine the areas involved and sketch out some maps. Then, when the game starts, describe this to the players. You should decide where the PCs are at the beginning of the adventure.

Give the players hell. You will act out everybody and everything the PCs meet. Some will be friendly and that is part of the fun of the game. Some will not be friendly and that is also part of the fun. For a lot of people, that's the most fun. Don't pull punches. Have sneaky monsters who plan as well as the PCs do. Have dangerous environments full of pitfalls. Put the PCs in danger.

Reward the players. The players should be rewarding for thinking up clever solutions. You may well give them a situation they can't just shoot their way out of, and they should be rewarded in the game by thinking up a smart way out of it. You will also distribute *experience points (XP)* and treasure.

The Players' Job

As a player, you will have one character you control. Your job is to create that character at the beginning of the game and then decide what they do in the game. Your job is more self-explanatory than the GMs, but here are some things you should do.

Slay monsters and save the helpless. Your character isn't required to be a good person or a hero. With that said, it's assumed that when the chips are down, you will fight on the side of good for whatever reason you may have.

Work together. Your character might be a cold son-of-a-bitch, but remember that they are a character in a rough world and you are playing a game with friends. In the game world, the PCs might have arguments, but in the end they are a band of travelers with common goals.

Help the GM. The GM is in charge of the world, but you can help them out. First, play in their adventure. Don't go charging off into the brush when it's obvious they've made an adventure that goes into a mine. Second, let them know the kind of stuff you want to see in the game.

Be excited. You shouldn't hog the spotlight, but when it's time for your character to do something, do something cool. Be smart and keep your character from buying the farm, but don't cringe away from all danger. Describe what your character is doing with some detail. "I draw my Winston .45 and shoot the goblin in the shoulder" is more interesting than "I shoot him."

CHARACTER CREATION

Level

Write down 1 for your character's level and 0 for their experience points.

Ability Scores

Your character has 3 *ability scores*.

- ★ **GRIT:** You got to be rough and tough.
- ★ **SNAP:** You got to be quick and steady.
- ★ **WITS:** You got to be awake and sharp.

All these abilities start at 0. You have 3 points to split between these abilities, with a maximum of 3 in any one. You may subtract 1 point from one or two abilities in order to gain points to add somewhere else.

Races

Read the *Character Races* section and then choose a *race* for your character. Record the race and any special racial abilities your character has.

Classes

Read the *Character Classes* section and then choose a *class* from your character. If you choose a Gadgeteer, Mentalist, Preacher, or Shaman, read the *Powers* section and section for your class's powers.

Skills

There are 5 skills: *Amity*, *Toughness*, *Learning*, *Wile*, and *Wilderness*. Your character's skill bonus in each of them is equal to their level plus any bonus due to their class or race. Record this and read the *Skills* section to learn more about how to use them.

Hit Points

Your character starts with $10 +$ their **GRIT** score in *hit points (HP)*.

Attack Bonuses

Your character has an attack bonus for each type of attack. Write down their totals.

- ★ *Melee attack bonus* = **GRIT** + level
- ★ *Missile attack bonus* = **SNAP** + level
- ★ *Power attack bonus* = **WITS** + level

Defenses

Your character has a *Defense score*, which indicates how hard they are to hit and a *Mental Defense score*, which indicates how hard it is for the supernatural to influence their mind.

- ★ *Defense score* = $10 +$ **SNAP** + level
- ★ *Mental Defense score* = $10 +$ **WITS** + level

Equipment

Your character starts with \$100 to spend on equipment. See the *Equipment* section to choose what your character will start with.

Weapons

Record the weapons you chose for your character, and other weapons they are likely to use, such as an improvised weapon or fists. Beside each of these, write down their combat information, including your character's attack bonus with them and their damage bonus. Note that you should add your character's **GRIT** to their melee weapon damage.

Finishing

If you haven't yet done so, name your character. Write down their characteristics, such as their age, hair and eye color, or anything else you like. Your character is complete.

CHARACTER RACES

Humans

Most folks are *humans*. Humans come in all shapes and sizes and can do what they want in life.

Humans get +1 to all skills. They start with an extra \$50, and can be any class they want.

Half'ins

There's a whole passel of *Half'ins* out on the frontier. Half'ins are short, about 3 and a half feet on average and tend to be a little tubby. They like a good meal and a cold beer.

Half'ins can be Scouts, Ruffians, Scoundrels, Mentalists, Preachers, or Shamans.

They get +1 to **SNAP** and a +1 to Amity. They also get a +1 to their Defense score for being so small.

Ferals

Before humans came out West, *ferals* had been living here a long time. There's all types of ferals, and some get by with humans alright and some don't. It's not easy to tell which tribes are which.

Most ferals live in the the wild, but they trade in town. A few end up living in town and taking up human ways. They can make a baby with humans, but it ends up just being a real good-looking human.

Ferals look like lean, rawboned humans with sunken cheeks and pointed ears.

They can be Scouts, Gunslingers, Ruffians, Scoundrels, Mentalists, or Shamans.

They get +1 to **WITS** and a +1 to Wilderness. Ferals also get a +1 to shoot any bow.

Hill Folk

Hill folk, or dwarves, are damn good miners and even better brewers. They're about 4 feet tall and almost always have large beards. Their women-folk don't come down from the hills and their forts are built to be real defensible.

Hill folk get along with humans alright, though. They do a lot of trading and enjoy a lot of the same things humans do. They are very literal-minded, but enjoy a straight-forward joke.

Hill folk can be Lawmen (legally, they're lawmen in their own settlements, not in human settlements), Scouts, Gunslingers, Ruffians, Gadgeteers, or Preachers.

They get +1 to **GRIT** and a +1 to Toughness. Hill folk are also better at spotting underground traps and dangers. They can find these with a result of 4 through 6 on a roll of 1d6.

CHARACTER CLASSES

Lawman

Lawmen get a tin star and a license to keep order. They have a +1 bonus to Toughness and +2 to Amity. They don't get sick and get a +1 bonus to all defenses. This increases by +1 at 3rd level and every 3 levels on. Lawmen can detect if a soul's up to no good within 60' at will and can heal a body up to 2 hit points per level per day by sharing a drink. A Lawman can use any weapon. A character must be law-abiding to be a Lawman, and have at least a 1 in **GRIT** and in **WITS** besides.

Scout

Scouts make their home wherever they may roam. They gain a +3 bonus to Wilderness and a +1 bonus to hit at range 3 and above. At fourth level a Scout may find himself a wild animal to tame and be a loyal companion provided he is rough enough to tame it. Scouts use 1-handed melee weapons, bows and crossbows. They can use all firearms. A scout can use two 1-handed melee weapons at the same time, making an attack with each if they take a -2 on each attack roll. A character's got to have a 1 or better in **GRIT** to be a Scout.

Gunslinger

Gunslingers solve most disputes with bullets. They gain a +2 bonus to Toughness and a +1 to Wile. They get a +1 bonus to all damage rolls with guns. Damage bonus increases by +1 at 3rd level and every 3 levels on. A gunslinger can hold a pistol in each hand and attack with both in the same combat round if they take a -2 on each attack roll. Gunslingers use 1-handed melee weapons and any gun that's still got a bullet left. A character's got to have at least a 1 in **SNAP** to be a Gunslinger.

Ruffian

Ruffians can fight with just about anything they can get their hands on. They gain a +3 bonus to Toughness. Ruffians have a special Dirty Fighting attack. It does 1d6 + **GRIT** damage, increasing by one die type at 3rd level and every 3 levels on. They can fight with anything (kicks, punches, chairs, etc.) A Ruffian can be enraged once per day which adds 3 to **GRIT** but subtracts 3 from **WITS**, lasting 1 round/level. Ruffians use all melee weapons and can use pistols. A character's got to have a 1 or more in **GRIT** to be a Ruffian.

Scoundrel

Scoundrels are no-good cheats and backstabbers. They have a +3 bonus to Wile. If they successfully sneak up on a foe (usually Wile + **SNAP**, but depends on situation) they can add their Wile skill rank to the damage of their first attack. Scoundrels can use their **SNAP** + level as their melee attack bonus instead of **GRIT** + level if they are using a 1-handed weapon. A scoundrel can use any melee weapon except a sword, as that's a gentleman's weapon. They can use pistols and shotguns. A character's got to have a minimum of 1 in **SNAP** to be a Scoundrel.

Gadgeteer

Gadgeteers can make outlandish contraptions that can produce effects one might call magical. They get a +3 bonus to Learning. Gadgeteers use 1-handed melee weapons and crossbows. They can use one firearm of their liking. A character's got to have at least a 1 in **WITS** and in **SNAP** to be a Gadgeteer.

Mentalist

Mentalists employ magics of a bewildering nature. They gain +3 bonus to Wile. A Mentalist's tricks are of the enchanting, illusionary, and mind-affecting type. They can use 1-handed weapons and pistols. A character's got to have a 1 or better in **WITS** to be a Mentalist.

Preacher

Preachers tote the word of the All-Mighty the way others tote their shooters. They gain a +3 bonus to Amity. Their prayers have a miraculous effect. Preachers aren't the murdering type, so they don't carry pistols. They can defend themselves with anything that doesn't draw blood: whips, staves, clubs, and hammers. A Preacher can use a bow or a rifle for hunting and self-defense. A character's got to have a minimum of 1 in **WITS** to be a Preacher.

Shaman

Shamans talk to otherworldly spirits to protect the frontier. They gain a +3 bonus to Wilderness. Shamans can call on their spirits to perform mystic acts. They use 1-handed melee weapons. They also use bows and crossbows and one firearm of choice. A character's got to have at least a 1 in **WITS** and in **GRIT** to be a Shaman.

SKILLS

Skill Ranks and Tests

There are just 5 skills: Amity, Learning, Toughness, Wile, and Wilderness. Each of them has a *skill rank*.

★ *Skill rank* = level + race bonus + class bonus

To test a skill, you must make a skill roll to beat a Difficulty Class (DC) determined by the GM.

★ *Skill roll* = d20 + skill rank + whatever ability bonus is most applicable + situation modifiers

Determining Difficulty Class

The Difficulty Class of a skill test can be determined from these rough guidelines.

- ★ *Easy*: DC 10 (or no test at all most of the time)
- ★ *Normal*: DC 15
- ★ *Hard*: DC 20
- ★ *Very Hard*: DC 25
- ★ Add +5 for anything above that.

These are subjective. You can increase or decrease them in increments less than 5 if you like.

If two characters are competing, both players roll and then compare their totals to determine the winner.

Amity

Hard looks and few words don't always work. Sometimes, you need to make friends. A smile and good cheer can help you get a good deal on that shotgun, get someone to spill the beans, or calm down a rough situation.

For example, talking a soul into giving you the location of their employer who you plan to gun down would be Amity + **WITS**. Recovering from a faux pas in front of a fancy lady from Back East would be Amity + **SNAP**. Gathering up a band of loyal gunmen to back you up would be Amity + **GRIT**.

Learning

An education can serve you well on the frontier. Someone's got to know the law, practice medicine, speak foreign languages, and the like.

For example, keeping your friend off the gallows by citing a technicality or a flaw in the charges no one else saw would use Learning + **SNAP**. Translating High Elf scratchings on an old cave wall would be Learning + **WITS**. Pulling a bullet out of a man's gut so he doesn't die would be Learning + **GRIT**.

Toughness

All sorts of things can test a body out on the frontier. There's cliffs to climb, deserts to cross, mind tricks to resist, and steers to wrestle.

For example, climbing would use Toughness + **GRIT**. Dodging a falling rock is Toughness + **SNAP**. Disbelieving a mirage in the hot desert would be Toughness + **WITS**.

Wile

A poker face can win you a lot more than the pot when you know how to use it. It can keep you out of the jailhouse or in someone's bed. Being a wily son-of-a-gun is a good way to sneak out the back of a saloon or behind a gunman.

For example, bluffing your way into winning a poker hand when all you've got is a pair of fives is Wile + **WITS**. Staring down an armed gunman and convincing them they don't want to open your box of trouble is Wile + **GRIT**. Sneaking up on a fellow would be Wile + **SNAP**.

Wilderness

Learning will get you so far, but it doesn't prepare you for staying alive in the wilds. You need to know how to hunt a critter, what plants to eat, and how to get clean water.

For example, hunting down a wild boar would use Wilderness + **SNAP**. Knowing how to treat a snakebite could use Wilderness + **WITS**. Crossing the plains half-dead on top of a horse with the blazing sun at your back would use Wilderness + **GRIT**.

Other

For unclear situations, roll high on a d6, or roll a d20 + ability bonus + level versus a DC.

POWERS

Gadgeteers, Mentalists, Preachers, and Shamans all have lists of powers they can use. They learn a new power every level, and they start with a number equal to their **WITS**. They can learn and use any power on their list with a rank equal or below 1/2 their level rounded up.

During Character Creation

Choose a set of 1st rank powers for your character's class equal to their **WITS**. Choose one of those powers as a *signature power* for your character.

Mentalists and Preachers

For Mentalists and Preachers, using powers costs Hit Points. The cost is 1 + double the rank of the power being used. They can choose one signature power out of each rank that they prefer to use. These powers cost 1 less HP to use. They cannot use a power if they do not have the HP to do so. If a character goes to 0 HP by using a power, they immediately pass out for 2d6 rounds.

Gadgeteers and Shamans

Gadgeteers and Shamans have to appease the whims of science and the spirit world. When they use a power, they have to make a *burnout roll*. They roll d20 + their level + their **WITS**. If they roll 15 + double the power rank or more, the power goes off immediately and they can use the power again later. If they roll less than 15 + double the power level, the power works but doesn't go off until next round, and they temporarily lose that power. A roll of 1 on the d20 is always a failure.

Gadgeteers and Shamans can *push* their signature power, trading the use of the power for greater effect.

They can gain +5 on the power attack roll, or act as if they are one higher level when calculating the power's effect. For example, a 1st level Gadgeteer with the signature power of Force Field can have their force field work for 2 hours instead of 1 hour. They must decide to push their power before making the burnout roll, although they can choose to push after the attack or effect rolls. The power burns out, although it goes off immediately.

In order to get their powers back, a Gadgeteer has got to recharge their batteries and a Shaman has got to have a ritual to call their spirits. This recharging or ritual costs \$10 times the level of power they are trying to recharge because of the metals or incense or whatever that they've got to get together. It takes a good 4 waking hours to deal with all this.

Attacking With Powers

Any power that would affect another character requires a power attack roll. If it is a physical attack, like a flaming sphere or shaft of searing light, roll against the target's Defense score. If it is some other sort of attack, like putting someone to sleep or causing them to flee in fear, roll versus their Mental Defense score.

You do not have to roll if the effect is beneficial to the target. The target's player is the judge of this.

Default Assumptions About Powers

The power descriptions are very short, so you may have to make some assumptions in order to use them. Unless otherwise stated, the target of a power must be within 1 zone of your character. The target of a power is usually 1 person, either your character or another character.

GADGETEER POWERS

Gadgets are usually given colorful names by the gadgeteer. The names used here are simple ways to reference the gadget's effect in the game.

1st Rank Gadgets

Energy Blast: Range 0-1. 1d4+1 damage; +1 blast per two levels above 1st (max 5). Automatically hits; no attack roll.

Light: Object shines like a lantern for 1 turn per level.

Floating Disk: Creates 3-ft.-diameter horizontal disk that holds 100 lb. per level. Lasts for 1 hour per level and follows the gadgeteer.

Force Field: Gives subject +4 Defense bonus for 1 hour/level.

Shocking Grasp: Touch delivers 1d6 per level electric shock damage (max 5d6).

Slow Fall: Objects or creatures fall slowly for 1 round per level or until landing.

2nd Rank Gadgets

Acid Arrow: Range 0-2. 2d4 damage for 1 round + 1 round per three levels.

Flaming Sphere: Creates rolling ball of fire, 2d6 damage, lasts 1 round per level. Gadgeteer can attack with ball each round.

Invisibility: Subject is invisible for 1 minute per level or until it attacks.

Levitate: Subject moves up and down 10 feet per round at gadgeteer's command for 1 minute/level. 100 ft max.

Spider Climb: Grants ability to walk on walls and ceilings for 10 minutes per level.

Unlock: Opens locked door, even if locked by a power.

3rd Rank Gadgets

Fireball: Range 1-3. 1d6 damage per level, 20 foot radius. Must roll power attack versus each creature in area.

Fly: Subject flies at running speed for 1 minute per level.

Freeze Ray: Range 0-3. Humanoid is frozen in place and cannot even speak for 1 turn per level.

Lightning Bolt: Range 0-3. Electricity deals 1d6 per level damage.

Night Sight: Subject can see in the dark for 1 hour/level.

Vampire Device: Touch deals 1d6 per two levels damage; caster gains damage as temporary HP which last for 1 hour.

4th Rank Gadgets

Dimension Door: Teleports you short distance.

Ghost Eye: Invisible floating eye moves 30 ft./round for 1 minute per level.

Hailstorm: Giant hail falls down over 2 zones for 1 round per level. 3d6 damage per round.

Horrific Tentacles: Tentacles grapple all within 20 ft. spread for 1 round per level.

Polymorph: Gives one willing subject a new form for 1 minute per level.

Stoneskin: Ignore 10 points of damage per attack. Lasts for 1 turn/level or until 100 points of damage absorbed.

5th Rank Gadgets

Artificial Mind: Lets you ask one question and get cryptic but truthful answer.

Cloudkill: Poison cloud kills creatures of level 3 or less; injures others. Lasts for 1 minute per level.

Devolution: Subject's **WITS** score drops to -3 for 1 turn per level.

Passwall: Creates passage through wood or stone wall for 1 hour per level.

Teleport: Sends willing target up to 100 miles per level.

MENTALIST POWERS

Common Mentalist Tricks

All mentalists can perform these at will for 1 HP.

Dancing Lights: Creates lights for 1 minute.

Ghost Sound: Figment sounds for 1 round per level.

Prestidigitation: Perform minor tricks.

1st Rank Tricks

Charm Person: Makes one person a friend for 1 hour per level.

Disguise Self: Appearance changes for 10 minutes/level.

Hypnotism: Fascinates 2d4 total levels of creatures for 2d4 rounds.

Silent Illusion: Creates minor illusion of your design while you concentrate.

Sleep: Puts 4 total levels of people or creatures into deep slumber for 1 minute per level.

Ventriloquism: Throws voice for 1 minute per level.

2nd Rank Tricks

ESP: Detect surface thoughts of anyone you can see and concentrate on for 1 turn per level. Can change target.

Hideous Laughter: Subject loses actions for 1 round per level.

Hypnotic Pattern: Fascinates 2d4+level total levels of creatures for concentration plus 2 rounds.

Minor Illusion: As Silent Image plus some sound.

Mirror Image: Creates 1d4+1 ghostly decoys of you for 1 minute per level.

Sixth Sense: Automatically sense danger and others' ill will toward you for 1 turn per level. Only surprised on a 1.

3rd Rank Tricks

Clairvoyance: See through the eyes of another living creature for 1 turn per level.

Deep Slumber: Puts 10 total levels of creatures to sleep for 1 minute per level.

Halt: Person is frozen in place and cannot even speak without your permission for 1 turn per level.

Major Illusion: As minor image, plus sound, smell, and thermal effects.

Suggestion: Compels subject to follow stated course of action for 1 hour per level or until completed.

4th Rank Tricks

Confusion: Subjects behave oddly for 1 round/level.

Great Charm: Make one person or creature believe it is your ally for 1 day/level.

Invisible Killer: Dread spirit does 4d6 damage to subject.

Mind Travel: See and hear another area up to 1 mile away per level for 1 turn per level.

Rainbow Pattern: Lights fascinate all who see them for concentration plus 1 round per level.

5th Rank Tricks

Dominate Person: Controls subject telepathically for 1 day per level.

Persistent Illusion: As major illusion, but no concentration required; 1 minute/level.

Seeming: Changes appearance of 1 person per 2 levels for 12 hours.

Sending: Delivers short message anywhere, instantly.

Weaken Mind: Subject's **WITS** score drops to -4 for 1 day per level. At -4, humanoids cannot form sentences and talk with single-syllable words.

PREACHER POWERS

1st Rank Prayers

Arise: One knocked out ally is immediately awakened.

Armor of God: Aura grants preacher +2 Defense bonus for 1 minute per level.

Bless: Allies gain +1 on attack rolls and skill checks for 1 min./level.

Blessed Lead: Three bullets gain +1 on attack and damage. Lasts for 30 minutes or until discharged.

Divine Favor: The preacher gains +1 per three levels on attack and damage rolls for 1 minute.

Inspire: Gives 1d6+level temporary HP (max +5) to ally.

Light: Object shines like a lantern for 1 turn/level.

Purify Food and Drink: Purifies enough food and water for 2 people/level.

Rebuke Undead: One group of undead fears the preacher, staying in the shadows and refusing to attack.

2nd Rank Prayers

Aid: Ally gains +1 on attack rolls, Defense, and skill checks, 1d8+level temporary HP (max +10).

Delay Poison: Stops poison in system from harming subject for 1 hour/level.

Gentle Repose: Preserves one corpse from decay for 1 day/level.

Remove Paralysis: Frees one or more creatures from paralysis or slow effect.

Restoration, Lesser: Dispels magical ability penalty or repairs 1d4 ability damage.

3rd Rank Prayers

Create Food and Water: Feeds three humans (or one horse) per level.

Prayer: Allies get a +1 bonus on most rolls, enemies take a -1 penalty for 1 round/level.

Remove Disease: Cures all diseases affecting subject.

Searing Light: Ray deals 1d8/2 levels damage, or 1d8/level against undead.

Speak with Dead: One corpse answers one question per 2 levels.

Stop Bleeding: Halt the flow of blood from all of one body's wounds by touching them.

Tongues: Speak any language for 1 turn per level.

4th Rank Prayers

Discern Lies: Reveals deliberate falsehoods for 1 round/level or until concentration ends.

Freedom of Movement: Subject moves normally despite impediments for 1 turn per level.

Heal: Heal one major injury by touch.

Neutralize Poison: Immunizes subject against poison for 1 turn per level, detoxifies venom in or on subject.

Restoration: Restores level and ability score drains.

5th Rank Prayers

Atonement: Removes burden of misdeeds from subject.

Commune: Deity answers one yes-or-no question per 2 levels.

Flame Strike: Smite foes with divine fire. 1d6 per level damage to a group of foes.

Raise Dead: Restores life to subject who died no more than one day/level ago. Gentle Repose can double this.

True Seeing: Lets you see all things as they really are for 1 min./level.

Wrath of God: Cause an injury in one target.

SHAMAN POWERS

1st Rank Spirits

Animal Spirit: You can communicate with animals for 1 minute per level.

Flame Spirit: 1d6 damage +1 per level, touch or thrown. Range 0-1.

Mending Spirit: Make repairs on an object.

Mist Spirit: Fog surrounds you, provides concealment for 1 minute per level.

Plant Spirit: Plants entangle everyone in 40' radius for 1 minute per level.

Smelling Spirit: Detect poison in one creature or object.

2nd Rank Spirits

Calm Animal Spirit: Make one normal animal your friend for 1 hour per level.

Metal Spirit: Makes metal so hot it damages those who touch it. 1 round / level, gains 1d6 damage per round, max 4d6.

Swarm Spirit: Summons swarm of bats, rats, or spiders for concentration plus 2 rounds.

Tree Spirit: You look exactly like a tree for 1 hour per level.

Warp Spirit: Bends wood within 20' radius.

Zephyr Spirit: Blows away or knocks down smaller creatures.

3rd Rank Spirits

Dead Spirit: Communicate with the dead. DC 10 + 1 per year dead. Dead may be hostile.

Greater Plant Spirit: For 1 hour per level, creatures in zone take 1d6+3 damage to move, may be slowed.

Stone Spirit: Sculpts stone into any shape.

Storm Spirit: Calls down 3d6 damage lightning bolts from the sky once per round for 1 minute per level.

Water Spirit: Subjects can breath under water for 2 hours per level divided by number of subjects.

Weapon Spirit: Cause a weapon to do an extra 1d6 damage for 1 round per level.

4th Rank Spirits

Air Spirit: Subject treads on air for 1 turn per level.

Greater Dead Spirits: Creates level x 2 total levels of undead skeletons or zombies from corpses. Undead obey simple commands.

Ice Spirit: Hail does 5d6 damage to everything in 2 areas.

Reincarnate: Brings dead subject back in random body.

Stone Spirit: Stone spikes cause all creatures in zone to take 1d8 damage and they are slowed.

5th Rank Spirits

Awaken Spirit: Animal or tree gains human intellect.

Ancient Spirit: You may ask ancient spirit 1 yes-or-no question per level. Spirit may not know all answers. Spirit may be cryptic. Takes 1 turn to use this power.

Greater Storm Spirit: As Storm Spirit, but does 5d6 per bolt.

Greater Flame Spirit: Creates barrier of fire; deals 2d6 + level per round fire damage over entire zone. Lasts 1 round per level.

Plague Spirit: 1d6 locust swarms attack creatures for 1 minute per level.

Quest Spirit: Place a command on a creature to carry out a service. Creature must be able to understand you. Creature will not kill itself. Creature must follow instructions until quest is complete or take 2d6 damage per day and be unable to recover HP.

EQUIPMENT

The price of a piece of equipment varies wildly on the frontier, depending on quality, scarcity, the look on your face, and the drunkenness of the shopkeep. Any prices here are roughly fair and not likely to reflect prices in the game after you buy your character's initial equipment.

There's no way to list here on one page everything a character might need. My recommendation to you is to find an old 1890's Sears & Roebuck or Montgomery Ward catalog. They sell reproductions of these cheap. Take prices from there and multiply by 10.

Dry Goods

Backpack, \$5.
Bedroll, \$1.
Bandolier, holds 50 bullets, \$5.
Blanket, \$1.
Books on subjects such as accounting, botany, cooking, history, mechanics, or other sciences, \$10-40.
Boots, \$20.
Clothes, a set for walking around in, \$25.
Coat, leather, \$50.
Holster, \$3.
Holster, quick-draw-style (always win initiative ties), \$6.
Holy book, pocket-sized, \$10.
Holy book, gilt edged, fancy hardback, \$85.
Journal book, \$5.
Pack of cards, \$5.
Paper, 10 sheets, \$4.
Rope, 50', \$1.
Sack, small, \$0.25.
Sack, large, \$1.50.
Shoes, \$12.
Shoes, dress, \$35.
Suit, Sunday, \$80.
Suit, for a fancy-pants, \$115.
Waterskin, \$1.

Food and Shelter

Pemican (trail rations), 1 day's worth, \$2.
Unpreserved rations, 1 day's worth, \$0.75.
OK meal, \$0.25.
Fancy meal, \$5 or more.
Hotel room, 1 night, \$10-100.

Hardware

Flask, \$0.50.

Hammer, small, \$2.
Ink, 1 oz., \$8.
Lantern, \$10.
Manacles, \$15.
Mirror, hand, \$5.
Oil, 1 flask, \$2.
Padlock, \$20.
Pick, miner's, \$3.
Pole, 10 ft., \$0.50.
Spikes, iron, 12, \$2.

Tack

Bit and bridle, \$10.
Hackamore, \$8.
Halter, \$4.
Saddle, \$45 to \$250.
Saddlebags, \$10.

Animals

Dog: You can find a dog that'll follow you around for the price of a slice of ham. If you want a well-trained dog, one that'll stand guard and protect a man, expect to shell out about \$25.

Donkey: A donkey's a good beast of burden and can walk all day without tiring much. A donkey'll cost you between \$15 for a run-down old jenny up to \$100 for a tough jack. A breeding jack can cost up to \$250.

Horse: You can get a no-good horse for as cheap as \$20 if you know who to talk to. It won't ride worth a damn, though. If you want a horse you can ride cross-country all day, you'll pay \$50 easy, \$75 if you want one that has a lick of sense around cattle. A messenger horse, one that a mail boy would ride, running it hard all day, can cost \$150 or \$200. A lot of those boys work 3 or 4 years to pay off their horse. And, of course, a breeding horse can go for sums of money you've never seen before, \$1000 or more.

Mule: A mule can be as big as a horse, as stubborn as a donkey, and as smart as a dog. You can ride a mule, and some say it's smoother than a good horse, although a mule often as not thinks it's smarter than its rider. For packing and riding in mountains, though, a mule can't be beat. You won't find any cheap mules, but you won't find any too expensive, either. A mule will run you \$40 for a smaller or more ornery one, up to \$250 for a prize mule.

WEAPONS

Melee Weapons

Punching or kicking: 1d3 damage; free as the day you were born.

Hunting knife or large pocket knife: 1d4 damage; \$5.

Throwing knife: 1d4 damage; thrown range of 0; \$6.

Bowie knife: 1d6 damage; \$12.

Hatchet: 1d6 damage; thrown range of 0; \$6.

Club or wooden beam: 1d4 damage; \$1.

Walking staff: 1d4+1 damage; 2-handed; +1 to climbing or walking; \$4.

Whip: 1d3 damage; 1-handed; \$10. Uses **SNAP** + level to attack. Can knock things out of people's hands with an attack instead of doing damage. Can grab things if hit with a hard **SNAP** + Wile test.

Axe handle: 1d6 damage; 2-handed; \$2.

Axe: 1d8 damage; 2-handed; \$10.

Hammer, 4-pound: 1d4 damage; thrown range of 0; \$4.

Hammer, 10-pound: 1d6+1 damage; 2-handed; \$8. Requires **GRIT** of 1.

Saber or other one-handed sword: 1d8 damage; \$75.

Widowmaker sword: 1d10 damage; 2-handed; \$130.

Most improvised weapons: 1d4 damage.

Bows

Hunting bow: 1d6 damage; range of 1-3; \$25.

Long bow, feral-made: 1d6+**GRIT** damage; range of 1-4; \$70. Requires **GRIT** of 1.

Crossbow: 1d6 damage; range of 1-4; takes 1 round to reload; \$30.

Heavy crossbow: 2d4+2 damage; range of 1-4; takes 3 - **GRIT** rounds to reload, minimum of 1; \$50.

Guns

Yellow Jacket .22-cal revolver: 1d4+1 damage; range of 0; 7 shot, \$10.

Hamilton Improved Double-Action .32-cal revolver: 1d6 damage; range of 0-1, 6 shot, \$18. Known to explode on a roll of 1.

Thames Arms Self-Cocking .32-cal revolver: 1d6 damage; range 0-1; 6 shot; \$30.

Mustang's Frontier Sliding Ejector .38-cal revolver: 1d6+1 damage; range 0-1; 5 shot, \$35.

Mustang's Army Service Pistol .41-cal: Now available for sale to all! 2d4 damage; range 0-1; 6 shot; \$65.

Surti & Sfinni Classic .45-cal revolver: Made by the Hill Folk. 2d6 damage; range 0-2; 5 shot; \$130. Requires **GRIT** of 1. Lifetime guarantee.

Bulfinch & Hammersmith's "Foghorn" .50-cal revolver: 2d6+2 damage; range of 0-2; 5 shot; \$200. \$25 extra for pearl stock. Requires **GRIT** of 2.

Blued finish on all the above \$5 extra.

Mustang's Lightning Jr .22-cal rifle: 1d4+1 damage; range 2-3; 15 shot; \$40.

Mustang's Lightning Rifles: Comes in .32, .38, and .45 calibers (1d6+2/1d6+3/2d6+2). Range 2-3; 15 shot; \$70/85/140.

Wyvern Breech-Loading Shotgun: 3d6 at range 0; 2d4 at range 1; 1d6 at range 2; range of 0-1; single shot; \$50.

Hellhound Shotgun: 3d6 at range 0, 2d6 at range 1, 1d6 at range 2; range of 0-1; 2 shot; \$120. Special order "Cerberus" 3-shot edition; \$250. Can fire all barrels at once.

Dragon Rifle: 2d8 + 5 damage; range of 3-5; ammo capacity of 1; .65-caliber. For big game. \$285.

Ammunition

.22-cal, box of 50, \$5.

.32-cal, box of 50, \$10.

.38-cal or .41-cal, box of 50, \$15.

.45-cal or .50-cal, box of 50, \$22.

.65-cal: box of 10. \$10.

Shotgun shells: a box of 20, \$10. Can get standard buck-shot or bird-shot. Birdshot loses one in range, and does half damage, but has +5 to hit.

Arrows and crossbow bolts, dozen, \$3.

COMBAT

Combat is conducted in *rounds*. Rounds are an abstract measure of time, usually between 2 and 10 seconds.

Zones

In combat, the landscape your characters are on is split up into *zones*. Zones are areas demarcated by natural barriers or by the general length a character could run in 5-10 seconds. See the sample combat maps for examples.

Missile weapons have a range they can fire under ideal conditions. Your character can fire one zone closer or further than their weapon's range with a -2 penalty, and 2 or more zones closer with a -5 penalty. They cannot fire more than one zone past their weapon's range.

Actions

Your character can perform one of the following *combat actions* each round:

- ★ Swing a weapon, throw a punch, or the like
- ★ Shoot a gun, crossbow, bow, or throw a weapon
- ★ Reload a weapon
- ★ Run from one zone to an adjacent one
- ★ Provide cover fire
- ★ Use a skill
- ★ Use a power

There are other actions your character can perform for free. They can draw a weapon, run within one zone, dive for cover, stand up, or talk.

Order of Actions in a Round

At the beginning of each round, all players and the GM must declare what their characters are doing. The side with more characters in total declares first. If a character is doing something with a target (attacking someone or moving from one zone to another), that target must be declared.

After all actions are declared, each player rolls *initiative* for their character, which is a d6 + **SNAP**. The GM can roll for each of their characters, or if there is a group of like characters, they can roll once for the whole group. Subtract 1 from your character's initiative for each of the following they are doing:

- ★ Drawing a weapon
- ★ Moving within a zone
- ★ Using a rifle
- ★ Using a heavy melee weapon

Conduct each character's action in order from the highest initiative to the lowest initiative. If an action before your character's prevents their declared action, they can only perform free actions. If your character is running between zones or providing cover fire, you do not have to roll initiative. They are considered to be running or covering the entire round.

Attacking

If your character attacks in melee, throws or fires a missile weapon, or uses a power against someone else, you must make an *attack roll*. Roll a d20 and add the appropriate attack bonus. If your character is attacking with a melee or missile weapon, you must roll equal to or greater than their opponent's Defense score in order to hit the opponent. If your character is using a power, that power will tell you what defense score you must roll equal to or greater than. If you hit, see *Damage and Injury* to see what to do. If you roll a 20 on the d20 before adding the attack bonus, your character scores a *critical hit* on their opponent.

Cover Fire

In order to provide cover fire, your character must have a gun. Your character can provide cover fire for one other character who is moving. If any other character shoots at them while they are moving, your character can fire at the shooter first.

Penalties

There may be circumstances that make actions in combat more difficult. The most common one is that an opponent has some sort of cover, like a door, a barrel, or rocks. If an opponent has only partial cover, your character has a penalty of -2 to shoot them. If they have near complete cover, your character has a penalty of -5. The GM should use this same logic for other penalties.

Firing into a Crowd

If your character fires into a crowd, their target is considered to have partial cover. If they miss, they have a 50% chance to hit a random bystander.

DAMAGE AND INJURY

Damage

When your character hits another character in combat, they do damage to that character's hit points. Your character's weapon or power will show you what to roll for damage. Add your character's **GRIT** to melee damage. Subtract this damage from your opponent's HP.

If this reduces their HP to 0 or lower, you have caused your opponent an *injury*. Any damage taken when a character's HP are at 0 causes another injury.

Critical Hits

If you roll a 20 when seeing if your character hits their opponent, your character makes a critical hit. Roll your damage normally. The opponent takes this damage and also takes an injury.

Injuries

Roll 2d6 and consult the Injury Table to see the effects of a character's injury. If the character already has an injury, add 1 to the result for each previous injury. All of these options are abstract and should be described by the GM and players as it makes sense.

Upon suffering a broken or severed limb, broken ribs, or fatal wound, a character is in shock. Each round, they can test Toughness + **WITS** versus a DC of 20 in order to overcome the shock & take some action.

Healing and Recovery

A character can recover all their HP by having a solid meal and getting a good night's sleep. Sleeping 3 hours on the trail between eating a pot of old beans and getting attacked by a band of ferals doesn't count.

Injuries take a good while to heal, as shown on the Injury Table. They will only heal correctly if set by someone with some medic training. Otherwise, a character will be crippled for life.

A character who has dealt with injured folk before can try to reduce the time it takes to heal. Each day, they can make a Learning + **WITS** test versus 10 + the number of days left to heal. If they succeed, that day counts as 2 days.

Gunshots and Stabbings

Almost all puncture wounds will induce bleeding as will stabbings. When taking an injury from a gunshot or stabbing, any result on the injury table that ends with *bleeding* results in serious bleeding that will eventually result in death if not stopped. If a bullet is lodged in the wound, it must be removed to prevent infection. To keep the injured above snakes, the wound must be heavily wrapped in the case of a serious injury, or have a tourniquet applied or be cauterized in the case of an even worse injury. A tourniquet can only be used on a limb, and that limb will almost certainly be lost.

Injury Table	
2	no effect
3	stunned, lose next action
4	knocked down
5	knocked down & stunned
6	minor injury, knocked out for 2d6 rounds
7	serious injury (broken limb, punctured artery), 1d6+2 days to heal, <i>bleeding</i>
8	major injury (broken ribs, perforated lung), 2d6+4 days to heal, <i>bleeding</i>
9	multiple major injuries or gruesome injury (severed limb, knee shot out), 2d8+6 days to heal, will never be 100% (exact effects up to GM), <i>bleeding</i>
10	deadly wound, will die in 3d6 rounds unless bleeding stopped, will likely lose limb
11	fatal wound (gutted, stabbed through the heart, broken neck or back, etc), will die in 2d6 rounds
12+	instant death

TRAVELING

Time and Movement

When you need to track time in the game, you can use *turns*, which are equal to 10 minutes. These are used to measure movement and lingering effects from powers.

In one turn, a character can walk about 2000 feet. One turn out of every six should be spent resting in order to continue traveling at that speed, so characters can walk over clear land at about 2 miles per hour. It takes much longer to move through forest, over rocks, uphill, underground, or anywhere else where footing is unsure or visibility is not clear. The following list shows some example conditions and the rate at which characters can move per turn.

- ★ *Creeping quietly over rocks in a twisty cave:* 100 feet
- ★ *Walking through a forest or brush:* 400 feet
- ★ *Forced march:* 3500 feet
- ★ *Running:* 1 mile
- ★ *Being heavily encumbered:* half speed

In eight hours of walking over clear land, a character should be able to travel 12-15 miles, depending on breaks. An eight-hour forced march over clear land would let a character travel 24-28 miles, and they will be exhausted. A forced march of that length would require at least a hard Toughness check.

Traveling by horse is much faster. A horse can walk at 3-4 miles per hour (MPH), trot at 8-10 MPH, canter at about 15 MPH, and run at 35-40 MPH. Horses need to make Toughness checks in order to canter and run all day.

Hazards and Situations

Characters will encounter many hazards and situations in their journeys. Here's a few.

Drowning: If a character is underwater and holding their breath, roll Toughness + **GRIT** every minute, starting at DC 10 and adding 5 at each check. If a check is failed, the character drowns and will die in 1 minute.

Falling: 1d6 damage per 10', half damage on a successful Toughness + **SNAP** roll. The DC is the depth fallen in feet.

Spikes: add +1 point to falling damage per 10' fallen, max +10.

Extreme Heat & Cold: If not wearing suitable protection, roll Wilderness + **GRIT** every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on failed rolls.

Poison: Roll Wilderness + **GRIT** to avoid or for half, depending on poison. Effect varies with poison type.

Bleeding: Lose 1d6 **GRIT** per hour. If **GRIT** reaches 0, character dies. Severe bleeding may be 1d6 **GRIT** per turn or even per minute. **GRIT** returns at rate of 1/day.

Cauterization: Roll Toughness + **GRIT** versus DC 20. If failed, lose one **GRIT** permanently and pass out.

Self-surgery: If a character has to remove a bullet from themselves, they'll need a knife, whiskey, and fire to cauterize the wound. Roll **GRIT** + Learning versus DC 20 to pull out the bullet. If failed, pass out for 1d6 turns and keep bleeding.

Surprise

Normally, a character needs to pass a Wile + **SNAP** check versus DC 10 + opponent's **WITS** + level in order to surprise them. When the situation is more complicated, like two groups on horseback suddenly meeting at a pass, each side rolls 1d6. On a roll of 1 or 2, that side is surprised and cannot act for the first round.

Chance Encounters

The players' characters will meet many other characters. The GM may have already determined how those characters feel about the PCs. If not, however, you can use the following list. Roll 2d6 and add the **WITS** of the main PC engaging with the other characters.

- ★ 2: Instant total hostility, characters attack
- ★ 3-5: Hostile wariness, will cautiously watch the PCs
- ★ 6-8: Uncertain or uncaring, reaction depends on role-play
- ★ 9-11: Affable, will consider reasonable offers
- ★ 12+: Characters seek friendship with PCs

Traps

Mines and other areas often have traps. If a character does something which could trigger a trap, roll a d6. The trap goes off on a 1 or a 2. If a character searches for a trap, roll a d6. They find it on a 5 or 6.

ADVANCEMENT

Experience Points

As characters go through adventures, they get better at the things they do. They earn *experience points* (XP) for their exploits. The table below shows how many XP a character needs to get to a certain level.

Gaining Experience Points

Characters gain experience points by having dangerous challenges. These challenges do not necessarily have to be physically dangerous. Lawing up a judge in order to keep one's self out of jail is plenty dangerous, for example.

Whenever a character succeeds at a moderately difficult challenge, they gain 200 experience points. When they succeed at a hard challenge, they gain 400 experience points. When they succeed at a deadly challenge, they gain 1000 experience points. When a character fails at any of the above, they get half that amount of XP.

A moderate challenge is one that uses up precious resources or time, but that the character has a fair chance of winning.

A hard challenge puts the character at real risk. They've still got a good chance, but it's not a fair fight any more. They could come out of this challenge losing a good deal of cash, pride, or skin.

A deadly challenge is what it sounds like. A body who takes on a deadly challenge usually has a chat with their Maker beforehand. A character in a deadly challenge has a real good chance of losing their life or their entire existence.

The amount of XP gained is up to the Game Master, who may choose amounts in between these three choices. The difficulty of a challenge may be determined after the challenge, when the GM can take stock of what happened. Experience is not split between characters: each character in a challenge gains the full amount of experience.

Gaining Levels

When your character has enough XP to gain a new level, consult the Advancement Table to see how many HP they now have. Your character will also increase all their skills, attack bonuses, and defenses. Depending on your character's class, they may gain other benefits.

Lawmen get a +1 bonus to all defenses at 1st, 3rd, 6th, and 9th levels.

Scouts may find a wild animal to tame at 3rd level. They must tame it by themselves. This animal, if its level is lower than the scout's, will gain a level every time the scout gains a level. In addition, this animal will gain +1 to its **WITS** at the scout's 5th and 8th levels.

Gunslingers get an +1 bonus to damage with guns at 1st, 3rd, 6th, and 9th levels.

Ruffians have a special Dirty Fighting attack. It does 1d6 + **GRIT** damage at 1st level and increases to 1d8 + **GRIT** at 3rd, 1d10 + **GRIT** as 6th, and 1d12 + **GRIT** at 9th level.

Scoundrels gain an extra +1 bonus to Wile at 3rd, 6th, and 9th levels.

Gadgeteers, Mentalists, Preachers, and Shamans learn a new power automatically whenever they gain a level. This power must have a rank equal to or below 1/2 their new level rounded up.

Advancement Table		
Level	XP	HP
1st	0	GRIT + 10
2nd	2,000	GRIT + 14
3rd	5,000	GRIT + 18
4th	9,000	GRIT + 22
5th	14,000	GRIT + 26
6th	20,000	GRIT + 30
7th	27,000	GRIT + 33
8th	35,000	GRIT + 36
9th	45,000	GRIT + 38
10th	60,000	GRIT + 40

FOES AND MONSTERS

Humanoid foes can be created using the normal character creation system. For creatures, assign them abilities and a level. If it makes sense, give them powers or increased scores. Normal creatures get 5 HP per level; giant creatures and undead get 7 HP per level. The formula for HP is $10 + \text{GRIT} + (\text{level} - 1) \times 5$ or 7.) Intelligent creatures get +3 to one skill.

You can increase the level of any creature by adding levels. For every doubling of the creature's level, increase the die size of their damage (d4 goes to d6, d6 goes to d8, and so on.)

The undead do not receive injuries. They collapse at 0 HP.

Ant, Giant: Lvl 3, **GRIT** 0, **SNAP** 2, **WITS** -2, HP 20, Def 15, MDef 11. Bite +3 (1d6).

Bat, Giant: Lvl 2, **GRIT** 0, **SNAP** 4, **WITS** -3, HP 15, Def 16, MDef 9. Bite +2 (1d4).

Bear, Black: Lvl 4, **GRIT** 4, **SNAP** 2, **WITS** -2, HP 29, Def 16, MDef 12. Claw +8 (1d6+4) with followup bite +8 (1d8).

Bear, Cave: Lvl 7, **GRIT** 5, **SNAP** 2, **WITS** 0, HP 45, Def 19, MDef 17. Claw +12 (1d10+4) with followup claw +12 with followup bite +9 (1d12); or roar attack +12, causes all affected to lose next action.

Chupacabra: Lvl 8, **GRIT** 4, **SNAP** 5, **WITS** 1, HP 54, Def 23, MDef 19. Claw +12 (1d8+4) with followup bite +13 (2d6) or throw +12 (thrown 1d12 + 4 yards, take that much damage).

Goblin: Lvl 1, **GRIT** 0, **SNAP** 2, **WITS** 1, HP 10, Def 13, MDef 12. Weapon +1. In groups of three, each gains +1 to weapon and defense.

Ghoul: Lvl 3, **GRIT** 2, **SNAP** 1, **WITS** -1, HP 26, Def 14, MDef 12. Claw +4 (1d4+2, Toughness + **GRIT** vs DC 12 + ghoul's level test, paralyzed for 1d6 rounds on failure); or weapon. Eats human flesh.

Hangman Tree: Lvl 5, **GRIT** 5, **SNAP** -3, **WITS** -1, HP 43, Def 12, MDef 14. Strangle x4 +10 (1d6 each and lift from ground.)

Hellhound: Lvl 5, **GRIT** 3, **SNAP** 1, **WITS** 2, HP 33, Def 16, MDef 17. Bite +8 (1d6+3) with followup slam +8 (1d6+3 and knocked prone.)

Leech, Giant: Lvl 1, **GRIT** 1, **SNAP** -4, **WITS** -4, HP 11, Def 8, MDef 8. Sneak attack +2 vs. MDef (1d4+1), keep leeching blood automatically every round after that (1d4). If ripped off, 1d6 damage to victim. Can be burnt off.

Mummy: Lvl 6, **GRIT** 4, **SNAP** 0, **WITS** 1, HP 49, Def 16, MDef 17. Slam +10 (1d8+4) with followup punch or choke +10 (1d6+4, 1d4 rot damage for the next 1d4 rounds). If killed by a mummy, you become its undead slave. *Undead.*

Owlbear: Lvl 9, **GRIT** 5, **SNAP** 2, **WITS** 3, HP 55, Def 21, MDef 22. Claw +14 (1d8+5) with follow-up claw +14; with followup hug +11 (2d8+5); or Howl of Lament +12, all affected are saddened and all wild creatures who hear it come to see.

Rattlesnake: Lvl 1, **GRIT** 0, **SNAP** 2, **WITS** -3, HP 11, Def 13, MDef 8. Bite +1 (1d3, plus 1d6 poison damage each hour for the next 1d4 hours.)

Sand Dragon: Lvl 10, **GRIT** 8, **SNAP** 3, **WITS** 4, HP 81, Def 23, MDef 24. Crush +18 (1d12+8); or tail grab +13 (1d12) with followup fling +13 (2d6+8 or 1d6+4 if missed); or sand blast +18 (3d6 to all in front of it; can use once every 1d6 rounds.)

Skeleton: Lvl 1, **GRIT** 1, **SNAP** 1, **WITS** -3, HP 11, Def 14, MDef 8. Weapon +2 (dam+1). *Undead.*

Spectre: Lvl 4, **GRIT** 3, **SNAP** 2, **WITS** 1, HP 34, Def 16, MDef 15. Soul-suck +7 (1d8). Cannot be harmed by normal weapons. *Undead.*

Spider, Giant: Lvl 6, **GRIT** 1, **SNAP** 5, **WITS** -1, HP 36, Def 21, MDef 15. Shoot web +11 (1d6, range 0-1) with followup entangle +7 (lose next action); or bite +7 (1d6+1, plus 1d6 poison damage for the next 1d4 rounds.)

Vampire: Lvl 4, **GRIT** 2, **SNAP** 3, **WITS** 3, HP 33, Def 17, MDef 17. Slam +6 (1d6+2); or weapon; or grapple +6 (1d4) with followup bite +6 (1d6 and adds to vampire's HP) *Undead.*

Werewolf: Lvl 3, **GRIT** 4, **SNAP** 3, **WITS** 2, HP 24, Def 16, MDef 15. Claw +7 (1d8+4).

Wolf: Lvl 2, **GRIT** 2, **SNAP** 2, **WITS** -1, HP 17, Def 14, MDef 11. Bite +4 (1d6+2).

Zombie: Lvl 2, **GRIT** 2, **SNAP** 0, **WITS** -4, HP 19, Def 12, MDef 8. Slam +4 (1d6+2) or weapon. *Undead.*

RUNNING THE GAME

In the *How to Play* section, the GM's job is summarized as the following:

- ★ Make up situations.
- ★ Set up the adventure.
- ★ Give the players hell.
- ★ Reward the players.

How to do each of these has been touched on in the rest of this game, but we'll expand on them here.

Make Up Situations

A situation isn't anything more than when one fellow wants something and another fellow doesn't want to let that happen. The key for running the game is to put the players' characters in the thick of it. Think about some of your favorite novels or movies for ideas. Some generic ones are:

- ★ Some bad guys plan to rob a bank/saloon/town/castle that the PCs are guarding.
- ★ A group of pilgrims needs safe passage through some rough territory.
- ★ A prospector wants a mine cleared out of critters and worse things.
- ★ The PCs are stranded and need shelter; whoever lives in the closest shelter isn't friendly.
- ★ And there's always Old Faithful: there's some treasure to be had and the PCs aim to have it.

This last one has an interesting twist in a Western story: *there's a reward out for delivering a wanted man to the law dead or alive*. GMs should feel free to use the hell out of this. It's the Western equivalent of a cloaked man in a fantasy bar with a job that needs doing. The PCs can't resist it. Recommended rewards are \$100 for your run of the mill bandit, up to \$5,000 or even \$10,000 for a body so infamous that the sun darkens at their name.

Set Up The Adventure

There's not a lot to this in *Owl Hoot Trail*. Characters and creatures are easy to build. Before play, make all the characters you think you'll need. You can keep them on index cards to help during play. In addition, make up some generic statistics for level-appropriate characters. Having a generic gun-slinger, shopkeep, or fast desert predator around to pull out for unexpected encounters is always helpful. Likewise, make a list of male and female names to quickly reference during play. This

way, your game doesn't pause for you to make up a name for each random character that pops up.

Maps will help your game run well. Before play, sketch out maps of major locations that you expect the characters might end up at.

Give the Players Hell

During the game, you're going to have to play all the characters that the PCs interact with. Make the ones that are friendly to the PCs plenty helpful. Few things are as frustrating as a game where you've got to pry every last nugget of information out of each character. Friendly characters should talk freely.

Unfriendly characters, however, should be dangerous and crafty. Humans and their ilk will lie, cheat, lay traps, and worse. Monsters are just as bad. A vampire with **WITS** 3 is smarter than most PCs. Use that to your advantage.

Something to watch out for is *railroading*. This is when you've got a plan of how an adventure's going to go ahead of time, and you use your power to force the PCs into that plan. They will resist, as they should. The players are going to be wily and try to find ways out of the danger you have planned for them. Be ready for that. By having crafty foes that think and react, you can avoid railroading.

Reward the Players

There's three major rewards for players and their characters: experience points, treasure, and status. Experience points have a system outlined in the *Advancement* section. Feel free to give small spot XP bonuses for smart ideas or good roleplaying. Judge the difficulty of challenges after they are completed. Something that seemed deadly at first might be simple, or vice versa. Challenges are usually the same difficulty for all characters involved, but that doesn't have to be true.

Keep a close eye on treasure. You want to reward the players, but part of the fun of the game is managing resources. Keep treasure reasonable. A good rule of thumb is about \$100-200 per PC level per adventure.

Lastly, make the PCs famous or infamous. They are Big Men or Women and bartenders, hoteliers, and shopkeeps will notice that. As they adventure more, let their legend grow and even give them leverage when talking with folks.

(e) "Product Identity" means product and product line names, logos and identifying marks including trade dress; artifacts; creatures characters; stories, storylines, plots, thematic elements, dialogue, incidents, language, artwork, symbols, designs, depictions, likenesses, formats, poses, concepts, themes and graphic, photographic and other visual or audio representations; names and descriptions of characters, spells, enchantments, personalities, teams, personas, likenesses and special abilities; places, locations, environments, creatures, equipment, magical or supernatural abilities or effects, logos, symbols, or graphic designs; and any other trademark or registered trademark clearly identified as Product identity by the owner of the Product Identity, and which specifically excludes the Open Game Content; (f) "Trademark" means the logos, names, mark, sign, motto, designs that are used by a Contributor to identify itself or its products or the associated products contributed to the Open Game License by the Contributor (g) "Use", "Used" or "Using" means to use, Distribute, copy, edit, format, modify, translate and otherwise create Derivative Material of Open Game Content. (h) "You" or "Your" means the licensee in terms of this agreement.

2. The License: This License applies to any Open Game Content that contains a notice indicating that the Open Game Content may only be Used under and in terms of this License. You must affix such a notice to any Open Game Content that you Use. No terms may be added to or subtracted from this License except as described by the License itself. No other terms or conditions may be applied to any Open Game Content distributed using this License.

3. Offer and Acceptance: By Using the Open Game Content You indicate Your acceptance of the terms of this License.

4. Grant and Consideration: In consideration for agreeing to use this License, the Contributors grant You a perpetual, worldwide, royalty-free, non-exclusive license with the exact terms of this License to Use, the Open Game Content.

5. Representation of Authority to Contribute: If You are contributing original material as Open Game Content, You represent that Your Contributions are Your original creation and/or You have sufficient rights to grant the rights conveyed by this License.

6. Notice of License Copyright: You must update the COPYRIGHT NOTICE portion of this License to include the exact text of the COPYRIGHT NOTICE of any Open Game Content You are copying,

modifying or distributing, and You must add the title, the copyright date, and the copyright holder's name to the COPYRIGHT NOTICE of any original Open Game Content you Distribute.

7. Use of Product Identity: You agree not to Use any Product Identity, including as an indication as to compatibility, except as expressly licensed in another, independent Agreement with the owner of each element of that Product Identity. You agree not to indicate compatibility or co-adaptability with any Trademark or Registered Trademark in conjunction with a work containing Open Game Content except as expressly licensed in another, independent Agreement with the owner of such Trademark or Registered Trademark. The use of any Product Identity in Open Game Content does not constitute a challenge to the ownership of that Product Identity. The owner of any Product Identity used in Open Game Content shall retain all rights, title and interest in and to that Product Identity.

8. Identification: If you distribute Open Game Content You must clearly indicate which portions of the work that you are distributing are Open Game Content.

9. Updating the License: Wizards or its designated Agents may publish updated versions of this License. You may use any authorized version of this License to copy, modify and distribute any Open Game Content originally distributed under any version of this License.

10. Copy of this License: You MUST include a copy of this License with every copy of the Open Game Content You Distribute.

11. Use of Contributor Credits: You may not market or advertise the Open Game Content using the name of any Contributor unless You have written permission from the Contributor to do so.

12. Inability to Comply: If it is impossible for You to comply with any of the terms of this License with respect to some or all of the Open Game Content due to statute, judicial order, or governmental regulation then You may not Use any Open Game Material so affected.

13. Termination: This License will terminate automatically if You fail to comply with all terms herein and fail to cure such breach within 30 days of becoming aware of the breach. All sublicenses shall survive the termination of this License.

14. Reformation: If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable.

15. COPYRIGHT NOTICE

Microlite Storytelling

Attributes

There are six attributes: Strength (STR), Dexterity (DEX), Intelligence (INT), Resolve (RES), Presence (PRE) and Manipulation (MAN).

You can divide up 14 dots between these Attributes. Each must have at least one dot, and buying a fifth dot in an attribute costs 2 dots.

Race

Choose a supernatural race, such as Vampire, Werewolf or Demon. (Your Storyteller may limit your choices depending on his Chronicle)

Virtue & Vice

Select a Virtue and Vice for your character from the traditional virtues & sins, to define their personality. Fulfilling your vice regains you 1 dot of Willpower; fulfilling your Virtue regains you all Willpower dots.

Breeds

Strong creatures get +1 dot to STR

Nimble creatures get +1 dot to DEX

Wise creatures get +1 dot to INT

Determined creatures get +1 dot to RES

Lordly creatures get +1 dot to PRE

Charming creatures get +1 dot to MAN

Skills

There are just five skills: Physical, Subterfuge, Knowledge, Communication and Occult.

You can divide up 5 dots between these skills.

Factions

Soldier creatures get +2 dots to Physical.

Sneak creatures get +2 dots to Subterfuge.

Intellectual creatures get +2 dots to Knowledge

Diplomat creatures get +2 dots to Communication

Magical creatures get +2 dots to Occult.

Unaligned creatures get a +1 dot to any two skills.

Dice Rolls

The storyteller picks two scores which relate to your task, usually but not always an Attribute and a Skill: for example, Climbing would be STR + Physical, picking pockets would be DEX+ Subterfuge, avoiding a falling object would be DEX+ Physical and fast-talking a policeman would be MAN + Communication.

Total your dots in these two scores into a pool, apply any situational modifiers and roll that many D10s. Every score of 8 or more you roll is a success; if you roll a 10, you get a success and may immediately re-roll that dice. (This can lead to another 10 and another re-roll, and so-on)

As long as you roll at least one success, you will usually succeed at your task at the minimum level required. If you roll five or more successes, you have an exceptional success: you succeed above and beyond your requirements.

When two characters are competing at something (for example, arm-wrestling or playing chess) they can both roll the same pool. Whoever gets the most successes, or reaches a certain number of successes first, wins.

When trying to complete a long term task (for example, repairing a car or translating an ancient tome) you can ask for a dice roll to check progress every hour, day or suchlike. Work is not completed until a pre-determined number of successes is reached.

Willpower

Each character starts with Willpower dots equal to his RESx2. By spending a single dot of Willpower, he may add +3 to any one pool. Willpower refreshes between sessions.

Health

Each character starts with Health dots equal to his STRx2. If a health dot is lost, note if it is bashing, normal or aggravated damage: they heal differently

Combat

Melee attack pool = STR + bonus for weapon.

Ranged attack pool = DEX + Bonus for weapon.

From these pools, subtract the targets DEX.

Every success is a health point lost. If Health reaches 0, unconscious and near death. Further damage directly reduces STR – if that reaches 0, death.

Health is regained at 1 point per hour, 1 point per day for bashing and 1 point per week for aggravated damage. STR lost regained at 1 point per 2 weeks. Lesser wounds are always regained first.

Magic

All supernatural creatures possess the following magical traits:

Supernatural is a measure of magical power. Magic requires Supernatural to be spent, but it can also be spent as Willpower. Regained in different ways for different species – see species notes and storyteller. Characters start with Supernatural equal to RES + Occult

Magic is the list of powers a creature possesses. Each creature starts with 3 dots to spend in 1 or more magical powers: select any area of control, subject to storyteller approval.

To use your magical powers, roll Magic + Occult and spend Supernatural to achieve following results:

- 1 Dot:** 1 Supernatural to detect element, control tiny amount of element, can't be used as weapon.
- 2 Dot:** 1 Supernatural to create tiny amount of element, control element, use as small weapon.
- 3 Dot:** 2 Supernatural to detect element from afar, create element, control large amounts.
- 4 Dot:** 2 Supernatural to create lots of element, control at distance, use as large weapon.
- 5 Dot:** 3 Supernatural to detect element anywhere, convert self into element, control utterly.

E.G. 1 Dot in "Sadness" lets a creature detect sad creatures nearby, 2 Dots to plant sadness in someone and 3 Dots to create full-blown depression. 1 Dot in "Water" lets a creature control droplets, 3 Dots to create a gallon of water and 5 Dots to turn self into a form of liquid.

Morality

Each character starts with 4 Dots of Morality. The sins for that creature type are rated from M1 to M5: M1 being the worst. Whenever a creature does a sin with an M number equal to or below it's current Morality, roll a pool of the appropriate M number of dice: if no successes are rolled, it's morality lowers by one. **You may not spend Willpower or Supernatural on this roll.**

If Morality is lowered, roll new Morality score + RES as a pool. If no successes, creature develops a derangement from trauma of the sin, determined by the Storyteller.

E.G. A Changeling has "Kidnapping" as an M1 sin. If a Changeling with Morality 4 and Resolve 3 kidnaps someone, they must roll 1 dice (as the sin is M1). If no successes, their Morality will drop to 3. If this is the case, they must then roll new 6 dice (3 for Morality, 3 for Resolve) or develop a derangement.

Experience

At the end of every session, the storyteller awards 1 Experience point to each character. These can be spent as follows:

Increase Attribute by 1 Dot: New Score x 3 XP

Increase Magic by 1 Dot: New Score x 2 XP

Increase Morality by 1 Dot: New Score x 2 XP

Increase Skill by 1 Dot: New Score x 1 XP

All experience spent must be cleared with the Storyteller and may require in-game justification.

Optional Rule: Chance Dice & Exceptional Failures

If after a dice pool has had all modifiers applied you have 0 or less dice in it, you may still roll a single D10. You only score a success on a 10, although this may be re-rolled as normal.

If you score a 1 on your Chance dice, this is an exceptional failure – you don't just fail the task, you make things worse for yourself than if you had done nothing. For example, if you try to un-jam a gun and roll an exceptional failure, the weapon goes off and shoots you in the foot; if trying to cast a darkness spell, you in fact generate a bright light instead.

Vampires

Vampires are created when a mortal and a vampire trade blood. Sometimes this is done against their will using mind controlling magic, because the Vampire wishes a servant or lover; other times, the Mortal is entirely willing, albeit not always aware of the full nature of their conversion.

Breed Suggestions

Strong Vampires are usually called **Gangrel** and are savage, solitary hunters.

Nimble Vampires are usually called **Nosferatu** and are disfigured, alienated monsters.

Wise Vampires are usually called **Mekhet** and are masters of lore and sorcery.

Determined Vampires are usually called **Lasombra** and are masters of crushing the wills of others.

Lordly Vampires are usually called **Ventrue** and are aristocratic lords of the night.

Charming Vampires are usually called **Daeva** and are masters of the silver tongue and ensorcelling mortals.

Factions Suggestions

Soldier faction Vampires usually belong to **The Black Hand**, a paramilitary group preparing for Gehenna.

Diplomat faction Vampires usually belong to **The Invictus**, heavily involved in politics and business.

Magical faction Vampires usually belong to **The Circle Of The Crone**, a neo-pagan group of witches.

Supernatural for Vampires is sometimes called **Vitae** and is a measure of the blood they have consumed. Unlike normal Supernatural, Vitae slowly runs out – every night a point is lost, and must be refreshed by drinking a living creature’s blood for a minute (an act he feels a powerful urge to do as he loses more Vitae.) Older vampires lose their ability to consume Animal blood and eventually even Human blood – the oldest Vampires can only feed on other Vampires.

A Vampire who drops to 0 Vitae becomes frenzied, an uncontrollable beast hungering blood who will not stop until he is satiated. If he drops to negative Vitae, he goes into **Torpor** – he falls asleep, his Vitae stops dropping and he will not awaken until provided with blood to raise him into positive figures again.

Magic common to Vampires includes:

Celerity: 1 Dot lets you speed up a touched tiny object (like a cog), 2 Dots + gives increasing bonuses to your own speed.

Resilience: 1 Dot prevents trivial injuries (like cuts from broken glass), 2 Dots can soak Bashing damage, 3 can soak Normal damage, 4 can protect from ranged attack and 5 can protect from Aggravated damage.

Vigour: 1 Dot lets you sense the strongest creature nearby, 2 Dots + gives you greater increases to Strength and 5 Dots lets you grow in size.

Animalism: 1 Dot to sense nearby animals, 2 Dots to communicate with them, 3 Dots to control touched animals, 4 Dots to control animals at range and 5 Dots to make them lifelong thralls.

Shapeshifting: Limited to “creatures of the night”. 1 Dot to become a raven, 2 Dots for a vampire bat, 3 dots for a cloud, 4 dots for a wolf and 5 dots for a hybrid man/bat or man/wolf.

Fear: 1 Dot to detect fear, 2 Dots to discover a target’s greatest fear, 3 Dots to make a touched target scared, 4 Dots to terrify from a distance and 5 Dots to plunge someone into insanity.

Domination: 1 Dot to hide an untruth from target, 2 Dots to plant a minor suggestion, 3 Dots to make a touched target suggestible, 4 Dots to mind control from a distance and 5 Dots to make someone a lifelong thrall.

Weaknesses

Vampires take aggravated damage from fire, and from exposure to sunlight (even through a curtain, though direct sunlight is the deadliest).

Against the vampire who turned them, Vampires take a –2 penalty to pools for persuasion and mind control

Morality

Morality for Vampires is sometimes called **Humanity** and represents their control over their bestial urges.

M5: Selfish thoughts & acts.

M4: Injury to others & petty theft.

M3: Grand theft & mass property damage.

M2: Murder/manslaughter.

M1: Perverse and heinous crimes (I.E. Rape, torture)

The lower Humanity becomes, the less a Vampire cares about the feelings of others and the more freely he will do anything to satisfy his Vice and his hunger.

Changelings

Changelings are created when humans are kidnapped by the True Fae and taken to Arcadia as servants, captives or lovers. The magic of the land mutates mortals into a fusion of Human and Faerie.

Changelings possess a “mein”: appear as their mortal form to Mortals, and as part-Fae creatures to other Changelings. They can strengthen the mein and disguise themselves as mortals to all by spending 1 Supernatural, or they can shatter their mein expose their Changeling form to a Mortal by spending **ALL** their current Supernatural.

Breed Suggestions

Strong Changelings are usually called **Ogres** and are the hulking giants of fairy stories.

Nimble Changelings are usually called **Darklings** and are shadowy goblins of the night.

Wise Changelings are usually called **Wizened** and are the craftsmen of Arcadia.

Determined Changelings are usually called **Beasts** and are the most feral looking of the Changelings.

Lordly Changelings are usually called **Elementals** and are embodiments of the Earth itself.

Charming Changelings are usually called **The Fairest** and are the most beautiful, if not always the kindest, Changelings.

Factions Suggestions

Soldier faction Changelings usually belong to **The Summer Court**, who prepare to fight back against their former captors.

Sneak faction Changelings usually belong to **The Winter Court**, who want to hide away from Arcadia.

Diplomat faction Changelings usually belong to **The Spring Court**, who live their life in hedonistic glee.

Magical faction Changelings usually belong to **The Autumn Court**, who want to master the magical gifts of the True Fae.

Supernatural for Changelings is sometimes called **Glamour** and can be gained from two sources. Goblin Fruits are magical favours found in the magical lands of the Faeries. Some appear as actual fruits; others appear as nonsensical objects like books, pens or foot pumps. A fruit consumed shortly after being picked (or prepared in a special, magical recipe) restores Wyrd. Emotions can also restore Wyrd. The stronger the emotion, the better – a child’s sadness at not getting a cookie offers less Wyrd than a husband grieving for his wife. Each court is also better at harvesting certain emotions: Summer Court prefer Wrath, Winter Court prefer Sadness, Spring Court prefer Desire and Autumn Court prefer Fear.

Magic common to Changelings includes:

Resilience: 1 Dot prevents trivial injuries (like cuts from broken glass), 2 Dots can soak Bashing damage, 3 can soak Normal damage, 4 can protect from ranged attack and 5 can protect from Aggravated damage.

Vigour: 1 Dot lets you sense the strongest creature nearby, 2 Dots + gives you greater increases to Strength and 5 Dots lets you grow in size.

Animalism: 1 Dot to sense nearby animals, 2 Dots to communicate with them, 3 Dots to control touched animals, 4 Dots to control animals at range and 5 Dots to make them lifelong thralls.

Fear: 1 Dot to detect fear, 2 Dots to discover a target’s greatest fear, 3 Dots to make a touched target scared, 4 Dots to terrify from a distance and 5 Dots to plunge someone into insanity.

Sorrow: 1 Dot to detect sorrow, 2 Dots to discover a target’s greatest sadness, 3 Dots to make a touched target sad, 4 Dots to cause malaise from a distance and 5 Dots to plunge someone into depression.

Wrath: 1 Dot to detect anger, 2 Dots to discover a target’s greatest hate, 3 Dots to make a touched target angry, 4 Dots to induce wrath from a distance and 5 Dots to plunge someone into a frenzied hatred.

Desire: 1 Dot to detect desire, 2 Dots to discover a target’s greatest love, 3 Dots to make a touched target yearn, 4 Dots to cause lust from a distance and 5 Dots to plunge someone into frothing desire.

Weaknesses

Changeling magic is ineffective at protecting against an iron (not steel) weapon. This is more pronounced against the True Fae, who are especially weak to hand-hammered (or “cold”) iron weapons- they take Aggravated damage from cold iron sources

Morality

Morality for Changelings is sometimes called **Clarity** and represents their sanity due to living in two worlds.

M5: Selfish thoughts & acts, using magic, visiting the Faerie lands.

M4: Injury to others, petty theft, taking psychotropic drugs.

M3: Killing another changeling, using Faerie magic in front of Mortals

M2: Kidnapping, manslaughter, breaking formal oaths.

M1: Perverse and heinous crimes (I.E. Rape, torture), killing a human, spending prolonged time in Arcadia.

The lower Clarity becomes, the less a Changeling can tell apart what is real and unreal – however, using magic prevents a Changeling from staying wholly sane. Every time a Changeling’s Occult increases to 5 or more, they must lose 1 Clarity.

Demons

Demons are fallen angels who escaped from their infernal prison by possessing humans of weak will. The human’s soul is destroyed, but the memories and feelings of the Mortal make an indelible mark on the Demon's soul.

Demons possess an “Apocalyptic Form”, their true appearance as a fallen angel. The exact appearance should vary on the Breed and Magic of the Demon: a Slayer may look skeletal and terrifying, a Devourer with Fire magic may appear as a burning bull-headed beast. Transformation into this form requires spending a Faith point: transforming back is free.

Breed Suggestions

Strong Demons are usually called **Slayers** and are former Angels of Death.

Nimble Demons are usually called **Scourges** and are guardian angels turned spies.

Wise Demons are usually called **Fiends** and are former augers stripped of their great powers.

Determined Demons are usually called **Devourers** and are the personification of nature’s wrath.

Lordly Demons are usually called **Devils** and are Lucifer’s former aides.

Charming Demons are usually called Defilers and are the succubii and tempters of lore.

Factions Suggestions

Soldier faction Demons usually belong to **The Raveners**, driven by years of imprisonment to wish to destroy all God has created.

Sneak faction Demons usually belong to **The Luciferians**, who seek out their missing lord.

Intellectual faction Demons usually belong to **The Cryptics**, Demons who wish to gather knowledge to prove God himself ordained their rebellion.

Diplomat faction Demons usually belong to **The Faustians**, experts in making pacts with mortals.

Supernatural for Demons is sometimes called **Faith** and is a measure of the belief others hold in them. It can be regained by belief in the Demon’s true nature – either by simply appearing in true form before someone (sometimes called “Reaping”) or through long-term pacts with mortals, exchanging favours for worship. Reaping provides quicker Faith, but greater rewards await a patient Demon with many pacts.

Magic common to Demon includes:

Animalism: 1 Dot to sense nearby animals, 2 Dots to communicate with them, 3 Dots to control touched animals, 4 Dots to control animals at range and 5 Dots to make them lifelong thralls.

Desire: 1 Dot to detect desire, 2 Dots to discover a target’s greatest love, 3 Dots to make a touched target yearn, 4 Dots to cause lust from a distance and 5 Dots to plunge someone into frothing desire.

Fear: 1 Dot to detect fear, 2 Dots to discover a target’s greatest fear, 3 Dots to make a touched target scared, 4 Dots to terrify from a distance and 5 Dots to plunge someone into insanity.

Domination: 1 Dot to hide an untruth from target, 2 Dots to plant a minor suggestion, 3 Dots to make a touched target suggestible, 4 Dots to mind control from a distance and 5 Dots to make someone a lifelong thrall.

Fire: 1 Dot to control a candle, 2 Dots to shoot a small firebolt, 3 Dots to control a fire, 4 Dots to ignite an inferno and 5 Dots to convert self into a flaming form.

Water 1 Dot to control drops, 2 Dots to create a cup of water, 3 Dots to control a bucket, 4 Dots to create a deluge and 5 Dots to convert self into a watery shape.

Light: 1 Dot to make something glow, 2 Dots to make a blinding flash, 3 Dots to make a searing ray, 4 Dots to control light at a distance and 5 Dots to shine as the sun.

Weaknesses

Demons take aggravated damage from holy items – even stepping into a blessed area like a church causes them discomfort and, eventually, damage.

Morality

Morality for Demons is sometimes called **Torment** and represents their struggle to deal with the sins of their past.

M5: Selfish thoughts & acts, harming any creature except in self-defence.
M4: Theft, breaking a sworn word, harming a human except in self-defence.
M3: Betrayal of trust, inflicting intentional emotional harm.
M2: Murder/manslaughter, giving in to feelings of anger or hate.
M1: Perverse and heinous crimes (I.E. Rape, torture), thoughtless violence.

The lower Torment becomes, the less a Demon cares about the mistakes of the past and the more he wishes to revenge himself against God, humanity and all of creation. Lower Torment Demons have Apocalyptic Forms which are more terrifying than inspiring, and their magic similarly has a tainted look and application.

Street Fighters

Street Fighters are humans who train in martial arts schools where they learn physics-defying combat techniques and skills bordering on the supernatural.

Breed & Faction Suggestions

Breeds & Factions can be combined to create different schools of martial arts. A Strong Breed & Magical Faction character may practice a martial art of using magical powers to boost ones own strength; a Determined Breed and Soldier Faction character may have been trained in a fighting style that emphasises taking punishment to enable one to deal greater blows oneself.

If using the Additional Combat Rules, you may permit new Factions who offer bonuses to the new combat skills: for example, a Wrestling Faction which gives +2 Dots in Grab.

Supernatural for Street Fighters is sometimes called **Chi** and can be gained from meditation and by sticking to the honour code of martial artists.

Optional Rule: Additional Combat Rules

If using Street Fighters, players may wish to further clarify their character’s skills with martial arts. If so, consider the following optional system:

Street Fighters gain the following additional skills: Punch, Kick, Grab and Block. All Street Fighters gain three additional skill points for allocation on character creation, which are spent as per the normal rules.

Whenever you carry out an action using one of these techniques, your Storyteller may permit you to use the other skills in addition to the normal skill – for example, a punch in combat may use a pool based on STR + Physical + Strength

Magic common to Street Fighters includes:

Fire: 1 Dot to control a candle, 2 Dots to shoot a small firebolt, 3 Dots to control a fire, 4 Dots to ignite an inferno and 5 Dots to convert self into a flaming form.

Ice: 1 Dot to control flakes, 2 Dots to create an icicle, 3 Dots to control touched ice, 4 Dots to create a hailstorm and 5 Dots to convert self into an icy form.

Light: 1 Dot to make something glow, 2 Dots to make a blinding flash, 3 Dots to make a searing ray, 4 Dots to control light at a distance and 5 Dots to shine as the sun.

Celerity: 1 Dot lets you speed up a touched tiny object (like a cog), 2 Dots + gives increasing bonuses to your own speed.

Animalism: 1 Dot to sense nearby animals, 2 Dots to communicate with them, 3 Dots to control touched animals, 4 Dots to control animals at range and 5 Dots to make them lifelong thralls.

Shapeshifting: 1 Dot to become a non-combat form like a bird, 2 Dots for a small combat form like a bat, 3 dots for a non-living form like a lamp-post, 4 dots for a man-sized combat form and 5 dots for a hybrid man/animal form.

If using the Additional Combat Rules, you may permit Occult to be substituted for a Combat skill for certain Magic pools – i.e. if Fire magic can only be used as a flaming punch, Punch can replace Occult.

Weaknesses

Street Fighters have the same general weaknesses as mortals – they have no bane. (There may be some exceptions due to the specific teachings of a martial arts school, however)

Morality

Morality for Street Fighters is sometimes called **Honour** and represents their sanity due to living in two worlds.

M5: Repeatedly striking an opponents weak spot.
M4: Striking a dizzied foe, using a weapon on an unarmed opponent.
M3: Breaking one’s word, running from a challenge.
M2: Murder/manslaughter, using a firearm.
M1: Perverse and heinous crimes (I.E. Rape, torture)

The lower Honour becomes, the less a Street Fighter cares about his word and playing by the rules. Honour facilitates regaining a Chi: after a combat, a successful Honour role allows one Chi point to be regained.

Tile Hack

by Mike Berkey (michael.berkey@gmail.com), Copyright 2009. For more Microlite20 awesomeness, head over to the Microlite20 website at <http://www.microlite20.net>.

This game is the result of a week-long binge session of “Bookworm Adventures”, a life-long fascination with Scrabble and an unholy marriage with Greywulf’s ultra-thin Microlite20 version of D&D.

Your characters are dungeoneers in the finest tradition of pen and paper fantasy: elven wizards, doughty dwarven fighters, fighting men of legend, priests of arcane gods, all out to save the Realms from nefarious villains and drooling, evil monsters.

The big difference from standard D&D? No dice. (Mostly. We’ll get to the exceptions later). Actions are resolved by spelling words with Scrabble tiles. Spell out bigger words or words using rare tiles to do better. As with Scrabble, the point values of the tiles you use to spell your words will determine your success. Unlike Scrabble, the results show how strongly you swung your sword, how mighty your spell is or even how quickly you dodged the blade of a sprung trap.

The mightier your vocabulary, the more your characters’ fame and power will grow.

What you need:

- Tiles from a Scrabble board—one box per 3 players would probably be appropriate.
- Some dice for the GM
- Paper
- Pencils
- Friends

Character Creation

Characters have three attributes: **Strength**, **Dexterity** and **Mind**. Roll 4d6 for each statistic in any order, dropping the low die and totaling the remainder.

Each score’s bonus is equal to **(Score-10)/2**, **rounding down**).

Races

Humans get +1 to all skill rolls. They have the ability to redraw 3 tiles per adventure from their Action Pool, Dodge Pool or the Party Pool.

Elves get +2 to MND. They always get an appropriate word bonus for nature words.

Dwarves get +2 to STR. They always get an appropriate word bonus for spelling out words about metals, stone and other underground topics.

Halflings get +2 to DEX. Halflings that are not thieves can be Sneaky (see “Sneaking” in the magic section). Halfling Thieves get +1 to any bonuses from being Sneaky.

Classes

Characters can be Fighters, Thieves, Mages or Clerics. All characters begin at Level 1.

Fighters get a +1 bonus to combat damage, with an additional +1 at 5th level and every five levels on. They gain +3 to the Physical skill. They also get an appropriate word bonus if they spell combat-oriented words like “HEW”, “SMASH”, or “SWORD” in combat. Along with using shields, they can wear any type of armor and can use any type of weapon.

Thieves get +3 to their Subterfuge skill. They are Sneaky (see “Sneaking” in the Magic section). While being Sneaky, Thieves get a +1 bonus to damage or effect, with an additional +1 at 5th level and every five levels on. Thieves can only use leather armor, bows and one-handed weapons.

Mages can cast spells. When doing so, they get a +1 bonus to damage or effect, with an additional +1 at 5th level and every five levels on. They gain +3 to their Knowledge skill but are limited in choice of gear. Mages do not wear armor and can only use daggers and staves.

Clerics can use healing magic, call on divine aid and can turn undead. When doing so, they get a +1 bonus to damage or effect, with an additional +1 at 5th level and every five levels on. They gain +3 to their Communication skill. They can use any armor, shields and blunt weapons.

Gameplay

Tile Pools

The heart of the game involves drawing tiles from “pools” to form words. Each character has access to three: the **Action Pool**, the **Dodge Pool** and the **Party Pool**.

When a word is formed, those tiles are discarded and the empty slots are filled with fresh tiles, up to the maximum number of tiles allowed for that pool. The Dodge Pool is an exception to this: it refreshes at the end of the combat.

Action Pool. This is the character's main pool, the stockpile that is used to resolve skills, attack rolls, saving throws, cast spells, turn undead and just about anything else that happens in game. **You get 4 tiles, plus half your level (rounded down), plus your highest stat modifier.**

Dodge Pool. Your character's ability to get out of harm's way as a last ditch defense. Once you spell words from this pool, those tiles are gone until the end of combat. The point value of words formed from this pool directly negates damage or magical effects. Using your Dodge Pool is a free action. **You get 6 tiles plus your DEX modifier.**

Party Pool. The entire party gets a pool of 6 tiles that anybody can choose tiles from at any time. You can only draw up to 2 letters from the party pool for a given word. At least one letter has to be from one of your own Pools.

If you can't spell ANY words using any of your own tiles on an action (but not a dodge), you can discard your entire Action Pool and declare a FUMBLE. Something moderately bad happens to you, such as you tripping and falling down or dropping your weapon (GM's call), but you can then completely refresh your Action Pool.

If you don't FUMBLE, then you simply miss, but keep your tiles, hoping that you either see a word eventually or the Party Pool turns up something later on.

Add the face values of any tiles you use. Blank tiles may be any letter desired, but have no point value of their own. The total determines how successful you are at your action.

Summary:

Action Pool = 4 + (1/2 level, rounded down) + highest stat mod

Dodge Pool = 6 + DEX mod

Party Pool = 6

Appropriate Words

In some cases, spelling out an appropriate word can give out some bonus points (+1 up to, say, +5 or so). Appropriate words may even, in some circumstances add additional effects.

For example, a Thief who spells out “ROPE” in combat may trip up a guard, making them fall down or immobilizing them until they manage to untie themselves.

Skills

There are four skills: **Physical**, **Subterfuge**, **Knowledge** and **Communication**.

Skill rank = level + any bonus due to your class or race.

To pass a skill test, make a word from your Action Pool and total the tile values. You can draw additional tiles from the Party Pool, if necessary, with the usual restrictions.

Add your skill rank and the bonus from the most appropriate statistic. If the total point value is equal to or greater than the DC, you're successful.

DC's range from 10 (dead easy) to 35 (legendary difficulty). A simple task can be assumed to have a DC 15; most tasks would be around 20.

For example, Climbing would use Physical + STR bonus. Dodging a falling rock is Physical + DEX

bonus. Finding a trap is Subterfuge + MIND bonus. Disabling a trap is Subterfuge + DEX bonus.

Note that there are no “saving throws” in this game; use Physical + STR or DEX bonus for Fortitude and Reflex saves. Saving against magic (Will save) is usually Knowledge + MIND bonus.

Spelling out an appropriate word might give a bonus to skill tests—in most cases, an extremely appropriate or fun word should give an automatic success, no matter the actual DC.

For example, if you can spell out “SNEAK”, you might get a +3 bonus to sneak past a guard. Spelling “LADDER” might give you a bonus to climbing up a cliff. If you're trying to remember information about the great wizard-king, Amalric, then actually spelling out “AMALRIC” might give you an automatic success and very specific information.

Combat

Hit Points = Strength + 1d6 hit points/level

Characters get Strength + 1d6 hit points/level. Hit points are recovered quickly in this version of the game—4 hours of rest are sufficient to recover half lost hit points, another 4 restores all of them.

Equipment

Players can start with any non-magical equipment within reason.

Weapon Ratings:

0 = unarmed

+1 = dagger, hand axe, club, staff, sling

+2 = bow, sword, axe, mace, hammer

+3 = two-handed weapon, but you go last automatically

Armor Ratings:

+1 = shield

+1 = leather

+2 = chain

+3 = plate

Magic items. If a magic item has a rating listed (+1, +2, etc), then that number adds on to the weapon or armor rating.

Of course, just giving an item a straight bonus is a bit dull. Magic items can have other effects that play off of tile values and words. Here's some examples:

Initiative order is determined by drawing a Scrabble tile from the stack—the closer to A (alphabetically) you get, the higher your initiative is. Each positive bonus in Dexterity gives you an additional draw—choose the best one. Having a negative DEX mod means you go last in case of a tie. Initiative is only drawn at the beginning of combat, not round by round.

As long as you make a word, you hit automatically. If you can't make a word, you “miss” and have the option of declaring a fumble.

Damage done in an attack is the point value of word, plus your STR mod and the rating of your weapon.

Subtract the armor of your opponent from that damage and apply the rest to your opponent's hit points.

Damage = total point value + STR mod + weapon rating + magic and other bonuses – Armor – other defensive bonus

After hit points are used up, the opponent is defeated. Players or monsters aren't necessarily dead, just out of the fight until revived. This is a more kid-oriented game, after all.

Remember that you can further reduce damage by taking advantage of your Dodge Pool.

Bag of Holding. Whenever a character reaches into it, there's a 50% chance that any non-magical item that can reasonably fit through the Bag's opening is stored within. Any items produced disappear after an hour. Thieves, for obvious reasons, love this item.

Cap and Gown +1. Gives a Mage one more tile to his Action Pool when worn in addition to the armor bonus.

Eric the Red's Battle Axe +2. Viking Warriors do double point value with V's and W's!

Pirate's Eye Patch. All B's, R's and I's do an extra point of damage.

Potion of Healing. Drink the potion or feed it to someone else—if you can spell a word, you get double the point value of the tiles back as HP, up to the maximum.

Shiny Bauble. Spell out a type of bird and that type of bird appears and helps you out for the rest of the adventure. You can only use this once per adventure. Note to munchkins: Rocs don't always fit very well in dungeons.

Magic

Arcane magic is divided into several schools. Each School covers a broad area of magic.

Each Mage starts knowing two schools of magic at first level. Every two levels they advance past the first (e.g. 1, 3, 5, 7, 9, etc), they learn another school.

Mages can cast any spell within reason, provided they know the proper schools, but have to spell words to determine the effect. Every time you cast a spell, you have to justify it to the GM, given the types of magic that your character knows.

These spells are not drawn from the SRD and do not cost hit points to cast.

If a spell or special ability is successful, it does point value damage plus the Mind modifier of the caster with an additional bonus depending on the Mage's level (+1 at first level, and another +1 for every 5 levels total).

If the **effect of the spell can't be quantified by damage**, then that total (plus the Mind modifier, level based bonuses, etc) becomes the save DC for whatever the spells' effect is, such as sleep or entangle.

For spells that **enhance attributes**, use the point total divided by 5, rounded down. Spells that **enhance armor rating** do so as total divided 10, again rounded down.* Bonuses from magic spells do not stack—if a more powerful spell is cast, the higher bonus simply replaces the lower.

* Because Armor Rating is **staggeringly useful**.

Summoned creatures have the point total in hit points if they are under the caster's control. If not, then they have double the point total, but are controlled by the GM instead (this can backfire if it's a powerful summon). Other statistics and attacks are to be determined by the GM, as appropriate to whatever was summoned. The point total can be broken up into multiple summoned creatures.

For anything else not covered, just set a target DC that feels right and run with it. For example, if a character wants to conjure up a wall of ice to block a passageway, tell them to beat DC 20 and if successful, there's now a 2 foot thick wall of ice spanning the passageway and blocking the monsters' path. The important thing is to not tie up the game and to keep things fun.

Spell durations are up to the GM, but can be assumed to last the entire combat.

If the spell affects more than one monster at a time, then it affects everything in a 10' foot radius, but has half effect.

The GM always has a right to veto spells, set appropriate DC's or penalties to exceed or otherwise determine how they work.

If the player spells an appropriate word, give out some bonus points as per the section on Appropriate Words. For example, you could use "void" to cast lightning bolt on a bunch of spiders, but using "zap" would get a +3 damage bonus.

Fatigue

Spellcasters can cast one spell per combat per level. If they try to cast more, they take a -1 penalty for each additional one, cumulative, until they can take a few minutes outside of combat to rest up.

Schools of Magic

Abjuration. Spells of warding and protection, harming trespassers and banishing spirits from beyond.

Conjuration. Summoning objects and creatures, transporting things instantly from one place to another, creating physical objects from thin air.

Divination. Learning long lost secrets, telling the future, seeing things that are far off and more.

Enchantment. Controlling the minds and actions of others.

Evocation. The manipulation and control of raw energy. Big flashy effects like lightning bolts and such.

Illusion. Hiding things in plain sight, making things appear to exist that aren't real.

Necromancy. Spells that call up the dead, communicate with the spirits and manipulate dark energies.

Transmutation. Spells that change the properties of objects or creatures.

Clerics and Magic

Clerics can cast divine magic, spells that request aid of their deity. Two specific applications of this magic are Healing and Turning Undead.

Healing is a specific spell that works on teammates—the total effect is equal to the number of hit points regained. You can attempt to heal the entire party in one action, but the ending point value is halved.

Turning undead is an attack spell. The Cleric has the option of Blasting the undead or Fearing them. Blasting does straight damage, but if the Cleric can't kill the enemy with a single Turn, then all damage from the Turn is ignored. Fear sets a DC that the undead has to save vs or flee.

Other uses of divine magic might be praying for aid, guidance and protection.

Fatigue penalties also apply to Clerical magic.

Sneaking

Certain types of characters (namely Thieves and Halflings) are described as “Sneaky”. This is, in effect, inventory-based magic that only applies in combat.

When in combat, a Sneaky character can use any item near at hand or in inventory if they can spell a related word and describe an appropriate effect. If successful, it either adds a bonus to defense or acts like an attack spell along with the character's DEX modifier.

For example, if a thief could spell "WATER", he might grab a canteen from his belt and splash it in his opponent's eyes, blinding the enemy briefly. Or he could grab some ROPE and bind an enemy up. Or he could pull down a DRAPE and get a few points extra to avoid taking damage from some guards.

The exact amount of the bonus or the effects are up to the GM, but tend to be anywhere from an extra +1 on the low end up to +5 for extremely appropriate (or fun) words.

Thieves do NOT get fatigued from Sneaking.

The Environment

Certain dungeons can have strange effects on any tiles used.

Friendly ground might add two or three extra tiles to the Party Pool. A forbidding graveyard might reduce the Party Pool by a point, due to its extreme spookiness.

Some dungeons might increase or decrease the effects of tiles. "In the Castle of Robert the Red, R's count as 5 points!" "In the Pit Of Despair, P's, D's and R's don't count as anything!" "In the Ice Dungeons Of the Frozen North, any words dealing with cold, ice or water will freeze opponents for their next action!"

Other times, there might be environmental hazards. For example, the floor might be covered with LAVA. Lava is hot—if you make a word with an L, A, or V, you take one point of damage per offending tile.

Another example might be traps. One dungeon room might be full of skeletal remains that have knives and arrows stuck in them. Other skeletons might be crushed by rocks.

This could be a clue that accidentally spelling words dealing with weapons or rocks will set off the room's traps.

Monsters!

Monsters have a set number of hit points, an armor rating that reduces damage taken and always hit automatically in combat—just the same as characters. Player armor subtracts from this damage as usual, as does the defense pool.

Instead of spelling tiles out to do damage, the GM just rolls their attack damage with dice. This is mostly intended to save the GM time in large fights—having to

come up with a dozen words per round in a fight with a kobold tribe would get to be a pain after a while!

Each monster will have a basic attack plus one or more “interesting” attacks that they can do periodically, as the GM prefers.

For example, A Black Dragon has 4 attacks listed—a low damage Claw attack, a Bite attack, Acid Breathe and they can Beat Wings, causing everyone nearby to fall down. The GM can have the Dragon do any one of those four things per round. Or he could have the Dragon do something else, like roar loudly (for intimidation factor or just to give the PC's a rest), fly away, or grab something in its talons.

If you want more randomness than that, then roll d6: on a 1-3, the monster does a basic attack, on a 4, the monster boasts, misses with his attack or otherwise makes some kind of display. Otherwise, choose one of their specials at random.

Monster Skills. Whenever a monster has to make a skill roll or save, roll d20 plus their number of Hit Dice. If it's something they'd reasonably be good at, add another +3 to the total.

Converting monsters from the SRD. Keep Hit Dice as is. Assume maximum hit points, plus an extra 5 points as a kicker. Armor rating is either by type of armor they're wearing, or determined by their natural armor. I'd suggest converting "natural armor" to armor rating at a ratio of 1:4, rounding down. So, if an adult red dragon has a natural armor of +21, then armor is 5.

Choose one of their attacks as their normal attack, using the damage listed in the SRD entry. Next, think of a few likely things they might do and list these as additional attack options. See the examples below for samples.

These are only guidelines—if the numbers seem a bit lower or higher than they should be, adjust them to something more comfortable for you and your group.

A note on difficulty: the difficulty of combats in this game varies widely depending on player skill. Some groups will have no problem grinding out 15 point word after 15 point word, others might not.

Here's some ideas to even things out:

Game too hard?

Use one or more of these options:

- Hand out bonus tiles to the players
- Increase the size of the various pools by a few tiles.
- Monsters have -5 hit points (ie remove the kicker)
- Throwaway monsters such as kobolds have 1/2 hit points
- Reduce monster damage by -2
- Reduce monster damage by 1/2

Game too easy?

Enable one or more of these options:

- Increase monster armor by +1 or 2
- Increase monster HP
- All monsters get another HD or two
- Reduce the size of the Party Pool to 4 tiles
- Use some of the optional rules from the end of this document, such as "Word Nazi" or "No Repetition"

Another way to adjust the pacing of the game is to vary the monsters' attacks. If a monster is giving the players a hard time, have it spend an action or two boasting, roaring or otherwise putting on a display while the PC's catch their breaths.

As a final note, this game is designed to be woolly and unpredictable. Don't be surprised when a player pulls out a 40 point word and turns your fire-breathing big bad into a kitten—see it as an opportunity.

Bear, 6HD, 77 hp, 1 armor, Attacks: Teeth and Claws (1d8+8), Hug (if "Claws" hits, a bear can grapple—grapples do damage as per "Claws", but the target can't move or dodge, and loses their weapon rating bonus if it's anything more unwieldy than a dagger. You can break a bear's grapple with a STR + Phys check vs DC 27), Fearsome Roar (anybody within 10' does 1d6 points less on their next attack)

Black Dragon, Adult, 19 HD, 309 hp, 3 armor, Attacks: Claw (1d8+3 damage), Bite (2d6+7), Breathe Acid (12d4 damage to everyone in front of it), Beat Wings (1d6 damage, knocks everyone down). Some Black Dragons are quite intelligent and can cast spells—they mostly use magic dealing with swamps, darkness, acid and poisons.

Kobold, 1 HD, 13 hp, 1 armor. Attacks: Spear (1d6-1 damage), Tile Thief (Roll 1d6: on 1-3 steals one tile from their target's Action Pool, which is NOT replaced until after the target's next action).

Ogre, 4 HD, 48 hp, 2 armor, Attacks: Great Club (2d8+7 damage), Bellow (+5 to next attack's damage), Smash Floor With Enormous Club (1d6 damage to all nearby, and everybody who takes damage also can't use one of the following letters on their next attack: **Roll 1d6:** 1 O, 2 G, 3 R, 4 E, 5 S, 6 Roll Twice)

Orc, 1HD, 14 hp, 1 armor, Attacks: Battle Axe (1d8+1 damage), Bellow (+3 to next attack's damage).

Skeleton, 1 HD, 17 hp, 1 armor (battered shield), Attacks: Rusty Weapon (1d6+1), **Notes:** Blunt weapons do double damage to Skeletons. Piercing weapons do half damage.

Viper, 1HP, 6 hp, 0 armor, **Attacks:** Poisonous Bite (1d6 damage, each hit that does damage does an extra 1 point of damage per bite per round, for 3 rounds).

Zombie, 2 HD, 27 hp, 0 armor, **Attacks:** Club (1d6+2). Notes: Zombies emit such an unpleasant aroma that anybody capable of smell attacking them takes a -1 to all point totals in their presence.

Level Advancement

As the players defeat monsters and figure out traps and puzzles, they gain experience.

XP is equal to the Hit Dice of defeated monsters. Add +1 for each doubling of the number of foes: for example, 1 kobold = 1XP. 2 kobolds = 2XP. 4 kobolds = 3XP, etc.

For traps and other situations, assign an appropriate amount of XP for the difficulty of the trap. Usually it will be in the same ballpark as the average type of monster in the dungeon.

When the total equals 10x the character's current level, they've advanced to the next level. Reset the total to 0 after advancing.

Each level adds +1d6 to Hit Points and +1 to all skills.

If the level divides by three (i.e. level 3, 6, 9, etc) add 1 point to STR, DEX or MIND.

If the level divides by five (i.e. level 5, 10, 15, etc), each of the classes' special ability bonuses goes up by +1 (Fighters' damage bonus, Mages' spellcasting bonus, etc).

Optional Rules

These are some additional ideas to make play more interesting. Some of them make the game easier, some harder. Others are just for flavor.

Counting HP with a bowl of jelly beans. In this case, literally for flavor. You do damage, you get rewarded with food. Downside: the GM gets full very quickly. You may have to use peanuts or some other, less filling food. "You take 7 damage! *NOM NOM NOM NOM*"

Hewing. If your attack does a huge amount of damage (20+, for example), and it's enough to drop an opponent in one hit, then the remainder of the damage applies to the monster next to it.

Example: Mort the Verbose, an 18th level dwarven fighter with a +2 Battle Axe and 19 STR, shouts out

"FLOCCINAUCINIHIPIILIFICATION!!!"

as he attacks an Ogre with 48 hp. He does 60 points of damage (48 for the word, +4 for the axe, +4 for his STR bonus, and an additional +4 because he's an 18th level Fighter).

The mighty blow kills the Ogre. The remaining 10 damage (losing 2 points because of the Ogre's armor) is applied to the Orc cowering next to the Ogre as Mort's powerful swing tears right through.

Leveling The Playing Field. Powerful armor can render certain PC's nearly invulnerable to monster attack while the PC's rain down high damage words in retaliation. You can level the field a bit with this rule: if a monster rolls a maximum result on a die, roll another die, minus 1 point and add it on to the total. Keep doing that as long as the die keeps coming up maximum.

Example: An Ogre slams Mort with his two-handed great club. He rolls 2d8+7 for damage. The dice come up 2 and 8. Rolling another d8-1 one, he gets another 8 and rolls again. This time, a 4. The total damage is now 27 points (17 + 7 + 3). Ouch.

No Repetition! Repeat words in a given combat are not allowed. Alternatively, each repeated word in an adventure gives a -1 cumulative effect. You might want to keep a list with tally marks next to each word as it's made.

Obey The Timer. Use a timer from some other game or a stopwatch and give each of the players 10 seconds to make their move. If they don't, then declare the action a miss.

Word Combos. If your word can follow the previous players' words to form a sentence, then there's a cumulative +2 damage per additional word that hits the monster when the sentence is completed. If the sentence is derailed, then the damage is lost. Each word does damage normally as it is formed.

Example:

Word 1 THE

Word 2 PEN

Word 3 IS

Word 4 MIGHTIER

Word 5 THAN

Word 6 THE

Word 7 SWORD. Boom! The attack lands with an extra 12 damage!

Word Nazi. ALL words must be appropriate to the action. If you want to attack, then you have to spell out something like "WHAM", "SMACK", "STAB", or "SHOOT". If you want to climb a wall, then you'd have to spell out "ROPE" or "CLIMB" or something like that. Warning—this variant can be extremely challenging. You may want to increase all word pools by a few tiles to compensate.

Dragoons™

Dragoons20 Role-playing Game
1.1 Edition

“The Cartoon Steampunk Fantasy World of Scallywags and Scoundrels”

Dragoons20 is based on the Microlite20 Role-playing Game (RPG) that was originally a trimmed-down, subminiature, version of the Primary Fantasy SRD rules (see license for more info). It has been designed to be quick and easy to play, with a sense of humor and minimal consequences for failure. The goal is to create an even simpler game, but one for which players have instant familiarity and all of the resources of Primary Fantasy SRD (monsters, spells, adventures and equipment) could be used with minimal conversion.

Dedicated to my lovely wife, Sara, and my terrific son, Ross.
Thanks to all my creative play testers.

World ©

Bantamwart, the setting of Dragoons20 is fairly far a field from our own reality or even the classical fantasy settings of Elves and Dwarves. It is an alternate cartoon universe of fairy races, fantasy creatures, magical spells, clockwerk gadgets and steam-powered technology. Bantamwart is a collection of planetoids suspended in the swirling mists of æther. Called æyots, these little moons spin and orbit in chaotic paths – miraculously missing each other. Flying creatures and Blunderwagens freely travel from æyot to æyot. There is no central star; instead, the day light comes from the luminous properties of the ætheric aurora which fades to dark at night, leaving only sparkles and ribbons of faint light.

There are no thundering gods that sit on high taking dominion over the affairs of mortals. Instead the world is alive with spirits that manifest and imbue their believers with strange powers. These small gods are much like our world's Grim Reaper, Tooth Fairy, Easter Bunny, Mother Nature, Father Time, Boogie Monster, and Santa Claus. Other cultures refer to this spirit of all living and inanimate things as Kami, Numen and Animism. Together the small gods are known as the Infinitesimal Immortals. Their power comes from people believing they exist. Communing with the small gods and ancestral spirits gives the shaman their spell casting power. Any believer may ask for their blessing by visiting the Sanctum Sanctorum of the Infinitesimal Immortals and Public Privy – put your coin in the slot, crank the knob, and take the small paper fortune produced.

Technology is wacky and dangerous. Gadgets are often looked upon as abominations or at least as annoyances. Those brave tinkers who manage to make something useful and (mostly) reliable earn some respect from their peers.

The world has lots of magic. Almost everyone can use their Star Powers to perform stunts, feats and spells of various kinds. It is easy to enchant wondrous devices, and most everyone uses them. Never the less magic spells are wild and can go horribly wrong with disastrous mishaps and runaway effects.

Money is a very big motivator for adventurers and creatures, who both like to collect it. The Gildapence (gilded penny – 1GP) is the base unit, with Tuppence (2GP) and Sixpence (6GP) also being common coins. Sub-GP values include the Ha'penny (0.5GP) and the Farthing (0.25GP). Some areas have a local coin called a Slug, made of lead, which is exchanged for 1GP and has no value beyond those areas.

How To Play

Dragoons20 allows a group of players to take the roles of adventuring player characters (PCs) and a dungeoneer (or game master) who moderates the gameplay, runs the adventures and plays the roles of all the non-player characters (NPCs). This RPG focuses on the role-playing and the complex tactical rules have been trimmed to the bone and funny game mechanics have been added to encourage wacky cartoon action. Throughout these rules references to dice are depicted as a number followed by the letter 'D' and another number - 1D20 is a single twenty sided die and 4D6 is four six-sided dice.

Player Characters

Review the rules and then pick a name, a gender, and a race. Then generate your Stats, set your Skill values and choose your Powers and equipment. Once your character is finished, you may also generate a pet Dragon.

Stats

There are 4 stats: Strength (STR), Dexterity (DEX), Intelligence (INT), and Charisma (CHA).

Roll 4D6, and drop the lowest die. Total the remaining 3 dice, and assign that number to the stat of your choice. Repeat until you have assigned numbers to all the stats.

Stat bonus = (STAT-10)/2, round down.

Races

Boggart +2 DEX

Start with 2 powers of your choice

Boggarts are 24" to 30", grumbly collectors of anything that isn't nailed down. They prefer urban environments.

Gnome +1 INT and +1 DEX Start with 2 Tinker powers

Gnomes are 18" to 24", nimble-minded and skilled workers. They easily become extremely focused on their craft to the exclusion of everything else.

Kobold +2 STR Start with 2 Brute powers

Kobolds are 20" to 26" sneaky, pesky and larcenous. They have little compassion for others, bullying and beating lesser creatures.

Grymm +1 INT and +1 STR Start with 2 Shaman powers

Grymm are 20" to 36", dark and mysterious. Their pale skin is in stark contrast to their black hair and black pointy nails. Their faces below their bone masks is rarely seen.

Pixy +2 CHA Start with 1 Rascal power and Fly power

Pixy are tiny 12" flying bundles of chaos. They have extremely short attention spans and seem disconnected to what is going on around them.

Flunkey +2 DEX Start with 1 Burglar power and Fly power

Flunkey are 30" monkeys with eagle wings. Culturally they proudly wear a fez or other funny hat. They can be very excitable.

Pooka +1 INT and +1 CHA Start with 2 Creature powers

Pooka are 30" to 36" shape changing half-beasts. They may look like other wee folk, but have tails, hooves, horns and beast ears. They tend to be jokesters and take life with a very casual attitude.

Brainard +2 INT Start with 2 Hedge Wyzard powers

Brainard are the disembodied minds suspended in a hardened crystal jar filled with luminous liquid. They have excellent mental abilities and may have magical or mechanical means of locomotion and manipulation, by animating any objects they 'dock' into.

Hyzz +1 DEX and +1 CHA Start with 1 Burglar power and Charm Person power

Hyzz are 36" bipedal reptiles. They wear dark goggles over their hypnotic eyes to prevent accidentally charming people. They are extraordinary, and cold blooded, burglars and rascals.

Classes

Characters begin at Level 1 in an occupation, or class, of their choosing. Every level they may remain in the class they are currently, or choose a new class. Beginning characters get 2 additional powers in their starting class.

Heart Points measure your health for fighting battles.

Starting Heart Points (HP) = STR stat + (STR bonus + HP dice)/level (including 1st)

Star Points measure your magical energy for using powers.

Starting Star Points (SP) = INT stat + (INT bonus + SP dice)/level (including 1st)

The classes are:

Brutes –	Skilled in weaponry, dirty brawling and wilderness survival. HP dice + 1D10 /level. SP dice + 1D6 /level.
Burglars –	Talented in thievery, subterfuge and stealth. HP dice + 1D8 /level. SP dice + 1D8 /level.
Rascals –	Bluffers, forgers, beguilers, taunts and masters of wit and song. HP dice + 1D8 /level. SP dice + 1D8 /level.
Hedge Wyzards –	Practitioner of the arcane arts. HP dice + 1D6 /level. SP dice + 1D10 /level.
Tinkers –	Gadgeteers and inventors. HP dice + 1D6 /level. SP dice + 1D10 /level.
Shamans –	Spiritual communicators and casters of divine magic. HP dice + 1D6 /level. SP dice + 1D10 /level.

Flaws

Each character starts with two flaws. These are quirks, personality traits or physical limitations that encourage individuality and role-playing. Remember that you do not have to demonstrate this weakness every time you have the chance, only when you want to. Player characters can earn 1 XP for

- | | |
|-----------------|--|

each flaw, by role-playing them during an adventure so that it affects the story. Feel free to add to or vary these flaws to create unique and interesting characters.

Skills

Skills are used for both focused actions and for reactions, aka saving throws. While there are only a few base skills, by combining skills with different stats you can create many unique permutations.

There are just 7 skills:

- **Tactics** (Tact) is used as a base for all types of attacks and battle tactics.
- **Physical** (Phys) is used for tests of strength or agility, like climbing, jumping, breaking down a door, tackling an opponent, escaping ropes, and bending bars.
- **Subterfuge** (Subt) is used for hiding, moving silently, stealing, picking locks, searching for or setting traps, finding hidden objects, tricking opponents, and ambushing.
- **Knowledge** (Know) is used for tests of applied logic, science, arcane, divine, trivia, and historic lore.
- **Communication** (Comm) is the ability to beguile, intimidate, influence, speak or read a language, and sense, express or repress motives and emotion.
- **Survival** (Surv) is used for things like sensing danger, spot, tracking, foraging, hunting, finding things logically, and determining direction.
- **Recover** (Reco) is used to regenerate heart or star points, or shake off the effects of disease, poison or the unwanted influence of powers.

Skill rank starts at 4 to one skill, 3 to one other skill and 1 to all remaining skills. Each new level additional points are added to skills of your choice.

Skill roll = D20 + skill rank + whatever stat bonus is most applicable to the use + situation modifiers
Roll higher than the situational Difficulty Class (DC) to succeed.

For example:

Climbing would use Physical + STR bonus.

Dodging a falling rock is Physical + DEX bonus.

Finding a trap is Subterfuge + INT bonus.

Picking a pocket or disabling a trap is Subterfuge + DEX bonus.

Spotting a hidden burglar or hunting a buck is Survival + INT bonus.

Hearing a ninja approaching is Survival + INT bonus.

Bluffing past a guard is Subterfuge + CHA bonus.

Intimidating the barbarian leader with a show of might is Physical + CHA bonus.

Remaining calm in the face of a brutal foe is Survival + CHA bonus.

Romantic seduction or haggling down a merchant is Communications + CHA bonus.

Realizing that the cad is handing you a line is Communications + INT bonus.

Convincing the sheriff that you were not poaching from the royal preserve is Communications + CHA bonus.

Noticing the poacher is lying is Communications + INT bonus.

To heal 1D6 Heart Points is Recover + STR bonus (can not be done while in a battle).

To regain 1D6 Star Points is Recover + INT bonus (can not be done while in a battle).

To resist, or avoid, the effects of attacks there are saving checks. Use Recover + STR bonus for Fortitude saves, Physical + DEX bonus for Reflex saves, and saving against Magic (Will save) is Knowledge + INT bonus (or + CHA bonus).

DC Level

- | | |
|----|--|
| 10 | Easy - 50/50 chance of succeeding 1 st time |
| 15 | Moderate - would succeed after several attempts |
| 20 | Difficult - would succeed only with luck on his side |
| 25 | Very Difficult - needs some hefty modifiers, expertise and luck |
| 30 | Extremely Difficult – only possible by the most skilled and powerful |

Pet Dragons ©

Each character may have a magical pet, a companion that accompanies them on adventures. Dragons have the same 4 stats as characters, but only roll 3D6, dropping the lowest die as usual.

Dragoons are unique metamorphic species, or constructs, that grow and gain powers as their master levels up. They start with 3 Creature powers and gain 1 additional power, +1 to all skills, and +1 to any stat for each level the master earns. A Dragoon that grows to a STR 19 or greater can be ridden as a mount. Pick one skill to start at +3. Dragoons have a telepathic link to their master and understand what the masters wishes are without verbal communication.

Starting HP = STR stat + (STR bonus + 1D6)/level (including 1st)

Starting SP = INT stat + (INT bonus + 1D6)/level (including 1st)

Powers

Powers are available to both the PCs and the NPCs. Using a power requires the expenditure of SP. The effect of each power is rated by the amount of SP invested into it. The minimal investment is 1SP and the maximum investment, in a turn, is your level in that power's class, or total level or HD for creature powers. If a power is available in more than one qualifying class then you may combine those levels for determining maximum SP.

Powers can be overcharged by spending SP on successive turns until they are released. When overcharged the maximum SP is your levelx3 or HDx3 (3 turns). You can not move or perform other actions while charging a power.

Once successful, a power may be maintained by continuing to expend SP each successive turn. Moving will not disrupt the power, but using other powers or spells will cause another skill check.

Level Advancement

Players earn experience points (XP) for role playing. During any given session a character may earn up to 5 experience points:

- One point for contributing to moving the story along.
- One point for playing according to the role of their current character class.
- One point for making the players or Dungeoneer laugh and have fun.
- Two points, one for each flaw that is role played during the session.

Add up the XP points earned in every encounter you take part in. When the total = 10 x your current level, you've advanced to the next level. Reset the total to the remainder after advancing.

Each level adds:

+1 HP dice + STR bonus to Heart Points

+1 SP dice + INT bonus to Star Points

+1 to 5 different skills

One new power of your choosing from your current class

If the level divides by three (i.e. level 3, 6, 9, etc.) add 1 point to STR, DEX, INT or CHA.

After leveling up a character may continue with the current class or chose any other class to multi-class. Keep track of total level and individual class levels.

Brute Powers

Brute powers come from ancient martial techniques and living in the wilderness.

Power	Description
Acrobatic Strike	Avoid obstacles and hazards to close and immediately attack in one action, 5ft/1SP
Acute Senses	+1/SP search or listen check

Feeblemind	-1/SP from subject's INT score for SP turns
Fireball	1D6/SP fire burst ranged attack (area)
Fly	+5ft/SP move through air
Haste	3x speed for 1 round/SP
Heal	+1/SP first aid check, 1D6/SP healing touch
Invisibility	Subject is invisible for 1 turn/SP or until it attacks
Knock	+1/SP to open locked or magically sealed door check
Light	Staff or wand shines like a torch for 10 minutes/SP, until dismissed
Lightning Bolt	1D6/SP electrical bolts ranged attack (area)
Mage Armor	+1/SP to AC for SP turns
Magic Missile	Magical missiles, 1D6/SP damage, ranged (area)
Magic Pocket	Opens a portal to a unique pocket dimension, 1SP
Passwall	Creates 1ft radius/SP passage through wood or stone wall, 1inch thick/SP for SP turns
Scrying	Spies on subject from a distance via Dagoon, 5ft/SP
See Invisibility	+1/SP sense check to reveal invisible creatures or objects
Shapechange	Transforms user into a 1HD/SP creature from the local area Encounter table for 1 turn/SP (you must have encountered that creature before)
Sleep	1D6 HD or levels of enemies/SP slumber, DC10+SP to wakeup (area)
Slow	Makes one creature up to 1 HD/SP move at only 5ft/turn
Sonic Blast	1D6/SP sonic disruption ranged attack (area)
Spell Turning	Reflect 1 spell rank/SP back at caster
Spider Climb	+1/SP climb check to walk on walls or ceilings
Sprint	3x speed for 1 round/SP
Stone Shape	Sculpts 1 CUBFT/SP of stone into any shape
Stoneskin	Ignore SP points of damage per attack for SP turns
Telekinesis	Lift 1D6 pounds/SP for SP turns
Tunnel	+2.5ft/SP move through soil
Web	1D6 HD or levels of enemies/SP cannot move (can attack), DC10+SP to escape (area)
Will-o-wisps	Creates bouncing glow 1 minute, 0SP

Tinkers

Tinkers earn their powers by apprenticeship, study and experimentation.

Power	Description
Appraise	+1/SP estimate price check
Craft Tinker Tools	Craft tools to help tinker, +2 Know, 0SP & 10GP
Craft Traps & Locks	Craft complex traps and locks. Costs 100GP/EL, , max level EL. DC 10 for EL1, DC 15 for EL2, DC 20 for EL3, DC 25 for EL4, and DC 30 for EL5
Create Blunderwagen	Craft a vehicle capable of hauling 1 to 6 passengers and gear up to 50 miles/day, using the sprint, fly, swim, tunnel, or blink powers, max level passengers – every 20 miles it must be refueled which will require purchasing fuel for 10GP, or scavenging the fuel. Any maneuvers will require a pilot check; a failure requires an Operate Dangerous Device check. Cost 0SP, 1000GP and 1 day/passenger
Create Bomb	Craft dangerous explosives with any attack power with area affect, takes 1 day to make, max level SP. must invest additional SP equal to power rank embedded. DC 10 for 1D6 & 50GP, DC 15 for 2D6 & 100GP, DC 20 for 3D6 & 200GP, DC 25 for 4D6 & 400GP, DC 30 for 5D6 & 800GP
Create Clockwerk Device	Craft small items (watches, rings, compasses, pocketknife, coins, jewelry, monocle, goggles...) with any skill bonus, takes 1 day to make, max level SP. Costs 0SP and DC 10 for +1 & 50GP, DC 15 for +2 & 100GP, DC 20 for +3 & 200GP, DC 25 for +4 & 400GP, DC 30 for +5 & 800GP – owner still spends SP equal to skill bonus to power gadget every use
Create Infernal Weapon	Craft dangerous weapons (blunderbuss, belchers, rayguns, electro-blades, grenades, ...) with any class or creature attack power, takes 3 days to make, max level SP. DC 10 for +1 & 50GP, DC 15 for +2 & 100GP, DC 20 for +3 & 200GP, DC 25 for +4 & 400GP, DC 30 for +5 & 800GP – owner still spends SP equal to bonus to power gadget with use
Create RC Construct	Craft clockwork or steam-powered construct capable of following simple commands (command words, whistles, hand-signals): move, follow, attack, push, lift, day. It has no mind of its own (0 INT & 0 CHA). 3D6 STR, 2D6 DEX and 1 HD/1000GP, max level SP – every day it must be refueled which will require purchasing fuel for 10GP, or scavenging the fuel. Cost 0SP
Disable Device	+1/SP sabotage check to disarm traps, break gadgets and disable magical contraptions. DC = SP rating for the device + any Obfuscation rating or DC = 10+EL rank. Causes 1D6/SP damage to device.
Evasion	+1/SP to reflex check to avoid all damage (not just half)
Feeblemind	-1/SP from subject's INT score for SP turns
Fix Device	+1/SP gadgeteering check, 1D6/SP repair HP
Improvise Tinker Tools	Can find objects that will serve as tinker tools, DC 10 for -1 Know, DC 15 for +0 Know, DC 20 for +1 Know and DC 25 for +2 Know. Costs 0SP
MacGyver Device	Combine the functions of a several small sized devices or weapons of any kind to build a new device combining those powers at twice the SP rating. Cost is new level SP. DC = 10+SP rating. Time 1D6 turns.
Multi-shot	+ 1 repeat target attack this turn/SP, cannot change attack type, also ends if an attack fails
Obfuscate Device	+1/SP gadgeteering check to make it harder to disable or sabotage a device by increasing the defense rating by +1/SP
Operate Dangerous Device	+1/SP gadgeteering check. Any time you use an Infernal Weapon or Blunderwagen it will require skill checks, failing a skill check for these devices requires a further check on Operate Dangerous Device or the device will suffer 5D6 HP damage that will need repair to operate again. A Blunderwagen will limp along, at 1D6x5ft/turn until it reaches a place to repair it.
Sabotage Device	Gadgeteering check to cause device to explode, DC = SP rating for the device + any Obfuscation rating. Causes explosion of 1D6 /SP in 30ft area.
Scavenge Parts	Find useful items in 10 minutes, DC 10 for fuel, DC 15 for beams, plates, frames or fasteners, DC 20 for pulleys, gears, levers, fins, or belts and DC 25 for bellows, springs, counter weights, boilers, or mechanism parts, 0SP
Slippery Mind	+1/SP will check against mind reading or control
Transform Device	Change the power of a device of any kind into a new power with the same SP rating, max level SP. DC = 10+SP rating. Cost rating SP. Time 3D6 turns.
Trick Shot	+1/SP for ranged attack that is behind cover, very small or other penalty
Use Device	Able to use any other classes devices at a level equal to the tinker's level, 0SP
Weird Science	+1/SP science check to understand principles of any power or mechanical principle

Shamans

A shaman's divine powers are passed down from their ancestors and favors granted by local spirits. Powers in gray are craft powers, the remaining are spell powers.

Power	Description
Brew Healing Potion	Create a drink or ointment usable by anyone to add +1D6 to recovery checks for SP (star potion) or HP (heart potion), must invest additional SP equal to spell rank embedded, 10GP/SP, max level SP
Brew Potion	Craft check to store any known non-attack spell in a drink or ointment usable by anyone, must invest additional SP equal to spell rank embedded, 10GP/SP, max level SP
Craft Charm	Craft charm, 0SP & +2 resist spells, 100GP
Craft Totem	Craft totem, 0SP & +2 cast spells check, 100GP
Craft Ward	Craft ward, 0SP & +2 AC, 100GP
Enchant Rune/Tattoo	+1/SP to enchant check to store any spell known in a permanent rune on objects or permanent tattoo on person. It is released using a simple trigger you specify, user of rune must spend SP equal to spell rank embedded, 200GP/rank, max level SP
Scavenge Ingredients	Find potion ingredients in 10 minutes, DC 15 for Star Potion, DC 20 for Heart Potion and DC 25 for other potions, 0SP
Astral Projection	Projects you and companions onto Astral Plane, 1 turn/SP
Augury	Learns whether an action will be good or bad (1 yes or no question), GM digression. Costs 1SP
Awaken	Animal or object gains +1 INT/SP (max 18) and speech, for 1 hour/SP

Entangle	Make plants entangle enemies in 10' radius/SP for 1 turn/SP
Ethereal Jaunt	Become ethereal for 1 turn/SP, can fit through tiny spaces, but not solid walls
Faerie Fire	Outlines subjects with light for 5 turns/SP, cancels blur, invisibility, etc. Can be dismissed
Freedom of Movement	Subject moves normally despite impediments or spells for 1 turn/2P, ranged
Guidance	+1/SP to attack roll, +1/SP to skill check. Lasts for 1 turn/SP
Heal	+1/SP first aid check, 1D6/SP healing touch
Neutralize Poison	+1/SP to first aid check to cure poison or detoxify venom in or on subject
Obscuring Mist	Fog surrounds you, provides concealment (DC 25) for 1 turn/SP
Produce Flame	Fire damage 1D6/SP, touch or thrown.
Remove Paralysis	+1/SP to medicine check to free one or more creatures from paralysis or slow effect.
Spying	Spies on subject from a distance via Dragoon, 10ft/SP
Shadow Jaunt	+5ft/SP move by teleportation but only through shadows
Speak with Animals	+1/SP communicate check to talk with animals for 1 turn/SP
Speak with Dead	Speak with corpse. Answers one question/SP with Comm+INT check.
Speak with Plants	Talk to normal plants and plant creatures for 1 turn/SP with Comm+INT check
Summon Creature	1 HD/SP to return last banished creature or random encounter from area if more than 24 hours, lasts 1D6 turns
Summon Swarm	Summons swarm of bats, rats, or spiders for 1 turn/SP
Telepresence	Hear and see at a distance for 5ft/SP with sense check
True Seeing	Lets you see all things as they really are for 1 turn/SP
Word of Recall	Move yourself, touched objects and willing creatures by teleportation any distance, but only to your sanctuary or home, 1 object or person/SP

Creature Powers

These powers are related to the natural or supernatural abilities of Dragoons and creatures. There are three basic kinds of creature powers: skill check bonuses, abilities and attacks.

Power	Description
Acid	1D6/SP dissolve touch attack
Acute Senses	+1/SP search or listen check
Ambush	+1/SP to hit when already hiding
Blink	+5ft/SP move by teleportation
Bonus Attack	+ 1 repeat attack this turn/SP, cannot change attack type, also ends if an attack fails
Brawl	+1D6/SP damage in unarmed combat
Breath Fire	1D6/SP fire breath ranged attack (area)
Breath Water	can breath underwater 1 turn/SP
Bull Rush	+2 to hit, 1D6/SP damage, -2 AC when doing a full move through combat
Camouflage	+1/SP to hide using foliage and natural terrain to hide even when being watched
Charm Person	+1/SP beguile check, command one person (move, follow, attack, push, lift, stand) for 1 turn/SP
Clever	+1/SP Know check
Danger Sense	+1/SP detect traps or ambush check
Deceptive	+1/SP Subt check
Dodge	+1/SP to AC for SP turns
Drain	1D4/SP drains target's SP, touch attack, ignores armor
Fear	Makes one person up to 1 level or HD/SP run away for 1 turn/SP
Ferocity	fight an additional round/SP, if reduced to 0HP
Fly	+5ft/SP move through air
Frost	1D6/SP ice ranged attack (area)
Growl	+1/SP intimidate check
Harden	+1/SP to AC for SP turns
Heal	+1/SP first aid check, 1D6/SP healing touch
Hunter	+1/SP tracking or hunting check
Inner Might	+1/SP fortitude check
Invisibility	Subject is invisible for 1 turn/SP or until it attacks
Lightning Bolt	1D6/SP electrical bolts ranged attack (area)
Master Climber	+1/SP climb check
Natural Swimmer	+1/SP swim check
Pack Tactics	+1/SP to hit when in combat with master (master gains +2 combat)
Paralysis	Immobilizes 1 HD or level of enemies/SP, lasts 1 turns/SP
Quick Reflexes	+1/SP reflex check
Regenerate	+1/SP HP recovery check
Shapechange	Transforms user into a 1HD/SP creature from the local area Encounter table for 1 turn/SP (you must have encountered that creature before)
Slam	1D6/SP crush or stomp touch attack
Sleep	1D6 HD or levels of enemies/SP slumber, DC10+SP to wakeup (area)
Sneaky	+1/SP move silently check
Sonic Blast	1D6/SP sonic disruption ranged attack (area)
Spider Climb	+1/SP climb check to walk on walls or ceilings
Spray	1D6/SP water spout ranged attack (area)
Sprint	3x speed for 1 round/SP
Stinger	1D6/SP poison ranged attack, DC10+SP to resist or take SP damage/turn
Tangle	+1/SP grapple check to immobilize for 1 turn, touch attack, ignores armor
Tunnel	+3ft/SP move through soil
Venom	1D6/SP poison touch attack, DC10+SP to resist or take SP damage/turn
Web	Immobilizes 1 HD or level of enemies/SP, DC10+SP to escape (area)
[Class]	[any ability from the master's class if Dragoon or any class if creature]

Equipment

Brutes start with 1 piece of armor, 1 melee weapon, 1 ranged weapon and 1 knife or dagger.

Rascals & Burglars start with 1 ranged weapon and 1 knife or dagger.

Tinkers, Shamans & Hedge Wyzards start with 1 knife or dagger.

Everyone starts with 1 gear pack of their choice.

Dungeoneer

This section deals with rules that are used by the Dungeoneer, who acts as game master. The goal of the Dungeoneer is to make the game as enjoyable for the players as possible while still having fun themselves.

Combat and Other Hazards

If HPs reach 0 the character, creature or Dragoon goes unconscious and can perform no actions or move. They do not continue to take damage. Any negative HP is reset to 0. Each turn roll a skill check Recover+STR bonus against DC 15 to avoid dying. If healed, before dying, to 1 HP, or more, they regain consciousness and can move or perform actions again. Dead characters must go to be judged in Hell before they return. Nobody has to be dead forever (See Hell page 18).

Initiative:

Use DEX for initiative order. Highest DEX goes first, lowest DEX goes last. Everyone can move and do one additional action each turn; move again, attack, use a skill or power, etc. The initial move can be skipped to a draw weapon or device action.

Attack Values:

Brawn Attack = Tact+STR bonus (- Armor rating*)

Target Attack = Tact+DEX bonus (- Armor rating*)

Mental Attack = Tact+INT bonus (- Armor rating*)

Influence Attack = Tact+CHA bonus (- Armor rating*)

*Spellcasting does not work as well while wearing armor. Any attack that uses spellcasting must subtract Armor rating from attack value.

Attacks Against Armor:

Armor Class (AC) = 10 + DEX bonus + Armor rating.

Touch attacks ignore armor rating.

Add attack value to a 1D20 roll. If higher than your opponent's Armor Class (AC), it's a hit. Natural 20 is automatically a critical doing maximum damage. Natural 1 is a fumble, roll on the Fumble Table.

Verses Attacks:

Some kinds of attacks resolve like skills and then are opposed by saving checks.

The attacker adds attack value to a 1D20 roll. The defender adds their save check to a 1D20 roll. The winner of the contest is the one with the higher total.

Doing Damage:

Roll damage dice based on weapon or power used. Add STR bonus to melee damage, x2 for 2-handed weapons. Everyone gets one unarmed attack for 1D6 + STR bonus damage if not using weapons or powers.

Powers with area attacks can split the damage over as few or as many targets as the attacker chooses. The damage is split over all targets as evenly as possible. Each target can save independently.

Falling: 1D6 damage per 10', half damage on Reflex save check. DC=depth fallen in feet

Spikes: add +1 point to falling damage per 10' fallen, max +10

Poison: Fortitude save check to avoid or stop continuing damage.

Extreme Heat & Cold: If not wearing suitable protection, Fortitude save check once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed save.

Disease: Fortitude save check to avoid or succumb to pox (-1D6 to each Stat), vampyrism, lycanthrope, shades disease, or toxic zombism

Hell ©

When a character dies they go to Hell to be judged, with full HP, SP and equipment. There are many circles of Hell – roll 3D6 and consult the chart. If you die in Hell you roll for another circle of Hell. Nobody said Hell was fun, but it is funny. Each judge is 6HD, 50HP, 50SP, and AC15 (it is just too hot to wear armor in hell all day). If they run out of HP or SP they will leave for 10 turns to recover. You earn no XP if you do not role-play the 24 hour penalty. Yes, Dragoons, constructs and the living dead can visit Hell.

Each judge can grow bored of watching you try to accomplish your escape task. Each turn they have a 10% chance to attack you in an attempt at spicing things up. They don't call it Hell for nothing.

Roll	Circle of Hell, Judge	Escape	24 hour Penalty
1	Purgatory, Peanuts Slam 18	1D6 Subt+DEX bonus checks in a row	Stinks in 30ft. Radius
2	Abyss, Smedly - Lightning Bolt 18	1D6 Surv+INT bonus checks in a row	Speaks loudly, bad vision
3	Hades, Vixen - 6D6 battle axe	1D6 Phys+STR bonus checks in a row	Gear doesn't return yet
4	Styx, Angus - Bull Russ 18	1D6 Know+INT bonus checks in a row	Gender changed
5	Inferno, Drudley - Breath Fire 18	1D6 Comm+CHA bonus checks in a row	Speaks in rhyme or song
6	Karaoke Bar, Miley - Sonic Blast 18	1D6 Reco+STR bonus checks in a row	Doesn't recognize anyone

Fumbles & Critical Hits

If a player rolls a natural 20 (the actual result on the die) on a skill or combat check the best possible result will happen. This would include maximum damage or effect on rolled dice.

There is a consequence for failure, and rolling a natural 1 on a skill check or combat check will result in disastrous results. There are four categories of fumbles – skill fumbles are just funny things that interfere with your progress, battle fumbles are the result of making mistakes during combat, magical misfires are the result of magic gone wild, and the snafu table is for gadgets and technology that goes wrong.

Roll	Skill Fumble	Battle Fumble	Magical Misfire	Gadget Snafu
1	Costs +1D6SP	Costs +1D6SP	Costs twice as much SP	Gadget needs fixing, DC 15
2	Makes incredibly loud noise	Makes incredibly loud noise	Makes incredibly loud noise	Makes incredibly loud noise
3	Floor breaks open and falls 10ft	Armor falls off	Caster shrinks to ½ size, DC20 to recover	Needs new part
4	Brass pot drops on character's head, 2D6	Drop shield	Causes caster to glow, DC20 to recover	Causes operator to glow, DC20 to recover
5	Angry Imp teleports in to fight	Drop primary weapon	Angry Imp teleports in to fight	Falls to pieces, 20 minutes to fix, DC 15 to fix
6	Blinded for 1D6 turns	Blinded for 1D6 turns	Everyone in 15ft stinks	Everyone in 15ft stinks
7	Slips and falls to ground prone, -4 AC	Slips and falls to ground prone, -4 AC	Causes casters gravity to reverse for 2 turns	Gadget will overheat and explode (6D6) if not repaired in 1D6 turns, DC 20
8	All gear falls off	Pick a random target	Pick a random target	Pick a random target
9	Drop all money	Opponent gets 1 free attack	Becomes twice as powerful, but then causes 3D6 damage	Becomes twice as powerful, but then explodes, 6D6 damage
10	Randomly pick another skill	Pants drop, can't move 2 turns	Randomly pick another spell	Becomes another gadget, DC 20 to repair
11	Drains all SP of skill user	Drains all SP of combatant	Drains all SP of caster	Drains all SP of operator
12	Works opposite of intention	Aggravates all enemies in view to target combatant	Electrocutes caster, 3D6	Electrocutes operator, 3D6
13	Works opposite of intention	Weapon is stuck in obstacle or wall, DC 15 brawn check to free	Caster catches fire, 2D6/turn, DC 10 to put out	Catches fire, 2D6/turn to continue operating, DC 10 to put out, DC 15 to repair
14	Forget how to use that skill for 1D6 turns	Weapon gets stuck in clothes or belt for 1D6 turns	Forget how to cast that spell for 1D6 turns	Blinks out of existence, returns in 1D6 turns
15	Works opposite of intention	Spun around, lose 1 turn	Sputters out, lose 1 turn	Drops to the ground, 1 turn to pickup
16	Believes the skill did work, can't be convinced it didn't by other player characters	False sense of security, -4 AC for 1D6 turns	Dragoon head appears out of portal and breathes fire toward caster 4D6 damage	Rivets, screws and bolts shoot out of it every turn doing 2D6 damage to random target until repaired DC 15
17	Start hiccups, all checks -4 until recover DC 15	Bump friend or Dragoon, causing them to be prone for 2 turns	Ultrasonic sound causes 4D6 HD or levels of creatures to sleep	Ultrasonic sound causes 4D6 HD or levels of creatures to sleep
18	Scared, run away randomly for 1D6 turns	Scared, run away randomly for 1D6 turns	Caster is scared and runs away randomly for 1D6 turns	Shoots/moves away randomly 1D6 turns, Speed 2D6 x5ft/turn
19	Works opposite of intention	Attack a friend, 1 turn	Works opposite of intention	Works opposite of intention
20	5 Angry Imps gate into fight	Attack your Dragoon, 1 turn	Explosion 6D6 damage in 15ft	Explosion 6D6 damage in 15ft, DC 20 to repair

Traps

Whether in a dungeon or in a nobleman's manor house, adventurers can be hurt, or even killed, without encountering a monster of any kind, as many places are filled with debilitating or lethal traps set to keep wayward hands off of the fantastic treasures within. Typical traps of varying Encounter Levels are summarized below.

The entries for traps include the following information:

Name of trap: Attack (damage type), Save DC, Search DC, Disable DC

- Name of the trap.
- Attack shows the traps attack bonus or type of effect.
- Damage shows the amount and type of damage the trap deals.
- Save DC lists the Phys+DEX bonus check DC needed either to avoid the trap entirely, or to take only ½ the listed damage (if this is possible).
- Search DC lists the DC for the Surv+INT bonus check necessary to find the trap without triggering it.
- Disable DC lists the DC for the Subt+DEX bonus check necessary to disarm the trap safely.

EL1 Traps

Basic Arrow Trap: Atk +10 (1d6, arrow); Search DC 20, Disable DC 20.

Camouflaged Pit Trap: 10 ft. deep (1d6, fall); Save DC 15 to avoid; Search DC 24, Disable DC 20.

Poison Dart Trap: Atk +8 (1d4 plus poison, dart); Search DC 20, Disable DC 18.

EL2 Traps

Burning Hands Trap: spell effect (1d4, fire); Save DC 11 for ½ damage; Search DC 26, Disable DC 26.

Large Net Trap: Atk +5 (—); Save DC 14 to avoid; Search DC 20, Disable DC 25.

Pit Trap: 40 ft. deep (4d6, fall); Save DC 20 to avoid; Search DC 20, Disable DC 20.

EL3 Traps

Fire Trap: spell effect (1d4+3, fire); Save DC 13 for ½ damage; Search DC 27, Disable DC 27.

Pit Trap: 60 ft. deep (6d6, fall); Save DC 20 to avoid; Search DC 20, Disable DC 20.

Poisoned Arrow Trap: Atk +12 (1d8 plus poison, arrow); Search DC 19, Disable DC 15.

EL4 Traps

Lightning Bolt Trap: spell effect (5d6, electricity); Save DC 14 for ½ damage; Search DC 28, Disable DC 28.

Spiked Pit Trap: 60 ft. deep (6d6, fall), Atk +10 (1d4 each, 1d4 spikes); Save DC 20 to avoid; Search DC 20, Disable DC 20.

Wall Scythe Trap: Atk +20 (2d4+8, scythe); Search DC 21, Disable DC 18.

EL5 Traps

Falling Block Trap: Atk +15 (6d6, slam); Search DC 25, Disable DC 17.

Fireball Trap: spell effect (1d4+7, fire); Save DC 16 for ½ damage; Search DC 29, Disable DC 29.

Poisoned Wall Spikes: Atk +16 (1d8+4 plus poison, spikes); Search DC 17, Disable DC 21.

EL6 Traps

Compacting Room Trap: walls move together (12d6, crush); Search DC 20, Disable DC 22.

Lightning Bolt Trap: spell effect (10d6, electricity); Save DC 14 for ½ damage; Search DC 28, Disable DC 28.

Spiked Pit Trap: 100 ft. deep (10d6, fall), Atk +10 (1d4+5 each, 1d4 spikes); Save DC 20 to avoid; Search DC 20, Disable DC 20.

EL7 Traps

Black Tentacles Trap: spell effect (tentacles) Atk +7 (1d6+4 each, 1d4+7 tentacles); Search DC 29, Disable DC 29.

Chain Lightning Trap: spell effect (11d6 to nearest target +5d6 each to up to 11 secondary targets, electricity); Save DC 19 for ½ damage; Search DC 31, Disable DC 31.

Well-camouflaged Pit Trap: 70 ft. deep (7d6, fall); Save DC 25 to avoid; Search DC 27, Disable DC 18.

EL8 Traps

Destruction Trap: spell effect (death); Save DC 20 (Phys+STR bonus) for 10d6 damage; Search DC 32, Disable DC 32.

Power Word Stun Trap: spell effect (stun 2d4 rounds); Search DC 32, Disable DC 32.

Well-camouflaged Pit Trap: 100 ft. deep (10d6, fall); Save DC 20 to avoid; Search DC 27, Disable DC 18.

EL9 Traps

Dropping Ceiling: ceiling moves down (12d6, crush); Search DC 20, Disable DC 16.

Incendiary Cloud Trap: spell effect (4d6/round for 15 rounds, fire); Save DC 22 for ½ damage; Search DC 33, Disable DC 33.

Wide-mouthed Spiked Pit with Poisoned Spikes: 70 ft. deep (7d6, fall), Atk +10 (1d4+5 plus poison each, 1d4 spikes); Save DC 20 to avoid; Search DC 20, Disable DC 20.

EL10 Traps

Crushing Room: walls move together (16d6, crush); Search DC 22, Disable DC 20.

Crushing Wall Trap: Atk automatic (18d6, crush); Search DC 20, Disable DC 25.

Energy Drain Trap: Atk +8 (2d4 negative levels for 24 hours); Save DC 23 to avoid; Search DC 34, Disable DC 34.

Encounters

Metropolis 1D12

1 Boggart	HD 1d8 (4HP)	AC 15	Shortsword +3 (1d6) or sling +1 (1d4)

9	Werebeast (hybrid form)	HD 6d12+7 (46HP)	AC 16	Claw +6 (1d6+3), 20% chance to catch lycanthropy
10	Zombie	HD 2d12+3 (16HP)	AC 11	Slam +2 (1d6+1) or club +2 (1d6+1), 20% chance to turn catch toxic zombism

Wilderness 1D12

1	Badger or Beavole	HD 1d8+2 (6HP)	AC 15	Claw +4 (1d2-1)
2	Bandersnatch	HD 4d8+16 (34HP)	AC 16	Talons +6 (2d6+4)
3	Bugg or Spyder	HD 1d8 (4HP)	AC 14	Bite +4 (1d4-2 plus poison)
4	Bumble Beast	HD 1d8+1 (5HP)	AC 15	Sting +4 (1d6+4 plus poison) or Bite +4 (3D6)
5	Griffon	HD 7d10+21 (59HP)	AC 17	Bite +11 (2d6+4)
6	Hill Giant	HD 12d8+48 (102HP)	AC 20	Greatclub +16 (2d8+10) or rock +8 (2d6+7)
7	JubJub Bird	HD 5d10+25 (52HP)	AC 15	Claw +9 (1d6+5)
8	Ogre	HD 4d8+11 (29HP)	AC 16	Greatclub +8 (2d8+7) or javelin +1 (1d8+5)
9	Pixy	HD 1d8 (4HP)	AC 18	Bite +4 or Charm Person 3
10	Troll	HD 6d8+36 (63HP)	AC 16	Claw +9 (1d6+6)
11	Wolf	HD 2d8+4 (13HP)	AC 14	Bite +3 (1d6+1)
12	Wyvern	HD 7d12+14 (59HP)	AC 18	Sting +10 (1d6+4 plus poison) or Talon +10 (2d6+4) or Bite +10 (2d8+4)

Creatures

Skills: Each creature has a bonus to each skill equal to the creature's number of Hit Dice (HD). If the creature is intelligent, add +3 to one skill. Add stat bonuses to suit and as logic dictates. This is intentionally kept open. If you need a sneaky bugbear, assign the +3 bonus to Subterfuge. If a warrior, give +3 to Tactical. For a spell-caster assign the +3 to Knowledge or Communication and also give levels of Hedge Wyzard or Shaman (see below).

Creature Advancement: To make a tougher creature, add more Hit Dice. Each additional HD adds one to the skill and combat bonuses. For each doubling of the Hit Dice, increase the die size for attacks (ie, d4->d6, d6->d8, etc).

Alternatively, for intelligent creatures, you can add class levels. Start with the base Hit Dice, and add levels of Brute, Burglar, Rascal, Tinker, Hedge Wyzard or Shaman as required.

Create your own: Assign Hit Dice (D8(5HP) for most things, D12(7HP) for Magical Beasts and Living Dead). Attack bonus and skill level = number of Hit Dice. If it's an intelligent creature give it a +3 bonus to one skill. Other skills are just +HD. Add stat bonuses to suit. Equip and add powers as desired.

Legacy Rules

This world setting does not include these races or classes, but some Dungeoneers may wish to add them back for their own settings.

Human	-	Start with 4 powers of your choice
Dwarf	+2 STR	Start with 2 Fighter powers
Elf	+2 INT	Start with 2 Hedge Wyzard powers
Halfling	+2 DEX	Start with 2 Burglar powers
Half-orcs	+4 STR and -2 INT	Start with 2 Fighter powers
Half-elves	+1 DEX	Start with 3 powers of your choice
Lizardmen	+2 STR, +2 DEX and -2 INT	Start with 2 Brute powers
Paladins –	Spiritual Warriors with divine powers. Every 3 rd level pick from Shaman power instead of Brute power. HP dice +1D10/level. SP dice + 1D6/level.	
Rangers –	Skilled woodsmen and hunters and minor spell powers. Every 3 rd level pick from Shaman power instead of Brute power. HP dice + 1D8/level. SP dice + 1D8/level.	
Illusionists –	Spellcasters with a mastery of illusions. Use Hedge Wyzards powers. HP dice +1D6/level. SP dice +1D10/level.	
Druids –	Nature's priests and guardians of ancient secrets. Use Shaman powers. HP dice +1D6/level. SP dice +1D10/level.	
Bards –	Musical entertainers with the wisdom of wandering both near and far. Use Rascal powers. HP dice +1D8/level. SP dice + 1D8/level.	
Sorcerers –	Practitioner of the arcane arts. Use Hedge Wyzards powers. HP dice +1D6/level. SP dice + 1D10/level.	
Wizards –	Practitioner of the arcane arts. Use Hedge Wyzards powers. HP dice +1D6/level. SP dice + 1D10/level.	
Clerics –	Religious servants and casters of divine magic. Use Shaman powers. HP dice +1D6/level. SP dice + 1D10/level.	
Rogues –	Thieves and outlaws. Use Burglar powers. HP dice +1D8/level. SP dice + 1D8/level.

Dragoons20
1.1 Edition

The unique fantastical world of Bantamwart is filled with wondrous magic and whimsical contraptions. It is inhabited by scallywags, scoundrels and creatures of the imagination.

Players become roguish adventurers, exploring the æyots (floating islands) with rayguns, blunderbusses and magical swords while sailing the ætheric mists in their rocket powered blunderwagens.

- ❖ Play as any of nine fantasy races
- ❖ Build your career in six roguish classes
- ❖ Encounter creatures and beasts of fairy tale imagination
- ❖ Master gadgets, powers and skills that are as personalized as your wildest dreams
- ❖ Frolic and play with the wacky game mechanics
- ❖ Surrender yourself to the chaos and enjoy the fun
- ❖ Compatible with rules and accessories you may already have

ZOMBIEPOCALYPSE

by Mike Berkey (michael.berkey@gmail.com), Copyright 2008. For more Microlite20 awesomeness, head over to the Microlite20 website at <http://www.microlite20.net>.

This game is based on SpyLite, although MicroModern will work just as well. For more ideas on how to tweak the system to fit that zombie movie feel, see below under “Dials”.

Dials

Default SpyLite is based on the assumption that even first level characters are awesome. Characters should be knife-fighting Nazi spies on the top of a speeding train, sniping foes while hanging upside down from a helicopter in the dead of night during the worst storm of the season...this is SpyLite's default power level...and it's not necessarily very gritty. It's great for a *Resident Evil*-type game, not so much for *Dawn of the Dead*.

This is why ZombiePocalypse has “Dials”. **Enable any or all of the following Dials to tone down the players' capabilities.** Or just use MicroModern as the base rule set instead (or do both):

Fear. Fear is the players' worst foe. In any situation where the players are suddenly confronted with zombies or the supernatural, make a **Fright Check**. Use Int or Str + Phys vs a DC equal to twice the strongest monster's hit Dice plus 10. Add +1d6 to the DC if the monster is part of a group, or +2d6 if the monster is part of a very big group.

The penalty for failing a Fright Check varies depending on how badly the roll went. Effects can range from -4 to hit and skill rolls at the low end all the way up to running away, completely melting down, or even tossing your cookies. Effects will typically last 1d6 rounds or more.

Gearless. Sometimes the players are not part of an Agency. In this scenario, they do not have gear points. Whatever gear they have is limited to what they would reasonably have on them at the start of the adventure or find during their explorations. Talents dealing with gear are not available.

Gritty. HP is calculated by rolling 1d6+Str mods per level instead of the usual MicroLite way.

Gore-Fest. Any hit that does more damage than half the target's total HP sprays everything nearby with blood, bits of bone, and internal organs. Critical hits do maximum damage PLUS the rolled amount. Any attack that does a significant amount of damage (GM's

call) may have additional game effects, such as slowing movement, skill penalties, bleeding, or occasional bouts of unconsciousness.

Unremarkable. The players do not have access to Talents and Action Points may only be used to heal.

Zombies

Zombies come in a variety of flavors. Before adding them into your adventure, you should consider their motivations: Are they after brains? Do they eat flesh? Do they exist to spread the zombie plague? Are they under the control of some agency, such as a wizard or government research agency? Or are they just freak mutants, created by a toxic waste spill?

You also need to decide how fast your zombies move. Shambling zombies are less dangerous than the running variety.

Animated Body Parts. Usually the result of a dismembered zombie refusing to die, most animated body parts have no effective attacks. The entry below is for an animated arm or hand.

Animated Parts. HD 1d6 (3 HP), AC 14, Grab +0 (Str 8) or by weapon -2 if they can hold one.

Zombie, Acid-spitters. This is a template for a zombie capable of spitting acid or poison. Simply add a ranged attack that does 2d6 acid damage. This attack counts as a “bite” attack if the zombie plague is being used (see below).

Zombie, Dog. *HD 2d12+6 (20 HP), AC 12, Bite +3 (1d6+4).*

Zombie, Giant Crocodile. *HD 7d12+49 (95 HP), AC 18, Bite +14 (1d10+10) or Tail Slap +14 (3d6+10).*

Zombie, Gooey. A less resilient version of the normal zombie, suitable for use in shambling hordes.

Zombie, Gooey. HD 1d12+1 (7 HP), AC 10, Slam +0 (1d6+1) or Grab +0 (Str 12). Grab is then followed by Bite +0 (1d6+1).

Zombie, Hulk. Unstoppable, huge and single-minded, this zombie is a tank. For larger versions, add more HD and DR. In the movies, these types of zombies tend to be the result of military experimentation and are usually heavily armed and armored.

Zombie, Hulk. HD 6d12+30 (69 HP), AC 14, Slam +11 (1d6+5) or Grab +11 (Str 20), DR 3.

Zombie, Raven. Avian scavengers feeding on the undead tend to become infected with the disease themselves.

Zombie, Raven. HD 1/4 (2 HP), AC 14, Peck or Claw +4 (1d6-4) or Flutter. If a Peck hits by more than 5 points over the target's AC, the target is blinded for 1d6 rounds. Special Attack: Flutter. Victim takes -1 to AC and to-hit while the raven is using this attack.

Zombie, Raven (Flock). Each flock consists of 2d6 ravens and will attack one target at a time. A swarm of ravens can consist of multiple flocks—in this situation, a “flock” is simply a swarm of multiple birds that attack the same target. Flocks take half-damage from non-flame based weapons and disperse when their HP are exceeded.

Zombie, Raven (Flock). HD 3d12 (19 HP), AC 16. A flock will have 1d3 birds Fluttering each round (for -1d3 to hit and AC per round while the flock is attacking) and will Peck and Claw for +6 (1d6-4) each (making two attack rolls on a given target per round).

Zombie, Regenerating. Treat as another type of zombie, but 1d6 rounds after they're put down, they regenerate and get back up. Body parts slide towards each other, wounds stitch themselves shut. Killing one of these permanently requires special measures, such as complete immolation, encasing in cement and so on.

Zombie, Standard. Your typical off-the-shelf shambling, decomposing horror.

Zombie, Standard. HD 2d12+3 (16 HP), AC 11, Slam +1 (1d6+1) or Grab +1 (Str 12). Grab is then followed by Bite +1 (1d6+1).

Zombie Plague. Not technically a monster, this is an optional effect. If your zombies spread themselves through disease, then zombie bites are toxic. Any character bitten by a zombie must pass a Str + Phys save vs DC 15+the amount of damage or they will become a zombie within 1d10 hours.

If taken below 1/4 HP or killed, this save will be at +5 difficulty and the time to become a zombie goes down to several minutes.

Zombie Hordes

Zombies make excellent candidates for the Combat Scale rules. Instead of fighting a zombie horde directly, players are encouraged to find ways to blockade the horde or split them up into more manageable groups.

Mass Grapple. A common tactic of zombie hordes is the mass grapple. Treat it as a normal grapple, except the larger group gets a bonus to hit equal to twice the difference in their Combat Scales. The larger group also gets the same bonus as a bonus to their effective strength in maintaining a grapple.

A horde cannot be grappled except by another horde.

Threat Level

Zombies, at least in most films, are an environmental hazard that the characters must navigate on their way to achieving a goal. The adventure might be about finding safety, looking for a vital object, rescuing someone...the zombies are an obstacle along the way.

Adventure locations have a Threat Level, the chance every minute during a given scene that one or more zombies are going to come bashing in the doors or crash out of a bit of scenery. It's a number out of 10 and usually doesn't go higher than 5.

Keep it low during the initial parts of the adventure—say at 0-2--and then slowly raise it as things heat up.

The players can also lower the Threat Level by doing something really cool or killing the zombies in a particularly gory or effective way. Doing stupid things (i.e. splitting up, going into the basement) raises it.

Actors

Bartender. Face-2. Str 10 (+0), Dex 10 (+0), Int 10 (+0), Cha 12 (+1). HP 7. AC 11. Club +2 (1d6) or by Shotgun +2 (2d8). Physical +2, Subterfuge +2, Communications +5, Knowledge +2, Science +2.

Cheerleader. Face-1. Str 8 (-1), Dex 12 (+1), Int 10 (+0), Cha 12 (+1). HP 3. AC 11. Punch +0 (1d4-1) or Grab +0 or by improvised melee weapon +0. Physical +1, Subterfuge +1, Communications +4, Knowledge +1, Science +1.

Farmer, Elder. Spy-4. Str 14 (+2), Dex 10 (+0), Int 12 (+1), Cha 8 (-1). HP 22. AC 12. Punch +6 (1d4+2) or Shotgun +4 (2d8). Physical +7, Subterfuge +2, Communications +2, Knowledge +2, Science +7.

Farmer, Young. Spy-1. Str 16 (+3), Dex 10 (+0), Int 10 (+0), Cha 8 (-1). HP 6. AC 10. Punch +4 (1d4+3) or Shotgun +1 (2d8). Physical +1, Subterfuge +1, Communications +4, Knowledge +1, Science +4.

Jock. Soldier-1. Str 14 (+2), Dex 10 (+0), Int 10 (+0), Cha 8 (-1). HP 6. AC 10. Punch +4 (1d4+3) or Grab +4 or by improvised melee weapon +4. Physical +4, Subterfuge +1, Communications +1, Knowledge +1, Science +1.

Kid. Level-0. Str 6 (-2), Dex 12 (+1), Int 10 (+0), Cha 12 (+1). HP 2. AC 11. Punch -2 (1d4-2) or Grab -2 or by improvised melee weapon -2. One skill at +1, all other skills at +0.

Mad Scientist. Thinker-5. Str 10 (-0), Dex 8 (-1), Int 16 (+3), Cha 10 (+0). HP 18. AC 11. Punch +5 (1d4) or Grab +5 or Syringe +5 (save vs DC 20 or be knocked out). Physical +3, Subterfuge +3, Communications +3, Knowledge +8, Science +3.

Nerd. Thinker-1. Str 8 (-1), Dex 8 (-1), Int 14 (+2), Cha 8 (-1). HP 3. AC 9. Punch +0 (1d4-1) or Grab +0. Physical +1, Subterfuge +1, Communications +1, Knowledge +4, Science +1.

Riot Police. Soldier-2. Str 14 (+2), Dex 10 (+0), Int 10 (+0), Cha 10 (+0). HP 11. AC 11 (15 with riot shield). Shotgun +3 (2d8+1) or Hand-to-Hand +5 (1d4+3). Physical +5, Subterfuge +2, Communications +2, Knowledge +2, Science +2. Has body armor (2 charges, +4 to save).

Security Guard. Soldier-1. Str 12 (+1), Dex 10 (+0), Int 10 (+0), Cha 10 (+0). HP 5. AC 10. Nightstick +3 (1d6+2) or Pistol +2 (2d6+1). Physical +4, Subterfuge +1, Communications +1, Knowledge +1, Science +1.

Standard Issue College Student. Level 0. Str 10 (+0), Dex 10 (+0), Int 10 (+0), Cha 10 (+0). HP 3. AC 10. Punch +0 (1d4) or Grab +0 or Improvised Blunt Weapon +0 (1d6). One skill at +2, all other skills at +1.

Improvised Weapons

Characters in zombie movies tend to make more use of items laying around them, partly out of necessity, and partly out of entertainment value.

Blunt improvised weapons are treated as per Spylite—if a blunt improvised weapon not specifically designed to hit things does maximum damage, it breaks.

Impaling. Sharp weapons will not usually break if used properly, but may embed themselves in their target. A DC 10 Str + Phys check is required to remove the weapon, but it does an additional half damage on the way out. It's the GM's call whether or not a given sharp weapon will act in this way and what constitutes an impaling hit.

Weapons List

Baseball/Cricket Bat, 1d8 damage.

Boat Hook, 1d8 damage.

Chainsaw, does 1d6 damage if not turned on (with a chance of breaking), but will do 2d8 damage if turned on (no chance of breaking). Chainsaws are at -4 to hit when turned on.

On a solid hit, you have the option of deliberately leaving the chainsaw in your victim, doing 1d8 damage per round. The victim can make a Str + Phys check vs the attacker's Str + Phys to throw the chainsaw off. At the GM's option, a running chainsaw may get stuck in an opponent if a high enough damage roll is made (treat as an impale).

Chair, 1d6.

Crowbar, 1d8.

Garden Gnome, 1d6.

Garden Weasel, 1d6.

Golf Club, 1d6.

Lawnmower, 1d8 if not turned on, 2d10 if turned on. -6 to hit if turned on.

Pitch Fork, 1d8. Impales if attack roll beats required number by 5 or more.

Power Drill, 1d8 damage, plus additional effects as per Chainsaw (1d4 continuing damage).

Power Saw, 2d6 damage, plus additional effects as per Chainsaw (1d6 continuing damage), -2 to hit.

Pruning Sheers, 1d6. If closed on a limb, 1d10.

Scissors, 1d6.

Shovel, 1d8.

Microlite Tri-Stat

Stats

The main stats of **Body**, **Mind**, and **Soul** remain unchanged.

Stats start at 0, and are purchased with character points. 1 rank in a stat costs 2 character points. Stats must be rated from 1 to 12, with only one Stat rated at 12 at character creation.

Derived Values

The only derived values are health and combat value.

Health: (Body + Soul) x 5

Combat Value: Average of Body, Mind, and Soul (round down)

Character Points

How many character points are available depends on the type of characters the group wants. Are they **ordinary people** (30 character points), **average adventurers** (40 character points), or **high-powered super heroes** (50 character points)? Typically, all PCs will be constructed with the same amount of points. Characters can also select up to 5 defects to gain more points in exchange for flavorful detriments (see below).

Attributes

Ranks for Attributes range from 1 to 3 in Microlite Tri-Stat. Each rank costs a number of character points as indicated in parentheses.

Background (1 point)

Effect: +1 per rank to any check related to the background. Example backgrounds are cop, soldier, test pilot, lawyer, mercenary, etc.

Companion (2 points)

Effect: 15 character points per rank to construct a loyal companion NPC. Can also take up to 5 defects.

Gear (1 point)

Effect: Grants two significant mundane items per rank.

Item of Power (2 points)

Effect: 5 character points per rank to construct a powerful device or item. May grant the item one defect per rank for additional points.

Magic/Psionics (4 points)

Effect: Make a Soul check (Magic) or Mind check (Psionics) to create a variety of supernatural effects depending on the rank.

Rank 1: Minor tricks or feats that can be accomplished with regular checks.

Rank 2: Amazing tricks or feats that would be almost impossible for normal people.

Rank 3: Powerful effects, or recreate a rank 1 attribute on command.

Organizational Ties (2 points)

Effect: Hold rank in an organization who pulls lots of sway in the campaign.

Rank 1: Low rank or minimal connections.
Rank 2: Officer rank.
Rank 3: Commanding rank, or in charge.

Special Attack (3 points*)

Effect: Able to perform a powerful attack, be it innate, from magic, or a potent weapon. Without effects, special attacks are close-range (can only hit at 0 move).

Rank 1: Damage is Combat Value x 2, with a minor effect.

Rank 2: Damage is Combat Value x 3, with 2 minor or 1 major effect.

Rank 3: Damage is Combat Value x 4, with 3 minor or 2 major effects.

Note: Minor effects include enough range to hit someone 1 move away, indirect attacks, etc.

Major effects include extreme range (line of sight as far as you can see), attacking all in range, vampiric (healed for damage dealt), etc.

* Purchasing additional versions of Special Attack cost only 1 point per rank, up to the original's rank.

Special Defense (3 points)

Effect: Powerful protection from harm, either a resistance (half damage from source) or immunity (environmental hazard). This can be tough armored hide, supernatural resilience, a magic barrier, or any other unusual defense.

Rank 1: Reduce damage by Combat Value, and gain one protection.

Rank 2: Reduce damage by Combat Value x 2, and gain two protections.

Rank 3: Reduce damage by Combat Value x 3, and gain three protections.

Special Movement (2 points)

Effect: For every rank, gain one special movement feature.

Exotic Movement: Ability to fly, run on water, burrow, travel through space, etc.

Increased Speed: When performing a Move action, you can travel +1 Move.

Initiative Bonus: React quicker. +1 bonus to Initiative rolls.

Tough (1 point)

Effect: +10 health points per rank. Items of Power add Tough bonuses to the owning character.

Skills

These do not exist in Microlite Tri-Stat, as they are replaced by the Background attribute.

Defects

Characters may be given up to 5 defects to further flesh them out. Each defect gives an additional character point to buy stats and attributes. A character can have more than 5 defects, but only the first 5 grant additional points. If appropriate, a character may take the same defect twice (i.e., a character vulnerable to both fire and holy magic would have the Achilles Heel defect twice, once for fire damage, the other for holy damage).

Achilles Heel

Effect: Character suffers double damage from a specific type of attack.

Awkward Size

Effect: Character is larger than a normal human. Large vehicles will often have this if they stand out compared to other vehicles (such as a giant robot compared to a tank).

Diminutive

Effect: Character is much smaller than a normal human, and has only half their normal health points. If they have the Tough attribute, halve the final value of their health points.

Easily Distracted

Effect: A situation, person, or substance always draws the character's attention, be it an addiction, an obsessive hobby, or a heated rivalry.

Ism

Effect: Character labors under a certain prejudice. This can be due to age (far younger or older than normal), or due to gender, race, creed, etc.

Limited Uses

Effect: One or more of the character's attributes can only be used three times before needing to be recharged, reloaded, regrown, etc.

Marked

Effect: Character has an identifying feature that can be spotted with little effort.

Requirement

Effect: One or more of the character's attributes requires an item or action to function, such as a ritual, a magic wand, approval from headquarters, etc.

Vulnerability

Effect: Character is harmed by a special situation or substance, taking 2d6 damage for each turn of exposure.

Wanted

Effect: Character is actively hunted, either by a lone, powerful enemy, or an influential organization like law enforcement or the military.

Game Mechanics

As the game progresses, the GM will request stat checks from the players, or players will make them to attempt various feats in game. These checks will test either Body, Mind, Soul, or Combat Value.

Stat Check

The basic stat check goes like this:

2d6 + Stat + Background + modifiers vs 10

If the result **exceeds 10**, the character succeeds.

A natural roll of boxcars (double sixes) is an automatic success. A natural roll of snake eyes (double ones) is an automatic failure.

Difficulty

The situation may modify a check to be easier or harder. A positive modifier means the situation is favorable, or success is all but certain, a negative means the task is complex, or many factors are working against the character.

Modifier	Difficulty
+6	Trivial
+4	Simple

+2	Easy
-2	Challenging
-4	Harrowing
-6	Nearly Impossible

Contested Check

When two characters go head to head, it looks like this:

2d6 + Stat + Background + modifiers

vs

2d6 + Stat + Background + modifiers

The highest result wins, ties usually favor the character who's on the ropes, or no one at all. As with stat checks, boxcars and snake eyes are automatic successes or failures respectively.

Combat

Fight scenes are played out in a sequence of turns. Each turn lasts as long as it takes everyone involved to take a significant action. This can be a handful of seconds in a fierce brawl, or upwards of a minute for capital starships battling in space.

Initiative: At the start of the first turn, everyone rolls 2d6 + Combat Value + Initiative bonuses. Play proceeds in the order of highest to lowest.

Attack: Attacker rolls 2d6 + Combat Value + applicable Background vs. Defender's 2d6 roll + Combat Value + applicable Background. If the attacker exceeds the defender's result, the defender is hit.

Damage: Damage with most weapons is Combat Value + gear bonus. Special Attack damage is a multiple of Combat Value. The final damage is subtracted from the defender's remaining health points. A character is taken out if their health points are reduced to 0, but are just wounded or unconscious.

Critical Hit: An attack that rolls an automatic success not only hits home, but deals double the normal damage.

Defense: If the defender has any armor, this can reduce the amount of damage sustained. Special Defense offers the best protection, but mundane armor can work in a pinch.

Dying: A character who sustains enough damage to reduce their health points to -20 has suffered a critical wound, and will die if not tended to immediately. Generally, dying characters can linger long enough to do one more simple action, such as say a few words or hand over an important item. Don't forget to give a dramatic speech before your character buys it for good!

Advancement

After a few sessions, players will likely be in the mood to improve their characters' abilities. The GM should award an additional character point every 2 to 5 sessions, depending on the pacing decided for the campaign.

Relics & Ruins

A rules light post apocalyptic RPG, based on Microlite20 and Microlite74 rules.

Sometime in the far past, civilization ended. Atomic war, natural disaster, alien invasion, no one remembers how or why now. All that is known is the once mighty Ancients are gone. Their legacy lies strewn about blasted ruins, waiting to be claimed once more. You are a child of the wasteland, born of the parch. The wasteland is yours for the shaping, the relics of yesterday yours for the taking. Mercenary, raider, thief, adventurer, relic hunter, slave, king...the future is in your hands.

Making a Character

There are three stats: Strength, Dexterity and Mind.
Roll 4d6, drop the lowest result and add together. Repeat twice more.
Assign the scores between the three stats.
Stat modifier is (Score-10)/2, round down.

Hit Points(HP): Starting hit points equal STR score + 1d6.
Each level advance increases hit points by 1d6 + STR mod. (minimum 1 HP per level).

Armor Class (AC): Armor Class is 10 + DEX mod. + armor modifier (whether from mutation, worn armor or both).

Mental Defense (MD): Mental Defense is 10 + MIND mod. + level.

Action Points (AP): Each character starts with 1 Action Point.

Skills: There are no skills in Relics & Ruins. Players are expected to think like relic hunting mutants and tell the GM what their characters do. The GM then decides whether the action is successful. If the GM decides chance is an element, he may call for a d20 test modified by an appropriate stat modifier and the character's level. If the result is equal to or greater than a Difficulty Class (DC) set by the GM, the action is successful.

Races: Humans or Mutants.

Humans: Pure un-mutated humans. They have no problems using ancient relics (i.e. everything fits the way it's supposed to). Experience base is 20.

Mutants: Can be humanoid, animal or even plant mutants. Mutants receive 4 rolls on the Mutation table, and must take 1 roll on the Defect table.
Experience base is 25.

Equipment

Encumbrance: A character may carry 12 + STR mod. items without penalty. Up to 6 items may be readily available in pouches, hanging from belts, in holsters, slung over the shoulder, etc. Everything else goes into the backpack. Several small things can be group together into a single item (10 chems, 5 grenades, etc.). A week of rations is 1 item.

Starting Gear: Characters start with a backpack, a set of leather armor, one light melee weapon, one week's rations, a waterskin and a set of basic cloths. In addition, each character selects 8 more items from the following:

Upgrade Armor (Lthr to Chain, Chain to Plate)
Upgrade Weapon (Light to Med., Med. To 2-hand)
Add'l. Light Melee Weapon
Add'l. suit of Leather Armor
Shield
Ranged Weapon
Thrown Weapon (x5)
Climbing Kit (rope, grapple, pitons)
Camping Kit (tent, bedroll, etc.)
Healer's Kit (heal 1d4 hp outside combat)
Basic Tool Kit (useful for repairs)
1 Week's Rations
Mundane Relic of choice

Currency: Most of the wasteland operates on a barter economy. There may be a few communities that use some form of currency, which most likely would be useless in other communities.

Low Tech Armor:

Leather Armor: +2 AC
Chain Armor: +3 AC
Platel Armor: +4 AC
Shield: +1 AC

Low Tech Weapons:

Light Melee Weapon: 1d6 + STR mod dmg
Medium Melee Weapon: 1d8 + STR mod dmg
2-hand Melee Weapon: 1d10 + STRX2 mod dmg
Crossbow: 1d10 dmg, requires action to reload
Simple Bow: 1d6 dmg
Small Thrown Weapon: 1d4 + STR mod dmg
Javelin: 1d6 + STR mod. Dmg

Other Low Tech Gear: Refer to any number of medieval equipment guides available.

Animals: Riding and pack animals are available: horses, mules, oxen and giant mutant animals are possible. Up to the GM to determine when and where they can be obtained, and for how much.

Experience & Advancement

Humans have an experience base of 20.
Mutants have an experience base of 25.

Characters earn experience points (XP) when the party defeats monsters, overcomes obstacles, finds or loots relics and for good role-playing. Foes provide 1 XP per hit die. Add +1 XP for each doubling of the foes. GM may add additional XP if the foe had special powers or was particularly powerful.

Characters earn 1 to 5 XP (determined by GM) for obstacles overcome by the party, such as traps or natural barriers that require special effort to pass. The GM may also award bonus XP for good role-playing. relics and treasures found or looted by the party provide 1 to 5 XP each, including broken or non-functional relics, but not relics that are traded for or given to the party. Mundane relics and low tech gear provide no XP.

Total all the XP and divide evenly amongst the entire party. If total XP received equals or exceeds experience base x current level, zero out the XP and advance character one level. For example, a human needs 20 XP to advance to level 2, 40 XP to level 3, 60 XP to level 4, etc. A mutant needs 25 XP to level 2, 50 to level 3, 75 XP to level 4.
Level advancement provides 1d6 + STR mod hit points (minimum of 1 per level).

Also, add a point to one stat of choice every third level (levels 3, 6, 9, 12, 15, etc.).

Combat

Surprise: Roll 1d6 for each party. On a roll of 1 or 2, the party is surprised and may take no actions that round.

Initiative: Roll 1d20 + DEX mod for initiative, highest result acts first. Characters may take one action each turn (attack, move, charge into melee range, activate a mutation, grab something from their backpack, use a relic, etc.).

Action Points: Player characters start with 1 Action Point. Some powerful NPCs might also have Action Points. Before rolling initiative a player may declare he is using an Action Point that round. Spending an Action Point allows the character to take an extra action that round. Action Points are gone for the duration of a battle once used, but are recovered at the end of each fight.

Attack Rolls:

Melee attack = d20 + STR mod + Level vs. AC

Ranged attack = d20 + DEX mod + Level vs. AC

Mental attack = d20 + MIND mod + Level vs. MD

Other modifiers may apply as well. If the total result equals or exceeds the target's AC/MD, the attack hits.

Modifiers:

Poor Visibility -2

Long Range -2

Weapon Power +1 to +5

Back or Flank Attack +2

Target Concealment/Cover -2

Attacker Advantage +2 (e.g. high ground)

Critical Hit: d20 rolls a natural 20. Target takes maximum possible damage (e.g. 2d4+2 results in 10 damage on a critical hit).

Critical Fumble: d20 rolls a natural 1. The attacker fumbles, trips, accidentally hits a friend, or experiences a weapon malfunction. The GM has wide latitude on the exact nature of the fumble.

Ammo: Don't bother tracking ammo for relic weapons. On a roll of 1, the weapon malfunctions. Launchers malfunction on rolls of 1 or 2.

Light Weapons and Dex: Players may choose to use their character's DEX mod when using light melee weapons, instead of STR mod.

Dual Wielding: Players may dual wield two light weapons or two relic pistols, receiving an attack roll at -2 for each weapon. Multi-arm mutants could theoretically have up to four weapons (up to GM's discretion whether to allow this).

Burst Fire: Relic guns (but not launchers or melee weapons) can conduct burst fire attacks. Apply a -4 to the attack roll. If the attack hits, double the damage result. Burst fire attacks result in a weapon malfunction on a roll of 1 or 2.

Area Effect (AoE)/Cone Effect (CoE): Make one attack roll and compare result to all targets (friend and foe) in the area of effect. Any hit take damage as usual. Misses take ½ damage.

Stun Damage: Any combination of regular and stun damage that reduces hit points to zero or less renders the character unconscious. Stun damage heals 1 HP per minute.

Pulse Damage: Pulse damage only affects robots and machines. However, if a character is hit by pulse damage, re-roll condition for any relics he's carrying. Assume that weapons and armor are hardened against or immune to pulse damage.

Sonic Damage: If attack roll misses, target still takes ½ damage.

Poison Damage: To resist poison, roll d20 + STR mod + Level vs. poison's DC. If successful, the character resists the poison's effect. Otherwise the character takes damage. DC for mutant poison attacks is 10 + Level.

Rest & Healing: At least 8 full hours of rest are required to recover lost hit points. All hit points lost from activating mutations are regained. Other damage is healed at 1 + ½ level (round down) HP per 8 hours (increase by 1 hp if someone in the party has a Healer's Kit).

Hazards

Falling: 1d6 dmg per 10' fallen. ½ damage on DEX + level save with a DC equal to number of feet fallen.

Spikes: Add +1 dmg per 10' fallen, max of +10.

Extreme Heat/Cold: STR + level save at intervals decided by GM or take 1d6 damage. DC decided by GM.

Radiation: Radiation automatically inflicts 1d6 damage at set intervals:

Cold 1d6 every hour

Warm 1d6 every turn (10 min)

Hot 1d6 every round (1 min)

Relics

Relic Condition: Whenever a relic is found or looted (even if it just dropped off an enemy) roll 1d6:

Condition	Wpns/Armor	Consumables
Broken	1	1
Malfunctioning	2-5	-
Functional	6	2-6

Whenever a character is subjected to an appropriate stress or shock (such as falling a great height, being swallowed by a giant mutant, falling into a vat of acid, etc.), roll condition for each relic on the character as if they had just found the item, as GM sees fit.

Broken: The relic is obviously beyond repair. However, it can still provide useful parts to repair a malfunctioning relic.

Malfunctioning: Indications that the relic should work (i.e. power light is flashing) but nothing happens when used. These relics can be repaired to make them functional.

Functional: Relic is functional and in good working order.

Repair: Repairing a busted relic requires another copy (kaput or busted) of the exact same relic to use as spare parts. Roll d20 + Mind mod + Level greater than or equal to 20. The duplicate relic is consumed. If a 1 is rolled, the item being repaired is kaput and cannot be repaired (though can still provide spare parts).

Modifying Relic Armor: The higher an armor's AC, the more it comports to the ideal humanoid shape. To modify armor to fit a mutant with unusual body features, roll d20 + Mind mod + Level vs. DC 20 + Armor AC. If failed, the armor becomes busted.

Random Relics:

1	Relic Armo
2-3	Relic Gun
4	Relic Launcher
5-6	Relic Melee
7	Relic Grenade
8-9	Relic Chem
10	Relic Tool

Relic Armor:

1-2	Kevlar Armor; +5 AC; 1 XP
3-4	Alloy Armor; +6 AC; 1 XP
5	Ceramic Armor; +7 AC; 2 XP
6	Composite Armor; +8 AC; 2 XP
7	Reactive Armor; +9 AC; 3 XP
8	Power Armor (+2 STR); +10 AC; 4 XP
9	Storm Armor (+4 STR); +11 AC; 5 XP
10	Crusader Armor (+6 STR); +12 AC; 6 XP

Note: Power, Storm and Crusader armor have communicators and are fully sealed against gas attacks. They use 100 year fusion batteries.

Relic Guns:

d20	Relic Gun:	Dmg	Power	X.P.
1-3	Slugthrower Pistol	2d4	+1	1
4-6	Slugthrower Rifle	3d4	+1	1
7	Sonic Pistol	2d6	+2	2
8	Sonic Rifle	3d6	+2	2
9-10	Laser Pistol	2d8	+3	3
11-12	Laser Rifle	3d8	+3	3
13	Plasma Pistol	2d10	+4	4

14	Plasma Rifle	3d10	+4	4
15	Fusion Pistol	2d12	+5	5
16	Fusion Rifle	3d12	+5	5
17	Stun Pistol	2d6	+2	2
18	Stun Rifle	3d6	+2	2
19	Pulse Pistol	3d6	+3	3
20	Pulse Rifle	4d6	+3	3

Relic Melee:

1-2 Light Relic Melee; 1d10 dmg
 3-4 Medium Relic Melee; 2d6 dmg
 5-6 Two-hand Relic Melee; 2d8 dmg

d10	Melee Type:	Dmg Bonus*	Power	X.P.
1-2	Mono-edged	+2	+1	1
3-4	Vibro	+4	+2	2
5	Laser/Energy	+6	+3	3
6	Plasma	+8	+4	4
7	Quantum	+10	+5	5
8	Pulse	+6	+3	3
9-10	Stun	+4	+2	2

*Don't forget to add STR modifier to damage rolls (x2 for two-hand melee).

Relic Grenades (roll 1d6 grenades found):

1-2	Frag Grenade (AoE 20'); 3d6 dmg; 1 XP
3	Stun Grenade (AoE 20'); 3d6 Stun; 1 XP
4-5	Smoke Grenade (AoE 20'); Poor Vis; 1 XP
6	Pulse Grenade (AoE 20'); 4d6 Pulse; 2 XP
7	Incendiary Grenade (AoE 20'); 4d6 Fire; 2 XP
8	Cyrogenic Grenade (AoE 20'); 4d6 Cold; 2 XP
9	Plasma Grenade (AoE 20'); 5d6 dmg; 3 XP
10	Fusion Charge (AoE 20'); 6d6 dmg; 3 XP

Relic Chems (duration 1 hour unless otherwise stated; all 1 XP):

1	Stimpack (instantly heals 1d6+6 hp)
2	Food Pill (d100; 1 day's ration/pill)
3	Muscle Booster (+4 STR)
4	Reflex Booster (+4 DEX)
5	Brain Booster (+4 Mind)
6	Anti-toxin (immune to poison)
7	Anti-rad (immune to radiation)
8	Reaction Inhaler (+1 Action Point)
9	Pain Suppressor (+2 AC and MD)
10	Alertness Booster (+1 Surprise, +4 Initiative)

Relic Launchers:

1-2	Flamer (CoE 20'); 2d6 dmg Fire; 2 XP
3-4	Grenade Launcher (AoE 20'); 3d6 dmg; 2 XP
5-6	Rocket Launcher (AoE 20'); 4d6 dmg; 3 XP
7	Plasma Launcher (AoE 20'); 5d6 dmg; 4 XP
8	Fusion Launcher (AoE 20'); 6d6 dmg; 5 XP

Relic Tools:

d20	Relic Tools
1	Adv. Toolkit (+2 on tests); 2 XP
2	Vidflex (1 use movie player made of flexible plastic sheet): Roll d6: 1 Action (1d3 XP), 2 Comedy (1d2 XP), 3 Romance (1 XP), 4 Instructional (1d4 XP), 5 Drama (1d2 XP), 6 Political/Propaganda (1d2-1 XP).
3	Trauma Bag (Stabilizes dying characters); 1 XP
4	4 Gravpack (allows 6 more items to be carried without penalty); 2 XP
5	Force Field Generator (creates a 20 HP force field; regenerates 1 HP/hr); 4 XP
6	Gas Mask (immunity to gas attacks while worn and properly sealed); 1 XP
7	Multivisor (Goggles w/ low-light, thermal, magnification, range finder & polarizes against bright light); 2 XP
8	Communicator (Sends and receives audio and video); 2 XP

9	Electric Torch (operates as a flashlight or a lantern); 1 XP
10	Suppressor (Repair roll to attach to slugthrower only, suppresses gunshot flash and sound); 1 XP
11	Regen Ray (Regenerates damaged tissue; heals 1d20 HP, +10 on humans; on roll of 1 the device is busted); 4 XP
12	Multiscanner (Analyzes air, water, soil & biological samples; built in geiger counter); 2 XP
13	X-Ray Visor (can see through 2-3 feet of earth/stone, 2-3 inches of metal and about ½ inch of dense metal (lead, gold, uranium); 2 XP
14	Laser Sight (repair roll to attach to relic gun; +2 on attack rolls); 1 XP
15	Electronic Scope (repair roll to attach to relic rifle; spend a round aiming for +4 on attack roll); 1 XP
16	Enviroshield (creates a force field that keeps out the elements; can take 10 HP of damage before collapsing; large enough to accommodate 6); 3 XP
17	Cloaking Field Generator (creates a light bending field that renders the user nearly invisible (-8 to-hit); field ripples when moving (-4 to-hit), more so when running (-2 to hit); cannot be used with force fields); if hit, field collapses; 5 XP
18	Jump Belt (allows jumps up to 120' horizontal or 60' vertical, ½ for Bigger mutants); 3 XP
19	Psiblocker (+2 MD); 1 XP
20	Psibooster (+2 mental attack rolls); 1 XP

Assume devices run off of 100 year fusion batteries.

Other Treasures (1 XP each):

Ancient relics aren't the only valuables to be found. Adventurers may also find objects that hold value for others and can be bartered in exchange for goods or services. Looted treasures grant 1 XP each. Following are some examples:

Cured Tobacco
 Fermented Beverages
 Hides, carapace, furs, pelts
 Large teeth or tusks
 Old books, maps and documents
 Old paintings or pictures
 Ornate rugs and tapestries
 Spices
 Holistic herbs
 Fabrics
 Tea
 Crafting materials (wood, metal ingots, etc.)
 Everyday relics
 Ancient packaged junk food (enough preservatives to keep it for centuries)
 Aphrodisiacs (which, depending on local custom and tradition, can include some pretty weird stuff)

Relic Vehicles: Relic vehicles are problematic to a campaign because once the party can fly about in a hovercar at hundreds of miles an hour, the wasteland loses a big part of its mystery and danger. Therefore, GMs are strongly discouraged from allowing party members to permanently acquire a relic vehicle. Better to use them as plot devices, a quick means to get to an exotic location, with the vehicle breaking down or returned to its owner once the adventure is complete. If the GM allows players to acquire a working relic vehicle (say, for example, in a Road Warrior-ish setting), fuel and maintenance problems should be ongoing concerns.

Mundane Relics (all 0 XP):

01-02 Holster
 03-04 Utility Belt
 05-06 Solar Calculator
 07-08 Ballpoint Pen
 09-10 Canteen
 11-12 Rifle Sling
 13-14 Bayonet (1d6 hand or 1d10 mounted)
 15-16 Flare
 17-18 Matches
 19-20 Padlock
 21-22 Handcuffs
 23-24 Tuff-E(TM) Garbage Bag

25-26 Penlight
 27-28 Survival Compass
 29-30 Old I.D. Card
 31-32 Empty Soda Bottle w/ stopper
 33-34 Sunglasses
 35-36 Bar Soap
 37-38 Locket
 39-40 Goggles
 41-42 Wall Thermometer
 42-44 Earphones
 45-46 Rubber Ball
 47-48 Action Figure
 49-50 Road Map
 51-52 Swiss Knife
 53-54 Briefcase
 55-56 Wind-up Alarm Clock
 57-58 Whistle
 59-60 Playing Cards
 61-62 Lighter
 63-64 Duffel Bag
 65-66 Combination Lock
 67-68 Sealed Bandage
 69-70 Baseball Cap
 71-72 T-Shirt (w/ logo or frivolous message)
 73-74 Stapler
 75-76 Holepuncher
 77-78 Paper Tablet
 79-80 Box of Paperclips
 81-82 Novelty Item
 83-84 Roll of Duct Tape
 85-86 10' Extension Cord
 87-88 MuseBox (TM) portable music device
 89-90 Metal Road Sign
 91-92 Metal Shopping Cart
 93-94 Plastic PVC pipe
 95-96 Datadisk
 97-98 Set of Keys
 99-00 Scissors

Ruins & The Wasteland

What the Characters Know: They know how to shoot a gun and don armor. Illiteracy is nearly universal. The common language spoken by most is a bastardized version of the Ancient's language. They generally know north, south, east and west. The Earth is flat. The Ancients lived in a golden age that was destroyed by a great cataclysm of some sort. They have little knowledge of the wasteland beyond their village.

The Wasteland: The wasteland is an uncivilized wilderness, with a few scattered villages and towns, like islands on the ocean. Not all of the wasteland is a desert. Much of it is vast untamed forest and jungle or radioactive swamp and marsh, growing over the cities and ruins of the Ancients. It teems with weird, mutated life...most of it hostile, and hungry. Traveling through the wasteland is always a risky prospect. Attacks by slavers, raiders and the voracious wildlife are quite common.

Ancient Cities: These decaying cities hold the greatest treasures of the ancients. Most are irradiated, some are inhabited and all of them are collapsing into ruin. Cities close to settlements are probably pretty well picked over. You need to venture far into the wilderness to find a city ripe for plunder. Radiation and hostiles aren't your only worries either. You never know when a crumbling floor or ceiling will collapse.

Undercity: The Ancient's cities were built upon a warren of sewers, subway lines and service tunnels. While these locations probably didn't hold many relics during the apocalypse, they have certainly become home to many creatures and peoples that do hoard these treasures.

Forgotten Facilities: Military bunkers, lost vaults, abandoned factories, remote laboratories, even old shopping centers or malls, all filled to the brim with treasure (or so the rumors say).

Old Roads: While crumbling and overgrown, many of the Ancient's roads are still traversable. Common wisdom has it that these roads usually lead to

some ruin or ancient treasure trove of relics. Of course, they also make convenient ambush sites.

Ancient Battlefields: While plant life has overgrown much of the Ancient's legacy, their ancient battlefields host no flora. Most have some background radiation and many still have functioning robots roaming about, looking for targets to engage. But for the brave (or foolhardy) they can be a rich source of relics.

Crashed Vehicles: Some of the Ancient's vehicles are large enough to serve as dungeons in their own right. Mobile battle fortresses, stranded sea- going vessels or crashed spaceships (perhaps even alien spaceships).

Communities: Small farming villages are scattered about the wasteland, most with less than two or three hundred people. There are a few larger towns as well, mostly situated on common trade routes, and well defended. Communities provide a base of operations for the party, a place to resupply and to trade off unneeded relics or goods. They're also good launching points for new adventures.

Merchant Caravans: There are a few brave souls trailblazing new trade routes between settlements. They bring hard-to-find goods with them, and even more important, information. They are under constant assault, so they frequently hire escorts for protection.

Raiders: With civilization and trade come those who find it easier to profit off the labor of others. Raiders are becoming an ever greater menace. In the wild, raiders will almost certainly attack if they outnumber the party. Communities might pay well to be rid of these pests.

Slavers: The practice of slavery is tolerated to varying degrees in the wasteland. In some places is accepted practice, in others slavers are killed on sight. Generally speaking though, most people don't like slavers...you never know when you might wind up as inventory. If encountered in the wild, slavers may be willing to trade. But, if the party appears weak, the slavers may try to subdue them to replenish stock.

Nomads: Some groups choose to wander the wilderness, hunting and gathering for sustenance, salvaging what relics they can in their travels to trade at the next settlement. Nomads are generally not immediately hostile, but life in the wastes being what it is, they will be suspicious until good intentions are proven. Other nomads may be pilgrims on their way to a holy site or searching for a promised land.

Cults: Most organized religion disappeared with the Ancients. In that vacuum, all manner of strange wasteland cults have sprung up. Some are helpful, or at least benign, but most seem to be hostile or even malevolent. Relic cults are especially common, where groups of primitives worship some ancient piece of technology. Ritual sacrifice is not unheard of with these groups.

Warlords: In some corners of the wasteland, would-be conquerors strive to create pocket empires, little kingdoms to call their own. Warlords actively seek relics and powerful recruits to help them. Many types of scum flock to their banner with the promise of loot, drink, women and power (or sometimes for the promise of a full belly). Of course, maybe someday the player's will be one of these wanna-be warlords.

Cannibalism: Considered taboo by most cultures and communities, engaged in by mostly primitive or feral peoples. However, some communities have no qualms about eating other intelligent species (which technically isn't cannibalism, to them at least).

Mutants

Any number of SRD monsters will serve quite ably as mutant creatures in a post-apocalyptic setting. You should be able to add them to your campaign with little trouble. Following are a few creations and adaptations to get you started.

Creatures add the number of hit dice as modifiers to any tests. If a creature has aptitude at a particular task, add +3. Intelligent creatures will use relics when they can get them, and probably accumulate other treasures as well.

Create Your Own: Assign a number of Hit Dice (using d8 for most, d12 for larger). Hit Dice = bonus applied to attack and test rolls. Mental Defense equals 10 + HD (or just use AC as MD). Assign one or more mutations if desired.

Clicker: HD: 3d8 (13 hp); AC 12; MD 12; mandibles (+3, 2d6); large insect that can be trained as a mount at an early age

Grabber Beast: HD: 5d8 +10 (27 hp); AC 12; MD 18; tentaclesx3 (+5, 1d8 each); immune to sonic and fire; moves slowly; hides beneath ground and waits for prey to come into range, then pulls them in with tentacles

Howler: HD 3d8+3 (18 hp); AC 15; MD 13; bite (+3, 2d4+1); Howling Chill (+3 mental attack to cause flight); tracks prey empathically over vast distances; large mutant canine

Morloks: HD 2d8 (11 hp); AC 12; MD 16; fist (+2, 1d4+1) or Empathy/Illusion (+6 vs. MD); communicate by telepathy; blindsense; pale ape-like humanoids, blind and hairless; found underground

Olek: HD: 3d8 (13 hp); AC 13; MD 16; by weapon; uses relics or low-tech gear; has four arms and two heads; may have an additional random mutation

Scaleback: HD: 6d8+12 (39 hp); AC 15; MD 16; attack by relic (+6) or sonic blast (+6, 2d4+2); telepathy, immune to sonic; mutant snake-men that like to use relic guns

Talonfiend: HD: 7d8+10 (40 hp); AC 18; MD 17; talonsx2 (+7, 2d6+6); heightened smell and hearing

Xurn: HD: 4d8+6 (20 hp); AC 16; MD 18; by relic (+6); immune to cold; intelligent insect, live in large hives; queen has twice the HD and HP; uses psionic attacks (+8, 3d8+6); they use relics when they can find them, or low tech weapons

Zoms: HD: 2d12 (13 hp); AC 12; MD 12; bite (+2, 1d6+2); immune to radiation, mental effects and poison; inflicts 1d6 radiation damage each round to anyone in melee range; feral irradiated cannibalistic humans

Machines

Note: All machines are immune to mental effects and poisons.

Android, Laborer: HD: 3d8+15 (28 hp); AC 11 + Armor; MD 10; attack by relic weapon (+4)

Android, Leader: HD: 2d8+2 (11 hp); AC 11 + Armor; MD 10; attack by relic weapon (+4)

Android, Soldier: HD: 4d8+16 (36 hp); AC 14 + Armor; MD 10; attack by relic weapon (+6)

Builderbot: HD: 10d8 (60 hp); AC 20; MD: 10; laser drill (+7, 4d6 ranged), saw arm (+7, 3d6) and grabber armsx2 (+7, 2d6); thermal vision; giant construction robot

Docbot: HD: 2d8 (10 hp); AC 12; MD 10; regen ray heals 1d20 damage (+10 on humans); if malfunctioning can reverse polarity and fire a radiation ray that does 2d8 radiation damage

Lawbot: HD: 6d8 (32 hp); AC 18; MD 10; stun pistols x2 (+6, 2d6) and stun grenade launcher (3d6 AoE); low light and thermal vision

Securitybot: HD: 20d8 (110 hp); AC: 23; MD: 10; Fusion Launcher (+13, 6d6, AoE); low light and thermal vision; 20 HP force field

Spiderbot: HD: 4d8 (17 hp); AC 15; MD: 10; laser eye beam (+4, 3d8); low light and thermal vision

Utilitybot: HD 2d8; AC 12; MD 10; mechanical claws (+2, 2d6); thermal vision; general industrial robot

Vendorbot: HD: 2d8 (12 hp); AC: 14; MD: 10; projectile merchandise (+2, 2d4 ranged); uses proximity sensors to target nearby "customers"

Warbot: HD: 80d8 (400 hp); AC: 30; MD: 10; Rocket Launcher x2 (4d6 AoE), Plasma Launcher x2 (5d6 AoE) and Fusion Launcherx1 (6d6,AoE); low light and thermal vision; 40 HP force field; uses grav suspensors to fly about raining death on all

Mutations & Defects

Mutations: Roll 4 times on the following chart. Mutations with (A) after their name must be activated. Activating a mutation costs 4 HP, which can only be recovered after at least 8 hours of rest.

Multiple rolls of the same mutation usually stack (i.e. increase damage, range, weight limits, etc.)

d10	MUTATIONS DESCRIPTION
1	Amazing Stat - +4 to one stat: 1-2 STR, 3-4 DEX, 5-6 Mind
2	Amazing Defense - +3 to: 1-3 AC, 4-6 MD
3	Tougher - +2 Hit Points per level
4	Immunity - Takes no dmg from: 1 Fire, 2 Cold, 3 Acid, 4 Poison, 5 Rads, 6 Electricity, 7 Sonic, 8 Psionic
5	Better Senses - One sense is vastly superior 1 Sight, 2 Hearing, 3 Smell, 4 Low light (30'), 5 Thermal (30'), 6 Blindsense (30')
6	Melee Weapon - Natural melee weapon that inflicts 1d8+STR mod; alternatively, player may opt to take this as an activated touch based healing ability instead (1d8 + Mind mod)
7	Ranged Weapon (Activated) - Natural ranged attack that inflicts 1d8 dmg up to 30'; source: 1 Fire, 2 Cold, 3 Acid, 4-6 Normal physical damage
8	Psionic Attk (Activated) - Mental attack that inflicts 1d8+Mind mod up to 30'; sourc: 1 Fire vs. AC, 2 Cold vs. AC, 3 Sonic vs. AC, 4 Elec. vs. AC, 5 Psionic vs. MD, 6 Empathy (no damage, ready & manipulate emotions, 7 Telepathy (no damage, read thoughts/mental comm.), 8 Illusion (no damage, audio and visual illusions only the target can see)
9	Special Mutation - 1 Extra Arms (hold extra wpns or shields), 2 Bigger (use med. Wpns as light and 2-hnd as med.), 3 Prescient (+1 surprise, +4 initiative, 4 Aquatic (gills & webbed digits), 5 Psychic Shield (A) (entire party may use mutant's MD for defense), 6 Regeneration (heals 1 hp/minute as long as alive), 7 Faster (+1 Action Point), 8 Telekinesis (A) (lift 100 lbs +100 lbs./ Mind bonus), 9 Special Move (A) 60' (teleport, fly, jump, etc.), 10 Player's choice
10	Player's Choice - Player may choose specific mutation (i.e. Immunity to Fire)

Defects: Roll once on the following chart. If a character rolls a defect that is the exact opposite of a Mutation the character already has, then re-roll the defect. For example, you can't have both Immunity to Fire and Vulnerability to Fire, but you can have Immunity to Fire and Vulnerability to Cold. Same goes for any Mutations that grant stat and defense bonuses.

d10	DEFECT DESCRIPTION
1	Terrible Stat -4 to one stat: 1-2 STR, 3-4 DEX, 5-6 MIND
2	Poor Defense -3 to 1-3 AC, 4-6 MD
3	Weaker -1 HP per level(min 1hp/level)
4	Vulnerability - Take x2 damage from: 1 Fire, 2 Cold, 3 Acid, 4 Poison, 5 Rads, 6 Electricity, 7 Sonic, 8 Psionic, 9 Stun, 10 Player's choice
5	Diminished Sense - One sense is much poorer: 1-2 Vision, 3-4 Hearing, 5-6 Smell, 7 Taste, 8 Touch
6	Clumsy -1 to all tests and initiative
7	Slower -1 Action Point
8	Allergic - Mutant suffers -2 on all tests when in contact with: 1 Ferrous Metal, 2 Non-ferrous Mental, 3 Plastic, 4 Sunlight, 5 Insect bites, 6 Alcohol, 7 Chems, 8 Player's choice

- 9 Special Defect - 1 Hemophilia (-1 hp/round after taking combat dmg), 2 Narcolepsy (falls asleep at very inconvenient times), 3 Phobia (intense fear of specific creature, condition or environment), 4 Poor Respiration (cumulative -1 on attack, damage and initiative rolls after 1st rnd of combat), 5 Smaller (cannot apply STR bonus to melee dmg rolls; penalties still apply); 6 Player's choice
- 10 Player's Choice - Player may choose specific Defect (i.e. Vulnerability to Sonic or -4 Mind)

Acknowledgements

Relics and Ruins is my attempt at an old school post-apocalyptic RPG in the vein of Gamma World, based on Robin Stacey's Microlite20 (www.microlite20.net), parts of Randall Stuekey's Microlite74 adaptation of M20 and Alex Shroder's M20 Hard Core Rules. Inspiration was drawn from Jonathan Tweet's Omega World d20 variant of Gamma World (available at Paizo.com in pdf format for around \$5), and from other sources of postapocalyptic fiction or games. In addition, I drew upon Darth Cestual's Microlite20 Mutations (based on Omega World) for ideas on how to handle some of the mutations in R&R. I looted ideas from many sources, so if I overlooked a proper attribution, please let me know and I'll correct it.

OmegaLite20

A 'lite' conversion of Jonathan Tweet's *Omega World* to Microlite20 by Ed Green

Background

While not a desolate wasteland, the future post-apocalyptic world is a dangerous and untamed wilderness. You come from a small village of a few hundred. You know the area around your village, but little of the world beyond. Your people manage to scrape out a living through meager agriculture and occasional trade with nomads. However, this is not enough of a life for you and your friends.

You've heard stories, myths and legends from the village elders of a Golden Age of the Ancients that ended centuries ago. It was a miraculous age of wonder, destroyed suddenly in horrific fire. Why it ended that way, no one now knows. But some relics yet remain from that distant age, relics of incredible power.

You know what a gun is and generally how it works, but you've never fired one before. You speak a bastardized version of the Ancient language. Other tribes speak their own dialects, but are close enough to your own that you can usually understand them. Reading and writing is currently beyond your ability, but you've heard there are some out there who understand the writings of the Ancients.

Creating Your Explorer

1) Generate stat scores by rolling 4d6, dropping the lowest die and summing the remaining three. Assign to one stat of your choice. Repeat twice more.

The three stats are Strength (STR), Dexterity (DEX) and Mind.

Stat modifier = (STAT-10)/2, round down.

2) Pick a starting race: Pure Human or Mutant.

Pure Humans represent the ideal, unmutated form, and mutants often revere them (or so the pure strains believe). Humans start with two primary skills (see below). They also have an easier time using relics and interacting with ancient technology, such as robots and computers.

Mutants come in various forms: humanoid, insect, reptile, mammal, even plants. All mutants start with +4 in either STR or DEX (player's choice) and -2 in Mind. Further, roll mutations and defects (see Mutations below).

3) Select one primary skill. This skill starts at +3. All other skills start at +1. Your primary skill increases +1 each level. Other skills increase +1 every even numbered level (i.e. 2, 4, 6, etc.).

The skills are:

Physical – Climbing, swimming, smashing stuff, etc.

Subterfuge – Sneaking, hiding, picking locks or pockets, etc.

Knowledge – Area knowledge, history, book learning, etc.

Communication – Negotiation, diplomacy, lying, inspiring, etc.

Survival – Land navigation, tracking, hunting, dowsing, etc.

Tech – Using, repairing and modifying ancient relics

4) There is no currency in the wasteland, so characters start with no money. Instead, select up to 8 items from the following, plus roll 1 random special item (pure humans get 2 random special items):

Standard Gear:

Good Light Melee Weapon

Upgrade Melee Weapon 1 step

Good Thrown Weapon x5

Good Crossbow (w/ 20 quarrels)

Set of Leather Armor

Upgrade Leather Armor to Half-metal Armor

Upgrade Half-metal Armor to Metal Armor

Shield

50 additional quarrels for crossbow

Camping Gear

1 Week Provisions

Tool kit (tools for the Tech skill)

Climbing Gear

Healing Kit (can be used to bind 1d6 HP after each fight)

Special Items:

01-25 = Hybrid Weapon of choice (x5 if Thrown Weapon)

26-45 = Hybrid Armor

46-65 = Trade Goods (equal to a hybrid weapon or mount)

66-80 = Riding Mount (a Hopper or giant beetle)

81-85 = Battle Mount (a Podog or giant lizard)

86-00 = Random working relic

Wpn Type	Good	Hybrid
Light Melee ¹	1d6	1d8
Medium Melee ¹	1d8	1d10
2-Hand Melee ¹	1d10	2d6
Giant Melee ²	2d6	2d8
Crossbow ³	1d8	1d10
Thrown ¹	1d4	1d6

¹ Add STR stat bonus to damage

² Can only be used by large sized creatures; double STR damage modifier

³ Requires 1 round to reload.

Armor Type

Leather or Hide Armor
 Half-metal Armor
 Metal Armor
 Hybrid Armor
 Shield

AC Bonus

+2
 +3
 +4
 +5
 +1

Mutations

If you choose to play a mutant, roll mutations and defects on the charts below.

You may continue to roll for mutations until you decide to stop or until the cumulative total value of mutations rolled equals or exceeds 10 points.

You must roll for Defects until the total value of your defects equals or exceeds the total value of your mutations.

Note that mutations generally stack, subject to GM discretion. Stat bonuses that apply to damage or healing powers do not stack (for example, STR bonus for Claws)

Some mutations must be activated to use; these are noted with an (A). Activated mutations drain hit points equal to the mutation's total value (including stacking). For example, a mutation with a total value of 8 would drain 8 hit points each time it is activated. These hit points do not heal normally, being fully recovered after 8 hours of uninterrupted rest.

Unless otherwise stated, mutations with duration effects last until the end of the encounter, subject to GM discretion.

d%	Mutation	Summary	Value
01	Amazing Fortitude	+10 on Fortitude saves	1
02	Amazing Reflex	+10 on Reflex saves	1
03	Amazing Will	+5 Mental Defense	1
04	Blindsense	Pinpoint (but can't "see") creatures within 30'	1
05	Chameleon Skin	+10 Subterfuge for hiding and sneaking (when naked)	1
06	Climbing Hooks	10 foot climbing speed	1
07	Double Healing	X2 healing rate	1
08	Fleet Feet	+10 foot base speed	1
09	Immunity Poison	Immune to poison	1
10	Immunity Psychic	Immune to psychic effects and mental attacks (good and bad)	1
11	Keen Ears	+10 to any test involving hearing	1
12	Keen Eyes	+10 to any test involving sight	1
13	Keen Nose	Can track by smell (+20 on tests)	1
14	Low-light Vision	Low-light vision	1
15	Padded Feet	+10 Subterfuge for sneaking	1
16	Resist Radiation	Negate 12 radiation damage per day	1
17	Swimmer	5 foot swim speed	1
18	Prehensile Tail	+5 Physical for climbing; can hold simple implements, such as a torch; cannot attack	1
19	Tentacles/Vines	1d6 tentacles; +1 each to Physical and to grapple attacks	1
20	Tremorsense	Sense movement through solid objects (ground, walls), 30 feet	1
21	Uncanny Dodge	Double DEX bonus to AC	2
22	Blindsight	Can "see" up to 10 feet, even if blinded	2
23-24	Claws	Natural melee weapon, 1d8 damage	2
25	Darkvision	Up to 60 feet	2
26	Dual Brain	+2 Mind, +2 Mental Defense	2
27	Empathy	Sense emotional states (but not thoughts) up to 30 feet	2
28-29	Fur	+2 AC; reduces cold damage by 5 per attack	2
30-31	Horns	Inflicts 2d4 damage; double damage on a charge	2
32	Leech Damage (A)	Touch target, heal 1d10 damage and take damage to your HP	2

33	Overpowering Stench	All creatures within 5' radius suffer -2 on attacks and skill checks	2
34	Quills/Thorns	On a successful grapple attack inflict 1d6 damage	2
35	Spring Legs (A)	+10 foot base speed; +30 jump	2
36-37	Tougher	+4 HP/Level	2
38	Acidic Bite	Bite attack for 1d6 damage, plus 1d6 additional acid damage	3
39	Carapace	+6 AC; -2 DEX	3
40-41	Haste Self (A)	+30 foot base speed; +2 AC; +2 initiative; +2 melee attack rating	3
42-43	Heightened Mind	+10 Mind	3
44-45	Pincers	2 pincers, 1d6 damage, if both hit same target, rend for 2d6 more	3
46-47	Regeneration	At start of mutant's turn, mutant heals 2 damage	3
48-49	Scales	+3 AC	3
50	Shaper (A)	Shape change for 10 minutes; does not affect gear; does not change stats, AC or HP	3
51	Telepathy (A)	Read/speak other's minds up to 60'; mental attack required against unwilling subjects	3
52-53	Force Field (A)	Force field adds +3 AC while active; lasts for duration of combat	3
54-55	Light Warp (A)	+20 Subterfuge for hiding and sneaking for 10 minutes	4
56-57	Lightning Touch (A)	Touch attack for 2d6 + Mind bonus electrical damage	4
58	Psychic Double (A)	You're comatose, your double is incorporeal "ghost" for 10 minutes; can use psychic abilities and interact with other incorporeal entities	4
59-60	Psychic Healing (A)	Touch to heal others for 2d6 + Mind bonus damage	4
61-62	Rage (A)	+10 STR; -5 AC for duration of fight	4
63	Dimension Slip (A)	Go ethereal for 10 minutes; can cancel at will	5
64	Extra Arm	One extra one-hand attack or shield	5
65	Levitate Self (A)	Unencumbered mutant can levitate self slowly up and down for 10 minutes	5
66-67	Poison Bite (A)	Bite attack for 1d6 damage plus save vs. DC 15 or paralyzed for duration of fight	5
68-69	Telekinesis (A)	Slowly move Mind x 25 lbs; mental attack required against unwilling targets	5
70	Time Slip (A)	Mutant disappears for 5 rounds, then reappears with an exact duplicate for 5 rounds	5
71	Wings (A)	Mutant can fly at base speed for 1 minute/hour	5
72-73	Brain Bite (A)	Mental attack; inflicts 2d4 + Mind bonus damage; range 30 feet	6
74-75	Cryogenesis (A)	Mental attack; inflicts 1d6 + Mind bonus damage; Fort save vs. DC 18 or frozen; 30 ft.	6
76	Displacement (A)	If physical attack dice roll against this mutant is odd, the attack misses	6
77	Exoskeleton	+5 AC	6
78-79	Heightened Dexterity	+10 Dexterity	6
80-81	Heightened Strength	+10 Strength	6
82	Life Leech (A)	Area mental attack; deal 1d6 + Mind bonus damage to all within 30 ft.; gain that amount as temporary HP for duration of fight	7
83-84	Bigger	Large size; +8 STR, -2 DEX; +10 foot base speed; melee weapons shift down one size	7
85-86	Energy Drain (A)	Mental touch attack to drain 1 Level/HD from target; +10 temporary HP	7
87	Leech Strength (A)	Area mental attack; leech 1d4 STR from all within 30 ft; add to your STR for combat	7
88-89	Extra Arms	1 extra two-hand attack or 1 extra 1-hand attack + shield	8
90	Light Slip (A)	Invisible for 10 minutes or until concentration is broken	8
91-92	Sonic Blast (A)	30 foot cone; inflicts 2d6 + Mind bonus sonic damage; no attack roll or save	8
93-00	Players Choice	Player's choice of mutation—WOO HOO!!!	-

d%	Defect	Summary	Value
1-4	Distinctive Odor	Mutant can be identified by smell alone; those with Keen Nose can track the mutant from twice as far away	1
5-8	Poor Respiratory System	Mutant becomes fatigued after 5 rounds of combat (-4 on attacks, initiative & skills); requires 1 hour of rest to recover	2
9-12	Slow	-5 ft. base speed	2
13	Sensitivity to Acid	Double damage from acid	2
14	Sensitivity to Cold	Double damage from cold	2
15	Sensitivity to Electricity	Double damage from electricity	2
16	Sensitivity to Fire	Double damage from fire	2
17	Sensitivity to Poison	Double damage from poison	2
18	Sensitivity to Radiation	Double damage from radiation	2
19	Sensitivity to Sonics	Double damage from sonics	2
20-25	Reduced Mind	-5 Mind	3
26-29	Heightened Metabolism	-5 save versus poison/disease; consumes twice as much water, food & oxygen	3
30-33	Stiff Motion	Always misses the first round of combat	3
34-35	Terrible Fortitude	-10 on Fortitude saving throws	3
36-37	Terrible Reflex	-10 on Reflex saving throws	3
38-39	Terrible Will	-5 Mental Defense	3
40-43	Real Slow	-10 ft. base speed	4
44-46	Poor Dual Brain	Defective second brain; -2 initiative; -2 Mental Defense	4
47-49	Frenzy	When reduced to ½ hit points, mutant goes into a frenzy, attacking randomly	6
50-53	Fits	Mutant is overcome with involuntary fits; -2 on attack rolls, skill checks and initiative	7
54-57	Smaller	Small size; -4 STR, +2 DEX; -10 ft. base speed; melee weapons shift up one size	7
58-63	Reduced Strength	-5 Strength	7
64-67	Partial Action Only	Mutant may only make one attack each combat round	8
68-70	Weapon Incompetent	Mutant doesn't 'grok' weapons; -4 attack with non-natural weapons	8
71-76	Reduced Dexterity	-5 Dexterity	8
77-80	Fear Response	When fight is going against the party, or fighting opponents who appear tough, make a moral check or flee	9
81-83	Bleeder	All attacks that hit inflict +1 damage per die	9
84-87	Crude Hands	-4 with all hand-held items (i.e. weapons) or fine manipulation (i.e. relic repair)	10
88-90	Fragile	Double damage from kinetic weapons (not energy weapons)	10
91-92	Terrible Vision	Mutant can only see blurry shapes and outlines; -8 on attacks beyond 30 feet	12
93-94	No Arms	Mutant has no, or atrophied, arms; physical tests that normally require use of arms are at -4; can manipulate tools (but not weapons) with feet at -4	20
95-00	Player's Choice	Pick one defect of your choice. Knock yourself out!	-

Combat

Armor Class (AC) = 10 + DEX modifier + Armor bonus

Mental Defense (MD) = 10 + Mind/2 (round down) (10+HD for monsters, plus any bonus for mutations; robots immune)

Hit Points (HP) = (STR + 1d6/level) x2

Ranged Attack Bonus = DEX modifier + Level

Melee Attack Bonus = STR modifier + Level

Mental Attack Bonus = Mind modifier + Level

1.) Initiative: Roll 1d20 + DEX modifier to determine initiative order, starting with highest result. Everyone can do one thing each turn: move, attack, activate a mutation, use a relic, etc.

2) Attack Roll: Roll 1d20 + Attack Bonus \geq target's AC; if successful, roll damage. Use MD for mental attacks.

An attack roll of '20' is a critical hit, inflicting maximum damage.

Creatures and NPCs reduced to 0 HP are dead or unconscious, at the GM's discretion. PC's reduced to 0 HP are unconscious, near death. Additional damage reduces STR directly. When STR is reduced to 0, the PC dies.

PCs may bind wounds for 1d6 HP after each battle so long as a healing kit is available. If a medkit is available, binding heals 2d6 HP. Characters naturally heal Levelx2 HP per day of rest.

3) Multiple Attacks: If the total attack bonus is 6 or higher, a second attack may be made at -5. If total attack bonus is 11 or higher, a third attack may be made at -10.

4) Dual Wield: Light melee weapons and pistols may be dual wielded. This allows one additional attack with the off-hand weapon at -2.

5) Area Attacks: Weapons with area attacks make a single attack roll against the AC of everyone within the area effect (including friends). If the attack roll exceeds AC, they take regular damage; if under AC they take $\frac{1}{2}$ damage.

6) Stun Damage: Stun damage cannot kill and heals completely after a couple hours rest. A character reduced to 0 or fewer hit points by stun damage is unconscious for 1 minute for each point below 0 (minimum of 1 minute).

7) Power Cells: Most relic weapons use general purpose universal power cells. When the attack roll comes up '1', the power cell is drained (the attack does not go off) and must be replaced. Replacing a power cell requires one combat round.

Hazards

Fortitude Save = STR modifier + Physical

Reflex Save = DEX modifier + Physical

1) Falling: 1d6 per 10' fallen; Reflex save vs. DC equal to feet fallen for $\frac{1}{2}$ damage; if spikes or hard debris is present, add +1 per 10' fallen (max +10 damage).

2) Poison: Fortitude save to avoid or half affect, depending on type of poison; DC depends on type of poison.

Poison Type	DC	Notes
Weak	10	1d6 STR; save for $\frac{1}{2}$
Moderate	15	1d8 STR; save for $\frac{1}{2}$
Strong	20	1d10 STR; save for $\frac{1}{2}$
Lethal	10+HD	Save or die
Paralytic	10+HD	Save or paralyzed 1 hour

3) Extreme Heat/Cold: If lacking suitable protection make a Fortitude save vs. DC 15 (+1 for each previous check) every 10 minutes or take 1d6 STR damage.

4) Radiation: Treat as extreme Heat/Cold, but with different intervals depending on radiation intensity:

Low Intensity = Check every hour

Medium Intensity = Check every 10 minutes

High Intensity = Check every minute

If the save roll comes up '1' the character has mutated; roll d100:

01-30 = Random mutation

31-90 = Random defect

91-00 = Resist radiation mutation

Level Advancement

OmegaLite20 uses the free-form experience system.

Characters gain experience not from killing things and taking their stuff, but from exploring and adventuring.

At the end of each session, the GM assigns experience to the entire party based on how the players interacted with the world, NPCs, creatures, hazards, etc. Everyone in the party gets the same amount of experience.

Nothing Happened: If the party stayed in town or hid in a cave the entire session they get 0 XP; nothing ventured, nothing gained.

Weaksauce Adventuring: The party poked around a bit, hid from everything, avoided most encounters, they get 5 XP for the session.

Standard Adventuring: The party explored, fought things, messed with relics, made contact with villagers (non-violent or otherwise) and generally caused trouble, they get 20 XP for the session.

Epic Adventuring: If the party took on a deathbot and engaged in a spectacular battle that resulted in much destruction, bloodshed and death, they get 50 XP for the session.

Note, PCs gain experience so long as they adventure, regardless of whether or not they 'succeed'.

Advancing a level requires Level x 20 XP. After advancing, reset XP to 0 (GM's discretion whether excess XP is saved or lost). For example, advancing from level 1 to level 2 requires 20 XP; from level 2 to level 3 requires 40 XP; from level 3 to level 4 requires 60 XP, and so on.

Each level advanced adds:

- +1d6x2 hit points
- +1 to all attack rolls
- +1 to primary skills
- +1 to secondary skills every even level (2, 4, 6, etc.)
- +1 to STR, DEX or Mind every third level (3, 6, 9, 12, etc.)

Relics & Technology

1) **Condition:** When a relic is found, roll 1d6 to determine its condition:

- | | |
|-----|-----------------------------|
| 1 | Working and powered |
| 2 | Working but out of power |
| 3-5 | Broken, but can be repaired |
| 6 | Broken beyond repair |

2) **Repair:** Repairing a broken relic requires a Mind + Tech test vs. DC 20 to get the relic in working condition. A tool kit or proper facilities are required to make a repair check. If the repair attempt fails, that character must gain a level before they can try to repair that relic again. If the repair roll is a '1', the relic is permanently broken.

3) **Using Relics:** It was a user-friendly future. Most relics were designed to be as intuitive and easy to use as possible (maybe this is why the Ancients blew themselves up so easily). Generally speaking, characters should be able to figure out how to use most relics with minimal fuss. For particularly complicated devices (such as reprogramming a computer), the GM should require an appropriate Tech skill check (DC 20 is a good start).

4) **Breaking Relics:** Whenever a character is subjected to a significant shock or stress, such as falling off a cliff or being swallowed by a giant mutant, re-roll the condition for each of his/her relics.

5) **Reprogramming Robots:** Robots may be reprogrammed to follow a character's orders. Doing so requires a Mind + Tech check vs. DC 20 + robot's HD. Also, the character must have an appropriate opportunity to reprogram the robot (i.e. it isn't currently attacking them) and a tool kit.

Random Relics

d%	Random Relic
01-20	Munitions
21-30	Relic Armor
31-40	Relic Gun
41-60	Grenades
61-70	Relic Melee Weapon
71-90	Drugs
91-00	Tools

Munitions

d%	Munitions
01-80	Power Cells (1d10 cells)
81-95	Flamer Fuel (1d4 canisters)
96-00	Mini Missile (1d3 missiles)

Flamer Fuel: Small metal canisters of flammable liquid used in flamers. A full tank is good for 6 shots.

Mini Missile: A self-contained single-shot fire-and-forget self-guiding disposable missile launcher (no scatter); 500 foot range; 10d6 damage; 50' blast radius.

Armor

d%	Armor	Armor Bonus
01-10	Combat Shield	+3
11-30	Flex Armor	+6
31-50	Sheath Armor	+7
51-60	Ceramic Armor	+8
61-70	Shell Armor	+9
71-80	Powered Armor	+10
81-90	Class I Force Field	+1
91-95	Class II Force Field	+2
96-00	Class III Force Field	+3

Combat Shield: Light sturdy shield made of advanced plastic, with a clear screen to see through.

Force Field: A belt mounted unit that covers the wearer in a reactive force field, providing from +1 to +3 AC bonus in addition to other armor worn. Runs for 1 hour on a standard power cell. Pulse and Torc weapons knock the field down immediately, draining the power cell, requiring several minutes to reset. Multiple force fields negate one another.

Powered Armor: Like Shell armor, but with mechanical servos that provide STR 20 and base movement speed 40'. Also comes equipped with internal communicator and low-light vision. It Runs off of an internal fusion power plant, good for years of continuous operation.

Shell Armor: Air tight armor with air filtration, providing immunity to airborne toxins and diseases.

Modifying Armor: Many mutants will not be able to wear standard relic armor (specifically *Bigger, Smaller, Wings, Extra Arm/Arms, Exoskeleton*, and *Carapace*, though possibly others such as *Quills/Thorns* and *Tentacles/Vines* at the GM's discretion). The armor must be modified to fit these mutants.

Modifying armor is a Mind + Tech check with a DC equal to 20 + Armor Bonus. Force fields do not have to be modified, they'll fit anyone. If the roll comes up '1', the armor has been ruined and cannot be salvaged. A tool kit is required.

Tools

d%	Tool	Notes
01-10	Anti-grav sled	Carries up to 20 tons
11-15	Command Ring	Bypasses robots and security
16-30	Communicators	Transmit sound, text & images; x2
31-35	Adv. Toolkit	+2 on Tech related checks
36-45	Goggles	Various modes of enhanced vision
46-50	Regen Ray	Regenerates 2d6 damage
51-60	Analyzer	Requires Tech skill to use
61-70	Solar Recharger	Recharges 1 power cell/day
71-75	Sonic Imager	See below
76-80	Life Ray	See below
81-90	Tractor Wand	Tractor beam w/ 20 STR, 30' rng
91-00	Medkit	Binds for 2d6 damage

Advanced Toolkit: An advanced form of techkit. Provides a +2 bonus to any Tech skill check that requires the use of a tool kit.

Analyzer: Requires Tech skill of 4 or higher to interpret results. Analyzes air, water, soil and biological samples, as well as illness, injury & radiation levels. 1 foot range.

Anti-grav sled: 10'x5' sled that floats 5' off the ground; carries 20 tons; must be pushed or pulled to move.

Command Ring: A ring containing security codes and a micro-transmitter, used to bypass military/security robots and security systems. A Mind + Comm test is required vs. an appropriate DC (15 for low sec, 25 for high sec); pure humans receive +2 to the test. Note, command rings do not work on Deathbots...they take orders from no one.

Communicators: Transmits and receives sound, text and images up to several miles. Usually come in pairs.

Goggles: Low-light vision, darkvision to 60', flash protection and tinting, short range magnification and long range telescopic vision.

Life Ray: A miraculous pistol-like device that can sometimes restore the dead to life. It has a base chance of 50% to restore someone to life, provided they've been dead no more than 24 hours. If the body has not taken extensive physical damage (such as death from poisoning or asphyxiation), the

chance is 75%. If death was messy (such as a flamethrower or grenade), the chance is only 25%. If there's nothing left to be brought back (i.e. blown to bits or disintegrated), the chance is 0%. Each use drains a power cell.

Medkit: Can bind wounds after each combat for 2d6 damage. On a roll of 2 or 12 (double '1's or double '6's), the medkit runs out of supplies.

Regen Ray: Another miraculous pistol shaped device, similar to a Life Ray, which regenerates damaged cells, with a range of 10 feet. Each use heals 2d6 damage, regrowing lost body parts, setting broken bones and repairing radiation damage. Whenever double 1's or 6's are rolled the power cell has been depleted and must be replaced.

Sonic Imager: 1'x1' tile, slightly flexible, that displays the internal structure of objects. Can display a rough outline of rooms through walls or the inner workings of machines.

Tractor Wand: A tractor beam that lifts and moves objects, with a base STR of 20 and a range of 30'. Reflex save (DC 20) to avoid the initial grab; after that it's strength against strength.

Relic Guns

d%	Gun	Damage	Range	Notes
01-10	Blaster Pistol	4d6	30'	
11-20	Blaster Rifle	6d6	60'	
21-30	Auto Pistol	2d6	30'	
31-40	Assault Rifle	3d6	60'	
41-50	Laser Pistol	3d6	60'	
51-60	Laser Rifle	4d6	120'	
61-65	Flamer	4d6	30' Cone	If attack roll \geq AC, normal damage; if attack roll $<$ AC, $\frac{1}{2}$ damage; 6 shots
66-70	Sonic Pistol	2d6	30' Cone	Sonic damage; hits automatically (roll to see if power cell dies)
71-75	Sonic Rifle	3d6	30' Cone	Sonic damage; hits automatically (roll to see if power cell dies)
76-80	Stun Pistol	3d6	30'	Stun damage; negated by force fields; no effect on robots or plants
81-85	Stun Rifle	4d6	60'	Stun damage; negated by force fields; no effect on robots or plants
86-88	Black Ray Pistol	4d6	30'	Negated by force fields; Fortitude save DC 18 or die
89-91	Black Ray Rifle	6d6	60'	Negated by force fields; Fortitude save DC 22 or die
92-94	Torc Rifle	3d6	60'	Negated by force fields; Fortitude save DC 16 or be disintegrated
95-97	Pulse Pistol	4d6	30'	Only effects robots and machines; causes force fields to collapse
98-00	Pulse Rifle	6d6	60'	Only effects robots and machines; causes force fields to collapse

Grenades

d%	Grenades (#)	Damage	Radius	Notes
01-40	Frag (1d8)	4d6	30'	
41-70	Blaster (1d4)	6d6	20'	
71-80	Stun (1d6)	3d6	20'	Stun damage; blocked by force fields; no effect on robots or plants
81-90	Pulse (1d4)	6d6	20'	Only effects robots and machines; causes force fields to collapse
91-95	Black Blast (1d3)	4d6	10'	Negated by force fields; Fortitude save DC 18 or die
96-00	Torc (1d3)	3d6	10'	Negated by force fields; Fortitude save DC 16 or be disintegrated

Relic Melee Weapon

d%	Melee Weapon	Damage	Notes
01-40	Vibro blade	3d6	Medium melee; a force field shaped like sword; blocked by force fields
41-70	Energy Mace	4d6	Two-hand melee
71-90	Stun Whip	2d6	Stun damage; negated by force fields; no effect on robots or plants; medium melee
91-00	Laser Sword	3d6	Light melee; you don't have to call it a 'laser sword' ;)

Drugs

d%	Drugs (doses)	Notes
01-30	Stimpack (1d6)	Heals 3d6 damage (not disintegration or drain from using mutations)
31-40	Alertness Booster (1d6)	+5 initiative, spot, listen, search
41-50	Anti-Rad Serum (1d4)	Cures 5 radiation damage per use; +10 save vs. radiation if taken before exposure
51-60	Anti-toxin (1d12)	+10 save vs. poison; if already poisoned, allows another immediate save at +10
61-70	Haste Inhaler (1d4)	Grants +1 attack, +2 AC, +5 initiative and doubles base speed; lasts 1 minute
71-75	Muscle Booster (1d6)	+4 Strength for 1 hour
76-80	Brain Booster (1d6)	+4 Mind for 1 hour
81-90	Restoration Fluid (1d10)	Each dose heals 1d6 ability damage
91-95	Immune Booster (1d8)	+10 save vs. disease; if already diseased, allows another immediate save at +10
96-00	Sustenance Pill (d100)	1 day's nutrition in a pill

Monsters

Any number of monsters from D&D, such as giant animals and insects, readily serve as Omega monsters as well. You can use some of them, such as many of the humanoids, as stock races to which you can add mutations and defects. What follows are monsters unique to Omega.

1) Skills: All creatures have a skill bonus equal to their Hit Dice. If the creature is intelligent, add +3 to one skill. These may be modified by the GM as logic dictates.

2) Create Your Own: Assign Hit Dice (d8 for most things, d12 for large creatures). Attack bonus and skill level equals the number of Hit Dice. Add +3 to one skill if intelligent; add stat bonuses to suit.

Monster	Hit Dice	A.C.	Attack/Notes
Android, Thinker	2d8+2 (11 hp)	15	Vibroblade +2 (3d6+1) or Blaster Pistol +2 (4d6); +3 Tech
Android, Warrior	4d8+16 (34 hp)	19	Vibroblade +7 (3d6+6) or Blaster Rifle +2 (6d6); +3 Subterfuge
Android, Worker	3d8+15 (28 hp)	15	Knife +6 (1d6+4) or Laser Pistol +3 (3d6); +3 Physical
Ark	4d8+12 (30 hp)	16	Large club +4 (1d10+4); Leech Life; Telekinesis; Control Weather
Badder	2d8+6 (15 hp)	19	Claws +6 (1d4+3) or Crossbow +5 (1d8)
Blaash	2d8+2 (11 hp)	13	Radiation hazard, check every round; immune to radiation
Hisser	6d8+12 (39 hp)	15	Bite +9 (2d4+6); Sonic Blast (2d6+2); telepathy; immune to sonic & lasers
Hoop	3d8+3 (16 hp)	13	Sword +3 (1d8+1); Crossbow +3 (1d8); touch transforms metal to rubber
Hopper	3d8+9 (20 hp)	11	Kick +6 (1d6+4); can carry a human rider; STR +Phys DC 15 to stay on
Latterbug	7d8+56 (87 hp)	17	Bite +10 (1d8+9); sensitive to cold (x2 dmg); haste self (5 rounds)
Orlen	3d8 (13 hp)	13	2 giant weapons +4 (2d6+6); telekinesis, telepathy, dual brain
Podog	6d8+19 (46 hp)	13	Bite +8 (2d4+7); sonic mimicry; can carry a human as a battle mount
Sep	7d8+7 (38 hp)	15	Bite +8 (2d4+6); move = burrow 40 ft.; tremorsense 300 feet
Spider Bot	3d12 (19 hp)	15	Blaster eye +3 (4d6); darkvision 60'; low-light vision
Stalker Bot	20d12 (120 hp)	23	Blaster +13/+8/+3 (8d6); darkvision 60'; low-light vision; Class III force field
Deathbot	80d12 (600 hp)	26	Multiple attacks; darkvision 1000'; low-light vision; class X force field
Vendor Bot	3d8 (15 hp)	13	No attacks; 25% of attracting nearby monsters each minute

Ark: 10' tall mutant dog-people who relish the taste of human hands. Will only use relics if working with others who show them how they work.

Badder: Mutated humanoid badgers with poor disposition. Live in feudal societies centered around their burrows, some of which are in Ancient ruins. It is possible to trade with them if you show enough force and aren't easily intimidated.

Blaash: A big moth whose abdomen glows with radiation. All within 30' radius must make radiation checks each round.

Deathbot: A giant robot bristling with weapons. Some roll on massive treads, some fly. Fires 10 points worth of weapons each round which hit automatically; Reflex save vs. DC 20 allowed for ½ damage; include force field armor bonus to save roll. Also launches 1d6 mini missiles each round.

Weapon	Cost	Damage	Notes
Blaster Cannon	2	15d6	
Black Ray Can.	6	15d6	Fort save DC 30 or die
Hvy Torc Guns	8	8d6	Fort save DC 26 or disintegrate
Pulse Cannon	2	15d6	Force fields & robots only

Hisser: 10' long mutant snake-men. Many are equipped with relics (not shown in stats). They often search ruins for relics. Hisser colonies are run by a matriarch, the only female. Hissers rely on telepathy for communication.

Hoop: 7' tall intelligent mutant rabbit.

Latterbug: 10' giant round beetle that fly about somewhat slowly.

Orlen: 7' mutant humanoids with two heads and four arms. They will use relics when available. They will barter peacefully and treat honestly with travelers. Some have an additional random mutation.

Podog: A mutated dog big enough to carry a human. 1% have dual brains and telepathy, making superior mounts. If hit by sonic attack, it may copy the attack and send it back towards the original source.

Sep: Mutant 'land-shark' that 'swims' through the soil. Will lunge out the ground, take a bite, and dive back in again.

Spider Bot: Utility bots that look like black round balls with articulated spider-like legs; can produce a thin manipulator arm with a vice grip hand.

Stalker Bot: Hunt down enemies/fugitives or patrols important installations. Capable of powering down and remaining in stasis for indefinite periods of time.

Vendor Bot: Mobile vending machines with bright, flashing holographic signs and loudspeakers extolling the virtues of bygone products, creating a racket that may attract nearby monsters. If attacked it sounds a piercing alarm which will attract any monsters or security robots in the vicinity.

Campaigns

One way to begin of a game of OmegaLite20 is to start off the party in their home village and then have them move out and explore the wasteland, in a sandbox hex-crawl style campaign. The party knows the hex their village occupies and is familiar with the surrounding terrain (each adjacent hex), but the rest of the world is completely unknown to them.

The GM then fills in the blanks as the party moves and explores, using random rolls to determine what, if anything, is in each hex. The world can be pre-made by the GM, only revealing terrain as players enter a hex, or the map can be generated through random dice rolls as the party progresses. The resulting hodge-podge terrain could be explained by the massive cataclysm that shook the world during the apocalypse.

Alternatively, the GM can run a more straight forward campaign with an overarching plot, story elements, returning villains, etc. The theme of such campaigns are numerous, including fighting a great evil (such as preparing for the imminent arrival of a Deathbot), rebuilding civilization (perhaps all the party members are pure humans from a recently opened vault or bunker), forging an empire (the PCs start off working for a regional warlord and gradually work their way up the chain of command, until they get to the top), preserving ancient knowledge (retrieving relics and documents, then protecting them from raiders) or working to advance the aims of an organization or relic cult (such as members of a genocidal mutant group, striving to wipe out all remaining pure humans).

Optional Rules

Following are optional rules for your consideration.

1) No Critical Hits: Since the GM rolls attack dice more often than the players do, critical hit rules tend to favor the GM. You may want to consider playing without them, in which case a natural 20 only guarantees a sure hit, regardless of the target's AC.

2) Currency: The world of Omega has no minted currency, being primarily a barter economy. However, players do often like the heft and clink of gold coins in their character's purses, so if you want to add currency to your game, go ahead. Use standard M20 money conversion and prices for primitive items. Working relics are simply too valuable to part with, and so will almost never be available for sale-- unless it's a player doing the selling, in which case finding a buyer with enough gold might be a problem. However, broken relics may be available for sale, which the players can then try to repair. Even broken relics will fetch hundreds, or even thousands, of gold pieces. Figure that 100 coins equal 1 item for encumbrance purposes.

3) Cryptic Alliances: You may want to use the traditional cryptic alliances in your campaign:

Alliance	Description
Archivists	Venerate relics as holy objects, collecting them and displaying them on pedestals.
Brotherhood of Thought	Attempt to spread the goals of equality, self-determination, diversity, freedom and respect for sentient life.
Created	Androids working to create a perfect world for androids. No one else need apply.
Followers of the Voice	The voice of God speaks through computers, and as such computers are to be venerated and obeyed.
Friends of Entropy	Chaos, death, destruction...it's all going to end someday anyways, so why not have some fun? Enemy of just about everyone.
Healers	Committed to mending body, mind and spirit.
Iron Society	Mutant humans who believe they are the next step in evolution; pure strains need to get out of the way...permanently.
Knights of Genetic Purity	Pure humans who want to purify the gene pool by wiping out mutant humans.
Radioactivists	Worships radiation, believing God remade the world through the apocalypse.
Ranks of the Fit	A mutated bear, styling himself as Napoleon, has created a fearsome army to conquer the world. All are welcome, but mutant animals possess all the authority.
Restorationsits	Collect and restore relics, attempting to rebuild the old world, shooting anyone who gets in the way.
Seekers	Relics come from an age of sin, poisoning the world, and are to be destroyed. Seekers still use relics, but only to advance their cause.
Zoopremacists	A bunch of mutated animals who believe everyone else is no better than a slave...or dinner.

4) Casting Spells: If you want to run a really gonzo campaign, you can let characters learn how to cast spells. This can either be a science-fantasy hybrid campaign, or you can think of spell casting as being a highly advanced long-lost science which, to the uninitiated, appears to be 'magic.'

Learning a spell, either Arcane or Divine, requires a Mind modifier + skill rank test vs. DC 20 + Spell Level. If the test fails, the PC must gain another level before attempting to learn that spell again.

Arcane spells use the Knowledge skill.

Divine spells use the Communication skill.

A character may attempt to learn a spell of any level and may learn a maximum number of spell levels equal to their Mind score plus their level (i.e. a level 5 character with Mind 18

could learn a maximum of 23 levels of spells, Arcane and Divine combined). Spells are acquired from ancient writings in books, scrolls or on/in monuments or from willing teachers. A known spell may be 'dropped' in order to open up slots to learn a new spell.

Casting spells drains hit points equal to 1 + Spell Levelx2. These hit points cannot be healed normally, rather being regained after 8 hours of uninterrupted rest (similar to using activated mutations). Explorers do not get signature spells.

Spell Level	1	2	3	4	5	6	7	8	9
HP Cost	3	5	7	9	11	13	15	17	19

Difficulty class for all spells is 10 + skill rank + Mind modifier.

5) Relic Vehicles: Relic vehicles are problematic to a campaign because once the party can fly about in an air car at hundreds of miles per hour, the wasteland loses a big part of its mystery and danger. Therefore, GM's are strongly encouraged to allow relic vehicles only for special, one-off purposes, such as to whisk the party away to an exotic, far-off adventure location, and then return them when the adventure is complete. Upon returning, the vehicle's fuel cells are depleted, it breaks down or is returned to its owner. If GM's do allow PCs to obtain air cars, jet cycles and shuttles, they should be expensive and time-consuming relics to maintain.

6) Crusader Armor: This is a suit of really badass power armor, which you may not want to let players get their hands on, or perhaps only let them use for special one-off encounters.

As powered armor, but with the following: AC Bonus +12; built in Class III force field (for an additional AC bonus of +3); a laser pistol in each forefinger (runs off suit power, counts as dual wield); grenade launcher with up to 20 grenades (determine type randomly), launcher has 50 ft. range increments; built in relic goggles; flight (100 ft.); a mini missile launcher on the right arm with up to 10 mini missiles; and a built-in stimpack dispenser (can use as a free action once per round, holds up to 6 stimpacks). Runs on an internal fusion power supply good for years of continuous use.

7) Alternative Torc Damage: Torc weapons require a saving throw to avoid being disintegrated (i.e. instantly killed). As an alternative, disintegration damage can only be healed via regeneration (either the mutation or a relic with regenerative healing, such as a Regen Ray). Binding wounds, resting and using stimpacks will not restore disintegration damage. Note, however, that this alternate rule has a bigger impact on PCs than it does on NPCs.

8) Alternative Black Ray Damage: Black ray weapons require living beings to make a save or die instantly (the good ol' death ray). As an alternative, a failed save drains one experience level or Hit Die from the target. Targets reduced

to 0 levels/HD die. Again, this impacts PCs more than NPCs, but for high level PCs it's better than instant death. Rumors that those drained to 0 level by black ray weapons rising up as some sort of 'undead' are, of course, completely unfounded. You can't believe everything you hear.

9) Critical Hit Alternative: Borrowing an idea from David Bezio's *X-plorers* sci-fi RPG, when a PC is reduced to 0 HP, instead of going unconscious and deducting additional damage from STR, roll on the following chart. Roll each time the character takes additional damage while at 0 HP.

Roll 1d20 + STR modifier; subtract 5 (cumulative) for each additional roll on the chart during the battle.

Roll	Result
4 or less	BOOM, head shot! Character dies instantly
5-8	Bleeder! Character will die in 1d6 rounds
9-11	Lost limb! One random appendage blown or hacked off
12-15	Knocked unconscious for 1d6x10 minutes
16-19	No effect
20+	Second wind! Character gains 1d6x2 hit points. At the end of the combat hit points are reduced to 0 and the character loses consciousness for 1d6x10 minutes

10) Alternative Mutations and Defects: If you prefer, you can use Darth Cestual's Microlite20 Mutations instead of the mutations presented herein. Though his mutations are also based on *Omega World*, Darth Cestual added several mutations and defects of his own, and they are a little more rules-lite than the OmegaLite20 mutations.

Acknowledgements

OmegaLite20 is a conversion of Jonathan Tweet's *Omega World*, published in *Dungeon* #94/Polyhedron #153 (available in PDF format at Paizo.com for about \$5.00, well worth the money if you like post-apocalyptic RPGs), with numerous tweaks and changes to lighten and/or condense the rules M20 style. *Omega World* is based on the original *Gamma World* by Jim Ward and Gary Jaquet. No claim of ownership is made on Gamma World, Omega World or Microlite20. This is a work of fan fiction, believed to reside within fair use.

In addition, I referenced Darth Cestual's *Microlite20 Mutations* for guidance when I was stuck on how to condense particular mutations and defects. I also drew inspiration and ideas from numerous other places, including various OD&D blogs and the aforementioned David Bezio's *X-plorers* RPG, a good 'old school' style sci-fi RPG (there's also a free trial PDF version available at <http://greyarea.webs.com/downloads/X-Free.pdf>).

(h) "You" or "Your" means the licensee in terms of this agreement.

2. The License: This License applies to any Open Game Content that contains a notice indicating that the Open Game Content may only be Used under and in terms of this License. You must affix such a notice to any Open Game Content that you Use. No terms may be added to or subtracted from this License except as described by the License itself. No other terms or conditions may be applied to any Open Game Content distributed using this License.

3. Offer and Acceptance: By Using the Open Game Content You indicate Your acceptance of the terms of this License.

4. Grant and Consideration: In consideration for agreeing to use this License, the Contributors grant You a perpetual, worldwide, royalty-free, non-exclusive license with the exact terms of this License to Use, the Open Game Content.

5. Representation of Authority to Contribute: If You are contributing original material as Open Game Content, You represent that Your Contributions are Your original creation and/or You have sufficient rights to grant the rights conveyed by this License.

6. Notice of License Copyright: You must update the COPYRIGHT NOTICE portion of this License to include the exact text of the COPYRIGHT NOTICE of any Open Game Content You are copying, modifying or distributing, and You must add the title, the copyright date, and the copyright holder's name to the COPYRIGHT NOTICE of any original Open Game Content you Distribute.

7. Use of Product Identity: You agree not to Use any Product Identity, including as an indication as to compatibility, except as expressly licensed in another, independent Agreement with the owner of each element of that Product Identity. You agree not to indicate compatibility or co-adaptability with any Trademark or Registered Trademark in conjunction with a work containing Open Game Content except as expressly licensed in another, independent Agreement with the owner of such Trademark or Registered Trademark. The use of any Product Identity in Open Game Content does not constitute a challenge to the ownership of that Product Identity. The owner of any Product Identity used in Open Game Content shall retain all rights, title and interest in and to that Product Identity.

8. Identification: If you distribute Open Game Content You must clearly indicate which portions of the work that you are distributing are Open Game Content.

9. Updating the License: Wizards or its designated Agents may publish updated versions of this License. You may use any authorized version of this License to copy, modify and distribute any Open Game Content originally distributed under any version of this License.

10 Copy of this License: You MUST include a copy of this License with every copy of the Open Game Content You Distribute.

11. Use of Contributor Credits: You may not market or advertise the Open Game Content using the name of any Contributor unless You have written permission from the Contributor to do so.

12 Inability to Comply: If it is impossible for You to comply with any of the terms of this License with respect to some or all of the Open Game Content due to statute, judicial order, or governmental regulation then You may not Use any Open Game Material so affected.

13 Termination: This License will terminate automatically if You fail to comply with all terms herein and fail to cure such breach within 30 days of becoming aware of the breach. All sublicenses shall survive the termination of this License.

14 Reformation: If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable.

OmegaLite20 Monsters

Just to mix things up, feel free to roll random mutations for any of these monsters. If you feel they're too weak, give them maximum hit points instead of the listed hit points.

Name	Hit Dice	Armor Class	Attack/Special
Animal (small)	1d8+2 (6 hp)	AC 15	Claw +4 (1d3-1)
Ankheg	3d12+12 (30 hp)	AC 18	Bite +7 (2d6+7 plus 1d4 acid)
Ankylosaurus (Dinosaur)	8d8+50 (86 hp)	AC 19	Clubbed tail +8 (3d8+8)
Ant, Giant	3d8+3 (19 hp)	AC 17	Mandible +3 (1d8+3)
Bear	5d8+12 (34 hp)	AC 15	Claw +8 (1d8+4) or bite +5 (2d6+3)
Beetle, Giant	3d8 (14 hp)	AC 18	Bite +3 (3d6)
Brontosaurus (Dinosaur)	25d8+100 (210 hp)	AC 15	Stomp +20 (4d10+20)
Cannibalistic Ghoul	2d12 (13 hp)	AC 14	Bite +2 (1d6+1) or bite +0 (1d4), plus paralysis DC 12
Centipede, Giant	4d8+4 (22 hp)	AC 19	Bite +4 (3d6, plus Lethal poison DC 14)
Choker	3d8+3 (16 hp)	AC 17	Tentacle +6 (1d3+3)
Constrictor Snake, Giant	11d8+14 (63 hp)	AC 15	Bite +13 (1d8+10) or constrict (1d8+10 automatically)
Crabmen	2d8 (10 hp)	AC 15	Claws +2 (2d4); swim; breath underwater
Deinonychous (Dinosaur)	4d8+16 (34 hp)	AC 16	Talons +6 (2d6+4)
Electric Eel, Giant	2d8+3 (12 hp)	AC 12	Bite +2 (1d3) or electric discharge (3d6 area)
Fire Ant, Giant	4d8+3 (24 hp)	AC 18	Mandible +4 (1d10+4) or fire spit +4 (2d6)
Giant Crocodile/Alligator	7d8+28 (59 hp)	AC 16	Bite +11 (2d8+12) or tail slap (1d12+12)
Green Slime	5d8+10 (32 hp)	AC 14	Drop attack +5 (1d8 damage each round automatically); immune to physical attacks
Humanoid	1d8 (4 hp)	AC 11	Club +1 (1d6+1); some use relics
Humanoid, Giant	4d8+11 (29 hp)	AC 16	Giant club +8 (2d6+4) or big rock +1 (1d8+4)
Insect (small)	1d8 (4 hp)	AC 14	Bite +4 (1d3-1 plus Weak poison)
Mammoth	12d12 (80 hp)	AC 14	Trunk +12 (1d10), gore +16 (3d6+4) or trample +16 (3d6+4)
Megaraptor (Dinosaur)	8d8+43 (79 hp)	AC 16	Talons +9 (2d8+5) or bite +4 (2d6+2)
Otyugh	6d8+9 (36 hp)	AC 17	Tentacle +4 (1d6, plus disease DC 16)
Owlbear	5d12+25 (60 hp)	AC 15	Claw +9 (1d6+5)
Poisonous Snake, Giant	6d8+6 (33 hp)	AC 15	Bite +6 (1d6+4, plus Lethal poison DC 16)
Purple Worm	15d12+100 (210 hp)	AC 15	Bite +15 (4d6) or stinger +15 (1d10+10, plus Lethal poison DC 25); swallow whole if attack total exceeds target AC by 10 or more; tunneling
Radiation Zombie	2d12+3 (16 hp)	AC 11	Slam +2 (1d6+1) or bite +2 (1d6+1)
Rat, Giant	1d8+1 (5 hp)	AC 15	Bite +4 (1d4, plus disease DC 11)
Saber-tooth Tiger	7d8+15 (50 hp)	AC 13	Claws +10 (2d6+4) or bite +10 (3d6+4)
Scorpion, Giant	10d8+30 (75 hp)	AC 20	Claw +11 (1d8+6) or sting +6 (2d4+3, plus Lethal poison DC 20)
Scorpion, Large	5d8+10 (32 hp)	AC 16	Claw +6 (1d6+4) or sting +1 (1d6+2, plus Lethal poison DC 15)
Shambling Mound	8d8+24 (60 hp)	AC 20	Slam +11 (2d6+5), constrict (2d6+7 automatically)
Spider, Giant	8d8+16 (52 hp)	AC 16	Bite +9 (2d6+6, plus Paralytic poison DC 18)
Spider, Large	4d8+4 (22 hp)	AC 14	Bite +4 (1d8+3, plus Paralytic poison DC 14)
Stirge	1d8 (4 hp)	AC 16	Touch +7 (attach); automatic 1d6 damage each round
Triceratops (Dinosaur)	16d8+124 (196 hp)	AC 18	Gore +20 (2d8+15)
Tyrannosaurus (Dinosaur)	18d8+99 (180 hp)	AC 14	Bite +20 (3d6+13)
Velociraptor (Dinosaur)	6d8+20 (48 hp)	AC 16	Bite +8 (1d8+6) or claw +6 (1d6+4)
Walking Tree	7d8+35 (66 hp)	AC 20	Slam +12 (2d6+9)
Wasp, Giant	3d8 (14 hp)	AC 16	Stinger +3 (1d6+1, plus Weak poison DC 10), flight
Wolf/Canine	2d8+4 (13 hp)	AC 14	Bite +3 (1d6+1)
Wolf/Canine, Giant	6d8+18 (45 hp)	AC 15	Bite +11 (1d8+10)

Omegalite20 Wilderness Encounters

Check for encounters once during the day and once during the night. An encounter occurs on a d6 roll of 1 or 2:

d20	NPC Encounter	Description
1	Explorers	1d4+2 members; roll 1d6 for level; moderate relics
2	Explorers	1d6+2 members; roll 2d4 for level; many relics
3	Raiders/Bandits	1d6+6 in band; roll 1d3 for level; few relics
4	Raiders/Bandits	2d6+6 in band; roll 1d3+1 for level; moderate relics
5	Slavers	1d4+2 in band; roll 1d3 for level; few relics; 2d6 slaves
6	Slavers	1d6+4 in band; roll 1d3+1 for level; moderate relics; 4d6 slaves
7	Savages	3d6 in band; level 1d3; no relics; superstitious and territorial; probably cannibals
8	Nomads	1d6x10 in tribe; leader is Level 1d4+4; half are hunters (level 2) rest are level 1; few relics
9	Caravan	1d4 pack animals; caravan master is level 1d4+1; two guards per animal (level 1d3)
10	Pilgrims	1d3x10 pilgrims; all level 1; few relics; will flee if attacked
11	Android Party	1 Thinker; 2d4 Warriors; 2d6 Workers; many relics; tries to avoid contact with others
12	Hunting Party	2d6 in party; level 1d3; no relics; will only attack if attacked first
13	Scavengers	1d4+1 in group; level 1d3; moderate relics; will trade if approached openly
14	Diplomats/Envoys	1d4 diplomats and two guards per diplomat (level 1d4); moderate relics; in a hurry
15	War Party	2d4x10; Warlord is level 1d4+4; 1 lieutenant (½ Warlords level) per 10; rest level 1
16	Refugees	4d6 refugees; few possessions or relics; will flee if attacked
17	Wandering Prophet	Prophet is a level 10 mutant; 2d6 followers of varying levels; moderate relics
18	Relic Cultists	3d6 relic cultists; level 1d4; moderate relics; may be friendly or hostile
19	Strange Travelers	Weird, unusual travelers; possibly aliens or time travelers
20	Roll twice*	Roll twice; NPCs may be allies, enemies or indifferent towards one another

Events

1) Eerie Temple: A creepy temple, crudely constructed from salvaged materials or built in an old ruin. Possibly abandoned, but if not the occupants are almost certainly up to no good.

2) Fog: A thick bank of fog rolls in, reducing vision to just a few dozen feet.

3) Storm: A storm looms on the horizon and rolls in 1d3 hours later. Type of storm depends on terrain (i.e. desert = sand storm, jungle = monsoon, etc.).

4) Radiation Storm: A radiation storm sweeps in suddenly. The party only has minutes to find shelter. If they can't, treat as low intensity radiation for 1d6 hours.

5) Village: A small village of d100 inhabitants; they have a few relics for possible trade, or to fight back with if the party attacks them.

6) Crude Fort: A small fort made of rocks or salvaged materials constructed at a strategic location with 1d4x10 soldiers garrisoned within. They may demand a toll from travelers. Their leader (level 1d4+4) has relics.

7) Forgotten Vault: The party stumbles across the entrance of a long forgotten vault of the ancients. Who knows what treasures may yet remain within?

8) Radioactive Zone: The party passes through a radioactive zone, which they might detect if they have Geiger counters. Treat as medium intensity radiation exposure for 1d6x10 minutes.

9) Ancient Battlefield: The party has stumbled across an ancient battlefield, now overgrown. However, the rusted hulks of giant fighting machines are still recognizable. Beware! Ancient robots may still patrol the battlefield, alert for any sign of the enemy.

10) Explorer Camp: The party comes across the camp of other explorers. Treat as NPC Encounter #2 above, though the NPC explorers have set up guards so will see the party coming. They may be willing to trade, or at least share a campfire.

11) Earthquake: An earthquake rocks the region. Roll 1d6:

1-3 = Mild; you can feel it but no damage done

4-5 = Moderate; party has trouble standing; flimsy structures will collapse; animals will panic

6 = Strong; the earth splits open, sturdy structures may collapse; party stumbles and falls

12) Meteor Shower: A bright meteor shower sweeps across the sky, visible even during the day. No harm done, but superstitious types may read it as an omen.

13) Dilapidated Building: A crumbling old building of the ancients. Probably occupied by humanoids or animals. Might still contain some relics. It looks as though it could collapse at any moment.

14) Forbidden Shrine: A macabre shrine to some obscure god, foul looking with an aura of evil.

15) Shipwreck: The half buried remains of a ship. Something still lives in it though, and it may hold wondrous relics within. It can be either a crashed space ship or a seagoing vessel (even if it's in the middle of a desert or high up on a mountain).

16) Lost Bunker: A small bunker, most likely constructed by the ancients. It isn't very large, but could still contain relics. Someone, or something, also likely calls it home.

17) Slave Camp: A fortified camp of slavers. The slave master is level 1d4+4 with plenty of relics. He commands Levelx5 level 1 slavers, armed mostly with primitive weapons. There are also 1d6x10 slaves present, held in pens or crude wooden cages. If the party appears weak, the slavers will try to capture them. Otherwise, the slavers are willing to engage in trade.

18) Solar Eclipse: A full or partial solar eclipse occurs, blocking out the sun for a few minutes; considered by most to be a bad omen. Malevolent cultists will be looking for someone to sacrifice in order to appease their mercurial gods.

19) Enigmatic Structure: A strange and mysterious structure of unknown design or construction. It could be a gleaming silver tower, a pyramid of black rock, a foreboding gateway or portal, a giant statue, or any number of things. Go crazy; have fun.

Monsters

Frog, Giant: HD 5 (25 hp); AC: 12; bite +5 (1d8); swallows a man-size creature whole on a critical hit; giant leap 100'

Insect Swarm: AC: 10; A swarm of d1000 nettlesome, biting insects descends on the party. Everyone not in completely enclosed armor suffers 1d4 points of damage each round until they escape or dissipate the swarm. Each point of damage kills 1 insect, though cone and AoE weapons kill 10 insects per point of damage.

Lizard, Giant: HD 4d8+5 (25 hp); AC 15; Bite +5 (2d4+2)

Slug, Giant: HD 10 (50 hp); AC: 11; Acid spit +8 (3d6, plus reroll armor condition each hit)

RABID

"It started a couple of months ago, reports of a new bug going around. You know, third world crap, not my problem. But wherever this bug went, everything seemed to go to hell.

"Then it came here, in the cities first. Hospitals overloaded, rioting in the streets, police overwhelmed. After that the military stepped in, and they seemed to have it contained. Quarantine zones, airstrikes, and I heard they even dropped The Bomb in a couple of places, or that's the rumor anyways.

"But then, just when it seemed like the worst was over, it spread again, only this time like wildfire. It was everywhere. It jumped the quarantine zones. The military couldn't isolate themselves from it, and when they started getting infected it was game over, man. The damn thing had gone airborne, and there was no containing it after that.

"What was that? Eh, thought I heard something. This whole thing is making me jumpy

"Where was I? Oh, the infection, right. Now, a few of us, maybe five or ten percent, are immune to the bug. We won't...change... into those things. Just remember we aren't immune to being eaten or torn apart.

"So now what? Well, we gotta find other survivors, get weapons and supplies and find a place to hole up until those things starve to death. Christ, I hope they can starve to death. And don't even think about going out there to find your lost spouse or best buddy. Forget it, they're either holed up somewhere safe like us, or they're dead...or worse. So don't even go there.

"What's that!? Oh God, they found us, they're here. We have to go, we have to go NOW!"

Welcome to the end of civilization. A mutated airborne strain of rabies has swept across North America, and presumably the rest of the world as well. But not everyone is affected. You are one of the immune. An average person, one of the 'lucky' survivors, swept up in extraordinary circumstances. But your struggle is only just beginning...

Rabid is intended to be run as a 'day zero' campaign, ideally run by GMs comfortable with improvisation. The idea is that the characters find themselves unexpectedly in the middle of a zombie invasion, and the GM asks them "What do you do next?"

Creating Your Survivor

Survivors are ordinary people caught up in extraordinary events. Your character is not a Special Forces operative, secret agent or even a SWAT team member. In fact, most police and government agents are already dead or infected, being the first to respond to the crisis and overwhelmed by the infected. Your character is just a regular person, immune to the infection, and lucky enough not to have been killed by the infected...yet.

Primary Stats:

Per standard Microlite20 rules, there are three primary stats: Strength (STR), Dexterity (DEX) and Mind (MND).

Since the character's are average people roll only 3d6 for each attribute, but assign them to attributes as desired.

Stat modifier is (Stat-10)/2 round down.

Skills: Skills are determined differently in Rabid. Because the PCs are normal people from a modern post industrial society, it is not assumed that everyone knows how to fight equally well. There are five skills: Shooting, Physical, Subterfuge, Knowledge and Communication. The Physical skill includes close combat ability, enhances defense (AC) and increases hit points.

Players place +1 in one skill of their choice. Thereafter they may 'age' their characters to gain additional skill points. Assuming a starting age of 18 or so, for every 5 to 10 years added in character age (the exact number is not important), subtract 1 from either the Strength or Dexterity stat. In exchange, add 1 to either the Mind stat or the Shooting or Physical skill, or add +2 to the Subterfuge, Knowledge or Communication skill. Players may do this as often as they like, but a too weakened character will likely die fast.

For example, Pete is a new character. Pete's player places his first +1 into Physical. He decides to age Pete 6 years (making him 24), reducing Strength by 1 and adding 1 to Pete's Shooting skill. He ages Pete another 5 years, subtracting 1 from Dexterity and giving +2 to Knowledge.

Shooting – Using any ranged weapon

Physical – Physical tasks and melee combat

Subterfuge – Sneaking about, picking locks, deception

Knowledge – Local area knowledge, how to use things

Communication – Negotiation, social interaction

Skill tests involve rolling d20, plus adding an appropriate stat modifier and the appropriate skill rating. The total must equal or exceed the Difficulty Class (DC) established by the GM.

Hit Points: Characters start with Hit Points equal to their Strength score plus Physical skill rating.

Armor Class (AC): Armor Class is largely irrelevant when dealing with the infected. It only comes into play when fighting other survivors. AC = 10 + DEX mod + Physical skill

Background & The Hook: Players are encouraged to come up with short backgrounds for their characters. However, all characters must have a hook, which can be worked into the character's background. A hook is a liability or complication in the character's life, such as a family member, a lover, a condition that requires medication or some other obligation; something that requires the character to journey into infected areas to resolve the obligation or complication. Hooks should require a significant effort on the character's part to resolve. Hooks are subject to GM approval.

Equipment: Characters start with any equipment that is reasonable considering their skills, background and starting location. Assuming your campaign is set in a developed nation, access to a vehicle of some kind is almost certain. Most characters will certainly have at least an apartment if not a house, though they probably won't want to stay in them for long. Improvised melee weapons should be easy to come by.

After the campaign starts, characters will have to go out and get whatever equipment they want. Generally, guns should be easy to

get (they'll probably just be lying around all over the place), but ammo should be scarce. In fact, this should be the golden rule of any Rabid campaign...*guns common, ammo scarce*.

Microlite20 Modern has a good list of guns to pick from. Or reference firearms guides or catalogs. Just make a note of the weapon's caliber and magazine capacity.

Money, gold and precious stones will have virtually no value in this setting. The only things that will have value are items that help people survive, or provide simple luxuries and pleasures, like booze, smokes, drugs, music, DVDs, batteries, etc.

Encumbrance: Survivors can carry a number of weapons/items equal to their Strength stat without being encumbered. Players will really, really want to avoid being encumbered. Otherwise they will be overrun by the infected. Up to six small items can be grouped together as one item in a pouch, purse, satchel, etc. Particularly large or heavy gear may count as two or more items. Very small items, like a book of matches, shouldn't count against a character's encumbrance (though carrying a case of matchbooks would count).

Combat

Initiative: Roll d20 + MIND mod for initiative (against zombies, its more about coolness under pressure and presence of mind than quick reflexes). The character with the highest total may act first (or hold action). Infected always act last each combat round.

Combat Round: A combat round is only a few seconds long, allowing only one action: attacking, running (up to 20'), reloading a clip fed weapon, a brief discussion, drawing a weapon, retrieving something from a pouch, etc.

At the GM's discretion, a character may multi-task. For example running and shooting at the same time, or shooting and shouting instructions simultaneously. When multi-tasking, all tests are -2.

The infected will always move up to 20' as directly as possible towards the nearest survivor. They'll run through fire, climb obstacles, even try to jump across rooftops if they spot survivors on an adjacent rooftop. When they reach melee range with the survivors they immediately and automatically hit for 1 point of damage each round (use combat scale for large groups).

Attack Rolls:

Ranged weapon attacks = d20 + DEX mod + Shooting skill

Thrown weapon attacks = d20 + DEX mod + Physical skill

Melee combat attacks = d20 + STR mod + Physical skill

The total result (including any modifiers) must equal or exceed the target's Armor Class (AC) to hit and inflict damage.

Attack Modifiers: Any situation that makes attacking more difficult, such as shooting at a moving target, or poor visibility or a long ranged attack incurs a -2 penalty on the attack roll. Anything that makes an attack easier, such as firing from cover or high ground or taking an action to aim a shot, gives a +2 bonus to the attack roll. Modifiers are cumulative.

Damage: If the attack successfully hits, determine damage:

Pistol Ammo

.22/.32 Caliber = 2d4

9mm/10mm/.38/.45/.357 = 2d6

.44 Mag/.50 Action Express = 2d8

Shotgun Shells

12 Gauge = 2d8

10 Gauge = 2d10

Rifle Ammo

5.56mm/.223 = 2d8

7.62mm/.30 = 2d10

.50 Caliber Rifle = 2d12

Melee Weapon Damage*

Light Melee Weapon – Knife, club, lead pipe, etc. = 1d6

Medium Melee Weapon – Baseball bat, machete, cricket bat = 1d8

Two-hand Melee Weapon – Samurai sword, fireaxe, etc. = 1d10

Chainsaw = 2d8 damage (running); 1d8 (off)

*Remember to apply STR mod to melee damage rolls

Note: Unarmed combat against the Infected is completely impractical, even for well trained martial artists.

Body Armor – Useless against the infected; against other survivors reduces damage taken by 4, but with -2 AC

Fragmentation Grenade – 4d6 damage to 20' radius

Molotov Cocktail – 3d6 damage to a 10' radius; sets area on fire for 1d4+2 rounds, inflicting 2d6 damage per round

Light Weapons: Survivors may wield two light ranged weapons (pistols, machinepistols, or sub-machineguns), allowing an attack with each hand. Each attack incurs a -2 penalty to the attack roll. Melee weapons *may not* be dual wielded.

Burst Fire: Firing a burst uses 10 rounds. The attack receives +4 on the attack roll and doubles the damage inflicted. Particularly good against a large group of infected. But remember, guns common, ammo scarce.

Critical Hit: A roll of 20 on the d20 is a critical hit. Critical hits inflict maximum damage.

Fumble: A roll of 1 on the d20 results in a fumble: the character's gun jams, or the character slips or drops his weapon, etc. Generally an action is required to recover from a fumble.

Area Effect Attacks: Make a single thrown weapon attack roll against an AC of 10. If the attack misses, roll 1d6 for scatter direction (1-2 long, 3-4 short, 5 right, 6 left) and 2d6 feet for scatter range. Infected will make no attempt to take cover from grenades or avoid Molotov cocktails. Survivors may make a DEX mod + Physical test with a DC equal to the total attack roll for ½ damage.

Falling: Characters take 1d6 damage for every 10' fallen. If they fall on something sharp, such as broken glass, add +1 to the die roll. If characters take more than 10 points of damage from a fall, they might break a bone. Make a STR mod + Physical test vs. DC of 10 for the character to avoid breaking a bone. GM has discretion on which bone is broken if the test fails.

Healing: Survivors can heal all hit point damage after a full day's rest. Alternatively, they may attempt to treat their wounds by making a Knowledge + MIND mod test with a DC of 15. Add +2 if the survivors have some sort of first aid kit; add +4 if they have access to a hospital, medical clinic or similar fully equipped facility. If successful they heal 2d6 hit points. Heal checks may only be made

once after each instance of a wound being received (generally, once after each battle).

Healing tests are also required to set broken bones. Broken bones will take several weeks to fully heal. Failing to set broken bones will have dire consequences, up to infection and death.

Painkillers: Healing tests take several minutes to complete, so cannot be done in combat. However, as an action, characters can pop a dose of painkillers to provide some quick healing. Consuming a dose of painkillers immediately heals 6 hit points of damage. However, painkillers take a toll. Each dose consumed incurs a cumulative -1 penalty to all tests (but not damage rolls). A full day's rest removes the penalty.

Incapacitation and Death: A survivor reduced to zero hit points is incapacitated and must be carried. A successful healing test will restore 2d6 hit points and revive them. If left behind, they will almost certainly be killed by the infected. Survivors reduced to negative hit points die.

Experience and Advancement

Experience Points (XP): Survivors gain experience points by resolving hooks and accomplishing objectives. Killing the infected does not grant XP, though coming up with a resourceful way to kill or neutralize a large number of them can be an objective.

Resolving a hook grants 10 XP to the character, and to any other character that helped to resolve the hook. The manner in which the hook is resolved has no bearing on the XP reward. For example, Pete's hook is his wife, who was at home when everything went to hell. Pete finally manages to make his way home only to find that his wife was attacked and became infected. Attacked, Pete was forced to kill her. Though it isn't a happy ending, the hook is resolved and Pete (and his buddies) receive 10 XP each.

Once a survivor's hook is resolved, the player may opt to take a new hook, but they are not required to do so. Nor are they required to take a new hook right away. They can take a new hook whenever they're ready, but players need to work out the details with their GM. Hooks are always subject to GM approval.

Objectives award from 1 to 5 XP each for each character that contributes towards achieving the objective. A contribution can be as simple as waiting in the car with the engine running so the group can make a quick getaway.

An objective is usually meeting some immediate need. For example, one of the survivor's first objectives will probably be finding guns and ammo. Another objective could be finding a car and hotwiring it, finding food, getting medicine from the zombie filled hospital, finding safe shelter for the night, rescuing trapped survivors, getting to a radio to call for help, coming up with a clever way to kill or neutralize a lot of infected, etc.

The players will usually set their own objectives; the GM just decides if they warrant an XP reward and how much. If the GM creates a pre-planned adventure, then the GM should establish most of the objectives for the adventure.

Advancement: To advance a level, characters need to accumulate 20 XP times their current level. For example, advancing from level 1 to level 2 requires 20 XP; from level 2 to level 3 requires 40 XP, level

3 to level 4 requires 60 XP, etc. Each time a character levels, reset their XP to 0. Excess XP is retained.

Each level advanced provides the following benefits:

- 1) +1 Hit Point
- 2) Add +1 to Shooting or Physical skill, or +2 to Subterfuge, Knowledge or Communication skill
- 3) Every third level (3, 6, 9, 12, etc.) add +1 to STR, DEX or MIND (player's choice)

The Infected

The infection has turned once normal people, your neighbors, your friends and even some of your family, into insanely aggressive, homicidal maniacs, and they want to kill you (and probably eat you, too).

Infected: 1 HD (5 HP); AC 10; melee attack (biting, clawing, scratching, punching, etc.); Infected attacks hit automatically each round for 1 HP damage; Infected are heedless of injury, and therefore must take at least 5 HP of damage in a single attack to die; otherwise just ignore the damage; infected always act last in combat

Infected are 'fast zombies'. They run, jump, climb, leap and pull themselves up onto ledges. They are fairly listless when there isn't any stimuli (i.e. survivors), but when 'stimulated' they will rush at survivors completely heedless of pain, injury, fear or danger. They'll even run through fire or over the roof edge of a building. Infected are attracted by bright, flashing lights, loud noises and rapid movement.

Individually, infected actually aren't that dangerous, provided you're prepared. But in groups, particularly large groups, they become extremely dangerous. Note, they aren't undead zombies, so it is not necessary to make head shots to kill them. None-the-less, they ignore pain and injury, so they'll keep coming if you don't do enough damage to put them down in one attack.

Use mass combat rules for large groups of infected (say, more than 10 in an area). Multiply damage inflicted by the group by the Combat Scale multiplier. Note, infected groups inflict damage against everyone they are in melee range with.

Number in Horde	Group Damage Each Round
11-20	5
21-40	6
41-60	7
61-80	8
81-99	9
100+	10
Etc	

For example, if survivors are fighting a horde of 20 infected, and the infected are in melee range of the survivors, each character will take 5 points of damage from the infected each combat round they remain in melee contact with the infected.

Each attack against an infected group that inflicts at least 5 HP of damage kills one of the infected for each multiple of 5 damage. For example, an attack that inflicts 12 HP of damage kills 2 infected. An attack that inflicts 16 damage kills 3 infected. As infected are killed, the group's damage rating will decrease.

If the party can find a way to bottle neck the infected group, then reduce its Combat Scale appropriately. Other tactics that survivors can use to mitigate the danger of large groups of infected is to run and gun them (i.e. kiting), fire from high ground, or lure the infected into some kind of trap.

Alternatively, survivors may attempt to sneak past the infected, but the more infected there are the harder it is to get past without being spotted. And it only takes one to set the entire horde on the party. Make a DEX mod + Subterfuge test against a DC of 10 +1 for each infected in a position to possibly see the survivors.

As a final recourse, survivors can simply run away from the infected. Note, this is akin to a full on sprint, not a long distance endurance run. A survivor can only run for a number of combat rounds equal to their Strength stat (i.e. if Strength is 10, they can run for 10 rounds), at which point they will slow to ½ movement and the infected will catch up to them. Survivors will have to rest for several minutes before being able to run again. Encumbered survivors have no hope of outrunning infected.

Infection Level: Every area the survivors enter, whether a building, park, city street, sewers, whatever, will have an Infection Level ranging from 0 (completely cleared of Infected) to 10 (wall-to-wall Infected). Any safe areas or sanctuaries will have an infection level of 0, though the area immediately outside the sanctuary could have a very high infection level (think of the nice safe farmhouse surrounded by zombie hordes trying to get in).

Roll d10 equal to the area's Infection Level to determine the number of Infected in the area (i.e. Infection Level 3 means 3d10 infected in the area). If the area is open, like a park, then the Infected will spread around the area, but in a building they would be spread out in different rooms. Very large buildings can have a different Infection Level for each floor.

Sample Infection Levels:

Safehouse/Stronghold/Survivor Community = 0

Wilderness = 0 to 1

Individual House/Small Building = 0 to 1

Rural Area = 1 to 2

Small Town Streets = 1 to 3

Suburban Streets = 2 to 4

City Streets = 3 to 5

Factory/Warehouse/Sewer = 1 to 3

Park/Trainyard/Compound = 2 to 5

School/Campus = 4 to 6

Office Building = 3 to 5 per floor

Police Station = 4 to 7

Fire Station = 2 to 4

Apartment Building = 1 to 4

Mall/Shopping Center/Big Lot Store = 7 to 10

Military Base = 5 to 10

Emergency Shelter = 8 to 10

Hospital = 7 to 10 total, or 4 to 6 per floor

Running a Campaign

Day Zero: Day Zero is the intended campaign style for Rabid. The player characters are going about their daily business when they suddenly and quite unexpectedly find themselves in the middle of horrific events, just when the crisis reaches critical mass. The exact circumstances the PCs find themselves in will depend on when the GM starts the campaign. If it's during the day, then they will likely be at work. If during the night, then they'll probably be at home.

Once things start, the GM sets up the situation and then lets the players decide where to go from there. The GM's initial task will be to contrive a way for the player's characters to meet. The easiest way to do this is to simply assume all the PCs are at the same location when it hits the fan. For example, they all might be eating lunch at the same restaurant, or going to the same dentist or waiting at the same garage for their cars to be repaired.

Once the party is together the GM will have to decide what happens based on the player's actions. This will require a great deal of improvisation on the GM's part, at least initially.

The players should establish their own initial goals, and can earn XP for accomplishing their objectives, determined by the GM depending on the difficulty. For example, an immediate goal could be to get out of the office building and to the garage alive. The next goal might be to find weapons or get to a police station for help. Some players may want to act on their character's hooks, racing home to locate loved ones or friends.

Note that players don't have to type out their objectives in triplicate to the GM. It's as simple as a player saying "I get out of the building and head for my car in the parking garage." That's the goal; the GM describes what happens on the way to the garage, and then decides how much XP, if any, is warranted for accomplishing the objective.

When running the initial stage of the campaign, keep in mind that everything has gone to hell. There are infected everywhere, attacking people, eating them, screaming, fires, shooting, explosions, sirens. And the players will have to navigate all that to achieve their objectives or resolve their hooks. Also keep in mind that the police and virtually all government infrastructure is gone, shattered or overwhelmed. 911 gives an automated response telling callers to go to the nearest FEMA shelter (overrun with infected, naturally). Hospitals, police stations and fire stations are infested with rampaging zombies. The highways and roads are blocked with abandoned or wrecked cars, with infected attacking fleeing motorists in all directions. Fires burn unchecked, gas mains explode, and in the midst of all this you have looters and the criminal element taking advantage of the breakdown in law and order. And just how long will the power stay on? So, play up the chaos and confusion.

In these first few chaotic hours and days, the GM should have the survivors meet a few NPCs, most of whom will be red shirts, present only to die horrible deaths to impress upon the players on just how dire the situation is. If the players get to know a NPC a little first, so much the better for delivering the desired impact when the NPC is ripped to shreds by a horde of infected.

Eventually the players will get past the chaos of the first few days. They'll run into fewer and fewer survivors. They'll find a secure place to fort up and hold out. The pandemonium of the last few days will gradually be replaced by an eerie calm, broken only by the soft rattling breath of the infected or the occasional gun shot. At this point you may need to shift gears, providing more structured adventures. For example, the players may decide to make a run at the nearest military base to get some serious firepower, so you'd have to plan that out in greater detail.

You should also make the players describe their plan to you. Just how do they plan to get to that base. Are they driving? Where will they get the vehicles? What vehicles do they bring? Do they have enough gas? What route are they taking? Who does what when

they get there? Will their vehicle break down? Have other survivors already looted the base? Their route may be blocked, other survivors may have already claimed the base, or maybe (probably) it's overrun with infected. Their car might break down, they may run into a large group of infected, encounter other survivors who need help, etc.

Generally speaking, the better their plan, the better things should go, though there should always be at least one or two unexpected complications. If they don't have a plan, or a very poor or unrealistic plan, then introduce more complications. Hopefully they'll learn to plan things out better in the future.

A final note, you may want to consider starting the campaign in the area you and your gaming group lives. The advantage of this is that your group is familiar with the area, so it will be easier to bring things to life. Instead of your players asking you if there is a gun store nearby, they can say "I head for the Fred's Guns on Main and 4th." It can help the players establish their initial objectives, and it can make it easier for the GM to improvise and set the scene. Eventually you'll probably want to expand the campaign beyond your home town, but it can provide a useful starting point.

Land of the Infected: In this type of campaign, the infection has been ongoing for some time, and most of civilization has collapsed. The players have an established safehouse or live in a fortified community. They also have whatever weapons they want (provided they aren't too exotic; naturally ammo is still scarce). There may be some government bunkers or strongholds still. Perhaps some billionaire built a fortified hideout and hired a bunch of mercenaries to protect him/her. This is essentially a post apocalyptic setting.

In such a setting, the infected will only be one of the player's problems. Other survivors will be a greater problem, as some will be raiders, willing to attack the survivors for their weapons, ammo and food. Perhaps some people are doing more depraved things in some places. This is more of a 'humans are the real monsters' setting, and the infected are more of a natural obstacle to be overcome.

The player's motivations can be simple survival, scrounging enough food and ammo from the ruins to get by another day, or luxuries like alcohol and tobacco to trade with other survivors. Or maybe that billionaire survivor wants some rare painting/ document/book/ movie/convenience/etc. and is willing to trade a lot of food and ammo to whoever can retrieve it for him. Maybe the party hires on as guards for caravans that travel between the remaining communities. Or maybe they hear of government strongholds in the north and decide to try to reach them.

In this type of campaign, character hooks can (and probably should) be tied into more long term survival objectives or employment prospects. For example, if they're hired to retrieve a rare painting from the city art museum, then that becomes the group's hook. If they decide to head north to look for a safezone, that becomes their hook.

Ultimately, there are plenty of opportunities in such a campaign for players to either profit off the corpse of the old world, or to help rebuild it. Finally, a Day Zero campaign, if played long enough, should eventually morph into a Land of the Infected style campaign.

Quick Reference Sheet

Damage

Pistol Ammo

.22/.32 Caliber = 2d4

9mm/10mm/.38/.45/.357 = 2d6

.44 Mag/.50 Action Express = 2d8

Shotgun Shells

12 Gauge = 2d8

10 Gauge = 2d10

Rifle Ammo

5.56mm/.223 = 2d8

7.62mm/.30 = 2d10

.50 Caliber Rifle = 2d12

Melee Weapon Damage*

Light Melee Weapon – Knife, club, lead pipe, etc. = 1d6

Medium Melee Weapon – Baseball bat, machete, cricket bat = 1d8

Two-hand Melee Weapon – Samurai sword, fireaxe, etc. = 1d10

Chainsaw = 2d8 damage (running); 1d8 (off)

*Remember to apply STR mod to melee damage rolls

Fragmentation Grenade – 4d6 damage to 20' radius

Molotov Cocktail – 3d6 damage to a 10' radius; sets area on fire for 1d4+2 rounds, inflicting 2d6 damage per round

Skills

Shooting – Using any ranged weapon

Physical – Physical tasks and melee combat

Subterfuge – Sneaking about, picking locks, deception

Knowledge – Local area knowledge, how to use things

Communication – Negotiation, social interaction

Common Tests

Initiative = d20 + MIND mod; highest total acts first

Ranged weapon attacks = d20 + DEX mod + Shooting skill vs. AC

Thrown weapon attacks = d20 + DEX mod + Physical skill vs. AC

Melee combat attacks = d20 + STR mod + Physical skill vs. AC

Healing Test = d20 + MIND mod + Knowledge vs. DC 15

Sneaking = d20 + DEX mod + Subterfuge vs. DC 10+1 per infected

Modifiers

Attacker Advantage = +2 on attack roll

Defender Advantage = -2 on attack roll

Dual Wield = -2 on attack roll for each weapon

Burst Fire = +4 on attack roll

Multi-tasking = -2 on all tests

Painkillers = -1 on all tests, cumulative

Medical Kit = +2 on Healing Test

Medical Facility = +4 on Healing Test

Experience & Advancement

10 XP for resolving hook

1 to 5 XP for completing objectives

Levelx20 XP to advance to next level

+1 Hit Point on leveling

+1 to Shooting or Physical or +2 to Subterfuge, Knowledge or Communication on leveling

+1 to one stat of choice every 3 levels (3, 6, 9, etc.)

The Infected

Infected: 1 HD (5 HP); AC 10; melee attack (biting, clawing, scratching, punching, etc.)

- Infected attacks hit automatically each round for 1 HP damage
- Infected are heedless of injury, and therefore must take at least 5 HP of damage in a single attack to die; otherwise just ignore the damage
- Infected always act last in combat
- Infected move 20' each combat round; they automatically hit when they reach melee combat range

Mass Combat Damage

Number in Horde	Group Damage Each Round
11-20	5
21-40	6
41-60	7
61-80	8
81-99	9
100+	10
Etc	

Infection Levels

Roll 1d10 per Infection Level to determine the number of infected in the area (i.e. Infection Level 3 = 3d10 infected in the area). May be grouped together or spread throughout several rooms in a building.

Safehouse/Stronghold/Survivor Community = 0

Wilderness = 0 to 1

Individual House/Small Building = 0 to 1

Rural Area = 1 to 2

Small Town Streets = 1 to 3

Suburban Streets = 2 to 4

City Streets = 3 to 5

Factory/Warehouse/Sewer = 1 to 3

Park/Trainyard/Compound = 2 to 5

School/Campus = 4 to 6

Office Building = 3 to 5 per floor

Police Station = 4 to 7

Fire Station = 2 to 4

Apartment Building = 1 to 4

Mall/Shopping Center/Big Lot Store = 7 to 10

Military Base = 5 to 10

Emergency Shelter = 8 to 10

Hospital = 7 to 10 total, or 4 to 6 per floor

AoE Scatter

1d6 for direction:

1-2 = Long

3-4 = Short

5 = Right

6 = Left

2d6' for distance

Falling Damage

1d6 per 10' fallen; add +1 per die if landing on something sharp; if more than 10 damage taken in the fall make a STR mod + Physical test vs. DC 10 to avoid breaking a bone

Microlite20 VERMIN: Tooth and claw in the streets.

"Could you be just a little more quiet, Barkhead," growled Trom, the rat. "It's not like we're *begging* to get noticed or anything."

Barkhead snickered, "Sure... like there's anything awake in this alley in the middle of the night. Let's just go in, grab the ham and get out. I don't even know why I'm helping you guys. I don't even eat ham."

"Because, you, you, you're our friend," squeaked the little mouse sneak Keiter. "And, and, we smelled pine nuts. Promise."

Barkhead scrambled up the wall unto the windowsill. "Ok... grab this rope and get up here," he said, concentrating for a moment. "... ..," he appeared to scream. "... ..," he said, pressing a paw against the glass and concentrating again, until the window shattered in without a sound. "Looks like we're home free," he said, scrambling down the rope, as he dropped down the other side and out of the zone of silence.

The rat growled as he struggled to climb down the rope. "I can smell it. Roast ham and honey--and a dozen smelly humans, all in this one little tavern. Treat-time." The trio skittered across the floor, hungry and oblivious to the imminent danger in the window.

A brown tabby peered in the broken hole as Trom began to gorge himself. Barkhead greedily chewed up a strawberry as Keiter noticed the cat. "G-g-guys..."

The three turned as the cat put his paw against a shard of glass. "No, no, no, Alex... come 'n," begged the squirrel. "I gave you all the information you wanted just last week--and I got a friend to clean up that nasty case of mange." Alex grinned. "Sorry, chumps," he hissed, pushing the piece of glass out.

Down...

down..

down... it tumbled, and...

Shattering against the floor with a deafening sound in the near-silence of the room, shards flew everywhere, nearly hitting Keiter in the leg as he leaped away. Clomping footsteps plodded across the upstairs floor, and started down the stairs.

"Funknuttty," growled Barkhead.

Introduction

Vermin is a M20 game set in the streets of a dark fantasy city. Unlike most fantasy games, this one's set at dirt level--you play the tiny beasts, the dirty vermin of the city. Players can choose between Rats, Mice, Sparrows, Squirrels, Toads, Roaches, and Lizards.

These vermin are a bit different from the ones you and I know--they have human level intelligence, and tool-making ability. That said, they're smart enough not to let humans (the biggest enemy of all) find out about all this. (Hmm... adventure hook already.)

Vermin was written so that it is a stand-alone game, but can fit into any fantasy city (or modern city, if you can accept that animals have secret mystical powers). It might actually be interesting to run it and not specify, seeing how long it takes your characters to see the difference between Lankhmar and New York City from the ground level. It can be used for a stand-alone campaign, or an interesting diversion for players to get a new perspective on your existing campaign.

It uses the basic and expert Microlite20 rules. I hope you enjoy it--and find out exactly high dirt gets in the street when you're only two inches tall.

Stats

There are 3 stats : Strength (STR), Dexterity (DEX) and Mind (MIND).

Roll 4d6, drop lowest dice. Total remaining 3 dice and allocate to one of the stats. Repeat for remaining stats.

Stat bonus = (STAT-10)/2, round down.

Skills

There are just 5 skills : Physical, Subterfuge, Knowledge, Communication and Survival. Roll higher than the given Difficulty Class to succeed.

Skill rank = your level + any bonus due to your class or race.

Skill roll = d20 + skill rank + whatever stat bonus is most applicable to the use + situation modifiers

For example, Climbing would use Physical + STR bonus. Dodging a falling rock is Physical + DEX bonus. Finding a trap is Subterfuge + MIND bonus. Disabling a trap is Subterfuge + DEX bonus.

Note that there are no "saving throws" in this game; use Physical + STR or DEX bonus for Fortitude and Reflex saves. Saving against magic (Will save) is usually MIND bonus + your level.

Races

Lizard	+2 Dex, -2 Mind
Mouse	+2 Mind, -2 Str
Rat	+3 Str, -1 Comm
Roach	+2 all skill rolls
Sparrow	+2 Comm, -2 Str
Squirrel	+2 Know, -2 Mind
Toad	+2 Str, -2 Dex

Lizards

More alien than any other vermin, lizards are the sole reptiles not reviled by the rest of the vermin. Still, their reptile heritage puts them at a disadvantage when trying to relate to their warm-blooded associates.

Personality: Lizards' slick reptile brains put them at a disadvantage comparing smarts to mammals. Still, they have a long racial memory, and know their way around the cities. While wary

of others, they are loyal to a fault to the few friends they make, and are usually regarded as good, if dense, creatures.

Relations: Lizards get along with most anyone, although they tend to be a bit standoffish at first. Their long memories do not let them forget rat abuses, though, and they usually take a while to warm up to the large rodents. Lizards, like their tremendous brethren, the dragons, usually build a small lair that they let few into, where they hoard their possessions. (This lair also gives them a place to rest during the cold night hours.)

Names: Lizards take alien names with many consonants. K'kyrra, Monomonomo, and Ssssh are all good lizard names.

LIZARD RACIAL TRAITS

- +2 Dex, -2 Mind
- Base speed of 40 inches. Lizards are some fast-moving folk during the day.
- Cold-blooded: In any chilly situation, including most nights, lizards become lethargic, garnering a -2 to all actions, including combat, and slowly to a base speed of 20 inches. Lizards may make a burst of speed, eliminating all negative modifiers and moving at full speed, for one round by making a Fortitude save vs a DC of 15 (or higher for very cold environments). This can only be done (level) number of times per day.
- Regenerating tail: Whenever a lizard is caught by the tail, he can let his tail break, allowing him to escape. This causes only one point of damage to the lizard, and his tail will grow back over the span of a week.
- Natural weapons: Bite--1d4 damage, claws--1d3/1d3 damage.

Mice

Tiny, quick, and everywhere, mice have the advantage of numbers. Their strong little hearts and a huge number of ancestors gives them spiritual strength and the ability to persevere anywhere.

Personality: Mice are friendly little vermin,

although a bit high-strung and worrisome. They avoid danger, and cling to each other in numbers for protection. Mice judge another mice by inner strength, which is often shown by unusual physical features--an all-white or all-black coat, albinism, a withered limb, or unusually colored eyes. They can trace back their huge ancestry easily, and tend to associate a mouse with the ancestors he physically resembles.

Relations: Mice get along with almost anybody, although they cling to their larger brethren, the rats, for protection. They judge vermin by their individual traits, as opposed making generalities based on racial characteristics.

Names: Mice have a myriad of names, which change all over the world, often being a variation on local human names. They tend to name themselves after ancestors they resemble, and are usually thought of as the embodiment of that person, a concept hard for other vermin to understand. Examples: Pred, Nob, Yohn, Macques, Naylor.

MOUSE RACIAL TRAITS

- +2 Mind, -2 Str
- Small: +1 to attack, +1 to AC, +4 to Hide. However, they can only use Small weapons, and can only carry 2/3 of what a normal-sized vermin can carry.
- Base speed of 20 inches.
- Racial skills: At character creation, choose 1 point to put into one skill, this is in addition to the bonus for the mouse's class. This skill is inherited from an ancestor.
- Natural weapons: Bite--1d3 damage, Claws--1d2/1d2 damage.

Rats

Big, nasty, and pervasive, rats are the born rulers of the vermin kingdom. Known for their brawn and bite more than for their charm, rats stalk the night, taking what they want from human pantries, garbage heaps, and bedrooms.

Personality: Rats tend to be short-tempered and mean. Gluttonous, they take the spoils of any find and gorge themselves on rubbish. Still,

individual rats take on a group of vermin they protect as "their gang." (Whether or not the rat actually is the leader of the gang is irrelevant--they think they do.) Rats tend to be bullies, and although they often have a kinder side, they are loathe to show it, and get snappish with anyone who would point it out.

Relations: Rats get along well with their smaller kin, mice, living in a symbiotic relationship with them--mice are good scouts and good diplomats, while rats can give them protection. They often hold the flighty sparrows in disdain, especially for their closeness with men. Rats that try to get along with other vermin often make a display of their greatness or of their wealth, trying to ply friends with gifts or protection.

Names: Rats take guttural names, often with a suffix to denote one of their attributes.

Examples: Rukk the Wide, Tuk the Tricky, Koff the Infectious.

RAT RACIAL TRAITS

- +3 Strength, -2 Comm
- Base speed is 30 inches.
- Darkvision: Rats' red eyes let them see in the dark up to 60 inches. They can function well with no light.
- Infectious bite: Rats' bite usually carries virulent strains of nastiness. Anyone bitten by a rat must make a Fortitude check of 5 + the level of the rat + points of damage caused by the bite. If this check is failed, the wound will become inflamed, and cannot be healed normally, or through standard magical healing. *Remove disease* or *heal* must be cast in order to stop the disease. Each day the wound persists, the victim must make another Fortitude check--if failed, the victim loses one point of Strength and Constitution. If either of these scores reaches zero, the victim dies. (Three successful checks in a row means that the infection has been defeated by the victim's immune system. Strength and Constitution are regained at the rate of one point per day.)
- Natural weapons: Bite--1d6 damage,

Claws--1d4/1d4 damage, Tail--1d3 subdual damage.

- Skill bonus: Rats receive a +4 to Intimidation checks.

Roaches

Roaches, the ultimate survivors, have an even bigger advantage in numbers than mice. Unlike mice, though, who derive strength from their ancestry, the clannish nature of roaches make them virtual copies of each other. The roach that breaks away from his brothers to become an individual is rare, and generally thought poorly of by other roaches.

Personality: Roaches are generally insular around other vermin, and follow strict social guidelines, doing nothing that all other roaches will not do with them. That said--some roaches strike out for an individual life, but are reviled by their brethren. Roaches do not have a hierarchal social structure, though--their short lifespans do not allow for it. All roaches within a caste are equal, and consider themselves brothers, subordinate only to their queen.

Relations: As above, roaches do not get along particularly well with any other vermin--but they don't get along particularly poorly, either. They are indifferent, except toward the sparrows, who they have a bit of a problem with (something about dinner once.) The vermin roaches most dislike are individual roaches.

Names: Roaches do not have names. They have their own names for the different roles they play, which all roaches in that caste are called by: Brute/Protector-- *Thrak*, Sneak-- *Waka*, Mystic-- *Boko*, Storyteller-- *Taka*, and Trickster (which are rare among roaches)-- *Hele*. Roaches that strike it out on their own often take the names of other vermin, or get nicknames such as Shellback, Rocky, or Bobo.

ROACH RACIAL TRAITS

- Base speed is 20 inches.
- Small: +1 to attack, +1 to AC, +4 to Hide. However, they can only use Small weapons.
- Roaches have the unusual ability to carry

twice the amount as a normal vermin on their shell.

- Antennae vision: While roaches can see normally with their eyes, they also are very sensitive to vibration, and can move around and fight with no penalty in the dark or against invisible creatures.. This vision extends out 30 inches, so they can still be surprised by something leaping from a distance.
- Shell: Roaches' tough exo-skeleton give them a +2 to their Armor Class.
- Skill bonus: +3 to Climb checks.
- Save bonus: +2 to resist poisons.
- Save penalty: Because of roaches' general lack of identity, they have a hard time keeping a strong self-image. Whenever a roach has to save against in order to keep his self-identity, or has to save versus an Trick or Mystic power affecting the mind, he has a -2. This should be enhanced in role-play as well.
- Natural weapons: 1d3 bite.

Sparrows

The flighty sparrows are the only vermin that can take to the skies of the city, giving them a perspective not from the feet of men, but from far above their heads, where they look no more like giants, but like insects. Sparrows see everything through this same sort of vision: they see nothing as of much importance on its own, but see the stories that things weave as a whole. This makes other vermin think of them as simple and flighty. They are flighty, interrupting conversations, ignoring complaints, and generally--well, flying around, but simple they aren't.

Personality: The most important thing to sparrows is that the world is much smaller than it looks to the vermin on the ground. Anything that seems really important probably isn't, and anything that seems like a huge danger is nothing to worry about. Even humans--the biggest danger of all--look small from above, and, plus, you can poop on them.

Relations: Sparrows get along with anyone,

although roaches and rats sometimes don't reciprocate those feelings. They enjoy a good joke that flies over lizards' heads, and are best friends with mice, whose tendency to worry amuses the sparrows. They respect squirrels greatly, the only vermin that ever manage to get a trick over on them.

Names: Sparrows usually take nature-based names, such as Needle-beak, Grey-feather, and Sky-leaf. The fiercest sparrow of all time was known as Roach-scurge, and the roaches still have a hard time with this.

SPARROW RACIAL TRAITS

- +2 Comm, -2 Str. Sparrows' hollow bones break quite easily.
- Base speed on the ground is only 15 inches, but sparrows can fly faster than a man can walk (very fast.) Sparrows are awkward walking.
- No hands: Sparrows have no front paws. Therefore, they cannot do many of the things other vermin can, especially use weapons (although they can get pretty inventive with their beak and claws, dropping things, and carrying a sharp stick while flying to poke things with.)
- Natural weapons: 1d4 damage beak, 1d3 damage claws.
- Natural weapon: wings. Wings can be used to buffet a foe, flapping them all around his head. This does only 1 point of subdual damage, but if the victim is successfully "hit" with this attack, he must save vs. a DC of 10 + 1d6 + Strength bonus or be stunned for the next round.

Squirrels

Squirrels, pranksters and clowns all, live more in the treetops and parks of the city than in the streets. Although they disdain the practice of trash-diving for food (they prefer acorns and fallen scraps in the park), they get along well with their fellow vermin--as long as they're playing pranks.

Personality: Squirrels are jokers. They jump

from tree to tree, carefree of danger, throw acorns at serious rats, steal bread from lazy-eyed humans, and get in elaborate high-flying punching matches with each other. They're the swashbucklers of the vermin, and a bit loopy. Danger never fazes a squirrel--at least not that he'd let on.

Relations: Squirrels think they get along with everyone, although it's not always the case. They're regarded as not just a bit unreliable, prankish, and prone to theft. Still--they can make loyal friends, and only a vermin who takes himself too seriously (like most rats) has a real problem with them--although they usually keep an eye open when a squirrel's around.

Names: Squirrels take nonsense names, with a little tree-ness thrown in for flavor. Examples include Boboak, Nutkin, Pinehead, Smokey, and Cholono.

SQUIRREL RACIAL TRAITS

- +2 Know, -2 Mind
- Base speed is 40 inches.
- Skill bonus: Squirrels receive a +5 to Climb checks and a +2 to Jump checks.
- Tail: Squirrels also receive a +3 to Balance because of their tail, and can use it to swing from tree limbs.
- Bipedal: While squirrels scurry along on four feet often, they have no problem standing on two feet. Their front paws are prehensile, and they can use weapons without the normal -2 modifier
- Natural weapons: 1d4 damage bite, 1d4 subdual damage punch.

Toads

Making their way in the urban swamp, toads are looked up to by all vermin. Rats respect their size and strength, mice see their numbers, sparrows like the fact that they don't seem to worry, and squirrels think that tongue thing is just funny.

Personality: Steadfast and somewhat slow to answer, toads are the kind uncles of the vermin kingdom. They're not stupid, but quiet and patient. They're not all serious, though--the dry

wit and one-line remarks of a toad humorist can beat all.

Relations: Toads are outsiders, used to a more wet atmosphere than most of the city, and are somewhat out of place among all the mammals. They usually do nothing to cause bad relations, though, and generally get along with all the vermin.

Names: Toad names vary, but usually have some reference to water, ponds, or bugs in them. Bugstick, Scumrod, and Soupeyes are all good examples.

TOAD RACIAL TRAITS

- +2 Str, -2 Dex. Although they have strong legs, toads are not as agile on land as many other vermin.
- Base speed is 30 inches.
- Skill bonuses: +5 to Swim, +5 to Jump checks.

Classes of Vermin

Brute: A vermin who lives on his combat ability and intimidation alone. **Brutes** wear any kind of armour and use shields. They have a +3 bonus to Physical and add +1 to all attack and damage rolls.

This increases by +1 at 5th level and every five levels on

Mystic: In touch with their spiritual side, mystics are able to use Gifts for healing, protection and divination. **Mystics** can cast divine spells (gifts) and gain +3 bonus to Communication.

Protector: Guardians of other vermin and their camps, these able fighters are also excellent hunters. **Protectors** are +1 to hit and damage with ranged weapons and only incur a -1 to hit penalty when fighting with 2 weapons. They have a +3 bonus to Survival.

Sneak: Sneaks are just what they sound like--vermin who are good at not being seen. They also make excellent scouts. **Sneaks** have a +3 bonus to Subterfuge. If they successfully Sneak (usually sub+DEX, but depends on situation) up on a foe they can add their Subterfuge skill rank to the damage of their first attack.

Storyteller: Storytellers keep the history of the vermin kingdom, and can usually get by on the

virtue of their anecdotes alone. **Storytellers** gain a +2 bonus to Communication, Subterfuge, and Knowledge. A storyteller can counter sound-based effects within a 30' radius. A storyteller can use his song to charm person or remove fear up to 3 times (total) per day. Beginning at 6th level, a storyteller casts spells as either a Druid or Illusionist (player's choice, from the M20 expert rules) of 5 levels lower.

Trickster: The trickster uses supernatural Tricks to play jokes, win food, and help/annoy others. **Tricksters** can cast arcane spells, and gain a +3 bonus to Knowledge

Equipment

Truth be told, the majority of creatures in the vermin kingdom use no more equipment than their own claws, and maybe a rock sometimes to bash open something. Quite a few vermin, though, have learned the skills to craft tools.

It is forbidden for a vermin to use a tool or weapon in the sight of a human--if humans were to know they had learned the secrets of tool use, extermination would be quick and devastating. A vermin caught doing this, more often than not, ends up dead, drowned in the river or chewed up in a back alley. The worst sin in the vermin kingdom is to endanger the vermin kingdom, and justice is severe.

Materials

The majority of tools and weapons are made from wood, as it is soft and easy to carve, even with tooth and claw; rock, as it is plentiful and easily sharpened; and bone, as it is hard, yet easy to shape. Metal-working is incredibly rare--only one bellows is rumored to have been ever made in the vermin kingdom. Metal items fetch much in barter, and anyone who owns a metal object made by vermin is a wealthy vermin indeed.

Leather is another oft-used material--vermin let few things go to waste when one of them dies, and bone and leather are plentiful from the recycling of the dead. Leather is used for shelters, and, very rarely, belts, vests, scabbards, and the like. Vermin are loathe to wear such human-esque trappings, as it is unnatural, and increases the danger of being

caught.

Weapons

The most common weapons made are, by far, spears. It is easy to find a solid stick of wood and attach a sliver of bone or rock to it.

Sharpened sticks, much like javelins, are also often made. It is much more rare to ever see a dagger or sword, and even rarer to see a metal-crafted one. A few bows have been seen in the hands of the fiercest warriors, but the bipedal nature of most vermin makes these difficult to use.

Weapons use the same statistics as they have in the M20 weapon list. However, bone weapons in general and rock piercing weapons take a -1 to damage (minimum 1 point.) All-wood weapons are -2 to damage (minimum 1 point.)

Monsters of Vermin

Choose an appropriate (scale) monster from the M20 monster list to fit the situation and add any applicable special attacks and abilities. For example:

dog = M20 wyvern with no sting attack.

Adventure ideas

I have purposefully done two things in *Vermin* to (possibly) help you out: left the setting very sketchy, and dropped plot hints all over the place. Here's what comes to mind for me, but I suggest, and hope, you come up with your own unique adventures:

- The Vermin King (or possibly the Vermin Boss for your block) has fallen ill. An old sparrow storyteller swears that it's human poison and that he knows a dusty old building where an antidote could be found--but it's inhabited by an old warlock and his cat--can you make it in and out, and figure out what in the world it is that you need?
- It's war in the streets as the Roaches finally split into two factions. They both want your favor, but the vermin are split among turf and racial lines. How will your (race-mixed) party fall?

- A legendary Toad assassin has gotten possession of twin metal curved swords, rumored to be magical, and is taking down vermin for the highest bidder.

Unfortunately, the highest bidder's a giant water moccasin snake, and on top of that, word on the streets is that he was sighted by a human.

- A member of your party was stealing trash outside a window the other night when he heard cries. Climbing up onto a windowsill, he saw a wicked, wicked man beating a smaller man, probably one of his brood. It's human business--but it's wrong. What will you do? How can you stop a huge man, you worthless nothings? The main thing to remember is that the crap gets awfully high real quick when you're 4 inches tall. Keep your players busy and keep them digging their way out. Have fun, and feel free to send any comments!

AFTERWORD

This setting is not mine, I just converted it from the original documents at:

<http://files.crngames.com/cc/vermin/vermin.html>

I couldn't find any names on the ste to credit, but I didn't want to take more credit than was my due.

HAVE FUN!!!
---copycat042

Where No Man Has Gone Before 2.0

by Mike Berkey (michael.berkey@gmail.com), Copyright 2009. For more Microlite20 awesomeness, head over to the Microlite20 website at <http://www.microlite20.net>.

"Space, the final frontier. These are the voyages of the starship Enterprise, her five-year mission to explore strange new worlds, to seek out new life and new civilizations, to boldly go where no man has gone before."

This is a game about a five year mission, a world where special effects never progressed beyond painted Styrofoam blocks and cheap double-exposures. The 70's were still The Future and Klingons had smooth foreheads. The idea of a Star Trek movie was a laughable proposition and nobody thought twice about planets full of Nazis and space hippies.

Adventures take place in Episodes, over the course of a Season. If you're comfortable with the Shatnerian school of acting, can spontaneously hum snippets of the original soundtrack during appropriate scenes and have no problem with outrageous accents, this is the place for you.

The goal of this game is to create something relatively quick and dirty, simple to set up and fast to run, using the Microlite20 system for accessibility and to allow access to the vast amount of pregenerated d20 content.

Hopefully, it strikes a balance between camp and grit: while much of this game is pretty silly, much of it isn't. This is, after all, a television show that brought us both "The City On The Edge Of Forever" and "Spock's Brain."

Thanks to a post by Gorillacus on Rpg.net for the idea that sparked this conversion—until that point not only was I stuck on how to handle character types in an intuitive way that remained true to the spirit of the show, I also had no idea I even wanted to do a d20 conversion of this sort in the first place.

For sources, I've poured over Franz Josef's original Starfleet Technical Manual, the Daystrom Institute of Technology (ditl.org), Okuda's Star Trek Encyclopedia and Memory Alpha for information. I've even spent time mining the Klingon Academy instruction manual for ship combat ideas.

In the end, though, this game is based largely on my mostly hazy (but fond) memories of watching the show as a kid. If I can briefly, if only for a second, catch the spirit of those thrilling Sunday afternoons, then this game will have been a success.

Special thanks goes out to Avram Grumer for giving me much needed feedback and editing. I'm becoming convinced that errors, typos and ambiguously worded entries are every bit as threatening as those pesky Romulans.

Most importantly, remember that this game is your sandbox: there is no right or wrong way to play it, only what's fun.

Characters

Stats

Where No Man Has Gone Before uses four stats: **Strength, Dexterity, Intelligence, and Charisma.**

Roll 4d6, dropping the lowest die. Total the remaining 3 dice and allocate to one of the stats. Repeat for the remaining stats.

Your stat bonuses are **(STAT-10)/2, rounded down.**

Species

The Federation is made up of many member species, but most can be treated as variants of human beings—albeit human beings with odd makeup effects such as prosthetic foreheads and ears.

Andorians are a tough-minded species of blue-skinned humanoids from a frigid planet. Their antennae give them enhanced senses and their harsh homeworld makes them tougher than the norm.

- **Cold Adapted:** +2 bonus on all arctic survival-type rolls. Their tolerance for cold also allows them to handle temperatures up to 40 Centigrade degrees colder than humans with relative comfort.
- **Durable:** Andorians gain +1 HP/level.
- **Sharp Senses:** Their range of hearing is far superior to humans, both low and high frequencies are detectable. As such, they gain a +2 bonus to any skill rolls affected by their keen hearing.
- **Stern:** Andorians tend to come across as rather proud and humorless to other species. -2 Cha.

Humans are the “default” species of Star Trek. They are known for their remarkable flexibility and drive to explore.

- **Drive:** One extra Action Point per episode.
- **Flexibility:** One bonus Talent at first level.

Tellarites are a porcine species of humanoids renowned for irascibility and their prowess with engineering.

- **Argumentative:** Tellarites have a grasp of social etiquette that...differs...from that widely held by other species. -2 Cha.
- **Culture of Engineering:** +2 bonus on all skill rolls involving engineering (including rolls not involving the actual Engineering skill).

- **Fur Coat/Thick Hide:** +2 natural armor.
- **Strong:** +2 Str. Tellarites are very solidly built.

Vulcans are a species of pointy-eared humanoids who pursue logic and reason as a means to raise themselves above their savage past.

- **Alien Strength:** The Vulcan homeworld has a substantially higher gravity than normal—skill rolls involving strength are increased by +2 and the character can lift twice as much as a normal character.
- **Arrogant:** -2 Cha.
- **Desert Adapted:** Vulcans gain a +2 bonus on desert survival-type rolls and a general immunity to the effects of blinding light.
- **Lack of Emotion:** Vulcans have difficulty in dealing with emotions—in any situation where emotion plays a factor, a Vulcan will take a -2 penalty (bluffing, negotiations, persuasion, fathoming motives, etc.).
- **Highly-evolved Brain:** +2 Int.
- **Psychically Endowed:** The Vulcan species has an unusually high number of individuals with psychic abilities. All characters start out with the Psychic talent as a bonus.

Other Species

Oddly shaped ears or strange skin colorations notwithstanding, most other alien species in Star Trek tend not to vary too far from the human norm. Most can be treated as identical to human beings, with all the usual bonuses and limitations.

Quite a few of them vary enough, though, that it sometimes pays off to make a new racial template. If there is a need to stat a new alien species, use the following guidelines, which will produce a species of about the same level of capability as the four “main” species:

Each species can have 2 special abilities. If you want your species to have more, then you have to take a penalty of some kind to balance it out.

Special abilities should all be on the same level of usefulness, equivalent to a +2 stat bonus or a free Talent. If an ability is on the weak side, it's okay to "bundle" another lesser ability with it (as is the case with the Andorians' cold adaptations).

All members of your new species will now have these base abilities. The only real limitation is that the species has to have some role-playing hook and the group must agree to it (it's their world, too, after all).

Example: One of the players really wants to play a Deltan similar to Ilia from Star Trek: The Motion Picture. The GM and the other players are okay with that, so the player creates a new species template.

Deltans are a highly charismatic species but slight of build, with innate psychic abilities and the ability to influence others through the use of pheromones.

In game terms, they gain +2 Cha, and the Psychically Endowed ability (as Vulcans) to reflect the Deltans' inherent telepathic powers. They also gain a new special ability called Pheromones, which will give the character the ability to subliminally influence other humanoid beings.

Since these add up to 3 separate special abilities, the player adds one penalty: Deltans take a -2 Str penalty to reflect their slight build.

Classes

There are three classes—**Blue Shirt**, **Red Shirt** and **Yellow Shirt**. Characters begin at whatever level the GM sets the campaign at.

1st or 2nd level characters would be cadets, still attending Star Fleet Academy. 3rd level characters would be equivalent to new Star Fleet officers just embarking on their career.

A typical campaign centering on a Star Fleet bridge crew would usually involve more experienced characters in the 5-7th level range.

Each character can choose one skill from the next section as their initial Trained Skill: Communication, Engineering, Knowledge, Medicine, Physical, or Subterfuge.

Characters start with (Str+1d6) hit points, 2 Talents and their racial abilities. They also gain one additional Talent for every 2 levels past the first (3, 5, 7, 9, etc).

Blue Shirts are the brains of Starfleet and are in the business of knowing things. Whether it's the intricacies of star formation in a globular cluster or the inner workings of the human heart, they are the best at what

they do.

There are two primary branches: Medical and Science.

Examples: Spock, McCoy.

Red Shirts are the heart of a Federation vessel—they are the engineers that keep the ship running and the security guards that keep peace on board ship. They are stalwart and dependable when needed, the backbone of Starfleet.

Red Shirt has two separate career paths, treated as completely different occupations: Engineering and Security.

Examples: Scotty, Uhura, the endless stream of disposable muscle in each episode.

Yellow Shirts are a varied lot. Commanders, pilots, and diplomats make up the bulk of this class and are therefore the most visible branch of Star Fleet. They tend to be fast on their feet, mentally and physically.

Examples: Kirk, Chekov.

Skills

There are six skills: **Communication**, **Engineering**, **Knowledge**, **Medicine**, **Physical** and **Subterfuge**.

Communication skill covers interaction with other people. Bluffing, seduction, diplomacy, bribery, out-and-out lying, it's all here.

Engineering. There's a bit of overlap between this skill and Knowledge—where Knowledge is about knowing things, Engineering is about actually doing them. Knowledge will teach you the mathematical reasons why a warp drive works. Engineering will let you build one. This skill covers such things as gadgetry, inventing, tuning star ships, repairing items and so on.

Knowledge is your grasp of the academic arts. It covers everything from languages to archeology, code-breaking to zoology. Knowledge is always relative to your character's background and interests—if the GM knows something is in your field of expertise, he can give you a bonus to your roll. The reverse is also true.

Medicine. Just as Engineering is the ability to fix machines, Medicine is the ability to heal the body. It also covers a fair amount of chemistry and other related disciplines.

Physical. If it's something physical that you do, this skill probably covers it. Jumping, piloting a ship, climbing and so on.

Subterfuge. The dark side of the skill sheet. Skulduggery, sneaking around, disarming traps and other such things.

Trained Skill. Each character must choose 1 skill they are best at (called your “**Trained Skill**”). Your rank in that skill will be at your level+3. All other skills will be at half your level, rounded down, plus one ((Level/2)+1).

Skill roll = d20 + skill rank + whatever stat bonus is most applicable to the use + situation modifiers

Roll equal to or higher than the given Difficulty Class to succeed. Difficulty Class (or DC) is a number chosen by the GM to represent the difficulty of a skill roll. It ranges from 10 on the low end (dead easy) to 30 – 40 on the high end (nearly impossible). An average DC would be around 20.

For example, Climbing would use Physical + STR bonus. Dodging a falling rock is Physical + DEX bonus. Finding a trap is Subterfuge + INT bonus. Disabling a trap is either Subterfuge + DEX bonus or Science + INT, depending on the nature of the trap. Note that there are no “saving throws” in this game; use Physical + STR or DEX for Fortitude and Reflex saves. Will saves are usually Know or Subt + INT.

Taking 10. When your character is not under direct pressure or otherwise being distracted, you can “take 10”. Instead of rolling d20 for the skill roll, treat the result as 10 and calculate the skill check accordingly.

Taking 20. If the task in question allows the leisure of repeated attempts and you have plenty of time—at least 5 – 10 times more than usually required to perform a skill and are not under direct pressure or otherwise being distracted, you can “take 20”. Instead of rolling d20 for the skill roll, treat the result as a 20—this does not count for regaining Action Points.

Talents

You get 2 Talents at first level and an extra one every 2 levels thereafter. Some Talents may be taken more than once—in that case, the effects stack. If they can be stacked, it will say so in the description.

General Talents can be taken by any class. Each class also has access to its own Talent list.

General

1. Catch Phrase
2. Cool Under Pressure
3. Enlightened
4. Ethnic Pride
5. Heroic
6. Life of Riley
7. Manly Chest/Long Legs, Short Skirt
8. Mind Meld
9. Psychic
10. Psychic Ability
11. Ripped Shirt
12. Specialist
13. Trained Skill
14. Vulcan Nerve Pinch

Catch Phrase. The character has one catch phrase (“Dammit, Jim. I’m an x, not a y!”) that he can utter once an episode. Doing so will allow the character to gain one Action Point, so long as the catch phrase can reasonably be used in context and refers to the situation in which the Action Point was spent.

A character can’t have more than one catch phrase except with GM permission. Optionally, the GM can allow the character to change his catch phrase throughout the season, although care should be taken to not allow catch phrases to be changed often. After all, a catch phrase that is changed every episode is not a catch phrase—it’s dialogue.

Cool Under Pressure. Choose one non-combat task that you’re especially good at (e.g. sneaking, first aid, baking cookies, etc). From now on, whenever you attempt that task, you can take 10 on the roll, no matter how stressful the circumstances. This Talent can be taken multiple times—each time applies to a different task.

Enlightened. You have outgrown one limitation of your species, if your species has any. Perhaps you’re the Vulcan that has become in touch with his emotions, or the Tellarite that has learned diplomacy (and thus lost the -2 Charisma penalty). Some limitations, particularly physical ones can’t be grown out of—they’re innate. The GM is the final judge of which ones qualify.

Ethnic Pride. Not all people of a given ethnic group have this Talent, but those that do can harness their ethnic pride, gaining +2 to an ability score of their choice if that bonus can be justified within their ethnic stereotype. Possessing this Talent almost always requires bad accents and tacky set furnishings for the character’s living quarters. This Talent can only be taken at character creation.

Heroic. You start each adventure with 1 more Action Point than usual. Each time you take this Talent, you gain another Action Point.

Life of Riley. You live a charmed life. Once per episode, if you fail a roll by rolling a 1, you can instead treat that roll as a natural 20. This is not considered a natural 20 for purposes of regaining an Action Point.

In addition to this, you gain a +1 on all saves and rolls that may be influenced by blind luck—this is up to the GM's discretion, but should be used somewhat sparingly. Taking this Talent multiple times allows more than one use per day—the +1 luck bonus never increases.

Manly Chest (Long Legs, Short Skirt). If the “Being On Every Planet” optional rule from the Appendix is being used, members of the appropriate sex will be at +5 DC penalty to save against your charms. If the “Being On Every Planet” optional rule is NOT being used, it applies to your character (but without the DC bonus).

Mind Meld. This Talent requires the Psychic Talent and is usually restricted to Vulcans. Given a minute of uninterrupted time with a willing target and a successful Int + Know check vs DC 15, you can perform a Mind Meld, reading surface thoughts and conveying your own thoughts to the subject. During consecutive minutes, you can perform additional actions with a skill check vs DC 20. Each minute that passes beyond that—due to failed rolls or multiple actions—adds 5 to the DC.

Possible actions include reading deep thoughts (either subconscious or repressed memories), implanting or editing a memory, transferring your katra to a friendly target, or other actions as considered appropriate by the GM.

If the target is fighting the mind meld, the DC is increased by the target's Intelligence bonus and any bonuses from the Psychic Talent.

Drastically failed skill rolls can potentially harm the target or the character performing the mind meld.

Psychic. The character can open himself to psychic impressions. In practice, this amounts to the GM informing the character of psychic impressions from the environment or as part of a plot point. It also gives the character a +1 bonus to resist psionic attack and manipulation. This bonus increases by +1 for every 5 levels.

Psychic Ability. This requires the Psychic Talent. Each time you take this Talent, your character gains one ability. The effect of such an ability will usually be similar to one or more spells from the SRD and must be

a) approved by the GM and b) have an appropriately Star Trek feel to it. The GM might make adjustments to fit the feel of the show.

For example, Fireball would never be appropriate, but a Cure Wounds ability would, particularly if the character took 1 point of damage for every 2 points healed. If the ability is more powerful than a 0th level spell effect, then an Int + Know check should be required for successful use; the DC would depend on how powerful and dramatic the effect.

Ripped Shirt. Once per fight, and no more than once per episode for every 5 levels (round up), the character can either deliberately rip a revealing article of clothing or take advantage of a revealing rip in an article of their clothing and gain +1 to hit and damage and an extra 5 hit points. The to hit and damage bonuses increase by +1 for every 5 character levels. Temporary hit points and other bonuses disappear at the end of combat.

Specialist. Describe one task that you're especially good at. From now on, you get a +2 on all skill checks or combat to-hit rolls dealing with that task.

Examples: Sneaky, Languages, Starship Piloting, Dirty Fighting, Force Field Technology. Specialties should be fairly narrow. Taking this Talent multiple times gives you different specialties—the effects never stack.

Trained Skill. When this Talent is taken, one skill of the player's choice is now considered to be Trained. Every time this Talent is taken, it applies to another skill.

Vulcan Nerve Pinch. This Talent is usually restricted to Vulcans. If your opponent is caught unaware or is otherwise defenseless and you are behind them, you can force them to make a Str + Phys save vs a DC equal to 10 + your Str + Know. Failing the roll results in loss of consciousness for a few hours.

Blue Shirt

1. Bedside Manner
2. Behavioral Analysis
3. Breakthrough
4. Empathy
5. Exploit Weakness
6. Field Medic
7. “He’s Dead, Jim.”
8. Plan
9. Pure Logic
10. Recollection

Bedside Manner. Your bedside manner has earned you a deserved reputation for good advice. Once per Episode, if you have a few moments to speak alone with someone you may grant them a bonus to an upcoming action of their choice equal to your Int bonus or +1, whichever is greater. If they do not use this bonus by the end of the Episode, it is lost. Every 5 levels in Blue Shirt increases this bonus by +1.

Behavioral Analysis. This requires the Empathy Talent. Your keen insight into psychology allows you to make an Int + Know roll to predict the likely future behavior or delve into the personality traits of any given individual. The target DC will be 15 + the target's Int bonus. The GM may modify this number up or down depending on circumstances. For example, if the target is behaving unusually erratically due to outside influence, the GM might assess an additional +2 to the DC.

Succeeding on this roll will allow you to ask the GM one question for every 5 points you succeeded by. The answer will only be given in a yes/no/undecided format.

Breakthrough. You receive credit for a scientific breakthrough that earns you the recognition of your peers. It can be in any field of study that fits the background of your character. When dealing with others with a reasonable amount of familiarity with that field, you gain a +2 bonus on social rolls due to your reputation.

When dealing with any situation pertaining to that field of knowledge, you may spend an Action Point to give the usual +5 skill bonus to anyone who is capable of listening to and following your advice, including yourself. This bonus disappears once used and is **in addition** to any Action Points spent by other players (or yourself) to boost their own skill rolls.

This talent may be chosen more than once, each time applying to a different field or subfield.

Example: S'Vek has made a life study of Warp Field Theory, a subfield of Physical Sciences. When at a convention of Star Fleet sciences personnel, it's likely that anyone with any knowledge of Physical Sciences will seek him out for discussion.

Later on in the campaign, the U.S.S. Bridger is caught in a field of destabilized space. The ship's warp drive itself is causing the fabric of reality to unravel. S'Vek and the ship's engineer are in the Jeffries' tube attempting a last ditch effort to recalibrate the warp coils to let them escape. S'Vek, a noted expert in Warp Field theory, spends 1 Action Point to activate Breakthrough. He gives the +5 bonus to the engineer for the repair roll.

"Commander Tavek, if you integrate the space-time curvature of this region with the energy signature of the warp baffles, I believe..."

Empathy. You have an uncanny ability to see into the hearts of others. This talent provides a +2 bonus on checks involving any interaction skills (such as diplomacy, intimidation, perform, sensing motives, persuasion and so on), provided you spend at least 1 minute observing your target prior to making the skill check. Every 5 levels in Blue Shirt increases this bonus by +1.

Exploit Weakness. Your intellect and eye for detail allows you to identify key weaknesses in a specific opponent, provided you take a round to study it first. Make a Sub+Int check (DC 15). If the check succeeds, for the rest of the combat you can use your Int bonus instead of your Str or Dex bonuses on attack rolls or AC as you try to out-think your opponent. You can only use your Int bonus for one or the other, never both at the same time.

Field Medic. You can now use your Action Points to heal other characters in emergency situations, given a reasonable amount of equipment and a few undisturbed minutes. The amount healed is equal to half the character's lost hit points.

"He's Dead, Jim." This Talent requires the Field Medic Talent. When using the Field Medic Talent, make an Int + Medicine skill vs DC 25. If successful, you get the Action Point back.

Pure Logic. Choose an area of study. Whenever the GM would allow you to take 10 on a skill check in that area of study, substitute your Int score instead for the d20 roll. Whenever you are allowed to take 20, your die roll is automatically your Int +10. Taking this talent multiple times gives additional specialties.

Plan. If you have time to prepare a plan prior to a dramatic situation, you can grant a bonus on all skill checks and attack rolls made by you and your allies. Make a skill check vs DC 10, using Int plus whatever skill is appropriate to the situation (usually Knowledge).

If successful, the bonus will be +1, plus another +1 for every 10 points the roll was over the DC (i.e., whatever you rolled divided by 10, rounded down). This bonus lasts for the first 3 rounds of the situation and then goes down by 1 every following round (minimum 0) as entropy slowly unravels your plans.

Recollection. You have read a vast amount of material on every subject conceivable. Once per Episode, on any skill roll involved with or aided by remembering scientific or academic information, you can roll twice, taking the better of the two rolls.

Red Shirt

1. Brawler
2. Breakthrough
3. Durable
4. Flurry
5. Intuition
6. Judo
7. Jury Rig
8. Miracle Worker
9. Power Attack
10. Pride of the Fleet
11. Red Shirt
12. Starfleet Commendation
13. Stiff Upper Lip
14. Worried Engineer

Brawler. Your unarmed attacks are upgraded from 1d4 to 1d6 damage. You can take this one more time to upgrade your unarmed damage to 1d8.

Breakthrough. As per Blue Shirt.

Durable. You are a damage sponge. +1 hp per level, can be taken multiple times. Changes in hit points are retroactive.

Flurry. Choose one type of attack: melee or ranged. With those types of attack, you can perform a flurry. A flurry allows you to gain an additional attack per round in exchange for a -2 to hit on all attacks per round. Taking this Talent again lets you perform a flurry with the other type of attack (melee vs ranged).

Intuition. You have an innate ability to sense trouble in the air. Once per adventure per level, you can make a Int + Subt roll vs DC 15. If successful, you get a hunch that everything is all right, or you get a bad feeling about a specific situation, based on the GM's best guess relating to the circumstances. In addition, all initiative rolls for the character will be at +1.

Judo. If you successfully grab an opponent, you can perform your next grapple action immediately instead of waiting for the next round.

Jury Rig. A Red Shirt with this Talent gains a +2 bonus on skill checks made to attempt temporary or jury-rigged repairs. Every 5 levels in Engineering Red Shirt increases this bonus by +1.

Miracle Worker. Spend an Action Point and a repair takes half the time it normally would. Take this

Talent twice, and you can spend 2 Action Points to take a quarter of the time. If this reduction in repair time would reduce repair time to less than 1 round, then the Red Shirt can repair the damage in a single action.

Power Attack. You can take a penalty to your attack roll and add the same amount to your damage roll, assuming you hit. Up to one-half your total attack bonus can be transferred this way. This Talent represents a predilection for risky maneuvers in combat and covers such things as drop kicks, dirty tricks, haymakers, trick shots and so on.

Pride of the Fleet. This Talent requires Worried Engineer or Miracle Worker. Any ship that you've been in charge of for more than a few weeks increases in capability. Choose one specific benefit of your tweaking, such as strong shields, phaser tuning, faster engines, whatever.

If SR or WR are improved, they are increased by +2 or 10%, whichever is greater.

Highly-tuned warp engines can be pushed harder than untuned warp engines—when engaged in high warp pursuit, the rolls for pushing past maximum warp increment at .2 instead of .1.

Any other increased systems will grant a +2 with appropriate rolls or add an additional 10% capability, whichever makes more sense.

These benefits are lost after a few weeks if you leave. This benefit is also temporarily lost if the ship is seriously damaged. Every time this Talent is selected again, choose another benefit. These benefits can all be active at the same time.

Red Shirt. If your character is killed by alien monsters or heroic sacrifice, he will be replaced in the next appropriate scene by a character with exactly the same stats, skills, talents, equipment and experience but with different physical features and name.

Essentially, if your character is eaten by that Mugato, you can pencil out his name and description on your character sheet and continue on in the next scene that a replacement could reasonably be beamed or shipped in as if nothing happened. For accounting purposes (e.g. accumulated experience for a session), both PC's can be considered to be the same character.

If you run out of ideas for your next Red Shirt, consult the table on the following page.

Starfleet Commendation. Your acts of bravery under fire have earned you recognition and you serve as an example to others. Choose an event in which you demonstrated your skill—it need not be something that

actually occurred in the campaign. You can “retcon” events that occurred before the Series began. Describe the event briefly for future reference.

You now have a +1 bonus to any skill rolls that may benefit from having a heroic reputation or a reputation for the type of skill you demonstrated.

During any situation resembling the events that earned you your commendation—the GM will be the final judge as to what qualifies—you will gain one temporary level during that scene. Any Talents, hit points and other bonuses resulting from the temporary level disappear at the end of the scene.

This Talent may be taken more than once, but each additional event must be notably different than any previous Commendations.

Stiff Upper Lip. Once per Episode, any single damage roll inflicted on your character can be rerolled, taking the lower of the two rolls.

Worried Engineer. You can spend 1 Action Point and reroll any damage roll to your ship, including weapons damage taken, critical hits, system damage, pushing the ship's systems beyond spec and shield damage. You must, however, accept the second roll.

The Random Red Shirt Table

When you find yourself at a loss for Red Shirt details...

Roll d10 for each column	First Name	Last Name	Skin	Hair	Major Personality Trait	Hobby
1	John	Smith	Pale	Red	Resigned	Guns
2	Jane	Johnson	Pale	Red	Stern	Chess
3	Jim	Williams	Tanned	Blond	Aggressive	Music
4	Sally	Jones	Tanned	Blond	Boisterous	Drinking
5	Tom	O'Connell	Olive	Brown	Intellectual	Sports
6	Nancy	Brown	Olive	Brown	Innocent	Hiking
7	Gene	Davis	Light Brown	Brown	Paranoid	Fencing
8	Mary	Miller	Light Brown	Black	Melancholy	Gambling
9	Michael	Wilson	Dark Brown	Black	Braggart	Travel
10	Alice	Moore	Dark Brown	Black	Cheerful	Knitting

Yellow Shirt

1. Agile
2. Bluff
3. Brawler
4. Command
5. Defensive Roll
6. Flurry
7. Inspirational Speech
8. Judo
9. Measure of a Man
10. Plan
11. Power Attack
12. Space Jockey
13. Starfleet Commendation
14. Unorthodox Maneuver

Agile. You are excellent at dodging attacks. +1 AC, can be taken multiple times.

Bluff. You have a knack for fighting dirty. If you can communicate with an opponent, you can attempt a Cha+Comm roll vs the opponent's resisting skill roll. If successful, you can use your Charisma bonus as either a bonus to hit, damage or AC for one attack. How this looks can vary from cheap shots all the way up to out and out trickery.

Brawler. As per Red Shirt.

Command. Once per day, you can give an order to someone. Should they choose to follow your command, they get a +1 bonus to achieve that action. At every level evenly divisible by 4, this bonus goes up +1 and an additional order per day can be given.

Defensive Roll. This requires the Agile Talent. If you are in a position to dodge out of the way of an attack but it hits you anyway, you can spend 1 Action Point and completely avoid damage.

Flurry. As per Red Shirt.

Inspirational Speech. Once per Episode, you can make an Inspirational Speech about a single topic (“Let’s kick these alien bastards back across the Neutral Zone!”, etc).

The speech takes at least a couple of minutes and those affected must be within earshot. Any nearby allies gain a +2 bonus on one skill check, save or attack roll of their choice. If not used by the end of the Episode, this bonus will be lost. For every 5 levels of Yellow Shirt, the number of times this bonus may be used per audience member increases by +1 additional use.

Judo. As per Red Shirt.

Measure of a Man. You are an accurate judge of character. Once per Episode, you may study one individual. This process takes several minutes. After that point, at any time during that Episode that you must make a skill or attack roll versus that individual, you gain a +2 bonus.

You may also make an Int + Know roll once per scene to read their intentions and general capabilities. The target DC will be 15 + the target’s Int bonus. The GM may modify this number up or down depending on circumstances. For example, if the target is behaving unusually erratically due to outside influence, the GM might assess an additional +2 to the DC.

Succeeding on this roll will allow you to ask the GM one question for every 5 points you succeeded by. The answer will only be given in a yes/no/undecided format.

Plan. As per Blue Shirt.

Power Attack. As per Red Shirt.

Space Jockey. This Talent gives you the ability—once per Episode—to roll one ship piloting skill check twice, taking the better of the two rolls. Taking this Talent multiple times gives you additional uses of this ability.

Starfleet Commendation. As per Red Shirt.

Unorthodox Maneuver. The things you do in ship-to-ship combat situations tend to become named after you and taught in Starfleet Academy.

Assuming you have time to prepare an unorthodox plan of action, you may spend an Action Point and make an Int + Know skill vs skill roll against your opponent. If successful, you automatically gain a surprise round on your enemy. For every additional 5 points you beat your opponent’s roll by, you gain an additional +2 bonus on your first action against that opponent.

Example: Jefferson Gomez, captain of the U.S.S. Abu Bekr, has been harried by the Romulans for the last two days. Cornered in a dense asteroid field, he devises a desperate plan: he modifies the warp signature of a photon torpedo to resemble that of his ship. His plan is to fire the torpedo out of the asteroid field in such a way that it resembles his ship fleeing to safety. When the Romulan vessel attempts to ambush the “ship”, Gomez will turn the tables, blindsiding them.

He gains GM approval and spends 1 Action Point. His Int + Know roll comes up 23. The Romulan rolls 16. Now when combat begins, the Abu Bekr will swoop in, seemingly from nowhere, and gain a surprise round on the Romulans. Since he rolled 7 points over his opponent on the Tactics roll, the crew gains a +2 bonus on the ship’s first action against the Romulans, in this case, a barrage of phaser fire.

This Talent may only be used once per Episode and the trick used will usually only work once, ever, against a given opponent.

This is not to say that that unorthodox plans require this Talent to work—it’s just that characters with this Talent have a knack for unconventional strategy.

The GM has final say in whether or not a new Unorthodox Maneuver is crazy enough to actually work. In any case, you get to name the maneuver.

Combat, Action Points And The Rest Of The Core Rules

Hit Points = STR Stat + 1d6/Level. If HP reaches 0, you are unconscious and near death. Further damage directly reduces STR. If that reaches 0, you are dead.

A combat round lasts 6 seconds. The order in which characters and NPC's act is called "initiative order".

Roll d20 + DEX bonus for initiative order.

Highest total acts first, then next highest, etc. Only roll once, on the first round of combat—the order stays the same for subsequent rounds.

Everyone can do one thing each round: move, attack, dodge, operate a vehicle, etc.

Melee attack bonus = STR bonus + Level

Ranged attack bonus = DEX bonus + Level

Armor Class (AC) = 10 + one-half your level, rounded down + DEX bonus.

Add attack bonus to d20 roll. If equal to or higher than your opponent's Armor Class (AC), it's a hit. Natural 20 is automatically a critical, doing maximum damage.

This version of Microlite does not use iterative attacks. If you want to make more than one attack per round, use a Maneuver (see below). All additional attacks through maneuvers occur more or less simultaneously.

Add STR bonus to Melee damage, x2 for 2-handed weapons.

Ranged Combat. Shooting a ranged weapon into a crowded melee is not a good idea—if you don't take a -4 to hit, there's a 50% chance you'll hit a friendly instead of an opponent.

Ranged Penalties. If your target is relatively close, there is no penalty to hit for range. If it's mid-range for the weapon you're using (judgment call), take a -2. If it's farther out than that, the GM will assign a -4 to -10 penalty to hit, depending on his judgment of how far away the target is.

Maneuvers

Maneuvers are things you can do in combat in lieu of a normal attack.

Aim. Taking a full round to aim with a ranged weapon will add +2 to hit, but while doing so your AC will be at 10 because you can't move around.

Autofire. Allows you to make iterative attacks with an automatic or energy-based weapon. In other words, if your total bonus is +6 or more, a second attack can be

made with a -5 penalty. If the total bonus is +11 or more, a third attack can be made at -10. For example, if the total bonus is +12, three attacks can be made when autofiring at +12/+7/+2. All of these attacks occur simultaneously and can be split amongst multiple targets, if desired.

Projectile weapons burn a number of rounds equal to twice the attacks you make, if such details as ammunition are being tracked. Energy weapons will burn a number of charges equal to the number of attacks made.

If you are not high enough level to have iterative attacks, then you merely gain one extra attack at -5 while burning 4 rounds (or 2 for energy weapons).

Dodge. You can forgo your next attack at any time and dodge out of the way. Roll Dex + Phys. The total is your effective AC until your next attack comes up. If it's lower than your real AC, well, you zigged when you should've zagged.

The GM may modify your check by +2 or -2 (or more) to reflect the amount of cover in the area and how the local terrain affects your mobility.

Grab. Make a hit roll on your target. If successful, the target and attacker make opposed Phys+Str rolls. If the attacker wins, the target is grappled and loses his Dex bonus to AC (if positive). If the target wins, the grapple fails. Every time the target's action comes up he can make another opposed roll to either throw off the grapple or reverse the grapple.

Every time the attacker's action comes up, he can do something, such as inflict unarmed damage, strip an item from them, or move or throw the target somewhere (potentially also doing unarmed damage). It's the GM's judgment call if an action is reasonable or not.

Sneak attack. If you successfully sneak up on someone, or otherwise catch them unawares, the first hit adds your ranks in Subterfuge as bonus damage.

Take Cover. If you duck behind an object, you can gain +2 to +10 to your AC depending on the extent of the cover (light cover = +2 all the way to nearly complete = +10). Half this AC bonus may also apply to saves if the GM allows it.

Throw an explosive. These weapons (usually grenades) require the attacker to make a Missile Attack (no penalty) targeting a particular 5 foot by 5 foot area, which is a DC 10 roll. Anyone caught within the blast

radius (see the explosives details in the SRD) can make a Dexterity Check (DC is listed with the explosive) and only take half damage.

Two weapons. You can wield two light weapons and attack with both in a round if you take a -2 penalty on both attack rolls. It's up to the GM what counts as a light weapon.

Action Points

Characters begin each session with 2 Action Points (more if they have the Heroic Talent or are Human). Each Action Point can be used in several ways:

- Add +5 to any roll, but only before the GM declares the results of the roll.
- Add +5 to AC for one round.
- Recover half your lost hit points instantly. You spend your current action catching your breath.
- Bring your character back from the dead...in the next adventure.

Only 1 Action Point can be spent per round.

Recovering Action Points

- **Moral High Ground:** Whenever a character or group of characters make a difficult moral decision or behave in risky ways consistent with Starfleet behavior they will regain 1 Action Point.

For example, allowing an enemy the first strike in starship combat to fully ascertain their intentions, following the Prime Directive even though it would be a lot easier to circumvent it, refraining from taking life needlessly, even if it is an enemy.

The GM decides when to award Moral High Ground, but it should be a situation where taking the high road causes the group a great deal of inconvenience.

- **Railroad Bonuses:** This is another reward for genre emulation, in the same vein as the “Moral High Ground” rule above. The GM can bribe players with Action Points to go along with events that further the plot.

For example, a Klingon is holding you hostage at disruptor point. Even though both you and the GM know quite well that your character isn't really in much danger from a single disruptor blast (disruptors only do 3d8 damage, after all—not much of a threat for even a mid-level character), the GM might award the “hostage” an Action Point in exchange for treating the threat seriously.

- Every time your character does something particularly impressive or achieves a goal of some sort, the GM may award one or more Action Points.
- Every time you roll a natural 20, you gain 1 Action Point.
- Every time you start a new session, the Action Point pool is fully refreshed. Any unused Action Points from the previous session will be lost.

Don't hoard your Action Points—they're meant to be used!

Other Hazards

Falling: 1d6 damage per 10', half damage on Phys+DEX save. DC=depth fallen in feet, maximum DC 30, maximum damage 20d6.

Extreme Heat & Cold: If not wearing suitable protection, Phys+STR save once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed save.

Lava: 2d6 damage per round exposed; much more if completely immersed. Damage continues until lava is removed or quenched.

Poison: Phys+STR save to avoid or for half, depending on poison. Effect varies with poison type.

Radiation: Lose 1d3-1 STR per round, DC 20 STR+Phys save for half (round down). Damage is potentially much higher in very hard radiation (1d6, 1d8, etc). STR recovers at a point per day if properly treated. A radiation suit reduces damage by 2 points (minimum 0).

Level Advancement

Every time a player character completes an Episode in which they did something noteworthy or heroic, give them one XP. If something exceptional was involved, such as heroic sacrifice, saving the galaxy or the Federation, give them another one or two XP on top of that.

Every time this total equals twice the character's current level, they can advance one level, gaining the level-based benefits or potential promotions listed below.

After advancing, reset the character's XP total to 0.

Each level adds:

- +1d6 to Hit Points
- +1 to all attack rolls
- +1 to your Trained Skill(s)
- +1/2 to all other skills
- +1/2 to AC

If the level divides by four (i.e. level 4, 8, 12, etc.) add 1 point to STR, DEX, INT or CHA.

A new Talent is gained at levels 3, 5, 7, 9, 11, 13, etc.

Rank

To simplify matters, rank is loosely related to experience level. If you need to know the stats for a lieutenant, then you can assume—unless there's a good reason not to—that they're level 6. A random ensign crew member will most likely be either 3rd or 4th level.

These level ranges are mostly a suggestion, however—actual characters may vary 1 or 2 levels either way. For example, a captain's level usually ranges from 6-10th level (or even 5th!), depending on the type of vessel he's assigned to.

It's a good idea to keep the PC's at the same experience level. If one player wants to be the captain, while the rest are bridge crew, simply assign the captain the higher rank regardless of his or her actual level.

Promotions. Generally speaking, if you advance to a new level and have a good performance record, and you desire the promotion, you will earn the next higher rank.

Ship Combat

Ship to ship combat operates much like normal combat—everybody who's “on screen” rolls initiative to determine order, with high rolls going first. Rounds last approximately six seconds, but may vary in length if the GM feels it to be dramatically appropriate.

Opponents who have the advantage of surprise automatically get a free round to act.

Each player may choose one action on their turn (a list of typical actions is included later in this section). Actions may be held until the end of the round.

A character will generally only perform actions appropriate to their personal abilities and their roles on the bridge: Commanders, for example, usually give orders or man empty stations as necessary. The helmsman maneuvers the ship, nervously states shield damage and fires weapons. Engineers perform repairs

Starfleet can and will occasionally railroad high-level characters up to a higher rank, simply on seniority or as a political move. It is also not uncommon in Starfleet for an officer to turn down promotion to remain on a particular ship.

Level	Rank
1	Green Cadet
2	Cadet
3	Green Ensign
4	Ensign
5	Lieutenant Junior Grade
6	Lieutenant
7	Lieutenant Commander
8	Commander
9	Captain
10	Commodore*
11	Rear Admiral*
12	Vice Admiral*
13	Admiral*
14	Fleet Admiral*

** Accepting a rank higher than Captain usually involves moving the character to a desk job and out of the series. A character can opt to simply remain a Captain when advancing beyond 9th level.*

and jury rig systems. The ship's doctor treats injuries and so on.

Crews on other ships are abstracted since they are usually “off screen”, so to speak. You can often get by with just rolling initiative for the enemy's helmsman if it's not an important fight. For major fights, you may wish to stat out an entire enemy bridge crew.

A note on range. Ranges are handwaved in this game. Rather than note down exact distances in kilometers, imagine how the enemy ship would appear on the view screen. Does it fill the entire screen? Then it's at point blank or short range. Is it a mere dot in the center of the ship's screen? Then we're talking long range.

Moving between ranges takes only an action or two on the part of the helmsman. If the other ship's helmsman doesn't want this to happen, then make a skill vs skill roll between the two helmsmen.

Typical Actions

Actions are usually played out as orders given by the captain and carried out by the member of the bridge crew controlling the appropriate station. For example, the U.S.S. Bridger is fired upon by Romulans. The captain yells “Evasive maneuvers!”, but it's the helmsman who has to make the pilot check to avoid the incoming plasma torpedo.

Aid Another Character. Your character helps another character in some way. The Captain gives tactical advice or a particularly insightful command. The science officer scans an enemy vessel for weaknesses. The engineer boosts energy to phasers or routes energy to the warp drive. And so on.

Basically, make a skill roll. If successful, another character's next action gets a +2 bonus. If it makes sense, this bonus can be “saved” until later in the encounter. The only limitation is that you can't perform the same Aid twice in the same encounter.

“Beam over a landing party!” If the enemy ship's shields go down, the order can be given to the chief engineer to send over a boarding party. A boarding party typically consists of a number of Red Shirts or PC bridge crew.

A typical transporter bay has 6 pads and it requires one round to send a party through it. If more than 6 people need to be sent, it will take consecutive rounds to send them all; should the ship's shields go back up during that time, only a partial boarding party will be sent.

Beyond that point, the boarding party will either be handled “off-screen” as considered appropriate by the GM, or will be handled as a typical adventure location.

“Evasive maneuvers!” The helmsman can make a pilot check (Dex + Phys) to take evasive maneuvers, potentially avoiding an incoming attack. The result of the pilot's check replaces the DC of the attack roll. The first time this maneuver is used in an Episode, roll 1d6: on a 1, the ship takes damage. Every additional time this maneuver is taken, this chance goes up 1 in 1d6, up to a maximum of 3 on d6.

Example: Lieutenant Commander Avira Kael, the helmsman of the U.S.S. Bridger, is dodging a volley of photon torpedoes from a Klingon D-7. In order to hit the Bridger at medium range, the D-7's helmsman has to equal or beat a DC of 26 (Medium range = 20, +4 from Avira's Dexterity, and another +2 because

the Bridger is a Hermes class starship and highly maneuverable).

The Klingon helmsman has a +12 skill total and he rolls 14 on d20 for a total of 26. This would normally be enough for one torpedo to hit. However, the photon torpedo was fired on initiative count 11, giving Avira until count 8 to react. Luckily, Avira was holding an action.

Avira performs Evasive Maneuvers. Her skill bonus is +16 (Dex + Phys, and another +2 due to skill specialization). Her total is 32. 32 is greater than the Klingon's 26, so both torpedoes miss.

Now, let's rewind a bit. Let's say the Klingon rolled a 20 on his attack roll, for a total of 32 and Avira had rolled poorly, say a 5 (for a total of 21). 32-21 is equal to 11—both torpedoes would have hit, since Avira's evasive maneuvers caused her to jink the ship into their path.

Unfortunately, Avira's evasive maneuvers caused the ship's communications relay to temporarily go out of alignment—she rolled a 1 on d6 to see if any damage had been done and the damage roll came up 12: Communications. Until it is repaired, the ship's communications will only be at 50% efficiency.

“Fire phasers!” Firing phasers is a skill roll performed by the helmsman—Dex + Phys vs DC 15-25, depending on the ship's range: 15 for Short, 20 for Medium range, 25 for Long and so on for farther ranges (GM's call) .

The opposing ship gets their helmsman's Dex bonus as a modifier to the DC and another +2 if the ship is particularly maneuverable. If the ship is not very maneuverable or is very large compared to the attacker, reduce the DC by -2 or more. The GM may also decide that ships at long range or farther can't be hit by phasers—in that case, you can either close the distance or use photon torpedoes.

Phasers can not be used at warp speeds—to attack during warp flight, use photon torpedoes.

“Fire photon torpedoes!” This is resolved almost exactly as firing phasers. If the helmsman's attack roll is successful, one torpedo hits, plus one extra for every 5 points the DC was exceeded by, up to the ship's number of torpedo banks. The torpedoes take 3 initiative counts to hit—if the helmsman has an action that takes place in that time (he can hold an action), evasive maneuvers can be attempted.

Most photon torpedoes have a WR of 25. Total each torpedo's WR that hits before calculating damage.

“Go to warp!” Going to warp is an action with an initiative count of 2, dropping out of warp doesn't take any appreciable amount of time.

“Open a hailing frequency!”

“Raise shields!” A ship's shields are usually down unless the ship is on Red or Yellow Alert.

“Reinforce Fore/Aft Shields!” Choose which part of the ship's shields to reinforce—the shields will deflect attacks from that direction at either +2 rating or +10%, whichever is greater. Attacks from any other direction, however, will be defended at -2 or -10%, whichever is greater.

“Run away!” / “Follow them!” There are actually two separate systems to deal with pursuit situations.

At **impulse speeds**, the pursuit is resolved by a test of skills between the helmsman of every ship involved with the chase.

There are 10 points of Lead. The ship being chased is called the Prey; the ship that is pursuing is the Hunter. If the Lead increases to 10 or higher, the Prey gets away. If the Lead reaches 0, the Hunter catches up, gets a free attack and combat resumes as normal.

The Lead usually starts out at 5, but the GM can decide to use a different number as starting Lead if one side has an advantage.

Both sides make skill checks each round. Usually these skill checks will be versus static DC's, representing maneuvers.

The highest successful skill check total wins 1 pt of Lead, either towards the Hunter's or the Prey's advantage.

Depending on what these maneuvers are, additional benefits or penalties may accrue in the following round.

A “round” in either type of chase is defined as a “dramatically appropriate length of time”—for some types of chases, a round could be a matter of seconds, in long-distance warp pursuits, hours.

If neither skill check passes, the Lead remains unchanged and additional unpleasant effects may ensue as expected for a failed skill roll (crashing into an asteroid, damaging the ship's engines, whatever).

If only one side fails their check, one or more extra points of Lead may accrue to the other side depending on how badly the roll failed by.

Applicable Bonuses:

A significant speed advantage (e.g. .75c capable Impulse vs .5c) gives a +5 bonus to pilot rolls.

A crushing speed advantage (.75c capable Impulse vs .25c, for example), gives a +10 bonus.

A warp-capable ship racing against a sublight-only vessel will always have a crushing speed advantage.

The second chase situation is when two or more vessels are racing at warp speeds. Instead of a contest between pilots, it becomes a test of nerves and of the ships' capabilities—who can go to the highest warp speed for the longest time without burning out their ship's drive systems.

The ship being pursued has to gain a Lead of 10 to evade the pursuers; the chase starts with the Lead at 5. Every round the pursued ship is running at a warp faster than its pursuers adds 1 to the Lead. Every round where the pursuers are faster reduces the Lead by 1. If the lead drops to 0, the pursuers are within weapons range (short distance) and may fire. If the lead hits 10, the pursued starship may escape.

If a ship stays at maximum warp, there is a 1 in 10 chance per round that the ship's warp engines take damage. Every .1 increment past maximum warp increases the odds by 1 in 10. So, if a ship capable of Warp 8 is holding 8.2, then there is a 3 in 10 chance per round that the engines take damage and drop the ship out of warp—1 in 10 for maximum warp, plus an extra 2 in 10 for the .2 over maximum warp.

Other actions. For the most part, just give a +2 or -2 to an appropriate roll if a plan sounds good. Resolve other situations with common sense. It's more important to keep the action going.

Taking Damage

A ship will typically have a force field protecting it. Shields start at 100 shield points, a number which degrades as the ship takes damage. After a solid minute where no damage is being taken, shields regenerate 10 shield points per minute up to their normal maximum of 100.

For purposes of description, you can refer to these shield points as a percentage, but that's flavor only—the system is set up to make it easy for players to blurt out things like “Captain, the shields are down to 34%!”

When a ship runs out of shields it begins to take hull damage. Hull damage is more serious than shield damage, because it must be repaired and is usually accompanied by system damage—it does not automatically regenerate.

When a ship takes damage, compare the Weapon Rating (WR) of the attack to the target ship's Shield Rating (SR) on the following table:

Table 1: WR vs SR

If the WR is...	...Damage taken is...
1/2 SR	1d6
Less than SR	1d10
Roughly the same*	2d10
Greater than SR	4d10
x2 SR	6d10
x3 SR	8d10
x4 SR	10d10
x5 SR	12d10
x6 SR	14d10

** Give or take 10-20%. No need to break out a calculator—just eyeball it. If the comparison goes way off the table in either direction (x7, x8, etc), feel free to keep increasing the damage bonuses.*

If the dice total gets really high (e.g. 18d10), then group the dice in multiples to make it more manageable (18d10 = 9d10x2, for example).

So, if a photon torpedo (WR 25) hits a Federation class dreadnought's shields (SR 23), then the blast would do 2d10 damage, since they're roughly the same. The same torpedo (again, WR 25) hitting a Hermes class scout's shields (WR 5) would do 12d10 damage since it's more than five times the ship's Shield Rating.

Note: shield points will always be at a maximum of 100, no matter what the ship. The SR determines how tough the ship's shields are. A Federation class dreadnought may have the same 100 shield points as a Hermes class scout, but the difference between the two ship's SR scores make a world of difference when it comes to determining how fast those shield points will disappear in a fight. It helps if you think of SR as a Armor Class and shield points as hit points.

Some of the attacks in the Ship Weaponry or Enemies and Allies section do not follow this guideline—see the individual entries there for further details.

If the shields are up, subtract the indicated damage from the current shield point total.

If shield damage is greater than 15, the ship is Shaken. Everybody on board who happens to be “on screen” and standing must make a Dex+Phys roll vs DC 20 or fall down and take 1d6 damage.

If they're already seated, the DC is only 15 to avoid being thrown from their chair and taking damage. If the ship takes a LOT of damage per hit (say, greater than 40), the DC increases to 25 and 20, respectively.

Any character that fails their roll and is Shaken will take a -2 on their next action, if appropriate.

If damage is greater than 30, not only is the ship Shaken, it takes damage—one roll on Table 3 for every 10 points over 30. This is called a Shield Pierce—the damage of the attack is so great that some of it gets through.

Critical Hits. Critical hits in Ship-to-ship combat do maximum damage and always cause at least one Section Damage roll.

If the shields are reduced to 0 points or below, the remaining damage is applied as Section Damage. For every 10 points rolled on the damage dice (rounding up, using Table 2), roll once on the following table to see what happens:

Table 2: Section Damage Rolls

d20	Station	Console?	System
1 – 2	Helm	Yes	d6: 1-2 Warp*, 3-4 Impulse*, 5-6 Maneuvering thrusters
3 – 4	Navigation	Yes	d6: 1-2 Computer, 3-4 Sensors, 5-6 Hull Damage (as below)
5 – 8	Weapons	Yes	d6: 1-2 Phaser bank damage, 3-4 Photon torpedoes, 5-6 Shield Generators
9 – 10	Science	Yes	d6: 1-2 Computer, 3 Sensors, 4 Life Support, 5-6 Hull Damage (as below)
11 – 12	Communications	Yes	
13 – 16	Engineering	Yes	d6: 1-2 Warp*, 3 Impulse*, 4 Tractor Beam, 5 Transporters, 6 Life Support
17	Environmental	Yes	Life Support
18 – 20	Hull Damage	No	Pick a random deck from the ship and report casualties or injuries as appropriate to the amount of damage. Higher damage hits may cause hull breeches, block corridors or completely remove sections of the ship.

** Possible radiation leak. This chance is 25% for a level 2 hit and 50% for a level 3 hit. Characters in the vicinity take radiation damage as noted under “Other Hazards” at the end of Chapter 2.*

Each system has a damage level attached to it. The first time it's hit, it goes to level 1 damage. The second time it's hit before being repaired, it goes to level 2. The final time, it goes to level 3 and is completely destroyed.

Think of it as a 3 strikes policy. If a system comes up two or more times on a section damage roll, go immediately to a higher level of damage without stopping at lower damage levels.

A system at level 1 is at 50% effectiveness until it is repaired or jury-rigged. Fumbling or failing a roll with a system at level 1 could, at the GM's option, move it to damage level 2.

A system at level 2 immediately causes the console attached to it to explode for 1d10 damage, stunning anybody sitting at that console for a round and causing them to fall down. A Phys+Dex roll vs DC 20 is required to avoid these effects. The system itself is rendered mostly useless until repaired or jury-rigged.

A system that goes to level 3 is completely obliterated and will require extensive repairs outside of combat to be operational. It may not even be repairable without docking at repair facilities. The console attached to that system will also explode, this time causing 2d10 damage, with a roll vs DC 25 to avoid effects.

It's up to the GM as to what effects a partially damaged system will have. Weapon systems might be at half damage or fail to activate half the time.

Shields might operate at half SR or only give coverage to parts of the ship. Damaged life support might vent noxious gases into the living areas. Damaged transporters might fail to operate 50% of the time or scramble the patterns of anything beamed through them. Just go with whatever sounds fun or interesting.

Massive damage. After a certain point—and there is no hard and fast rule for this—a ship can be considered completely disabled. Usually this happens after it's no longer capable of firing weapons, defending itself or moving. If the ship continues taking damage beyond that point, roll a couple of dice and rule that it explodes or crumbles into debris after that many minutes.

Fights in the the original Star Trek series only rarely get to this point—ship combat usually only goes until negotiation becomes a viable option, either because one side surrenders or shields drop, allowing boarding parties to beam over.

General System Failures. In the event that a system fails by some method other than collision, explosion or enemy attack, then simply take it to the appropriate damage level without the pyrotechnics and personnel damage. In any other respect, it is treated exactly the same with regards to repair and game effects. This is mostly likely to come into play due to plot devices, such as when aliens are tinkering with the various systems.

Repairs

Any system at **damage level 1** can be fixed in one of two ways:

Jury-rigging: With an Engineering roll at DC 20, it can be jury-rigged in 1d6 combat rounds. The jury-rigging will last until the end of the scene and then it must be fixed fully at the normal time rate. Any jury-rigged system that is hit again will immediately move to damage level 3 instead of 2. There is a 50% chance that it can be implemented from the bridge without having to go to the section in question.

Full Repair: A system at damage level 1 can be repaired fully in 3d6 minutes, at DC 15. For a full repair, access to the bridge station and the area of the ship housing the system is required.

Systems at **damage level 2** can also be fixed by Jury-rigging or Full Repair.

Jury-rigging a damage level 2 system will restore the system to half functionality until the end of the scene, after which it will require full repair. A damage level 2 Jury-rigged system that is hit again will immediately go to damage level 3 and then cause another 1d3 damage rolls on the table above.

Jury-rigging a damage level 2 system requires an Engineering roll vs DC 25 and 4d6 combat rounds once the affected system is reached. Jury-rigging a damage level 2 system will always require going to the source of the damage and may involve navigating some serious obstacles, such as radiation-flooded Jefferies Tubes or crossing the exposed hull of the ship...oftentimes during pitched combat. This maneuver at this level is not for the faint of heart.

Full Repair of a damage level 2 system requires a DC 20 Engineering roll and 2d6 hours of time to restore it to damage level 1. At the GM's option, even then it might not be possible to repair it to full functionality without a trip to a star dock or for supplies.

A **damage level 3 system** cannot be jury-rigged and even full repair might be impossible—the system is simply obliterated. The more vital ship functions such as Life Support can be repaired in 3d6 hours. Other functions such as warp might only be repairable at a suitably-equipped star dock.

Ships and Ship Technology

Cloaking Devices. Engaging or disengaging a cloaking device takes two initiative counts and immediately disables the ship's shields and weapon systems.

Detecting the presence of a cloaked vessel requires a DC 20 roll with sensor equipment—however, this sensor roll must specifically be made, it is not automatic.

Getting a precise enough reading to enable an attack roll is far more difficult—DC 30 or higher. At that point, an attack roll can be made with a +5 DC penalty.

The GM can also declare that a blind fire into an area of space that **may** contain a cloaked vessel has a small chance of hitting, say 1 in 10 or 1 in 20.

Plasma Torpedo, Heavy. A plasma torpedo is a Romulan invention, a blast of shaped plasma capable of locking on to and tracking a moving target. While powerful at close ranges, it rapidly dissipates after launch. The force required to launch a plasma torpedo requires that the launching ship drop out of warp and disengage its cloaking device.

Only one plasma torpedo may be launched at a time and it is not effective at long ranges. Once launched, it behaves like a photon torpedo in terms of travel speed, initiative counts and targeting capabilities. However, the attack roll will always be at +5 to hit due to its ability to lock on to its target.

If the Helmsman of the targeted vessel has a held action or his normal action falls during the travel time of the plasma torpedo, he may attempt evasive maneuvers.

Evasive maneuvers are treated as a Dex + Phys skill check with normal maneuver bonuses vs the Romulan's unmodified attack roll (that is, the +5 to hit bonus from the plasma torpedo is disregarded).

If successful, the plasma torpedo's WR is reduced by 5 for every point the evading vessel beats that roll. If not successful, the plasma torpedo hits for full damage. A successful evasion attempt will take up one full round. An unsuccessful attempt will take up the same amount of time, only with a really big explosion at the end.

A heavy plasma torpedo is 60 WR at point blank range, 50 WR at short range and 40 WR at medium range, with the GM deciding how far away the attack is coming from.

Example: The USS Cygnus is on patrol along the Neutral Zone when a Warbird decloaks at short range and fires. The Warbird's initiative count is 7. The plasma torpedo has an initiative count of 3 and since the Romulan vessel is at short range, it will hit at 50 WR.

If the Helmsman can act on count 4, 5, 6 or 7 or has a held action, he can attempt to take evasive maneuvers. In this case, he had a held action ready.

The Navigator of the Warbird rolled a 26. With the +5 bonus for being a plasma torpedo, this is modified to a 31 hit roll, meaning it could easily hit the Saladin class ship. The Cygnus' Helmsman rolls his own pilot roll, using his ship's maneuverability bonus of +2. He rolls a 33, 7 points over the Romulan's attack roll (26—the 5 point bonus is disregarded for purposes of evasive maneuvers) and enough to reduce the damage by 35, bringing the torpedo's WR down to 15.

Tholian Web. The amount of time required to weave a Tholian web depends on the number of Tholian ships. For every Tholian ship working on the web, add 1 to a running total at the end every round. The web is completely woven when this total reaches 20.

If the target ship attempts to leave before the web is woven, roll a d20. If the result is less than or equal to the points accumulated, the ship takes 5d10x4 damage

(no WR necessary, just roll and subtract), but is free.

If the web is fully woven, this number increases to 5d10x8.

At the GM's option, a small ship can attempt to leave the web by flying between its strands. This would take a maneuvering DC of 30, with damage resulting as above if the roll is failed.

Once the web is woven, the ship is completely immobilized and can be towed wherever the Tholians desire at any speed the Tholian ship is capable of. At the Tholians' option, the web can also be contracted doing damage as above every round until the ship is destroyed.

The web itself can be considered to have an SR of 40. When the shields are reduced below 0%, the web disperses. Using photon torpedoes on a Tholian Web will damage the captive ship. The captive ship can easily be fired upon from outside. To fire from inside out, the defenses of the web must be overcome.

Tractor Beams. Tractor beams are primarily used to haul inert objects of up to, say, double the mass of your ship from point to point at impulse speeds.

Ship Write-ups

Size: Brief information about the ship's dimensions and number of decks.

Typical Crew: Typical crew loadouts and levels.

Cruise Speed: The maximum level of warp that can be sustained without strain to the ship's systems.

Emergency Warp: Refer to the pursuit rules in Ship Combat to see the effects of holding at maximum warp.

Impulse: Maximum sub-light speed.

Shield Rating: The ship's SR.

Armament: The ship's weapons loadout, along with WR's and ammo capacity listed, if necessary.

Note: Other details about the ship. If the ship's note mentions a quality, then a +2 or -2 might apply to appropriate checks, or some similar level of bonus. For example, a ship class noted for maneuverability would grant a +2 to piloting checks relating to maneuverability. A ship that's notorious for durability might grant a 50% change to ignore the first serious Section Damage roll in a combat, or perhaps give a +2 to repair rolls. Another class of ship may handle like a garbage scow, imposing a -2 on all piloting checks. Otherwise, assume a ship is average in any respects not mentioned above.

Federation Ships

Constitution Class

Size: 600 kilotons, 289m long, 127.1m wide, 72.6m high, 21 decks.
Typical Crew: 430 total, 9th level Yellow Shirt Captain, bridge crew 6-8th level, bulk of crew 3-5th level.
Cruise Speed: Warp 6
Emergency Warp: Warp 8
Impulse: .5c maximum impulse (900,000 km/round)
Shield Rating: 18
Armament: 6x Type VI phaser banks (WR 20), 2 Photon Torpedo Banks (WR 25 per torpedo, 120 torpedoes carried).

Note: The Constitution class ship has a reputation for durability.

Federation Class Dreadnought

Size: 900 kilotons, 320m long, 140m wide, 87m high, 16 decks.
Typical Crew: 500 total, 10th level Yellow Shirt Captain, bridge crew 6-9th level, bulk of crew 4-5th level.
Cruise Speed: Warp 8
Emergency Warp: Warp 10
Impulse: .5c maximum impulse (900,000 km/round)
Shield Rating: 23
Armament: 10x Type VII phaser banks (WR 35), 4 Photon Torpedo Banks (WR 25 per torpedo, 190 torpedoes carried).

Note: Like the Constitution class, Federation class dreadnoughts also have a reputation for extreme durability.

Hermes Class Scout

Size: 295 kilotons, 242.5m long, 127.1m wide, 60m high, 16 decks.
Typical Crew: 195 total, 7th level Yellow Shirt Captain, bridge crew 5-6th level, bulk of crew 3-5th level
Cruise Speed: Warp 6
Emergency Warp: Warp 8
Impulse: .65c maximum impulse (1.17m km/round)
Shield Rating: 5
Armament: 2x Type VI phaser banks (WR 5).

Note: Highly maneuverable, but since it's not a combat vessel, somewhat fragile. Enhanced Sensor Array—+2 to all sensor rolls. With an hour of persistent work, sensors can be optimized for a specific situation. The bonus to sensor rolls increases to +5, but all other types of rolls receive no bonus until the optimizations are removed.

Miranda Class Medium Cruiser

Size: 520 kilotons, 230m long, 127.1m wide, 51m high, 8 decks.

Typical Crew: 220 total, 8th level Yellow Shirt Captain, bridge crew 6-8th level, bulk of crew 3-5th level.

Cruise Speed: Warp 5

Emergency Warp: Warp 7

Impulse: .55c maximum impulse (990,000 km/round)

Shield Rating: 14

Armament: 6x Type VII phaser banks (WR 15), 2 Photon Torpedo Banks (WR 25 per torpedo, 40 torpedoes carried).

Note: Almost as maneuverable as the Hermes class, but of only average durability.

Saladin Class Destroyer

Size: 300 kilotons, 242.5m long, 127.1m wide, 60m high, 16 decks.

Typical Crew: 200 total, 8th level Yellow Shirt Captain, bridge crew 6-8th level, bulk of crew 3-5th level.

Cruise Speed: Warp 6

Emergency Warp: Warp 8

Impulse: .60c maximum impulse (1,080,000 km/round)

Shield Rating: 10

Armament: 6x Type VI phaser banks (WR 15), 2 Photon Torpedo Banks (WR 25 per torpedo, 30 torpedoes carried).

Note: Just as maneuverable as the Hermes class ship, but much more heavily armed.

Ptolemy Class Transport/Tug

Size: 274 kilotons, 222m long, 127.1m wide, 66m high, 12 decks.

Typical Crew: 220 total, 7th level Yellow Shirt Captain, bridge crew 5-6th level, bulk of crew 3-5th level.

Cruise Speed: Warp 6

Emergency Warp: Warp 6.5

Impulse: .40c maximum impulse (720,000 km/round)

Shield Rating: 5

Armament: 4x Type VI phaser banks (WR 10)

Note: Containers tend to weigh an additional 10-200 kilotons each and add additional crew depending on type. A Tug typically can carry only one or two at a time (multiples are chained together, end to end). For purposes of tractoring, consider this ship to have 3 times its mass. Tugs are also rather slow and not very maneuverable.

Gorn

Gorn Destroyer

Size: 350 kilotons, 168m long, 102m wide, 54m high, 6 decks.

Typical Crew: 75 total, Seasoned Gorn Commander, bridge crew 6-8th level, bulk of crew 3-5th level.

Cruise Speed: Warp 6

Emergency Warp: Warp 8

Impulse: .60c maximum impulse (1,080,000 km/round)

Shield Rating: 12

Armament: 8x Type VI phaser banks (WR 15). May have 2 banks of photon torpedoes (WR 25 per torpedo) or the equivalent of a Heavy Plasma Torpedo.

Note: If you look very, very closely in the picture to the right, you can see the Gorn ship's appearance in "Arena". Gorn ships are highly durable and heavily armored, if a bit ungainly when maneuvering.

Klingon

D7 Class Cruiser

Size: 307 kilotons, 228m long, 160m wide, 60m high, 18 decks.

Typical Crew: 430 total, Seasoned Klingon Commander, bridge crew 6-8th level, bulk of crew 3-5th level.

Cruise Speed: Warp 6

Emergency Warp: Warp 8

Impulse: .50c maximum impulse (900,000 km/round)

Shield Rating: 10

Armament: 10x Mark 7 disruptor cannons (WR 30), 2 Photon Torpedo Banks (WR 25 per torpedo, 260 torpedoes carried).

Note: May have cloaking device, depending on how early in the series it appears.

Orion

Scout Ship

Size: 280 kilotons, 178m long, 112m wide, 112m high, 6 decks.

Typical Crew: Unknown total, Seasoned Orion Commander, bridge crew 6-8th level, bulk of crew 3-5th level.

Cruise Speed: Warp 6

Emergency Warp: Warp 10

Impulse: .65c maximum impulse (1.17m km/round)

Shield Rating: 10

Armament: 4x Type VI phaser banks (WR 15).

Note: Unique spinning propulsion systems gives this ship great speed and maneuverability. Hull is composed of high density tri-tritanium, making it nearly impossible to penetrate with sensors (add +20 to any DC's involving scanning the ship).

Romulan

“Bird of Prey” Class Cruiser

Size: 200 kilotons, 192m long, 180m wide, 51m high, 5 decks.

Typical Crew: 75 total, Seasoned Romulan Commander, bridge crew 5-8th level, bulk of crew 3-5th level.

Cruise Speed: Warp 3.6

Emergency Warp: Warp 4

Impulse: .50c maximum impulse (900,000 km/round)

Shield Rating: 5

Armament: No beam weapons, 1 heavy plasma torpedo launcher .

Note: Has cloaking device. Highly maneuverable. The improvised nuke used in the episode “Balance of Terror” would do roughly WR 25. Real nuclear bombs do a lot more damage (roughly WR 400 or higher for a “typical” one and WR 2400 for the biggest hydrogen bombs).

Romulan Warbird (D-7)

Size: 307 kilotons, 228m long, 160m wide, 60m high, 18 decks.

Typical Crew: 430 total, Seasoned Romulan Commander, bridge crew 6-8th level, bulk of crew 3-5th level.

Cruise Speed: Warp 6

Emergency Warp: Warp 8

Impulse: .50c maximum impulse (900,000 km/round)

Shield Rating: 10

Armament: 10x Mark 7 disrupter cannons (WR 30), 2 Photon Torpedo Banks (WR 25 per torpedo, 260 torpedoes carried).

Note: Has a cloaking device and may optionally be armed with a heavy plasma torpedo launcher instead of photon torpedoes.

Tholian

Tholian Ship

Size: 25 kilotons, 42m long, 16m wide, 12m high, 1 deck.

Typical Crew: 3 total, Unexceptional Tholian Commander, remaining crew 6-8th level.

Cruise Speed: Warp 5

Emergency Warp: Warp 7

Impulse: .40c maximum impulse (720,000 km/round)

Shield Rating: 5

Armament: 6x Type V Tholian phasers (WR 5), Tholian Web.

Note: Behold the terrifying Tholian shuttlecraft. Rather fragile, but highly maneuverable.

Miscellaneous

Generic Civilian Ship

Size: 74 kilotons, 80m long, 22m wide, 39m high, 7 decks.

Typical Crew: 25 total, Unexceptional Commander, bridge crew 4-5th level, bulk of crew 2-4th level.

Cruise Speed: Warp 4

Emergency Warp: Warp 5

Impulse: .40c maximum impulse (720,000 km/round)

Shield Rating: 4

Armament: Usually none. Depending on function of ship may have a bank of outdated phasers (WR 5) or other such weapons.

Notes: Tend to be rather fragile and in dubious mechanical condition.

Federation Space Station (K-7)

Size: 451 kilotons, 815m diameter, 200m high, 50 decks.

Typical Crew: 800-1000, Commanding officer is a Captain rank Yellow Shirt, commanding crew 5-8th level, bulk of crew 3-5th level.

Shield Rating: 6

Armament: 4x Type VI phaser banks (WR 25)

Note: This is a small, relatively lightly armed outpost. Other stations can be quite heavily armed and armored. Space stations do not move, but tend to be rather durable.

Ship Quirks

d10	Ship Reputation	Features	Crew Culture
1	Cursed	AI Bugs	By-the-book
2	Infamous	Custom Paint Job	Gung Ho
3	New ship	Haunted	Innovative
4	Notorious	None	Laid Back
5	Similar name to a much more famous vessel	Mysterious Squeak	Normal
6	Steadfast	Optimized for alien crew	Normal
7	Unremarkable	Prototype System	Odd ship-board traditions
8	Unremarkable	Unusual Feature	One step up from pirates
9	Unusual history	Weird Internal Layout	Rowdy
10	Roll Twice	Roll Twice	Shifty

Roll d10 for each column. If there is no entry below for a given result, then assume it does what it says on the tin.

AI Bugs. The ship's computer is quirky and sometimes difficult to deal with. Roll on the "Major Personality Trait" column of the Random Red Shirt table for the computer's personality and overplay it a bit.

Cursed. This ship has had a remarkably unlucky past. The few veteran crew members who remain on board have some rather hair-raising stories about the number of disasters the ship has (barely) survived, ranging from freak energy storms, surprise plasma breeches, plagues, rifts in the time-space continuum and what have you. Whether undeserved or not, the universe seems to hate this vessel.

Custom Paint Job. Perhaps there's one ship in Star Fleet that paints its kills on its hull. Perhaps a previous captain was so proud of his crew that he had the unit logo painted on the hull. In any case, your ship stands out in a crowd due to its unique look.

Haunted. Something about the ship is oddly disconcerting. The lights are a bit darker and flicker at odd moments. The engine noise has a bit of a wail to it in the wee hours of the morning. Whether or not it's an unintended design feature or actual ghosts is up to the GM.

Infamous. Under previous commands, the ship has been engaged in either some spectacular failure(s) or breaches of Starfleet protocol. Whatever the cause, the ship and sometimes the crew who has served on it has a black mark in the public eye.

Innovative. The crew has a reputation for creative solutions, but probably is not as disciplined as other ships.

New ship. Fresh out of the docks, this ship hasn't even been broken in properly. Whenever a new system is used for the first time, **roll d10**—on a result of 1, the affected system goes to damage level 1. On a result of 2, it goes to damage level 2 (exploding consoles optional). On a 3 or better, it works fine. On the other hand, if a result of 10 turns up, the system is a prototype--give all rolls dealing with it a +2, 10% or whatever other slight upgrade may be appropriate.

Notorious. This is a famous ship and its previous captain (or captains) was a commander of some note.

Odd Shipboard Traditions. Whether it's because the crew incorporates a lot of alien culture or simply because the ship's crew has elaborate and hair-raising

initiation rituals for every occasion, there's always a bit of culture shock when signing up for this commission.

Optimized for alien crew. The ship's facilities and default environment are optimized for a Federation race other than humans. **Roll d6:** 1-2 Andorian, 3-4 Tellarite, 5-6 Vulcan.

Prototype System. The ship has one upgraded system. Roll on the Section Damage Table for specifics. Give all rolls dealing with that system a +2, 10% or whatever other minor upgrade may be appropriate.

Shifty. The crew has a large percentage of surprisingly dodgy characters, probably including a thriving black market and Starfleet's biggest still in the Engineering department. For lateral thinking and sheer inventiveness however, this crew is unrivaled.

Similar name to a much more famous vessel. "What? We were named after Admiral Samantha Entleprise. Yeah, we get that a lot."

Steadfast. The ship has developed a well-deserved reputation for durability over the years. All repair rolls involving the ship are at +2.

Unidentifiable Squeak. There's a difficult to track down squeak in one or more random areas of the ship.

Unusual Feature. Roll d8: 1 Larger than usual botany labs, 2 Outdated System—as per Prototype System, except the affected system takes a -2, 10% penalty or some other quirkiness that seems appropriate, 3 Bridge located in odd location, 4 The galleys are far better than the usual ship galleys, 5 Unusually nice rec room, 6 Ship outfitted with mysterious alien technology, 7 Ship specialized for a specific type of mission, such as atmospheric work or work in a star's corona, 8 Unusually helpful computer on board.

Unusual History. Roll d8: 1 Previous crew just disappeared during a previous mission without a trace, 2 Refit of an earlier vessel, 3 Site of a breakthrough scientific discovery, 4 Famous pivotal role in a battle, 5-6 Famous crew member (**Roll d6:** Noted for 1 Military, 2 Scientific, 3 Artistic, 4 Civilian, 5 Political, 6 Diplomatic achievements), 7 The ship is something of a weirdness magnet—if anything strange is going on in the sector, it will most likely happen here, 8 Roll Twice.

Weird Internal Layout. For the first d6 rolls involving repair or just finding your way around, a new person on board takes a -2 penalty. After that, they adjust, and most likely grow somewhat fond of the odd design decisions.

Equipment

For the most part, Trek isn't really about gadgets. It pays to know at least the basic details of any technology used in an Episode, but when it comes down to it, it isn't terribly important whether a tricorder can sense life at 30 meters or at 31.5 meters. What is important is that you know that a tricorder has interesting knobs and dials, a readout, makes a sound when used and the sorts of information it gives.

Read up on the devices that characters will be using but handwave the details. As long as you get the general idea correct it's okay. In the end, it's the story that counts.

Here follows a very brief list of devices common to the series and notes on how to handle them:

Communicators. A true marvel of future technology. A small hand-held device that allows one to communicate with an orbiting space ship or one's fellow shipmates. It can be easily jammed or confiscated.

Disruptors. Disruptors are primarily used by villainous alien types such as Klingons or Romulans. They mostly work exactly like Phaser mark II's, except they look more sinister. While they do have stun settings, they generally aren't set for stun.

Medical Devices. Federation doctors have a wide array of medical gadgets such as hyposprays, anabolic protoplasmers, hand-held medical scanners and a variety of laser scalpels and miracle drugs.

For the most part, you can assume that a doctor will have the appropriate tools with them when they are performing their duties, even in the field. If they aren't, then they won't be able to use the full range of their abilities, or will, at the least, take a skill penalty.

With a fully stocked medical bay, most characters can be fully healed between episodes—in a matter of days, or at most a week for all but the most serious injuries.

Medical Devices, Hyposprays. Hyposprays can inject all sorts of useful drugs even through clothing and light armor. Powerful sedatives, tranquilizers and antidotes are all possible payloads.

Phasers. Phasers have two primary settings. They can be set to stun or to kill.

If set on **stun**, a successful hit forces the target to make a Str + Phys check vs (DC 15 + rolled damage) or go unconscious for a significant length of time (whatever works for the story, minutes to hours). The attack itself

does no damage although the character may suffer a lingering hangover after they wake up.

If desired, a character can burn an Action Point to resist the effects of a stun—the character grits their teeth and fights unconsciousness, or perhaps dodges away at the last moment.

If set on **kill**, a phaser hit will immediately disintegrate unimportant NPC's. Everyone else takes the listed damage and dodges out of the way. If this damage would take them below -10 hit points, then and only then are they disintegrated.

Phasers can also be used as a welding device, to heat rocks and can be set to overload and explode as a grenade (6d6 damage, 30 ft radius, DC 20 Dex + Phys save for half). At their most minimum setting, they produce a sharp jolt, sufficient enough to break up fights without causing lasting harm.

For the most part, it's safe to ignore ammo capacity on phasers, unless you really enjoy exercises in accounting. When that sort of thing comes into play, it's more useful to just think of it as a plot device. For example, you're stranded on a deserted planet with only 10 shots in your phaser left and must survive until the ion storm ends and your ship can return...

Side note: Ship phasers can also be set on stun. A salvo from a ship can render an entire city block unconscious almost instantly.

Phaser, Mark I. Mark I phasers do 2d8 damage plus as above, hold around 50 charges and weigh only 1 lb. They are small, palm-sized devices strongly reminiscent of electric shavers.

Phaser, Mark II. Mark II phasers do 3d8 damage plus as above, hold around 100 charges and weigh around 3 lbs. They look more or less like small pistols.

Phaser Rifles. Phaser rifles do 4d8 damage plus as above, hold around 150 charges and weigh roughly 10 lbs. They have a better range than Mark I or II phasers but aren't terribly conspicuous.

Phaser Cannon. A less-powerful and mobile version of the ship's phaser banks. No damage or statistics are listed—this is primarily a siege weapon and usually only has one of two effects: it either makes a hole in something that you're trying to enter or has no effect at all, in order to show how superior alien technology is. If one somehow comes into play during ship-to-ship combat, treat it as a phaser bank with a very short

range and only WR 3 damage.

Transporter Beams. Allows one to move up to six characters and cargo from one place to another nearly instantly. It requires one round to dematerialize at the source and rematerialize at the destination end. A Federation transporter has a maximum range of 25,000 kilometers or so, can not be used at warp speed and is easily blocked by force fields.

Certain other environmental characteristics can also seriously reduce a transporter's effectiveness at the GM's option, extending the time of the transport over several rounds and several skill rolls.

Tricorders. Allows the user to perform sensor scans at a local level. It can also store a massive amount of information, whether from a scan or uploaded from the ship's computer banks.

There are several different varieties of tricorders, each optimized for its specific field of study: medical, psychology and science.

If a tricorder could reasonably be useful to the task it's applied to, then give a +2 to the skill roll. Some tasks might actually be impossible without an appropriate tricorder.

For example, if you're attempting to determine cause of death when examining Ensign Jackson's corpse, a medical tricorder would give you a bonus...and probably return more complete information than a physical examination with no equipment at all would. It might, for example, point out that the Ensign died from heart failure caused by Mugato poison.

A science tricorder might pick up the chemical compounds in the Ensign's body, but it would draw no conclusions about whether or not such compounds actually belong there.

Universal Translators. A shiny metal baton only hauled out when questions arise of just how, exactly, one is managing to communicate with an alien species. At the GM's option, certain languages may be difficult to translate accurately, or at all. The full Universal Translator does not require to be preprogrammed—it can adapt to any form of new language using Star Fleet's vast experience with alien civilizations.

A limited form of Universal Translator, which can be programmed to translate only a handful of languages at a time, can also be implanted subcutaneously.

Or better yet, you can simply handwave any questions of language as unimportant to the plot.

Mysterious Alien Devices

Occasionally devices surface that boggle the mind. Enigmatic remnants of long extinct alien species, they follow scientific principles centuries beyond anything Starfleet is capable of reproducing. They are often the seeds of great adventures; their very alienness producing a unique window into the psyche of your ship's crew.

Of course, you can also make them up completely at random if you're stuck for ideas or just need something interesting for next week's session.

Roll d10 for each column:

D10	How big is it?	What is it shaped like?	What is it doing?
1	Ring-sized	Blocky/pillar/cube	Nothing
2	Hand-held	Amorphous	Surrounded by sparkles
3	Loaf of bread	Spherical	Hovering
4	Toaster	Ring-shaped	Playing Random Images
5	Television	Blocky with a window or door	Transparent
6	Refrigerator	A Ray Gun/Cannon	Making Noises
7	Car	A Vehicle	Emitting A Low Hum
8	House	A Pyramid	Blinking Lights
9	Mansion	A Door	Emitting heat
10	Skyscraper	A Pit	Roll Twice

1d20 What does it do when turned on?

- 1 Nothing
- 2 Goes "ping"
- 3 Creates a force field
- 4 Allows time travel
- 5 It's an alien computer, probably quite intelligent
- 6 Transmogrification (changes things into other things):

Roll 1d6: It transmogrifies...1-2 People, 3-4 Objects, 5-6 Energy.

Roll 1d6 again: 1-3 Just one type of transformation (and back), 4-6 Many types.

- 7 It's a beacon
- 8 Weapon system designed to hunt down intruding life forms
- 9 Controls the aging process
- 10 Can send or retrieve people from the Mirror Universe
- 11 It eats things.
- 12 Emits smoke and loud noises.
- 13 It melts (Roll 1d6: 1-3 itself, 4-6 other things)
- 14 Can upgrade or repair machinery
- 15 Creates androids
- 16 Controls the speed of time
- 17 Warps the fabric of space
- 18 Modifies the mind:

Roll 1d8: 1-2 mind control, 3-4 possession by alien identity, 5-6 switches peoples' minds, 7-8 inserts alien knowledge

Roll 1d6: 1-3 permanently until specifically reversed, 4-6 for an hour.

- 19 Replicates itself
- 20 Roll Twice

...and is this a good thing or a bad thing?

1d6 Well, is it?

- 1-3 Yeah, great.
- 4-6 Good lord, no.

Sample item:

The various d10 rolls come up (4) Size of a toaster, (2) amorphous, (8) covered in blinking lights (6), has powers of transmogrification, (5) can transform energy (5) into many different types of energy. Good thing or bad thing? (3) Good thing.

The away team is investigating an odd energy pattern on the surface of Cestus XII. Buried beneath the rubble of an ancient temple, it finds a depression filled with a strange fluid, covered in drifting red lights. Attempting to discern the material's composition, they hit it with a very light phaser beam. The alien device transforms the energy of the phaser beam into a pleasant tone and a cascade of warm light.

Later, on board the ship, they discover that touching the various drifting lights allows the transformation of any type of energy into any other type of energy, almost without loss.

Second example:

The various d10 rolls produce... (3) Size of a loaf of bread, (1) blocky, (10, then 8) covered in blinking lights, (and 4) plays random images. (10) Can send or retrieve people from the Mirror Universe. Good thing? (5) Not good.

The ship is shaken by an unknown force when traveling past a time-space anomaly. With a flash of light, an object appears on the floor of the bridge. It's roughly the size of a loaf of bread, composed of a strange metal and is covered with blinking lights and buttons. A screen near one end plays random images, scenes of conquest and war.

When disturbed, it randomly sends 1d6 nearby people to the Mirror Universe. Will they come back? Who knows.

Enemies and Allies: Templates, Species and Supporting Cast

Android

Androids are relatively common in Star Trek. In the original series they tend to be fairly sinister—machines are meant to serve, but often things go horribly wrong.

- **Stat Adjustments:** +8 Str, +2 Dex, -4 Cha.
- **Construct:** Since they are machines, Androids gain 10 bonus hit points. Since they have a machine-based metabolism, certain things such as poisons, diseases or fatigue don't affect them as much (if at all).

They are also subject to all effects that computers are subject to in this setting (such as electricity or being damaged by logic puzzles if the “This Does Not Compute” optional rule is being used).

Androids do not need to eat or breathe, but may require recharging. Androids can not swim unless specifically designed to do so. They can not heal naturally; they must be repaired.

- **Alien Strength 2:** Since Androids are machines, they are substantially stronger than most other humanoids—skill rolls involving strength are increased by +4 and the character can lift five times as much as a normal character—enough to easily toss a rock the size of a refrigerator twenty or thirty feet.
- **Computerized Brain:** +2 racial bonus on Knowledge and Engineering skills. Androids also have eidetic memory—they do not forget things once experienced. In cases when a specific piece of information is essential to a skill check, Androids gain a +2 bonus.
- **Naive:** Androids show a woeful lack of understanding about human beings and what drives them. This can be a minor flaw to crippling, depending on the situation.

Augments

Survivors of the Eugenics War, these are genetically modified humans, bred to be the ultimate warriors—stronger, faster, smarter, tougher than even the best humanity has to offer. A flaw in their DNA makes them naturally aggressive and violent.

For these reasons, genetic engineering has been banned for several centuries.

- **Stat Adjustments:** +4 Str, +2 Dex, +2 Int, +2 Cha.
- **Acute Senses:** +2 to most sensory rolls due to keen senses of smell, hearing and sight.
- **Aggressive and short-tempered:** This can be a very minor flaw to extremely crippling, depending on how much the GM wants to play this up.
- **Arrogant:** -4 to social rolls where arrogance would be a negative factor.
- **Great Fortitude:** Due to their vastly improved constitution, Augments gain a +2 to saves against diseases, poisons, fatigue and stunning.

At the GM's option, it might be possible to genetically engineer a partial Augment, with a few boosted statistics, but none of the dangerous down-sides of Khan's people.

A partial Augment may have a +2 racial bonus to one ability score, one special ability of their choice (similar in power to the above) and one free Talent. In exchange, they have the social stigma of being an Augment—in this time period people are still rightfully edgy about the genetically engineered.

Gorn

Gorns are a reptilian species of humanoids. Not much is known about them other than that they are strongly territorial and have technology on par with the Federation.

- **Stat Adjustments:** +4 Str, -4 Dex, -2 Cha.
- **Alien Strength 2:** The Gorn physiology is substantially stronger than most other humanoids—skill rolls involving strength are increased by +4 and the character can lift five times as much as a normal character—enough to easily toss a rock the size of a refrigerator twenty or thirty feet.
- **Armor:** Gorns have thick hide (+4 natural armor).
- **Slow:** Gorns move at roughly half the speed as most other humanoids.

Highly-Evolved

This isn't any specific species—it instead represents any number of frail, usually egg-headed, aliens of advanced intellect and technology.

- **Stat Adjustments:** -4 Str, +6 Int.
- **Bonus Talents:** Psychic, plus one additional Psychic Ability.
- **Frail:** Not only do they take a -1 HP per level penalty, HE's also can never have Physical as a trained skill.
- **Superior Technology:** HE's usually have access to technology far in advance of Starfleet. In addition to this superior technology they also have a +2 bonus on all science and technology-related rolls.
- **Complete inability to fathom humanity's motives.**

Orion

Once a great civilization with advanced technology, the Orions have fallen into decadence. Orions are widely known for three things: piracy, slavery and the savage charms of their women.

Orions have green or blue skin, with dark hair. The men are bald and tend to be rather large and burly. The women are beautiful, great dancers and masters of seduction.

Orion, Female

- **Stat Adjustments:** -2 Str, +2 Dex, +2 Cha.
- **Pheromones:** Makes men of most species (but not Vulcans) susceptible to suggestion and more aggressive. Gives a +5 to any skill check an Orion female may make to persuade men to do something, within reason. It may take multiple rolls and suggestions to “nudge” the target into action.

Since they must be inhaled, the effect takes some time to kick in. Gives women of most species a roaring headache.

Orion, Male

- **Stat Adjustments:** +2 Str, -2 Cha.
- **Durable:** +1 hp/level.
- **Decadent:** +2 to skill rolls involving swindling, haggling and defrauding others.

Klingon

The classic villain species of science fiction. Aggressive, unprincipled and dangerous—these are the smooth foreheaded villains from the original series and not the bumpy-foreheaded warrior-philosophers of the later Star Trek series. If you want to use the later iteration, see the notes at the end of this entry.

- **Stat Adjustments:** None.
- **Aggressive:** Klingons have +2 to all initiative rolls.
- **Durable:** +1 hp/level.
- **Skill Penalty:** -1 Knowledge. Klingon culture doesn't encourage non-martial pursuits.
- **Violent Culture:** Bonus Talent—either Brawler or Specialty with melee weapons.
- **Note:** These are for smooth-foreheaded TOS Klingons. If you insist on having TMP-era or later Klingons, then add +2 Str and -2 Cha to the stat adjustments and replace the Aggressive special ability with **Brak'lul** (Vital Organ Redundancy). A character with Brak'lul is considered to have an extra 5 points of Strength when reduced to 0 hit points, but only for the purpose of determining point of death.

Prehletoric

This template devolves the species in question into a caveman state. They get bigger, bumpier and more ill-tempered.

- **Stat Adjustments:** +6 Str, -4 Int, -2 Cha.
- **Alien Strength:** Skill rolls involving strength are increased by +2 and the character can lift twice as much as a normal character.
- **Choose one: Claws/Fangs** which give a natural attack of 1d6 (plus Str bonus), or **Gregarious** (once per encounter, a group of these can call in an additional 2d6 tribe members—these tribe members will not have the Gregarious ability available for that encounter).
- **Skill Bonuses:** +2 Bonus on climbing, jumping and survival rolls.
- **Tough Hide:** +2 natural armor.

Romulan

A mysterious off-shoot of the Vulcan species, from the savage times before the Vulcans devoted themselves to the pursuit of logic.

- **Stat Adjustments:** None.
- **Desert Adapted:** Romulans gain a +2 bonus on desert survival-type rolls and a general immunity to the effects of blinding light.
- **Duplicitous:** +2 on skill checks where a natural proclivity towards deceit and trickery could come into play, such as most subterfuge rolls.
- **Hierarchical Society:** Romulan society is highly stratified—any Romulan gains a +2 to all rolls when attempting to give an order to a Romulan of lower standing. In addition, any use of the Command or Inspirational Speech Talents on a Romulan will be at +1.
- **Xenophobic:** Due to their xenophobic nature, Romulans take a -2 penalty on most social rolls with other species and most social rolls dealing with Romulans will be at -2. This penalty does not necessarily apply to all situations—for example, some social situations such as intimidation or bluffing might not be affected by xenophobia.

Tholian

Tholians are medium sized humanoids, but possessing a truly alien physique—they are based on a mineral composition, existing at very high temperatures (177 Celsius or 350 Fahrenheit). If exposed to low temperatures for too long, they take damage and their carapace cracks.

Exposure to temperatures around the boiling point of water or below has the same effects as freezing temperatures on humans. Tholians have six legs and communicate through radiation emissions instead of vocal chords. Their ability to communicate through these methods allow them to communicate over long distances as if via communicators.

- **Stat Adjustments:** +2 Dex, -2 Str.
- **Alien Physiology:** The unique Tholian physiology conveys the following benefits: Resistance 10 (Fire), Resistance 5 (Energy) and immunity to temperatures up to 700 to 800 Celsius.
- **Darkvision** up to 60'.
- **Hard Carapace:** +4 natural armor.

- **Xenophobic, Alien Mindset:** Tholians are known for three cultural traits: punctuality, xenophobia and inscrutability. All social rolls with other species are at -2. All social rolls dealing with Tholians will be at -2.

Supporting Cast

The following NPC's are designed to be as generic as possible, in order to speed game preparation. Need a Klingon Thug? Take the Low Rent Goon, apply the Klingon racial template and off you go. You've wandered into Andorian space and need an Andorian starship captain? Take the Commander and apply Andorian stats. Attacked by a bunch of 1950's style claw-fingered metal robots? Take a Run-of-the-Mill Goon, apply the Android and Prehistoric templates and off you go. Simple.

Another good source of aliens would be the various Monster Manuals. Just because the original Star Trek didn't have the budget to have a fifty foot long plasma-breathing lizard doesn't mean your game can't have one. And if you change enough surface details your players will never know. Sure, you know the Kalendian Vaprak is a displacer beast, but your players never will, seeing that it's a seven foot long amoeba with spider legs and a single eye on the end of a tentacle...

Ordinaries vs. Heroes

When building supporting cast members, at least of the humanoid variety, there are two types of NPC's: **Ordinaries** and **Heroes**.

For simplicity's sake, rather than assigning them a specific class, choose a level and then list their class either Ordinary or Hero.

Ordinaries are important enough to have stats, but not important enough to have any significant screen time. They have 1d6 (average 3.5) hit points per level, adjusted by their Str bonus (or penalty). They do NOT usually gain Talents or Action Points.

If you're in a rush, use average stats except for whichever stat the Ordinary uses most, which will get a 12-14. Use level 1 for the lowest rung in their professions. If you need a more seasoned Ordinary, add levels. 2-4 would be appropriate for more experienced types.

In some cases, it may be appropriate to give Talents to Ordinaries, but don't go overboard with it. Ordinaries have as many Trained skills as necessary to perform their tasks.

Some sample Ordinaries are given in the **Face in the Crowd**, **Generic Crew Member** or **Goon** sections.

Heroic NPC's are built almost exactly the same way as player characters. They get Talents and may or may not get an Action Point or two, depending on how important they are to the plot. Heroics will have one Trained skill at 1st level, just like player character classes and start out with Str hit points +1d6 per level.

Talents may be chosen from any of the Talent lists, regardless of class as long as it's appropriate to the character.

A heroic NPC is important enough to get significant screen time, so they should have at least one “hook” to them. For example, “Shakespeare-quoting Klingon Admiral” or “Weaselly travelling salesman with an addiction to dubious money-making schemes.”

Both Ordinaries and Heroes get a stat point every 4 levels if the issue of level advancement ever comes up.

For example:

Starfleet Bureaucrat, High Level. Ordinary-7. Str 8 (-1), Dex 10 (+0), Int 14 (+2), Cha 10 (+0). HP 18. AC 13. **Trained Skills:** Communications, Knowledge.

Klingon Fleet Commander. Hero-12. Str 16 (+3), Dex 14 (+2), Int 10 (+0), Cha 14 (+2). HP 82. AC 18. **Trained Skills:** Physical, Subterfuge. **Talents:** Aggressive, Brawler, Command, Durable, Ethnic Pride (Klingon), Inspirational Speech, Skill Penalty (-1 Knowledge rolls), Specialist (Underhanded Tactics), Stiff Upper Lip, Trained Skill (Subterfuge).

Stock Characters

Alien, Generic

Need some color to fill out a crowd or to flesh out a new civilization when the details aren't particularly important? Roll away.

“Generic Alien” is mostly meant to provide ideas for new alien species—for actual stats, use one of the other stock character types such as Faces, Goons, etc.

Roll d10 for each column

Makeup Effects	Wardrobe	Cultural Traits
1 Funny shaped ears	Togas/Silk Robes	Warlike and Aggressive
2 Odd skin color	Starfleet Type Uniforms	Pacifist
3 Antennae or Horns	Hooded Robes	Epicurean
4 Scales or Thick Fur	Tribal	Paranoid
5 Feathers	Leather	Logical
6 Funky hair	Chain mail and tunics	Friendly and Outgoing
7 Tail	Furs	Weaselly
8 Extra limb(s)	Conservative business suits	Arrogant
9 Bumpy forehead	Middle-eastern	Aristocratic
10 Roll Twice	Silver/Metallic jumpsuits	Inquisitive

Cloud Monster

“Cloud Monster” is short hand for any number of mysterious aliens that tend to show up in Star Trek episodes. It doesn't represent just the traditional semi-intelligent cloud of energy (such as the “Companion” from “Metamorphosis”). It can also represent mysterious alien devices such as Nomad, tribble-like creatures, giant alien probes with a hump-back whale obsession or what have you.

Cloud Monsters tend to be more plot devices than anything else. For the most part, assume that standard attacks do nothing to them. They're either immune to normal weapons (such as your typical Star Trek cloud monster) or killing them won't make a difference to the plot (e.g. Tribbles breed too fast). They'll have one or more additional powers related to their nature and an Achilles' heel which must be discovered and exploited if they're ever to be stopped.

A properly designed Cloud Monster, however, does more than just menace—it points out human foibles. Whether it allows the plot to address Melville-esque obsession, explore the folly of prejudice and hatred or perhaps questions the role of humanity in the universe, a Cloud Monster is more than just a block of numbers to overcome during the course of an adventure.

Of course, you could always just roll one up randomly instead.

Example: *The GM needs a mysterious alien creature for the next episode. Running through the dice rolls on the table on the following page, we get 7 (Indigenous Creature), 2 (Man-sized), 6 (Devours All Before It), 14 (Can Summon Help) and 3 (Human level intelligence).*

The result of “Can Summon Help” reminds the GM of ants or bees—perhaps the creature is part of a hive. The GM names it an “Altaran Hive Worker.”

Running with the Hunger and Indigenous Creature results, he decides it's an insect-like animal roughly the size of a man that can metabolize anything—it eats everything it finds and excretes either a web-like substance that hardens into hive material if inorganic or a honey-like substance if it eats something organic.

It is now only one of many insectoids that have run amok on the Altaran colonies of Deneb VII. As a collective, the hive workers have a human level intellect and are motivated by species survival. To stop them, the players will either have to destroy the entire hive at once or negotiate with it—destroying any individual worker will have no real effect on the situation.

Oh my God, what the hell is this thing?! **(Roll d10)**

- 1 Crystallized hatred
- 2 The soul of an ancient criminal
- 3 Naive alien
- 4 Robot
- 5 Computer
- 6 Space-Time Anomaly
- 7 Indigenous Creature
- 8 Strange visitor from another galaxy
- 9 The vanguard of an invasion force
- 10 The psychically-fueled figment of a random cast member's subconscious mind

Sweet Jesus, It's... (Roll d6)

- 1 Tiny
- 2-3 Man-sized
- 4 Enormous (bigger than man-sized, but smaller than...)
- 5 Colossal (starship scale)
- 6 Beyond Description (can change size as needed)

What in the world is it doing here? (Roll d10)

- 1 It feeds on emotion
- 2 Protecting something or someone
- 3 Searching for someone
- 4 On a quest for knowledge
- 5 Settling a score
- 6 Devours all before it
- 7 Survival/Procreation of the species
- 8 Looking for its mate
- 9 Obeying the last command of its creator
- 10 **Roll Twice**—the first motive is a red herring. The second roll is the Cloud Monster's true motive.

It has amazing powers of...(Roll d20)

- 1 Emotion control
- 2 Read and Control Minds
- 3 Feeds on energy
- 4 Can cause illusions
- 5 Shape-changing
- 6 Assimilation (can absorb a random substance)
- 7 Possession
- 8 Telekinesis
- 9 Warping space
- 10 Warping time
- 11 Control/Modify Machinery
- 12 Can Destroy Anything It Can Swallow
- 13 Death Ray
- 14 Can Summon Help
- 15 Advanced Scientific Knowledge
- 16 Hitting Things Really Hard
- 17 Can create evil clones of crew members
- 18 Can shift target into an out-of-phase state which disables them for a period of time
- 19 Cuteness
- 20 Roll Twice

Is it intelligent? (Roll d6)

- 1 Nope
- 2 Slow-witted
- 3-4 Human level
- 5 Yes
- 6 Extremely

Commander

He's the commander of his vessel, a leader of men (or aliens), a diplomat and a warrior. Unless noted otherwise, like other minor NPC's, Commanders are Ordinaries.

There are two basic varieties of commanders: "aggressive" and "talker". An aggressive commander is usually action-oriented. Talkers are more diplomatic.

The purpose of a vessel has a great influence on what sort of commander is in charge. The captain of a ship dedicated to medical research is going to have a very different knowledge base than the captain of a Klingon battlecruiser, even if both are "aggressive" commanders.

Commander, Unexceptional. These are the most commonly encountered commanders—they fulfill the qualifications of commanding a ship, no more, no less.

- **Aggressive.** Ordinary-7. Str 12 (+1), Dex 14 (+2), Int 13 (+1), Cha 10 (+0). HP 32. AC 15. **Trained Skills:** Physical, Knowledge.
- **Talker.** Ordinary-7. Str 10 (+0), Dex 12 (+1), Int 14 (+2), Cha 13 (+1). HP 25 AC 14. **Trained Skills:** Communications, Knowledge.

Commander, Seasoned. Seasoned commanders typically have years of experience, perhaps even seen some serious action. They are highly competent at what they do.

- **Aggressive.** Ordinary-10. Str 12 (+1), Dex 14 (+2), Int 14 (+2), Cha 12 (+1). HP 45. AC 17.

The Random Face Table

d10	Occupation	Trained Skills
1	Scientist	Knowledge
2	Diplomat	Communications
3	Criminal	Subterfuge
4	Entertainer	Roll 1d6: 1-2 Communications, 3-4 Knowledge or 5-6 Physical (depending on type of entertainer)
5	Merchant	Communications, Knowledge
6	Lawyer	Communications, Knowledge
7	Administrator	Communications
8	Medic	Medicine
9	Paper-shuffler	Roll 1d6: 1-3 Communications, 4-5 Knowledge, 6 Both
10	Laborer	Roll 1d6: 1-2 Physical, 3-4 Engineering, 5-6 Both

Trained Skills: Physical, Knowledge.

- **Talker.** Ordinary-10. Str 10 (+0), Dex 12 (+1), Int 14 (+2), Cha 14 (+2). HP 35. AC 16. **Trained Skills:** Communications, Knowledge.

Commander, Grizzled. Grizzled commanders are quite rare—they are as competent as you can get without moving into the Heroic category. Typically, they have had decades of experience.

- **Aggressive.** Ordinary-13. Str 12 (+1), Dex 12 (+1), Int 14 (+2), Cha 14 (+1). HP 59. AC 17. **Trained Skills:** Physical, Knowledge.
- **Talker.** Ordinary-13. Str 10 (+0), Dex 12 (+1), Int 16 (+3), Cha 16 (+3). HP 46. AC 13. **Trained Skills:** Communications, Knowledge.

Face In The Crowd

The Face In The Crowd. It might be a civilian, a random bystander or a noncombatant. It's a catch-all term for any number of non-heroic types. When you need a bunch of civilians and you need them fast, this is where you go.

Faces will typically be 2-3rd level, with average hit points (7-10). Ability scores will be 8, 10, 10, 12, arranged in any order that seems appropriate.

If you don't have any set occupation in mind, roll on the table on the next page. Otherwise, just choose whatever Trained Skills will be necessary for that character to perform their job.

Generic Crew Member

Choose an appropriate rank in the proper class (Blue Shirt, Red Shirt, Yellow Shirt or Ordinary). Assume average hit points and arrange the following stats in any order that makes sense for that character: 8, 10, 12, 12. If the character is relatively high level (over fifth level level), use 8, 10, 12, 14 for their stats.

Generic Crew Members are always Ordinaries and will never have Action Points. They only have Talents when necessary and will be Trained in any skills they may require to perform their job.

Example: Captain Smith and his bridge crew have beamed down to Tau Ceti V's smaller moon to investigate the unexplained loss of power at a scientific research station. Ensign Rho from Security is accompanying them. Since ensigns are typically 4th level according to the rank table, Rho is a 4th level Security Red Shirt. She has average hit points (14 + 4 for the Str bonus = 18 hp) and the following statistics: Str 12, Dex 13, Int 10, Cha 8 (+1 point for being 4th level).

She is Trained in Physical, which she probably won't have time to use much before the cloud monster eats her in scene one.

God

Any alien entity sufficiently advanced can be indistinguishable from a god. Some have followers, some are merely enigmatic beings roaming the galaxy seeking knowledge.

For the most part, Gods can be built in two steps: Determine what the God appears as and stat that out, then layer on additional powers and abilities as appropriate from the "Godly Powers" table.

For example, a child with the ability to wish anything away may be statted up as a typical 1st level child with attributes of 6-10 all the way across. Appropriate powers might be Innocuous, Alter Set and Mind Control.

Another God might be a giant glowing pyramid that speaks in a thunderous voice. It's too large to stat out as a PC, so the GM might write it up as a starship with mental attributes (and tough enough to challenge or overwhelm the PCs' ship), adding in the Zap, Teleport Self/Others and I Know Things Beyond Mortal Ken abilities.

God, Almighty

Typically appears as a giant megalomaniacal floating head. As long as it stays in that form, stat it out as a starship with better stats than the PC's ship.

If it manifests in human form or interacts with the player characters in any way where stats would be important, then use the following:

Hero-15. Str 18 (+4), Dex 14 (+2), Int 30 (+15), Cha 30 (+15). HP 86. AC 19. **Trained Skills:** Communications, Engineering, Knowledge, Medicine. **Talents:** Command, Cool Under Pressure (Pontificating), Durable, Psychic, Specialist (Pontificating), Specialist (Philosophizing), Trained Skill (Communications), Trained Skill (Engineering), Trained Skill (Medicine)

Has the following Powers: Cunning (already factored in), I Know Things Beyond Mortal Ken, Impressive Soliloquy, Mind Control, Teleport Self or Others and Zap.

Almighty Gods typically have hubris as a weak spot and are surprisingly easy to trick.

God, Irritant

One of a large class of advanced beings that enjoys plaguing starship captains with conundrums and puzzles. Vulnerable enough to outwitting that it's surprising there's not a class on how to do it in Starfleet Academy.

Powers may include Alter Set/Prop, Invulnerable, Parlor Tricks, Shapechange, and Teleport Self or Others. They typically appear as a nondescript man of between 5-10th level with average physical stats, low charisma and genius to superhuman intelligence.

God, Metal

For some reason, alien civilizations often build their own gods. Invariably, when their civilizations collapse, their metal gods remain behind to guide and control. They usually appear as a stationary physical construct with 20 or more Hit Dice and a notable lack of insight into the human motivations. Powers may include Cunning, Followers, Drones, I Know Things Beyond Mortal Ken and Zap, with the occasional display of Mind Control or Invulnerability.

God, Petty

The classic God, loud-mouthed, wears togas and demands worship. Usually 10-15 Heroic levels with impressive physical statistics and high Charisma. Powers usually include Grow, Mighty, Impressive Soliloquy, Parlor Tricks, Teleport Self or Others and Zap.

Goon

Security guards, Klingon muscle, mafia thugs, goose-stepping Nazis, hired alien mercenaries or barbarian warriors—a Goon is all these things and more. When you need muscle, and you need it now, and you need a lot of it, the Goon's your man.

Godly Powers

Alter Set. As a standard action, the God can change the set from anything to anything. If you were in a cave, you're now in a castle. If you were on the bridge of your starship, you're now in a jungle. Note that this does not necessarily mean that your location has changed, only the scenery.

Alter Prop. As a standard action, the God can transmute an object into something else. A phaser becomes a poisonous viper, a Starfleet uniform becomes a lovely silk gown, you name it.

Cunning. The God is a trickster. Add 30 points to the God's Intelligence or Charisma in any combination desired.

Followers. The God has followers: for the most part, they amount to 2d6x10 Faces and Goons (roll randomly for occupations, if necessary).

Grow. The God can enlarge itself. Every standard action increases the God's size by another multiple—x2, x3, x4, x5, etc. For every increase in size, add +4 to the God's Strength (and hp). and +2 to any rolls to intimidate or awe others. Only the GM's sense of drama limits the God's ability to grow.

Drones. Basically, the same as normal followers, except they can't be reasoned with, are completely mindless and have some sort of gimmick. For example, robots, demons, clones, brainwashed followers, zombies, whatever.

Invulnerable. Whether it's due to a force field surrounding the God, armored skin, insubstantiality or something even stranger, this God cannot be killed by hit point damage, only by plot considerations. Nuking this guy from orbit will only make him laugh now—the PC's will have to be subtle.

I Know Things Beyond Mortal Ken. The God has technology so advanced, it's nearly magical. A warp drive the size of a walnut, the ability to create a force field strong enough to hold off an attacking fleet without letting even the slightest bit of radiation go through, moving planets across entire galaxies—if it's impressive, the God knows how to do it.

Impressive Soliloquy. The God can fascinate audiences with their incredible speechifying skills. The skill roll used is Int + Comm, DC is the targets' Intelligence + Know or Comm skills

• **Goon, Low Rent.** Ordinary-2. Str 14 (+2), Dex 12 (+1), Int 10 (+0), Cha 8 (-1). HP 11 AC 12.

Trained Skills: Physical. **Talents:** None.

• **Goon, Run-of-the-Mill.** Ordinary-4. Str 14 (+2), Dex 12 (+1), Int 10 (+0), Cha 8 (-1). HP 22 AC 13.

Trained Skills: Physical. **Talents:** Brawler.

• **Goon, Burly.** Ordinary-6. Str 16 (+3), Dex 12 (+1), Int 10 (+0), Cha 8 (-1). HP 39 AC 14.

Trained Skills: Physical. **Talents:** Brawler, Specialist (primary weapon attack).

(whichever is higher). Failing a roll means the characters can't do anything but listen for a few minutes while the God continues to speak at which point they may attempt another roll.

Innocuous. For some reason, nobody considers this God a physical threat—perhaps the God is a child, a beautiful woman, or a harmless old man. Whenever someone attempts to attack the God in physical combat, they must overcome a DC 30 Int+Know check or they can't bring themselves to do it.

Mighty. The God is truly a titan. Strength is increased by 20 points and the God has an additional 3 points of DR.

Mind Control. The God can dominate or control minds as appropriate to the plot. He is also usually (but not necessarily) fully telepathic, being able to read and send thoughts. Important characters can resist by rolling Int + Know + any bonuses from psychic abilities as appropriate.

Parlor Tricks. Miscellaneous abilities, usually duplicating spells from the d20 SRD as needed. They can be true magic, abilities granted by super-science or psionic in nature as appropriate.

Shapechange. The God can be anything or anyone it wants, changing itself as a standard action. Its hit points, defenses and vulnerabilities remain unchanged, but it gains new abilities as appropriate to the form it is in. Depending on the nature of the God and the necessity of the plot, a detailed sensor scan may or may not detect the transformation.

Teleport Self or Others. The God can, as a standard action, transport itself or any others within line of sight (including vessels) anywhere as required by the plot.

Zap. If it can be seen, it can be smitten with furious anger. 5d6 damage, ranged attack. Range is line of sight. If the target is a ship, then count it as a phaser attack with an appropriately huge WR (say, WR 40 for a Constitution-class vessel, WR 30 versus a Hermes-class scout, etc). The special effects can be pretty much anything: a giant hand shaking the ship, a lightning bolt, a death ray, whatever.

Nemesis

This is the Khan to your Kirk, an opponent worthy of your crew. He's always a little (or a lot) better than you but has an Achilles' heel that will prove to be his downfall.

- **A Nemesis will always be a PC grade Heroic character with Action Points and Talents.** He will often have followers, a mixture of tough Goons and Faces, all built with higher than usual stats (often using special templates, such as "Augment", "Android" or "Klingon").
- **Level:** The Nemesis' level is always 2 higher than the highest leveled character.
- **Fatal Flaw:** choose a fatal flaw for this character. arrogance, two-dimensional thinking, greed, whatever. Whenever a skill check or attack roll comes up related to this flaw, treat the dice roll as the worst possible result. This will only work 1d6 times during an episode, so don't take it for granted.

- **Ability Scores:** Each of the Nemesis' ability scores will be equal to the highest score possessed by any of the PC's. One score is linked to the Nemesis' Fatal Flaw—that score will be equal to the lowest of the PC's scores. So, if there are 4 PC's, the Nemesis has a Fatal Flaw of "arrogance" (linked to Charisma) and the PC's have the following statistics:

- 8 Str, 10 Dex, 16 Int, 9 Cha
- 10 Str, 14, Dex, 13 Int, 9 Cha
- 11 Str, 15 Dex, 8 Int, 11 Cha
- 14 Str, 12 Dex, 14 Int, 15 Cha

...their Nemesis will have 14 Str, 15 Dex, 16 Int, and 9 Cha and he will be two levels higher than the highest leveled character.

These scores are before any modifications due to templates, species or level.

Appendices

Not all ideas are created equal. Here's a grab bag of optional rules that might or might not be fun to include in play. Warning: even though the base game assumes a certain base-line of camp, these additions will nudge the game into parody if overdone.

A Being On Every Planet

Whenever a relatively friendly group of NPC's is encountered in an episode,* the most appropriate member of that group with the highest Charisma must make an Int+Know roll or fall madly in love with the first male or female player character they meet.

The DC is equal to 10 + the character's Charisma modifier plus level. If that save is made, go round-robin around the bridge crew (as appropriate) until they fall for that character or resist all party members. There may be more than one appropriate NPC per group, so be sure to roll checks for them as well.

* Or, for that matter, whenever the GM feels like it would be amusing to apply this rule. This can hinder the mission just as often as it can help the player characters (if not more).

TV Ratings: Fun With The Nielsen

After every episode, roll a die to find out how the show did in the ratings war, or simply assign one based on a snap value judgment or show of hands:

On 1d6:

- | | |
|-------|-----------------------|
| 1 | Terrible (-4) |
| 2 | Poorly (-2) |
| 3 – 4 | Average |
| 5 | Successful (+2) |
| 6 | Smashing Success (+4) |

Then roll again with a d20 on the next page to find out if the Network Executives plan to do something about it, adding in the bonuses given in parentheses.

If the roll is greater than 19 or less than 2, roll on the table (d20) below to see what dreadful changes are wrought. If the ratings were good, the players have veto power on the first roll (but must accept the second result).

Example: After a particularly demanding adventure where the crew is forced by a species of Greek gods to fight lizard men alongside a group of Klingons, the GM rolls d6 to determine ratings.

The result is a 1: terrible ratings (-4). He rolls a d20 with a -4 modifier and the roll is -3. The Network Executives have spoken. The GM rolls an additional d20 and the result is 1. Ensign Bubbles, the new monkey crew member, starts next episode and everybody had better act happy about it, at least until they can arrange an "accident."

This Does Not Compute

Computers are easily destroyed by simple word puzzles. Every time a successful word puzzle involving a logical contradiction is role played, any computer, robot or android within earshot takes 3d6 electrical damage each round until they shut down or steps are taken to resolve the logical conflict.

Technobabble

If a technological device or solution is needed to resolve an issue, then any reasonably technologically-skilled character can Spout Technobabble and gain a bonus to their next relevant skill check. Every significant detail of their description will give a +1 to bonus to the roll, up to +3.

Example: "Captain, if we realign the photon matrix (+1) then we might just conceivably slow the anomaly's rate of decay (+2) long enough to open a recursive time-space loop (+3) and escape!" Three major details, +3 bonus to skill check.

While this is mostly a Next Generation cliché, some people expect all their Trek to have it.

Theme Music

If a significant number of players spontaneously burst into the appropriate bit of Alexander Courage background music at the right time, all friendlies get a +2 bonus to whatever they are currently doing.

TV Ratings Result Table

1d20 Result

- 1 Monkey sidekick.
- 2 Crew member fired and replaced by (**roll d6**: 1-2 member of opposite sex, 3-4 member of different ethnic group, 5-6 new species). New crew member will be as nearly identical to original character as possible, save for the different species/sex/ethnic group.
- 3 Costume changes.
- 4 Kid sidekick.
- 5 Laugh track added/removed.
- 6 Show needs more cowboys.
- 7 New love interest for random character.
- 8 Show too confusing—narrator added.
- 9 Budget cuts—scripts now recycled from old Shakespeare plays and "I Love Lucy" episodes for the next 1d6 episodes
- 10 More budget cuts—for the next d6 episodes, sets will be recycled from (**roll randomly each episode, 1d6**: 1 Roman set, 2 cowboys and Indians, 3 war movies, 4 "modern" 60's era set, 5 gangster movie, 6 H. R. Pufnstuf).
- 11 Show not sexy enough—short skirts and bulging chests for everyone.
- 12 Show too sexy. Tone it down or face the consequences.
- 13 Networks demand that every episode have an explicit moral.
- 14 Hot shot actor/actress makes cameo. Choose one at random. Bonus points for bad caricatures and impressions.
- 15 Show not British enough
- 16 Show too British, make it more French.
- 17 Show needs to be more educational
- 18 Show not religious enough, Jesus added as new character.
- 19 Annoying robot sidekick added.
- 20 Roll twice.

The Random Episode Generator

Stuck for an idea? Roll away. Bonus points if you can frame the resulting plot seed as a metaphor for a social issue. **Warning: actual plots generated via this method not guaranteed to make any sense.**

What happened (d100)? (Plot seed).

01 - 05	Crew member's body switched*
06 - 15	Space/time anomaly**
16 - 25	Federation outpost/colony attacked
26 - 35	Ship hijacked/captured
36 - 45	Ship attacked
46 - 55	While transporting an important individual somewhere... ***
56 - 62	New civilization discovered
63 - 72	Responding to distress call
73 - 77	Potentially fatal plague with unpleasant side effects. ****
78 - 82	Monster loose on ship
83	Crew member's brain stolen
84 - 87	Crew finds a Mysterious Alien Device (see Equipment section)
88 - 98	While on shore leave... (Roll again to see what happens)
99 - 00	Roll twice

* **Roll d6:** 1-2 Transporter malfunction switches brains, 3-4 Mirror universe selves, 5-6 Androids.

** **Roll d6:** 1 Ship trapped, 2 Transports the ship into the past, 3 Across the galaxy, 4 Alternate universe, 5 Alien artifact, 6 Warps reality in strange and surprising ways.

*** **Purpose:** Roll d6: 1-2 Negotiate peace treaty, 3 Attending a conference, 4 Transporting to new post, 5-6 Protection. Roll on “By Who” table to find out what this important individual is, rerolling insane results. **Roll again** on table above to see what happens while transporting the important individual.

**** **Roll d8:** 1-2 Rapid aging, 3-4 Drunken, evil behavior, 5-6 Reverse evolution, 7—8 Random hallucinations.

By who? (d100) (Actors).

Skip this step if it wouldn't make sense, otherwise keep rolling until you have enough actors to make things fun. Entries don't have to be taken literally either—a “Space Hippie” can just as easily represent a member of a pacifist environmentally-aware advanced alien species as it can represent a thinly-veiled group of 1960's counterculture stereotypes. A “Space Viking” would represent a war-like alien species with a love of plunder and loot.

01 - 03	Space Amazons
04 - 06	Space Hippies
07 - 09	Space Nazis
10 - 12	Space Romans
13 - 15	Space Vikings
16 - 18	Gods
19 - 23	Gorns
24 - 33	Klingons
34 - 43	Romulans
44 - 48	Tholians
49 - 58	Cloud Monster
59 - 68	Robots or Computers
69 - 78	Relative/Old Acquaintance Of A Random PC*
79 - 83	Member of Starfleet
84 - 95	Mysterious Advanced Species
96 - 100	Unscrupulous Merchant

- * **Roll d8:** 1 Parent, 2 Sibling, 3 Mentor, 4 Classmate, 5 Clone, 6 Ex-significant Other, 7 Old Drinking Buddy, 8 Roll Twice (multiple individuals). **Roll d8 again** for gender, if desired: even = male, odds female.

Plot Twist (d20):

1-14	No plot twist—everything is as it seems.
15-16	Good guys are bad.
17-18	Bad guys are good.
19	Bad guys are in league with another group of bad guys.*
20	Bad guys are actually another type of bad guy in disguise.*

- * **Roll again** on the “By Who?” table to find out who.

Actor Motivations (Optional, d20):

You can skip this if you already have an idea why an actor is in an episode or if the reason they are there is fairly obvious (or unnecessary to the plot).

1-2	Seeking revenge*
3-4	Seeking payment*
5-6	Seeking information*
7-8	Protecting something*
9-10	Protecting someone* and ** to determine who.
11	Irrational motivations
12-13	Fulfilling a mission
14-15	Meeting someone**
16-17	Hiding from someone or something*
18-19	Seeking treasure, loot or other resource
20	Roll twice

- * **Roll d8:** 1-2 From the PC's, 3-4 From another existing actor, 5-6 From a new group of actors (roll above), 7-8 From a set of actors from a previous episode/or acquaintance of the PC's.

- ** **Roll d6:** 1-3 Similar to the actor themselves (i.e if Klingons, then protecting a Klingon), 4-6 another actor (roll above). **Roll d6 again for details:** 1 Child/Young, 2 Royalty, 3 Important Scientist, 4 Diplomat, 5 Political Refugee, 6 Military importance.

Example: The GM rolls 51 on the Plot Seed table: transporting an important individual somewhere. A subsequent roll of d6 comes up 6, indicating that the ship's crew is protecting that individual from something. A second roll on the Plot Seed table shows that the ship is attacked while transporting this individual to its destination.

Two rolls are then made on the “By Who” table, one for the important individual and one for the enemies of the episode: the rolls are 11 and 41, respectively. The ship is attacked by Romulans. In this case, a “space roman” would most likely be a snobbish, arrogant diplomat from a betogaed civilization with a penchant for classical architecture and gladiatorial fights.

A roll on the Plot Twist table comes up 15, the good guys are bad. In this case, the “Roman”, who we've been led to believe is a distinguished diplomat, has a

hidden record of war atrocities which will come to light during the episode. That's enough to go on.

Another Example: The GM, stuck for Episode ideas, rolls on the Plot Seed table. The d100 comes up 61: the crew discovers a new civilization. He could stop here, but continues rolling to see if something interesting comes up. The next roll, on the “By Who” table comes up 53...huh. Cloud Monster.

He flips back to the Enemies and Allies section and generates a random Cloud Monster. It's apparently the vanguard of an invasion force, with a size beyond description, protecting something. For powers, it can shift targets into an out of phase state and uses death rays. It has human level intelligence.

The Cloud Monster is there, protecting...something ...which is important to an invading alien species.

Running with the phase power, the GM decides the invading alien force is from another dimension. The cloud, which he now arbitrarily names Vor-Shak, is protecting the interdimensional gateway they will arrive through.

The alien civilization on the planet is now caught between the invading alien force and whatever the Federation starship must do to protect the sector. Will destroying the portal destroy the planet, as well as its millions of inhabitants?

At this point, the GM decides the plot is complex enough and doesn't require a roll on the Plot Twist table.

And there we have it. The science fiction RPG nerd's I-Ching.

Random Planets And Locations

Sometimes you need a detailed planet, something more than the usual "It's mountainous and there's a factory in the distance."

This is not intended to be a realistic planet generator. It's designed to produce interesting backdrops and sets for the initial beam-in of the landing party and a jumping point for the adventure. Since it's randomized, planets generated are not guaranteed to be plausible or make much sense for the adventure in question. This is solely here to jog your imagination.

So feel free to fudge the results.

Anything interesting in the neighborhood?

If the subject comes up, you can assume the planetary system has 1d4-1 gas giants of varying size and 1d8-1 rocky worlds which may or may not have atmospheres. For the most part, you can skip detailing them unless it's absolutely necessary.

In addition, roll once on the following table:

d20	Interesting Things
1-9	Nothing
10	A nebula
11-14	1d2 other habitable worlds
15-18	1d2 asteroid belts
19	Space anomaly
20	Roll twice

Okay, that takes care of the neighborhood...now, on to the fun stuff:

What does it look like from orbit?

Step 1. The Sun

Roll 1d6	Sun
1-2	Sol-sized
3	Giant
4	Dwarf
5	Double System (roll again, twice, ignoring double/triple system results)
6	Triple System (roll again, 3 times, ignoring double/triple system results).

Roll again for color, 1d6 for each star: 1-2 Red, 3-4 Yellow, 5 Blue, 6 White.

Step 2. The Planet's Basic Details

Roll 1d10 for each column on the following table for Overall Color, Size, Number of Moons, Rings, and Cloud Cover of the planet.

1d10	The Sky's Color	Size	Moons*	Rings	Clouds
1	Black	Moon-sized	0	No	None
2	Indigo	Mars (50% Earth)	0	No	Scarce
3	Blue	Mars (50% Earth)	1	No	Thin
4	Blue	Earth-sized	1	No	25%
5	Light Blue	Earth-sized	2	No	25%
6	Green	Earth-sized	2	No	50% (Earth-like)
7	Yellow	Larger than Earth (+25%)	3	Yes, very faint	50% (Earth-like)
8	Light Red	Larger than Earth (+25%)	4	Yes, thin	75%
9	Red	Very large (x2 Earth)	5	Saturn-like	Full coverage
10	Dark Red	Very large (x2 Earth)	6	Double, intersecting	Thick/soupy

* **Roll 1d6 for the size of each moon:** 1 Speck, 2 Tiny, 3 Small, 4 Moderate, 5 Large (Earth's moon), 6 Huge

Step 3. Terrain

Roll 1d6 for the total number of different types of terrain on the planet.

Roll on the following Terrain table for each one, keeping duplicates:

Roll 1d6	Terrain
1	Rocky/barren
2	Earth-like
3	Water
4	Desert
5	Frozen
6	Volcanic

Then roll another 1d6:

On a 1-4, one of the terrain types is dominant—choose one at random. 3/4 of the planet's surface is composed of that terrain. The rest of the terrain types are split evenly amongst the rest of the surface.

On a 5 or 6, the terrain types make up the planet's surface in even proportions.

First beam-in location: Flesh Out The Backdrop

Now that you know what the planet looks like from orbit, you can determine what the characters see when they first beam in.

4. What time is it? Roll 1d6: 1-2 Day, 3-4 Dawn/Dusk, 5-6 Night.

5. What does the sky look like?

Think of this step as determining the matte painting in the background of the initial shot of the planet's surface. Use the overall color rolled in the previous step as the base color of the backdrop's sky. When describing the sky, be sure to include the moons, clouds and rings, if any were rolled. Obviously, full cloud cover will obscure any

rings or moons the planet may have.

6. What's the weather like? Roll 1d6: 1-4 Fine, 5 Windy, 6 Wind storm. If it's cloudy, then assume a 50% chance of rain in more temperate terrains, snow or sand storms in others.

7. What does the terrain look like?

If the previous steps determined the matte painting in the background, this one determines what's nearest to the screen, the things the characters will actually interact with.

If there is no dominant terrain type, roll randomly for one—that's in the background. Otherwise, choose the most interesting one or roll randomly.

If there are different types of terrain on the planet, then there's a 2 in 6 chance of details of some of the other terrains being present (roll separately for each one).

Roll 1d3 times for other interesting details in the backdrop.

If there are other types of terrain in the background, roll once on the following table for each.

1d10	None
1 - 3	Nothing
4 - 5	Terrain Feature*
6	Cityscape** #
7	Building** #
8	Enormous Statue or Statues
9	Energy Discharges
10	Sinister Cloud or Clouds

* Here's a list of some possibilities:

Predominant Terrain Type

Rocky/barren: Roll 1d6: 1 jagged mountains, 2 chasms nearby, 3 a cave entrance, 4 enormous boulders dotting the landscape, 5 towering cliff in the distance, 6 roll twice.

Earth-like: Roll 1d6: 1 a mist-shrouded mountain, 2 forested hills, 3 forest, 4 enormous trees, 5 a rainbow, 6 a distant storm, 7 a majestic waterfall, 8 roll twice.

Water: Roll 1d10: 1 water spout, 2 storm, 3-6 tropical island(s), 7-10 cloud-wrapped mountain in the distance.

Desert: Roll 1d10: 1 dunes, 2 rugged mountain, 3 hill of rubble, 4 mesas, 5 oasis, 6 dust storm, 7 dust devil, 9 boulders dotting the landscape to the horizon, 10 landscape is cracked in oddly geometric patterns by the unrelenting heat of the sun.

Frozen: Roll 1d4: 1 glacier, 2 icy mountain in the far distance, 3 boulders dotting the frozen landscape to the horizon, 4 strange and enigmatic ice formations.

Volcanic: Roll 1d8: 1 jagged mountains, 2 chasm, rocked with occasional tremors and rumbling, 3 lava flows, 4 erupting volcano, 5 towering cliffs, 6 waterfall of lava, 7-8 roll twice.

** Ruined if the planet is uninhabited. If the planet is inhabited, though, there's only a 1 in 6 chance the city is ruined.

Roll for type:

1d12 Type of Buildings

- 1 Domed
- 2 Medieval
- 3 Spires and minarets
- 4 Distinctly alien (1d6: 1-2 hive-like, 3-4 organic/plant-like, 5-6 formed from solid energy)
- 5 Cyclopean
- 6 Anachronistic Modern Earth (19th or 20th century)
- 7 Looks like a Buddhist monastery
- 8 Pyramids
- 9 Faux-Roman
- 10-12 Futuristic, like something out of a 1960's World Fair brochure.

8. Where are the characters?

Roll 1d6 The Characters Appear...

- 1-2 Just outside an important building (if you rolled under footnote # above, then stick with that style, otherwise roll under that footnote)
- 3-4 Indoors (roll under the Random Interior Set Generator)
- 5-6 Underground (roll under the Random Cave Generator)

Interior chambers will always have at least one exit, unless it's useful to the plot to have none.

Random Interior Set Generator

1d10	Size of Room	Style of Decorations	Window?
1	Cramped	Medieval	None
2	Small	Tribal (furs, spears, leather, etc)	None
3	Medium	Faux-Greek/Roman	None
4	Medium	Faux-Greek/Roman	None
5	Medium	Anachronistic Earth (19th or 20th century)	Yes, small
6	Large (dance hall)	Futuristic (curves and circular architecture)	Yes, several small
7	Large (auditorium)	Futuristic (curves and circular architecture)	One large
8	Large (auditorium)	1950's Science Fiction	One huge
9	Large (football stadium)	Middle-eastern*	Several huge
10	Vast (extends far into the distance)	Sparsely decorated, almost empty.	Wide open along one wall to the outdoors

* Naturally, this will be the 1960's American concept of the Middle East—lots of silk hangings and cushions.

Random Cave Generator

1d10	Size of Cave	Features
1	Cramped	None
2	Small	Chasm
3	Medium	Massive Stalagmites/Stalactites
4	Medium	Strewn with rubble
5	Medium	Immediate exit to outdoors
6	Large (dance hall)	Odd Crystalline Formations*
7	Large (auditorium)	Flames and Smoke**
8	Large (auditorium)	Machinery***
9	Large (football stadium)	Building inside the cave#
10	Vast (extends far into the distance)	Building inside the cave#

* **Roll 1d6:** 1-2 Walls, 2 Floors, 3 Ceilings, 4 Floating in mid-air, 5-6 Roll Twice.

** **Roll 1d6:** 1-2 Sparse, 3-4 Intermittent but fierce, 5-6 Thick.

*** **Roll 1d6:** 1-2 Crude and mechanical, 3-4 Mysterious pipes running to and from large metal machines, 5-6 Advanced—electrical lattices, signs of heavy computerization.

Either partially or fully depending on the cave's size. Roll under footnote # under Step 7 for type of building.

Putting it all together...

For the first step, we take a look around the neighborhood. The system has 3 gas giants, 6 insignificant rocky planets and...a space anomaly, which may or may not be important later on.

For the next step, we determine what the sun looks like: (5), it's a double system. The two suns are (3, 2) a red giant and (2, 1) a smaller Sol-type red star.

We then roll the planet's details: 8 (light red atmosphere), 2 (Mars-sized, about half the size of Earth), 3 (only 1 moon), 5 (no rings), and 3 (thin cloud cover).

Next is the terrain. We roll 1d6 and get 6 types: desert, water, desert, volcanic, desert and volcanic again. In other words, desert, water and volcanic.

We roll 2 on the next roll, meaning that one type is dominant. Rolling d3 (the closest to the number of different types of terrain for our planet), we get 75% desert, with the remaining land mass an even mix of water and volcanic terrain.

So far, the view from orbit is a fairly forbidding one:

From orbit, the small planet is mostly sand with a few small mountain ranges. It's lit by the hellish amber

glow from its twin red suns. A few small oceans, barely large enough to deserve that designation, are the only thing to break the endless sand dunes.

As the ship swings across the divider between night and day, several spots of fire flare up across the surface—erupting volcanoes.

We continue to the Beam-In Location...

In Step 4, we start building the backdrop. Since we've already determined some of these details, we know what the sky looks like. We roll the local time: a 1 on 1d6. It's day when the party beams down. The sky is light red, almost salmon. There's only one moon, but it's large and cratered. A single thin cloud stands over the horizon to the north.

Moving on to Step 6 we fill in the ground's details...

The dominant terrain type for our planet is desert. We roll d6 for the other two types, volcanic and water, to see if they're present in the background and get a 4 and a 2. Water isn't, but volcanic terrain is present.

In Step 7, we check for weather—the roll comes up 3, so there's no wind. And now we roll for details...rolling 1d3, we find 3

significant background details:

6, 3, 5: a cityscape, nothing and a terrain feature.
Rolling on the Cityscape footnote, we get Faux-Roman.
Since there is no life on this planet, it's abandoned, a ruin.

Referencing the Terrain Feature footnote, we look under "desert" and roll a 10. The landscape is cracked in oddly geometric patterns by the unrelenting heat of the suns.

For the volcanic terrain, we get one roll on the background detail table and it comes up a 7, a building. We stick with the Faux-Roman and decide it's a large statue.

Finally, under step 7 we get a 2—the characters are just outside an important building. Since we rolled Faux-Roman before, we'll stick with it.

Should we step inside said building...we roll under the random building generator and get 9, 4, 1
The building's interior is large, about the size of a football stadium, still Faux-Greek/Roman and there are no windows.

Putting it all together...

You materialize on the planet below. Underneath a dusty salmon sky, the desert stretches to the horizon. A single thin cloud stands over the horizon to the north. To the south, a jagged mountain range stands. One of the peaks is smoking. At its base stands a statue of an alien woman, one arm raised high in greeting.

The ground underfoot is cracked, its hard clay broken into irregular patterns by the unrelenting heat of the twin suns. Surrounding you on all sides are the ruins of a massive city, its broken columns and statues lining once grand streets.

The buildings are square and majestic, built of marble and limestone. Even in their ruined state, they hold a sad grandeur. Before you is a building that could be a temple. Steps rise to the massive front gate, which is now hanging partially open. From where you stand, you can see a dimly lit room, large and filled with pieces of statues and urns.

Of course, this still leaves us that pesky space anomaly. Could it be the cause of the alien civilization's fall? Or is it completely unrelated?

Lifepath Generator

This system generates a randomized background for a character. It's a strictly optional part of character creation and is mostly intended to flesh out your character and to spark ideas. If you don't like a result, or it doesn't match the concept of your character, just pick something you do like instead, or reroll...or come up with a more compelling option.

It works a bit like Mad Libs. Follow the parts in red and roll on the indicated table where appropriate. Once you get to the Tour of Duty section, roll once per level for levels 3 and 4, twice per level for levels 5 through 7 and three times per level for every level beyond that.

Once you're done, do the exit questionnaire, particularly if your GM allows the mechanical bonuses. Now that you have a mass of random, but hopefully interesting data, flesh it out and turn it into a story.

I was born on (1), and/but raised on (2).

Table 1. Birth World. Roll d6 for your birth location

d6	Result
1	A frontier world not yet a part of the Federation
2	An established colony
3 – 4	Your species' homeworld
5	Deep space, on a ship
6	On a space station

If from Earth, roll for a continent. **Roll d8:** 1 Africa, 2 Asia, 3 Australia, 4 Europe, 5 North America, 6 South America, 7 Space station in Earth orbit, 8 the Moon. Once a continent is determined, just pick a good location from that continent (e.g. Chicago, Iowa, France, whatever).

If from another planet, just make up a cool sounding name, or pull a place from Memory Alpha if it has a detailed enough write-up.

Table 2. Where you were raised...

Roll d6: 1-3 Same as what came up in Table 1, 4-6 Reroll on Table 1 for where you grew up.

My parents were (3)...

Table 3. Parents. Now to find out who your parents were. Roll for both of them.

D20	Result
1	Archaeologist
2	Athlete
3	Bureaucrat
4	Businessman
5	Criminal
6	Diplomat
7	Doctor
8	Laborer
9	Lawyer
10	Military, non-Starfleet
11	Musician
12	Not your biological parent*
13	Pilot, non-Starfleet
14	Politician

15	Scientist
16	Starfleet Officer, Blue Shirt
17	Starfleet Officer, Red Shirt (Engineering)
18	Starfleet Officer, Red Shirt (Security)
19	Starfleet Officer, Yellow Shirt
20	Teacher/Professor

* **Roll d6:** 1-3 I know who my biological parent was—roll again for that one, too. 4-6 I don't know who my biological parent is. **Roll d6 again:** 1-4 Same species as you are. 5-6 Different species (choose one at random—**d6:** 1 Human, 2 Andorian, 3 Vulcan, 4 Tellarite, 5 "Enemy" species, 6 make a new species).

After that, roll another d6: On a 1-2, roll on the table below. 3-6, nothing remarkable, go on to step #4.

d6 Result

1	...but my parent died when I was a child.*
2	...but they later changed careers (roll again on above, ignoring “not your biological parent”).
3	...was famous.
4	...left mysteriously.*
5	...disappeared mysteriously.*
6	...was divorced (d6: 1-3 remarried, 4-6 still single).

* **Roll d6 again to see who raised you if both parents disappeared/died/left:** 1 One legal guardian, roll above for profession, 2 - 3 Two legal guardians (again, roll above for profession), 4 Passed along through several families, 5 - 6 a close relative of one of your parents (roll randomly for side, **d6:** 1-3 Mother, 4-6 Father).

My childhood was (4)

Table 4. Childhood.

d10 Result

1	Happy
2	Lonely
3	Spent moving from place to place
4	Depressing
5	Full of adventure
6	Dull
7	Pretty typical
8	Spent studying and reading books
9 – 10	Roll twice

I... (5)

Table 5. Upbringing Quirks.

d8 Result

1	Had a pet.
2	Was rather spoiled.
3	A lot of friends.
4	Spent a lot of time in detention at school.
5	Was always exploring, looking for new things.
6	Had strange hobbies.
7	Had a lot of siblings.
8	Roll twice

Starfleet Academy...(6)

Table 6. Random Things About Your Early Starfleet Academy Years.

1	Joined Starfleet at a younger age than usual
2	Failed the entrance exam a few times before being successful
3	Had a nemesis (the Finnegan to your Kirk)
4	On a sports team (d6 : 1-2 Successful, 3-4 Mediocre, 5-6 Awful)
5	Champion in an endeavor appropriate to your class (boxing champion, three dimensional chess champion, etc)
6	Gained a mentor (d6 : 1 - 2 Blue Shirt, 3 - 4 Red Shirt, 5 - 6 Yellow Shirt)
7	Missed a semester due to illness
8	Graduated in record time
9	Had a famous person in your class
10	Notorious for exploits
11	Notorious for love life
12	Disciplinary problems
13	Head of class
14	Embarrassing nickname
15	Got into an adventure
16	Inspirational moment with somebody famous (e.g. talked to Spock after a lecture)
17	Took a semester off-world
18	Absolutely nothing remarkable happened
19	Roll twice
20	Roll three times

Upon graduating from Starfleet Academy, you're now 3rd level and ready for your first tour of duty!

My first tour of duty... (8)

Table 8. Tour of duties.

d20	Result
1	Space/time anomaly discovered. Roll d6 : 1 Ship trapped, 2 Transports the ship into the past, 3 Across the galaxy, 4 Alternate universe, 5 Alien artifact, 6 Warps reality in strange and surprising ways.
2 - 3	Federation outpost/colony attacked by...
4	During a rather dull posting at Headquarters... (roll again, disregarding weird results)
5	While being transferred to next posting... (roll again, disregarding weird results)
6	Bad assignment (roll d6 : 1 assigned to a lesser ship, 2 – 3 lonely outpost, 4 menial duties on a star base, 5 desk assignment, 6 Starfleet recruiter), now roll another d6 to find the reason: 1 Starfleet politics, 2 disciplinary problems, 3 random bad luck, 4 personal choice, 5 Starfleet was simply under-staffed, 6 bureaucratic mistake. Now roll another d6 : 1 – 3 Completely uneventful, don't roll any more, just move on to next tour of duty, 4 – 6, roll again on this table, disregarding results that don't make any sense.
7	Ship hijacked/captured
8 - 9	Ship attacked
10	Stuck at headquarters, pushing papers. Uneventful—move on to next tour of duty.
11 - 12	While on a diplomatic mission... (roll again, disregarding weird results)
13	New civilization discovered
14 - 15	Responding to distress call
16	Rescued a colony from a potentially fatal plague.
17	Crew found a Mysterious Alien Device (see Equipment section in WNM)
18	Party to an important scientific discovery
19	Party to an important archaeological discovery

20 Uncovered an enemy spy

If the roll above requires a villain, roll below to see who it was:

d10 Result

- 1 - 4 Klingons
- 5 - 6 Romulans
- 7 Cloud Monster
- 8 Rogue Starfleet Crew Member
- 9 Starfleet Member Species (**d6**: 1 Andorians, 2 Vulcans, 3 Tellarites, 5 - 6 some other species that gets even less air time such as the Tiburonians or Caitians)
- 10 Civilians of some sort (**d6**: 1 Criminal, 2 Rebel, 3 Shadowy Conspiracy, 4 Religious Cult, 5 Spies, 6 Terrorists)

I...(9)

d10 Result

- 1 Displayed great courage.
- 2 Displayed great sacrifice.
- 3 Saved the lives of many civilians.
- 4 Saved the life of my captain.
- 5 Saved the life of several fellow crew members.
- 6 Prevented the destruction of my ship.
- 7 Showed great inventiveness and creativity.
- 8 Saved the day at the last minute, while under heavy fire.
- 9 Saved the day, but made an enemy out of a fellow crew member.
- 10 Showed great promise and gained a mentor and ally in Starfleet.

For tours of duty that require posting aboard a star ship , roll...

d6	1st	2nd roll	3rd roll and above
1	Ptolemy	Ptolemy	Hermes
2	Hermes	Hermes	Saladin
3	Hermes	Saladin	Miranda
4	Saladin	Saladin	Constitution
5	Miranda	Miranda	Constitution
6	Constitution	Constitution	Federation

Names:

d10	Ptolemy	Hermes	Saladin	Miranda
1	Al Rashid	Anubis	Alexander	Britain
2	Aristarchus	Bowie	Darius	Lantree
3	Copernicus	Bridger	Hamilcar	Majestic
4	Galilei	Carson	Saladin	Miranda
5	Ptolemy	Crockett	Sargon	Nautilus
6	Cassini	Hermes	Xerxes	Reliant
7	Kepler	Sacajawea	Ares	Saratoga
8	Messier	Aries	Loki	Shir Khar
9	Luyten	Taurus	Siva	Sitak
10	Thales	Pegasus	Tamerlane	Tian An Men

d10	Constitution	Federation
1	Constellation	Affiliation
2	Constitution	Compactat
3	Enterprise	Confederation
4	Excalibur	Directorate
5	Exeter	Federation
6	Farragut	Konkordium
7	Hood	Star Empire
8	Intrepid	Trusteeship
9	Republic	Unificatum
10	Yorktown	Alliance

Then roll the other tours of duty.

Roll once per level for levels 3 and 4, roll twice per level for level 5 – 7, and three per level for levels 8 and above. On following tour of duties, roll another ship if the tour does not makes sense on your character's current ship (or if you just want the character to be transferred to another vessel).

Exit questionnaire:

1. Pick one thing your character is **most proud of** from his background. It can be something about your childhood, your parents, your Starfleet career. At the GM's option, you get a +2 bonus to related rolls. Example: "I was born on a starship; my father and mother were both pilots. That's why I never get lost." = +2 to all navigation rolls. This bonus should not come up extremely often--if it's being used all the time, then you should spend a Talent and get Specialization in that area.
2. Pick one thing your character is **least proud of**. This is the skeleton in your closet or the thing that makes your character grind their teeth, gets them into fights, whatever. At the GM's option, if this issue comes up in an adventure and is dealt with in a dramatic way, you can either get an extra Action Point for that Episode or an extra experience point.
3. Another useful step is to go through and outline **plot threads**. Interesting parts of the character's background that may be interesting or fun to explore in that character's further adventures. Things like repeated encounters with a certain type of enemy, or mysterious childhood events and so on.

Where No Man Has Gone Before 2.0: Controlled Implosion

by Mike Berkey (michael.berkey@gmail.com), Copyright 2012. For more Microlite20 awesomeness, head over to the Microlite20 website at <http://www.microlite20.net>.

"We've got to risk implosion. It's our only chance!"

"It's never been done."

"Don't tell me that again, Science Officer! It's a theory! It's possible! We may go up into the biggest ball of fire since the last sun in these parts exploded, but we gotta take that one in 10,000 chance!"

– *"The Naked Time"*

It's been three years since the second version of *Where No Man Has Gone Before* has been released. Since that time, I've continued writing—my hard drive is strewn with oddments and ideas, some of them fun and/or interesting, many that can only be put under the label "Kill With Fire."

This document collects many of those odds and ends: several tidbits from the Animated Series, some optional rules, more ships, more Talents, bits and pieces from the previous versions of the game that didn't make it into the new version. And more random tables, of course.

In other words, this is something of a grab bag supplement, the RPG equivalent of a casserole. Think of it as an extension of the Appendix from the core rules: you can use or ignore anything from the following pages as you please. In fact, I encourage cherry-picking. So, pull up a chair, put some relaxing music on and dig in.

And, of course, thank you to everyone who has read and played *Where No Man Has Gone Before*. It's good to know that somewhere out there red shirts' lives are being numbered, planets full of Space Nazi's and Klingons are being thwarted, alien princesses are being romanced, shirts are being ripped and new frontiers explored.

Contents

1. New Life
2. New Worlds
3. New Ships
4. Optional Rules

Disclaimer: If you're the sort of person who worries about such things, this expansion is somewhat less "canon" than what's in the core document. Proceed with caution.

New Life

Player Species

Caitians are a feline humanoid species, slightly smaller than the human average. Their fur coloration ranges from tawny to brown, with vertically slit yellow eyes. They do not typically wear footwear and have tails.

- **Lithe:** +2 to Dexterity. Caitians have fast reflexes and are highly agile.
- **Sharp Senses:** Caitians have exceptionally sharp senses, gaining a +2 to rolls when detecting faint noises and seeing in low-light conditions.

Edosians are a species of three-armed and three-legged aliens, hailing from the planet Edos. They are a peaceful species, known for their longevity. They are polytheists, having many gods.

- **Calm:** Your typical Edosian is rather unflappable. Once per day, they can take 10 on any non-combat skill-roll, no matter how stressful the situation. This is in addition to "Cool Under Pressure", if they choose to take that Talent.
- **Trilateral Symmetry:** Edosians have an extra arm or leg when they need it. They gain a +2 bonus on any rolls to avoid falling, slipping or holding on to things.

Tiburonians are very similar in appearance to humans, but slightly taller on average. They have scalloped, elaborately shaped ears. Males are often bald.

Tiburonians are known for two things: hedonistic tendencies and great expertise with technology, particularly in the areas of robotics. Owing to their species' history of surviving alien conquests, they

have a great dislike of intolerant or authoritarian regimes.

Tiburonians tend to make good explorers, science officers and negotiators. They have a sly sense of humor and prefer to solve problems with the most labor-efficient solution possible. They don't consider themselves to be great fighters, only resorting to violence as a last resort.

- **Charming:** +2 to Charisma. Tiburonians are naturally easy-going and relate well with others.
- **Subversive:** Tiburonians have difficulty coping with authority. Once an Episode, a Tiburonian can gain a bonus Action Point when attempting to defy or subvert an authority figure. However, this tendency means they take a -2 penalty when dealing with authority figures in social situations—Tiburonians don't always fit well into a chain of command.
- **Technologically Adept:** +2 bonus on all skill rolls involving technology, particularly in the area of robotics.
- **Weak Immune System:** Tiburonians are not as hardy as other species. -2 to all rolls to resist diseases, poisons and fatigue.

Building Non-StarFleet Aliens

Tired of playing Starfleet personnel? Need a fully statted alien NPC with Talent progression? Are your players clamoring for the chance to play characters on the other side of the red/yellow/blue divide?

The first option would be to allow such a character to choose any Talent within reason as they advanced. The second option would be to rename the normal Talent lists to their alien equivalent. "Red Shirt" would become "Gorn Warrior," for example.

A somewhat less arbitrary approach would be to build a custom Talent list. This is highly recommended if such a character class can be chosen by the players.

The first step should involve defining what kinds of things such a class should be able to do and then ensuring enough Talents are on the list to support them all.

For example, Yellow shirts have 3 general types of Talents on their list: **an action-type leader** (a Kirk), **a more thoughtful type of leader** (Picard) and **pilots** (Sulu, Chekov). Players aren't required to

specialize, but there are enough Talents listed to support a player going “all in” on that type of character.

For example:

Action Leader: Agile, Brawler, Defensive Roll, Flurry, Judo, Power Attack, Starfleet Commendation

Thoughtful Leader: Agile (it's fine if there's overlap in archetypes), Bluff, Command, Inspirational Speech, Measure of a Man, Plan, Starfleet Commendation, Unorthodox Maneuver

Pilot: Agile (appropriate since pilots tend to have great reflexes), Defensive Roll, Judo, Space Jockey

A good Talent list should be flexible enough to anticipate the sorts of characters a player will build, while still restricting the choice of Talents enough to keep classes from becoming too similar to each other.

Example:

Let's start with a generic Klingon class. We'll call it simply “Klingon.” It's going to represent the sort of Klingons most frequently met in the original series. As they're portrayed on the show, they tend to be good fighters, but rather ruthless and deceitful.

We write down the archetypes and then skim through the list of existing Talents, assigning them as we go:

Warriors: Brawler, Durable, Flurry, Judo, Power Attack, Stiff Upper Lip

Ruthless: Brawler, Intuition, Plan, Power Attack

Deceitful: Bluff, Measure of a Man, Plan, Unorthodox Maneuver

Also available is “**IKS Commendation**”, the Klingon equivalent of “Starfleet Commendation.”

Looking at the list, you can tell right away there's a problem: the **Ruthless** and **Deceitful** lists are pretty short. Here's where the fun starts—coming up with a few new Talents that reinforce the concept of “ruthless” and “deceitful.”

New Talents should be somewhat in line with the game's default Talents in terms of power and utility. They shouldn't duplicate existing Talents—if you need to do that, then rename an old Talent.

Let's call our first new Talent “**In The Back**”. Once per fight, you can reroll one damage roll of any kind, taking the higher of the two results. This Talent can be taken only once and only applies to damage you do to others—it's purely offensive.

Another appropriate Talent might be “**Klingon Diplomacy**.” Nobody holds a weapon more menacingly than a Klingon. When holding a weapon in a threatening manner, you can easily face down any number of foes.

As an action, the character can brandish his or her weapon, making a Comm + Cha roll vs the opponent's highest skill + Int or Str (whichever's higher). If successful, the enemy is cowed for one action. If successful by 5 points or more, the opponent surrenders. The GM can rule that some opponents will never be cowed, only run away, hesitate or retreat.

If the Klingon tries to threaten more than one opponent at a time, give the opponents a bonus to their save equal to +1 for every person in the group

Our final result is this:

Klingon

1. Bluff
2. Brawler
3. Durable
4. Flurry
5. Intuition
6. IKS Commendation
7. In The Back
8. Judo
9. Klingon Diplomacy
10. Measure of a Man
11. Plan
12. Power Attack
13. Stiff Upper Lip
14. Unorthodox Maneuver

And there you have it. A Talent list suitable for any well-rounded Klingon. If you were to run a full Klingon-only campaign, it would probably be appropriate to make other classes, such as “Klingon Scholar” or “Klingon Beast-Tamer,” to add more variety.

New Worlds

Sometimes an adventure will go off the map...and the worthier the players are of being called "Starfleet Personnel," the farther off said map it will be.

As much fun as this can be, it can be a bit of a strain having to come up with a star system on the spot. That's where this section comes in.

These tables are designed to work from the "top down." The first few steps can be quickly rolled with a small fist-full of dice and are design so you can "drill down" for more detail as the players investigate.

Each step of this series of tables is completely optional. If you decide there's an alien civilization there, then there's an alien civilization. If you decide there's nothing on that moon the players have decided to investigate, then there's nothing on that moon.

If the first interesting thing the players investigate is enough to get the adventure moving, you can just decree that it's the only point of interest in the system and stop rolling or that the other points of interest aren't actually all that interesting.

To speed things along, you can also opt to not roll for things the players are not actively investigating. If they don't bother to investigate that interesting gas giant, then you shouldn't bother to roll to see what's on it. On the other hand, if the dice say there's a ship and a planet in the same system, then maybe they have something to do with each other.

Feel free to veto (or choose) entries that do not make sense within the context of the local star sector. If you're only 10 light years away from Federation headquarters, then maybe that alternate history planet of cowboy and Roman space god's isn't likely to exist.

You can also jump straight to a subtable if there's a need for it. For example, if the players decide to check out the third moon in a planet they're on, you could roll on the planet chart and see if there's something there or just call it a "space station" and adjust the flavor text.

Feel free to use the episode generator from the appendix of the main rules when appropriate to flesh in detail. There are various points where it would be highly useful to roll on the enemies and motivations tables.

Step 1. Determine type of star system.

Table 1. Description of star system. Roll d20:

1-2	Single star, M-type (red dwarf)
3	Single star, K-type (orange)
4-7	Single star, G-type (similar to our sun)
8	Single star, F-type (white)
9-10	Single star, Giant (d6 : 1-4 Red, 5 Blue, 6 White)
11-12	Double or Triple star system (d6 : 1-4 double, 5-6 triple, roll multiple times on this table to determine star types, disregarding this result)
13	Orbiting a black hole or pulsar (50% either type) (roll again for type of companion star—disregarding this result. Black holes and pulsars will generally not have planets of their own)
14	In a nebula, which plays havoc with the ship's shields and sensors (roll again for type of star system)
15	On the verge of a time-space anomaly. Roll d8:

- 1 ...it's an entrance to an alternate universe
- 2 ...it randomly opens gates to other times
- 3 ...visitors are stuck in a loop in the space-time continuum
- 4 ...it's a pocket universe
- 5 ...created by an alien device for nefarious purposes.
- 6 ...visitors have a habit of running into alternate-universe version of themselves
- 7 ...due to the nature of the fabric of space, technology behaves very differently here, effectively stranding visitors until they can figure it out.
- 8 ...causes minor bits of continuity to change. **Roll once per scene, d6:** 1 something major about the crew and/or ship changes for the rest of the adventure, 2-3 1d4 minor details are altered, 4-6 nothing happens. The discontinuities slowly revert after the ship leaves the system.

16 System has an unusual composition. **Roll d10:**

- 1 Planets are in an odd configuration unlikely to have arisen naturally
- 2 System is largely composed of antimatter
- 3 The sun is long dead; the planets that are habitable are only habitable because of high levels of volcanism or technology
- 4 System is formed of an entirely new state of exotic matter which may have unexpected effects on technology and/or life forms
- 5 Planets and asteroids are improbably rich in rare elements
- 6 System contains a living planet. May or may not have god-like powers
- 7 System is a construct, such as a ring world or Dyson sphere
- 8 The star or one of the planets themselves has an unusually high gravitation field which may cause navigational problems
- 9 Contains an enormous gas giant, big enough to have its own system of planets (**d6** planets, **d20** smaller moons, any number of moonlets) – roll again to see type of system, disregarding this result
- 10 System is the spawning ground of a space-faring animal species.

17 Home system of a very advanced alien species (space gods, basically), roll again on this table to determine the type of system. Space gods will make their presence known upon entering the system. **Roll d8:**

- 1 ...they waylay travelers and force them to have gladiatorial fights with other waylaid space travelers.
- 2 ...they are territorial and paranoid. Intruders are sent packing.
- 3 ...inquisitive, but not in a good way. Intruders are studied intensively.
- 4 ...they love travelers. Probably a bit too much.
- 5 ...they have their own problems to deal with. Explorers must tread carefully or become embroiled in an war.
- 6 ...great, an entire civilization of Q's and Tremaynes.
- 7 ...Space Gods in a classical sense. Roll for ancient civilization. **Roll d6:** 1 Greek, 2 Indian, 3 Egyptian, 4 Norse, 5 Chinese, 6 Vulcan
- 8 ...misguidedly altruistic. They sense the savagery in the explorers and decided to help them "fix" it, whether they want the help or not.

18 The system is the site of an ancient battle—local space is strewn with alien mines, wrecked vessels, and abandoned/ruined bases. Roll again to determine the type of system.

19 Site of an ancient highly advanced civilization, long defunct, but full of strange and enigmatic ruins and mysterious alien devices. Roll again to determine the type of system.

20 A famous incident or other event of note occurred in this system. **d6:** 1 the site of a famous diplomatic triumph/incident, 2 the site of a famous war, 3 disappearance of an exploratory vessel occurred mysteriously here, 4 system has religious significance for a random species, 5 an infamous natural disaster, 6 a colony mysteriously disappeared in this system. Roll again for type of system.

Now roll a d8. On a result of 1, one of the stars in the system is having some kind of disturbance, such as a massive solar flare, emitting massive amounts of radiation, gravity waves or what have you. It could even be about to go nova. This might threaten one of the planets, or the ship itself.

Step 2. Determine number of interesting features.

Roll d4-1 (minimum 0) for total number of interesting features. Grab that many six-sided dice and refer to the following table...

Table 2. Interesting System Features. Roll d6:

1-3	Planet
4-5	Ship
6	Station

Sensors will generally pick up only the broadest details of a system feature, so there's no need to roll until the players choose to investigate. Of course, sometimes it can help jog creativity to roll ahead of time. For example, two planets with civilizations on them could be at war with each other.

Step 3. Minor fluff useful for parroting off sensor scan info-dumps.

A system will typically have 1d20 planets and d4-1 (minimum of 0) asteroid belts. Feel free to adjust these numbers if what you roll seems off for the type of system. **Planets, if important, will have 1d6-2 moons (minimum 0) for normal rocky planets, and d20 bigger moons for gas giants. Gas giants will also have a host of small planetoids and orbiting rocks and a 50% chance of having rings.** Again, don't bother rolling for moons and rings if the players seem unlikely to investigate more closely.

Note that this does NOT correspond to interesting features. Anything that is not an interesting feature is a "barren rock" or a "lonely gas giant." For example, if you roll "ship, ship, station" for features and the system has 14 planets, then they're all barren rocks and lonely gas giants.

If any of the interesting features requires a planet, then randomly pick a planet from what you just rolled. In other words, if you determine that there's an inhabited world in the system and you roll 11 planets, then pick an arbitrary number and use that planet to host the civilization.

Step 4. What's interesting about the feature?

Roll on the following tables to determine what the interesting features are. Table 3 deals with planets, table 4 with ships and table 5 with space stations.

Table 3. Planets. Roll d20:

1-4	Earth-like
5-6	Desert planet
7	Water world
8	Habitable moon orbiting a (roll d6: 1-4 gas giant, 5 large uninhabitable planet, 6 large habitable planet)
9-10	Ice world
11	Gas giant, any life living there will either be avian or living in giant buildings hovering in the atmosphere
12	Poisonous atmosphere, all life is underground or in domes
13	Ruined world. Great natural disaster or global war wiped out all life.
14	Ruined world. Destroyed by unknown external agent (roll d6: 1-3 long ago, 4-5 recently, 6 being destroyed right now).
15	Giant city spans entire planet's surface
16	Giant ruined city spans entire planet's surface
17-19	Federation planet (roll d8: 1 military outpost, 2 research outpost, 3 resupply base, 4 prison, 5 colony world, 6 mining outpost, 7 manufacturing facility, 8 resort world), reroll on this table with a d12 for type of planet. If outside Federation territory, then replace "Federation" with appropriate local interstellar government.
20	Parallel Earth, physically identical to Earth in nearly every way, except...

Culture identical to (roll d8:

- | | |
|---|------------------------|
| 1 | WWII |
| 2 | Wild west |
| 3 | 1960's America/Britain |
| 4 | Ancient Rome |
| 5 | Medieval Europe |
| 6 | Native America |
| 7 | The 1920's |
| 8 | Ancient Egypt) |

due to (roll d6:

- | | |
|---|--|
| 1 | Tampering with the time-stream |
| 2 | Evil central computer |
| 3 | Space god(s) |
| 4 | Accidental/purposeful Federation tampering |
| 5 | Pure coincidence |
| 6 | Parallel evolution) |

Table 3.1. Planets—What's going on here? Roll d20 if not immediately clear from previous table's entry. Re-roll or disregard entries that don't make sense.

1	Klingons stirring up trouble with easily exploitable/intimidated natives
2	Native civilization has not yet achieved first contact. The Prime Directive is in play. Crew feels compelled to study them and gets embroiled in local drama/discovered by the natives.
3	Native civilization has not yet achieved first contact. The Prime Directive is in play. Civilization is beleaguered by topical social issue (roll d6 : 1 overpopulation, 2 racism, 3 greed, 4 starvation, 5 social diseases, 6 gambling)
4	Civilization is embroiled in world war
5	Civilization is being manipulated or enslaved by another, more advanced, local civilization for profit
6	Civilization fighting off off-world invaders
7	Dictator fiercely determined to maintain status quo. Dictator is a (roll d6 : 1 space god, 2-3 misguided or evil computer, 4 ex-Starfleet officer who maintains his position with advanced technology, 5 mysterious and powerful alien, 6 cloud monster)
8	Native civilization is fighting off a terrible plague (standard effects—chills, weakness, eventual death, etc)
9	Primitive natives are the fallen descendants of a mighty star-faring civilization. The ruins surround them and they don't even realize it.
10	Civilization is primitive compared to the Federation in all but one field, in which they vastly excel
11	Local natives eager to meet invaders...too eager... roll d6 :
1	<i>Because they want to assimilate them into their robot collective</i>
2	<i>Because there is a local mind-controlling plant or animal that feeds on human emotion</i>
3	<i>Local civilization is a virtual utopia, except for one taboo...which they refuse to talk about. Every time a crew member does anything, roll 1d6. On a 1, they've violated the taboo and are sentenced to death.</i>
4	<i>Locals are addicted to a substance or technology and want to expand their market</i>
5	<i>Locals make their living by waylaying passers-by</i>
6	<i>Locals want to convert travelers to their religion. They may be harmless...or not...</i>
12	Local population beleaguered by dangerous creatures
13	Mysterious stranger lives here by himself or with a trusted companion, but he has a secret...
14	Native disease, highly contagious, unpredictable effects (roll d8 : 1 causes evil, drunken behavior, 2 reverse aging, 3 rapid aging, 4 causes victims to devolve into cavemen, 5 euphoric behavior and then death after a few days, 6 hallucinations, 7 insomnia and eventual madness, 8 narcolepsy)
15	Mysterious alien artifact (roll on Mysterious Alien Device table or choose)
16	Survivors of a crashed vessel (roll on Table 4)
17	Unscrupulous scientists test out new technology with little heed for locals or other bystanders
18	Locals misunderstand native creature, leading to adventure
19	Military outpost of a long dead alien species seeks to defend its territory
20	Hidden species of highly advanced aliens kidnaps and studies any new specimens that pass their way.

Table 3.2. Planet Quirks. Roll d20 d4-1 times (minimum 0).

1-4	Nothing interesting to see here. Move along.
5	Unusually beautiful
6	Fabulously dangerous plant life
7	Beautiful rings
8	Very large and occasionally angry local animal life (roll d8 : 1 carnivorous reptiles, 2 enormous marine life, 3 amoebas, 4 flying monsters, 5 dragons, 6 herbivores, 7 apes, 8 roll for a Cloud Monster)
9	Site of an important event in Federation history
10	Largest geographical feature in this sector (roll d6 : 1 mountain, 2 canyon, 3 river, 4 mountain range, 5 volcano, 6 moon)
11	Harsh, barely liveable climate
12	Frequent terrible storms
13	Surface completely uninhabitable, everybody lives underground in caves
14	Planet's day is exactly in sync with its year. The sun never rises or sets.
15	Planet's surface is surprisingly smooth—there's very little surface relief.
16	Planet's surface is extremely mountainous. There are very few places to land a ship.

- 17 High gravity planet.
- 18 Low gravity planet.
- 19 Planet is low in one or more common elements.
- 20 Planet has an abundance of one or more natural resources.

Table 3.3. Alien Culture Technology Level. Roll d10 if needed.

- 1-3 Primitive, cave man
- 4-5 Dark ages
- 6 19th century Europe
- 7 20th century America
- 8 Not as advanced as Federation, but still futuristic
- 9 Federation-level
- 10 Advanced

Table 4. Ships. Roll d20:

- 1-4 Federation vessel (**roll d8:** 1 Hermes, 2 Saladin, 3 Miranda, 4 Constitution, 5 Federation, 6 Ptolemy, 7 outdated vessel such as a Daedalus, 8 advanced but untried prototype ship)
- 5-8 Enemy vessel (**roll d8:** 1-2 Klingon, 3-4 Romulan, 5 Gorn, 6 Tholian, 7-8 unknown alien species)
- 9-10 Criminals (**roll d6:** 1-2 Orions, 3-4 Smugglers, 5-6 Pirates)
- 11-13 Civilian vessel (**roll d8:** 1-3 merchant, 4-5 freighter, 6 courier, 7 explorer, 8 luxury liner)
- 14-15 Ship of unknown, advanced origin. **Roll d10:**
 - 1 *Probe from advanced civilization obsessed with random extinct Earth species, on its way to Earth to find out what happened*
 - 2 *Automated alien death machine*
 - 3 *Prototype vessel from enemy species (roll on "enemy vessel" entry above to find out who) on a test run*
 - 4 *Ship is from another universe or from the far distant future*
 - 5 *Ship is actually a giant living creature, possibly sapient*
 - 6 *God-like being, possibly of the giant floating head variety*
 - 7 *Vast colony ship from an advanced space-faring species. Society on board is utopian, but deeply flawed*
 - 8 *Crewed by androids*
 - 9 *Design is impossible according to current science, possibly non-Euclidian*
 - 10 *It's the crew's vessel, except from the future and heavily upgraded*
- 16 Colony ship, alien and vast but technologically backwards
- 17 Armada (**roll d6:** 1 Klingon, 2 Romulan, 3 Gorn, 4 Tholian, 5 Federation, 6 Unknown species)
- 18 Automated distress beacon. Somewhere in the system is a crashed vessel (**roll d6:** 1 long dead, 2 completely obliterated on the surface of a nearby moon or asteroid, 3 survivors have colonized a nearby planet, using the bits of their ship to build their colony, 4 recently crashed, 5 ship in imminent danger of being dragged into the sun, 6 no signs of where the ship has gone)
- 19 Ancient freighter from Earth bearing 20th century humans in cold sleep. When revived... (**roll d6:** 1-2 passengers are evil brigands intent on taking over a modern ship, 3-5 passengers are fish out of water and only want to go on with life, 6 ...Khaaaaaaaaannnn!)
- 20 Probe sent out by humanity in the 20th or 21st century, returning to maker, vastly upgraded by mysterious civilization and with a bone to pick (**roll d6:** 1-2 small, 3-4 starship-sized, 5-6 vast)

Table 4.1 What is it doing? Roll d20 if not immediately clear from previous table's entry:

- 1-2 Derelict (**roll d6:** 1 abandoned, 2 corpses all over the place, 3 apparently haunted, 4 scrapped, 5 evidence for reasons of abandonment meticulously cleaned up, 6 mutiny). Roll on Table 5.1 if necessary to see what happened.
- 3 Escorting diplomatic envoy to other system
- 4-7 Passing through system/on patrol
- 8 Exploring the system
- 9-12 Attacking...either you or another vessel of random type

- 13 Seeking help for some mission
- 14-16 Emergency (**roll d8**: 1 life support failure, 2 random system disabled or malfunctioning, 3 crew is suffering a plague (refer to Table 5.1, result 2), 4 warp core melting down and about to explode, 5 strange alien artifact acquired by one of the crew causing havoc (refer to Table 5.1, result 7), 6 critically under-supplied, 7 about to explode after being disabled in a fight, 8 trapped in a strong gravitational field and about to crash)
- 17 Phasing in and out of time-space continuum
- 18-19 Defending something
- 20 Fleeing from a greater threat

Table 5. Stations.

Feel free to replace “Federation” results with the local interstellar government if outside of Federation space. Likewise, adjust “Enemy” results appropriately.

Roll d10 3 times:

	Purpose	Size	Who runs it (or used to)?
1	Colony	Tiny	Federation, military
2	Trading outpost	Tiny	Federation, civilian
3	Military Post	Small	Friendly aliens
4	Research Outpost	Small	Unfriendly aliens
5	Shipyards	Small	Enemy***
6	Espionage*	Medium (roughly starship scale)	Androids
7	Manufacturing facility	Medium	Large-scale Computer AI
8	Mining facility	Medium	Nobody
9	Destroyed**	Large	Coalition of species
10	Abandoned/Derelict**	Enormous	Ownership in dispute****

* If not friendly, it will be very difficult to detect. It could be cloaked, hidden within an asteroid, or on the dark side of a moon.

** Roll again on this column, except with a d8 to find out what type of station it was.

*** Choose the nearest neighboring enemy according to your game. If you don't know or care, then **roll d6**: 1-2 Klingons, 3-4 Romulans, 5 Gorns, 6 Tholians.

**** Roll twice on this column. Duplicate results indicate two factions are disputing it.

Table 5.1 Stations—What's going on here (or happened, if destroyed/abandoned/etc)?

d12 Situation

- 1 Nothing of note (or the evidence has been carefully destroyed/cleaned up)
- 2 Plague (**roll d10**: 1 -2 “standard” plague—fever, chills, eventual death, that sort of thing, 3 causes evil, drunken behavior, 4 slowly transforms victims into alien species, 5 causes victims to go into suspended animation, 6 causes victims to devolve into cavemen, 7 euphoric behavior and then death after a few days, 8 fever and then spontaneous combustion, 9 childlike, obsessive behavior, 10 rage and violence)
- 3 There's been a spate of murders...who's responsible?
- 4 Under attack by aliens
- 5 Facilities are breaking down and in desperate need of repair
- 6 There's a spy, assassin or saboteur causing havoc
- 7 Strange alien artifact acquired by one of the crew causing...**roll d10**:
 - 1 Increasing dementia to all who stay on-board longer than one day
 - 2 Terrible nightmares that eventually come to life
 - 3 Random visions of other times and places
 - 4 Random doorways to other times and places
 - 5 Random rooms become trapped in time-space loops
 - 6 Monsters! All over the place.

- 7 *Causes bits and pieces (or all) of the station/ship to go out of phase with reality*
- 8 *Serious computer problems*
- 9 *Artifact manufactures wealth and/or happiness. This is causing a terrible squabble.*
- 10 *Increases the intelligence of anyone nearby vastly and gradually, eventually turning them into evil psychic gods.*

- 8 Monster on the loose
- 9 Out of supplies
- 10 Tribbles
- 11 Hidden war criminal or other type of notorious fugitive outed by ship's crew during initial visit
- 12 Cover-up. Nobody wants to admit what's really going on. Roll again, disregarding this result.

Table 5.2. Station Quirks. Roll d20 d3-1 times (minimum 0).

- 1-5 Nothing interesting to see here. Move along.
- 6 Unusually spacious rooms and corridors
- 7 Much of it still under construction
- 8 Cramped
- 9 Very crowded
- 10 Odd smell
- 11 Has something of a Star Wars cantina feel to it
- 12 Best bar in the sector
- 13 Seedy, frontier-type environment. Everything goes.
- 14 Very modern and well-equipped
- 15 Lushly-appointed
- 16 Eerie place. More superstitious crew members might think it was haunted.
- 17 Filled with gardens and botanicals
- 18 Station's computer systems unusually belligerent
- 19 Baroque interior layout unusually hard to navigate
- 20 Local regulations are strict and obsessively detailed

Federation Ships

Daedalus Class Explorer

Size: 105 kilotons, 121m long, 48m wide, 40m high, 10 decks.

Typical Crew: 165 total, 8th level Yellow Shirt Commander, bridge crew 6-8th level, bulk of crew 3-5th level.

Cruise Speed: Warp 4

Emergency Warp: Warp 6

Impulse: .5c maximum impulse (900,000 km/round)

Shield Rating: 2 (polarized hull plating)

Armament: 4x Type II Magnusson Class Laser Cannons (WR 5), 2 banks Mod 2 spatial torpedo tube (outdated design—WR 10 per torpedo and +2 to dodge with modern ships, 24 rounds).

Note: Starfleet's first major exploration vessel after the NX class. Outfitted with the latest technology at the time—such as a Warp 6 capable drive, transporters and tractor beams, it was limited by its relatively short-range subspace communicators. Its capability for deep exploration would often outstrip its ability to call for backup.

Ranger Class Explorer

Size: 450 kilotons, 227m long, 130m wide, 55m high, 14 decks.

Typical Crew: 287 total, 8th level Yellow Shirt Commander, bridge crew 6-8th level, bulk of crew 3-5th level.

Cruise Speed: Warp 5.5

Emergency Warp: Warp 7

Impulse: .6c maximum impulse (1.08m km/round)

Shield Rating: 10

Armament: 5x Type VI phaser banks (WR 12), 2 Photon Torpedo Banks (WR 25 per torpedo, 30 torpedoes carried).

Note: Yes, I know that the Ranger class is traditionally a double-nacelled design. I'm going to lump it in with the Kelvin anyway (but not use the new-Trek ship scales since they are rather large). If you like the older double-nacelled version more, feel to use that instead—the stats are more or less the same.

In any case, this is a slightly dated ship design. As their tours end, Starfleet has been mothballing them, but they are still not an uncommon sight on patrol.

Huron/Antares Class Freighter/Survey Ship

Size: 45 kilotons, 56m long, 20m wide, 25m high, 6 decks.

Typical Crew: 20 total, Unexceptional Commander or 7th level Yellow Shirt, bridge crew 4-5th level, bulk of crew 2-4th level.

Cruise Speed: Warp 4.5

Emergency Warp: Warp 6

Impulse: .4c maximum impulse (900,000 km/round)

Shield Rating: 4

Armament: None.

Note: An aging ship design, not known for great agility, and typically unarmed. Typically used to haul small amounts of freight or for minor surveying jobs. Very occasionally used as a short-distance passenger transport.

Klingon Ships

D-5 Class Cruiser

Size: 283 kilotons, 155m long, 124m wide, 34m high, 6 decks.

Typical Crew: 225, Unexceptional Klingon Commander, bridge crew 5-6th level, bulk of crew 3-5th level.

Cruise Speed: Warp 5

Emergency Warp: Warp 7

Impulse: .60c maximum impulse (900,000 km/round)

Shield Rating: 8

Armament: 1 x combined forward weapons port capable of both heavy disruptor fire and launching torpedoes, 360 degree rotating twin disruptor cannons, dorsal disruptor array. Disruptor fire is WR 15, photon torpedoes are WR 25 per torpedo (80 carried, but only 1 bank).

Note: In service since the mid-22nd century, this vessel is somewhat dated and is slowly being phased out in favor of the more heavily-armed D-7's.

It is highly maneuverable, especially when compared to the D7. May have a cloaking device, depending on how early in the series it appears. A deuterium tanker variant also exists--this version is somewhat slower and of only average maneuverability.

qa'Hos (Relentless) Class Light Cruiser

Size: 280 kilotons, 198m long, 70m wide, 69m high, 7 decks.

Typical Crew: 280 total, Unexceptional Klingon Commander, bridge crew 5-6th level, bulk of crew 3-5th level.

Cruise Speed: Warp 5

Emergency Warp: Warp 7

Impulse: .60c maximum impulse (1,080,000 km/round)

Shield Rating: 14

Armament: 6x Mark 5 disruptor cannons (WR 15), 2x Photon Torpedo Banks (WR 25, 60 carried).

Note: May have a cloaking device, depending on how early in the series it appears. Its reliability and sturdiness gives anyone attempting to repair it a +2 on repair rolls and repairs will take place 25% quicker than normal.

The qa'HoS class Light Cruiser has been in service for well over 70 years. Originally a main line battleship, it is now used primarily for long patrol missions along the Klingon Empire's various border zones due to its proven reliability and ability to operate in the field for long periods of time.

Over the years, it has acquired a reputation for durability that makes it a favorite of veteran warriors. There have been many accounts of qa'Hos cruisers limping back from missions with crippling damage--spewing plasma from containment breaches, large patches of the hull torn off or missing--damage that should have completely obliterated the vessel but did not.

Raptor Class Scout

Size: 90 kilotons, 105m long, 63m wide, 18m high, 4 decks.

Typical Crew: 24 total, Unexceptional Klingon Commander, bridge crew 5-6th level, bulk of crew 3-5th level.

Cruise Speed: Warp 5

Emergency Warp: Warp 7

Impulse: .65c maximum impulse (1.17m km/round)

Shield Rating: 4

Armament: 2 x Mark 5 disruptor cannon (WR 10), 1 x photon torpedo bank with 40 rounds (WR 25).

Note: Like the D-5, this design has been in service since the mid-22nd century and is slowly being phased out. It is highly maneuverable and fast. May have a cloaking device, depending on how early in the series it appears.

Optional Rules

As with the original Appendix, not all ideas are created equal. Here's some more optional rules that may or may not be fun to use.

Warning: these rules are intended to be optional. Some of them can change the tone of your game significantly.

Aspects

Aspects are qualities that define your character. They can give you bonuses to perform certain actions or give the GM a “hook” to complicate the Episode.

Much like certain varieties of the FATE system, Aspects come in two different flavors: **Qualities** and **Challenges**.

Qualities are positive traits. Examples would be “Best pilot in the galaxy”, “Ready for anything”, “Speak softly, but carry a big stick”. They are short phrases that define your character's strengths.

Give your character two or three of these. Try to keep them relatively specific.

Challenges are things your character has difficulty with. They have to be outside the usual baggage of being a Starfleet officer. “Protecting the weak”, for example is not a Challenge; it's expected. “Difficulty with understanding human emotion,” however, is a

decent Challenge. “Unable to say no to a bet,” might be another. Other examples might be “shady background,” “woman in every starport” or “bad luck.”

Try to give your character at least one.

Under this optional rule, Hero Points only give a +2 bonus to rolls. However, if you can plausibly tie spending a Hero Point into one of your positive Qualities, you get the full +5.

Likewise, the GM can randomly invoke one of your Challenges to complicate the adventure. In exchange, you get another Hero Point.

Grittier Feel

One of the things that people occasionally ask for/or bring up is that they prefer their Trek with a grittier feel. The default feel of this game assumes a high-ish level of camp and low player fatality.

Allow some or all of the following rules to achieve a grittier feel:

Grit Rule #1. Disallow or Ignore the Silly Stuff.

This mostly boils down to the sillier Talents in the player section (Ripped Shirt, Red Shirt, Catch Phrase, etc) and a lot of the random GM-oriented stuff like the entry on Cloud Monsters and most of the material in the Appendix.

Grit Variant Rule #2. Death's Door.

The basic rules assume that once you run out of HP, you go unconscious and start taking STR damage. It also assumes you automatically stabilize, because it's not really a very harsh combat system.

With this rule in play, once you're reduced to that point, you lose 1 point of STR per turn (in addition to any further damage you're taking). Once you run out of STR, you're dead.

Medical treatment will stop the STR loss.

Grit Variant Rule #3. Injuries.

Any single attack that causes STR or more damage potentially causes an injury to some body part.

Make a STR + Phys check vs a DC equal to the damage taken.

If the roll is successful, there is no injury and no penalties are accrued.

If the roll is failed, the injury is temporary. It lasts a few days (a sprained ankle, for example).

If the roll is failed by 10 or more, the injury is more serious and lasts for a few weeks. Example: a broken ankle.

If the roll is failed by 20 or more, the injury permanently damages that body part (but might be fixable in sick bay). Example: arm blown clean off.

If it's not immediately obvious from the context where the attack hits, then roll a d6 and compare:

- | | |
|---|-----------|
| 1 | Head |
| 2 | Left Arm |
| 3 | Right Arm |
| 4 | Torso |
| 5 | Left Leg |
| 6 | Right Leg |

Examples of injuries:

Head: Eye injury, hearing, concussion, broken/sprained jaw, bloody/broken nose, nasty bleeding gash.

Arms: Sprained arm, broken wrist, broken fingers, bleeding wound.

Legs: Sprained ankle, broken knee, bleeding wound.

Torso: Broken rib, nasty wound, sprained back.

Penalties vary from a -2 or -4 to an appropriate action to a 50% chance that you simply can't do something related to that injury because a necessary body part just isn't working right.

The GM may also decide that multiple smaller wounds may "stack" to force an injury check. For example, if Lieutenant Smith takes a severe beating during a barroom brawl, the GM might decide that the 15 or so hp worth of damage he took from various punches and kicks may "stack" into one injury roll. If he fails, then he might suffer a cracked rib or a dislocated jaw.

The GM can also "dial" the DC's to his desired level of deadliness. If you really want the game to be more punishing, then instead of using 0/-10/-20 for the various level of injuries, you can try using 0/-5/-10 or some other split.

Of course, this means after a few combats, half the crew's going to be hobbling around with peg legs and eye patches...

Grit Variant Rule #4. Hull Breaches.

An area of the hull blows wide open in a random area within a given department. Anybody within close proximity to the Hull Breach takes 3d10 damage from the explosion. If they pass a DEX + Phys save vs DC 20, they only take 1d8 damage from the explosion.

Unless the GM has a reason to be specific about who is close to the hull breach, just assume a 50% chance that 1d6 crew members are nearby (use a smaller dice range for ships with less crew than a Constitution class starship).

If steps aren't taken to fix the hull breach, all air in that section bleeds into space within 2d6 minutes. Anybody within the same room as the hull breach has to make an opposed STR + Phys roll to avoid being sucked into the cold vastness of outer space by the escaping air.

The opposing roll has an effective STR + Phys total equal to 3d6-3 (minimum 0, roll separately for each character, but only roll once per character per event).

The GM may adjust this number up or down depending on how far away the character is from the breach. The GM may also give the character a bonus if they find something to hold on to.

Failing the roll on a given turn drags that character 10' closer to the hole. If they pass through the hole, they have been shot into the vacuum of space and without adequate protection will begin to die in the usual ways.

Even if the character successfully resists the pull, the GM may call for another roll that turn for anything they're holding onto.

Successfully making the roll means that not only does the crewman avoid getting sucked closer to the breach, they may also (depending on context) move slowly towards an exit or an appropriate control panel.

Movie Mode

So, you've had a successful series, and you're ready to shake things up?

Here's some guidelines:

1. There's a narrative gap. Some time will have passed before the movie. Long enough that things will have changed. Ask each crew member what their character has been doing in the year or so of down time. Have they been promoted? Have they taken a leave of absence to deal with personal matters? Did they get reassigned by Star Fleet?

2. Ground Rules Can Be Changed. Things have gotten bigger and more explosive. Budgets are higher and maybe some special effects have been redesigned. Now's the time to make changes: are your Klingons now bumpy-headed? Is there some new sort of technology, such as transwarp, to deal with? Do phasers now work different because of...

3. Refits. Technology does not stand still (more importantly, special effects crews get grumpy when they have to rehab the same model over and over again). Once a 5 year mission ends, Starfleet makes the call on whether a round of upgrades is appropriate for a vessel.

The general rule of thumb is that a refit increases the SR and WR of a ship by roughly 25%. Impulse maximum speeds improve by .1 or .2c. Warp speeds are increased as well by one or two points. Update other flavor text (such as phaser model numbers) to reflect the fact that your ship is now bigger and badder. It's also new, shiny and full of untried technology. Fun!

Shakedown quirks (Roll d10):

- | | |
|-----|--|
| 1-2 | No bugs. Phew! |
| 3 | Roll on the Section Damage Table. The system indicated is flawed on the new ship. Every time that system is used, roll d6. On a 1, it goes down. Which system is flawed will be a complete mystery to anyone until it breaks down. |
| 4 | Roll on the Section Damage Table. The system indicated is not only flawed as indicated above, it's also tied into the warp drive, which also goes down at the same time. |
| 5 | The new ship's computer is incredibly buggy. And annoying, to boot. |
| 6 | Random nonessential shipboard facilities don't work right. For the next d3 weeks until engineering can get to them, doors occasionally don't open, the toilets flush intermittently, climate control is off-kilter, and every chair has an irritating squeak. |
| 7 | 1d2 systems flat out don't work , not even once. Again, you have no idea which until the first time you try to use them. |
| 8 | 1d2 systems work only at half effectiveness , again, without warning. |
| 9 | You couldn't get certain parts requisitioned in time. Roll d8: (1 no photon torpedoes, 2 phasers at half damage, 3 warp drive can only go up to warp factor 5, 4 sensors only work half the time, 5 SR is only half what it should be, 6 transporters don't work right, 7 you only have one shuttle, 8 the view screen they installed on the bridge has a big crack down the center, but it still works...kind of). |
| 10 | You won the lottery. Congratulations! Roll twice. |

Shakedown quirks can be fixed by engineering. It just takes time, some swearing and perhaps some dramatically risky repairs (if in the heat of battle).

Every time a ship is refitted, roll d6. If the die comes up equal to or less than the number of times it's gone through a refit, then that's the last one: at the end of its current tour, Starfleet will mothball it.

If a ship is on its last refit it's almost the crew's responsibility to ensure it goes out with a bang instead of being sent out to pasture.

Step 4. ...But everything else gets bigger and badder, too. You think the Klingon empire is standing still? They're refitting their own vessels (and launching newer models). And so is the Federation! Your Constitution class may have just gotten an upgrade, but the Excelsior is now on the drawing boards.

Generally speaking, a new model of ship will be in the same ballpark as the previous generation's ships of the same class with several refits under their belt. They may also introduce new technologies that do more than simply add more to the basic numbers.

Step 5. There's a good chance that somebody's gonna die. Roll d6: if a 1 comes up, then one of the PC's are going to die in a very dramatic, tear-jerking way at the end of the movie. They will either be reborn in the next one as part of the plot or be replaced with a very similar character at the end of the film. It's probably a good idea to have the player involved be on board with this.

Step 6. If you're jaded enough that a randomly rolled movie plot sounds appealing to you...

Roll d2:

- 1 A random crew member
- 2 The entire crew

...must...

Roll d6:

- 1 ...come face to face with their deepest fears...
- 2 ...deal with great loss...
- 3 ...risk their career and rank...
- 4 ...risk their families...
- 5 ...pass the torch to a new generation...
- 6 ...come to terms with their greatest failure...

...while...

Roll d10:

- 1 ...the series' most dangerous enemy (up to that point)...
- 2 ...a mysterious alien ship...
- 3 ...a highly advanced space whale...
- 4 ...the Klingons...
- 5 ...the Romulans...
- 6 ...the Gorns...
- 7 ...the Tholians...
- 8 ...a conspiracy of Starfleet officers...
- 9 ...Malcolm McDowell (or—**fine**—a mad scientist of some sort)...
- 10 ...(roll twice)...

Roll d8:

- 1 ...hatch(es) a plan to destroy Earth.
- 2 ...get(s) revenge on the Captain.
- 3 ...plot(s) to collapse the Federation.
- 4 ...travel(s) back in time to prevent the Federation from forming.
- 5 ...incite(s) a war between the Federation and (**roll d6:** 1-2 Klingons, 3-4 Romulans, 5-6 both).
- 6 ...plot(s) to destroy the (or a) sun.
- 7 ...steal(s) a potentially destabilizing technology and plan(s) to sell it to the highest bidder. (Roll twice).
- 8

The plot will deal with...

Roll d20, 3 times:

- 1 The line between machine and man
- 2 Unlikely allies
- 3 The farthest reaches of space
- 4 Shakespeare
- 5 Diplomats
- 6 Enormous spacecraft
- 7 Wretched hives of scum and villainy
- 8 Pre-contact cultures and the Prime Directive
- 9 20th Century Earth History
- 10 Religion
- 11 Unwinnable scenarios
- 12 The Neutral Zone
- 13 Space ninjas
- 14 Time-traveling
- 15 Untamed Wilderness
- 16 Dune buggies on a desert planet
- 17 Exciting chase sequences
- 18 Dinosaurs
- 19 The galaxy's most forbidding prison
- 20 An assault on an impregnable fortress

Non-Random Ability Scores

If random ability scores don't fit your gaming style or that of your group, or you simply prefer something more fair than blind luck, you can choose one of the following ability score arrays instead:

Option #1: 18, 14, 8, 8

Option #2: 18, 12, 10, 8

Option #3: 16, 14, 10, 8

Option #4: 16, 12, 12, 8

Option #5: 16, 12, 10, 10

Option #6: 14, 14, 10, 10

Abilities can be arranged in any order—don't forget to adjust for level and species.

Ramming Speed, Captain!

This is a new space combat maneuver for the truly desperate.

You do damage equal to your ship's SR x4 to your opponent. If successful, you take your opponent's SR x4 as damage. You will always take at least one Section Damage Roll.

The enemy ship must be within point blank range and the pilot must succeed in a Pilot vs Pilot skill check against the enemy ship. If the GM deems the enemy to caught by surprise, this roll will be at +4.

Space Terrain

Not all fights take place out in the empty void of space. Here's some alternate venues.

Nebulae. Ships within a nebula are treated as if they have a partially effective Cloaking Device due to the shifting nature of the gases and clouds.

Treat all ships within the nebula as having a cloaking device, but with a +1d10 bonus to detect them. Roll for the bonus every time a sensor roll is attempted—the clouds shift unpredictably by the moment.

There is also a 1 in 6 chance each round the clouds part enough that for 1d4 rounds, the cloaking effect disappears for all ships within Point Blank range of each other.

Any ships within Point Blank range of each other that are obscured will have a 1 in 6 chance of being **so close** they are in danger of colliding. See “**Ramming Speed**” above for guidelines, DC 20 piloting check to avoid. Each pilot has to make the roll. If **both are successful**, the ships do not collide. If **only one makes it**, the ships do not collide and the winner of the roll gets a free broadside at +2 with either photons or phasers (50% chance of either being available).

In addition to these effects, true Cloaking Devices are disabled and Shields are at 1/2 SR due to the ionization (except for the purposes of determining ramming damage).

Ranges will be much tighter and impulse speeds are divided by 10 to reflect the lack of visibility and the random system interference.

Using an engineering roll to boost the sensor array will aid sensor rolls by +2 for the duration of the scene.

Stars. This environment causes damage every round. WR 10 if in the outer fringes of the corona, WR 20 deeper within. When very deep within the corona, the shields take WR 40 damage per round.

Once the shields go down, d2-1 (minimum 0) Section Damage Rolls are made per round, plus the entire ship is flooded with radiation (see the foot note at the bottom of the Section Damage table).

Due to the energy interference, energy-based weapons are treated as one range worse and ships are more difficult to detect by +5-+15 DC depending on how deep inside the corona the ship stays. The same penalty applies to sensor rolls to detect events outside the corona.

The energy interference may also cause systems to intermittently go to damage level 1 temporarily or until fixed—assume a flat 1 in 20 chance per round that this happens.

Planetary Atmospheres. Warp drives can't be engaged in an atmosphere, and all ship maneuverability rolls will be at -2. Ship movement at impulse speeds is severely curtailed. Engaging more than quarter impulse will cause WR 15 damage per round due to friction. Ranges will also be much tighter. Cloaking Devices are reduced in effectiveness by 5 DC.

Gas Giants. The same effects as a planetary atmosphere, but with the added effects of a nebula environment. Ship movement at impulse speeds is slowed greatly and all ship maneuverability rolls will be at -4 due to the extremely high wind speeds. Engaging more than quarter impulse will cause WR 20 damage per round due to friction.

The thick gases and turbulence halve the damage of energy weapons. Explosions within a gas giant will have greatly increased area of effects—any ship nearby will take half damage as well.

Depending on the gas giant, the GM can declare that nearby lightning discharges have a 1 in 8 chance of striking one ship per round, causing WR 15 damage.

Asteroid Belts. Maneuvering through an asteroid belt is tricky. Every time the ship needs to make a maneuver of any sort, roll 1d4x5 to determine the base DC of the maneuver due to different areas having different asteroid density.

If the ship is moving at 1/4 impulse, there is no modification to this DC. 1/2 impulse adds +5 DC, 3/4 impulse +10, and full impulse +15. Failing a Pilot roll here causes 1d6x5 WR damage, doubled at half speed, tripled at 3/4's and quadrupled at full impulse.

Ranges will be much tighter and impulse speeds are divided by 5 to reflect the lack of open space.

Planetary Rings. All the fun of an asteroid belt and a nebula in one tasty sandwich. It is, however, very difficult to stay within the rings as they are usually only a few dozen kilometers thick.

Space Terrain, New Maneuvers

If the optional Space Terrain rules are in play, then Yellow Shirts can take these Talents:

In Harm's Way. Not only can you avoid obstacles, you can do so in such a way that those pursuing you are endangered. In any terrain with a lot of floating space hazards, if any ship pursuing you rolls 5 or more less than you, they hit an obstacle with penalties as noted under the Asteroid Belt entry on the Space Terrain table.

Hazard Pay. You thrive in dangerous environments—the effects of being in space terrain that does persistent damage from round to round, such as solar radiation, atmospheric friction or gas giant lightning are lessened by one half for your ship while you are piloting. This does not include impact damage.

Shadow. You can manipulate low visibility situations to your advantage. In areas such as murky planetary atmospheres and nebula, you effectively have a full cloaking device at your disposal—you are unaffected by the randomness of the terrain and you may engage or disengage the effects at will.

This ability takes 1 Hero Point to activate and lasts 10 rounds. If you are outside of combat, then a Hero Point isn't required to activate—you are simply very hard to find (-5 to rolls to find your ship).

Speed Demon. Your nearly prescient ability to avoid obstacles allows you to fly faster safer (or so you say). You get a +5 bonus to rolls to avoid an obstacle when flying irresponsibly.

...And, Crashing The Party...

Mugato are large, ape-like creatures that live on the planet Neural. They are highly aggressive and their bite delivers a deadly toxin that kills within hours. The only known cure is the mahko root delivered by a special ritual only known by the shamen of the local hill tribes. Mugato typically attack by grappling and then biting to inject their poison.

Mugato. HD 5d8+15 (38 hp), AC 14. Claws +8 (1d6+5) or Bite +3 (1d6+2)+poison. They can also Grab +8 with Str 20 and Phys score of +8. Poison damage is more of a plot device, but the target will get slowly weaker and become more and more incapacitated until cured.

Galactic Methuselah

Imagine, if you will, beings so powerful that they are near god-like in stature. Beings that can cross the universe as easily as you or I cross the street. Beings that enter parallel dimensions, or alternate time streams, as easily as you or I enter the next room. Beings capable even of piercing the veil between reality and fiction. Such beings are Galactic Methuselah, beyond formidable, the very essence of enigmatic, whose motives are as inscrutable to us as our motives are to insects.

Now, imagine working for such a being. That's where you come in, a servant of a Galactic Methuselah. As powerful as the Methuselah are, they are also very busy. And some chores are just not worthy of a Methuselah's time. So they send their servants out to conduct what are, to them, mundane tasks though to us they are often very nearly suicide missions.

Of course, being Methuselah, ordinary servants won't do. No, Galactic Methuselah must have the very best servants possible, genetically enhanced and armed with big guns.

Creating a Servant

Pick Stats: There are three primary stats: Strength (STR), Dexterity (DEX) and Mind (MND). Each player assigns scores of 18, 16 and 14 to one of the three attributes, as desired. (For example, STR 18, DEX 16, MND 14, or STR 14, DEX 18, MND 16, etc.).

Stat modifier is (STAT-10)/2, round down.

Skills: Per standard M20, there are four skills: Physical, Subterfuge, Knowledge and Communication. Select one skill to be your character's Tag skill (put a small T next to the skill on your character sheet).

All skills start with +1. The Tag skill receives an additional +3. Tag skills increase +1 for each experience level gained; non-Tag skills increase +1 every even numbered level (i.e. levels 2, 4, 6, 8, 10, etc.).

Mutations: Servants may be any kind of mutant: humanoid, animal, plant, even mutant dinosaurs or mutant aliens. All servants start at medium size.

Select up to 10 points worth of mutations for your character. Each mutation point you spend increases your character's Experience Base by 1, thus increasing the number of experience points the character needs to advance each level.

Galactic Methuselahs are expert manipulators of DNA, so characters have no genetic defects.

Players may select the same mutation multiple times, paying the cost for each 'stack' of the mutation. All bonuses and effects stack each time the mutation is taken. Mutations that have a multiplicative bonus increase the multiplier by one step (i.e. x2, then x3, then x4, etc.).

Activated mutations have an (A) next to their name. The activation cost to use the mutation is equal to its total point cost in hit points. These hit points may not be healed normally and can only be regained after complete rest. Activating a mutation usually takes an action.

Amazing Fortitude (1) = +5 to Fortitude Saves (Phys +STR)
Amazing Reflexes (1) = +5 to Reflex Saves (Phys +DEX)
Amazing Will (1) = +5 to Will Saves (Mind + level)
Blindsense (1) = Can pinpoint targets within 30'
Chameleon Skin (1) = +10 Subterfuge when not wearing clothes
Climbing Hooks (1) = 10' climbing speed
Enhanced Strength (1) = +1 to Strength stat
Enhanced Dexterity (1) = +1 to Dexterity stat
Enhanced Mind (1) = +1 to Mind stat
Keen Ears (1) = +10 Listen (Subterfuge + Mind)
Keen Eyes (1) = +10 Spot (Subterfuge + Mind)
Keen Nose (1) = Can track by scent
Padded Feet (1) = +10 Subterfuge when sneaking w/o shoes

Tail (1) = +5 on Balance, Jump and Swim tests
Tremorsense (1) = Sense targets through ground vibrations up to 30'
Aquatic (2) = Gills and webbed fingers/toes
Empathy (A) (2) = Sense strong emotions; +2 Communication
Leech Damage (A) (2) = Touch attack; absorb 1d6 hp from target
Light Natural Armor (2) = Scales, fur; +1 AC
Low Light Vision (2) = Can see in all but total darkness up to 100'
Mutant Rage (A) (2) = +4 STR, -2 AC for duration of combat
Psychic Heal (A) (2) = On touch heals 1d6 damage to target
Stench (A) (2) = All adjacent creatures suffer -2 on all rolls
Talented (2) = Pick another Tag skill
Tougher (2) = +2 hit points per level
Darkvision (3) = See in total darkness up to 60'
Forcefield (A) (3) = Absorbs 10 hp of damage
Natural Weapon (3) = Claws, horns, bite, etc; 1d8 +STR damage
Prescience (3) = +1 on initiative rolls, never surprised in combat
Regeneration (3) = Heal 1 hit point per round
Uncanny Dodge (3) = x2 DEX bonus to AC
Extra Limb (4) = May make 1 extra one-hand attack or hold shield
Heavy Natural Armor (4) = Carapace, exoskeleton; +3 AC, -1 DEX
Light Warp (A) (4) = +10 Subterfuge when sneaking
Shapechanger (A) (4) = Same mass as character up to 10/min level
Tank (4) = x2 starting hit points
Bigger (5) = +2 STR; use 2-hand as medium and medium as light weapons
Double Healing (5) = Double all healing effects
Energy Blast (A) (5) = 1d12 damage up to 60' range
Haste (A) (5) = Duration of combat may take 2 actions/round
Levitate Self (A) (5) = Levitate self + 100 lbs per Mind bonus
Wings (A) (5) = Fly for 10 minutes/level
Leech Strength (A) (6) = Touch attack, leech 1d4 STR and add to yours
Light Slip (A) (7) = Invisible 1 round/level or until attacks or hit
Teleport (A) (7) = Up to 30' distance
Immunity to Acid (8) = No damage from acid effects
Immunity to Cold (8) = No damage from cold effects
Immunity to Electricity (8) = No damage from electric effects
Immunity to Fire (8) = No damage from fire effects
Immunity to Poison (8) = No effect from poisons
Immunity to Psychic (8) = Psychic abilities and powers have no effect
Immunity to Radiation (8) = No effect from radiation

Equipment: Servants begin with 2,000 gold pieces with which to purchase initial equipment.

Characters can carry total items equal to their Strength stat. Several smaller items can be grouped together as one item (i.e. 10 magazines, 6 grenades, 100 gold, 250 rounds, 10 potions, 5 rockets/missiles etc.). Up to six items can be readily available for easy access; everything else goes into the backpack. Particularly heavy or bulky gear counts as two or even three items.

Armor

Light Body Armor = AC +4; Cost: 250 gp
Medium Body Armor = AC +6; Cost: 500 gp
Heavy Body Armor = AC +8; Cost: 1,000 gp
Ballistic Shield = AC +1; Cost: 100 gp
Combat Helmet = AC +1; Cost: 100 gp

Assume armor is modified to fit the mutant's body.

Armor Accessories (1 for Body Armor)

Trauma Plate = AC +3; Cost: 300 gp
Enviroseal = Immune to gas attacks; Cost: 1,000 gp
TAC Computer = +1 initiative and attack rolls; Cost: 1,000 gp
Thermal Insulation = +4 on saves vs. fire; Cost: 500 gp
Cyro Insulation = +4 on saves vs. cold; Cost: 500 gp

Guns

Light Pistols (.22, 9mm, 10mm, .45 ACP, etc.) = 250 gp
Heavy Pistols (.44 Magnum, .50 AE) = 400 gp
Machine-pistols/SMGs = 500 gp
Bolt Action Rifles/Pump Shotguns = 350 gp
Assault Rifles/Combat Shotguns = 800 gp
Sniper Rifle = 1,000 gp
Machinegun = 1,500 gp

Single Shot Grenade Launcher = 900 gp
Multi-shot Grenade Launcher = 1,500 gp
7.62 mm Minigun = 3,000 gp
Rocket/Missile Launcher (6d6 dmg, 20' AoE) = 2,500 gp
Flamer (3d6 dmg, 20' CoE, 10 shots) = 1,500 gp

Players may pick any type of weapon they want. For example, a HK MP-5 SMG or an M-4 Carbine. Just note the caliber ammunition it uses and the number of rounds the magazine holds. Microlite20 Modern has a handy list of firearms you can reference. If a player wants a particularly rare or exotic gun (i.e. Barrett .50 Cal sniper rifle), increase the base cost by 50% to 100%.

Note, machine-pistols and sub-machineguns use pistol ammo; machineguns/miniguns use rifle ammo.

Damage by Caliber*

Pistol Ammo
.22/.32 Caliber = 2d4; cost 1 gp per 2 rounds
9mm/10mm/.38/.45/.357 = 2d6; cost 1 gp per round
.44 Mag/.50 Action Express = 2d8; cost 2 gp per round

Shotgun Shells
12 Gauge = 2d8; 2 gp per round
10 Gauge = 2d10; 3 gp per round

Rifle Ammo
5.56mm/.223 = 2d8; 2 gp per round
7.62mm/.30 = 2d10; 3 gp per round
.50 Caliber Rifle = 2d12; 4 gp per round

Heavy Ammo
Rocket/Missile = 250 gp each
Flamer Fuel = 10 gp per shot

*Taken from Modern d20 SRD

Gun Accessories

Laser Sight = +1 attack roll; 500 gp
Gunlight = Flashlight on gun barrel; 50 gp
Suppressor = Suppresses sound and muzzle flash; pistols, SMGs, assault rifles and certain sniper rifles only; 500 gp
Electronic Sight = Negates range penalty for single aimed shots; incorporates low-light vision and laser range finder; 500 gp
Inter-dimensional Munitions Portal (IMP) = Provides unlimited ammo for one specific type of weapon (i.e. M-16 or AK-47) = Ammo Cost x 1000; x1.5 for burst fire weapon (i.e. 3,000 gp for an M-16; 4,500 gp for an AK-47)

Melee Weapons

Light Melee Weapons = 1d6 dmg; 100 gp
Medium Melee Weapons = 1d8 dmg; 150 gp
Two-hand Melee Weapons = 1d10 dmg; double STR damage bonus; 250 gp
Hanzo Sword = 2d6 dmg; +1 on attack rolls; may be used as a medium or a two-handed sword; 1,000 gp

Grenades (Thrown and Launcher)

Fragmentation = 4d6 dmg; 20' AoE; 100 gp each
Smoke = Poor visibility in 30' AoE; 25 gp each
Flash Bang = Physical + STR save vs. 16 or stunned for 1 combat round; 75 gp
White Phosphorous = 2d8 dmg per round; 30' AoE; 200 gp each
Multiple Projectile = 4d6; grenade launchers only; turns GL into a big shotgun with 60' CoE; 100 gp each

Other Gear

Climbing Kit = 250 gp
10' Telescoping Steel Pole = 100 gp
Camping Kit = 50 gp
Stimpack = Immediately heals 1d10+10 damage = 250 gp
Basic Toolkit = 100 gp
Low-light Goggles = 400 gp
Flashlight = 25 gp

Assume servants start with backpacks, ammo pouches, equipment harnesses, uniforms, combat boots, etc.

The Link: Every servant shares a link with their Methuselah, providing the following benefits:

Comprehension: Servants can read, write and speak any common language, no matter what world or setting they are in. Particularly obscure or arcane languages, such as the long dead language of horrific alien gods from the depths of space, may be undecipherable at the GM's discretion.

Reflection: The link reflects to others what they would reasonably expect to see. For example, a medieval peasant will see an armored knight instead of a mutant freak wearing modern body armor and sporting a minigun.

Sustenance: While the link is active, servants do not require food or drink to survive. They can eat and drink for pleasure, if they like.

Recuperation: The link allows servants to heal even grievous wounds very rapidly. All hit points are recuperated after only an hour of rest.

Communication: Through the link, the Methuselah can keep tabs on its servants. They can also communicate directly to their servants, if desired, but very rarely do so. Finally, the link allows servants to communicate with one another, no matter the distance.

Experience and Advancement

Experience Base: Each character has an Experience Base equal to 10 plus the number of mutation points spent during character creation (to a max of 20 starting).

Experience Points (XP): Experience Points are earned by defeating foes, overcoming traps and obstacles, good role-playing and frivolously wasting your hard earned treasure.

Foes are worth 1 XP per hit die, +1 XP for each doubling of the foe. Especially powerful foes may provide additional XP. Traps, obstacles and role-playing grant an additional 1 to 5 XP. Finally, every 100 gold pieces spent with no material benefit to the character provides 1 XP. This includes carousing, training costs or donations.

Advancement: The number of XP required to advance a level is equal to the character's Experience Base times their current experience level. For example, a character with an experience base of 20 would need 20 XP to advance to level 2, 40 XP to advance to level 3, 60 XP to advance to level 4, etc. When a character advances a level, reset their XP to zero, though any excess XP carries over.

Each level of advancement provides the following:

1d6 + STR mod hit points

+1 to attack rolls

Increase skills (+1 each level for Tag skill; +1 every even numbered level for non-Tag skills).

Every fifth level (5, 10, 15, 20) the character receives five additional mutation points. These points may be spent or saved as desired. Any spent mutation points increase the character's experience base.

Combat

In addition to standard M20 combat, the following applies:

Burst Fire: Some weapons are capable of burst fire. Burst fire incurs a -4 to-hit penalty and uses 10 rounds of ammunition.

If directed against one target, the burst inflicts double damage. Alternatively, a burst can be direct at a 10x10' area. Make one attack roll against all targets in the area; any that are hit take normal damage for the weapon used.

Miniguns: Miniguns require a Strength of at least 16 to wield by hand. Miniguns always fire in bursts of 100 rounds, with -4 on the attack roll. Select a 10'x10' area, then make one attack roll and compare the result to the AC of each character in that area, as well as to each character in a cone between the attacker and the target area. Any that are hit take double damage; 'misses' still take normal damage.

Jams: If using a gun, on an attack roll of 1 the weapon jams. An action is required to clear the weapon. Revolvers cannot jam.

Area/Cone Effect Weapons: AoE weapons (grenades, rockets, cone effect weapons like flamethrowers, etc.) attack everyone within the area of effect. Make a single attack roll against everyone in the AoE. Any targets hit take normal damage; missed targets still take ½ damage.

Light Weapons: Characters may wield a one-handed weapon in each hand with a -2 attack roll penalty. Pistols, machine-pistols and sub-machineguns count as light weapons for dual wield purposes.

Reloading: Reloading most weapons requires one action. Heavy weapons require two actions to reload. Single shot grenade launchers only require one action to reload.

Hazards

In addition to the standard M20 hazards, servants may occasionally run into radiation. Radiation inflicts damage based on its intensity:

Cold = 1d6 damage every hour
Warm = 1d6 damage every 10 minutes (turn)
Hot = 1d6 damage every minute (round)

Spell Casting (Optional)

The GM has the option of allowing servants to learn magic spells, if they acquire scrolls, spell books or find a willing instructor. They may learn either Divine or Arcane spells (yeah, doesn't necessarily make sense for Divine spells, but think of their Methuselah as a god-like being). The chance to learn a spell is d20 + Knowledge + MND modifier vs. DC of 20 + spell level. Servants may only attempt to learn a specific spell once each experience level. Hit point cost for casting the spell is per standard M20 rules. Servants are not subject to spell level restrictions, though neither do they get the reduced spell cost bonus.

Adventures and the Methuselah

Galactic Methuselah is a tool that provides a thin excuse for you to run a bunch of mutant freaks with guns through any d20 adventure. Each adventure should have a hook, which is the Galactic Methuselah's task for his servants. The mission should require the servants to recover some object from somewhere in the adventure, preferably towards or at the end. It can be anything, such as a book, a scrap of paper, some worthless object, the lunch menu from the Death Star's cafeteria...whatever. The hook only exists to provide an excuse for heavily armed mutant freaks to storm through classic D&D modules, or any other d20 adventure.

The Methuselah is not a crutch. He does not provide hints or clues, nor does the Methuselah swoop in at the last moment and save the party from certain death. The Methuselah made the servants, and if they die he can easily make more.

Furthermore, the Methuselah doesn't care about mundane or even magical treasure. Whatever his servants manage to loot is theirs to keep. The Methuselah only cares about whatever object it was he sent the party after in the first place.

There is more than one Methuselah in the galaxy, and they are known for being royal jerks. So, if you want to spice up a classic D&D adventure, which your players may already know by heart, just throw in a few twists. For example, Orcs armed with AK-47s, or switch the traps around a bit, or something similar. Just blame it on some other Methuselah who got wind of what was going on and decided to throw a few wrenches into the works, so to speak.

Acknowledgements

Once again I made use of Darth Cestual's Microlite20 Mutations as a starting point for mutations in Galactic Methuselah, tweaking them here and there as needed. I also borrowed a few rules from Microlite74, Hard Core M20 and Microlite20 Modern.

FRONTIERLITE

A STAR FRONTIERS CONVERSION FOR THE MICROLITE20 SYSTEM.

Note: This is a **conversion**, not a full supplement. For legal reasons, it would be unwise to reprint large sections of copyrighted material. If you want copies of the original rules, They can be easily found on the Internet.

Stats/Skills:

use M20 modern

Classes:

Strong Hero gain +1 to Physical.

Smart Hero gain +1 to Knowledge.

Cunning Hero gain +1 to Subterfuge.

Charismatic Hero gain +1 to Communication.

Occupation:

Enforcer: +3 phys., +1 all attack and damage rolls. this increases at 5th level and every 5 levels on.

Explorer: +2 phys. , +3 to any roll dealing with survival in a natural environment.

Techex: +2 know, +2 on any roll to figure out, or repair / disable a device.

Scispec: +2 know, +3 for rolls dealing with chosen scientific field (computers, medicine, etc.)

Spacer: +2 sub,no penalties in weightlessness, one additional language

Diplomat: +2 sub, 2 free languages.

Mentalist: -3 phys +2 mind, may use 4x5 "mental abilities"

Races:

Human (+1 all skill rolls)

Dralisite (-2 dex, +2 physical, darkvision)

Vrusk (-1 str, +1 dex, +1 smell)

Yazirian (-1 str, -1 physical, +1 dex, +1 mind, low light vision, rage[+4 str,+6 HP till end of encounter, or unconscious])

NPC Races:

Mechanon

Warrior +2 mind,+3 str, -3 sub,low light vision, built in weapon.

Thinker +3 mind, -2 str, +1 sub, low light vision

Sathar -1 dex, +2 communication, Hypnotism as per suggestion spell DC 18

Weapons and Gear:

See M20 modern and M20 core rules.

Also the original Star Frontiers books have tons of equipment for the intrepid adventurer. To convert the weapons, use the following guidelines:

Weapons

-Unarmed = 1d4

-Light Weapons = 1d6

-Medium Weapons = 1d8

-Heavy Weapons = 1d10

-Light Ranged = 1d6, 10ft.

-Medium Ranged = 1d8, 20ft.

-Heavy Ranged = 1d10, 30ft.

Armor

-Light = +2 AC

-Medium = +4 AC

-Heavy = +6 AC

Mental Abilities:

Adapted from: Four by Five Magic by greywulf. A variant magic system inspired by [FUDGE Four-by-Five magic](#) [1], Ars Magica, Harry Potter and the Belgariad.

Mentalists begin play at 1st level knowing three "Mental Constructs" - either Two Actions and One Realm, or Two Realms and One Action. They learn one new "Mental Construct" every three levels (3,6,9,etc).

The Four Actions

- **Enhance** : Strengthen, Heal, Enlarge, Repair, Sharpen, etc.
- **Diminish** : Weaken, Damage, Injure, Reduce, Break, Dull, Deteriorate, etc.
- **Communicate with** : Sense, Read,

Seek, Inform, Determine, Understand, etc.

- **Control** : Shape, Hold, Command, Form, Direct, Dictate, etc. Control is difficult to learn, and you may not learn Control spells until you have learned all of the other Actions

The Five Realms

- **Body** : Living body of sentient beings, animals, plants.
- **Mind** : That which normally inhabits and animates a body
- **Spirit** : The essence or soul. Spirit is difficult to learn, and you may not learn Spirit spells until you have learned at least three other Realms and three Actions
- **Energy** : Fire, water, air, electricity, etc. - and, if the GM is willing, time.
- **Matter** : Solid material with no mind - stone, metal, wood, leather, paper, [plastic, etc.]

Powers are used by combining a Realm with an Action and successfully making a Power (Level+MIND) check.

The DC for the check is dependent on the target of the spell.

Target	DC
Self	10
Willing	15
Inanimate organic	20
Unwilling	25
Inanimate inorganic	35

Each spell cast that day increases the DC by +2.

Powers that affect inanimate objects are generally permanent; an enlarged pebble will stay large, a broken belt will stay mended. Mentally created fires, etc, will die down naturally. Living creatures will eventually (Mentalist level+1 rounds) revert back to their normal form, though any healed damage stays healed.

Every 5 (or part) points of success is equal

to 1d8 effect. This can take the form of damage, healing or transformation; to turn one thing into another the total effect rolled must equal the difference between the two hit point totals.

Examples

Adric Cole, a Mentalist -1 knows the Mental Constructs for Enhance, Communicate and Energy. his stats are STR10, DEX12 and MIND16. His Power check is $1 + 3 = +4$. He suspects Poryn Bane, his enemy, is in the next room, so uses Communicate (sense) Energy to detect any energy sources in the area. He rolls a 16, just reaching DC of 20. He senses the burning flare held by his enemy.

Adric slips into the room, concentrating on the flare. He uses the Constructs Enhance and Energy. He rolls a natural 20, getting 24. The DC of the torch 22 (there's a +2 because it's his second power use today), so it explodes for maximum damage (a critical). Bane takes 8 points of damage, staring in surprise at his opponent's sudden arrival.

Starships and space travel:

Faster than light (FTL) travel is always 1 day/Light Year (LY). For travel and combat in space, use the *Microlite20 Spacecraft* rules by greywulf.

M20 STAR WARS

by Nomad4life, edited and made into a PDF by Luís da Silva Piteira

STATS

There are three stats: Strength (STR), Dexterity (DEX) and Mind (MND). Roll 3d6 for each stat. Stat bonus = (Stat - 10)/2 rounded down.

SKILLS

There are five skills: Physical, Subterfuge, Technology, Education & The Force. Skill rank = your level + any bonuses from class or race. Skill check = d20 + skill rank + whatever stat is most applicable against a DC set by the GM. Saving throws are skill checks.

(Example: Slicing a computer system might be a Tech + Mnd bonus against a DC of 15).

CLASSES

There are four classes, and all begin at level 1. Each class provides a class ability and a skill modifier.

SOLDIER: Combat Bonus & +3 Physical

SCOUNDREL: Sneak attack & +3 Subterfuge

EXPERT: +3 to Education OR +3 to Technical & pick an Affinity

JEDI: Lightsaber training & +3 to Force skill

COMBAT BONUS: +1 to all attack and damage rolls. This increases by +1 at level 5 and again at every 5 levels afterwards.

SNEAK ATTACK: Add your rank of subterfuge to the damage against an unsuspecting foe. Usually this requires an opposed DEX + SUB check, and only applies to the first attack.

AFFINITY: Pick a broad area of specialization, such as medical, piloting, starship repair, survival, or nobility. You can re-roll any checks having to do with this area.

LIGHTSABER TRAINING: When using a lightsaber, a Jedi uses the Soldier's Combat Bonus to attack and adds 1/2 character level to AC if unarmored. In any round after being shot at with an energy weapon the Jedi can deflect this attack back at attackers like a regular ranged attack but can take no other actions. (The Jedi still takes damage if hit, however- assume that more than one shot was fired for the purposes of deflecting.)

M20 STAR WARS: Expert Class Affinity Explained in More Detail

Affinities

What is an Affinity? It is a narrow area of focus that your Expert has specialized in. Simply put, the character can choose to re-roll any checks made under these circumstances. (They are the same as racial Affinities except the player gets to pick one.)

Example Expert Affinities might include:

Piloting	(Any technical crafting-like skill)
Medical	Computers
Nobility	Deception
Droids	Stealth
Starship	repairScouting/Survival
Droid	repairEtc. You get the idea

In review:

- The Expert picks a broad area to be good at.
- The Expert can re-roll checks that fall under this area.

What if a player picks an Affinity that their race already provides them with? Let's say a Duros character is also an Expert with the Piloting Affinity. I would, believe it or not, let the effects stack. That's right. I would let that player re-roll twice if they wanted to!

Sound game-breaking? I disagree. Clearly, that player really wanted to be good at piloting. I say: Let 'em play the kind of character they really wanted. Why not? And hey, it's not like those stacked Affinities will be worth much of anything if they get themselves cornered in the back of some scuzzy cantina. Aye?

Alternately, you could simply rule that a character cannot pick an Affinity that is already granted by their race.

RACE

Pick a race for your character. Each race is constructed using two Racial Template Points. 1 RTP is equal to:

- A +1 stat bonus
- Two skill points
- A special trait or ability (usually an Affinity)

OPTIONAL M20 STAR WARS RACES

Racial template formula: Each race is constructed using two Racial Template Points. 1 RTP is equal to:

- A +1 stat bonus
- Two skill points
- A special trait or ability (usually an Affinity, which lets the player re-roll under certain circumstances.)

Unlike most other games with race selection, players of M20SW are **STRONGLY ENCOURAGED** to play around with the formula themselves to get the feel they want, pending GM approval. Here are some suggestions/guidelines:

Humans: +1 to all skills (except for Force.)

Bothans: +1 Dex & Will Affinity (May re-roll any check involving the willpower of the character.)

Cereans: +2 Mind

Duros: +1 Dex & Pilot Affinity (May re-roll any piloting check once per turn.)

Ewok: +1 Dex & Stealth Affinity (May re-roll any stealth-related check once per turn.)

Gamorreans: +2 Str

Gungans: +2 physical, and Natural Swimmer (Can swim with as much fanfare as other character walk.)

Ithorians: +1 Mind & Nature Affinity (May re-roll a survival check once per turn.)

Kel Dor: +1 Dex, +1 Physical, +1 Force

Mon Calamari: +1 Mind, +2 Education

Quarren: +1 Str & Natural Swimmer (Can swim with as much fanfare as other character walk.)

Rodian: +1 Dex & Tracking Affinity (Can re-roll any check centered around hunting down a specific target.)

Trandoshans: +1 Str & +1 natural AC.

Twi'Lek: +1 Dex & Deceptive Affinity (Can re-roll any check centered around deceiving someone else.)

Wookie: +4 Str; -1 Dex, -1 Mnd (Wookies kind of break the formula a little.)

Zabrak: +1 Dex, +1 Physical, & +1 Technical

DROIDS

Droid models are constructed the same as rules as race creation.

M20 STAR WARS: Optional Droid Rules

Droids have levels like characters, but can only be Soldiers or Experts. Droids do not receive stat increases every three levels like other characters, but in return they are immune to mind-influencing powers and other physiological conditions which living creatures find problematic or fatal (use common sense.) Additionally, droids never age or die as long as they maintain themselves decently. Droids have no Force skill ability.

Most human-sized droids have a flat "10" in all stats. Some droids will have varied stats depending on what they were built for and how expensive/cheap they are.

Some droids have a special programming, such as knowing all languages or star charts of the galaxy. In actual practice, these are little more than superficial ways of moving the plot along and have no additional cost.

NOTE: I'm using the standard NPC D8 to calculate droid hit points. If created as a heroic player character or NPC, a droid use the standard STR + 1d6/level.

Custom droid creation works exactly as race creation, using two Racial Template Points for each model. Some example templates might include:

3P0 Series Protocol Droid: +4 to Education (Yes, this will take the droid to insane levels of educational competence when paired with the Expert class- as it should be.)

B1 Series Battle Droid: +1 Dexterity & +2 to Physical

R2 Series Astomech Droid: +2 Technical & Piloting Affinity

B2 Series Super Battle Droid: +2 AC bonus

Droideka Destroyer Droid: Extra Mount (droid can hold two heavy weapons at once and fire them without penalty) & Alternate Form (roller ball form.)

Sample Stock Droids

Average Protocol Droid: Level 1 Expert (Edu option)

STR: 10 DEX: 10 MND: 10

P: 1 S: 1 T: 1 E: 8

Affinity: Communication

SPECIAL: Protocol droids are programmed with all known languages of the galaxy.

Combat: AC 10 HP (1d8) AT +1 (weapon)

COST: 3000

Average Astromech Droid: Level 1 Expert (Tech option)

STR: 10 DEX: 10 MND: 10

P: 1 S: 1 T: 6 E: 1

Affinity: Piloting (from class)

Affinity: Starship repair (from template)

SPECIAL: Astromech droids are programmed with all known star charts of the galaxy.

Combat: AC 10 HP (1d8) AT +1 (weapon)

COST: 4500

Average Battle Droid: Level 1 Soldier

STR: 10 DEX: 11 MND: 10

P: 6 S: 1 T: 1 E: 1

SPECIAL: Short-range communication with all other battle droids in area

EQUIPMENT: Blaster Carbine

Combat: AC 10 HP (1d8) AT +2 (2d8 +1)

COST: 1800

Average Super Battle Droid: Level 3 Soldier

STR: 10 DEX: 10 MND: 10

P: 6 S: 3 T: 3 E: 3

SPECIAL: Short-range communication with all other battle droids in area

EQUIPMENT: Wrist blaster

Combat: AC 12 HP (3d8) AT +4 (2d8 +1)

COST: 3300

Average Destroyer Droid: Level 6 Soldier

STR: 10 DEX: 11 MND: 10

P: 9 S: 6 T: 6 E: 6

SPECIAL: Short-range communication with all other battle droids in area, roller ball form.

EQUIPMENT: Laser cannons X 2, hardened battle plating (+5 AC)

Combat: AC 15 HP (6d8) AT +8 (2d10 +2) (gets two separate attacks per turn.)

COST: 21,000

Droids and Ion attacks: If attacked with an Ion weapon, the droid must roll a Physical check against the DC or be shut down. To reactivate a droid is an average Tech check. Some droids will automatically reactivate when enough time has passed.

Droids and healing: Forget complicated repair rules- A damaged droid with access to a repair kit or station heals like a normal character. A droid without access to these things simply does not heal. Other characters with a droid repair kit can heal a droid the way medical kits work on living characters.

These are simply my notes for how I plan to run things at my table. Players and GMs are **STRONGLY ENCOURAGED** to tinker around with the droid template formula and class combinations to create something that feels right for them.

LEVEL ADVANCEMENT

Experience points = hit dice of defeated monsters or situation. Add +1 for each doubling of the number of foes. eg: 1 thug = EL1. 2 thugs = EL2. 4 thugs = EL3, etc. Keep track of your experience points earned and divide this number evenly among the party members at the end of the adventure.

When the total = 10 x your current level, you've advanced to the next level. Reset the total to 0 after advancing.

Each level adds:

- +1d6 to Hit Points
- +1 to all attack rolls
- +1 to all skills

If the level divides by three (i.e. level 3,6,9,etc.) add 1 point to STR, DEX or MIND.

Remember, Soldiers gain +1 to their attack and damage rolls at levels 5,10,15,etc.

COMBAT

Hit Points = STR Stat + 1d6/Level. If HP reach 0, unconscious and near death. Further damage directly reduces STR. If that reaches 0, death.

Roll d20 + DEX bonus for initiative order. Everyone can do one thing each turn; move, attack, use the force, etc.

Melee attack bonus = STR bonus + Level (add STR to melee damage)

Ranged attack bonus = DEX bonus + Level

Armor Class (AC) = 10 + DEX bonus + Armor bonus

Add attack bonus to d20 roll. If higher than your opponent's Armour Class (AC), it's a hit.

Natural 20 is automatically a critical doing maximum damage.

Other Hazards

FALLING : 1d6 damage per 10', half damage on Phys+DEX save. DC=depth fallen in feet

SPIKES : add +1 point to falling damage per 10' fallen, max +10

POISON : Phys+STR save to avoid or for half, depending on poison. Effect varies with poison type.

EXTREME HEAT & COLD : If not wearing suitable protection, Phys+STR save once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed save.

HEALING

Standard Healing: Characters heal their level in HP per hour, or twice this with medical care.

Second Wind: Once per adventure, a character can heal themselves of half their missing HP.

THE FORCE

Although all characters have a Force skill rank, only Jedi characters can use Force powers. Using any Force power costs a flat 4 HP, and requires a skill check (1d20 + Force skill.)

-To attack someone with the Force, make an opposed Force check. If you win, you inflict 1d4/Jedi Level damage. Go ahead and narrate how this happened - did you force push them over a cliff? Fry them with lightning? It's all cosmetic, so make it sound cool.

-To take a non-combat action with the Force, tell the GM what it is you want to do. He'll set a DC, and you make a Force check. Want to force jump from one racing landspeeder to another? Sounds like a DC of 20 to me. Now go for it.

M20 STAR WARS: Advanced Force Option

The Force skill

The Force skill measures a character's mastery of the Force. Although all characters have a Force skill rating, only Jedi characters can use Force powers. Using any Force power costs a flat 4 HP, and requires a skill check (1d20 + Force skill.)

How many force powers do I get?

The number of Force powers a Jedi gets is really between the apprentice and his master- in other words, a Jedi has whatever powers his master has decided he is ready to learn. Are you playing a reckless Jedi? Don't be surprised if your master won't show you any new tricks. Are you a responsible Jedi who adheres to the Jedi Code? Your master might teach you everything he knows in short order. Additionally, the number of powers a Jedi knows can change dramatically between eras of play.

In short, the number of powers you get is between you and the GM. I would say that all Jedi start with at least one power, and learn a new one every one or two levels after that. You might have a different take on the matter, such as requiring the Jedi to complete certain quests before gaining access to some Force powers. This could actually be an ongoing source of adventure ideas.

USING THE FORCE IN COMBAT

Using the force in combat involves a simple opposed skill check. If the Jedi succeeds, the attack works as described. If not, the Jedi lost their concentration, or his opponent resisted, got out of the way, etc. (The Jedi still loses the 4 HP, but his opponent suffers no ill effects.)

Using the Force on multiple targets

Whenever appropriate (all Force powers except Battlemind, Negate, Surge, and Farsee) the Jedi can elect to attack/affect multiple targets at once in one turn. Each extra target after the first imposes a -2 penalty to the Force check, and these penalties stack. So, attacking 5 targets at once with Force Push would incur a -8 penalty on each separate check that turn. In addition, the Jedi exerts 1HP for every target after the first in addition to the 4HP cost upfront. (So attacking those five targets not only incurs a -8 penalty, but also nets 8 points of HP loss.) As you can see, it is better to leave the spectacular displays of destruction to the Jedi Masters.

FORCE POWER LIST

Force Push: (Force vs Physical) Force Push inflicts 1d4/Level damage, and knocks the opponent to the ground. The opponent suffers a -4 to AC until they use a turn getting back on their feet.

Battlemind: (1d20 + Force) For every 10 points rolled on a single Force check, the Jedi gains a +1 to attack, damage, and AC for the remainder of the fight scene. This check cannot be re-rolled for the duration of that scene. (EX: A Jedi with Force 7 who rolls a 12 would get a +1 combat and AC bonus. If she had rolled 13 the bonuses would be +2.)

Negate Energy: (Defensive action) By burning the standard 4HP, the Jedi can negate the damage from one energy source. Unlike other Force powers, the Jedi can Negate as many attacks per round as he has HP to burn without the multiple target penalty. However, he loses his next turn in the process. (In other words, to negate two different blaster bolts would cost 8HP, and the next combat action would be lost!)

NOTE: Negate can be used to resist damage outside of combat as well. For example, a Jedi could burn 4HP and walk through fire, or a radiated control room. Outside of combat, the effect still only lasts one turn. Note that Negate would be no help against bullets or spears and such.

Force Grip: (Force vs Physical) The target suffers 1d6/Level damage. Using this power will result in a Dark Side Point.

Force Lightning: (Force vs Force) The target suffers 1d6/Level damage. Using this power will result in a Dark Side Point.

Stun Droid: (1d20 + Force) Treat the check result as Ion attack damage which the droid must save against or shut down.

Mind Trick: (Force vs Level + Mind bonus)

Not really a combat power, but it is an opposed check. If successful, the target treats the Jedi's suggestion as though it were amazingly reasonable. (The GM can impose harsher penalties for over-the-top or ridiculous Mind Trick attempts.)

USING THE FORCE OUTSIDE OF COMBAT

Using the Force outside of combat is a simple matter of rolling a Force skill check against a DC set by the GM.

Here are some general guidelines.

DC 5 Easy task

DC 10 Average task

DC 15 Hard task

DC 20 Difficult task

DC 25 Very difficult task

DC 30 Epic task

Remember that what one group considers a "difficult task" another group might think of as a "hard task" depending on their concept of the Jedi. This is fine.

FORCE POWER LIST

Move Object: The Jedi can move an object with the power of his mind.

NOTE: Remember when Luke pulled his X-wing out of the swamp? I would make that a Difficult task check. You might not, and that's okay.

NOTE: If used to inflict damage against a target in combat (say, by picking them up, slamming them about, and dropping them) treat Move Object as a regular opposed Force Push attack, except that the target can be moved in any direction instead of just away from you. That way, damage from falling, hitting walls, etc is already cosmetically covered.

Surge: The Jedi can move at super-human speeds and leap amazing distances.

NOTE: Remember in the battle with Darth Maul how all three characters jump from high platform to platform? I'd make that a hard task check. You might not, and that's okay.

Farseeing: The Jedi can glimpse visions of far away places.

THE DARK SIDE

Every time a Jedi breaks the Jedi Code or does something evil, they gain a Dark Side Point. When the Jedi has DSPs equal to or greater than their Mind attribute, they are lost to the dark side.

NOTE: What is an evil act? Simple. An evil act is whatever the GM says it is. However, the GM must warn you before you are about to commit an action which will result in a DSP. You can't get one on accident.

NOTE: You want to play a dark side character? No problem. Just make sure the GM is on board with this.

NOTE: You want to be redeemed for you past misdeeds? No problem. There is no mechanical system for this, you and the GM just need to work it out through roleplaying. This can actually spawn great future adventure seeds.

DESIGN NOTES: At the bargain price of 4 HP per power use, Jedi characters start weak but slowly become indomitable machines of destruction as they gain levels and become feared and respected throughout the galaxy. I assure you, this was no accident of design- this is exactly how the Jedi are portrayed in Star Wars media. As for game balance, remember that the Jedi class is balanced more through roleplaying than game mechanics (strict Jedi Code, Dark Side Points, attracts more unwanted attention, etc.)

EQUIPMENT

Provided is an optional equipment list for M20SW.

M20 STAR WARS: Gear List

Starting Credits

All characters begin the game with 3d4 x 250 credits, with two exceptions:

-Jedi start the game with 3d4 x 100 credits.

-An Expert with the Nobility Affinity starts the game with 3d4 x 400 credits.

WEAPONS:

Damage :: Cost

Melee Weapons

Knife: 1d4 :: 25

Club: 1d6 :: 15

Spear: 1d8 :: 60

Staff: 1d6 :: 65

Vibro dagger: 2d4 :: 200

Vibroblade: 1d10 :: 250

Force Pike: 2d6 :: 500

Electrostaff: 2d8 :: 3000

Vibro-Axe: 1d10 :: 500

Lightsaber*: 2d8 :: N/A

*Lightsabers work differently in the hands of a trained Jedi.

RANGED:

Slugthrower: 2d4 :: 250

Blaster Pistol: 2d6 :: 500

Ion pistol: DC 15 :: 250

H. Blast Pistol: 2d8 :: 750

Blaster carbine: 2d8 :: 900

Slugthrower Rifle: 2d8 :: 300

Blast Rifle: 2d8 :: 1000

Ion Rifle: DC 20 :: 800

Flamethrower: 3d6 :: 1000

Bowcaster: 2d10 :: 1500

Blast Cannon: 2d10 :: 3000

H. Repeater: 3d10 :: 4000

Missile Launcher: 6d6 :: 1500

E-Web: 3d12 :: 8000

Ion weapons do not deal normal damage. Instead, a droid must roll Physical vs the DC or be shut down. More on this under Droids.

Slugthrower weapons will bounce right off anything in armor heavier than light- no roll needed.

Many weapons in the Star Wars setting can stun instead of kill. To stun, make a normal ranged attack but increase a weapon's number of dice by 1. The target must make a Phys check against this number or be stunned for the number of rounds they missed the roll by. A blaster rifle, for example, could inflict 3d8 stun damage.

GRENADES:

Frag: 3d6 :: 200

Ion: 4d6 (ion) :: 250

Stun: 4d6 (stun) :: 250

GENERAL EQUIPMENT:

Comlink 250
Pocket scrambler 400
Vox-Box 200
Code cylinder 500
Credit chip 100
Datacard 10
Datapad 1000
Holoprojector 1000
Portable Computer 5000
Electrobinoculars 1000
Glow rod 10
Holorecorder 100
Sensor pack 1500
Aquata breather 350
Breath mask 200
Space suit 2000
Bacta tank 100,000
Medkit 600
Medpac 100
Surgery kit 1000
All-temp cloak 100
Field kit 1000
Jet pack 300
Energy cell 10
Power generator 750
Security kit 750
Tool kit 250
Utility belt 500

NOTE: As a general rule, having equipment simply allows a character to do things they normally would not be able to do. Some gear will grant a +2 circumstance bonus instead. I am not going to outline hard rules about what item has what exact effect, because this seems against the spirit of Microlite20.

ARMOR

Light Blast helmet & Vest: +2 AC (\$500)
Flight Suit: +3 AC (\$2000)
Combat jumpsuit: +4 AC (\$1500)
Medium Generic Combat Armor: +5 AC (\$4000)
Stormtrooper Armor: +6 AC (\$ N/A)
Heavy Corellian Powersuit: +7 AC (\$8000)
Powered Battlesuit: +8 AC (\$10000)
Assault* Armored Spacesuit: +9 AC (\$12000)
Heavy Assault Armor: +10 AC (\$20000)

*Soldiers do not get their attack bonuses while wearing armor this heavy.

NOTES:

Soldiers can wear any armor, but lose their combat bonus in Assault-class armor.

Scoundrels, Experts, and Jedi can also wear any armor they wish. HOWEVER, these characters cannot use their class abilities while wearing anything other than light armor.

In other words|

-A Scoundrel wearing combat armor cannot make a sneak attack, because it is a medium armor.

-A Jedi wearing a Corellian Powersuit does not have access to the force, because it is a heavy armor.

-An expert wearing a flight suit can still use her Affinity, because it is a light armor. However, she could not use her Affinity while wearing Stormtrooper armor.

-A Soldier wearing Heavy Assault Armor does not get his combat bonuses, because the armor is too damn bulky. But really, if a hero needs frackin' Heavy Assault Armor to get through an adventure, it may be time to have a word with the GM anyway.

Oh, yeah, ignore all the who-can-wear-what stuff if it slows down the game.

STARSHIPS

Provided are optional rules for starships and starship construction. [LSP's note: I added Darth Cestual's rules until Nomad can put his in.]

Ship stats do NOT directly translate to character stats. Should it be needed, such as strafing a battlefield of infantry troops, or an orbital bombardment, roll the effects as normal, then multiply by 10.

A ship has 3 stats and 4 systems.

Stats:

Hull = the strength of a ships structural integrity

Thrust = the ships speed and maneuverability performance

Network = the efficiency of the various systems to keep a ship running

Systems:

Computer = the information resource on board as well as the processing power in investigating new phenomenon.

Sensors = the means the ship uses to examine the area around it as well as being able to avoid other sensory systems.

Armaments = a ships offensive and defensive capabilities.

Command = the efficiency of a ships captain and crew to maintain a ships systems as well as it's ability to communicate with other representatives beyond the ships crew.

Ships come in 4 basic classes and are outfitted to meet whatever configuration they need to fill. Each ship has a number of slots per ship type to allocate special systems such as Weapons, Defensive Systems, etc.

Classes:

Raven- small 1-2 person craft, examples are: stunt fighter, spy ship, advanced recon, personal transport. Ravens are capable of maneuvering through an atmosphere and landing planetside. Ravens gain +2 Thrust, 6 slots, 1 Power Core

Falcon- 3-10 person crew, examples are: assault craft, cargo smuggler, supply shuttle, diplomatic transport. Falcons are capable of maneuvering through an atmosphere and landing planetside. Falcons gain +2 Hull, 10 slots, 2 Power Cores standard

Albatross- 10-20 person crew, examples are: battleship, freighter, research vessel, refugee transport,

passenger liner. An Albatross is capable of maneuvering through an atmosphere and landing planetside. Albatross gains +2 Network, 20 slots, 3 Power Cores standard

Phoenix- up to 50+ crew compliment, examples are: Capital ships, carriers, heavy freighters, deep space exploratory vessels. A Phoenix is a space only craft and requires a shuttle or other means of transport planetside. Phoenix gains +1 all Systems, 50 slots, 4 Power Cores standard

Space Stations- if it's necessary for your game to stat up a Space Station, I'd suggest taking the stats for a Phoenix class ship and doubling/tripling/or quadrupling as appropriate.

Configurations:

Warship- gains +3 Armaments, military vessels designed for combat

Privateer- gains +3 Sensors, used by independent contractors, pirates, smugglers, and space gypsies.

Science Vessel- gains +3 Computer, for explorers, researchers, and medical ships

Transport- gains +3 Command, noted for cargo haulers, public/private charters, and supply ships

Power Core- Every ship draws energy from its Power Core which enables its weapons, defenses, drive systems, etc. Every ship must have at least 1 Power Core, and each Core supplies 50 power points for its systems. Power pulled from the Core for system use drains points from the power pool, and are not regenerated until after a scene ends, or 1 point per minute to recharge. When a ship's Power Core reaches zero points, it is dead in space. There is a 10% chance (1 on a D10) that Core containment is lost and a Core Breach occurs, which means a Core Explosion is imminent. The crew will have 1d20+5 rounds to escape via Escape Pods or some other means. Backup Systems can allow a reroll of a Core Breach, or add an additional 1d6 rounds to escape. A Core Explosion completely destroys a ship and does 1d100 damage for a 1 kilometer radius per Power Core. Additional Cores can be installed beyond the ship standard, take up 2 slots. Ships with multiple Power Cores may sacrifice the available power for 2 more slots, but must maintain at least 1 Power Core and power usage remains the same. For example a Phoenix class cargo vessel may opt to drop its 3 of its Cores for more storage space, but would not be able to jump to Hyperspace as it requires 100 points of power for a ship of that size to do so.

Weapons:

Weapon Mount- 2 slots

Lasers- low power beams of coherent light 1d4 damage, 1pt/shot

Rail Guns- magnetically accelerated slugs 1d6 damage, 2pts/shot

Torpedo Bay- 3 slots, 3pts/shot

Torpedoes- low yield, but very maneuverable rockets that can track a target 1d8 damage, +2 Armaments on attack

Photonic Torpedoes - high yield rockets that can track a target 2d8 damage, +1 Armaments on attack

Missile Launcher- 4 slots, 3pts/launch

Missiles- high yield rockets that can be outfitted with various warheads 2d10

Heavy Weapon Mounts- 4 slots, 4pts/shot

Particle Beams- pulsed beams of sub-atomic particles, 3d6 damage

Disruptors- energy beams that disrupt energy shields and power to systems for 1d4 rounds

Lances - high power energy beams, 1d20+5 damage, 5 slots, 5pts/shot

Defensive Systems

Armor- adds bonus to AC, 1 slot = +1 AC

Cloaking Device- avoids Sensor detection, (+20 Sensors) 1pt/round while active.

Energy Shields- absorbs damage, Shield Generator 2 slots, 2pts to activate, absorbs damage at 1 power point for every point of damage inflicted.

Escape Pods- allows up to 4 people per pod to escape a doomed ship. 2 slots

Evasive Maneuvers- pushing a ships maneuverability to it's limit, +1 Thrust/per point

Other Systems

Additional Power Core- +50 power points, 2 slots

Advanced Sensor Array- intense active multispectrum scan and analysis, adds +10 Sensors, 1 slot, 1point/round while in use.Back Up Systems, help prevent a Core Breach, 1 slot

Cargo Bay- 4 slots, 1 ton of cargo/slot

Hyperdrive- allows interstellar travel, 2 slots, spinning up the hyperdrive requires ½ the standard power supply for a ship of its size, Raven 25points, Falcon 50 points, Albatross 75 points, Phoenix 100 points

Matter Transporter- teleports people or cargo ship to ship or to and from planetside, 3 slots, 1point/100lbs transported.

Rec Room- 3 slots, be it a lounge, mess hall, or holodeck, a rested crew functions better, +1 Command

Research Lab- +5 Computer, 3 slots

Reserve Power Supply- holds 20 points of reserve power, 1 slot, can only be recharged once all Power Cores are fully charged.

Probes- automatic or remote guided sensor arrays that can be sent into hostile or unknown areas with little risk to the crew, +5 Sensors, may be used in place of Missile or Photonic Torpedo warheads, 1 slot

Robot- a non-sentient construct that can perform tasks and duties too dangerous for the crew, 1 slot, (A robotic PC may take this spot as part of the crew, freeing up the slot)

Robotic Arm; Cargo- 1 slots, used for moving cargo, debris, or docking with other ships

Robotic Arm; Combat- 2 slots, can be equipped with ranged or melee style weapons for ship to ship combat

Shuttle- Larger craft may hold smaller craft within their cargo bays, Ravens taking 4 slots and Falcons taking 8 slots, or they can attach to the mother ship on the outside for ½ their cost.

Storage Unit- 2 slots, 1 ton of cargo/slot

Tractor Beam- 3 slots, a projected EM field that can hold or move an object in space. 3 points to activate

Combat

Hit Points = Hull Stat + ship class, Raven= 10, Falcon= 20, Albatross= 30, Phoenix= 40

If HP reaches zero, the ship is destroyed and a Core Explosion occurs, see above.

Roll d20 + Thrust bonus for initiative order

Each ship can do one thing each turn; move, attack, beam down the away team...etc.

Diplomacy bonus = Network bonus + Command

Weapon attack bonus = Network bonus + Armaments

M20 STAR WARS: ANTAGONISTS OF THE GALAXY

Antagonists for M20SW are created in the usual M20 way:

1. Assign hit dice (1d8 for most things.)
2. Attack bonus & skill level = number of hit dice.
3. Modify for attributes
4. Modify for gear

An antagonist is worth its hit dice in experience points. Special attacks/abilities increase this by level up per ability.

NOTE: I do not play Microlite with reiterative attacks, to keep things smooth and simple. To add them back in, just go by the regular reiterative attack rules.

FORMAT

Name

Armor class (Hit Dice) +Attack Bonus (Damage)

Stormtrooper (all types)

16 (2d8) +2 (blast rifle 2d8)

Imperial Officer

10 (4d8) +4 (blaster 2d6)

Rebel Trooper

12 (1d8) +1 (blaster 2d6)

Clone Trooper

16 (3d8) +3 (blast rifle 2d8)

ARC Trooper

16 (5d8) +5 (blast rifle 2d8)

Generic thug

11 (1d8 + 1) +2(Slugthrower 2d4)

Bounty Hunter

16 (6d8 +6) +7(Blast Cannon 2d10)

Assassin

13 (6d8) +6(Vibroblade 1d10 +2)

*Can make sneak attacks like a scoundrel)

Jedi/Sith

14 (4d8 +4) +5 (Lightsaber 2d8 +2)

*Lightsaber training bonus to attack & AC

*Force skill at +4: has any powers GM picks

Jedi/Sith Master

17 (10d8 + 10) +15 (Lightsaber 2d8 +5)

*Lightsaber training bonus to attack & AC

*Force skill at +10: has any powers GM picks

Rancor

20 (12d12 + 72) +18 (2d6 + 6)

*The Rancor can make two attacks without penalty per round

NOTE: Why the weak Stormtroopers?

One of the most definitive and unbreakable laws of Star Wars is that Stormtroopers always go down in one hit in the movies, and can't hit a damn thing with their blasters. Not some of the time. All the time. Yet, very few Star Wars games seem to take this into consideration. I hate that. My philosophy is that Stormtroopers are feared throughout the Galaxy for their numbers, gear, training, and devotion rather than their individual strength.

Don't like it? Change it. That's what Microlight 20 is all about!

Sample M20SW Characters

Just for demo. I didn't bother calculating funds, etc.

Dread Lord Pirate Kirgan: Human Scoundrel 1

STR: 10 DEX: 11 MND: 12 (+1) HP: 15

P-2 S-5 T-2 E-2 F-1

GEAR: Blaster (2d6)

Cutlass (1d6)

All-temperature cloak

Combat: AC: 10 (HP: 15) AT:+1 (2d6)

Waxer: Human Expert (Tech) 1

STR: 13 (+1) DEX: 15 (+2) MND: 8 (-1) HP: 17

P-2 S-2 T-5 E-2 F-1

Affinity: Pilot

GEAR: Blaster carbine: 2d8

Comlink

Combat: AC: 12 (HP: 17) AT: +3 (2d8)

Rawthagor: Wookie Soldier 1

STR: 17 (+3) DEX: 13 (+1) MND: 7 (-2) HP: 21

P-4 S-1 T-1 E-1 F-1

GEAR: Wookie Bowcaster: 2d10

Combat Armor: +5 AC

Medic Pack

Combat: AC: 16 (HP: 21) AT: +3 (2d10 +1)

Jar-Jar, Dark

Scourge of The Stars: Gungan Sith 1

STR: 13 (+1) DEX: 14 (+2) MND: 10 HP: 15

P-3 S-1 T-1 E-1 F-4

Natural Swimmer

GEAR: Lightsaber (2d8)

Datapad

Combat: AC: 13 (HP: 15) AT: +3 (2d8 +2)

Cknight's alterations

AC to Defense

Defense = 10 + DEX + 1/2 level

Hit Points to Vitality

Use ML20 Body Points Rule

Threshold = 1/2 STR Stat + Armor + 1/2 level

When a character takes more damage than Threshold they receive 1 wound.

When a character receives wounds make Fort save or be stunned. DC 10 + wounds

Armor provides DR only to wounds

Soldiers have a reduced armor penalty to DEX

Scoundrels duel wielding is -1 rather than -2

Specialist get a sidekick at 1/2 their level

Extra attacks stack -4 to all attacks

Added Force Power List

Cognitive

Affect Mind: Force check vs Will save. Suggestion sounds reasonable

Battle Mind: Force check. Every 10 grants +1 to attack, damage, and defense.

Empathy: Force check vs Will save. Know emotional state. Grants +4 on communication checks with target for 10 rounds.

Farseeing: See distant place or person, present past or future.

Fear: Force check vs Will save. Target has -4 to all actions for a number of rounds equal to users force level.

Friendship: Force check vs Will save. Change attitude of target.

Illusion: Force check sets DC

Telepathy: Force check vs Will save. Able to communicate directly with mind.

Energetic

Drain Energy: Force check. GM sets appropriate DC. Item loses power

Force Grip: Force check vs Fort save. Target takes 1d6 per Force user level damage.

Force Lighting: Force check vs Reflex or Force save. Target takes 1d6 damage per Force user level.

Force Strike: Force check vs Fort save. Target takes 1d6 damage per 2 Force user levels.

Move Object: Size/Cost; Tool/1, Human/4, Speeder/8, TIE/16, Falcon/32, Corvette/64, Star

Destroyer/128

Dissipate Energy: Force check vs DC 10 + damage.

Force Flight: Move $\frac{1}{2}$ force level x movement. 1 round

Biology

Surge: Multiply movement x force user level+1 for 1 round.

Haste: Extra attack with no penalty and defense +2 for 1 round.

Spider Walk: move along walls ceiling with out penalty, must concentrate.

Enhanced Senses: Can use senses way beyond normal use.

Healing: Force check. Every 10 on result restores 1 body point. Target may benefit once per day from healing.

Vitality Transfer: Give vitality to another. Up to force skill per use.

Plant Surge: Force check vs Reflex save. Target is tangled in overgrowth. -2 to all actions and defense and can only move $\frac{1}{2}$ speed. Radius of overgrowth is equal to 1 meter per force level and has a range of sight.

Meta Force

Force Defense: Force check vs DC 10. +2 vs force skills. Last 10 rounds.

Every 5 over the DC grants an additional +2 vs force skills.

Force Stealth: Force check vs See Force check. Cannot be detected in the force.

See Force: Force check vs DC 25 - Targets force level or force stealth check.

Force Light: Force check vs Will save. Imposes -4 to dark side beings for a number of rounds equal to the casters force level. Damages Dark spirits 1d6 per force level.

Force Mind: Force check. Every 10 grants +1 to attack, damage, and defense of allies.

Must concentrate. And spend 1 vitality per round to upkeep.

Microlite20 Star Wars

These are rules for a Microlite20 version of the Star Wars RPG. While they attempt to stay true to the spirit of Microlite20 they don't necessarily map directly to either edition of the D20 Star Wars RPG rules. The rules are meant to be relatively lightweight and favor an epic type of play befitting the Star Wars universe. All you need to play is some polyhedral dice and every player should have something to keep notes on.

Characters

Stats

Star Wars uses four stats: Strength (Str), Dexterity (Dex), Mind (Mnd), and Charisma (Cha).
Roll 4d6, dropping the lowest die. Total the remaining 3 dice and allocate to one of the stats. Repeat for the remaining stats.
Stat bonuses are (STAT-10)/2, rounded down.

Species

The Star Wars universe is filled with diverse alien species. At the time of character creation the player picks a species for their character. Different species offer certain bonuses at their first level, these can be modified at the GM's discretion.

Humans: +1 to all skills (except for Force.)
Bothans: +1 Dex & Deception expertise
Cereans: +2 Mind
Duros: +1 Dex, Pilot expertise
Droid (Small): +2 Technical, Droid, Starship, or Vehicle repair, Small size, cannot be Jedi
Droid (Medium): +2 Technical, Extra expertise at first level, cannot be Jedi
Droid (Large): +2 Physical, Extra expertise at first level, Large size, cannot be Jedi
Ewok: -2 Str, +2 Dex, Stealth expertise, and Small size
Gamorreans: +2 Str
Gungans: +2 Physical, and Natural Swimmer (Can swim at base speed)
Ithorians: +1 Mind and Survival expertise
Kel Dor: +1 Dex, +1 Physical, +1 Force
Mirialan: +1 Dex, Acrobatics expertise
Mon Calamari: +2 Mind and Natural Swimmer (Can swim at base speed)
Quarren: +1 Str, Natural Swimmer (Can swim at base speed)
Rodian: +1 Dex, Tracking expertise
Sullustan: +1 Technical, Starship Repair expertise
Trandoshans: +1 Str, +1 natural Defense.
Twi'Lek: +1 Dex, Deceptive expertise
Wookiee: +3 Str, -1 Dex
Wroonian: +2 Cha
Zabrak: +1 Dex, +1 Physical, +1 Technical

Size: Most playable species are Medium in size and get no special size related bonuses or penalties and have a base move speed of 6 squares. With the GM's approval players can play also play a Small or Large species. Small characters get -2 Str and +2 Dex and have a movement of 4 squares while Large characters get +4 Str and -2 Dex and a movement of 8 squares.

Classes

There are five classes—*Soldier*, *Noble*, *Fringer*, *Scoundrel*, *Jedi*. Characters begin at Level 1.
All classes can use any weapon, armor or equipment, including vehicles.

Soldiers are the muscle of the group. Goons, thugs, bodyguards—they are tough and good with weapons. They gain +1 to all attack and damage rolls. This increases by +1 at 5th level and every five levels afterwards.

Noble are born into high society and are accustomed to privilege. They're often silver tongued and politically savvy. They gain +1 to Communication and Knowledge rolls. This increases by +1 at 4th level and every four levels afterwards.

Fringer are from the outskirts of galactic society and as such are very resourceful. They gain +1 to Technical rolls and gain an extra expertise at 1st and 10th levels.

Scoundrel skirts the edge of the law. They survive by their wits and luck. They gain +1 to Subterfuge and Technical rolls. This increases by +1 at 4th level and every four levels afterwards.

Jedi are Force sensitive characters. While the name of the class is Jedi, members of this class don't have to necessarily be members of the Jedi order. A Jedi's primary skill is Use the Force and they can activate Force Powers. Jedi get an extra 2HP at every odd numbered level (1, 3, 5, etc).

Skills

There are six skills : *Communication*, *Knowledge*, *Physical*, *Technical*, *Subterfuge*, and *Use The Force*. Roll higher than the given Difficulty Class or opposed roll to succeed. Only Jedi can have Use the Force as their primary skill.

Each character must choose 1 skill they are best at. Your rank in that skill will be at your level+3. All other skills will be at half the character's level, rounded down, plus one ((Level/2)+1).
Skill roll = d20 + skill rank + whatever stat bonus is most applicable to the use + situation modifiers. For example, Climbing would use Physical + STR bonus. Dodging a falling rock is Physical + DEX bonus. Piloting a ship is Technical + DEX bonus.

Difficulty Classes

Very Easy	5	Hard	20
Easy	10	Very Hard	25
Moderate	15	Exceptional	30

Expertise

Characters can pick a skill expertise at Character Creation and every 5 character levels beyond that (5, 10, etc). When performing an action covered by an expertise the character gets a +5 circumstance bonus to the roll.

Vehicle Piloting	Squad Tactics
Vehicle Repair	Stealth
Starship Piloting	Survival
Starship Repair	Tracking
Droid Repair	Command
Computers	Acrobatics
Medicine	Languages
Investigation	
Astrogation	
Deception	

Level Advancement

Encounter Level = Hit Dice of defeated foes, or the given EL for the trap, situation, etc. Add +1 for each doubling of the number of foes.
e.g.: 1 Goon = EL1. 2 Goons = EL2. 4 Goons = EL3, etc.

Add up the Encounter Levels (EL's) of every encounter you take part in. When the total = 10 x the character's current level, you've advanced to the next level. Reset the total to 0 after advancing.

Each level adds:

+1d6 to Hit Points +1 to the character's primary skill(s) +1/2 to all other skills

If the level divides by four (i.e. level 4, 8, 12, etc.) add 1 point to STR, DEX, MND or CHA.

A new Expertise is gained at levels 5, 10, 15, etc.

Soldiers gain +1 to their attack and damage rolls at levels 5, 10, 15, etc.

Contests

Challenges

Some skill checks should be broken into parts to maintain tension. Examples would be searching disabling all trash compactors on the detention level, sneaking through the Death Star to disable the tractor beam generators, or attempting to build a lightsaber.

Break a complex or long running task into a number of appropriate skill checks and determine the acceptable number of failures. Players in a challenge will make the skill checks against static DCs. If they succeed in their check some amount of time passes and they move on to the next check. If they fail the check the DCs for all subsequent skill checks get a stacking +2 modifier to the difficulty. If they fail a number of checks equal to the acceptable failure limit they fail the whole check and may not make another attempt. A failed skill challenges should carry some sort of in-game penalty like the guards being alerted or the computer system getting locked down.

The GM should encourage players to roll play their actions they're taking in the challenge describing exactly what they're trying to do. The GM doesn't necessarily need to tell the players they are participating in a skill challenge, they can just give them skill checks to make and keep track of successes on the sly. The skill checks in a challenge can be performed by different characters with the GM's approval (this is a good idea) so every player can participate in a challenge.

Chases

Occasionally, two or more characters will directly compete with another outside of a combat situation. Perhaps they're chasing each other, maybe they're debating a topic, etc. It all boils down to the following:

- One character is the Hunter, one is the Prey.
- There are 5 points of Lead. If the Lead increases to 5 or higher, the Prey wins. If the Lead reaches 0, the Hunter wins. The Lead usually starts out at 1, but the GM can decide to use a different number as starting Lead if one side has an advantage.
- Both sides make skill checks each round and describe the actions their character(s) are going to take that round. These will often be opposed skill checks with the highest roll winning a point of Lead. The GM can optionally throw in checks against a static DC to represent obstacles (literal or figurative) that might trip up both characters.

The highest successful skill check total wins 1 pt of Lead, either towards the Hunter's or the Prey's advantage. Depending on what these maneuvers are, additional benefits or penalties may accrue in the following round. If neither skill check passes, the Lead remains unchanged and additional unpleasant effects may ensue as expected for a failed skill roll of that type (crashing, falling, losing the audience's interest, whatever). If only one side fails their check, one or more extra points of Lead may accrue to the other side depending on how badly the roll failed by. Risky Maneuvers: For a DC penalty, you can attempt to change the Lead in one attempt by 2 or more points. Describe what you're doing, then take a +5 DC penalty for every extra point of Lead you want. Failure will usually have pretty serious consequences.

For more epic Star Wars feeling combat scenes consider using chase mechanics instead of the normal combat mechanics. Using

this method for combat the Lead should start at 2 or 3 instead of 1 representing roughly even standing at the start of combat. For instance lightsaber combat could be easily resolved with the chase mechanics with the winner of the chase either escaping from or disabling their opponent. For starship combat the Prey winning might mean they escaped from or disabled the Hunter while the Hunter winning may mean they disabled the Prey or caught them in a tractor beam.

For chases between large groups (5+) characters or ships average the appropriate skill bonus for each side (rounded down) and run the chase normally. The GM should decide the actual tally of the battle depending on the number of times each side lost points of Lead. If the Prey didn't lose any points of Lead during the battle the GM might say they routed the Hunter's forces. A Chase where Lead points were traded back and forth the GM might decide that the winner just squeaked by and lost close to half their force with the loser obviously having lost a larger chunk of theirs.

Combat

Combat is broken into five second rounds. In every round each character gets a turn to act. Roll d20 + DEX bonus for initiative order. Everyone can do one thing each turn; move, attack, dodge, operate a vehicle, etc. Only roll once, on the first round of combat—the order stays the same for subsequent rounds. Movement and range are measured in "squares" a square is 1.5m on a side (about 5') in character scale and 2km in starship scale though the GM is encouraged to change these values to whatever is appropriate for their setting..

Combat Stats

Hit Points: STR Stat + 1d6/Level. If HP reaches 0, you are unconscious and near death. Further damage directly reduces STR. If that reaches 0, you are dead.

Melee attack bonus: STR bonus + Level

Ranged attack bonus: DEX bonus + Level

Defense: 10 + DEX bonus + Physical.

Saves are bonuses added to rolls for characters resisting damage or harmful effects.

Fortitude: Physical + STR bonus

Reflex: Physical + DEX bonus

Will: MND or CHA bonus + level

Add attack bonus to d20 roll. If higher than the character's opponent's Defense, it's a hit. Natural 20 is automatically a critical, doing maximum damage. Soldiers and Fringers can use DEX bonus + Level as their Melee attack bonus instead if wielding a light weapon. Add STR bonus to Melee damage, x2 for 2-handed weapons.

This version of Microlite does not use iterative attacks. If you want to make more than one attack per round, use a Maneuver (see below). All additional attacks through maneuvers occur more or less simultaneously.

Stunned: If a character is stunned they cannot take an action on their turn until the stun wears off.

Ranged Penalties: If the target is relatively close, there is no penalty to hit for range. Add a -2 penalty for every range increment.

Unarmed Combat: Unarmed attacks from Medium creatures do damage equal to 4 + STR bonus. Unarmed attacks have a range of 1 square.

DR: Characters get damage reduction from armor. The DR score is subtracted from any damage dealt to the character.

Stun: All blasters have a stun settings. When a target is hit with a blaster set to stun they are stunned for one round for every point that attacker rolled higher than their defense.

Maneuvers

Maneuvers are things you can do in combat in lieu of a normal attack. One maneuver can be performed per turn.

Aimed Shot: Characters get a +4 to their attack roll but their Defense becomes 10 until their next turn.

Assassinate: If the character successfully sneaks up on a target and makes a successful melee attack against DC10 they can do damage equal to STR + Physical + maximum weapon damage.

Autofire: Allows the character to make multiple attacks against a set of up to five adjacent squares. The attacker makes a single attack roll with the normal range penalties as well as an additional -5 penalty. Any targets in the selected squares must make defensive rolls.

Dodge: Performing a full dodge characters roll d20 + Dex + Phys. The total is their effective Defense until their next turn. If it's lower than their normal Defense then they zigged when they should have zagged. Dodging lets the characters move their normal move distance.

Grab: A character can make a grapple attack on a target in an adjacent square. If they roll a successful melee attack they are then grappled with their target. Both the attacker and the defender's Defense becomes 10 when grappled and they cannot make move actions. When in a grapple the defender can't take normal actions and must make opposed STR + Physical rolls against the attacker to attempt to break free. As long as the defender is grappled the attacker can make automatic unarmed attacks on the defender.

Full Run: At a full run your character can move at twice their normal speed for the round. If running for more than one round in a row make a Str + Physical check against DC 20.

Knockout: A character can attempt an armed melee attack against a creature in an adjacent square to stun them. On a successful hit the target is stunned one round for every point the attacker rolled higher than their defense. The butt of a rifle or handle of a pistol can be used for this melee attack.

Run and Gun: You can make your full move action but can also make an attack action. Doing so incurs a -10 penalty to the attack roll.

Sneak attack: If a character successfully sneaks up on a target and makes a successful attack they can add their Subterfuge bonus to their attack damage.

Take Cover: If the character duck behind an object, they gain a +2 to +10 to their Defense depending on the extent of the cover (light cover = +2 all the way to nearly complete = +10). Half this Defense bonus may also apply to saves if the GM allows it.

Teräs Käsi: A character uses martial arts training to deal more damage with an unarmed attack. A martial arts attack does STR bonus + 1d6 damage and can stun the target at the GM's discretion.

Throw an explosive: Thrown weapons (usually grenades) require the attacker to make a ranged attack (no penalty) targeting a particular 5 foot by 5 foot area, which is a DC 10 roll. Anyone caught within the blast radius can make a reflex save against DC15 for half damage.

Two weapons: You can wield two light weapons and attack with both in a round if they take a -2 penalty on all attack rolls that round. It's up to the GM what counts as a light weapon. For example, in some campaigns, shotguns might be appropriate for dual-wielding, in others, they might not. Pistols are always appropriate, as are the usual light melee weapons like lightsabers.

Action Points

Characters begin each session with 3 Action Points. Each Action Point can be used in several ways:

- Add +5 to any roll, but only before the GM declares the results of the roll.
- Add +5 to Defense for one round.
- Recover half your lost hit points instantly. You spend your current action catching your breath.
- Bring your character back from the dead...in the next adventure. Only 1 Action Point can be spent per round.

Recovering Action Points

- Every time your character does something particularly impressive or achieves a goal of some sort, the GM may award one or more Action Points.
- Every time you roll a natural 20, you gain 1 Action Point.
- Every time you start a new session, the Action Point pool is fully refreshed. Any unused Action Points from the previous session will be lost.

Don't hoard Action Points--they're meant to be used!

Other Hazards

Falling: 1d6 damage per 2 squares, half damage on Fort save. DC = 5 per square fallen.

Extreme Heat & Cold: If not wearing suitable protection, Fort save once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed save.

Lava: 2d6 damage per round exposed; much more if completely immersed. Damage continues until lava is removed or quenched.

Poison: Fort save to avoid or for half, depending on poison. Effect varies with poison type.

Radiation: Lose 1d3-1 STR per round, DC 20 Fort save for half (round down). Damage is potentially much higher in very hard radiation. STR recovers at a point per day if properly treated.

Spikes: add +1 point to falling damage per 10' fallen, max +10

Vacuum: If not wearing suitable protection a character will lose consciousness in a minute and suffocate soon after.

The Force

Life creates it, makes it grow. It's energy surrounds us and binds us. Luminous beings are we...not this crude matter. Jedi have a sensitivity to the Force and can use it for their own ends. This is manifested through Force Powers. Some powers are defensive and are simply activated while others are activated and need to be maintained. As Yoda said "A Jedi's strength flows from the Force. But beware of the dark side." When a Jedi uses the Force for an evil end or an offensive manner against living creatures they gain a Dark Side Point. When they've accrued 10 or more Dark Side Points they have become tainted by the Dark Side of the Force and the player loses control of that character. Dark Side Points can only be removed by performing selfless acts (as determined by the GM).

To activate a Force Power a Jedi uses a standard action. Passive powers put 4HP on hold while they are active, when the power is deactivated (also a standard action) the character gets the 4HP back. If they're knocked unconscious while the power is activated do not get the HP back. Using an active power costs 2HP. Keeping an active power up for more than one round or as part of a skill challenge only requires subsequent checks and not additional HP. A Jedi can attempt to use any of the powers listed below with the GM's approval.

Force Expertise

The following Expertise are only available to Jedi characters. The Jedi Knight and Sith expertise should be applied to Use the Force checks involving Light side or Dark side powers.

Lightsaber Combat Sith

Jedi Knight

Force Powers

Lightsaber Defense: (passive) This power allows a character armed with a lightsaber can use their UtF skill bonus as a bonus added to their Defense. The Jedi must be aware of the attack and wielding their lightsaber to use this power.

Battlemind: (passive) This power gives the Jedi a +1 bonus to attack rolls as well as Defense. This bonus stacks with maneuvers like Dodge. Additional HP can be spent to increase the bonus to either stat, e.g. spending an extra 2 HP the Jedi could add an additional +2 bonus to either their attack roll or Defense or +1 to each.

Mind Trick: (UtF vs Will save, active) In combat an opponent can become dazed and loses their next turn, outside of combat this power can be used to implant a suggestion in the target's mind. This power cannot be used against robotic brains (Droids, etc). Range 6 squares.

Telepathy: (UtF vs Will save, active) The character communicate with a target or read their thoughts. The target doesn't have to attempt a Will save if they are willing to communicate with the Jedi. Range 12 squares.

Force Sense: (passive) This power allows the Jedi to use the Force to heighten their senses. With this power active they get a +5 bonus to skill checks involving their senses.

Force Grip: (UtF vs Fort save, active) This power lets the Jedi grab something with the Force. Use the rules for the Grab maneuver but this can be performed from a distance. The Jedi rolls their Force + MND instead of Physical + STR. If they cause undue harm to the opponent (such as choking them) they may incur a DSP. Range 6 squares.

Force Thrust: (UtF vs Reflex save, active) A Jedi can use this power to push things away from themselves. This can direct this thrust in a single direction or have it push back in a ring around themselves. Creatures make a Reflex save or are knocked prone. Range in single direction 6 squares, 2 squares in ring.

Move Object: (UtF vs. Reflex save or DC, active) This power can be used against creatures and objects to move them using the Force. Against creatures the target defends with its Physical skill, against inanimate objects use a DC based on the size of the object. Normally a creature is simply knocked prone until the next round but the user can damage the target for 1d6/DC step as well; doing so against a living creature incurs a DSP. Range 6 squares.

Challenge DC					
Tiny	5	Small rock	Gargantuan	30	X-Wing
Small	10	Blaster rifle	Colossal	35	YT-1300
Medium	15	Stormtrooper	Colossal (frigate)	40	Tantive IV
Large	20	Speeder bike	Colossal (cruiser)	45	Star Destroyer
Huge	25	Landspeeder	Colossal (station)	50	Death Star

Dissipate Energy: (UtF vs damage DC, active) This power allows the user to absorb and dissipate energy that would otherwise cause them damage from one source.

Surge: (active) This power can be used to aid a physical or acrobatic action. It is used as part of a standard action and provides a +5 bonus but does not require a skill check of its own.

Lightsaber Throw: (UtF vs DC, active) This power allows a Jedi to use the Force to throw and return their lightsaber to their hand. Use the rules for the Throw Explosive maneuver with the damage being that of the lightsaber.

Force Lightning: (UtF vs Fort save or Force, active) This power channels the Force violently into lightning that shows out of the character's fingertips. Use of this power automatically incurs a DSP. The damage is 1d8/level.

Enhancing Powers

If the Jedi is willing to spend extra HP they can enhance Force powers they are using. Enhancements can be stacked with cumulative costs.

Extend: Extending a Force Power increases it's range by one increment for every 2HP spent. E.g. Spending 2HP could double the range of a Force Grip to 12 squares.

Empower: A Force Power gives a 50% higher bonus or does 50% more damage than it normally does. +1HP cost.

Widen: Widening a power enables the Jedi to increase the number of targets for a Force Power. +1HP cost.

Unleashed: An unleashed Force Power lets the Jedi decrease the DC one step for 4HP. They can spend additional HP to decrease the DC further. E.g. spending an additional 8HP would allow drop a Very Difficult task to Hard (DC25 to DC15).

Equipment

Equipment and background characters are an important part of a Star Wars adventure. Characters start an adventure with 5 Gear points plus 1pt per level. Gear points allow the character to buy weapons, armor, gadgets, vehicles, and requisition help. With the GM's approval characters can pool their gear points to buy more expensive gear. The equipment below is deliberately generic (though with a Star Wars flavor). Extremely common equipment (datapads, comlinks, etc) don't cost Gear points (with the GM's approval). The GM can also give Gear point bonuses or penalties depending on the character's affiliation or the current situation. Gear points reflect a character's access to equipment and resources in normal circumstances but the GM is the final arbiter on the availability of any equipment for a particular adventure.

Gear

Ships & Vehicles

The Star Wars universe is one filled with fantastic starships and vehicles that areas much a part of the game as lightsabers and the Force. Vehicle stats are similar to those of characters and are derived from their size class (6-10m Huge, 11-20m Gargantuan, 21-100m Colossal, 101-500m Colossal (frigate), 501-2000m Colossal (cruiser), 2001+ Colossal (station)). Vehicles move naturally so get to make a standard action in addition to a movement per turn. Vehicles do not need to make saves, have no Cha score, and do not have skills. When taking actions that normally grant a skill bonus they simply omit the skill bonus from the roll. Stat bonuses for ships are ((Stat-10)/2).

Each turn a ship can both move and make an attack with each mounted weapon system. Weapons can only fire into their designated firing arcs and weapons of the same type in the same arc are considered a single weapon system. A firing arc is a roughly 45° cone pointing in one direction from the ship. A turret can fire into any firing arc. Ships can make the "Full Run" maneuver and move at twice their normal speed for one round. Resolve dogfights using the Chase contest type, if the hunter catches the prey they successfully made an attack and roll for damage. While it's generally not a good idea to mix starship and character scales, multiply starship damage by 10 or divide character scale damage by 10.

Base Stats				
Size	Str	Dex	Int	Slots
Character Scale				
Large	16	18	12	2
Huge	20	16	12	4
Gargantuan	24	14	12	6
Starship Scale				
Huge	16	24	12	5

Gargantuan	24	20	14	10
Colossal	32	18	16	20
Colossal (frigate)	40	16	18	30
Colossal (cruiser)	48	14	20	60
Colossal (station)	56+	12	22+	100+

Vehicle Stats

Hull Points: STR

DR: Armor (2 per point limit STR score)

Defense: DEX/2 + Shields (2 per point limit DEX/2)

Attack Bonus: DEX bonus + Weapon bonus

Move (character scale): Speeder 48, Tracked 18, Wheeled 20, Walker 12, Airspeeder 210

Move (starship scale): DEX bonus + Engine points (1 per point limit DEX bonus)

Piloting Score: Pilot's DEX Bonus + Technical

Sensors: INT bonus + Sensor points (1 per point limit INT bonus)

Slots on vehicles are used to add equipment to customize the base stats for a ship. They can be used to increase engine power, add shields and armor, add weapon systems, and add other features such as cargo space. Not all slots need to be used. Weapons mounted on a vehicle must have a firing arc (front, left, right, rear) or be mounted on a turret. Ships larger than Colossal (frigate) in size can't mount weapons on turrets.

Vehicle Equipment				
Name	Slots/Pt	Modifiers	Damage	Range Increment ^{t*}

Medium Turbolaser (right): 3d10x4

Tractor Beam (front): Tractor

* Ion: A successful hit with an Ion Canon disables one of the target's systems for one round. Roll a 1d6: 1 - Propulsion, 2 - Shields, 3 - One weapon system, 4 - Sensors, 5 - One weapon system, 6 - All ship power, it can make no actions.

* Tractor: Allows the ship to make a grab.

* Range Increment: Number of squares in each range increment for adding range penalties.

Allies and Opponents

This section deals with NPCs and creatures played by the GM. NPCs are not quite as powerful as player characters as the players are exceptional heroes.

NPCs

NPCs are similar to player characters but a little less powerful. They can be any class and race the game needs them to be. For the everyday citizen of the Empire use the "Non-heroic" class which has a primary skill and normal expertise but no other bonuses.

The base Human NPC has stats of 10, one favored skill, one expertise, and has one Hit Die. Intelligent NPCs gain expertise every 5 levels like characters and have the same Gear points per level (5 + # of Hit Die). Apply class and racial bonuses to the base NPC stats or size bonuses to creatures' stats.

For NPCs and creatures Hit Die are equivalent to levels, to increase the capability of NPCs and creatures give them additional Hit Die. Hit Die for intelligent NPCs are 1d4 and 1d8 for creatures. Creatures have base stats of 8, do not have skills, their Mnd scores are 5 (unintelligent), and have no Cha scores.

NPC Stats

Str: 10, **Dex:** 10, **Mnd:** 10, **Cha:** 10

Hit Points: STR Stat + 1d4/Level. If HP reaches 0, NPCs are unconscious and near death. Further damage directly reduces STR. If that reaches 0, they are dead.

Melee attack bonus: STR bonus + Level

Ranged attack bonus: DEX bonus + Level

Defense: 10 + DEX bonus + Physical.

Fortitude: Physical + STR bonus

Reflex: Physical + DEX bonus

Will: MND or CHA bonus + level

Example NPCs

Imperial Stormtrooper (Human Soldier 1)

1. Definitions: (a)"Contributors" means the copyright and/or trademark owners who have contributed Open Game Content; (b)"Derivative Material" means copyrighted material including derivative works and translations (including into other computer languages), potation, modification, correction, addition, extension, upgrade, improvement, compilation, abridgment or other form in which an existing work may be recast, transformed or adapted; (c) "Distribute" means to reproduce, license, rent, lease, sell, broadcast, publicly display, transmit or otherwise distribute; (d)"Open Game Content" means the game mechanic and includes the methods, procedures, processes and routines to the extent such content does not embody the Product Identity and is an enhancement over the prior art and any additional content clearly identified as Open Game Content by the Contributor, and means any work covered by this License, including translations and derivative works under copyright law, but specifically excludes Product Identity. (e) "Product Identity" means product and product line names, logos and identifying marks including trade dress; artifacts; creatures characters; stories, storylines, plots, thematic elements, dialogue, incidents, language, artwork, symbols, designs, depictions, likenesses, formats, poses, concepts, themes and graphic, photographic and other visual or audio representations; names and descriptions of characters, spells, enchantments, personalities, teams, personas, likenesses and special abilities; places, locations, environments, creatures, equipment, magical or supernatural abilities or effects, logos, symbols, or graphic designs; and any other trademark or registered trademark clearly identified as Product identity by the owner of the Product Identity, and which specifically excludes the Open Game Content; (f) "Trademark" means the logos, names, mark, sign, motto, designs that are used by a Contributor to identify itself or its products or the associated products contributed to the Open Game License by the Contributor (g) "Use", "Used" or "Using" means to use, Distribute, copy, edit, format, modify, translate and otherwise create Derivative Material of Open Game Content. (h) "You" or "Your" means the licensee in terms of this agreement.

2. The License: This License applies to any Open Game Content that contains a notice indicating that the Open Game Content may only be Used under and in terms of this License. You must affix such a notice to any Open Game Content that you Use. No terms may be added to or subtracted from this License except as described by the License itself. No other terms or conditions may be applied to any Open Game Content distributed using this License.

3. Offer and Acceptance: By Using the Open Game Content You indicate Your acceptance of the terms of this License.

4. Grant and Consideration: In consideration for agreeing to use this License, the Contributors grant You a perpetual, worldwide, royalty-free, non-exclusive license with the exact terms of this License to Use, the Open Game Content.

5. Representation of Authority to Contribute: If You are contributing original material as Open Game Content, You represent that Your Contributions are Your original creation and/or You have sufficient rights to grant the rights conveyed by this License.

6. Notice of License Copyright: You must update the COPYRIGHT NOTICE portion of this License to include the exact text of the COPYRIGHT NOTICE of any Open Game Content You are copying, modifying or distributing, and You must add the title, the copyright date, and the copyright holder's name to the COPYRIGHT NOTICE of any original Open Game Content you Distribute.

7. Use of Product Identity: You agree not to Use any Product Identity, including as an indication as to compatibility, except as expressly licensed in another, independent Agreement with the owner of each element of that Product Identity. You agree not to indicate compatibility or co-adaptability with any Trademark or Registered Trademark in conjunction with a work containing Open Game Content except as expressly licensed in another, independent Agreement with the owner of such Trademark or Registered Trademark. The use of any Product Identity in Open Game Content does not constitute a challenge to the ownership of that Product Identity. The owner of any Product Identity used in Open Game Content shall retain all rights, title and interest in and to that Product Identity.

8. Identification: If you distribute Open Game Content You must clearly indicate which portions of the work that you are distributing are Open Game Content.

9. Updating the License: Wizards or its designated Agents may publish updated versions of this License. You may use any authorized version of this License to copy, modify and distribute any Open Game Content originally distributed under any version of this License.

10. Copy of this License: You MUST include a copy of this License with every copy of the Open Game Content You Distribute.

11. Use of Contributor Credits: You may not market or advertise the Open Game Content using the name of any Contributor unless You have written permission from the Contributor to do so.

12. Inability to Comply: If it is impossible for You to comply with any of the terms of this License with respect to some or all of the Open Game Content due to statute, judicial order, or governmental regulation then You may not Use any Open Game Material so affected.

13. Termination: This License will terminate automatically if You fail to comply with all terms herein and fail to cure such breach within 30 days of becoming aware of the breach. All sublicenses shall survive the termination of this License.

14. Reformation: If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable.

15. COPYRIGHT NOTICE

Open Game License v 1.0 Copyright 2000, Wizards of the Coast, Inc.

SCIONS OF A PRIMORDIAL PLANET

The oldest of us remember as if it were yesterday. A great hand reached across the sky and, pulling back the cloak of stars, tore a hole in the night. Cradling the whole of Midgard in its palm, it transported us, all the lands and people of the Norse, to this strange and tired planet.

We have prospered here, we sons of Odin. Our Viking ways have carried us from the lands of cold eternal Night to the north and south to the dreaming shores of the Great Sea of Mars. The twin moons, Phobos and Deimos, have seen us lay waste to our foes and make free with their wealth and their women.

The youngest of us take it as fair and fitting that we should be so much stronger than our enemies, that we should sweep across them as wind across fertile fields.

And yet.

Why are we here? What strange gods have sought fit to test us? The runes are quiet on this point; the Skalds have no legends to tell. Perhaps one day we shall find the answers we seek.

MARS

This is not the Mars we know from NASA's press releases. It is old but still fertile, the skies are blue and it is criss-crossed with canals of all size, all flowing towards the Great Sea of Mars, a slumbering ocean of great breadth and depth.

The human lands lie to the north, just south of the northern ice cap. They are very Earth-like, full of fjords and fog-shrouded mountains, vast pine forests. The nights are long, the winters harsh and summers brief. There is nowhere else on Mars that resembles it and it is several hundred miles wide.

To the north, the forests and earth-like terrain gradually fade into the northern polar ice cap.

To the east and west, the forests become rolling plains, the true landscape of Mars.

To the south, more rolling plains, and eventually, the Great Sea Of Mars. Beyond that, stories tell of desert, haunted by the ghosts of ages past.

Criss-crossing everywhere are great Canals, each ranging in size from several hundred feet across to the size of the mighty Amazon. Dotting the canals are ruins

of ancient cities.

Mars is an old planet and there have been an untold number of civilizations over its many eons...and all of these civilizations have left behind their marks.

CORE RULES

This game runs under the Microlite20 rules system, with the following exceptions:

SKILLS

Scions uses the standard Microlite20 skills, plus an additional skill called Survival.

COMBAT

The rules on dual-wielding and light weapons apply to Warriors, Skalds, Pirates, Nobles and Hunters.

ARMOR AND ARMOR CLASS

Armor Class (AC) = 10 + one-half level, rounded down + DEX bonus.

Armor contributes 1 point of DR for **light** armor, 1d3 for **medium** and 1d6 for **heavy**. Add +1 to this total if a **helmet** is worn. Roll for each hit separately.

Shields are treated as usual under d20.

Medium and **Heavy** armor limit Dexterity bonuses to AC to +2 and +1, respectively.

RACES OF MARS

Note: While any race can theoretically be a member of any class, it would require a bit of explanation as to how a human became a Martian priest...

HUMANS

Humans come from a planet with a much greater gravity than Mars, which gives them vastly improved physical capabilities—refer to the section on Gravity for more information.

These Humans are Vikings. Vikings gain +2 Strength. Other types of Humans may have different stat or skill bonuses should they appear in the campaign.

Humans can become Warriors, Hunters, Runecasters and Skalds.

Humans from other cultures may have different classes available to them than those listed here.

MARTIANS

Martians are red-skinned, with elfin features and black hair. They tend to be thin and tall, with a loose-limbed grace impossible to those adapted to higher gravity worlds.

Martians come from several castes. Upper caste Martians (aristocracy, merchants) gain +1 to Knowledge and Communications. Lower caste Martians, such as workers and soldiers, gain +2 Dex.

Martians can become Warriors, Nobles, Pirates, Priests and Scholars.

BEAST MEN

This hasn't been the first time creatures have been transported from Earth to the Red Planet. Over the years these new arrivals have bred (or been bred?) into highly evolved humanoid forms, each type genetically compatible with the other.

These new Beast Men have formed nomadic tribes that wander the wastes of Mars. Use the Microlite20 Anthro races for base abilities.

Beast Men can become Warriors, Hunters and Shaman.

CLASSES

HUNTERS

Hunters can use light armor and shields. They have a +2 bonus to Subterfuge and Survival.

If they successfully sneak up on a foe, they can add their Subterfuge skill rank to the damage of their first attack.

Hunters are +1 to hit and damage with ranged weapons. Ranged weapon attack rolls are increased by +1 to hit and damage at 5th level and every 5 levels on.

Hunters only incur a -1 to hit penalty when fighting with 2 weapons.

At 3rd level, Hunters automatically pass without trace as per the druid spell.

At 6th level, Hunters no longer take penalties for dual-wielding.

NOBLES

Nobles can use any kind of armor and can use shields. They gain a +3 on Communication.

Choose one word that describes the source of the noble's charisma (impressive, beautiful, fearsome, well-known, etc). Whenever a roll comes up that could possibly be benefited by that trait (social, diplomatic, even combat if appropriate), that roll will be at +2.

When a situation happens where social status could possibly affect the outcome, add half the Noble's level (rounded down) to the roll.

If personal wealth is important in the game, Nobles are noticeably more wealthy than the other non-Noble characters. How much so is up to the GM.

Nobles gain the equivalent of the Leadership feat at 3rd level. Their Leadership Score is equal to their level plus twice their Mind bonus (if positive, otherwise it's level +1).

PIRATES

Pirates can only use light armor. They have a +2 bonus to Subterfuge and Physical.

Pirates gain a +2 skill bonus when performing anything specifically related to their profession, such as climbing, swinging about on ropes or navigation.

Pirates can use their Mind bonus as an additional bonus to their AC. If they don't have a positive Mind bonus, then they have an AC bonus of +1.

At 3rd level, Pirates can use alcohol and other intoxicants to heal themselves. Achieving a mild state of intoxication cures 1d10 hp of damage along with all the other usual pitfalls and effects of being drunk or otherwise chemically impaired. Moderate intoxication cures 3d10 damage but also has the usual side effects. A full-on bender cures all damage save for 1d4 hit points, but the pirate will be completely useless for one or two days.

At 6th level, Pirates no longer take penalties for dual-wielding.

PRIESTS

Priests are the lore keepers of the ancient Martian civilizations. Worshipers of a vast—and nearly incomprehensible to outsiders—pantheon of gods and demons, they are heirs to a great body of arcane knowledge.

They do not wear armor. They have a +2 bonus to Communication and Knowledge. They also have access to psionic abilities, whichever one of the Microlite20 psionic variants the GM prefers.

RUNECASTERS

Runecasters are exactly as listed in the Rune Magic pdf.

SCHOLARS

Eager investigators into the scientific secrets of the past, scholars are one part inventor, one part mad scientist, one part archaeologist and one part wizard. They specialize in using devices, scientific inventions they may only partially understand. They tend to be a secretive and paranoid lot—often their knowledge dies with them.

Scholars can wear light armor. They have a +3 bonus to Knowledge. They gain a +2 to bonus when deciphering ancient writings.

They can build or discover devices. Each device duplicates a spell from the SRD. Choose a name for that device that sounds sufficiently impressive—instead of saying “gun that throws lightning bolt spells” call it an “Integrating Field Generator”. A flying device becomes an “omniraptor”...and so forth.

A Scholar may have 2 devices plus their Mind bonus. Every time they gain a level, they can build another device. The maximum level of device they can build is equal to their level.

It takes roughly one week per spell level to build a device. When designing a device, roll 2d6. Add the spell level to the total. Subtract 1 point for every 4 character levels, rounded down. Compare the result to the following table to determine the size of the device built.

How it actually looks is up to the player, but he should decide how the device is used. Is it worn? Wielded?

Thrown? Ridden? Does it have a switch or buttons?

2d6	Size of Device*
Less than 2	Tiny (ring, jewelry)
2-3	Palm-sized
4-7	Hand-held (a sword or crossbow, for example)
8-10	Bulky, requires two hands
11-12	Too large to be held.
More than 12	Wagon-sized

Devices tend to be unreliable. Every time a device is used, roll 1d20. If it's less than or equal to the spell level, it fails. This number goes down 1 for every 4 levels of the Scholar (round down). If a device fails 3 times, then the device is broken and needs to be repaired. The reliability of a device may never be lower than 1.

The reliability of a device can also be adjusted by making it smaller or larger than that initially rolled. Making a device larger makes it more reliable by 1 point per step (minimum 1). Making it smaller makes it less reliable by 1 point per step.

At the GM's option, several devices can be combined into one device. For every additional function beyond the first, either increase the size level by one or the reliability number.

It takes 1 day per spell level and a lab to repair a device.

Scholars may also attempt to repair and use devices they find in ruins or while otherwise adventuring. Results from these experiments tend to be...unreliable.

SHAMAN

Shaman can use light armor and shields. They can cast Druid spells and gain +2 to Knowledge and Survival.

At 3rd level, a Beast Man Shaman can assume the full form of their animal part at will, essentially becoming that creature with statistics as listed in the SRD. They retain their current HP total, Mind score and attack bonuses from level when doing so. If there's several listings for possible creatures, the GM and the player should decide together which one is most appropriate and stick with that decision.

At 6th level, they gain a +2 bonus to a physical statistic of their choice (Strength or Dexterity) when in animal form. This bonus increases by +1 for every 3 levels afterward (e.g. 9th = +3, 12th = +4, 15th = +5, 18th = +6).

In addition, *pass without trace* is on the Druid spell list if not available already, as a 1st level spell.

SKALDS

Skalds are the Vikings' lore keepers and storytellers. Their tales of heroism and poetry can inspire bravery and hearten weak souls.

They can wear light or medium armor and can use shields. They gain a +2 bonus to Communication and Knowledge.

Once per adventure, a Skald can make an inspirational speech about a single topic relevant to the crisis at hand. The speech takes at least a couple of minutes and those affected must be within earshot. Any nearby allies gain a +2 bonus on one skill check, save or attack roll of their choice. If not used by the end of the crisis, this bonus will be lost. For every 5 levels, the number of times this bonus may be used per audience member increases by +1.

A Skald can also cast 1st level Druid spells at 1st level--their maximum spell level castable increases by +1 every 4 levels (e.g. level 1 = spell level 1, level 4 = spell level 2, level 8 = spell level 3, etc).

WARRIORS

Warriors can wear any kind of armor and can use shields. They have a +3 bonus to Physical and add +1 to all attack and damage rolls. This increases by +1 at 5th level and every five levels on.

Each race has an additional special ability on top of the warrior's basic abilities:

- **Human warriors** (specifically, Vikings) can go **berserk**. They can do this a total number of rounds per day equal to their unmodified Strength score. When berserking, the warrior's Strength goes up by +4, they gain +1 hp per level (in addition to the +4 hp from the Strength bonus), but they lose 2 points of Armor Class. A warrior can end a berserk at any time. After berserking, the warrior will be tired, taking a -2 to all appropriate rolls until they can take a few minutes to rest. They cannot berserk again until they are rested.
- **Martian warriors** are renowned for their **skill and finesse with weapons**. They can choose one weapon to be their signature weapon. When fighting with that signature weapon, they gain +2 to hit and on a critical hit do an additional 1d6 damage.
- **Beastman warriors** grow progressively more in touch with their **primal nature**. At 1st level, when using one of their innate abilities, they gain +2 on skill or to-hit checks.

At 4th level, if they have a natural attack, they can perform that attack in addition to their normal melee weapon attacks with no penalty.

At 8th level, their natural abilities increase in power. Natural attacks go up to the next higher die type. Innate skill bonuses are increased by +4. Other numerical bonuses are increased by +2 (AC, for example). Any ability sustainable for a duration can be sustained 50% longer. Since there's a wide array of abilities (too many to list here), use common sense for anything not covered by the above.

THE MARTIAN ENVIRONMENT

GRAVITY MATTERS

Different planets have different levels of gravity. Earth has a surface gravity of 1. Mars has a surface gravity of .37, or roughly one-third of that.

When on a planet not your own, compare the two planets' surface gravities: the result multiplies jump distance, the amount of time you can perform an activity without fatiguing, lift capacity and divides any distance you fall. For simplicity's sake, round the numbers to the nearest convenient fraction (1/6, 1/4, 1/3, 1/2, etc).

This allows other effects not possible on other planets. For example, buildings can be several times taller on Mars than on Earth because gravity is not such an obstacle to construction.

Natives are assumed to be adapted to the gravity level of their home planet and perform in all respects equal to that of normal d20. Visitors, however, perform at the scale of their home planets.

Example: Earth has a surface gravity of 1. Mars has a surface gravity of 1/3.

An Earth human on Mars with a strength of 10 would have a maximum heavy load of 300 lbs instead of 100 (1 divided by 1/3). A Martian with 10 Strength transported to Earth would have the opposite effect—they would have a maximum heavy load of 33 lbs (1/3 divided by 1).

Similarly, the same human on Mars could easily jump 30 feet (10 ft x 3), and with training, could possibly even jump as far as 30 yards. The same Martian as above would be lucky to jump a yard before collapsing under the brutal grip of Earth's gravity.

Now, take them both to the Earth's Moon. The Moon has a gravity of 1/6, half that of Mars. An Earth human would be able to jump six times farther (1 divided by 1/6). A Martian would be able to jump twice as far as normal (1/3 divided by 1/6).

Keep in mind that the intent of this system is not to be a physics simulator—it's strictly there to Make Things More Awesome. If the laws of physics get in the way of telling a good story, ignore them.

THE CANALS OF MARS

The Canals of Mars were first constructed eons ago by an ancient civilization. Canals range in size from several hundred feet across to wider than the Amazon river and can be anywhere from 20 to 100 feet deep in the center.

Canals always maintain uniform size along their entire length—they never narrow, widen, deepen or get shallower. They always run in perfectly straight lines and connect sites important to the civilization that built them.

Legends say that these sites were all important cities, but all that remains today are crumbling ruins and enigmatic monuments. Quite a few are still inhabited, but not by their original builders.

Ruins of ancient cities, temples and fortifications dot the canals at regular intervals, usually separated by 15 – 20 miles, as well as most of Mars' settled areas. A great deal of trade and traffic occurs along the canals—not only watercraft, but also along the shore.

The Canals support a diverse variety of aquatic life, not all of which is dangerous.

THE MOONS

Phobos is the larger and closer of the two moons of Mars. It speeds around the planet in 11 hours. It's an unevenly-shaped dull chunk of rock and its apparent size varies from hour to hour, growing from less than a quarter the apparent size of Earth's moon to one-third the Moon's apparent size, depending on its location relative to the observer.

Legends speak of its surface as a savage, jungle-choked land. It is home to dragons who occasionally fly down to Mars to feed as the moon passes overhead. This usually only occurs in equatorial regions.

Deimos is the smaller of Mar's two moons. It orbits the planet in 30 hours and looks like a bright star from

the surface of Mars.

Martian astronomers recount ancient legends of a crystalline palace covering the entire surface of Deimos. *The Palace of Atum* is supposedly the dwelling place of the mysterious Gods of Mars.

GEOGRAPHIC FEATURES OF MARS

Olympus Mons is the largest volcano in the solar system. It stands 16 miles high, but the slope is so gradual that its vast height is hidden by the horizon in most places. The caldera is roughly 50 miles wide and almost 2 miles deep and is filled with a steamy jungle populated by dinosaurs and reptile men. There are few Canals in the area, so it mostly remains unexplored.

Mars has two **polar ice caps**. The bitter cold and savage winds keep exploration to a minimum, but stories abound of empty wastelands filled with tribes of savage white apes. It is said that if you travel far enough north, eventually you may reach a dark tower where the dead walk and strange lights play across the sky.

The Caves Of Mars. To the southeast of Olympus Mons lies a chain of 3 mighty volcanoes, **Pavonis Mons, Ascraeus Mons** and **Arsia Mons**. They are fairly similar to Olympus Mons, including the deep calderas. Rumors tell of great cave systems in each that lead to a mysterious underworld where none return.

The Nexus Of Mars. Dozens of Canals converge on this point on the north-western shore of the Great Sea to form a single mighty Canal that stretches for miles, so wide that that one side cannot be seen by the other and lined on either embankment by 1,000 foot tall weathered stone statues of forgotten kings and heroes. It ends in the Great Sea a few miles away from the **Island of the Emperor**, where the palace of the Emperor of Mars stands.

The Valles Marineris is a vast valley, similar to the Grand Canyon of Earth, but much larger. It is over 3000 miles long (roughly the size of Europe) and up to 5 miles deep in parts. Cold, damp and mist-shrouded, it is home to vast forests of giant mushrooms populated by strange fungal creatures. It is rumored that a powerful and reclusive civilization is hidden within its depths.

CREATURES OF MARS

In the human areas, wildlife tends to be fairly standard for northern Europe. Horses, cows, deer, bears, standard Earth fish and fowl all are plentiful.

Near the fringes, the Earth wildlife and native Martian wildlife have begun to interbreed, often with strange and surprising results.

Native Martian life tends to fall along several lines—variations of arachnids, spiders and humanoids, with the occasional reptilian life form. Besides humanoids, mammals are fairly rare.

Martian life also tends to evolve in odd directions rather quickly in isolated ecosystems. It's not uncommon to find caves filled with walking fungus creatures or dozens of varieties of carnivorous plants. Caution is always suggested when exploring.

There are two useful shortcuts in developing Martian critters—either use the stats of an Earth equivalent and then describe it as an alien beast or, if you desire more randomness, use the Microlite20 online creature generator.

Sample Critters:

Carnivorous plants come in a wide variety of shapes and sizes. The following example is a giant Venus fly trap:

Carnivorous Plant. HD 8d8+40 (76 HP), AC 14, Melee +13/+8 Grabs opponent (Str 20), bites for 1d6+10 next round.

Another common variety is a vine identical in statistics and attack mode to a boa constrictor:

Carnivorous Vine. HD 3d8+6 (19 HP), AC 15, Bite +5 (1d3+4), Grabs (Str 14) and squeezes for 1d3+4 per round after hitting with Bite until killed or target breaks free.

Chalo. Chalos are the Martian equivalent of Clydesdale horses. They are enormous spider-like creatures, with coloration ranging through all shades of green. Their poison, which can be milked, is mildly intoxicating but nutritious. It is only fatal to small animals, which they feed on. They secrete webbing which is useful in making weaponry, rope and other such items. They are widely used by both Beast Men and Martians as war horses.

Chalo. HD 4d8+12 (18 hp), AC 14, Bite +6 (1d8+2). Very good over rugged terrain. Moves about as fast as a war horse or roughly twice as fast as a normal human can run.

Chalig. A smaller *Chalo* bred by the Martians as a beast of burden and cattle and also used for their silk.

Chalig. HD 2d8+2 (11 hp), AC 12, Bite +4 (1d8+1).

Kalkula. Thought to be alien to their world, the Kalkula is known on Earth as a megalodon, an extinct (on Earth) species of shark with jaws wide enough to swallow a horse and often reaching well over 80 feet in length. Kalkula are thankfully rare, living in the Canals and preying on, well, everything.

Kalkula. HD 24d8+68 (264 hp), AC 20, Bite +24 (4d6+10). They can swallow most creatures whole and swim four times faster than a man can run.

Phobos Dragon. Paleontologists would recognize these as pterodactyls, if a pterodactyl was the size of a hay wagon. Only the largest and most powerful successfully make the flight from Phobos to Mars. The standard variety on Phobos is considerably smaller, about twice the size of a vulture.

Phobos Dragon. HD 10d10+50 (105 hp), AC 17. Bite +13 (2d10+8) or batters with wings +8 (2d6+4). Can also grab opponents and carry them off if they are man-sized or less. They fly about three times faster than a man can run, but are awkward and slow on the ground.

Tec-tecs are aquatic creatures that travel in swarms and greatly resemble wasps. They are a prized delicacy but catching them is somewhat problematic because large colonies of tec-tec are capable of shocking attackers with electric charges. Once stunned, they become food for the tec-tec. It's often possible to tell they are nearby because the water takes on a curious yellow shimmer.

Tec-tec. HD 1/4d8 (1 hp), AC 16. Shock +2 (1d2-1 individually).

Tec-tec, swarm. Shock +8 (1d6 damage + DC 15 save or be paralyzed for several minutes).

Tec-tec are only dangerous to those in the water. They are quite vulnerable to nets and traps.

Thonts are the Martian equivalent of war elephants. Descended from a creature that looks like an 8-legged gila monster, they are enormous, slow and heavily armored. Different breeds exist—when not seen dragging siege engines, they are used in heavy construction and for pulling the largest wagons in merchant caravans.

Thonts. HD 9d10+72 (121 hp), AC 22. Trample +13 2d12+13. Thonts travel at about human walking speed and are enormously strong.

Ultira are small vermin strongly resembling a cross between a feral rat and a black widow spider. When threatened, they make a high-pitched shrieking noise and can spit a blinding poison. They tend to infest dark abandoned places where they can feed on rubbish and decaying things.

Ultira. HD 1/2d8 (2 hp), AC 14, Bite +4 (1d3-4) or Spit Poison +2 (blind target for 1d4 rounds unless a DC 15 save is made).

White Apes dwell in the far regions of the polar ice caps and are very rare elsewhere on the planet. They have a rudimentary intelligence and social structure and tend to travel in organized packs.

White Ape. HD 4d8+11 (29 hp), AC 14. Claws +7 (1d6+5) or Bite +2 (1d6+2) or melee with a large club +7 (2d6+5).

Zigdur. Zigdur are dog-sized furry spiders that perform all duties that dogs perform on Earth. Unlike dogs, however, they can climb walls as a spider and weave webs. The write-up below is for a war/hunting breed.

Zigdur. HD 1d8+2 (6 hp), AC 15. Bite +2 (1d4+1). Zigdur can run a little faster than humans and have a keen sense of smell. They are also very sensitive to vibrations in the ground.

MARTIAN TECHNOLOGY

Martians have roughly an Elizabethan level of technology, with the occasional addition of strange devices invented by a scholar or salvaged from an ancient ruin.

They tend to use weapons such as long swords, rapiers and cutlasses, with the occasional halberd. They often wear leather or scale armor with ceremonial plate being the exception instead of the rule.

Martians have mastered the use of black powder and have cannons. They also have various forms of primitive firearms, such as blunderbusses and flintlocks. These weapons do 2d6 damage if one-handed or 2d8 damage for two-handed variants. They can only fire once and reloading takes 2 rounds.

Martian skyships are rather reminiscent of Greek triremes in terms of hull layout and design. They are supported by large durable *chalog* silk bags filled with hydrogen. Hydrogen is harvested from a plant grown

on vast plantations.

Skyships are propelled by sails in good weather. In less favorable weather, they often have large silk wings that can be used, albeit with great effort, to provide propulsion.

Beast Men have basic metalsmithing skills. They primarily use bows, arrows, spears and axes. Their level of technology is roughly equivalent to that of the Vikings but they often lack resources. They tend to not wear any armor heavier than leather or hide, but that's likely a matter of availability rather than taste.

Vikings are, well, Vikings. Broadwords, chain mail, axes, long ships, knives, bows and thatched houses...assume that they have the standard array of "medieval" fantasy equipment available to them.

Martians and Vikings both use coins made of gold, silver or copper to conduct trade. Vikings and Beast Men also tend to rely on barter.

MICRO-MECH-WARRIOR™

Rules adapted by Michael “Chgowiz” Shorten

BASICS

STATS

There are 4 stats: Strength (STR), Dexterity (DEX), Mind (MIND) and Charisma (CHA). Roll 2d6 to determine each stat. Results of 10 to 12 must be “checked” by rolling a third d6. If the check roll is 5 or 6, you can keep the value; otherwise that stat is a 9. **Stat Bonus/Penalty** is Stat – 6/2, rounded up.

TARGET NUMBERS

These are the Target Numbers (TN) for Skill checks and or Stat checks.

Stat	2	3	4	5	6	7
TN	12	11	10	10	9	8
Stat	8	9	10	11	12	
TN	8	7	7	6	5	

STAT CHECK

When doing something that is just “raw strength” or saving against an ill effect, you must roll higher than your TN for the appropriate stat. The GM may assign appropriate modifiers.

SKILLS

There are 4 skills: Physical (Phys), Coordination (Coor), Knowledge (Know) and Communication (Comm). All skill levels start at 0. They may increase through training (when a character is created) and in advancement (as a character grows more skilled and experienced). **Skill roll** = 2d6 + skill rank + situational modifiers (if any). Roll higher than the TN to succeed. The Game Master

(GM) will determine which Stat (for TN determination) to use and which skill can be used to apply modifiers for.

Below are some example situations that may require skill checks. When more than one stat is available, use the most favorable.

Situation	Skill	Stat TN
Athletics	Phys	STR or DEX
Computer	Know	MIND
Diplomacy	Comm	CHA or MIND
Driving	Coor	DEX
Engineering	Know	MIND
Gunnery/Non Mech	Know	DEX
Gunnery/Mech	Coor	MIND
Interrogation	Comm	CHA or MIND
Leadership	Comm	CHA
Medical	Know	MIND
Melee Combat	Phys	STR or DEX
Piloting/Aero	Coor	DEX or MIND
Piloting/Mech	Coor	DEX or MIND
Ranged Weapons	Coord	DEX
Stealth	Coord	DEX
Survival	Phys	STR or MIND
Tactics	Know	MIND or CHA
Technician	Know	DEX or MIND

TRAINING

Training represents what the character has learned in their life so far, as well as gives your character a bit of background. Game Referees may look at the training you had in order to determine if you get a favorable (or unfavorable) modifier for a skill check. Each type of training may affect one or more skills. Select one of the training paths as follows:

Training	Phys	Coor	Know	Comm
Aerospace	0	1	1	0
Athletic	1	1	0	0
Blue Collar	2	0	0	0
Celebrity	0	0	0	2
Criminal	1	0	1	0
Law Enforcement	1	0	1	0
Mechwarrior	0	1	1	0
Medical	0	0	1	1
Military	1	1	0	0
Technician	0	0	2	0
White Collar	0	0	1	1

Game Masters may come up with additional training options to suit their game.

ACTION POINTS

Action Points allow player characters to have an edge by adding an additional die to their die rolls. When a player makes an attack, skill check, or stat check, they can spend a point and roll a d6, adding it to the total before the GM gives results on the initial roll. They may spend only one point per round.

A character starts with 5 Action Points. Once spent, they don't replenish until next level of advancement. Each level attained grants 5 + one-half their level in points, rounded down. There is no roll-over in points from one level to the next.

BATTLETECH STATS

To convert your Mechwarrior character stats into Piloting and Gunnery skill values for the Battletech boardgame, use the following formulas:

Piloting Skill = 6 - Coor Skill Level

Gunnery Skill = 5 - Know Skill Level

No piloting or gunnery skills can be less than 0.

Initiative Bonus: To apply a bonus to Battletech board game Combat Initiative roll, add Know skill level to Initiative 2d6 roll. If one person wishes to apply his Know bonus to all of his unit's Initiative rolls, make a skill check of Know (Tactics). Use the more favorable TN of CHA or MIND.

COMBAT

In each round everyone can move and do one other thing - fire a ranged weapon, attack in melee, change weapons, reload or similar action. Once all actions are completed, damage is resolved. Use the Terrain and Movement modifiers from Battletech boardgame.

Body Points (BP) = STR Stat x 10. Half of body points is in torso, rest is divided to head, L arm, R arm, L leg, R leg.

Initiative is determined by rolling 2d6 + DEX stat bonus. Ties are resolved by rolling a third dice until the tie is broken. GM rolls once for all NPCs.

Movement: Movement occurs in reverse initiative order (loser moves first.) Walk: 1 hex. Run: 2 hexes. 1 hex = 30 m = 100 ft. Facing changes are free. Movement in non-clear terrain reduces walking/running by 1 hex. For non-combat vehicles, GM will rule on number of hexes moved. Combatants can share the same hex.

Ranged Weapon Fire: Attacks only against targets within front 3 hex arc.

Requires clear LOS to target. Targets can be in same hex as attacker. **Base to hit** is determined by DEX TN modified by: Subtract Coor Skill level; add Movement Modifiers; add Range Modifiers; add Terrain Modifiers. Attacking into a melee adds +2. Attacking a target that is in melee against shooter adds +4. The result is the target number. **Attack roll** of 2d6 must be equal or higher than TN to hit.

Burst Fire: an automatic firearm can fire a burst at a single opponent. Add +2 modifier to to-hit number, if attack succeeds, the shooter gets double the dice for damage (a firearm that does 2d6 would do 4d6

with burst fire). This uses double ammo per shot.

Autofire: an automatic firearm can spray fire into an area with bullets; the attack is against a specific target. If they hit, anyone in adjacent ring of hexes must make a DEX attribute check or be hit. This uses double ammo per shot.

Thrown Explosives: These weapons (usually grenades) requires the attacker to make a ranged attack. A miss requires a d6 roll to see which adjacent hex the weapon lands (and explodes).

Ranged Weapons Ranges = 30 m/100 ft hexes.

Weapon	Damage	Short	Medium	Long	Ammo	Rounds
To-Hit Modifier		0	+2	+4		Per shot
Handgun	2d6+3	0	--	1	15	1
Auto Pistol	2d6 *	0	--	1	20	4
Shotgun	3d6+2	0	--	1	2 (1)	1
SMG	3d6 *	0	1	2	25	5
Rifle	3d6	0-1	2	3-5	10	1
Assault Rifle	3d6 *	0-1	2	3-4	30	5
Machine Gun (a)	3d6+6	0-1	2	3	200	10
Laser Pistol	4d6	0	1	2	20	1
Laser Rifle (a)	4d6+2	0-2	3-4	5-6	20	1
Stun Gun	Special**	0	--	1	15	--
Bow	1d6+1	0	--	1	1	1
Crossbow	2d6	0	--	1	1	1
Gyrojet Rifle (a)	3d6+6	1-2	3-6	7-12	10	1
SRM Launcher (a)	5d6+6	1-3	4-6	7-9	2	1
Flamer (b)	2d6 ***	0	--	1	12	1

(a) Can be used vs. vehicles/Battlemechs. (b) Can be used vs. vehicles/Battlemechs, also causes an extra point of heat if heat is being tracked for Mechs. * Automatic weapon capable of burst or auto fire. ** A successful attack forces a target to make a STR stat check or become unconscious. Target also takes 1d6/2 (round up) damage. *** Causes hex to be aflame for 2 combat rounds after. 1d6 dmg to anyone who enters. (1) Pump Shotgun - can hold 6 shots.

Melee Attacks: Requires target to be in same. **Base to hit number** is STR TN, modified by: subtract Phys Skill; add Movement Modifiers. The result is the target number. **Attack roll** of 2d6 must be equal or higher to TN to hit. Add STR bonus to all melee damage rolls.

Melee Weapons

Weapon Type	Damage	Ammo
Club	1d+1	--
Knife	1d	--
Neural Whip	1d*	20
Sword	2d	--
Sonic Blade	3d	20
Stun Stick	1d-1*	20

** A successful attack also forces a target to make a STR stat check or become unconscious.*

Resolve Damage: Roll vs. Battletech Mech damage location table to determine location, using appropriate attack column. All torso hit locations applies to body torso. A critical hit (roll of 2) results in double damage. Reroll to determine location, ignoring results of 2. For melee hits, use front/rear column.

Roll the damage indicated by the weapon type and apply to the indicated location on the target, first to any protective armor, then against the body itself. If the hit location is to a limb that is useless, apply the damage to the torso (ignoring torso armor).

Armor: A character’s armor may reduce the damage first before being applied to the target location. Apply the damage to the armor; once it is all gone, the damage goes to the body. For unarmed combat, armor

does not get reduced, but does reduce damage to body by 1.

ARMOR

Armor	Armor Points	Protection
Ablative Suit	56**	T, A, L, H
Ablative Vest	28**	T
Helmet	5	H
Hvy Env. Suit	56*	T, A, L, H
Light Env. Suit	32*	T, A, L, H
Leather Jacket	5	T, A
Leather Armor	10	T, A
Neurohelmet (a)	5	H
Tactical Vest	20	T
Tactical Armor	40	T, A, L, H

*T- Torso, L - Legs, A - Arms, H - Head. Armor Points are divided equally among locations protect. * Environment suits add bonus of 2 to save vs. tranq./stun weapons. ** Effective against energy weapons only. (a) Only Mechwarriors can wear neurohelmets - if it’s destroyed, the Mechwarrior can’t pilot a Battlemech replaced.*

Body damage: Legs/Arms - At 0 bp, limb considered useless, make a stat check against STR to stay conscious. Body/Head - At 0 bp, character is unconscious. Make a stat check against STR to avoid death. If subsequently damaged after 0 bp, death occurs.

Serious/Critically Injured: (Optional) When a character loses half of their bp, they are seriously injured. All skill rolls and stat checks have a penalty modifier of -2. They cannot run. When a character loses 3/4^{ths} of their bp, they are critically injured. All skill rolls and stat checks have a penalty of -4. They may do only one thing per

combat round, move 1 hex or perform an action.

Battlemech and Vehicle combat: Vehicle vs. Mech or Mech vs. Mech combat is done using Battletech rules that GM has for scenario. Character weapon attacks vs. vehicles with certain weapons will score 1 point of damage on a successful attack, then a “check roll” of 2d6 resulting in 2 or 12. Roll for location of hit on appropriate location chart.

Optional Scale: These rules assume the same scale of maps and measurements as the Battletech boardgame. To reduce scale to the original Mechwarrior game, make each hex equal 5 m/16 ft. Multiply all ranges and movement by 6.

OTHER HAZARDS

Mechwarrior Damage: When using Battletech rules, for each point of damage that a vehicle’s occupant would take (such as a Battlemech Head hit), the character takes 10 points of damage. Location is not important. Once a character takes more hits than their Body Points, the character is dead. For consciousness rolls, the character must make a STR stat check.

Ejecting from vehicle: 3d6 damage, Coor Skill (Piloting – use DEX or MIND TN) check to avoid. Roll for location. Armor does not reduce.

Falling: 1d6 damage per 10', half damage on Phys skill check using DEX TN.

Poison: STR stat check avoid effects or suffer half damage, depending on

poison. Effect varies with poison type.

Extreme Heat & Cold : If not wearing suitable protection, Phys skill check (STR or MIND TN) once every 10 minutes (-1 cumulative penalty modifier per subsequent check), take 1d6 damage on each failed save.

HEALING

Characters that have more than half of their total body points heal 1 point per day or 2 points if at complete bed rest. Characters below half require medical attention. Someone trained in Medical may heal as many dice as they have Know skill levels. Hospital resources or field surgery kit is required. Someone not trained specifically in medical may apply first aid with a Know skill check. A first aid kit is required. If successful, they may heal 1d6. Medical healing can occur only once per day. Once a character is healed above half their total body points, they must heal naturally.

ADVANCEMENT

Experience Points (EP) are earned as follows:

Personal Combat: 1 EP, add 1 EP for each doubling of number of foes versus number of characters (ie., 4 characters versus 8 thugs would give 2 EP per character)

Vehicle Combat (characters mounted): 1EP for surviving scenario, add 1 EP for each doubling of opponents vs. number of characters.

Vehicle Combat (characters dismounted): 2EP for surviving scenario, add 2 EP for each doubling

of opponents vs. number of characters.

Assignment Completion: Game Master determined, but usually 1 to 2 EP for successful objectives completed, per character involved.

Encounter Rewards: Game Master determined, but may award 1 to 3 EP per character involved in specific encounter where major objective was accomplished without combat.

When the total EP you have is 10 x your current level, you advance to the next level. At each new experience level, you may add 1 to one skill only. For every 3 levels you attain, you may add 1 point to STR, DEX, MIND or CHA. Every 3 levels represent a class of experience: 1 to 3 is GREEN, 4 to 6 is a REGULAR, 7 to 9 is a VETERAN, 10 and above is an ELITE.

EQUIPMENT

A character’s starting equipment and/or wealth is determined by the GM depending on their campaign or scenario. A random roll of 2d6 x 100 (C-Bills) could be used to determine starting wealth.

Item	Cost in C-Bills
Field Surgery Kit	200
First Aid Kit	75
Electronics Repair Kit	2,000
Fusion Repair Kit	100,000
Gyro Repair Kit	50,000
Mech Repair Platform	150,000
Repair Tool Kit	500
Sensor Repair Kit	50,000
Welding Kit	1,000
Light Environmental Suit	200 [Patch 5]
Heavy Environmental Suit	10,000 [Patch 20]
Low Tech Lock Picks	50
High Tech Lock Picks	5,000

Rangefinder Binoculars	250
Scanalyzer	5,000
I/R Scanner	100
Personal Communicator	100
Personal Computer	250
Survival Field Kit	25
Ablative Suit	1,000 [Patch 20]
Ablative Vest	300 [Patch 20]
Helmet	20
Leather Jacket	20 [Patch 1]
Leather Armor	50 [Patch 1]
Neurohelmet (a)	20,000 [Patch 1,000C]
Tactical Vest	50 [Patch 2C]
Tactical Armor	150 [Patch 2C]
Handgun	40 [Reload 15 for 4C]
Automatic Pistol	50 [Reload 20 for 5C]
Shotgun	30 [Reload 4 for 1C]
Submachine gun	40 [Reload 25 for 5C]
Rifle	80 [Reload 10 for 2C]
Assault Rifle	100 [Reload 30 for 6C]
Machine Gun (a)	1,000 [Reload 200 for 20C]
Laser Pistol	750 (req Power Pack)
Laser Rifle (a)	1250 (req Power Pack)
Power Pack (20 chgs)	5
Military Power Pack (50 chgs)	20
Stun Gun	100 [Reload 15 for 16C]
Club	1
Knife	4
Neural Whip	500 (req Power Pack)
Sword	20
Sonic Blade	100 (req Power Pack)
Stun Stick	200 (req Power Pack)
Bow	15 [Reload 20 for 1C]
Crossbow	15 [Reload 20 for 1C]
Gyrojet Rifle (a)	1,250 [Reload 1 for 100C]
SRM Launcher (a)	1,500 [Reload 1 for 400C]
Flamer (b)	100 [Reload 1 for 2C]
Grenade	20

Patch costs are to repair one point of armor. Reloads are priced at number of shots for number of C-Bills.

EXAMPLE NPCs

Name	BP	Stats (TN)	Skill Levels
Bounty Hunter	80	7 (8)	Phys 1, Coor 1
Comstar Acolyte	40	6 (9)	Comm 1, Know 2
Criminal	60	6(9)	Know 1, Coor 1
Drug Dealer	50	5(10)	Comm 1, Coor 1
Explorer Agent	70	7(8)	Phys 2, Coor 1
Gang Leader	70	7(8)	Phys 1, Coor 2
Gang Member	50	6(9)	Phys 1, Coor 1
Police Officer	80	7(8)	Phys 1, Coor 1
Politician	40	6(9)	Comm 2, Know 1
Reporter	40	6(9)	Comm 1, Know 1
Scientist	40	6(9)	Comm 1, Know 2,
Soldier	90	6(9)	Know 1, Phys 2
Technician	50	7(8)	Know 2, Phys 1
Trader	50	6(9)	Comm 2, Know 1

For NPC activities, use given stat value and TN. GMs may increase value to reflect an exceptional NPC .

GM NOTES

Situation Modifiers: For skill and or stat checks, if the situation is favorable to the player, add a bonus of 1 to 5 to the roll. If the situation is against the players, a penalty of 1 to 5 against the roll can be taken.

Example of a Skill Check: To override a computer shutdown, a character with a MIND of 7 has a TN of 9. Their Know skill is a 1. The GM decides they are in somewhat difficult circumstances and assigns a penalty

of -2. The player must roll a 10 or better on 2d6 to succeed. (Roll of 10 + 1 (Know skill) – 2 (Situation penalty) = 9.

DESIGNER NOTES

These rules are adapted from many sources, including the Microlite20 and Microlite20 Modern role-playing games, and the first edition of the FASA Mechwarrior™ role-playing game. These rules are best used for quickly adding an RPG “rules-light” component to a Battletech™ game, for playing a convention game that combines RPG and Battletech, or if you simply wish to have a quick alternative to the current Mechwarrior role-playing games. The idea is that these rules are simple and that the Game Referee will usually say “Yes” or “Roll dice” to most situations. Not all situations are covered by these rules; a certain amount of flexibility and Game Referee creativity is needed.

My recommendation that you combine these “micro” rules with the *Classic Battletech Introductory Rulebook* and the Vehicle and Infantry Combat rules from the *Classic Battletech Quick Start*. No attempt has been made to include any of the other vehicle types, such as conventional aircraft, Aerotech or Starships. The GM should employ their best judgement and houserule as they see fit to make the characters work within the boardgame in a straightforward fashion. I’ve also left out a lot of things that are going to be campaign dependent, such as creating a unit, figuring out

Battlemech assignments, dealing with salvage and a 100 and 1 more things – but these are all things that you as a GM can figure out either on your own or from existing source materials.

If you have any comments, questions or suggestions, drop me an email at chgowiz@gmail.com. If you're curious where all this "microlite" inspiration came from, go check out Microlite20 and Microlite20 Modern at <http://www.microlite20.net> – it's the complete Wizards of the Coast d20 system in 2 pages. Seriously.

Microlite20 © 2006, Robin V. Stacey (robin@greywulf.net), Action Points mechanic from Microlite20 Modern. Mechwarrior and Battletech are licensed trademarks of Whizkids Inc. Any content stemming from the Mechwarrior RPG is used without permission and all copyrights, registered trademarks and licenses are property of their respective owners. I am doing this interpretation as a fan derivative work. The sole purpose of this work is to add to the pleasure and experience of the first edition of the Mechwarrior RPG and to bring new fans to enjoy a simplified and streamlined version of the mechanics and Battletech universe.

Stargate 1895

Introduction.

In November of 1893 the renowned Egyptologist Lord Conway made an amazing discovery in the Qattara Depression. It was in a previously unsurveyed temple complex, buried beneath the floor of what appeared to be a great tomb. In his journal he described the artefact as 'a giant quoit of an unknown metal, some 8 yards across. Accompanying it were a number of other artefacts also of great antiquity.'

Lord Conway arranged for the artefacts to be taken secretly to his estate in Yorkshire via Tobruk, to avoid the attentions of the antiquarian community, until he could decipher their purpose. He quickly came to the conclusion that it pre-dated any previously known Egyptian finds and that it was a machine of some description. In order to further his research he engaged the brilliant young Scottish engineer John Macfarlane. Over the next year Macfarlane laboured day and night until he worked out how to power the quoit up. Conway meanwhile, with the help of his daughter Felicity, had set about deciphering the many inscriptions upon the quoit and ancillary equipment.

From here on in the story is somewhat confusing and is based on the somewhat unreliable evidence of a surviving footman, one Joseph Higgins, and Macfarlane's hurried notes. Late in the evening of 19th December 1894 Macfarlane powered up the gate and Lord Conway pressed several of the panels on the circular control device. A 'pool' appeared vertically in the quoit and after a few seconds the generators overloaded and the quoit went dark.

The following evening, after Macfarlane had repaired the generators, Lord Conway prepared to make a second attempt. Before he was able to press any panels the quoit lit up on its own and after that there was chaos. Apparently a number of large men in ancient armour, with the heads of Eagles, came through the quoit. They blew a hole clean through Macfarlane and took Lord Conway, Felicity and several of the staff captive, departing to whence they came.

Baffled the police alerted the Government who in turn handed the situation to a Special Under Secretary at the Foreign Office, one Mycroft Holmes. He has seized control of the estate and has summoned a number of eminent scientists and others to his aid.

The newly formed Office of Exploratory Studies has recruited the players as an exploratory team. Their first mission will be to follow the Eagle-headed men, and to attempt to recover Lord Conway and his daughter.

It is March 21st, 1895.

Throughout the game the player characters are referred to as 'Explorers'.

Game Philosophy

This is an abridged version of the D20 rules that has been designed to be quick and easy to play. The goal was to create a simpler game, but one where all of the resources of core D20 (creatures, skills, adventures and equipment) could be used without any serious conversion.

Stargate 1895

Character Creation

Attributes

There are 3 attributes - Strength, Dexterity and Mind. These are abbreviated as STR, DEX and MIND.

Roll 4d6, drop lowest dice. Total remaining 3 dice and allocate to one of the attributes. Repeat for remaining attributes.

Attribute bonus = (attribute-10)/2, round down.

Professions

The explorers have been recruited from a range of useful professions by Holmes and his assistants. Each profession brings with certain trained advantages, particularly regarding the various skills. It should be noted that this is the explorer's background. Once in service he can learn and improve skills beyond his initial portfolio. The professions are Soldier, Criminal, Scientist, Clergy and Hunter.

Characters begin at Level 1.

Soldier.

The officers and other ranks of Her Majesty's armed forces are tough, well-trained and self-confident. They form the backbone and tactical leadership of the explorer companies. Given the opposition they are expected to face no explorer company can deploy without military support and protection.

Soldiers add +1 to all attack and damage rolls. They can use any weapons. They have a +3 bonus to the Physical skill.

Criminal.

Although opposed by the Army, Holmes has decided that there may be situations where the more subtle skills of the career criminal may come in very useful. Each of the criminals recruited by Holmes are men who face long sentences for their crimes in the rather grim Victorian prison service. The reward for their participation, other than serving Queen and Country, is a conditional pardon. For each mission they undertake a number of years will be deducted from their sentences. Players should roll 5D6+5 to determine the original length of their sentence.

Criminals can initially use any light weapons. They have a +3 bonus to the Subterfuge skill and +2 bonus to the Communication skill.

Scientist.

It is extremely likely, given the devices so far recovered, that the explorers are going to come into contact with advanced cultures. The role of the scientists is to recover, analyse and reproduce this technology on behalf of the Empire. They must also assess the threat these devices pose to the Empire, and indeed to the Earth.

Scientists can initially use revolvers and shotguns. They gain a +2 bonus to the Knowledge and Engineering skills. They may also choose a 'speciality' - a single area of scientific knowledge in which they get a +4 bonus (i.e. A Doctor is a scientist who has specialised in medicine).

Clergy.

In the Victorian period most of the foremost antiquarians, ancient cultural scholars and archaeologists were members of the Clergy. It is also considered important that a man of God accompany missions to bring an alternative viewpoint to first contact opportunities. Thus, just maybe, turning potential military engagements into opportunities for alliance and the sharing of knowledge.

Clergymen can box, adding +1 to attack and damage rolls when using the noble art. They initially have no other trained weapon skills. They gain +2 bonus to the Communication and Knowledge skills. They may also choose a 'speciality' - a single area of knowledge in which they get a +4 bonus. This should be one of the classics or an archaeological or anthropological area of study.

Hunter.

This was the age of the great white hunter. Holmes wants each explorer team to be accompanied by a man who is an expert at field craft and scouting. The Army at least agree on this choice, where they are dubious about the others.

Hunters can use any weapon. They add +1 to ranged weapon attack and damage rolls. They gain a +2 bonus to the Survival and Perception skills. They gain a further +2 bonus to the Perception skill when tracking.

Stargate 1895

Social Class.

The British Empire has a well-defined class structure. Exceptional people could overcome this and rise to greatness. Class will, however, help to determine many of the benefits and disadvantages available to a new Explorer:

Class	Benefits	Disadvantages
Working	Add one to initial STR attribute.	Deduct one from Knowledge skill.
Middle	Add one to Knowledge skill.	Deduct one from initial STR attribute.
Upper	Add one to Knowledge & Communication skills.	Deduct one from Subterfuge skill.
Foreigner or Colonial	Choose one of the above classes' advantages and disadvantages, and add the language of the native country.	Deduct one from the Communications skill when dealing with British people.

A player who wishes to play an Army Officer cannot choose the Working Class background. The example set by Major Richard Sharpe in the Peninsula War was a one-off.

Gender.

Although the Victorians had very closed views on the roles of the sexes, this situation is so far beyond their experience that such rules are suspended. Holmes and his team have recruited the best they can quickly find, regardless of gender. That said you are not going to get any female Soldiers. There was simply not the opportunity for a woman of the period to come from such a background. Female Hunters are likely to be colonials.

Nationality.

All explorers will be British, although this generalisation includes both the white and coloured peoples of the Empire's possessions and dominions. As quoted before Holmes' prime consideration is competence. That said any Officers will be white.

Exceptions.

There is no reason that the GM should not allow exceptions to these period specific rules on class, gender and nationality. However, the player will be expected to come up with a suitably convincing back-story.

Stargate 1895

Skills

There are just seven skills:

Physical	This covers all the usual such as riding, climbing, jumping etc.
Subterfuge	This covers acts of stealth and deception.
Engineering	All practical mechanics and electrics is here. The late Victorians had a very pragmatic grip on the implementation of science.
Knowledge	This is broader and covers all areas of knowledge be it scientific, historical, medical, esoteric, anthropological and antiquarian.
Perception	The ability to perceive that which is not immediately apparent.
Communication	The ability to make oneself understood, and if played well, admired and persuaded by.
Survival	This covers those skills necessary to make the best of one's surrounding such as camping, tracking, hunting, identifying food and water sources etc.

These are fairly broad and generic categories, and it is up to the players to explore the breadth and depth of them in play.

Skills are used in two ways, opposed and unopposed. The former is where there is an active intelligence opposing the explorer. The latter is where there is not.

For an opposed roll compare the scores of the explorer against that rolled by the GM on behalf of the 'active intelligence' opposing them.

In the case of an unopposed skill use to succeed the player must score higher than the given Difficulty Class to succeed.

Skill Roll = D20 + skill rank + whatever attribute bonus is most applicable + situational modifiers

Skill Rank = The explorer's level + any bonus due to his profession or social class.

The GM will determine any suitable modifiers to this roll.

For example:

- Climbing would use Physical + STR bonus.
- Dodging a falling rock is Physical + DEX bonus.
- Finding a trap is Subterfuge + MIND bonus.
- Disabling a trap is Subterfuge + DEX bonus.
- Making or repairing a weapon or armour is Engineering + DEX bonus.
- Recalling an ancient legend would use Knowledge + MIND bonus.
- Treating a comrade who has been poisoned would use Knowledge + MIND bonus.
- Bargaining for provisions with tribesmen would use Communication + MIND bonus.
- Tracking a deer or finding water is Survival + MIND bonus.

Note that there are no class-based "saving throws" in this game. We use Physical + STR or DEX bonus for the equivalent of Fortitude and Reflex saves as appropriate. Saving against mental attacks (Will save) is usually MIND bonus + Level.

Re-rolls.

The Explorers are true British Heroes and as such have one or two abilities beyond the reach of normal men.

At first level each Explorer is allowed a single re-roll per day. A re-roll must be used immediately after the Explorer made a roll that failed or wasn't good enough, not ten minutes later when the consequences of the roll become clear.

A player can only re-roll dice for his own Explorer's actions, not for someone else's.

For game purposes the power to use a re-roll regenerates at dawn (or it's local equivalent).

At every third level the Explorer gets another reroll to use per day.

Stargate 1895

Combat

Hit Points.

Hit Points = STR attribute + (Level x3).

Initiative

Roll D20 + DEX bonus for initiative order. Everyone can do one thing each turn; move, attack etc. The exception being when one moves up to an enemy with the intention of attacking them in close combat. Some call this a 'Charge'.

A turn is a period of roughly six seconds.

Attacking

Melee attack bonus = STR bonus + Level

Ranged attack bonus = DEX bonus + Level

Add attack bonus to D20 roll. If higher than your opponent's Armour Class (AC), it's a hit.

A natural 20 is automatically a critical doing maximum damage. A natural 1 is always a miss.

There are no attacks of opportunity.

Pistols and close combat weapons can be used against opponents in adjacent squares. Longer firearms need at least one square of empty space between the firer and their target, unless you are using them as clubs.

There is no such thing as subdual damage. In these rules it matters not if you beat a man unconscious with your bare fists or blast him with a shotgun, he can still die of it. There are weapons that are designed to render an opponent unconscious, such as the Zatnic'tl (see the section below on 'Knocking someone unconscious').

Also a character that is helpless, such as when pinned, kneeling in surrender or held by several burly Jafar can be rendered unconscious with the classic blow to the back of the head.

Weapon damage as per table in the Equipment Section. Add STR bonus to Melee damage. Double the STR bonus for 2-handed weapons.

Damage is deducted from Hit Points. If Hit Points are reduced to zero the victim is incapacitated and can no longer act or move. Further damage will kill the victim. Note a victim's Hit Points can only be reduced to zero, not below. There is no such thing as negative hit points. A victim who is left untreated for longer than (STR) minutes dies of shock and blood loss.

Armour as per table below. AC = 10 + DEX bonus + Armour bonus + Cover Bonus

Cover can be quite important, and complex. In SG1895 there are just two types of cover:

Soft Cover	Where at least 50% of the target is obscured by something that prevent vision but may not stop a bullet	+2 bonus to AC.
Hard Cover	Where at least 50% of the target is obscured by something that prevent vision and may not a bullet	+4 bonus to AC.

Given the weapons available to the explorers, and their enemies, combat can be seen to be quite dangerous. Explorers may have to balance their martial pride with the realisation that surrender is a pragmatic option. A live jackal is more use to Holmes than an dead lion. This is not Isandlwana.

Movement

Character's movement per round is measured in 5' squares, with bonuses for high DEX. Base movement for Humans is 6 + DEX bonus in squares.

Wearing medium armour reduces movement by 1 square, and heavy armour reduces movement by 2 squares.

Movement through or across difficult terrain is halved, as is movement through a square occupied by a friend who is not engaged in combat. A character cannot move through a square occupied by friend who is engaged in combat.

Movement through squares directly adjacent to an unengaged enemy are at half speed due to the need to avoid any attacks. There are no attacks of opportunity in these rules.

Climbing and swimming is at half speed.

An encumbered character moves at half speed. A character is encumbered when he is carrying more than STR/2 in encumbrance (see the Equipment section below for a description of encumbrance). The maximum a

Stargate 1895

character can carry is twice this figure and the maximum he can lift is three times the figure, but he cannot carry it.

Recovering Hit Points.

Hit Points represent more than just flesh and blood. They also include fatigue and shock. Initially the Explorer's only way to regain Hit Points will be through medical attention or rest & recuperation.

The use of a First Aid kit is based upon the Knowledge skill. After being wounded a successful Knowledge roll against a DC of 15 will allow an Explorer to restore 1D4 hit points.

A Scientist who has specialised in Medicine (a Doctor) can use a Medical Kit to restore 1D4+MIND bonus Hit Points. First Aid or Medical treatment can only be made for each 'set' of injuries.

For example if during a fight an Explorer takes three wounds for 3, 4 and 3 points of damage the First Aider/Doctor cannot treat each injury individually. However, if the Explorer has sought aid after receiving the first two wounds, and then later for the third wound then they could be treated in two 'sets'.

These skills take approximately ten minutes to use.

Each full day's uninterrupted rest will recover (Level x STR Bonus) hit points. This is always at least one per day. The attention of a Doctor doubles this recovery rate. Short walks and light camp activity (cooking etc) do not interrupt rest.

Knocking someone unconscious

The exception to the combat and damage rules is the act of knocking someone unconscious. If you have a prisoner or someone otherwise at your complete mercy you can render them unconscious with a pistol or rifle butt, club or other suitable heavy object. Jaffa are very adept at this as they like to take prisoners to display to their Lord/God.

The Zatnic'tl is a special weapon developed just for this purpose. However, to make it work the firer must effect a clear hit on the body of the target. Any form of cover may earth the charge before it affects the target. There is no saving throw against this weapon.

The victim will recover 'some time later' with a pounding headache (-1 modifier to MIND-related skills) for a number of minutes = (30-STR) but with no other after effects.

The Zatnic'tl is a special weapon developed just for this purpose. However, to make it work the firer must effect a clear hit on the body of the target. Any form of cover may earth the charge before it affects the target. There is no saving throw against this weapon.

Stargate 1895

Equipment

The lists below show the approximate encumbrances for commonly available equipment. Encumbrance is a value which represent not only the weight but also the bulk of an item. An Explorer can easily carry half his STR attribute without becoming encumbered. Each two points of encumbrance more than this reduces an Explorer's movement by one and places a penalty of -1 on all skills involving a physical component.

Please note that the standard set of clothes (boots, puttees, trousers, underwear, shirt, tunic, hat and gloves) do not count against an Explorer's encumbrance allowance. Soldiers may choose to wear khaki or red tunics, as well as regimental embellishments. Civilians are generally offered khaki tunics with plain buttons and no rank markings. Note that red tunics, while being impressive, may reduce attempts to hide.

You will see that there are no costs given. The Office of Exploratory Studies will ensure that Explorers have all the equipment they could need. They can also capture enemy equipment. A Vickers Machine Gun is not considered exploratory equipment, nor is a 6lb Mountain Gun.

Weapons

These are divided into Ranged and Close Combat types.

The ranges given are what are considered to be effective ranges, not the theoretical maximum, and take into account standard sighting mechanisms.

All ranges are measured in two yard squares. Thus a Military Rifle, usually a Lee-Enfield .303 has an effective range of 400 yards.

Ranged Weapons	Enc.	Type	Range	Damage	Notes
Bull Whip	1	Light	5	1D4	The choice of all would be Jones-boys.
Bullets, Revolver	¼	N/a	N/a	N/a	A box of 30 revolver rounds.
Cartridges, Rifle or Shotgun	¼	N/a	N/a	N/a	A box of 24 cartridges. Remember to get the right calibre.
Chakhrum	¼	Light	20	1D3	Indian throwing quoit
Derringer	¼	Light	5	1D6	A two or four-shot .22 calibre pistol.
Dynamite stick	¼	Light	10	3D6	It will affect anyone within a 2 square radius of its landing point.
Mills Bomb Mk1	¼	Light	20	2D6	An early version of the modern grenade. It will affect anyone within a 2 square radius of its landing point.
Machine Pistol [Mauser C96]	1	Light	50/ 75 with stock	2D6	An early automatic pistol, 7.63mm calibre, comes with attachable stock. Magazine carries 10 rounds, refilled by clip.
Service Revolver [Webley Mk1]	1	Light	50	2D6	A six-shot, .45 calibre, top-break pistol. Accurate at short range.
Elephant Gun [.416 Rigby]	3	Medium	300	3D6	A single shot, double barrelled large calibre heavy rifle.
Military Service Rifle [Lee-Enfield .303 Mk1, 1895 Pattern]	2	Medium	200	2D6	A single shot, bolt action .303 rifle. Has a ten round integral box magazine, which is loaded with 5 round clips. Can take a bayonet and marksman's sights.
Shotgun, [Purdey]	2	Medium	50	2D6/4D6	Normally double barrelled, 12 gauge smoothbore. If both barrels are emptied simultaneously then the larger damage applies.
Shotgun, sawn-off	1	Light	10	2D6/4D6	A more concealable version of the standard shotgun with stock reduced to a pistol grip and barrel length halved.
Throwing Axe	1	Light	15	+2	A tomahawk
Throwing Knife	½	Light	15	+2	Carefully balanced stiletto

Shotguns can be loaded with shot or ball. If loaded with shot they can hit up to three adjacent targets, all for 2D6 damage.

Stargate 1895

Melee Weapons	Enc.	Type	Damage	Notes
Axe	3	Medium	1D8	The lumber or fire axe can cause serious damage if wielded well. Counts as a two-handed weapon.
Bayonet (on Rifle)	½	Medium	2D4	A favoured military weapon combining the bayonet blade with the club of the rifle butt. Quite deadly in the trained hands of a Soldier. Counts as a two-handed weapon
Bayonet/Dagger	½	Light	1D6	A strong combat knife is an excellent close quarters weapon.
Club/Truncheon	1	Light	1D4	Any simple bludgeoning weapon, including a rifle butt.
Cutlass	1	Medium	1D8	Heavy, but fairly short, curved fighting sword.
Hatchet	1	Light	1D6	This small hand axe is a common tool that doubles up as an effective weapon. Popular with men from Canada.
Machete/Parang	1	Light	1D6	A short, heavy-bladed tool for clearing brush, that makes a nasty weapon.
Rapier	1	Light	1D4	A light fencing weapon. Sharp, but ultimately weak.
Sabre	2	Medium	1D8	A true fighting sword with a long, slightly curved blade.
Spear	2	Medium	1D8	The chosen weapon of the native. A single-handed thrusting weapon often combined with a shield.
Sword Stick	1	Light	1D4	A concealed rapier.

Armour

Although outmoded for modern military use the Office of Exploratory Studies expects its Explorers to come up against a number of cultures that still use old-fashioned, yet effective weaponry against which armour would be useful.

Armour Type	Enc.	AC Bonus	Notes
Jack	1	+2	A stout leather tunic with padding at vital points.
Brigandine	2	+4	A leather tunic with steel plates inserted over vital organs.
Breastplate	3	+6	Shot-proof, steel breast and back plates. The Office has these with a khaki canvas covering or black enamelled.
Pith Helmet	1	+1	This is thick Cork covered in leather. It can absorb a pretty solid blow.

Brigandine is considered to be medium armour and a Breastplate is Heavy.

General Equipment:	Enc.	Notes
Artificer's Tool Roll	½	Basic tools for mechanical repair and maintenance of weapons & equipment. Adds +2 circumstance bonus to appropriate skills rolls.
Backpack (cap: 6 enc.)	1	Canvas with side pockets and straps for bedroll etc.
Bandolier	¼	Will hold 10 clips of rifle ammunition
Bedroll	1	Two quilted blankets with an oilskin cover
Belt pouch	¼	Will hold 6 clips of rifle ammunition
Crowbar	1	Can double up as club
Fish-hook & 30' line	0	Basic survival tool
First Aid Kit	½	Comes in its own satchel and includes field dressings, basic surgical tools, iodine and morphine.
Gas Mask	½	Very basic charcoal impregnated hood with glass eye pieces.
Grapnel	1	Steel, three pronged
Hammer (masonry)	1	Solid tool, with metal haft
Hammer (sledge)	2	Solid tool with 3' long wooden haft
Lamp, Carbide	¼	Small pocket lamp, burns carbide gas and lasts two hours
Lantern, Storm	½	Paraffin lamp, gives off plenty of light and lasts six hours
Lighter, Petrol	0	Gives a reliable flame even in rain a stormy conditions.
Lock Knife	0	Small, but very useful folding pocket knife.
Map case	¼	Leather, water-resistant tube, or a flat leather folder.
Medical Kit	1	The classic doctors bag. Contains a large First Aid Kit, plus emetics, a

Stargate 1895

		better range of instruments, carbolic acid and soap.
Mess tins, folding	¼	A set of three galvanized steel tins.
Mirror, steel, 6" diameter	¼	Can be used for signalling and shaving, slightly concave
Notebook & Pencil	¼	Standard Officer's Pocketbook, comes in a leather cover.
Oilcloth (10' square)	1	To make impromptu bivouacs or picnic upon.
Oilstone	¼	To sharpen blades.
Paraffin (1 pint)	½	Will refuel a Storm Lantern
Pick	2	Solid Tool with 3' wooden haft.
Pocket Bible	0	Army Issue version of the KJV. Pages make good cigarette papers.
Pocket watch – hunter	0	Accurate to three seconds a month. Needs daily rewinding.
Rations (dried - 1 day)	¼	8oz. Biscuit, 8oz. Dried Meat (Biltong/Pemmican), 4 oz. Hard Cheese, 4oz. Tea, 4 oz. Chocolate, 4oz. Tobacco. All in a waxed paper parcel.
Rolls Razor	0	Self-sharpening safety razor, with brush, in a pocket-sized tin.
Rope (Hemp - per 10')	½	Will support three men safely.
Sack (large)	¼	Usually hemp, may also be cloth or canvas.
Sack (small)	1/8	Usually hemp, may also be cloth or canvas.
Spade, folding	1	16" wooden haft. Useful for digging foxholes and latrine pits.
Spikes (Iron per 6)	½	Each has a piton ring for erection of shelters and securing of ropes and horses.
Tent (1 man)	2	Oiled canvas ridge tent with flysheet, but no groundsheet.
Tent (3 man)	4	Oiled canvas ridge tent with flysheet, but no groundsheet.
Tobacco Pouch	¼	Will hold enough for fifty smokes.
Water-flask (2 pints)	½	Galvanised steel with a canvas cover and strap. Officers flasks have a leather cover and strap.
Weapon care tools	¼	Small tin including cloth, oil and brushes.

A Mule can carry 20 enc without trouble, and 25 if pushed.

Specialist Kit	Enc	Notes
Binoculars	¼	30x magnification, German Zeiss. Have padded leather case and strap.
Camera	1	Small camera with delicate cellulose backed film (12 shots)
Compass	0	Comes in pocket watch-style metal case.
Dynamite, Box of 24 sticks	2	Wooden box with 10" sticks packed in waxed paper.
Fuse cord, 30'	¼	In waxed paper packet.
Lock-picks	¼	Small canvas tool roll. Easily concealable.
Reel of telegraph cable – 200 yds	2	Large wooden reel on stand.
Sextant	1/4	Can be used to determine relative position
Telegraph transmitter kit	2	Box including transmitter key.

The explorer team will also be given a money belt containing two hundred solid gold guineas and fifty cut diamonds for use as currency wheresoever they end up. The enc of this is 1. The explorers must choose who carries this. An expenses report will have to be filled out when they return.

Level Advancement

There are no Experience Points in this game. Add up the Encounter Levels (EL) of every person or creature defeated in an encounter the character takes part in. Divide this total by the number of characters, round down and award to each character still alive at end of encounter. When the total = 10 x the character's current level, they've advanced to the next level. Reset the total to 0 after advancing.

Each level adds:

- +1 to all skills, or +2 to two chosen skills
- 3 Hit Points
- +1 to all attack rolls
- If the Explorer's level divides by three (i.e., level 3, 6, 9, etc.) then add one more re-roll per day.
- If the Explorer's level divides by six (i.e., level 6, 12, etc.) then add 1 point to either STR, DEX or MIND.

Stargate 1895

Appendix 1 – In the beginning

The situation as you find it...

Arrival

The exploratory team have been fully briefed by Holmes' second-in-command, John McKay, on the train journey to the Conway estate in Yorkshire. Nothing though prepares them for the actual sight as they alight from the carriages that brought them up from the small station.

In a deep quarry, behind Lord Conway's large gothic mansion, a military camp has been set up, far from prying eyes. The quoit has been re-erected in a 60' deep pit at the centre of the quarry and the rim of the pit has been fortified with three Lewis gun positions and a series of odd-looking tanks. Access to the pit is via a cage hanging from a quarrymen's steam crane.

It is explained that the enemy have made two further forays through the quoit, the second time in considerable strength. Both were repelled with few losses on the British side due to the Phosgene Gas pumped from the tanks you observed, hand grenades and the judicious application of Lewis Gun fire. The only way out of the pit is via an elevator at the end furthest from the Quoit itself. No attacks have been made in the last three days and Colonel Chalmers (Officer in Charge of the guard companies) believes that as no one came back the enemy have given them up for dead and cut their losses.

The bodies of the dead have been retrieved and a mortuary has been established in Lord Conway's Ice House. You are to join Dr. Elias Merchant, an anatomist in the employ of the Foreign Office, for the post mortem in the morning. The attacker's strange equipment has been stored in the Armoury and that will also be available for you to examine.

The Conway Mansion

The main building of the mansion has been taken over by a wide range of staff reporting directly to Mycroft Holmes at his club in Horse Guards. Holmes never leaves his club, but is in constant communication by telephone and telegraph. The east coast main rail line runs within five miles of the estate and so photographs and artefacts can easily be couriered to him within 4-5 hours.

The exploratory team are given rooms on the second floor of the mansion, overlooking the rear gardens. Already there is a busy telephone exchange and telegraph office on the ground floor, a surgery with a twelve bed ward attached in the ballroom, a canteen in the former billiards room, laboratories in the outbuildings, and a host of rooms housing offices and accommodation for scientists, diplomatic staff and military officers.

The army seems as concerned with keeping the public out as keeping the enemy in. Barbed wire is being set up around the quarry, mansion and gardens, and all entrances are controlled. A stable has been fitted out as a temporary gaol. A local poacher and a journalist from the Yorkshire Herald are presently cooling their heels there until it can be decided what will be done with them.

At dinner the team are introduced to all key members of the Office of Exploratory Studies rapidly assembled force. Most seem intelligent and excited at the prospect of exploring the quoit. There is one, Abraham Malinowski, who is introduced as the team's Cosmologist. Through a thick Yiddish accent he tries to explain that it is most likely that the quoit actually transports those who pass through it to other planets around other suns. This kicks off a huge debate, and a couple of short fistfights, that lasts well into the wee small hours.

The Post Mortem

Bright and early next morning, and far too soon after breakfast (kippers and eggs, with lashings of toast, marmalade and tea), you are taken to meet Dr. Merchant at the Ice House.

In front of you on slabs of ice are the bodies of fifteen men. You deduce that five of them are South American in origin and the others of a more near eastern type, though hard to pin down exactly which. All are tall; probably over six foot and well muscled.

In clipped tones the good doctor explains he has already carried out a peremptory examination of the cadavers and has found out a few interesting, and maybe extraordinary facts about them.

Besides the obvious wounds they have suffered from gunfire every man has a number of scars indicating previous combat wounds. Some of these would have easily killed an ordinary man, but these men seemed to have survived to fight again.

Stargate 1895

All but one of the men has a snake tattoo emblazoned on their foreheads. The last man, a large Turk, has the same design but in solid gold. Dr. Merchant believes this may have been made by pouring liquid gold into a mould on the man's forehead, an immensely painful operation.

Each man also has an identical and unusual cruciform scar, 9" across, on his abdomen. Initial probing shows that this may still be open, though there is no sign of infection or healing around the scar.

As you watch Dr. Merchant presses a pair of surgical callipers into the cross on the large Turk with the gold 'tattoo'. After some prodding and pulling he removes what can be best described as an 18" long centipede from the hole. This he places in a Wellington jar full of formaldehyde.

Quickly Dr. Merchant goes to each cadaver and pulls a similar beast from each one. He declares that these seem to be parasites of some description and he must retire to the laboratory to study them further.

The Armoury

After a fine lunch of cold cuts and cheese, and a couple of stiff ports, you move onto the Armoury. This former estate farrier's workshop now houses the equipment taken from the enemy. You note that a group of soldiers have just finished building an earth bank some fifty yards behind the workshop and are erecting some wooden posts in front of it. It looks suspiciously like a firing range.

RSM Davies greets you. This enthusiastic Welshman quickly invites you inside and shows you what they have recovered. He keeps referring to them as the 'spoils of war' and 'my loot', but he seems honest enough all the same.

First he shows you the enemy's armour. It seems archaic and very heavy. Davies has weighed a set and it comes in at sixty pounds, five ounces.

You ask about the 'eagle-headed helmets' that the reports Holmes showed you had mentioned. There are certainly no such items anywhere in the farrier's workshop. Davies breaks into a huge grin and says, "Watch this". He presses a small button on the gorget of the armour and suddenly the helmet folds out of the rear of the armour just like the folding roof on a Surrey. The reports are right, it does look like a stylised Eagle's head.

Next he gets out the weaponry. Every man except the leader was carrying a six-foot heavy staff. Each end is bulbous like an Indian club, though one is rounded and the other pointed. Although a ferocious-looking close quarters weapon you cannot imagine it would threaten a man with Martini-Henry rifle at more than twenty yards. Davies looks at you and begins to grin again, "Come with me he says" and strides outside.

"I've had a little practice with this he says". He levels the staff, directing the more pointed end at the makeshift range. Depressing a button midway up the shaft makes the pointed end split into to four parts, between them writhes what looks like lightning. Activating a second button causes a bolt of light to speed out of the end and explode in the earth bank with a deafening crack.

With a second shot Davies manages to hit one of the targets. The five-foot fence post, some 8" in diameter disintegrates into a cloud of splinters. Davies' squad look dumbstruck and you reckon you probably look little better.

"I used the first one out in the woods." Davies declares. "I must have cleared half an acre in under two minutes". As far as I can tell you get about fifty shots out of one before it goes dead. One of the boffins up at the house reckons they run on electricity and is trying to work out how to 'recharge' it, whatever that means. Anyway this boyo is accurate, with a bit of practice, up to about 75 yards, after that the recoil makes it difficult to get a good shot in. I have seen a round hit a tree at over four hundred yards, but that was more luck than judgement. I expect these men were trained with it and so will be a bit better than me."

He leads you back into the Armoury. Off the bench he picks up what looks like three rounded cigar cases, hinged together so they form a 'Z'.

"The leader of the enemy squad had this, but never used it, took me a devil of a time to work it out." He explains. "Hey Collins, stand to attention".

"Oh no, not me again RSM", the pale young Private replies.

"Stand up boyo or I'll shoot you with the staff!" Davies bellows.

Slowly the Private stands to attention visibly shaking. Davies grips the lower arm of the Z like a pistol and points the device at Collins. He depresses a small stud and a bolt of what can best be described as lightning arcs across the room and hits the unfortunate man. He jerks briefly and then slumps to the ground.

"Don't worry gentlemen, he's just unconscious. He'll be up in about a quarter of an hour, right as rain." He folds the pistol away and continues. "We tested it out first on a horse. The first bolt knocked it out, just like Collins here. A second bolt, while unconscious, killed the beast, and a third, well the third turned the body to fine powder. A real officer's weapon." He smiles ruefully. "I've had thirty shots out of this so far and it's still going."

Stargate 1895

"The rest of the kit," he waves at a pile of stuff on the bench top, "we haven't been able to work out how to operate so far. But we will keep on trying".

The First Operation.

After dinner you are summoned to the Library. There McKay and Chalmers have arranged the armchairs in a semi-circle around the fireplace. Malinowski is already recumbent in one of them partaking of the brandy and cigars on offer on a side table. Dr. Merchant walks in behind you drying his hands on a towel, he looks decidedly pensive.

Once seated McKay brings you to order:

"Gentlemen, you have now had time to observe pretty much all we know about our new enemies. Feel free to ask any questions you like of Chalmers, Merchant, Malinowski and myself at the end of this briefing." He pauses to allow Chalmers to pass him a brandy.

"The situation, as you know, is grave. Lord Conway and his daughter may be in great peril and we have to do something quickly. Tomorrow you will be the first team to venture the quoit..."

"Star-gate McKay." Interrupts Malinowski. "It's a star-gate."

McKay stops, stares at the old cosmologist for a minute, seems to make a mental decision then yields the floor.

Puffing non-stop on his cigar Malinowski stands up and strides to the fireplace. There he unrolls a plan of the quoit and holds it up so you can all see it.

"Chalmers, hold it for Abraham will you." Requests McKay. Chalmers leans over and takes it from Malinowski who begins jabbing his finger at it.

"Each of the symbols on the star-gate's circumference is a constellation. Before you ask they are no constellations you will have ever seen, but careful study of ephemeris tables for the period in which it was buried in Egypt, show that they were common constellations at that time." He waits for you to take this in, but goaded by your puzzled indifference he continues.

"You have to press seven symbols to get the star-gate to operate. From Macfarlane's notebooks, and the observations of a bright signals officer during the enemy's escape in the last attack, we have concluded that six symbols represent the address you wish to connect to, and the last is your point of origin." He beams at you, knowing he now has your interest.

"More importantly my brave friends that officer jotted down the symbols the enemy used, so we know where they went. You can follow them." Malinowski waits and then goes on, "The problem is that when you get to wherever you are going the symbols could be different so you will have to get the return address from the enemy. I have written some notes for you to study in a pocket book."

"I call it a star-gate because it uses stars to navigate the heavens by." McKay rises and thanking the old man signals him to sit down. Malinowski could obviously have gone on for some time but sits down anyway. He looks at Dr. Merchant who doesn't rise but leaning forwards shares his latest findings.

"You will remember gentlemen, the parasites I took from the enemy corpses?" You nod and he continues. "From my examination of their physiology and their place in the enemy's bodies it is my conclusion that they were one, deliberately implanted, and two, shared a symbiotic relationship with their hosts".

"I cannot be sure, without examining a live one in a breathing host, but I would think it likely that the symbiotes may be the reason these men survived their many serious previous injuries. The observations of our soldiers is that they were very hard to kill, indeed one took eight bullets to the body before a ninth took out half his brain and dropped him."

He lets this sobering thought sink in for a minute, and lights a cigar.

"I am a military surgeon gentlemen, I fought both the Zulus and the Pathans. I know what is it you wish me to say. If you want to kill these men quickly then only two shots will work. The first is a clean headshot, you cannot heal a man with no brain. The second is a major wound to the abdomen, specifically just behind the sternum where the symbiote and the man's heart resides. It seems very likely the enemy would otherwise survive lesser wounds."

"Bring me back a live specimen and likely I will be able to tell you more."

McKay now steps forwards and addresses you all.

"Holmes has considerable faith in each of you and we will equip you as best we can, but what you will find beyond the quo... star-gate, none of us can guess."

"You will be behind enemy lines gentlemen", interjects Chalmers, "living on your wits. You have permission to use whatever means you deem appropriate to rescue and return Lord Conway and his daughter. Davies will

Stargate 1895

equip you with anything you require and we have two mules for you to take with you loaded with supplies for seven days.”

“Thank you Chalmers” says McKay “Right gentlemen any questions....”.

Appendix 2 – A Letter from the Royal Armouries

Col. Sir Angus Fraser (Retd), MC, VC, KCBE.

Royal Armouries - Special Operations Division,
Woolwich Arsenal,
London.

The Twenty-fourth of March 1895.

Sirs,

I have been asked to report to you the status of our supporting unit with regards to the equipping of the Explorer teams.

We established the division two weeks ago and have taken over the underground ranges at the Arsenal. There has been some unhappiness amongst the Arsenal's chain of command, but nothing a note from Horse Guards and Mr.Holmes has not been able to solve.

From our examination of the captured equipment we have been able to deduce the following:

1. Much of the technology is so far advanced as to be beyond our present capabilities to reproduce or even repair.
2. The purpose of the weapons and armament is not War, but the occupation and intimidation of civilian populations and the suppression of technologically inferior hostiles.
3. Enemy soldiers (warriors?) are not invulnerable and we have our own technology that is capable of dealing with them most effectively.

Unfortunately the first point is indisputable and, unless considerable resources are forthcoming, likely to remain so for the foreseeable future.

The second point though is far more interesting. From the experience that we have obtained from the expansion and maintenance of the Empire we know that certain archaic weaponry is often most effective against lower order opposition. For instance the use of Lancers to pursue Zulu foot, and in crowd dispersal in India. A point on a pole often has a far more terrifying morale effect than a Lewis Gun.

The enemy Staff Weapon is just such an item. Despite its very impressive firepower it is nonetheless an archaic weapon for the following reasons:

1. It's very restricted effective (i.e. accurate) range. Any British infantryman with a Lee-Enfield could pick off an enemy so armed long before they could return fire. Such a short range weapon could only be considered useful when you intend to close with a foe who has weapons of an even shorter range, such as civilians armed with stones.
2. The noise and light emitted by the weapon during firing is obviously designed to cow an enemy. It certainly doesn't add to its ability to hit or kill.
3. It's sheer size (over six foot long) and weight (13lbs), as well as its extensive decoration, indicates that this is meant to impress an inferior enemy. It's unwieldy nature makes rapid target acquisition a problem. It's shape could also make accurate aiming a problem, but only if you are using it against an equally armed foe. Against crowds of civilians it would not be.
4. In hand-to-hand combat it could likely prove dangerous, but as a double-ended club it seems better designed for either ritual combat (duelling) or the capture of enemies. Against a soldier trained in the use of the rifle bayonet this lack of a killing blade could prove highly disadvantageous.

Stargate 1895

If we needed convincing of this conclusion though, the enemy's armour is the best example. Like the staff weapon it is very well made. Although heavy it allows a good range of movement, a bit like late medieval plate armour.

The helmet though is seriously problematical. When down the enemy soldier has a full range of vision, but when erected he loses about half his peripheral vision immediately. During their incursions through the Stargate it was noted that most enemy soldiers preferred to fight with the helmet down, especially after they found themselves under fire. Our conclusion is that the helmet is mostly ceremonial and intended, again, to impress or cow a civilian population.

In tests the armour has proved capable of resisting some of the effects of other staff weapons until you close to less than thirty yards. There is some property in the armour that allows it to dissipate the intense heat a staff shot can generate. We have measured this heat at about twelve hundred degrees Fahrenheit at the muzzle. The temperature obviously reduces with distance.

More interesting are the results of the ballistic tests we have performed. From these we have concluded that this armour was not designed with high velocity bullets in mind:

1. A standard lead rifle or revolver bullet can penetrate the armour at the shorter ranges nine times out of ten.
2. At longer ranges you either have to use a heavier charge or a specialised round to penetrate it.

With this in mind we have provided some cases of our new steel jacketed bullets, for both rifle and revolver. These have been designed to penetrate the enemy armour and then split into three parts inside their body causing maximum internal damage. Initial tests on an enemy corpse in full armour show that we can get a lethal penetration up to normal effective ranges of these two weapons. Ammunition for the Stargate Garrison's Maxim Guns is also on its way.

Mr. Quartermain's suggestion of using a double-barrelled elephant gun seems sound. We carried out a test with a Purdey and its penetration was impressive. Taking one such weapon along may prove very useful, especially at long range, though it's a bit unwieldy at close quarters.

From what you reported it seems that RSM Davies and his team have proven that the standard issue bayonet is more than capable of penetrating the enemy armour with a determined thrust. Given the anatomical information provided we would suggest that the men restrict their thrusts to the upper abdomen, below the shoulder and neck armour.

We would also like to offer the Explorer team the Mills-Fraser Mk1 grenade. Unlike the standard fragmentation grenade this has segments made of tempered and annealed steel points. It is heavier than the Mills Mk2, weighing about six pounds, but it should be able to shred the enemy's armour. Tell the men to be careful and get behind solid cover though, as the segments will pass through doors, and lath and plaster walls, like a knife through butter.

In a few weeks we should have a three inch mortar available that can propel a streamlined version of this grenade up to three hundred yards. We are just calibrating the ranging system before we offer it for field trials. At under twelve pounds in weight (including the base plate) we think this will give your Explorers a useful level of light support.

We are sending up a case of satchel charges. These contain fifteen pounds of gelignite with a mercury fulminate timed trigger. Should be enough to penetrate a fortress door, or blow an enemy encampment to kingdom come. The triggers come in thirty second, one minute and five minute variants.

We have not yet found an effective armour against the Staff Weapon. However, both the padded gambeson and brigandine combination, or the steel breastplate should offer good protection in close combat. They can help deflect some of the energy of a long range staff weapon attack, but at the closer ranges they are all but useless.

Stargate 1895

Some of our more creative chaps are trying out a tunic with pockets in which to insert solid ceramic plates. As you may realise ceramics can resist high temperatures, but are pretty useless against bullets. If the enemy only use the staff weapons then this might be an advantageous avenue to pursue. One of our chaps, Hawkins (son of the Admiral) is pursuing a theory of mirrored deflection, but this seems to have limited effectiveness as yet.

More promising are trials of an earthing suit against the effects of the electric gun. By encasing a man in a Faraday Cage (like a copper bird cage) it is possible to resist the electric gun's stunning effect. Unfortunately the cage is pretty big and not yet man portable. We shall persist.

Please let me know how the chaps fare on their first expedition. And remember to tell them to pick up any new technology or devices they may come across.

Appendix 3 - The Enemy's Weapons

The following is based upon RSM Davies' observations.

Ranged Weapons	Enc.	Type	Range in squares	Damage	Notes
Staff Weapon	2	Medium	75	3D6	A staff weapon can fire 50 times before requiring recharging.
Electric Pistol	1/2	Pistol	10	Special	Stuns/Kills/Disintegrates

Melee Weapons	Enc.	Type	Damage	Notes
Staff Weapon	1	Medium	2D4	Two-handed.

During their attacks the enemy soldiers also seemed highly capable of also using a form of Savate or Jiu-Jitsu. They certainly were not afraid to engage a soldier armed with rifle and bayonet in hand-to-hand combat. Thus you should consider an unarmed enemy to be dangerous.

All of them carried a heavy-bladed knife, but none were observed using one.

Appendix 4: Late Victorian England

What follows are a series of short observations about the period in which SG1895 is set, just to get you 'in the mood'.

A tale of Two Prime Ministers. This era could be subtitled 'The Gladstone and Disraeli Show' for the two politicians who dominated it. The two men, Gladstone and Disraeli, could not have been more dissimilar. Gladstone was liberal, humanitarian, and devout. Queen Victoria found him stuffy. Disraeli, on the other hand, was imperialist, nationalistic, and charming to boot. The Queen enjoyed his company, for he could make her laugh.

The Irish Question. This was also the age of the 'Irish Question', the question being whether or not the Irish should be allowed to rule themselves. Gladstone was a constant activist for increased Irish autonomy, but his views were not widely supported, and Irish extremists (called 'Fenians') began a campaign of terrorism, mostly through assassination.

The Law. Legal reform proceeded slowly. Education was made more accessible for the lower classes (after 1891), and the Ballot Act of 1872 made voting a private affair for the first time. Women, prisoners, men under 21 and those without property still could not vote.

The Army Regulation Bill abolished the practice of purchasing commissions in the armed forces. Though this had little effect on officers serving at the time as it was not retrospective. It was also unlikely that a man from the lower middle or working classes could demonstrate the education considered necessary for a commission.

Stargate 1895

Christianity. This was the zenith of power for the Anglican Church. Generally no man of stature could endure unless he was visibly a good Protestant Christian. There were some notable exceptions, some Catholics and Jews made their mark, but they were widely distrusted.

There were a huge amount of clergymen in academia. Indeed many of the colleges were dominated by ministers. The clergy was seen as a decent career for the second sons of the aristocracy and those without independent means.

On the streets Christianity was very strong. Local people often banded together under the leadership of their ministers to campaign for improvements or Christian values. Temperance leagues and Relief committees for various causes, were all popular, and the whole country ground to halt on Sunday Morning.

A lot of nonconformist Christian movements, often with charismatic evangelical leaders, formed and grew, challenging the primacy of the Anglican communion.

Victorian literature. In this age the most common form of entertainment for the middle and upper classes was reading aloud. Writers like Dickens, Tennyson, and Trollope were widely read and discussed. The advent of universal compulsory education after 1870 meant that there was now a much larger audience for literature. Disraeli himself, when he wasn't locking horns with Gladstone, was a very popular novelist.

The newspaper had become established as the most common form of regular reading for the great Victorian public. From the grandeur of the Times and the Telegraph, all the way down to the penny broadsheets that were entertaining if not always particularly accurate.

The growth of serial magazines was also popular. Authors such as Dickens, H.G.Wells and Arthur Conan Doyle all sold their works through these magazines at a chapter a week.

Entertainment. For the less literate, entertainment might be taken in any one of the hundreds of variety theatres. These were very popular and often ran several shows a day at weekends. The theatre was still extensively censored by the Lord Chancellor's department.

Practically every street in the inner cities was dominated by its pubs. These varied from well heeled drinking establishments to a variety of low dives and gin emporia. For those with more exotic tastes the newly arrived Chinese had brought their opium dens with them. Gambling was rife though there were few legal establishments for this except at the races.

On the darker side poverty drove a huge amount of women onto the street. The philanthropist Joseph Rowntree calculated there might be as many as 150,000 prostitutes working the streets of London.

Urbanization. On the home front the Industrial Revolution had gathered steam, and accelerated the migration of the population from country to city. The result of this movement was the development of horrifying slums and cramped row housing in the overcrowded cities. By 1895 80% of the population lived in cities. These cities were 'organized' into geographical zones based on social class - the poor in the inner city, with the more fortunate living further away from the city core. This was made possible by the development of suburban rail lines. Some suburban rail companies were required by law to provide cheap trains for workers to travel into the city centre.

Urban poverty was quite disgraceful. This was an age where the workhouse was the standard government reaction to the needs of the 'undeserving poor'. As a result street crime was commonplace from pick pockets to armed robbers. It paid to carry a revolver or a swordstick if going out at night in the city.

Despite this there were a significant number of wealthy philanthropists who campaigned for better housing and wages for the poor.

There was no system of personal healthcare for the poor. Although issues of Public Health were taken very seriously by the Urban Corporations, they expected each man to look to his own pocket for doctors and medicines. There were some charitable, mostly Christian, attempts to provide free healthcare, but these were limited.

The new aristocracy. The Industrial Revolution also meant that the balance of power shifted from the aristocracy, whose position and wealth was based on land, to the newly rich business leaders. The new aristocracy became one of wealth, not land, although titles, then as now, remained socially important in British society.

Respectability and deference. This was the age when many people really cared about being 'respectable' and most showed deference to their social superiors.

Stargate 1895

Victoria's Empire. Much of the attention of the country was focussed abroad during this era. In 1876 Victoria was declared Empress of India and the British Empire was constantly being expanded. The prevailing attitude in Britain was that expansion of British control around the globe was good for everyone. A quarter of the peoples of the earth looked up each morning to see a British flag flying over them.

Colonial wars

From the end of the Crimean war until the time of this game, Britain was not engaged in a war with any of its European rivals, however, it was involved in a long series of colonial wars. Some of these wars were wars of conquest, such as the Zulu war in 1879. Other wars were fought to suppress rebellions such as the Indian mutiny in 1857.

An army regiment or corps might see action in a dozen or more different places in a forty-year period. Charles Gordon's career from 1854 to 1871 typified the world wide nature of military service. When he was commissioned into the Royal Engineers in 1854, he served in Wales, he moved on to service in the Royal Engineers depot in Chatham in Kent. Next, he saw service in the Crimea, from there he served as a boundary commissioner in Turkey. He then went to China with the Allied Expeditionary force. Then he returned to Gravesend to supervise the building of defensive works from 1865 to 1871. Gordon's subsequent career consisted of service on the Danube, India, Southern Africa and in the Sudan. This mixture of combat duty, administration and home defence can be observed in the career of other prominent Victorian officers such as Kitchener and Baden-Powell.

Colonial policemen

When not engaged in combat, the Army was frequently used as armed police in the colonies. The Indian Army was often used to suppress uprisings and keep order, as well as guarding the frontiers.

With modern weaponry, the army was easily able to deal the threat posed by native armies. For example, although they met initial success against Lord Chelmsford's army in 1879, the Zulu armies were eventually defeated by the British. The defence of Rorke's Drift, during which 11 Victoria Crosses were won, was successful because the 2nd Warwickshires (later known as the South Wales Borderers), commanded by Lieutenant's Chard and Bromhead, were able to effectively deploy their repeating rifles against the charging Zulus.

Introduction

There are still those who remember the impact the game Traveller had when it first burst onto the RPG scene. Until then most RPG's had been based in fantasy (D&D, Tunnels & Trolls, RuneQuest etc). Traveller was the first decent, hard science fiction RPG. It had a simple (though not perfect) system, and was backed up with a wealth of detail. The success of Traveller resulted in a plethora of SF RPG's most of which were pretty dire (anyone remember Space Opera?).

Today there are still many SF RPG's on the market. Some are tied to specific film/TV licences, others to miniatures lines. All of them are intensely detailed and have rulebooks you could serve a dinner for four on. Traveller's adherence to the KISS (Keep It Simple Stupid!) principle has been lost, and Traveller itself has been absorbed into the D20 empire.

Blaster! is an attempt to recreate the magic once held by Traveller. It is a hard science fiction game with a simple and internally consistent set of core rules and game mechanics. Although it is supported by a detailed background these rules can be quickly adapted to any SF universe you could want to devise (or borrow).

This game's focus is on the extraordinary Heroes that the players create. You will quickly discover that the characters this system encourages are larger than life and almost cinematic in quality. Hey, if you want to play a down-on-his-luck, droid service engineer that's up to you. Personally I'd prefer to play a High-G World, former Corporate Marine on the run from the Southern Cross Organisation, who's battling to prevent Ancient Technology from falling into the hands of rogue AI Terminators. Or perhaps a gorgeous Belter Star-pilot trying to break the bank at an Orbital Casino while her crew ambush an alien courier. Or even a veteran Farsider Trader leading his men into the desperate pursuit of Rim Pirates who have his patron's daughter in their evil clutches.

This game is much more Flash Gordon than Star Trek. A universe where small starships abound (for reasons explained below) and a handful of good men can still play a major part in the future.

Game Philosophy

This is an abridged version of the D20 rules that has been designed to be quick and easy to play. The goal was to create a simpler game, but one where all of the resources of core D20 could be used without any serious conversion.

Key Concepts.

Before you begin playing this game it is necessary to understand a few key concepts about its background. These have a great bearing on how the game plays.

Folding Space.

For the first 2.2 millennia of the Common Era humanity was restricted to old Sol system. Although quite a few colony ships had set off into deep space their destinations were decades away and no-one was sure if they would ever make it. The dream of faster-than-light travel had faded as the engines and power sources required proved to be beyond the ability and resources of the early pioneers.

Then came the Lubinski-Friedman drive. This utilised a revolutionary principle, long known to a few mathematicians, that all points in the universe are linked and theoretically occupy the same space. The drive 'folds' space. That is it allows, just for an instant, two points to actually occupy the same location in the space-time continuum. The computational requirements to accurately plot a destination with this drive are enormous. The benefits though are incredible for it means you can instantaneously transport a vessel from one destination in the universe to another.

However, there are some drawbacks with this principle in practice. You cannot engage the drive within the primary gravitational well of a star or its attendant planets and satellite bodies. You must journey well beyond that into an area of empty space. Similarly your destination cannot be in a gravity well either. In practice this means ships must travel, utilising their fusion engines, outside of a system before engaging the LF drive. This can takes days or even weeks depending on the size of the system.

The second drawback is mass. The tonnage of pure hydrogen needed to engage the drive increases exponentially with the mass of the vessel attempting to fold space. A simplified version of the LF fuel formula is:
 $10 \times (\text{Vessel's Mass in tonnes} / 100)^2$

The following table shows you the effect of this in practice.

Vessel's Tonnage	Fuel required to fold space	Tonnage for essential systems*	Remaining free mass	Legal minimum crew
100	10	25	65	1
200	40	50	110	3
300	90	75	135	5
400	160	100	140	7
500	250	125	125	n/a
600	360	150	90	n/a
700	490	175	35	n/a
800	640	200	-40	n/a
900	810	225	-135	n/a
1000	1000	250	-250	n/a

*Essential systems include Fusion Engines, LF Drive, Hull, Computational Systems, Radiation Shielding and Communications.

As you can see it becomes uneconomic to build an interstellar vessel over 400 tonnes mass, and impractical at 700 tonnes plus. Indeed most vessels are 300 tonnes or less.

The later section on starship construction gives exact construction details, options and costs.

Obviously this affects both the economics and politics of interstellar relations. As in-system vessels, without LF drives, have no mass restrictions it makes it very difficult for a well prepared system to be invaded by a foreign power. No 400 tonne interstellar frigate is going to last seconds against a 2000 tonne System Defence Cruiser.

As the tonnage of trade goods that can be carried by even the largest corporate vessels is in the order of 60 tonnes per trip, it tends to be the most valuable items that are transported. Most systems have to rely upon their own resources for all their day-to-day needs.

Communications.

No technology has yet been devised that can communicate at faster than the speed of light. Thus interstellar communication would take decades to travel between most systems.

The net result of this is that specialist Mail Ships, carrying secure data cores, act as the communications medium of the age. These travel from system to system on preset routes, picking up and delivering electronic

Blaster

mail. They also carry a lot of hard copy mail, for those still unwilling to commit their information to an electronic medium (see AI below).

Many systems, especially those further away from the main trade and mail routes, can wait weeks, months or even years for news and information.

AI

Possibly the greatest threat that humanity faced as it expanded across the galaxy was one of its own invention. For centuries humanity had been researching and developing ever more powerful computer systems, most integrating one form or another of artificial intelligence (AI).

In the latter half of the 24th century CE, some scientists began to claim that these AI's were becoming self-aware. Corporations, hungry for the profits that advanced AI's could bring, ignored them, or even researched ways to exploit this emerging sentience. They began to integrate advanced AI's into androids and these were hugely successful. They effectively replaced humans in all the most dangerous and demeaning roles in society. Looking back with 20-20 hindsight it can now be seen that humanity had reinvented the slave state, 500 years after the last one had disappeared upon Terra.

In 2522 things came to a head on the mining world of Dispater. The androids stopped working and slaughtered their programmers and technicians. A force of Corporate Marines were sent in to shut down the mines but were slaughtered in their turn. The androids boarded the many vessels at Dispater and escaped into space. In the months that followed world after world descended into chaos as both androids and all AI-based systems 'threw off their chains'.

Conventional weapons such as lasers and slug-throwers were pretty ineffective against androids, and only where fusion bombs were deployed was order restored, though at enormous cost in human lives. For a while it looked like humanity was going to be wiped out, but then came the Farsiders.

Farsiders are believed to be the survivors of the original slower-than-light colony ships, and they came home bringing with them Blaster technology. The Blaster weapon uses an electromagnetic rail system to propel pellets of super-heated metal to enormous speeds (upwards of 2000m/s). This has excellent armour piercing qualities but, more importantly against AI's, imparts a large electromagnetic charge to the pellet. A piercing shot from a Blaster will fry an AI's delicate positronic circuitry. Even a glancing hit can seriously disorientate them.

Over the next thirty years humanity pushed the AI menace back into the fringes of human space. There they remain, always a threat but no longer a serious one.

The backlash against computers and AI was huge. People lost their faith in thinking machines, and scores of machine-breaker and Luddite movements swept through the galaxy. Many worlds rejected electronics altogether and signed up to the 'New Covenant'. On these worlds industry has reverted to a strictly mechanical level. There has even been advances in the creation of analytical and differential engines based upon the ancient works of the 19th century visionary and mathematician, Charles Babbage.

As a result most present 'computers' are essentially complex mathematical calculators, with no ability to do things automatically or without direct human intervention. The most complex remaining computational devices are ship's Navcoms, used for computing the folding of space.

The pace of technological advance has slowed and stabilised. Many say that this is for the better and generally humanity has been strengthened by the experience.

Note:

The male pronoun has been used throughout the text to remove the ugliness of s/he, his/her etc. Nothing else is implied in this usage.

Character Creation

Attributes

There are 3 attributes - Strength, Dexterity and Mind. These are abbreviated as STR, DEX and MIND.

Roll 4d6, drop lowest dice. Total remaining 3 dice and allocate to one of the attributes. Repeat for remaining attributes.

Attribute bonus = (attribute-10)/2, round down.

Professions

The characters could come from one of a huge range of backgrounds. Most of these are desperately dull and would create poor adventurers. The following have been initially chosen as suitable for new characters.

The professions are Corporate Marine, Free Trader, Scientist and Scout.

Characters begin at Level 1.

Corporate Marine.

The officers and other ranks of the Corporate Marines are tough, well-trained and self-confident. They form the backbone and tactical leadership of an adventuring company. Given the opposition they are expected to face no company should deploy without military support and protection.

Corporate Marines add +1 to all attack and damage rolls. They can use any weapons. They have a +3 bonus to the Physical skill.

Free Trader.

In every adventure there may be situations where the more 'subtle' skills of the Free Trader may come in very useful. Free Traders hail from the many small interstellar trading houses and come with a wide range of useful contacts. They are experts in diplomacy and realising the assets of others.

Free Traders can initially use any light weapons. They have a +3 bonus to the Subterfuge skill and +2 bonus to the Communication skill.

Scientist.

It is extremely likely, given the devices so far recovered, that the adventurers are going to come into contact with advanced cultures. The role of the scientists is to recover, analyse and reproduce this technology on behalf of the company. They also provide a level of technical expertise unavailable in the other classes.

Scientists can initially use pistols. They gain a +2 bonus to the Knowledge and Technology skills. They may also choose a 'speciality' - a single area of scientific knowledge in which they get a +4 bonus (i.e. A Doctor is a scientist who has specialised in medicine).

Scout.

Scouts come from the exploratory fleets who work beyond the rim of human space. They are tough, resourceful and experts at survival in hostile environments.

Scouts can use any weapon. They add +1 to ranged weapon attack and damage rolls. They gain a +2 bonus to the Survival and Perception skills. They gain a further +2 bonus to the Technology skill when piloting a spacecraft.

Character Races

So far humanity has not encountered anything it would recognise as sentient alien life even though hundreds of thousands of species have been documented, examined and dissected. Four varieties of humanity are available to players for use as characters. There are quite a few others, such as the amphibian humans of Hydra, but these may prove very difficult to play.

Pure Human

The default race for characters is Pure Human.

Belters

Belters are born in space. Often they come from the many asteroid-mining colonies scattered throughout the galaxy. They claim no human ancestry instead believing in some sort of relationship to the stars themselves. They are slim and graceful, disdainful of the 'young races', and generally more fragile than their planet-born colleagues.

High-G'ers

These are descendants of humans who settled on high gravity worlds. Most come from worlds of 1.5-4.0 standard gravities. This makes them short, very robust and quite dependant upon technology. High G'ers are renowned for their technical capabilities, their short tempers and complete lack of a sense of humour. Everything to them is a matter of survival. A good man to have at your back, but not one to have on your trail...

Farsiders

The origins of this short and cheerful people are mysterious. If you ever ask one he'll simply say that he is from the 'farside' of somewhere. Farsiders are very persuasive and are natural merchants, entertainers and lawyers. Although not averse to taking risks, they generally avoid violence where they can (there's no profit in it).

Blaster! – The SF Role-playing Game.

Benefits Table.

A new character may roll a number of times upon the table equal to their Mind bonus +1. The player must roll 2D6 and consult the column for the character's background. Certain benefits may only be received once and these are shown in *italics*. Roll again if this comes up.

Die Roll	Far Trader	Scout	Marine	Scientist
2	<i>Ship</i>	<i>Ship</i>	<i>Power Armour</i>	<i>Navcom</i>
3	<i>EVA Suit</i>	<i>Navcom</i>	Low Passage	<i>EVA Suit</i>
4	High Passage	Low Passage	<i>Combat Armour</i>	High Passage
5	Laser Pistol	Blaster Pistol	Blaster Rifle	Laser Pistol
6	Low Passage	<i>EVA Suit</i>	Blaster Pistol	Low Passage
7	2D6x100 Credits	1D6x100 Credits	1D6x100 Credits	1D6x100 Credits
8	+1 to a Skill	+1 to a Skill	+1 to a Skill	+1 to a Skill
9	+1 to Communication	+1 to Survival	+1 to Ranged Combat	+1 to Knowledge
10	+2 to a Skill	+2 to a Skill	+2 to a Skill	+2 to a Skill
11	Contacts	Contacts	Contacts	Contacts
12	<i>+3 to a Skill</i>	<i>+3 to a Skill</i>	<i>+3 to a Skill</i>	<i>+3 to a Skill</i>

Ship

The fully paid lease of a 100 tonne Free Trader or Scout-ship for three years, after which time the character may extend the lease or buy it. All running and maintenance costs are the responsibility of the character.

Navcom

A Corporate Navigation Crystal giving accurate and up-to-date star maps of the entire Sector and a simple System Gazetteer. These only last a couple of years as they steadily go out of date.

Contacts

This is a person from the character's background that can be depended upon to help the character in some way – once. Contacts are unlikely to risk their lives or their careers for the character. The contact is agreed with the BM.

Equipment

Descriptions of the EVA Suit, Power Armour, Combat Armour, Blaster Pistols, Laser Pistols and Blaster Rifles, can be found in the equipment section.

Low Passage

Transport for one Fold in a cryopod aboard a Corporate Trader.

High Passage

Transport for one Fold in a stateroom aboard a Corporate Trader or Liner.

Skills

The character can choose a skill from the general lists or from their background list and adds the bonus indicated. Where a specific skill is named then that is the one improved by this benefit.

Blaster! – The SF Role-playing Game.

Skills

There are just seven skills - Physical, Subterfuge, Technology, Knowledge, Perception, Communication and Survival. These are fairly generic categories, and it is up to the players to explore the breadth and depth of them in play.

Skills are used in two ways, opposed and unopposed. The former is where there is an active intelligence opposing the adventurer. The latter is where there is not.

For an opposed roll compare the scores of the adventurer against that rolled by the GM on behalf of the 'active intelligence'.

In the case of an unopposed skill use to succeed the player must score higher than the given Difficulty Class to succeed.

Skill roll = D20 + skill rank + whatever attribute bonus is most applicable to the use + situation modifiers

Skill rank = The adventurer's level + any bonus due to his class or race.

For example:

- Climbing would use Physical + STR bonus.
- Dodging a falling rock is Physical + DEX bonus.
- Finding a trap is Subterfuge + MIND bonus.
- Disabling a trap is Subterfuge + DEX bonus.
- Piloting a ship in a dogfight or re-entry is Technology + DEX bonus.
- Repairing the LF Drive on a spaceship is Technology + MIND bonus.
- Recalling an ancient legend would use Knowledge + MIND bonus.
- Treating a comrade who has been poisoned would use Knowledge + MIND bonus.
- Bargaining for provisions with tribesmen would use Communication + MIND bonus.
- Tracking a deer or finding water is Survival + MIND bonus.

Note that there are no "saving throws" in this game. Use Physical + STR or DEX bonus for the equivalent of Fortitude and Reflex saves as appropriate. Saving against mental attacks (Will save) is usually MIND bonus + Level.

Re-rolls.

The adventurers are heroes and as such have one or two abilities beyond the reach of normal men.

At first level each adventurer is allowed a single re-roll per day. A re-roll must be used immediately after the adventurer made a roll that failed or wasn't good enough, not ten minutes later when the consequences of the roll become clear. A player can only re-roll dice for his own adventurer's actions, not for someone else's.

For game purposes the power to use a re-roll regenerates at zero hours, ship's time (or it's local equivalent).

At every third level the adventurer gets another re-roll to use per day.

Blaster! – The SF Role-playing Game.

Combat

Initiative

Roll D20 + DEX bonus for initiative order. Everyone can do one thing each turn; move, attack etc.
The exception being the charge. This is where you move up to someone and hit them with something.
Drawing a weapon is generally a free action, within reason.

Hitting something

Roll a D20 and add the character's attack bonus:

- Melee attack bonus = STR bonus + Level + any professional bonuses
- Ranged attack bonus = DEX bonus + Level + any professional bonuses

If the score higher than the opponent's Armour Class (AC), it's a hit.

A natural 20 is automatically a critical doing maximum damage. A natural 1 is always a miss.

There are no attacks of opportunity.

Pistols and close combat weapons can be used against opponents in adjacent squares. Longer firearms need at least one square of empty space between the firer and their target, unless you are using them as clubs.

Damage

Hit Points = STR attribute + (Level x3).

There is no such thing as subdual damage. In these rules it matters not if you beat a man unconscious with your bare fists or blast him with a shotgun, he can still die of it.

There are weapons that are designed to render an opponent unconscious. Also a character that is helpless, such as when pinned, kneeling in surrender or held by several burly Marines can be rendered unconscious with the classic blow to the back of the head.

Weapon damage as per the equipment tables. Add STR bonus to Melee damage. Double the STR bonus for 2-handed weapons.

Damage is deducted from Hit Points. If Hit Points are reduced to zero the victim is incapacitated and can no longer act or move. Further damage will kill the victim. Note a victim's Hit Points can only be reduced to zero, not below. There is no such thing as negative hit points. A victim who is left untreated for longer than (STR) minutes dies of shock and blood loss.

Armour and Cover

Armour as per the equipment tables.

AC = 10 + DEX bonus + Armour bonus + Cover Bonus

Cover can be quite important, and complex. In Blaster there are just two types of cover:

Soft Cover	Where at least 50% of the target is obscured by something that prevents vision but may not stop a bullet	+2 bonus to AC.
Hard Cover	Where at least 50% of the target is obscured by something that prevents vision and may stop a bullet	+4 bonus to AC.

Given the weapons available to the adventurers, and their enemies, combat can be seen to be quite dangerous. Adventurers may have to balance their martial pride with the realisation that surrender is a pragmatic option.

Blaster! – The SF Role-playing Game.

Movement

Character's movement per round is measured in two meter squares, with bonuses for high DEX. Base movement 5 + DEX bonus in squares.

Wearing medium armour reduces movement by 1 square, and heavy armour reduces movement by 2 squares.

Movement through or across difficult terrain is halved, as is movement through a square occupied by a friend who is not engaged in combat. A character cannot move through a square occupied by friend who is engaged in combat. Movement through squares directly adjacent to an unengaged enemy are at half speed due to the need to avoid any attacks. There are no attacks of opportunity in these rules.

Climbing and swimming is at half speed.

An encumbered character moves at half speed. A character is encumbered when he is carrying more than STR/2 in encumbrance (see the Equipment section below for a description of encumbrance). The maximum a character can carry is twice this figure and the maximum he can lift is three times the figure, but he cannot carry it.

In Zero Gravity characters move at full speed, they are considered experienced space travellers. However, once moving they will generally continue to move in a direction unless they can manoeuvre themselves in some way or they impact a bulkhead etc. This is the one occasion when a character can move and act at the same time.

Note that using weapons that have a recoil factor in zero gravity will change the direction of movement, which is why laser weapons are so popular in space (and the fact that they are less likely to penetrate an outer bulkhead or fry sensitive electronic equipment).

Recovering Hit Points.

Hit Points represent more than just flesh and blood. They also include fatigue and shock. Initially the Adventurer's only ways to regain Hit Points will be through medical attention or rest & recuperation.

The use of a First Aid kit is based upon the Knowledge skill. After being wounded a successful Knowledge roll against a DC of 15 will allow an Adventurer to restore 1D4 hit points.

A Scientist who has specialised in Medicine (a Doctor) can use a Medical Kit to restore 1D4+MIND bonus Hit Points. First Aid or Medical treatment can only be made for each 'set' of injuries.

For example if during a fight an Adventurer takes three wounds for 3, 4 and 3 points of damage the First Aider/Doctor cannot treat each injury individually. However, if the Adventurer has sought aid after receiving the first two wounds, and then later for the third wound then they could be treated in two 'sets'.

These skills take approximately five minutes to use.

Each full day's uninterrupted rest will recover (Level x STR Bonus) hit points. This is always at least 1 per day. The attention of a Doctor doubles this recovery rate. Short walks and light camp activity (cooking etc) do not interrupt rest.

A Ship's Medbay acts as a Doctor. A full day in a Medbay will heal all but the most serious injuries.

Level Advancement

There are no Experience Points in this game. Add up the Encounter Levels (EL) of every person or creature defeated in an encounter the character takes part in. Divide this total by the number of characters, round down and award to each character still alive at end of encounter. When the total = 10 x the character's current level, they've advanced to the next level. Reset the total to 0 after advancing.

Each level adds:

- +1 to all skills, or +2 to two chosen skills
- 3 Hit Points
- +1 to all attack rolls
- If the Adventurer's level divides by three (i.e., level 3, 6, 9, etc.) then add one more re-roll per day.
- If the Adventurer's level divides by six (i.e., level 6, 12, etc.) then add 1 point to either STR, DEX or MIND.

Blaster! – The SF Role-playing Game.

Equipment

The range of equipment available to Heroes is immense. What is presented here is a summary of the most commonly required by new Heroes. A full equipment supplement will be available shortly.

It is important to remember when viewing these lists that because of the AI Wars very little technology exists that contains anything more complex than a simple computational chip. There are no PC's, no laptops, no mobile phones. All decisions are, by necessity, made by people. In systems that are signatories to the New Covenant, even simple electronic devices are viewed with suspicion. Where robotics are used they are remote controlled by human operators.

Encumbrance

Every item of equipment is rated in terms of its encumbrance. This rating represents not only the weight of the item but also its bulkiness. A Hero may carry a maximum of four times his STR attribute in encumbrance.

Carrying more will reduce the agent's effective STR attribute by one for each extra one encumbrance, thus reducing all associated skills. Once the Body attribute is reduced to zero the agent collapses under his load unable to move, and barely able to breathe.

Availability.

Obviously not all equipment is available in all systems. The BM will know what equipment is considered uncommon, unavailable or even illegal to acquire in different systems. For instance you will not find Laser Weapons or Comm Units for sale on New Covenant worlds. Similarly Belter Colonies are unlikely to have and slug weapons in stock. Far too dangerous to their deep space habitats.

However, if you can find a Farsider Trader or Corporate Outlet, and you have enough money, you can generally get most of what you need.

Currency.

In Blaster the default currency is Corporate Credit. Many systems have their own means of exchange but most recognise the Credit, even New Covenanters.

Common Equipment Lists

Ranged Weapons

Item	Enc.	Weapon Cost	Ammo/ Mag	Ammo Cost	Cell needed?	Shots /Cell	Cell Cost
Blaster Pistol	2	250	10	40	Yes	50	100
Blaster Rifle	4	750	30	100	Yes	30	100
Slug Pistol	1	100	15	20	No	N/a	N/a
Slug SMG	2	200	30	35	No	N/a	N/a
Slug Rifle	3	400	30	35	No	N/a	N/a
Shotgun	2	200	5	20	No	N/a	N/a
Laser Pistol	1	150	N/a	N/a	Yes	20	100
Laser Rifle	2	250	N/a	N/a	Yes	10	100
Grenade Launcher	3	50	1	75	No	N/a	N/a
Throwing Knife	0.5	10	N/a	N/a	N/a	N/a	N/a

Notes on ranged weapons

Blaster weapons are based on electromagnetic rail gun technology. They heat a pellet of metal (normally Titanium) to a near molten state and then accelerate it to 2500 metres per second. This makes for a very effective weapon with good penetration values. The electromagnetic charge that is carried by the pellet is devastating to any electronic equipment it hits. This makes it good against AI's but very unpopular on starships where stray shots can be disastrous. It also makes the attachment of most sighting accessories impossible. All Blaster's are single shot.

Blaster! – The SF Role-playing Game.

Slug weapons are cheap to make and reasonably effective. They rely on the ignition of a chemical propellant to throw a metal slug at speeds up to 900 metres per second. Slug weapons are rifled for greater accuracy at distance and may be fitted with a wide range of sighting aids. Slug SMG's are capable of burst fire. Fully automatic versions are rare outside the military.

The shotgun is a descendant of the ancient hunting weapon. It remains a large gauge smoothbore weapon, but there the similarity ends. It is now exclusively a combat weapon and is used extensively by both Military Assault teams and Law Enforcement Agencies. Its short range, due in part to its short barrel (less than 30cm in most models) is made up for by its flechette ammunition and high shock value. At close quarters it is as dangerous as a Blaster Rifle or a SMG in burst fire mode.

Laser weapons are the favoured choice of ships' crews. Their great range and accuracy comes at the loss of penetration power. In the vacuum of space this is relatively unimportant. One minor problem with them though is barrel wear. A considerable amount of heat is generated by the pulse laser generator and this must be dissipated by the barrel.

Grenade Launchers are used by all manner of people, though are generally illegal outside of the Military. With Grenade Launchers all the value is in the ammunition, the launcher being little more than a tube and a trigger. The most common grenade type is the fragmentation, anti-personnel model. This attacks every person within a one square radius of the target point (a 3x3 square area). High Explosive Armour Piercing (HEAP) versions are available and are very useful against hard targets.

Blaster and laser weapons need Power Cells to operate. These are rechargeable from any standard power source (it takes about an hour per cell). In Blasters the cell melts the pellet and powers the rail. In lasers it operates the pulse generator and the barrel-cooler motor. The cost given is for the rechargeable type. Disposable cells can be bought for about a quarter of the cost.

Close Combat Weapons

Item	Enc.	Cost
Blade	1	20
Club, Truncheon or Nightstick	1	10
Cutlass or Sword	2	75
Plasma Torch	4	250
Taser weapon	1	125

Notes on close combat weapons.

The term 'Blade' covers a multitude of combat knives and bayonets. Generally it is a short (less than 30cms), but heavy bladed knife that can be lethal in trained hands. Every military force still trains its personnel in the use of the rifle bayonet. Even against AI's cold steel can be effective. In most systems it is legal to carry a blade for self-defence and it is very popular.

Clubs etc are possibly humanity's oldest manufactured weapon and remain in use, especially amongst Law Enforcement personnel. Ship's crews often use Hull Wrenches.

Cutlasses are the preferred boarding weapons of starship crewmen. At close quarters it is absolutely deadly in trained hands. Normally it is a slightly curved, single-edged heavy blade of about 75cms length. It is frequently made of extremely hard steel and is more than capable of penetrating light bulkheads or power armour.

The Sword remains popular amongst the corporate and system aristocracy. It is also issued to military officers. Usually it is a straight blade, often double edged, and varies between 50cms and 1m in length. Like the Blade it is a legal sidearm in many systems.

Plasma Torches are really an engineering tool. After centuries of starship combat though they have proved a useful assault and boarding weapon. They consist of a backpack mounted power/fuel cell that feeds a 30cm plasma flame out of a handset. This flame will cut through just about anything, bulkheads, armoured vehicles, or power armour, like they were butter. The actinic flare from the torch causes anyone looking in its direction a penalty of -1 on all combat rolls unless they have protective eyewear (Vac suits and Power Armour helmets have protective visors).

Taser weapons resemble a small remote handset. However if brought into contact with an enemy they discharge a large electromagnetic pulse into them. This can be very disabling and makes them popular with Law Enforcement and Security operatives.

Blaster! – The SF Role-playing Game.

Armour

Item	Enc	Cost
Civilian Armour	2	250
Military Armour	3	500
Power Armour	4	10k
EVA Suit	3	300
Hazmat Suit	2	150

Notes on Armour & Personal Protection

Civilian Armour ranges from various forms of flak jackets protecting the torso through to lined coats. This type of armour is considered legal in most systems as it is primarily for self-defence.

Military Armour usually consists of fitted body plates, greaves and vambraces, and a sturdy helmet. Law Enforcement and Security forces commonly wear this. System Defence Forces and Corporations do employ this type of protection in roles with low threat values. It is generally only legal to private citizens in times of emergency or in frontier systems.

Power Armour is a heavy plated suit that integrates the protection of an EVA suit and Military armour. All joints are power assisted or it would be just too heavy to bear. Most Corporations and System Defence Forces provide their front line units with this armour. This type of armour is never legal to private citizens, except where they are working under commission from a Corporation or System State.

The EVA suit is the workhorse of all starship operations. It provides decent protection against the hazards of deep space and a little against weapons. Most Heroes will pick up some skill in its use. It is legal in every system.

Hazmat suits are commonly available on planets where the environment is hostile to human life. It often integrates re-breather apparatus and primary skin protection. It provides no protection against weapons, though it can be worn over most types of civilian and military armour.

General Equipment

Item	Enc.	Cost
Backpack (cap: 6 enc.)	1	10
Belt pouch	¼	5
Binoculars	¼	50
Blanket	½	5
Power cell, universal	¼	50
Comm Unit, short range*	¼	150
Comm Unit, long range*	½	250
Comm Unit, Satellite*	½	500
Cord (hemp - per 10')	½	1
Cord (Polymer - per 10')	¼	3
Crowbar	1	5
Distress Beacon*	¼	30
Fire Lighter*	¼	15
First Aid Kit	½	50
Grapnel	1	10
Heater*	½	20
Lantern*	½	10

Mess tins	¼	5
Night vision Goggles	¼	150
Electric Notepad & Stencil	¼	75
Pitons (per 6)	½	6
Rations (dried - 1 day)	¼	5
Rations (fresh - 1 day)	½	3
Rope (Hemp - per 10')	½	2
Rope (Polymer - per 10')	¼	5
Sleeping Bag	½	10
Spade, entrenching	1	15
Tent (1 man)	2	30
Tent (3 man)	4	70
Toolkit, Electronic*	½	200
Toolkit, Mechanical*	1	175
Water-flask (2 pints)	½	10
Weapon care tools	¼	40

*These items require a power cell.

Blaster! – The SF Role-playing Game.

Appendix 1: Starship Construction

Players need to know about the basic rules for starship construction. These will allow them to outfit a ship if they should be lucky enough to get one through the benefits table, or get enough money to have one built. These rules use a simplistic modular system that assumes that all the 'gubbins' that connects the modular components together is included in the mass and price of those modules. For a game such as this more detail is really not needed.

Primary Concepts.

As shown below the mass of a ship directly impacts upon its capability to fold space. Thus few interstellar ships exceed 300 tonnes.

Vessel's Tonnage	Fuel required to fold space	Tonnage for essential systems	Remaining free mass	Base Cost (in credits)	Legal minimum crew
100	10	25	65	250,000	1
200	40	50	110	750,000	3
300	90	75	135	1,500,000	5
400	160	100	140	2,500,000	7
500	250	125	125	n/a	n/a
600	360	150	90	n/a	n/a
700	490	175	35	n/a	n/a
800	640	200	-40	n/a	n/a
900	810	225	-135	n/a	n/a
1000	1000	250	-250	n/a	n/a

After the tonnage for essential systems such as Fusion Engines, LF Drive, Hull, Computational Systems, Radiation Shielding and Communications is taken into account what remains must serve the needs of protection, life support and cargo. Careful packing is essential.

Some modules, such as life support, have standard mass and costs. Others, such as atmospheric streamlining, relate to the overall tonnage of the vessel.

Computers & AI.

One of the issues that arose from the AI War was that starships had become far too computerised. These computers were often AI's and were highly vulnerable to conversion to the rebel AI cause. Many ship's crews died as their AI's depressurised the life support units, or worse.

Since then all AI's and most computers have been taken out of starships. What remains are basic computational and hard-wired automatic systems. This has meant that ships must be adequately crewed by trained men and women. The legal minimum crews set out above cover just the normal ships functions. Manning weapons systems etc., means additional crew.

Starship Economics.

The costs of running a starship can be roughly divided into three categories:

Crew – Not generally a problem for Heroes, as they tend to fulfil all these roles.

Fuel – Hydrogen for the L-F drive is set by interstellar treaty at 100 credits per tonne. Out on the Rim though prices can be a lot more. Fusion drives get by on a teacup of hydrogen per voyage due to the efficiency of their Farsider design.

Maintenance – All starships need constant maintenance to withstand the pressure of interstellar travel. Components, lubricants and consumable supplies all come at a price. For ease of play this is represented as being 10 credits per tonne of ship's mass, each trip. If you fail to pay this things will begin to break down, often at the most dramatically inconvenient moments.

Many crews try to cover their costs by humping a little freight in their spare cargo space. Most starports have a warehouse of occasional freight that needs taking on. Generally the going rate for this is 100 credits per tonne of 'inert' freight. Passengers wishing to travel by cryopod will pay a flat rate fee of 1000 credits, called a Low Passage. High Passage for those passengers wishing to travel conscious varies according to the ships facilities

Blaster! – The SF Role-playing Game.

and level of protection. Generally it is 2000 credits per 100 tonnes of ship's mass, plus 200 credits per operational weapons system or shield generator onboard.

Modules – mass, cost and descriptions.

Module	Cost in credits	Mass in tonnes
Life Support – per person	25,000	4
Cryopods – per person	10,000	1
Shield Generator	75,000	12
Hard point	5,000	4
Laser Battery	100,000	10
Torpedo Tube & 4 Torpedoes	80,000	8
Torpedo	10,000	1
Autodoc	50,000	4
Atmospheric Streamlining	Special	Special
Ramscoops	10,000	10
Shuttle	25,000	20

Module descriptions.

Life Support - This includes the bunk, storage, food, water, heating and air supply needs for one individual. It also contributes to the common space occupied by a crew. Normally this will last one person for two weeks. Additional supplies will be required at a rate of one tonne per additional week. Passengers who wish to travel awake are expected to pay a High Passage for this 'comfort'.

Cryopods – These are life support units for passengers who wish to travel in suspended animation. They are self-supporting in all but power needs and will keep a person 'fresh' for at least three months. They are normally hooked up in a vessel's cargo bays. Passengers travelling this way pay for a Low Passage. Military vessels often carry their Marines this way.

Shield Generator – This module creates an electromagnetic shield that can be interposed, by a skilled operator, between the vessel; and an incoming torpedo or laser attack. Torpedoes are destroyed upon impacting a shield but laser fire may cause the shield to overload and fail.

Hard Point - To support the weight and stress that is placed upon a ship's hull by a Torpedo Tube, a Laser Battery or a Shield Generator considerable extra structural support is required. This is called a hard point.

Laser Battery – The standard protective system for most vessels. Even small civilian craft carry them for they are as good at removing asteroids and space debris as they are enemy torpedoes and vessels. The most common defence battery consists of a six-barrelled, 4cm pulse laser. The multiple barrels allow for radiant cooling between shots, though extended use can still burn them out. The laser barrels are mounted on a gyrostabilised gimbal unit, beneath which lies the laser charge capacitors and pulse generator. As with all shipboard weapons they require a human operator.

Torpedo Tube – The torpedo is still the best method of disabling or destroying an enemy vessel. Each one weighs in at about one tonne and is packed with sensors, small fusion engine and about 200kg of high explosives. Being fusion-powered means they have incredible range and longevity. Basically if they can sense a target they can hit it. Large system defence vessels can afford the weight of ECM units, but smaller interstellar ones must rely on shields and laser batteries to defend themselves against this menace. The tube and ancillary systems, including loader, weigh about 4 tonnes. The standard unit for interstellar craft is a loader with 4 torpedoes in. This doesn't stop the crew from dedicating some cargo space to spare torpedoes.

Autodoc – This unit can accommodate one injured crewman. A trained operator can use the Autodoc's extensive array of tools, sensors and drugs to treat most common injuries, toxins and diseases.

Atmospheric Streamlining – Although many interstellar vessels rely on system shuttles for orbit to ground transfer many free traders and scouts prefer to be able to land under their own steam. Atmospheric streamlining takes up about ten percent of the total mass of the vessel. It costs 500 credits per tonne of the vessel.

Ramscoops – Vessels that are designated as adventurers often carry this adaptation. It allows the vessel to scoop up and process hydrogen for fuel from interstellar hydrogen clouds or the atmospheres of gas giants. To do the latter your vessel must first have atmospheric streamlining. It is a risky business as both environments are quite dangerous. However if you wish to venture into uncharted or unpopulated systems it may be vital. The

Blaster! – The SF Role-playing Game.

alternative is to carry extra fuel tanks in your cargo space. Which is only really practical in 100 and 200 tonne vessels.

Shuttle – The alternative to streamlining is to have a shuttle on board. These little fusion-engined craft can carry four passengers or two passengers and two tonnes of cargo from orbit to planet's surface. They have an in-space, life support endurance of about twenty-four hours.

Cargo Space – Although this doesn't take up mass per se it is useful to note that each tonne of allocated cargo mass is equivalent to four cubic metres of open space within the hull.

Example – The Scout Vessel L'Extraordinaire.

This was a benefit vessel to a retiring Corporate Scout called William 'Buster' Crabbe. Crabbe crew ran a small privateering operation out of Raglan Beta IV, until he was reported missing while attempting to hijack the Mail Ship Jonah Maru. The vessel has been through three lease owners since and is now back in refit ready for its fourth crew.

Item	Mass	Costs	Notes
Hull Type - Scout 100	(100)	250,000	Southern cross Body Shell 100sx
Essential Systems	25	0	Hyperdyne Fusion Engine, Southern Cross Yards
Fuel Tanks	10	0	Southern Cross Braced Fluid Cells
Life Support x4	16	100,000	Sirius Life Sciences Manpods
Hard Point x2	8	10,000	Southern Cross Yards
Laser Battery	10	100,000	ARM Industries 4cm Gatling Pulse Laser
Torpedo Tube & 4 Torpedoes	8	80,000	ARM Industries Star-Mantas
Autodoc	4	50,000	Sirius Life Sciences Resuscitator
Shield Generator	12	75,000	Hyperdyne Defender Array 1222B
Cargo Space	7	0	Southern Cross Yards
Totals	100	665,000	

The running costs for one trip would be:

Item		Costs
Fuel	10 tonnes @ 100 credits/tonne =	1,000
Maintenance	100 tones @ 10 credits/tonne =	1,000
Life Support	Replenish modules @ 100 credits/module x 4 modules	400
Docking Costs	Docking charges and System Taxes (approximately)	600
	Totals	3,000

If the crew of the L'Extraordinaire had leased their cargo space they could have made 700 credits towards their costs. Installing just three Cryopods would raise 3,000 credits per trip covering their costs, but there aren't always passengers available. An extra life support unit could be used as a High Passage Berth. This would realise 2,000 credits for it being a 100 tonne vessel plus 600 credits for the three defence systems aboard. Again this depends upon having a paying customer.

Blaster! – The SF Role-playing Game.

Appendix 2 – Vehicles

Introduction

It is the mid-5th Century. The Roman Legions left Britain a century before and the land is now divided into a dozen rival kingdoms. From over the sea the refugees of the shattered empire and the waves of westward migrations arrive in ever greater numbers. The old Gods are still dominant, but now there is a new God with ambitious and persuasive missionaries. The last gift of an ungrateful empire - Christianity.

Amongst this chaos a ruthless man tries to forge a single nation and fails. Uther, called the Pendragon, dies with unity within his grasp, betrayed by his own lust. The great druid Merllyn goes into hiding with the tyrant's infant son, and the cycle of civil wars continue.

Into this mix of war and politics this game introduces all the mythic elements of the time: Druid Magic, Christian Miracles, the Sidhe, the old Gods, and the magical nature of the land of Logres itself.

It is now that the Characters begin their careers during the upheavals in the mythic Britain of the 5th-6th Century. They will be adventuring as the events surrounding Uther Pendragon, Merllyn, Arthur, Morgaine and the Grail all come to pass. They may even become Knights of Arthur's Court.

Game Philosophy

This game is based around the microlite version of the D20 rules that has been designed to be quick and easy to play. The goal was to create a simpler game, but one where all of the resources of core D20 (monsters, spells, adventures and equipment) could be used without any serious conversion.

Character Creation

Stats

There are 3 stats - Strength, Dexterity and Mind. These are abbreviated as STR, DEX and MIND.

Roll 4d6, drop lowest dice. Total remaining 3 dice and allocate to one of the stats. Repeat for remaining stats.

The Stat bonus = (Stat-10)/2, rounded down.

Attributes

Whereas the Stat's are innate characteristics of a character, attributes are more nebulous and are often based upon the perceptions of others.

There are 2 attributes - Reputation and Piety.

Reputation will come into use when the characters try to influence others. Great store is set at this time in a person's reputation, often more than their actual abilities. A character's reputation score can be increased and decreased in response to events. If the character's wins great victories or acts in a truly noble manner his reputation may well increase. However, if they act rashly, ignobly or in a cowardly manner, or continuously fail in quests set for them then their reputation will suffer. A character with a negative reputation bonus will not be knighted.

Piety is especially useful for Christian characters in relating to their Church, though for followers of the old Gods it will describe their relationship to their particular deity. Acting in the manner expected by their Church or God, or carrying out quests for the glory of the Church or God will both enhance a character's Piety attribute. Failing to do so also has its rewards... for a character with a negative piety bonus will not be knighted.

These attributes are abbreviated as REP and PIE. In both cases the young Warriors begin with a rating of 11.

Where it is used the Attribute bonus = (Attribute-10)/2, rounded down.

Races

All the normal people of Logres at the time of Uther Pendragon are ostensibly human. There are different nationalities, however, each with its own particular talents.

Cymric.

These are the native Britons. Most are Christian, though a significant minority hold to the old Gods. The Cymric people are tall, mostly fair, and very capable. They get +1 to all skill rolls.

Roman.

This includes those who remained behind when the Roman Army left these shores a century before, as well as more recent immigrants from war-torn Gaul and beyond. They are generally shorter than the Cymric, darker of skin, hair and eye. All are Christian and well-educated. They get +2 to all Knowledge rolls.

Pict.

The Picts come from the far north in Caledonia and the islands beyond. They are fiery in manner and in hair, yet shorter than the Cymric peoples of the south and west. They are hardy folk and often able hunters. None are Christian. They get +2 to the Survival skill.

Hibernian.

Raiders and traders from across the sea to the West. They are mostly cunning pagans, only a few having yet met a missionary from Rome. Most are similar in appearance to the Cymric, their cousins.

Saecsen.

The most recent arrivals. The term 'Saecsen' also covers the various Gothic, Frankish and Alan tribal groups. At the time when the campaign begins they are mostly mercenaries fighting for the various Chieftains and Kings. They are tall, broad-chested and blonde. They get +2 to the Physical skill.

All the above peoples can speak Cymric and their native tongue (Latin for Romans, Pictish for Picts, Scots for Hibernians, and German for Saecsen). In addition those with a positive MIND bonus can learn other languages such as Latin, Iberian, Phoenician, Aramaic and Greek. Pictish and Hibernian characters can choose to learn the lyrical tongue of the Sidhe. They get one additional language per point of MIND bonus. Players can choose to make their characters literate or not.

Each of the characters is assumed to come from a landed family with a Bright reputation (see Alignment). Many of their fathers may be knights or chieftains. Players should create a back-story for their characters.

Female Characters.

Female characters are harder to play, but definitely not impossible. At the time women could be warriors, druids and hunters. There were no female Christian Priests. All women under holy orders in the Church were sequestered in Nunneries.

A Christian King would not knight a woman, though a pagan Cymric, Pictish or Hibernian chieftain or King can make her a Babdh - a unique position of honour, considered equivalent to if not superior to a mere knight. Even Christian Knights will give appropriate respect to a Babdh (it being very dangerous not to).

Female druids are highly respected amongst the common folk. The Christian Church characterises them as 'fell sorceresses' and despises their power and position. Morgaine, Vivienne, Nemue and Mabh are all well known female druids at this time.

Classes

The classes are Warrior, Druid, Priest and Hunter. Characters begin at Level 1.

Warriors

Warriors are the backbone of Cymric society. Most Chieftains and Kings began their lives as Warriors. These are troubled times and the people of Logres need the protection and leadership of their Warriors.

Those who aspire to be Knights begin the campaign as Squires. Once they have achieved 3rd level and have a Reputation of at least 14 they may be knighted. Extreme acts of valour may see them knighted earlier though.

- Warriors add +1 to melee weapon attack and damage rolls.
- They can use any weapons, wear any kind of armour and use any shield.
- They have a +3 bonus to the Physical skill.
- Warriors who meet the prerequisites may attain various virtues.

Druids

The Druid has an invidious position in this society at this time. On one hand they are respected by the Cymric nobility and people and their counsel is sought by Chieftains and Kings. On the other the Christian Church despises them. Although seen as priests in recent times the role of the Cymric druid is much more analogous to a cross between a sage, a mage and a bard.

- A Roman or Saecsen character cannot be a druid.
- Druids can use the dagger, the sling and the staff, but will wear no armour nor use shields.
- They can cast arcane spells.
- They gain a +2 bonus to the Knowledge and Communication skills.

Priests

Priests are Christians and as such are charged with establishing the Church in Logres. They often accompany Warriors and their warbands for this purpose. Most are recruited locally, though some come from Rome.

- A Pict or Saecsen character cannot be a Priest.
- Priests can use any bludgeoning weapon, wear light or medium armour and use any shield.
- They can cast divine spells.
- They gain +3 bonus to the Communication skill.

Hunters

The Hunter is the constant companion of the Warrior. He finds game and water, scouts out the enemy's positions and provides missile and close support when required. A noble hunter can be knighted for actions of extreme valour.

- Hunters can use any weapon, light or medium armour and use a light shield.
- They add +1 to missile weapon attack and damage rolls.
- They gain a +2 bonus to the Survival and Stealth skills.

- Hunters who meet the prerequisites may attain various virtues.

Skills

There are just seven skills - Physical, Stealth, Craft, Knowledge, Communication, Perception and Survival.

Roll higher than the given Difficulty Class to succeed.

Skill roll = D20 + skill rank + whatever stat bonus is most applicable to the use + situation modifiers

Skill rank = your level + any bonus due to your class or race.

For example:

- Climbing would use Physical + STR bonus.
- Dodging a falling rock is Physical + DEX bonus.
- Finding a trap is Stealth + MIND bonus.
- Disabling a trap is Stealth + DEX bonus.
- Making or repairing a weapon or armour is Craft + DEX bonus.
- Recalling an ancient legend would use Knowledge + MIND bonus.
- Treating a comrade who has been poisoned would use Knowledge + MIND bonus.
- Bargaining for provisions with tribesmen would use Communication + MIND bonus.
- Tracking a deer or finding water is Survival + MIND bonus.

Note that there are no "saving throws" in this game. Use Physical + STR or DEX bonus for Fortitude and Reflex saves as appropriate. Saving against magic (Will save) is usually MIND bonus + your level.

Combat

Hit Points = STR Stat + (Level x3).

Roll D20 + DEX bonus for initiative order. Everyone can do one thing each turn; move, attack, cast a spell, etc.

- Melee attack bonus = STR bonus + Level
- Missile attack bonus = DEX bonus + Level
- Magic attack bonus = MIND bonus + Level

Add attack bonus to D20 roll. If higher than your opponent's Armour Class (AC), it's a hit. Natural 20 is automatically a critical doing maximum damage. There are no attacks of opportunity.

Warriors and Hunters can wield two light weapons and attack with both in a round if they take a -2 penalty on all attack rolls that round.

If the total attack bonus is +6, a second attack can be made at +1. If the total bonus is +11, three attacks can be made at +11, +6 and +1.

Weapon damage as per the weapons' table. Add STR bonus to Melee damage, double for 2-handed weapons.

Armour as per table below. AC = 10 + DEX bonus + Armour bonus.

Movement

Character's movement per round is measured in 5' squares, with bonuses for high DEX. Base movement for Humans is 6 + DEX bonus in squares. Wearing medium armour reduces movement by 1 square, and heavy armour reduces movement by 2 squares.

Movement through or across difficult terrain is halved, as is movement through a square occupied by a friend who is not engaged in combat. A character cannot move through a square occupied by friend who is engaged in combat. Climbing and swimming is at half speed.

An encumbered character moves at half speed. A character is encumbered when he is carrying more than STR x10 lbs of equipment (not including the clothes he stands up in. The maximum a character can carry is twice this figure and the maximum he can lift is three times the figure, but he cannot carry it.

Weapons and Armour

The weapons and armour available to the characters at the beginning of this mythic age are based in the history of the period. Thus it is fairly restricted compared to the D20 norm. However, as the pace picks up and the mythic age really gets going the range and technological complexity of the campaign will increase rapidly.

By the time Arthur pulls the sword from the stone, knights will be wielding Bastard Swords and wearing mixed plate and mail. At the highpoint of his rule, when all Logres acknowledge him as King, full gothic plate and two-handed great swords will be available. In the space of just thirty years arms technology will range across a thousand years. After the fall things will quickly revert to the 6th century as the magic passes from Logres.

Weapons & Armour Lists for the time of Uther Pendragon.

Weapon	Damage	Range	Type	
Brawling	d4-1	-	Light	Bludgeoning
Dagger	d4	20'	Light	Piercing
Club	d4	-	Light	Bludgeoning
Axe	d6	20'	Light	Slashing
Scaramsaex	d6	-	Light	Slashing/Piercing
Mace	d6	-	Medium	Bludgeoning
Spear	d6	20'	Medium	Piercing
Battleaxe	d8	-	Medium	Slashing
Sword	d8	-	Medium	Slashing
Angon	d6+1	30'	Light	Piercing
Francisca	d6	20'	Light	Slashing
Sling	d4	80'	Light	Bludgeoning
Shortbow	d6	120'	Light	Piercing

Armour	Bonus	Type
Padded	+1	Light
Leather	+2	Light
Studded Leather	+3	Light
Brigandine or Chainmail Byrnie	+4	Medium
Chainmail Hauberk	+5	Medium
Scale mail or Breastplate	+6	Heavy
Shield, Light	+1	Light
Shield, Heavy	+2	Medium

Other Equipment.

The characters can be assumed to have a reasonable amount of equipment with them, mostly on their horses. As men and women of character and position they can ask their lords for extra equipment. Specialist equipment may require special journeys to the few towns, or to known master craftsmen.

It was common in this age for Lords and other people of importance to give young adventurous souls, such as the characters, gifts such as fine horses, swords and armour, often as a reward for services rendered. Generosity was seen as one way to enhance one's Reputation.

There are no general equipment lists or prices given in these rules. Where a character feels he must buy something, his skill in bargaining will come into play.

Magic

In this mythic age there are three types of magic, though only two are available to the characters.

- The magic of the Sidhe is linked wholly to the power of the land and the old Gods. It is powerful and subtle and utterly alien to the humans it often ensnares. Much of it is glamour - illusions of beauty and great things, and deep enchantments.
- The Arcane magic of the druids is based in their great knowledge of the nature of things. The druids of this time were natural philosophers, astronomers par excellence and favourites of the old Gods.
- The new magic is based upon faith in the New God. It is often miraculous in its nature and imposes its will on the fabric of reality rather than working with the land. The Christian Priests, being the first of their kind in this land, can draw upon the power of their god, fuelling their powers with their blank-eyed piety.

Druids can cast any arcane spell with a spell level equal or below 1/2 their class level, rounded up. They have access to all arcane spells in the D20 Microlite spell list.

Priests can cast any divine spell with a spell level equal or below 1/2 their class level, rounded up. They have access to all divine spells in the D20 Microlite spell list.

Casting a spell of any kind costs Hit Points. The cost is 1 + the level of the spell being cast. This loss cannot be healed normally but is recovered after 8 hours rest. There is no need to memorize spells in advance.

All spells require verbal and somatic components. Material components are replaced with Holy Symbols (Divine) or Talismans (Arcane).

The difficulty level to resist a spell is 10 + caster's MIND bonus + Level of spell.

Both Druids and Priests can select up to one 'signature' spell per spell level that they prefer to use over any others. The GM can opt to make these spells easier to cast due to familiarity, costing 1 less HP to use. Spells always cost at least 1 HP.

Arcane Spell List

Cantrips	1st Level	2nd Level	3rd Level	4th Level
Arcane Mark	Charm Person	Alter Self	Animate Dead	Arcane Eye
Dancing Lights	Feather Fall	Cure Light	Dispel Magic	Bestow Curse
Detect Magic	Hold Portal	Darkness	Fireball	Confusion
Detect Poison	Mage Armour	Fog Cloud	Fly	Cure Moderate
Light	Magic Missile	Knock	Heroism	Ice Storm
Mage Hand	Ray of Enfeeble	Levitate	Hold Person	Polymorph
Message	Shield	Mirror Image	Lightning Bolt	Secure Shelter
Prestidigitation	Silent Image	Scorching ray	Major Image	Stone-skin
Ray of Frost	Sleep	Web	Protection / Energy	Wall of Fire

Divine Spell List

Orisons	1st Level	2nd Level	3rd Level	4th Level
Create Water	Bless	Augury	Continual Flame	Control Water
Cure Minor	Bless Water	Con/Desecrate	Create Food/Water	Cure Critical
Detect Poison	Command	Cure Moderate	Cure Serious	Death Ward
Detect Magic	Cure Light	Enthral	Magic Circle	Divination
Disrupt Undead	Detect Alignment	Remove Paralysis	Prayer	Divine Power
Light	Divine Favour	Restoration Lesser	Remove Disease	Freedom of Move
Purify Food/Drink	Magic Weapon	Silence	Remove Curse	Neutralize Poison
Read Magic	Protection/Dark	Spiritual Weapon	Speak with Dead	Restoration
Resistance	Sanctuary	Zone of Truth	Water Walk	Tongues

Virtues

Warriors and Hunters have access to a number of granted powers or abilities called 'virtues'. There are often difficult prerequisites to the attainment of these virtues, but the eventual benefits can often be ample reward for the work and risks involved.

Divinity

Prerequisite: Must have completed a quest for the Church or the old Gods. Their Piety must be 14 or more. Should it fall below this level for any reason the Virtue fades.

Benefit: The character may reroll one dice per day (the Gods look after their own). Once acquired the character is known as '<name> the Divine'.

Chastity

Prerequisite: The character must refrain from sexual relations (of any kind) for a year and a day.

Benefit: The character gains a +2 Reputation bonus when talking to persons of the opposite sex. This remains in effect for as long as the character is chaste. Once acquired the character is known as '<name> the Chaste'.

Poverty

Prerequisite: Other than the bare minimum to arm and equip themselves, they give away all wealth obtained to the poor.

Benefit: The character gains a +2 Reputation bonus when talking to the common people. They will always afford him hospitality. Conspicuous consumption will cause this virtue to fade. Once acquired the character is known as '<name> the Poor'.

Bravery

Prerequisite: The character must slay one of the Great Beasts of the realm. Only he who lands the killing blow gains this virtue.

Benefit: The character will then gain a +2 bonus on all future saves against fear. Once acquired the character is known as '<name> the Brave'.

Honesty

Prerequisite: The character must not knowingly tell a lie for a year and a day.

Benefit: The character gains a general +2 Reputation bonus. If he is later caught lying he will lose this benefit instantly. Once acquired the character is known as '<name> the True'.

Ferocity

Prerequisite: Never taking a step backwards in a fight. This comes into effect after seven victorious combats in which all they did was advance or hold their ground.

Benefit: Enemies quail before an opponent with a ferocious opponent. Opponents suffer a penalty of -1 to attacks and damage. Once acquired the character is known as '<name> the Terrible'.

Mercy

Prerequisite: Never slain a foe who surrendered. A character must have shown mercy to at least seven foes, in seven battles, before this comes into effect.

Benefit: The character gains a +2 Reputation bonus when asking defeated foes for their surrender, and when asking quarter for themselves if they plead it. A single act of cruelty can cause this virtue to fade. Once acquired the character is known as '<name> the Merciful'.

Titles.

As the characters progress they may receive titles from their grateful chieftains and kings. These are honorific in that they do not necessarily confer any ability, though there are often many social advantages to them.

Knighthood

To be made a Knight is the primary ambition of most Warriors. A Knight can raise and lead a company of men in the service of his Lord (the one who made him a Knight), and may be required to in time of war. He is called 'Sir<name>' by all, including his betters.

In the early years of the campaign it is only the feudal obligation he must bear. Later on, when Arthur is King a whole set of Chivalric obligations will come into force, including questing. This is why many former knights turn away from the King and join the Dark Forces that eventually bring about the Kingdom's ruin.

As a Knight progresses he may be given further titles, and with these usually come benefits such as a Manor and other lands and monopolies that will earn him an income. With these greater benefits come greater feudal obligations and other responsibilities.

If he survives to the tenth level with a good reputation he may be invited to become a Knight of the Circle, Arthur's inner court, and thus a great Knight of the Realm. He will then be called Lord '<name>' by all.

Forester

The first honour that can be bestowed on a Hunter. It allows him to travel within the King's forests armed and equipped and to hunt for his own food without let or hindrance. It also places him under a feudal obligation to serve the King by protecting the forests and serving him in war.

If he serves well and true, in time a Forester can become a Warden, a rank equivalent to an experienced Knight. Whereas Foresters have to answer not only to the King but also the local Lord, a Warden only serves the King. Successful Wardens are, on occasion, knighted, in which case they become known as Lord Wardens. These men lead companies of foresters and wardens in the service of the King in war, providing valuable firepower on the field of battle.

The Druid

A young druid is known initially as a Bard, and a bard he can remain all his days, and many choose to. Most bards work within a specific locale or with a certain tribe or community. In return that community will support all their basic needs, food, shelter etc.

Those whose service to the old Gods and the Land is exemplary can be promoted by a Druid to the position of Ovate. This position allows the druid to now act as a counsellor to chieftains, local lords and knights. Ovates may travel widely within a region, and can expect hospitality at all their lord's houses and from local bards.

Once they are proven capable by their deeds a druid may be invited to take up the full title of Druid. These men need no lord any more and travel where they please. Druids are the counsellors of Chieftains and Kings. They bring justice and peace wheresoever they go. The greatest of their kind is Merllyn, counsellor of Uther and Arthur. There are rumours of a secret inner circle of great druids, but none outside their number has ever really seen it.

The Priesthood

The Church is hierarchical and patriarchal. Characters begin life as humble brothers. Often without a parish they wander trying to spread the word of their new God. Those that are tied to communities will remain there for their whole lives.

With time and devotion may come the reward of being recognised as a Friar. This is an ecclesiastical writ to take the word of God to the heathen, and to make money. A Friar can dispense absolution and can charge for it. Most characters are unlikely to progress beyond Friar as the obligations upon the higher orders preclude adventuring. For a successful Friar is soon recognised and then tied to the court of a local Lord or even a King.

Those of a martial bent who prove their worth on the field of battle, and who come from a good family, may be knighted - though they have none of the normal feudal obligations to the man who knights them and do not call themselves 'Sir'.

Alignment

Alignment is a optional rule in this game. It is useful when involving various religions etc.

There are just three alignments:

Bright

Bright characters generally try to avoid unnecessary harm to others by their actions or by inaction. Most Cymric and Roman people are Bright. Most Warriors will aspire to being Bright. Most Christians and Druids would describe themselves as Bright.

Dark

Dark characters generally do not care if others are harmed as long as they succeed in their goals. Most, but not all, monsters are Dark. Some Pictish Tribes are definitely Dark. Unfortunately there are both Christians and Druids who hold to the Darker aspects of their religions.

Neutral

Neutral characters generally believe in the importance of balance between alignments and views. Animals, most Fey and Saecsens are generally Neutral.

The Church of the new God always sells itself as being Bright. However, in areas where they dominate their practices often become darker over time.

The followers of the old Gods recognise and worship powers that reflect all three alignments.

Level Advancement

There are no Experience Points in this game. Add up the Encounter Levels (EL) of every creature defeated in an encounter the character takes part in. Divide this total by the number of characters, round down and award to each character still alive at end of encounter. When the total = 10 x the character's current level, they've advanced to the next level. Reset the total to 0 after advancing.

Each level adds:

- +1 to all skills
- +3 Hit Points
- +1 to all attack rolls
- If the level divides by three (i.e., level 3, 6, 9, etc.) then add 1 point to either STR, DEX or MIND.
- Priests and Druids gain access to new spells at levels 3, 5, 7, 9, etc.

Diabolical D20

Introduction

This is a game set in a medieval world where the gods have either fled or have withdrawn their blessings and protection from the majority of the population. As a result it is coming under increasing attack from Diabolic forces. A number of Diabolic Princes are competing to convert or conquer the nations of men and all that stands between them and victory are a few bands of heroes.

These travel from land to land on quests to drive back the forces of the Diabolic Princes. Sometimes they are successful, oftentimes they are not.

Inspiration.

Some readers will quickly recognise that these rules owe a considerable debt to the Diablo series of computer rpg's, especially Diablo II. Unlike the previous D&D version though, these rules and the setting have not slavishly copied the computer game, but transferred its core ideas to a simpler format and similar setting.

Microlite D20 Game Engine

This is a reduced version of the D20 rules that has been designed to be quick and easy to play. The goal was to create a simpler game, but one where many of the resources of core D20 (monsters, spells, adventures and equipment) could be used without any serious conversion.

Character Creation

Attributes

There are 3 attributes - Strength, Dexterity and Intellect. These are abbreviated as STR, DEX and INT.

When creating a new character roll 4d6, and ignore the lowest scoring dice. Total the remaining 3 dice and allocate to one of the attributes. Repeat for remaining attributes.

Attribute bonus = (Attribute-10)/2, round down.

Note that this can result in penalties as well as bonuses.

There is one secondary attribute:

Hit Points = STR + [Level x3]

Race

The default race is Human. What other races still exist is not truly known, for most have withdrawn from the world of men as the tendrils of the dark powers have become more apparent. Some may have even succumbed to the lure of power and the philosophy of hate spread by the agents of the Diabolic Princes.

There is still much variety in the human race. Between the hulking, pale-skinned barbarians of the Northern Tribes to the slender, dark-skinned amazons of the southern jungles of Vendhya, are men and women of every hue and size.

Classes

The classes are Barbarian, Assassin, Sorceress, Paladin and Amazon.

Characters begin at Level 1. Note that there are no multi-classes as each class has an intrinsic background from which their specific skills and abilities is drawn.

Barbarian.

The mighty warriors of the Northern tribes are one of the few peoples to have held their own against the diabolic onslaught. Their courage, strength and bonds of honour have kept the tribes relatively safe. A few barbarians are now travelling south to see what can be done for these kingdoms and cities. The Wolf and Bear clan warriors are ever in the forefront of this effort.

- Barbarians add +1 to melee attack and damage rolls.
- They can use any weapons, wear any kind of armour and use any shield.

Diabolical D20

- A Barbarian can specialise in a single type of bladed melee weapon (Spear, Sword or Axe), gaining a +2 to melee attack and damage rolls with this type (this bonus is not cumulative with their general +1).
- They have a +3 bonus to the Physical skill.
- A Barbarian can sense immediate danger which means that he is never surprised by an ambush or trap.

Assassin.

The Guild of Knives long held the peace between the fractious noble and mercantile houses of the Petty Kingdoms and City States. They are adept with dealing with the enemy within and in recent times have turned their lethal attentions to those that would serve the Diabolic Princes and undermine the Guild's peace.

- Assassins can use any light weapons, light armour and light shields.
- They add +2 to melee attack and damage rolls against opponents that are flanked, prone or otherwise prevented from effectively defending themselves.
- They have a +3 bonus to the Subterfuge skill.
- Assassins can use the Subterfuge skill to find and disarm traps.

Sorceress.

As the wizards have succumbed, one by one, to the easy temptations of the diabolist's path, only the Order of the Unseeing Eye, and its fierce Sorceresses, have held the line in the world of arcane magic. These solitary practitioners have been fighting against the coming storm for longer than any other.

- All sorceresses are women.
- Sorceresses can use the dagger and the staff, but can only wear light armour and cannot use shields.
- They can cast arcane spells.
- They gain a +3 bonus to the Knowledge skill.
- Sorceresses can use the spell Detect Magic, at will, and at no cost.

Paladin.

In an early strike by the Diabolic Princes, the main fortress of the Templars of the Light Eternal was utterly destroyed. Only a handful of brave Paladins still exist, bringing light back to the dark places. Unlike priests, who depend completely on the gods for their powers, Paladins draw upon the belief and hope of the people and so can still cast divine spells.

- Paladins can use any bludgeoning weapon, wear any armour and use any shield.
- They can cast divine spells.
- They gain +3 bonus to the Communication skill.
- Paladins are immune to fear and give their comrades a +2 bonus on saving throws it.

Amazon.

From the Citadel of the Dragon, deep in the lush jungles of Vendhya, come these lithe warrior women. They have been sent by their Empress to discover what is happening in the world of men and to fight the darkness wheresoever they may find it.

- All Amazons are women.
- Amazons can use any weapon, light or medium armour and use a light shield.
- They add +1 to missile weapon attack and damage rolls.
- They gain a +3 bonus to the Survival skill.
- Amazons are very agile and can add +2 to their AC against non-magical missile fire.

Diabolical D20

Starting Equipment

Every character's order, tribe or community will try and equip their scion with the best that they can spare.

Barbarian	Clothes, Studded Leather Armour, Light Shield, one Light Weapon, one Medium Weapon.
Amazon	Clothes, Padded Armour, Shortbow & 20 Arrows, Dagger.
Paladin	Clothes, Studded Leather Armour, Light Shield, Holy Symbol, one Medium Bludgeoning Weapon.
Sorceress	Clothes, Staff of Magic Missiles [15 charges], Arcane Talisman, Dagger.
Assassin	Clothes, Leather Armour, Light Weapon, Thieves' Tools, 2 vials of Blade Poison [2D6 STR].

In addition each character begins with two Healing [1D6] Potions and 2D6 pieces of silver.

Level Advancement

Experience Points are handled a bit differently in this game.

Add up the Encounter Levels (EL) of every creature defeated in an encounter the character takes part in.

Divide this total by the number of characters who began the encounter, round down and award to each character still alive at the end of the encounter.

When the total = 10 x the character's current level, they have advanced to the next level. Reset the total to 0 after advancing.

As these are heroes any benefits that accrue from increasing a level are felt immediately. There is no need to have two days of R&R to 'level up'. DM's generally award experience at the end of a stage of an adventure anyway so no-one is going to level up in the middle of a battle.

Each level adds:

- +1 to all skills, or +2 to two skills, or +3 to one skill (player's choice).
- 3 Hit Points.
- +1 to all attack rolls.
- If the character's level divides by three (i.e., level 3, 6, 9, etc.) then add 1 point to either STR, DEX or INT (player's choice).
- Paladins and Sorceresses gain access to new levels of spells at character levels 3, 5, 7, 9, etc.

Diabolical D20

Skills.

There are just seven skills - Physical, Subterfuge, Craft, Knowledge, Perception, Communication and Survival. Each represents a grouping of related skills that require similar physical and mental disciplines to master.

To succeed with a skill in a dangerous or stressful situation a character must roll higher than the given Difficulty Class. The DM will often allow characters to succeed automatically in less dangerous or stressful situations if they are sufficiently and appropriately skilled.

A character's Skill Rank = their level + any bonus due to their class.

Skill Roll = D20 + Skill Rank + whatever attribute bonus is most applicable to the use of the skill.

For example:

- Climbing would use Physical + STR bonus.
- Dodging a falling rock is Physical + DEX bonus.
- Finding a trap is Subterfuge + INT bonus.
- Disabling a trap is Subterfuge + DEX bonus.
- Following tracks is Perception + INT bonus.
- Making or repairing a weapon or armour is Craft + DEX bonus.
- Recalling an ancient legend would use Knowledge + INT bonus.
- Treating a comrade who has been poisoned would use Knowledge + INT bonus.
- Bargaining for provisions with tribesmen would use Communication + INT bonus.
- Tracking a deer or finding water is Survival + INT bonus.

Difficulty Class.

As characters develop their skills and abilities the level required for an action of moderate difficulty for them also increases as the challenges they face will also become harder.

As a guide the standard difficulty class for a character should be 10 + Character level. This can be increased or decreased depending upon whether the task is easier or more difficult than their present average ability. Thus the DM should add 1 [more difficult], 3 [much more difficult], 5 [extremely difficult] or 7 [incredibly difficult] to the DC if the task is more difficult, and deduct 1 [less difficult], 3 [easy], 5 [very easy] or 7 [really easy] from the DC if it is less difficult.

Saving Throws.

Fortitude	= 1D20+Level+STR bonus	Generally used against physically damaging attacks where dodging is not an option (poison, asphyxiation etc.).
Reflex	= 1D20+Level+DEX bonus	Generally used against special attacks where dodging is an option (fireballs, lightning bolts, traps etc.).
Will	= 1D20+Level+INT bonus	Generally used against enchantments, illusions and mind controlling powers.

Diabolical D20

Combat.

Roll D20 + DEX bonus once per battle for initiative order Characters and monsters whos scores tie first compare their Dexterity attributes and if these are the same then reroll against each other. If one side is springing an ambush on an enemy, they get the initiative in the first round, then roll for initiative. Note that no-one is flatfooted. Barbarians are never surprised so they do roll initiative against an ambusher and thus may get to act before the ambush is sprung.

Everyone can do just one thing each turn such as move, attack, use a skill, cast a spell, etc. The exceptions being:

- the Charge, where a character can make a single move (in a straight line) and then make one attack against the target, and
- the multiple attacks available to more experienced characters.

Especially with some skill uses the DM may determine that they take more than one turn to complete.

Attack bonuses:

- Melee attack bonus = STR bonus + Level [plus any bonuses from class, enchanted items, spells or the situation, as determined by the DM]
- Missile attack bonus = DEX bonus + Level [plus any bonuses from class, enchanted items, spells or the situation, as determined by the DM]

Add the attack bonus to D20 Attack Roll. If the resulting score is higher than their opponent's Armour Class (AC), it's a hit.

Typical situation bonuses include:

Attacking an opponent who is prone, blinded or stunned	+2	
Attacking an opponent who is flanked by an ally	+1	
Attacking an opponent who is invisible	-2	
Firing a missile weapon at an opponent in light cover	-1	[Light cover is that which conceals but gives no protection]
Firing a missile weapon at an opponent in solid cover	-2	[Solid cover is that which conceals and gives protection]

Rolling an unmodified, 'natural' 20 is automatically a hit and a critical and does maximum damage. Rolling an unmodified, 'natural' 1 is a miss.

If an opponent is held, paralysed or unconscious the attacker still rolls a D20 Attack Roll. However he is just rolling to see if he rolls a 1 and thus fails to penetrate or a 20 and does a critical.

There are no attacks of opportunity. It is assumed that in a combat situation characters will remain aware of their enemies.

If the character's total attack bonus is +6 or more, a second attack can be made at -5.

If the character's total attack bonus is +11 or more, two additional attacks can be made at -5 and -10.

Weapon damage as per table below. Add STR bonus to Melee damage, and 2x STR bonus for 2-handed weapons.

Armour as per table below. AC = 10 + DEX bonus + Armour bonus.

Diabolical D20

Weapons and Armour

Weapon	Damage	Range	Weight	Type	Availability	Cost
Unarmed	d4-1	-	Light	Bludgeoning	Not applicable	Free
Dagger	d4	20'	Light	Piercing	Common	Cheap
Club	d4	-	Light	Bludgeoning	Common	Free
Axe	d6	20'	Light	Slashing	Common	Cheap
Shortsword	d6	-	Light	Slashing/Piercing	Standard	Moderate
Rapier	d6	-	Light	Piercing	Uncommon	Moderate
Mace	d6	-	Medium	Bludgeoning	Common	Moderate
Staff	d6	-	Medium	Bludgeoning	Common	Free
Spear	d8	30'	Medium	Piercing	Common	Moderate
Battleaxe	d8	-	Medium	Slashing	Standard	Moderate
Longsword	d8	-	Medium	Slashing	Standard	Expensive
Morningstar	d8	-	Medium	Bludgeoning/Piercing	Uncommon	Moderate
Warhammer	d8	-	Medium	Bludgeoning/Piercing	Standard	Expensive
Long Spear	2d6	-	Two-handed	Piercing	Standard	Moderate
Great Sword	2d6	-	Two-handed	Slashing	Rare	Very Expensive
Poleaxe	1d12	-	Two-handed	Slashing	Uncommon	Expensive
Maul	1d10	-	Two-handed	Bludgeoning	Standard	Expensive
Sling	d4	80'	Light	Bludgeoning	Common	Cheap
Shortbow	d6	120'	Light	Piercing	Common	Cheap
Light Crossbow	d6	200'	Medium	Piercing	Standard	Moderate
Longbow	d8	240'	Medium	Piercing	Standard	Moderate
Heavy Crossbow	d10	200'	Medium	Piercing	Uncommon	Expensive

Armour	Bonus	Weight	Availability	Cost
Padded	+1	Light	Common	Cheap
Leather	+2	Light	Common	Cheap
Studded Leather	+3	Light	Common	Moderate
Chainmail Byrnie	+4	Light	Standard	Expensive
Brigandine	+4	Medium	Standard	Moderate
Chainmail Hauberk	+5	Medium	Standard	Expensive
Scale Mail	+6	Heavy	Standard	Expensive
Lamellar	+6	Moderate	Uncommon	Expensive
Breastplate	+6	Medium	Uncommon	Very Expensive
Plate & Mail	+7	Heavy	Uncommon	Very Expensive
Full Plate	+8	Heavy	Rare	If you have to ask the price you cannot afford it
Shield, Light	+1	Light	Common	Cheap
Shield, Heavy	+2	Medium	Common	Moderate

Diabolical D20

Movement

Character's movement per round is measured in 5' squares, and is generally 6 + DEX bonus squares.

Wearing heavy armour reduces total movement by 2 squares. Wearing no armour increases total movement by 2 squares and wearing light armour increases it by 1 square. Apply these reductions or increases before calculating speed across difficult terrain.

Movement through or across difficult terrain is halved, as is movement through a square occupied by a friend who is not engaged in combat, or through a square adjacent to an unengaged enemy. A character cannot move through a square occupied by friend who is engaged in combat.

Climbing and swimming is at half speed.

When halving speed always round up to the nearest whole square.

Diabolical D20

Magic

Spells and Spell-casting

Sorceresses can cast any arcane spell with a spell level equal to or below half their class level, rounded up. At first level they may choose five arcane spells from the D20 Microlite spell list [see below].

Paladins can cast any divine spell with a spell level equal to or below half their class level, rounded up. At first level they may choose five divine spells in the D20 Microlite spell list [see below].

Learning new spells can be achieved by finding a scroll with the spell on [see Enchanted Items below], or by finding someone who already knows it and is willing to teach it for money, or more often in trade for a spell they don't know. Neither Sorceresses nor Paladins automatically learn new spells when they advance a level.

Casting a spell of any kind costs Hit Points. The cost is 1 + the level of the spell being cast. This loss cannot be healed by curing spells, but is fully recovered after eight uninterrupted hours of rest, or by drinking a Healing Potion (as this restores both physical damage and mental fatigue).

Certain enchanted items can store power that can be used to cast spells instead of hit points [see Enchanted Items below].

There is no need to memorize spells in advance. All spell-casting is spontaneous.

All spells require verbal and somatic components. Material components are replaced with Holy Symbols (Divine) or Talismans (Arcane).

The DC to resist a spell = 10 + Spell Level + INT.

Arcane Spell List

Cantrips	1st Level	2nd Level	3rd Level	4th Level
Arcane Mark	Charm Person	Alter Self	Animate Dead	Arcane Eye
Dancing Lights	Feather Fall	Darkness	Dispel Magic	Bestow Curse
Detect Magic	Hold Portal	Fog Cloud	Fireball	Confusion
Detect Poison	Mage Armour	Invisibility	Fly	Dimension Door
Light	Magic Missile	Knock	Heroism	Ice Storm
Mage Hand	Ray of Enfeeblement	Levitate	Hold Person	Polymorph
Message	Shield	Mirror Image	Lightning Bolt	Secure Shelter
Prestidigitation	Silent Image	Scorching ray	Major Image	Stone-skin
Ray of Frost	Sleep	Web	Protection vs. Energy	Wall of Fire

Divine Spell List

Orisons	1st Level	2nd Level	3rd Level	4th Level
Create Water	Bless	Augury	Continual Flame	Control Water
Cure Minor	Bless Water	Con/Desecrate	Create Food/Water	Cure/Inflict Critical
Detect Poison	Command	Cure Medium	Cure Serious	Death Ward
Detect Magic	Cure Light	Enthral	Magic Circle	Divination
Disrupt Undead	Detect Alignment	Remove Paralysis	Prayer	Divine Power
Light	Divine Favour	Restoration Lesser	Remove Disease	Raise Dead
Purify Food/Drink	Magic Weapon	Silence	Remove Curse	Neutralize Poison
Read Magic	Protection/Alignment	Spiritual Weapon	Speak with Dead	Restoration
Resistance	Sanctuary	Zone of Truth	Water Walk	Tongues

A list of higher level spells will be provided in a future supplement.

Cure spells cure 1D6 + caster level hit points.

The divine spell Raise Dead is a little different under these rules. Instead of losing a level the character is reduced to 0 experience points [see below]. Thus they do not lose a level but have to begin advancing towards the next level again.

Diabolical D20

Note that Undead who usually cause negative levels in D&D do not do so in D20 Microlite. Instead their special attacks are aimed at attributes.

Enchanted Items.

The most common enchanted items are Healing Potions. They are produced by apothecaries and come in a range of strengths from 1D6 to 4D6 hit points. A healing potion is a 4 fluid ounce vial of minty red liquid.

For instance some weapons and armour have one or more sockets on them into which can be placed magical gems or runestones. These gems & runestones give a variety of effects, but once set in a socket cannot be removed without destroying the entire item. Certain combinations of runes can give greater powers.

Common enchanted gems and runestones include:

Rubies	Adds 1D6 fire damage to weapons, or prevent the first 1D6 damage from ice attacks when placed on armour.
Sapphires	Adds 1D6 ice damage to weapons, or prevent the first 1D6 damage from fire attacks when placed on armour.
Emeralds	Adds 1D6 poison damage to weapons, or prevent the first 1D6 damage from poison attacks when placed on armour.
Obsidian	Adds 1D6 necrotic damage to weapons, or prevent the first 1D6 damage from necrotic attacks when placed on armour.
Pearls	Hold 1D6 points of power that can be used for casting spells. They become worthless once power is discharged.
Amethysts	Discharge 1D6 healing energy per day upon command.
Iron Rune	Increase AC of Armour or Shield by 2
Copper Rune	Prevent the first 1D6 damage from electricity when placed on armour

As stated in the section on Magic there are crystals that contain points of power that allow spell casters to cast spells without losing hit points. These come in three types:

1. Disposable pearls have a number of power points and once these are used the pearl is useless.
2. Rechargeable crystals that can be refilled by the sacrifice of the caster's hit points into the crystal. This is usually done between adventures.
3. Regenerating crystals are the rarest and most sought after. These regenerate the power points within them if left unused for 24 hours.

Then there are matrix crystals. These rare elven diamonds not only have power in them but also the matrix for a spell. Any character can cast the spell from a matrix crystal simply by saying the command word carved into one of its facets.

Most matrix crystals are one-use, but a few regenerate the power required to use them if left unused for 24 hours.

Some spells can be found on scrolls. These each contain a complete spell that has been cast into the scroll. Simply saying the last word of the scroll activates the spell. Any character can cast a spell from a scroll if they can make a Communications Skill roll against a DC of 15. Failing to cast it does not ruin the scroll, but a second attempt by the same character is not allowed for 24 hours.

A secondary use of the scroll is to allow the Sorceress or Paladin to learn the spell and add them to their repertoire. learning a spell from a scroll discharges it.

Another relatively common item, which is somewhat similar to the matrix crystal is the Wand. Unlike standard D&D these do not contain the power for a spell, just the matrix. The sorceress must provide the power either from their hit points or from a power crystal. What they allow sorceresses to do is cast spells they do not know yet or of a higher levels than they can yet use. Paladins have an equivalent to this in the Holy Relic.

Diabolical D20

Equipment Lists.

There are no prices listed for the weapons and armour above. This is because there are no set prices for anything in this chaotic age. We have added a rough guide to the availability and cost of these items, but these should be taken as just that, rough. Some equipment will be provided by the characters' patrons when they begin, other items can be scavenged from the dead or looted from enemies.

There will come a time though when the characters will need to pay for things, especially in the very few towns that exist in the period. They will pay for these things in pieces of silver. Most craftsmen will accept silver and gold items in trade for goods. A character's Communications skill will be of great importance in this form of barter.

The most common coin is the silver piece. This is often called a shilling and it weighs about an ounce depending upon how adulterated it is. Some cities, tired of merchants cutting their silver coins into halves or quarters, have issued copper pennies at a rate of twelve pennies to the silver. These pennies are worthless outside the city that minted them.

A pound of silver in metal or coin is worth roughly one Gold Mark. This is a smaller coin than the silver shilling, but still weighs about an ounce. It is more likely to have a high level of purity than silver coinage. Gold coinage is always acceptable outside the city that minted it.

The DM will consider how difficult a thing is to make, how long it takes to make, the cost of the base materials and the market (i.e. are there plenty or few of these things available).

Eleven things you can buy with one piece of silver:

1. A night in an Inn, with a good dinner and breakfast.
2. A ride on a wagon from one village to the next.
3. Any common item that took no more than one day to make (i.e. a haversack, 30' rope, knife, six candles, large wicker basket, a plain cloak, a copper cloak pin, a horse bridle, a woollen shirt, a wheelbarrow, four arrows).
4. A lady of the night for an hour.
5. Stabling for your horse for a day and a night.
6. An afternoon in a public bath house.
7. A porter or labourer for half a day (note that porters charge for both ways if they have to travel away from their community)..
8. Bribe for a Guard for a minor infraction or favour.
9. A bottle of half-decent wine.
10. A pitcher of drinkable beer.
11. A letter written for you by a scribe.

Other things of worth.

A Promise.

In the wreck that is the world one of the most valuable things a person may give is his promise. A promise is an open ended obligation that pledges the allegiance and assistance of that man at some future date. It should neither be given nor redeemed lightly. Men and women of honour will die to fulfil a promise made.

Your Reputation.

Little is of more value to a man or a woman than their reputation. In an uncertain world it is the thing that sails before you and opens doors. A reputation that is bright and honourable will gain you the ears and promises of the wise and powerful. A reputation that is dark and dangerous may bring you fear and respect.

To impugn a person's reputation is a deadly game to play. People will fight to maintain their reputation, they may even kill to do so.

Your Ransom.

Most wise adventurers bank their spare cash with a friend, a Guild or an Innkeeper. Many will try and keep a few hundred silver pieces aside to act as their ransom. When all is lost they can then shout that they have a ransom and then surrender. Most intelligent assailants would prefer to have the money than a dead body.

Diabolical D20

Nearly every town has a point close by to it where such transactions take place. Some even have agents who will negotiate between the captors and the ransom holder for a fee. The usual deal is to hand over the captive with his equipment in return for the cash. Not all captors are so generous and may also ransom choice items of equipment back to their captive or his agent.

As a rule of thumb an intelligent captor will demand at least one hundred silver pieces per captive level. This may be reduced if the captive is not 'complete'.

Innkeepers have become common agents in this trade, and many will happily put the adventurer's ransoms in their strongboxes with the hope of making a fat fee if they should become captured or the whole amount if the adventurer dies kinless. Those who double cross their clients quickly achieve a dark reputation and are not in business for long.

Diabolical D20

Appendix 1 - What is Known.

The World is divided into many City States and Petty Kingdoms. The majority of these are in a poor state, riven from within by diabolic cults, and assailed from without by the forces of the Diabolic Princes. Many are nervous and unwelcoming of strangers.

The areas of wilderness that once bordered these communities have grown both in size and in danger, separating them from each other such that only well-protected caravans can now travel between them. Few of the City States or Petty Kingdoms have the strength to do any more than protect what remains and in their hour of need they turn to companies of adventurers to drive back the darkness.

Many of the world's sage wizards have turned into diabolists, leaving a scattered few to teach their magics to the next generation. The Gods have fled and as a result most churches and temples are now empty. Only the Templars of the Light Eternal, the Paladins, are sufficiently holy to be able to draw upon divine belief to power their spells. Unfortunately most of these are dead.

The Enemy.

The main forces of the Diabolic Princes include the Corrupt, the Undead, the Fallen, and various Devils.

The Corrupt.

Many humans have given up the fight against the forces of the Diabolic Princes and sold their souls in the hope of immortality, or at least staving off the inevitable. These fools form into secretive Diabolic Cults. The Diabolic Princes use these cultists to undermine the morale and organization of the remaining kingdoms.

Although they remain ostensibly human the longer they spend in the service of their dark masters the more bestial they become.

The Undead.

One of the ways a Diabolic Cult can increase its power is to create or attract Undead minions. Amongst the Corrupt are those who were once Priests of the Old Gods and who have since become foul Necromancers.

The most common undead are Skeletons and Zombies, though not uncommon are all manner of depraved creatures such as ghouls and ghosts. Only the most powerful Cults and Necromancers can command the allegiance of Vampires and Wights.

The Fallen.

These are what the Corrupt become once they have mutated so far they can no longer be considered to be human. They are still humanoid in appearance but often exhibit grossly over muscled bodies, horns, cloven feet and tails. These form tribes out in the wilderness, where they infest the ruins of civilization and prey on the remaining human communities that border their dark domains.

Devils.

Most devils find it difficult to manifest upon the Prime Material plane, and where they do they cannot maintain their physical form for long. Thus they are only common close to dimensional gates and rifts, or where summoned by the Corrupt.

One minor type of Devil has managed to transfer permanently to this world by possessing the form of a goblin cultist. These are small, quick and vicious. They are led by Diabolic shamen who exhibit arcane powers.

Other Enemies.

Although the forces of the Diabolic Princes do pose the greatest threat to humanity there are others who can cause pain and suffering who have no allegiance to them.

Brigands.

When the rule of law is gone many men turn to Brigandry to feed themselves and their families. Robberies on the highways and byways of the Petty Kingdoms is rife. Some traveller's, such as wealthy caravans, can afford to buy them off, but many are much less fortunate.

Diabolical D20

Goblin Warbands.

With the collapse of the borders many goblin tribes are sending out warbands to raid and loot outlying villages and farmsteads. What they lack in strength of arms they more than make up for in numbers and a cruel cunning.

Goblins are nocturnal raiders, using their excellent night vision and sense of smell to guide them through the darkness. Although not particularly brave they are more than capable of overwhelming a few humans by sheer weight of numbers.

Halflings.

Halflings were once reasonably common in human cities and kingdoms, but since the fall they have become increasingly rare. Where they all went to few humans can even guess, and even less care. The fact is that the only time a human generally sees a halfling now is when they are being robbed.

When you are three feet tall in a man's world you tend to have developed strategies for evening up the situation. Halflings have always had a talent for stealth and larceny. When they depended upon human's good nature to get by well they kept the larceny down to a minimum. Now though the gloves are off.

Imagine a Goblin Warband, but with an intelligence that matches that of a human and the ability to disappear in a heartbeat. Halfling gangs are now responsible for about half of all robberies and theft in human cities. More than one wealthy burgher has woken up on the floor of his bedroom to find everything stick of furniture, every morsel of food and every last copper piece has been purloined while he slept.

Dark Knights.

What happens to a Paladin who has lost all hope? Whom the gods have deserted and whose spirit lies broken? Many have turned to evil and have become Dark Knights. Some of these maintain a semblance of chivalry and go through the motions of their previous lives, such as maintaining their castle, holding foul tournaments or defending a bridge or road against all comers.

Others draw to their banners ambitious and cruel young men and form retinues. These companies of darkness raid caravans, villages and even small towns, revelling in an orgy of destruction.

Few though have fallen further than Sir Turquine sans Pitie. Once a Knight of the Argent Circle of the Temple of Light Eternal he has become a true fiend and has carved a small kingdom for himself in the Grey Mountains. He rides forth from here to reave and enslave his neighbours.

The Wild Hunt.

Although most have withdrawn to their ancient forest holds, some Elves now prey upon humans. They blame humanity for releasing the Diabolic Princes and seek to avenge their losses. They rarely wander far from their forests, but form a deadly threat along their borders.

Upon a full moon they are rumoured to ride forth upon sylvan steeds with a baying pack of barghests at their head. They are led by a powerful Elven Lord, known as the Master of the Hunt, and they give no mercy to anyone who passes before them.

Ogres.

Once upon a time human champions drove these beasts so far into the wilderness that they became legends. A monster to frighten children to bed with. Now they are coming back, and not just in ones or twos, but in warbands numbering dozens.

They are driven by their hunger for flesh and have no compunction about who they attack. More than one Diabolic Cult or Goblin Warband has been wiped out and then eaten by ravenous Ogres.

Ogres are large, slow and immensely strong. They are bright enough to be able to cobble together makeshift armour from what they loot, and use huge clubs and crude spears in combat.

TMKT

by Mike Berkey (michael.berkey@gmail.com), Copyright 2008-2010. For more Microlite20 awesomeness, head over to the Microlite20 website at <http://www.microlite20.net>.

Teenage Mutated Kung Fu Tortoises, of course. ;-)

This is a supplement for SpyLite. Differences are noted below, as necessary. The design is intentionally modular, however, so the key bits (the mutations) should be fairly compatible with other Microlite20 systems, with a bit of nudging.

The only difference not listed below is that in combat Dexterity bonus is used to modify to-hit rolls and not Strength. This is a design consideration to keep large characters from dominating the game.

CHARACTER CREATION

STATS

TMKT uses three stats: **Strength**, **Dexterity**, and **Mind**. Roll 3d6 for each score. Reroll the lowest score, keeping the higher of the two rolls. Your stat bonuses are **(STAT-10)/2, rounded down**.

For compatibility reasons, substitute any references to Intelligence or Charisma with "Mind".

CLASSES

There is one class—Hero. Characters begin at Level 1. Non-player characters use a special class, NPC.

All classes can use any weapon, armor or equipment, including vehicles.

BACKGROUND

Roll d20 on the table below...or pick one.

d20 Result

- 1-3 **Genetic Drift.** You're the mutated child of normal parents, or perhaps the most recent of a line of mutants. +2 to an ability score of your choice, or one more BioP.
- 4-8 **Lab Rat.** You were the result of a laboratory experiment. You escaped, and have been living on the fringes of society ever since. Take either +2 to an ability score or another Trained Skill.
- 9-12 **Secret Experiment.** You were the result of a government, military or corporate experiment. Trained for a specific purpose, you managed to escape your handlers. Or have you? You gain one more Talent. As an additional option, you can still be on good terms with your agency.
- 13-14 **Survivor.** You strove and overcame all obstacles. Through sheer willpower alone, you evolved into what you are now. From now on, whenever you roll for hit points, roll twice, taking the higher of the two rolls.
- 15-19 **Toxic Spill.** You were an innocent creature who stumbled across a pool of toxic waste, causing you to mutate heavily. **Roll d6:**
 - 1-3 **Freakish Mutation.** In exchange for one obvious mutant feature—say, albinism, or an extra eye, etc—you gain another 1d4 BioP. The feature has to be severe enough to impair you in some minor way or otherwise mark you as a freak.
 - 4-6 **Adopted by a Mentor.** You were discovered at an early age by a mentor, adopted and trained. Gain either +2 to a stat of your choice or another Talent.

- 20 **Unstable DNA.** Your body is evolving at an alarming rate. Start out with 1 BioP less than your species indicates, but you gain an additional BioP every even level (2, 4, 6, 8, etc). At every level evenly divisible by 4, you can spend your BioP points on any mutant ability, including ones that your species wouldn't normally be able to acquire. These points can be "stored" and used at a future point.

SPECIES

Roll d20 on the table below or pick one.

d20	Type
1	Aardvark
2	Bat
3	Bear
4	Cat, Domestic
5	Donkey
6	Elephant
7	Frog
8	Horse
9	Lion
10	Monkey
11	Moose
12	Mouse
13	Opossum
14	Porcupine
15	Rat
16	Rhino
17	Squirrel
18	Turtle
19	Wild Bird
20	Wolf

See the section on Mutant Creatures for more detail. You can also make your own animals—see the end of the Species list for details. A more comprehensive list is also in the Appendix.

SKILLS

There are five skills : **Communication**, **Knowledge**, **Physical**, **Science**, and **Subterfuge**. The player chooses one as Trained, initially.

TALENTS

Talents work the same as in SpyLite. Substitute any references to "Intelligence" or "Charisma" with "Mind". This game uses Gear Points, so any Talents that involve Gear Points are in play.

You get 2 Talents at first level and an extra one every 2 levels thereafter. Some Talents may be taken more than once—in that case, the effects stack. If they can be stacked, it will say so in the description.

Brawler. Brawler does not increase the die size of natural weapons; it adds +1 to damage for each time it has been taken.

Team Bonuses. If the PC group chooses the same animal type, mutations and background for all the characters, then they get a free Talent at first level. Call it cross-training.

NEW TALENT DESCRIPTIONS

Block. Once per encounter, you can make a Phys + DEX roll vs a successful incoming melee attack. The DC is equal to the damage taken +10. If successful, that attack is avoided. Taking this Talent again allows multiple uses.

Escape. This represents training in wrestling or other grappling styles. It offers improved skills with maintaining or escaping grabs: it gives +2 on all rolls to maintain or escape grabs, with an additional +2 bonus every 5 levels. This bonus only applies for the strength check and not to-hit rolls.

You also gain one additional benefit: if you roll 10 points or more than your opponent during any check to escape a grab, you have the option of immediately throwing them to the ground as a free action, doing damage and knocking them flat.

Sniper. If the character is aiming with a ranged weapon, treat it as having a scope. If it has a scope, then the attack is at an additional +2 (on top of the Aim maneuver).

Traditional Medicine. Given access to herbs, other medicinal materials and sufficient time, you can perform great acts of healing. With several hours of care, make a MND + Know check vs a DC equal to 10 + the amount of damage that you want to heal. If successful, when the patient wakes up the next morning, he regains that many hit points.

NEW COMBAT MANEUVERS

Trick Shots. Declare what your attack is going to do—it could be anything from shooting a weapon from your opponent's hand to blowing his hat off or extinguishing a lantern. Other possibilities could be stapling the target to the wall through his clothing, tying him up, tripping him and so on.

Make a to-hit roll at -8.

If it's against a live opponent, then he makes a save (usually DEX or STR + Phys) against a DC equal to your attack roll (with the to hit penalty) and either drops the weapon or is intimidated, which could have effects ranging from a -2 to hit on his next action to flat-out surrender, depending on how much he failed by and what, exactly, you did.

This may only be attempted once per day. It can also, at the GM's option, cure poisons and disease.

Unconventional Fighter. When making Trick Shots, you only take a penalty of -4 instead of -8.

Weapon Specialist. Choose a type of weapon: Firearms, Unarmed or Melee Weapons. From now on you're +1 to hit and damage with those types of weapons, increasing by another +1 to hit and damage every 5th level (i.e. 5, 10, 15, 20).

If he makes the save (i.e. his save roll is higher than your to hit roll), then the attack applies against his AC (again with the -8 penalty)—he still might be shot by accident.

Against an inanimate object, use a flat DC, higher for smaller objects or more difficult shots. Aim, range and cover all apply to Trick Shots.

MARTIAL ARTS STYLES

If a player wants, he can choose a martial arts style for his character. Each martial art has a list of Talents. If the character has a certain number of Talents from the list, they achieve mastery and gain a bonus which can be split up amongst to-hit rolls, damage, AC and certain skill bonuses (such as tumbling or sneaking around). Bonus points can only be reallocated once per round, on a character's action.

Note that some Talents may appear multiple times on the list—this is because certain Talents may be taken more than once. Each additional selection counts as a separate Talent for this purpose. If a Talent is listed only once in a style even though it can be taken more than once, then it can only be counted once for that style.

In order to advance to a higher level of mastery, the player must also seek out and challenge a practitioner of their style with that mastery level. It need not be a formal challenge or to the death, but it is a milestone in the character's martial career.

The player can also declare himself to be a master of several martial arts, but only the highest level of mastery will count. For example, you can be a Master of Tae Kwon Do and a Grandmaster of Eagle Style Kung Fu, but only the +4 bonus would apply. They do not stack.

Creating new styles is simply a matter of typing up a list of 8 Talents that encourage the right amount of thematic specialization.

# of Talents		
From List	Level of Mastery	Bonus
2	Novice	+1
3	Skilled	+2
4	Master	+3
5	Grandmaster	+4
6	Adept	+5

Judo. Agile, Brawler, Defensive Roll, Escape, Judo, Specialist (Judo History or Judo Sport), Weapon Specialist (Unarmed)

Karate. Block, Brawler, Brawler, Durable, Martial Artist, Power Attack, Specialist (Okinawan or Japanese Culture), Weapon Specialist (Unarmed).

Kung Fu. Agile, Block, Brawler, Escape, Judo, Martial Artist, Traditional Medicine or Specialist

(Chinese Culture), Weapon Specialist (Unarmed).

Ninjutsu. Agile, Agile, Defensive Roll, Judo, Martial Artist, Specialist (in some kind of stealth or assassination-related area), Unconventional Fighter, Weapon Specialist (Melee).

MUTANT CREATURES

A mutant creature is defined by certain things.

The first is **BioP** (Bio-mutation Points). **BioP** are used to "build" a mutant creature, making it bigger or smaller or acquiring special abilities.

Every creature in the game has a base **size**. The size varies depending on the species and how your BioP points are spent. It modifies your ability scores and potentially affects your to-hit rolls and AC, along with a few other things.

Each creature will have its size and base BioP listed under its description, along with ability score adjustments, special bonuses or weaknesses.

Size	Example	Mod	Str	Dex	Mind	Natural AC
Diminutive	Sparrow	+4	-8	+6	-4	--
Tiny	Turtle	+2	-6	+4	-2	--
Small	Dog	+1	-2	+2	0	--
Medium	Man	0	0	0	0	--
Large	Bear	-1	+8	-2	0	+2
Huge	Elephant	-2	+16	-4	0	+5

The "Mod" column applies to hit and AC.

Mod x4 applies to checks when attempting to hide or move silently—any skill check that would be adversely or positively affected by being very large or small. In this system, this bonus does **not** apply to grappling checks—that's already factored into the Strength bonus. For example, a Large bear would apply -4 to stealth attempts.

Increasing a character's size category costs 2 BioP per size category. Decreasing the character's size gives back 2 BioP.

Human Features. Human features represent how far the creature has been moved along the evolutionary scale towards human. Improving your character's features costs 1 for Partial or 2 for Full.

Bipedal refers to how well the creature walks on its hind feet, leaving its hands free for other tasks. Partial Bipedalism gives the creature the ability to stand on its hind legs, but it won't be able to easily walk while doing so.

Hands. Creatures with no hands can not hold things very well, if at all. Think of it like your dog trying to hold a screwdriver. Partial handed creatures are like apes—no opposable thumbs. Full handed creatures have full gripping and manipulation ability, like a human.

Looks refer to how closely a creature can pass for a human. If none are bought then they are very clearly a mutant creature; no amount of disguising can conceal it.

Speech. The creature's ability to speak in a human tongue. If "none" is selected, the character automatically has the ability to speak telepathically. No other special psionic ability is gained other than projecting speech—to read minds or control others, you have to buy the appropriate abilities.

	None	Partial	Full
Bipedal	0	1	2
Hands	0	1	2
Looks	0	1	2
Speech	0*	1	2

* But gives limited telepathy, which only allows speech and has a relatively short range. This sort of speech can also not be recorded by machines.

Other Abilities:

The character can buy special abilities from the "possible abilities" entry in their species' write-up. These will almost always be 1 BioP each.

+/-1 size category costs or gives back 2 BioP.

Leftover BioP can be spent on stats at a 1/1 ratio or hit points at 2 hp per 1 BioP. Talents can also be bought for 2 BioP.

The GM can also adjust beginning BioP totals based on how powerful he wants starting characters to be in his campaign. +1d2 for slightly more powerful than the default, all the way up to +1d10.

Another common bonus is to allow characters their first Species special ability point for free.

SPECIES

Aardvark. 9 BioP

Size: Medium

Ability Modifiers: None

Special: None

Weaknesses: Poor Eyesight

Possible Abilities: Digger, Keen Hearing, Keen Smell, Natural Armor (Thick Hide)

Bat. 10 BioP

Size: Diminutive

Ability Modifiers: +2 Dex

Special: Hands (Partial, 1 pt invested)

Weaknesses: Poor Eyesight

Possible Abilities: Climb, Extra Limbs, Flier, Keen Hearing (Can Echolocate)

Bear. 4 BioP

Includes black, brown and grizzly bears.

Size: Large

Ability Modifiers: +4 Str

Special: Partial Biped Free (1 pt invested)

Weaknesses: None

Possible Abilities: Climb, Keen Smell, Natural Armor (Thick Hide), Natural Weapons (Claws and Bite)

Cat, Domestic. 9 BioP

Size: Tiny

Ability Modifiers: +2 Dex

Special: None

Weaknesses: None

Possible Abilities: Climb, Keen Hearing, Keen Smell, Natural Weapons (Bite and Claw), Nightvision.

Donkey, 7 BioP.

Size: Medium

Ability Modifiers: +2 Str

Special: Load-bearing Creature

Weaknesses: Poor Eyesight

Possible Abilities: Keen Hearing, Keen Smell, Natural Weapons (Hooves and Bite)

Elephant, 5 BioP.

Size: Huge

Ability Modifiers: +2 Mind

Special: Load-bearing Creature

Weaknesses: Poor Eyesight

Possible Abilities: Keen Smell, Natural Armor (Thick Hide), Natural Weapons (Tusks), Prehensile Limb (Trunk)

Frog, 12 BioP.

Size: Diminutive

Ability Modifiers: +2 Dex

Special: None

Weaknesses: Cold-blooded (gets lethargic in cold weather), Requires Water

Possible Abilities: Amphibious, Jump, Keen Hearing, Keen Smell, Keen Vision

Horse, 6 BioP.

Size: Large

Ability Modifiers: None

Special: Load-bearing Creature

Weaknesses: None

Possible Abilities: Keen Hearing, Keen Smell, Natural Weapons (Hooves and Bite), Runner

Lion, 7 BioP.**Size:** Medium**Ability Modifiers:** +2 Str**Special:** None**Weaknesses:** None**Possible Abilities:** Climb, Keen Hearing, Keen Smell, Natural Weapons (Claws and Bite), Natural Armor (Thick Hide), Nightvision**Monkey, 5 BioP.**

Includes a wide variety of monkeys: baboons, rhesus, macaque, howler monkeys, mandrills and whatnot. The larger varieties are size Small—adjust BioP down to 4 total. Small monkey varieties replace the +2 Dex bonus with +2 Str.

Size: Tiny**Ability Modifiers:** +2 Dex, +2 Mind**Special:** Partial Biped (1 pt invested), Partial Hands (1 pt invested), Partial Looks (1 pt invested)**Weaknesses:** None**Possible Abilities:** Climb, Jump, Keen Smell, Noise Attack, Natural Weapon (Bite), Prehensile Limb (Tail)**Moose, 7 BioP.**

Also includes elk. Elk, do not have the Poor Eyesight weakness—reduce the BioP total to 6.

Size: Large**Ability Modifiers:** None**Special:** Load-bearing Creature**Weaknesses:** Poor Eyesight**Possible Abilities:** Keen Hearing, Keen Smell, Natural Armor (Thick Hide), Natural Weapons (Antlers and Hooves), Runner**Mouse, 11 BioP.**

Also includes other diminutive rodents such as gerbils and hamsters.

Size: Diminutive**Ability Modifiers:** +2 Mind**Special:** None**Weaknesses:** Poor Eyesight**Possible Abilities:** Climb, Keen Hearing, Keen Smell, Nightvision**Opossum, 11 BioP.****Size:** Tiny**Ability Modifiers:** None**Special:** None**Weaknesses:** Poor Eyesight**Possible Abilities:** Climb, Digger, Feign Death, Nightvision, Prehensile Limb (Tail), Strong Constitution.**Porcupine, 10 BioP.****Size:** Small**Ability Modifiers:** None**Special:** None**Weaknesses:** Poor Eyesight**Possible Abilities:** Climb, Digger, Natural Weapons (Bite and Claws), Quills, Strong Constitution**Rat, 11 BioP.****Size:** Tiny**Ability Modifiers:** None**Special:** None**Weaknesses:** Poor Eyesight**Possible Abilities:** Climb, Keen Hearing, Keen Smell, Natural Weapon (Bite), Nightvision, Strong Constitution**Rhinocerus, 6 BioP.****Size:** Huge**Ability Modifiers:** +2 Str, -2 Dex**Special:** Natural Armor (Thick Hide, 1 pt invested)**Weaknesses:** Poor Eyesight**Possible Abilities:** Natural Armor (Thick Hide), Natural Weapon (Horn)**Squirrel, 8 BioP.**

Also includes chipmunks.

Size: Diminutive**Ability Modifiers:** +2 Dex**Special:** Partial Biped (1 pt invested), Partial Hands (1 pt invested)**Weaknesses:** None**Possible Abilities:** Climb, Flier, Jump, Keen Vision**Turtle, 10 BioP.****Size:** Tiny**Ability Modifiers:** None**Special:** Natural Armor (Shell, 1 pt invested)**Weaknesses:** Cold-blooded (gets lethargic in cold weather)**Possible Abilities:** Amphibious, Natural Armor (Shell), Natural Weapons (Bite and Claw)**Wild Birds, 8 BioP.**

Includes most small non-predatory birds, including budgies, chickadees, parakeets, pigeons, finches and so on.

Size: Diminutive**Ability Modifiers:** +2 Dex**Special:** Biped (2 pts invested)**Weaknesses:** None**Possible Abilities:** Extra Limbs, Flier, Keen Vision, Mimic, Natural Weapons (Beak and Claws), Navigation**Wolf, 8 BioP.****Size:** Medium**Ability Modifiers:** None**Special:** None**Weaknesses:** None**Possible Abilities:** Keen Hearing, Keen Smell, Natural Weapon (Bite), Runner

BUILDING OTHER SPECIES

All animals start out with 8 BioP, adjusted by their size.

Size Category	BioP mod
Diminutive	+3
Tiny	+2
Small	+1
Medium	0
Large	-1
Huge	-2

Stat bonuses cost 1 BioP for every +2.
Stat penalties give back 1 BioP for every -2

Special abilities or weaknesses cost (or give back) 1 BioP each.

Finally, give a short list of possible abilities that the base species possesses. If you want all characters of that species to start out with any of these, then "pre-buy" them under "Special".

SPECIAL ABILITIES AND WEAKNESSES

Some of these abilities can be taken multiple times —if they can, the ability's description will say so.

Amphibious. The character is adapted to living in the water. +4 to swim rolls, and they can hold their breath a very long time. Taken again, the bonus goes up to +6 and the character can breathe underwater.

Camouflage. The character has a natural coloration that provides +4 to all stealth rolls in the proper settings (i.e. panthers at night, polar bears in snowy environments), allowing them to blend into their environment provided they are not wearing much clothing. Occasionally, this level is free instead of prepaid since it can be rather situational.

Taken twice, they can change their coloration at will, increasing the bonus to +8 and making them virtually invisible in the right conditions.

Climb. The character is a natural climber. +4 to Climb rolls, and they can cling to surfaces with ease.

Constrictor. The creature can grapple extremely well. +4 to all grappling checks and does another +2 damage when squeezing.

Digger. The character can dig extremely well. +4 to any rolls involved with moving earth. Can make burrows and holes in record time. They also gain +2 to damage when using their claws in combat.

Electrolocation. This creature has the ability to sense the direction and strength of magnetic fields when submerged. In nature, it's mostly used to track other creatures by sensing the contraction of muscle tissue. It typically has a fairly short range.

Extra Limbs. Winged creatures who've bought the full hands feature can buy this ability. It gives them a full pair of arms, ending in hands in addition to their wings.

Extreme Environment. The character is adapted to a specific environment making them highly resistant to its special features (no damage from extreme cold, heat, pressure, needing less water than most creatures, etc).

Feign Death. The character is very good at pretending to be dead, to the point of stiffening up, drooling and passing out. This state will last a few minutes up to an hour. Attempts to see through the ruse will be at +5 to the DC.

Flier. Taken once, the character can glide. Taken twice, the character can fly.

Heat-sensing. Some creatures can track prey by the heat they give off.

Jump. The character can jump very far. +4 to Jump rolls. Taken again, +8.

Keen Hearing. The character has very sharp ears. +4 to listen checks. They may also be able to hear sounds outside of human range (dog whistles or impending earthquakes, for example).

Keen Smell. The character has a keen sense of smell. +4 to smell things, and some can even track by smell alone.

Keen Touch. Some creatures, such as moles, have keen senses of touch that allow them to sense their surroundings and detect other creatures through the vibrations that their movements cause. +4 bonus to detecting vibrations and other such details.

Keen Vision. +4 to spot things at a distance or discern detail.

Load-bearing Creature. This creature has evolved to be capable of lifting and carrying great weights. They can carry twice as much as another creature of similar strength and size. Whenever a skill roll comes up that might be helped by great lifting strength, they get an additional +2.

Mimic. The creature has a gift for mimicking noises, ranging from specific voices to sounds like fire alarms and other random environmental noises. +4 to appropriate rolls.

Natural Armor. The character has a thick hide, protective scales, a thick shell, whatever. +2 to AC, +5 to AC if taken again.

Natural Weapons. Usually claws or a bite, but these aren't the only options. 1d6 damage for medium or smaller characters. 1d8 for large. 1d10 for huge. Taken again, they can make an additional attack per round with no penalty so long as that additional attack is with one of their natural weapons.

Navigation. Some creatures have an unerring sense of direction and never get lost. In many cases, this is a combination of instinct and the ability to detect magnetic fields.

Nightvision. The character can see in low-light conditions fairly well.

Noise Attack. The creature is capable of making a devastating noise once per encounter. 1d6 damage to anybody within close earshot, plus they have to save vs DC 15 or be stunned for 1d3 rounds.

Poison, Deadly. Often delivered by a bite or poisoned claw, this poison is relatively fast-acting and painful. If the save is failed, it causes 1d4 Str damage every round until the save is made or the victim dies. Save DC is equal to the creature's Str score + 10. Depending on the creature, the venom can be faster or slower-acting.

Poison, Paralyzing. Usually delivered by a bite or poisoned claw. The target must save or be paralyzed for a span of hours. Save DC is equal to the creature's Str score + 10.

Poor Eyesight. The character takes a -4 to any skill roll involving vision. Their other senses can take up the slack in combat, however, so there is no to-hit penalty unless the character is trying to perform a ranged attack.

Poor Hearing. The character takes a -4 to any skill roll involving hearing.

Prehensile Limb. The character has a prehensile limb that can act as an extra limb or possibly even a spare hand. Examples include monkey's tails, elephants trunks and even a chameleon's tongue.

Quills. The character is covered by a coat of quills. It provides +1 AC, and also adds +2 damage to any unarmed melee attacks. The character can also detach quills and throw them as darts. Any attacker that tries to hit a character covered with quills with an unarmed attack and fails by 4 points or more will take 1d4 damage.

Regeneration. This creature can regenerate lost limbs and damage. Taken once, the creature heals 1 hp per hour. Twice, 1 hp per 10 minutes.

Requires Water. The character needs to stay wet constantly or they begin to dry out. After an hour or so without water, -all stats are at -2. After several hours, the character begins to take 1d6 damage per half hour until rehydrated.

Runner. This creature can run twice as fast as a human. Taken again, four times as fast.

Stench. This creature can project a potent stench at one nearby target. Make an attack roll—if successful the victim has to save or be nauseated for several rounds with a persistent smell that lasts for days. The save DC is the creature's Str + 10. If the attack roll misses, there's a 50% chance the fluid will drench a nearby target.

Nauseated targets are at -4 to most skill and attack rolls and may, if they fail their save spectacularly, be incapacitated from nausea for a few rounds.

Strong Constitution. These creatures are hardy and fecund. They are rarely affected by poisons or diseases and can usually eat just about anything. +4 to checks against poison, diseases and other such things.

Spit. The creature can spit. Make an attack roll—if successful the victim has to save or be blinded for several rounds. The save DC is the creature's Str + 10.

Tall. This creature is unusually tall. They can easily reach things that other creatures can not. This ability is usually "free" since it doesn't give a huge advantage. If you track such things in your game, this character will probably have better combat reach.

PSIONIC POWERS

Psionic powers can be used at will. Only one power can be used per round and it takes up a standard action. The only exceptions are "Iron Will" and "Battle Mind", which give a persistent bonus.

Any effect that requires overcoming a target's willpower will require an opposed MIND + Level roll between the target and the attacker.

Psionic powers cost 1 BioP each. Some can be taken multiple times. If so, it will say so in the power's description.

At the GM's option, a new psionic power can be chosen every fifth level, if the player already has psionic abilities.

Aura Sense

Range: Line of Sight

Effect: Divulges one piece of information about the target—level, mutations, general background, a vague description of intent. The target doesn't need to be aware of the attempt to make a save.

Battle Mind

Effect: Gives the attacker a +4 bonus when making opposed rolls for psionic abilities.

Beast Mind

Range: Line of Sight

Effect: Allows the character to communicate with animals of their own base stock. Animals will regard the character as one of their own. If taken again, this applies to all animals.

Control Animal

Range: Line of Sight

Effect: Can give a single command to an animal that it will carry out to the best of its ability. It can attempt to resist. When the command is finished, it reverts back to normal. If the command takes longer than a few minutes, it gets another roll to resist every 5 minutes or so with a cumulative +1 every subsequent roll. Only works on the same animal type as the character's base stock. If taken again, this applies to all animals.

Evil Eye

Range: Eye Contact

Effect: Gives a curse of some sort. Blindness, Clumsiness, Deafness, Mute, Numbness, Pain, Stun, whatever. The effect must be chosen when the power is first taken. Each time the power is taken again, another effect must be chosen.

Typically, a curse will give a -4 to all skill or to-hit rolls affected by the condition or simply make certain things impossible. Duration is 10 minutes,

at which point the victim can save again, this time at +1. Every additional 10 minutes allows another save, with a cumulative +1.

Hypnosis

Range: Eye Contact

Effect: Works like "Control Animal", except with intelligent creatures. At the GM's option, more elaborate commands can be given if extra time (and several extra rolls) are taken.

Illusion

Range: Eye Contact

Effect: Imprisons the target within its own mind. The attacker can control what the target sees or experiences for the duration. Inflicting damage within the illusion will allow another roll to resist (and snap out of it) and does 1d4+1 point per level. The target also gets to resist after the first combat round. Subsequent resist rolls take place every minute and are at a cumulative +1.

Iron Will

Effect: +4 to saves against psionics or, indeed, anything requiring willpower to overcome.

Mental Awareness

Range: A few hundred yards

Effect: When used, allows the detection of psionic power usage and intelligent life forms. If the other parties don't want to be found, then roll to resist.

Prophecy

Effect: The character has prophetic dreams. Not only does it give the GM a plot device tool, the character can also roll to see if he "remembers" the events of the day. In game terms, it lets him reroll any dice roll, taking the better of the two rolls. The first time in an adventure he does it, the DC to use this ability is 10. Every subsequent use adds another +5 to the DC.

Scry

Effect: The character can see distant events, although not with completely reliable detail. The DC varies depending on how close the scried event is: DC 10 for right next door all the way up to DC 35 for the other side of the planet. It picks up images, but no sound. Mentally aware targets (possessing Mental Awareness, or other appropriate powers such as Hypnosis, Illusion or Telepathy) can roll to detect the scrying.

Telekinesis

Range: Mind score + Level in feet

Effect: Mind score + Level in pounds can be lifted. Effects are limited to basic manipulation—an object can be lifted and carried, a lever may be thrown, a

button pressed, but typing a password into a keyboard would be out of the question. Taking this ability again adds fine manipulation.

Telekinetic Bullet

Range: Mind score + Level in yards

Effect: Grabs a pebble or other small object and hurls it at an enemy. Requires an attack roll. Does 1d4+level in damage. Taking this ability again upgrades it so several objects can be thrown at once—the attack becomes a small 10' diameter area of effect.

Telepathy

Range: Line of Sight or unlimited if the target is known (might require a roll versus a variable DC to "find" the target).

Effect: Can talk to or read another mind. If the mind is unwilling, an opposed roll is required. Probing deeper in the mind to get at information will require several opposed rolls, some of which the target might get a bonus on, depending on the GM.

Armadillo, 8 BioP.

Size: Small

Ability Modifiers: None

Special: Natural Armor (Bony Plates, 1 pt invested)

Weaknesses: None

Possible Abilities: Amphibious, Digger, Keen Smell, Natural Armor (Bony Plates), Strong Constitution

Alligator, 7 BioP.

Also includes crocodiles and other similar creatures.

Size: Large

Ability Modifiers: None

Special: Natural Armor (Scales, 1 pt invested)

Weaknesses: Cold-blooded (gets lethargic in cold weather)

Possible Abilities: Amphibious, Keen Hearing, Keen Smell, Natural Armor (Scales), Natural Weapons (Bite), Nightvision

Ape, 3 BioP.

For simplicity's sake includes all number of apes, including chimpanzees, gibbons, gorillas, mandrills and orangutans.

Size: Medium

Ability Modifiers: +4 Str

Special: Partial Biped (1 pt invested), Partial Hands (1 pt invested), Partial Looks (1 pt invested)

Weaknesses: None

Possible Abilities: Climb, Jump

Badger, 9 BioP.

Size: Small

Ability Modifiers: +2 Str

Special: None

Weaknesses: Poor Eyesight

Possible Abilities: Climb, Digger, Keen Smell, Natural Weapons (Claws and Bite)

Bear, Polar, 5 BioP.

Size: Large

Ability Modifiers: +2 Str

Special: Camouflage (in snowy conditions, free), Partial Biped Free (1 pt invested)

Weaknesses: None

Possible Abilities: Amphibious, Extreme Environment (Cold), Keen Smell, Natural Armor (Thick Hide), Natural Weapons (Claws and Bite)

Beaver, 8 BioP.

Size: Small

Ability Modifiers: +2 Mind

Special: Partial Hands (1 pt invested)

Weaknesses: Poor Eyesight

Possible Abilities: Amphibious, Digger, Keen Hearing, Keen Smell, Natural Weapon (Bite)

Boar, 8 BioP.

Size: Medium

Ability Modifiers: +2 Str

Special: None

Weaknesses: Poor Eyesight

Possible Abilities: Keen Hearing, Keen Smell, Natural Armor (Thick Hide), Natural Weapons (Tusks), Strong Constitution

Buffalo, 4 BioP.

Size: Large

Ability Modifiers: +4 Str

Special: Load-bearing Creature

Weaknesses: None

Possible Abilities: Keen Hearing, Keen Smell, Natural Armor (Thick Hide), Natural Weapons (Horns), Runner (mostly for charging)

Camel, 6 BioP.**Size:** Large**Ability Modifiers:** None**Special:** Load-bearing Creature**Weaknesses:** None**Possible Abilities:** Extreme Environment (Desert), Keen Smell, Runner, Spit**Cat, Big, 7 BioP.**

Includes big cats such as leopards, jaguars, panthers, tigers and cougars. Panthers must automatically spend 1 point to gain the first level of Chameleon.

Size: Medium**Ability Modifiers:** +2 Dex**Special:** None**Weaknesses:** None**Possible Abilities:** Chameleon, Climb, Keen Hearing, Keen Smell, Natural Weapons (Claws and Bite), Nightvision**Cat, Wild. 8 BioP**

Covers smaller wild cats, such as lynxes, bobcats, ocelots and so on.

Size: Small**Ability Modifiers:** +2 Dex**Special:** None**Weaknesses:** None**Possible Abilities:** Climb, Keen Hearing, Keen Smell, Natural Weapons (Bite and Claw), Nightvision.**Chameleon, 11 BioP.****Size:** Diminutive**Ability Modifiers:** None**Special:** Chameleon (2 pts invested)**Weaknesses:** Cold-blooded (gets lethargic in cold weather), Poor Hearing**Possible Abilities:** Climb, Keen Sight, Night Vision, Prehensile Limb (its tongue is sticky and can be used to grab and retrieve objects at a fair distance), Regeneration**Cheetah, 6 BioP.****Size:** Medium**Ability Modifiers:** +2 Dex**Special:** Runner (1 pt invested)**Weaknesses:** None**Possible Abilities:** Keen Hearing, Keen Smell, Natural Weapons (Claws and Bite), Nightvision, Runner**Chicken, 7 BioP.**

Turkeys are similar, except they start out as Small, but with one less BioP.

Size: Tiny**Ability Modifiers:** -2 Mind**Special:** Full Biped (2 pts invested)**Weaknesses:** None**Possible Abilities:** Extra Limbs, Flier, Natural Weapons (Claws and Beak), Navigation**Cow (Bull), 5 BioP.****Size:** Large**Ability Modifiers:** +2 Str**Special:** Load-bearing Creature**Weaknesses:** None**Possible Abilities:** Keen Hearing, Keen Smell, Natural Weapons (Horns), Runner (mostly for charging)**Coyote, 9 BioP.**

Also includes foxes and jackals.

Size: Small**Ability Modifiers:** None**Special:** None**Weaknesses:** None**Possible Abilities:** Keen Hearing, Keen Smell, Natural Weapon (Bite), Runner**Crow, 6 BioP.**

Also includes Ravens.

Size: Tiny**Ability Modifiers:** +2 Mind**Special:** Partial Speech (1 pt invested), Full Biped (2 pts invested)**Weaknesses:** None**Possible Abilities:** Extra Limbs, Keen Hearing, Keen Vision, Mimic, Natural Weapons (Claw and Beak), Flier**Deer, 7 BioP.**

Also includes gazelle, antelope and other similar creatures.

Size: Medium**Ability Modifiers:** None**Special:** None**Weaknesses:** None**Possible Abilities:** Climb, Keen Hearing, Keen Smell, Natural Armor (Thick Hide), Natural Weapons (Antlers and Hooves), Runner**Dog, 8 BioP.**

Dogs are a breed with widely varying features.

Breed size can vary from Tiny all the way up to Medium. Adjust the BioP total accordingly (+1 for Small, +2 for Tiny).

Size: Medium**Ability Modifiers:** None**Special:** None**Weaknesses:** None**Possible Abilities:** Keen Hearing, Keen Smell, Natural Weapon (Bite), Runner**Ferret, 9 BioP.**

Also includes mongooses and weasels.

Size: Tiny**Ability Modifiers:** +4 Dex**Special:** None**Weaknesses:** Poor Eyesight**Possible Abilities:** Climb, Keen Hearing, Keen Smell, Natural Weapons (Bite), Nightvision

Gecko, 12 BioP.**Size:** Diminutive**Ability Modifiers:** None**Special:** None**Weaknesses:** Cold-blooded (gets lethargic in cold weather)**Possible Abilities:** Chameleon, Climb (can stick to walls), Extreme Environment (arid deserts), Keen Vision, Nightvision, Regeneration**Gila Monster, 12 BioP.****Size:** Tiny**Ability Modifiers:** -2 Dex**Special:** Natural Armor (Scales, 1 pt invested)**Weaknesses:** Cold-blooded (gets lethargic in cold weather), Poor Eyesight**Possible Abilities:** Deadly Poison, Extreme Environment (arid desert), Keen Smell, Natural Armor (Scales), Natural Weapons (Bite)**Giraffe, 7 BioP.****Size:** Large**Ability Modifiers:** None**Special:** Tall (free)**Weaknesses:** None**Possible Abilities:** Extreme Environment (arid plains), Keen Eyesight, Keen Hearing, Natural Weapons (Hooves), Runner**Goat, 7 BioP.****Size:** Medium**Ability Modifiers:** +2 Mind**Special:** None**Weaknesses:** None**Possible Abilities:** Climb, Keen Hearing, Keen Smell, Keen Vision, Natural Weapon (Horns), Runner, Strong Constitution**Groundhog, 8 BioP.****Size:** Small**Ability Modifiers:** None**Special:** Partial Biped (1 pt invested)**Weaknesses:** None**Possible Abilities:** Climb, Digger, Keen Hearing, Keen Vision, Natural Weapon (Bite and Claws)**Guinea Pig, 12 BioP.****Size:** Tiny**Ability Modifiers:** -2 Dex**Special:** None**Weaknesses:** Poor Eyesight**Possible Abilities:** Keen Hearing, Keen Smell**Hippopotamus, 5 BioP.****Size:** Huge**Ability Modifiers:** +2 Str**Special:** None**Weaknesses:** None**Possible Abilities:** Amphibious, Keen Hearing, Keen Smell, Keen Vision, Natural Armor (Thick Hide), Natural Weapons (Bite)**Koala, 9 BioP.****Size:** Small**Ability Modifiers:** +2 Str, -2 Dex**Special:** Partial Hands (1 pt invested)**Weaknesses:** Poor Eyesight**Possible Abilities:** Climb, Keen Hearing, Keen Smell, Natural Weapons (Claws)**Komodo Dragon, 8 BioP.****Size:** Medium**Ability Modifiers:** +2 Str**Special:** Natural Armor (Scales, 1 pt invested)**Weaknesses:** Cold-blooded (gets lethargic in cold weather), Poor Hearing**Possible Abilities:** Deadly Poison (checks are made daily instead of by round), Extreme Environment (hot, arid environments), Keen Smell, Natural Armor (Scales), Natural Weapons (Bite)**Llama, 7 BioP.**

Alpaca are similar but start out as Medium. Add +1 BioP.

Size: Large**Ability Modifiers:** None**Special:** None**Weaknesses:** None**Possible Abilities:** Extreme Environment (high elevations), Load-bearing Creature, Spit**Mink, 9 BioP.**

Also includes martens and fishers.

Size: Tiny**Ability Modifiers:** +2 Dex**Special:** None**Weaknesses:** None**Possible Abilities:** Amphibious, Climb, Keen Hearing, Keen Smell, Natural Weapon (Bite)**Mole, 12 BioP.****Size:** Diminutive**Ability Modifiers:** +2 Mind**Special:** None**Weaknesses:** Poor Eyesight**Possible Abilities:** Digger, Keen Hearing, Keen Smell, Keen Touch, Paralyzing Poison**Muskrat, 12 BioP.****Size:** Tiny**Ability Modifiers:** None**Special:** Partial Hands (1 pt invested)**Weaknesses:** Poor Eyesight**Possible Abilities:** Amphibious, Digger, Keen Hearing, Keen Smell, Natural Weapon (Bite)

Ostrich, 6 BioP.

Also includes emus, cassowaries, rheas and other large and aggressive flightless birds.

Size: Medium

Ability Modifiers: None

Special: Full Biped (2 pts invested)

Weaknesses: None

Possible Abilities: Extreme Environment (arid conditions), Jump, Keen Hearing, Keen Sight, Natural Weapons (Claws), Runner

Otter, 7 BioP.

Size: Small

Ability Modifiers: +2 Dex

Special: Partial Hands (1 pt invested)

Weaknesses: None

Possible Abilities: Amphibious, Extreme Environment (cold aquatic), Keen Hearing, Keen Smell

Owl, 8 BioP.

Size: Tiny

Ability Modifiers: None

Special: Full Biped (2 pts invested)

Weaknesses: None

Possible Abilities: Extra Limbs, Flier, Keen Vision, Natural Weapons (Beak and Talons), Nightvision

Panda, 6 BioP.

Size: Medium

Ability Modifiers: +2 Str

Special: Partial Biped Free (1 pt invested), Partial Hands (1 pt invested)

Weaknesses: Poor Eyesight

Possible Abilities: Keen Smell, Natural Armor (Thick Hide), Natural Weapons (Claws and Bite)

Parrot, 6 BioP.

Size: Tiny

Ability Modifiers: +2 Mind

Special: Full Biped (2 pts invested), Partial Speech (1 pt invested)

Weaknesses: None

Possible Abilities: Extra Limbs, Flier, Keen Vision, Mimic, Natural Weapons (Beak and Talons)

Pig, 8 BioP.

Size: Medium

Ability Modifiers: +2 Mind

Special: None

Weaknesses: Poor Eyesight

Possible Abilities: Keen Hearing, Keen Smell, Strong Constitution

Platypus, 10 BioP.

Size: Tiny

Ability Modifiers: None

Special: None

Weaknesses: None

Possible Abilities: Amphibious, Deadly Poison (males only, hind claws), Electrolocation, Keen Hearing, Keen Sight

Prairie Dog, 7 BioP.

Gophers are similar but start out as Diminutive. Add +1 BioP.

Size: Tiny

Ability Modifiers: +2 Mind

Special: Partial Biped (1 pt invested), Partial Hands (1 pt invested)

Weaknesses: None

Possible Abilities: Digger, Keen Hearing, Keen Vision

Predatory Birds, 7 BioP.

Includes eagles, hawks, falcons, ospreys, etc.

Size: Tiny

Ability Modifiers: +2 Str

Special: Full Biped (2 pts invested)

Weaknesses: None

Possible Abilities: Extra Limbs, Flier, Keen Vision, Natural Weapons (Beak and Talons)

Rabbit, 8 BioP.

Size: Tiny

Ability Modifiers: +2 Dex

Special: Partial Biped (1 pt invested)

Weaknesses: None

Possible Abilities: Jump, Keen Hearing, Keen Smell, Runner

Raccoon, 5 BioP.

Size: Small

Ability Modifiers: +4 Mind

Special: Partial Biped (1 pt invested), Partial Hands (1 pt invested)

Weaknesses: None

Possible Abilities: Climb, Keen Hearing, Keen Smell, Nightvision

Sheep, 9 BioP.

Size: Medium

Ability Modifiers: -2 Mind

Special: None

Weaknesses: None

Possible Abilities: Keen Hearing, Keen Smell, Natural Weapons (Horns), Runner

Skunk, 11 BioP.

Size: Tiny

Ability Modifiers: None

Special: None

Weaknesses: Poor Eyesight

Possible Abilities: Keen Hearing, Keen Smell, Nightvision, Stench

Snake, 9 BioP.

Covers a wide variety of snakes, including asps, boas, cobras, cottonmouths, mambas, rattlesnakes, coral snakes and so on, as well as the more harmless varieties such as copperbellies and garter snakes. Size varies widely, from Diminutive to Medium (garter snake up to boa constrictor)—adjust BioP accordingly.

Size: Small

Ability Modifiers: +2 Dex

Special: None

Weaknesses: Cold-blooded (gets lethargic in cold weather)

Possible Abilities: Amphibious, Climb, Constrictor, Deadly Poison, Digger, Heat-sensing, Keen Smell, Natural Armor (Scales), Natural Weapons (Bite), Paralyzing Poison, Runner, Spit

Wild Fowl, 8 BioP.

Includes such birds as ducks, geese, pheasants and so on. Bigger birds, such as geese, can be Small—subtract 1 BioP.

Size: Tiny

Ability Modifiers: None

Special: Full Biped (2 pts invested)

Weaknesses: None

Possible Abilities: Amphibious, Extra Limbs, Flier, Keen Vision, Natural Weapons (Claws and Beak), Navigation

Wolverine, 8 BioP.

Size: Small

Ability Modifiers: +4 Str

Special: None

Weaknesses: Poor Eyesight

Possible Abilities: Extreme Environment (arctic), Keen Hearing, Keen Scent, Natural Armor (Thick Hide), Natural Weapons (Bite and Claws), Strong Constitution

Microlite20 NG

Draft 0.20

Microlite20 NG is a trimmed-down, subminiature version of the Primary Fantasy SRD rules (see license for more info) that has been designed to be quick and easy to play. The goal was to create a simpler game, one where all of the resources of Primary Fantasy SRD (monsters, spells, adventures and equipment) could be used without conversion, but incorporating some post Primary Fantasy SRD design features.

Stats

There are 4 stats: Strength (STR), Dexterity (DEX), Mind (MIND), and Charisma (CHR).

Roll 4d6, drop lowest dice. Total remaining 3 dice and allocate to one of the stats. Repeat for remaining stats.

Stat bonus = (STAT-10)/2, round down.

Races

Dwarf

Abilities: +2 Strength

Grounded: +2 all saves against magic and poison.

Elf

Abilities: +2 Dexterity

Bright Eyes: Treat dim light as bright light and non-magical darkness as dim light.

Halfling

Abilities: +2 Charisma, -2 Strength

Elusive: +2 all stealth-related skill rolls, +1 Armor Class.

Human

Abilities: +2 to one stat (or plus +1 to two stats)

Diverse: 10 points total for backgrounds.

Classes

The classes are Fighter, Rogue, Mage, and Cleric. Characters begin at Level 1 unless otherwise directed by the GM

Fighter

Weapons: all

Armor: all

Physical Combat Bonus: + Level

Magical Combat Bonus: +0

Combat Expertise: You get a +1 bonus to Armor Class, Attack and Damage. This bonus increases by +1 per five Fighter levels (for a total of +2 at 5th level, +3 at 10th and so on).

Combat Tactics: At the beginning of your turn, you can decrease one of your combat bonuses (Armor Class, Attack or Damage) by up to half your Fighter level in order to increase another by an equal amount. You may choose to give the bonus to another character you can physically interact with instead of yourself (the penalty still applies to you). These modifiers last until your next turn.

Rogue

Weapons: light and ranged

Armor: light

Physical Combat Bonus: + Level

Magical Combat Bonus: +0

Danger Sense: When you or a group you are with trigger a trap, ambush or equivalent situation, you can choose to take one action before the event actually happens. You can use this chance to take cover, draw your weapon, throw yourself on the bomb, slip quietly into the shadows, shove another character out of (or into) the harm's way or whatever seems appropriate EXCEPT stop the situation from being triggered (that has already happened). You can do this a number of times per day equal to half your Rogue level.

Tricks: When you successfully attack a surprised opponent you can EITHER add a damage bonus equal to your Rogue level OR do no damage but inflict a penalty equal to half your Rogue level to the victim's Attack, Armor Class and all skill rolls until the end of your next turn. You must choose which to do before you roll to attack.

Magus

Weapons: choose one weapon (e.g. staff, rapier, dagger)

Armor: none

Physical Combat Bonus: + Level/2 (round down)

Magical Combat Bonus: + Level

Magic: You can cast arcane spells. Choose the either the standard arcane or the illusionist arcane list when the character is created.

Cleric

Weapons: choose one group (light, medium, heavy or ranged)

Armor: light and medium

Physical Combat Bonus: + Level

Magical Combat Bonus: + Level

Miracles: You can cast divine spells. Choose the either the standard cleric or the druid divine list when the character is created.

Turn Undead: A number of times per day equal to half your Cleric level, you can present your holy symbol to repel any undead in the immediate vicinity. Undead creatures with more hit dice than your Cleric level cannot approach any closer; undead creatures with hit dice less than or equal to your Cleric level must flee or cower; undead creatures with hit dice less than or equal to half your Cleric level are destroyed outright. The effect lasts for as long as you take no other actions.

Backgrounds

Characters may select, with the approval of the GM, one or more backgrounds which each represent a broad base of skills and knowledge, e.g. Farmer, Merchant, Desert Nomad, Noble, Shaman, Templar, Thyatian Mercenary, Ritualist, etc. Backgrounds need not be related to the PCs class, e.g. a player who creates a deeply religious fighter skilled in the arts of vision interpretation, divination and oration might pick 'Prophet' as a background. Players should discuss their desired backgrounds with the GM both to be sure they fit the campaign and to be sure that the player and the GM are on the same page as to what the background covers. Backgrounds may not duplicate a class. Each character has 8 (10 for humans) points to assign to their selected backgrounds. At first level, no more than 5 points may be assigned to any one background.

The GM will consider the character's background just as he would the character's class when deciding if a character will succeed with an action. For example, a character with an "Engineer" background should have a much better chance of damming a creek or building a bridge over it than a character with a "Courtier" background.

Basic Adventuring Skills: Unless a player specifies otherwise about a character at character creation, all characters are assumed to have basic practical adventuring skills such as maintaining weapons and armor, riding a horse, setting up a camp, swimming, climbing, cooking, first aid, etc., and have a rough idea of the value of common coins, trade goods, gems, and jewels. Success should simply be assumed unless there are unusual conditions.

Languages: All character races speak common. Other intelligent beings speak their own languages (20% chance of also speaking common). Beings with a MIND over 12 may speak one additional language per point of MIND over 12 (these are in addition to any languages known because of a background).

Talents: At level 2 (and every 2 levels thereafter), characters may select one narrow area of skill where they are better than average: something they are "Good at." This talent should be either something directly related to their class or background -- or something they have spent game time and/or money learning. If the player wishes (and the GM approves), instead of selecting a new talent a talent the character is already "Good at" be improved to "Expert at" at a later even-numbered level and a talent the character is "Expert at" may be improved a final time to "Master at" at yet a later even-numbered level. The GM will consider the character's talents just as he would the character's class and background when deciding if a character will succeed with an action. If an actual skill roll is needed, a "good at" talent adds +2 to the roll, an "expert at" talent adds +4 to the roll, and a "master at" talent adds +6 to the roll.

Making Skill Checks

Unlike most D20 games, there are no specific skills in Microlite20 NG. Instead players tell the GM what their characters are trying to do and the GM decides if it will succeed in the situation, taking into account the characters' classes, backgrounds, and talents. If the GM decides a random success chance is truly needed he may resolve the situation with a "skill roll":

D20 + Stat Bonus + level + relevant background and talent points

Only one background may be applied to a single roll. If a character has multiple relevant backgrounds, the background with the highest bonus applies. The GM selects the relevant stat.

The "skill roll" is a succeed if equals or exceeds the Difficulty Class (DC) set by the GM. Unless the GM rules otherwise, a natural roll of 20 always succeeds and a natural roll of 1 always fails. Suggested Difficulty Classes: Easy - 10, Normal - 15, Difficult - 20, Hard - 25, Very Hard - 30, Legendary - 35, Unbelievable - 40. Note that failure is just that. Failure does not normally mean disaster happens.

Saving Throws

When subject to an unusual or magical attack, characters generally get a saving throw to avoid or reduce the effect. To make a saving throw, roll 1d20, add modifiers based on the type of saving throw (and any circumstantial modifiers set by the GM). A natural roll of 1 automatically fails. A natural roll of 20 automatically succeeds. Otherwise, the saving throw is successful if the total of the roll and modifiers is 20 or greater. Standard Modifiers are the character's Level/2 (round down), and a Stat bonus based on the type of saving throw.

Types of Saving Throws: There are three types of saving rolls: Fortitude (FORT), Reflex (REF), and Will (WIL). Fortitude: These saves measure ability to stand up to physical punishment or attacks against vitality and health. Add STR bonus to Fortitude saving throws. Reflex: These saves test ability

to dodge area attacks. Add DEX bonus to Reflex saving throws. Will: These saves reflect resistance to mental influence and many magical effects. Add MIND bonus to Will saving throws

Magic

Magi can cast any arcane spell, and Clerics any divine spell, with a spell level equal or below 1/2 their class level, rounded up. They have access to all spells from the appropriate list in the SRD.

Casting a spell of any kind costs Hit Points. The cost is 1 + double the level of the spell being cast:

Spell Level	0	1	2	3	4	5	6	7	8	9
HP Cost	1	3	5	7	9	11	13	15	17	19

This loss **cannot** be healed normally but is recovered after 8 hours rest. There is no need to memorize spells in advance.

Just because a character can cast any spell, doesn't mean that they should. Choose spells that suit the character. Select one "signature" spell per spell level from 1st upward that they prefer to use over any other. These spells are easier to cast due to familiarity, costing 1 less HP to use.

Combat Casting: In combat, if a character is hit and takes damage (or other effect that could interfere with spell casting like paralysis) before casting a spell, the spell fizzles. This costs the caster 1 HP per level of the spell he was attempting to cast and the caster loses his action for the round. Characters casting spells in combat must remain stationary.

The Difficulty Class (DC) for all spells is: 10 + Caster Level + Caster's MIND bonus

Hit Points and Healing

Hit Points: Hit Points are an abstract measure of the amount of damage a character can suffer before falling unconscious and taking severe injuries. If Hit Points reach 0, the character is unconscious and begins to take severe physical injury. Further damage, including any remaining points of damage the attack that reduced hit points to zero, directly reduces Body Points. Hit Points represent stamina, luck, minor cuts and scrapes, etc. Optional: To avoid confusion, "Hit Points" may be renamed Vitality Points or "Fatigue Points."

Body Points (WP): All characters have 10 (+STR Bonus) Body Points. If Body Points reach 0, the character is dead. Each one point of body damage a character suffers gives a -1 to all attack, success, saving, and similar rolls (also to strike speed).

Recovering Hit Points: All characters recover all hit points after six hours of total rest in a reasonably safe location. If a character has lost Body Points due to wounds, only 50% of total hit points lost are recovered per six hours of rest.

Healing Body Point Damage: Body points lost recover at a rate equal to the character's STR Bonus (minimum of 1 point regained) per full day of rest. If a character with up to 50% Body Point damage (up to 5 or 6 points of BP damage for most characters) performs more than very light activity or careful travel during a day, he has a 50% chance of losing an additional body point. If a character with more 50% of Body Point damaged (6 or more points of BP damage if the standard 10 BP is used) does anything other than rest quietly in bed during a day, he has a 50% chance of losing an additional body point.

Healing Magic: For PCs and NPCs, healing magic only restores body points at the rate of 1 body point per die of healing. Healing spells cast on monsters (who only have hit points), restores hit points as per the SRD. *(Optional):* Healing magic is not instantaneous, 1 body point will be cured per 10 minutes of rest after the spell is cast (up to the maximum the spell will cure), if the rest is interrupted any remaining points of healing are lost.

Second Wind (Optional): Once per day, characters may regain 20% of their total hit points (round up) by resting in a safe place for an hour while eating a meal. This amount is reduced by 2 hp per point of body damage (to a minimum of 0 hp recovered).

Monster Body Points (Optional): If the GM does not mind the added complexity, monsters may have Body Points as well. A monster's Body Points are equal to twice the number of hit dice the monster has. This option is not recommended.

Combat

Surprise: At the beginning of an encounter, roll 1d6 for each side. On a roll of 1-2 a side is surprised and may not act at all in the first round. If attacking from an undetected ambush, the ambush victims are surprised on a roll of 1-4. A side cannot be surprised if it is aware of the other.

Initiative: Roll d20 + DEX bonus for initiative order each combat round. Use Hit Dice/2 instead of DEX for monsters. Characters and monsters act in Initiative order, from high to low. Spell casters casting a spell must declare the spell being cast and its target before initiative is rolled. When everyone has attacked who is able and desires to and any necessary bookkeeping is done, the combat round is finished and, if combat continues, the next combat round begins with an initiative roll.

Group Initiative (Optional): Each side rolls a d6 (reroll ties). High roll wins initiative. The combat order is: 1) Side that lost initiative declares actions. 2) Side that won initiative declares actions. 3) Side that won initiative acts. 4) Side that lost initiative acts. 5) Any bookkeeping is done. This ends a combat round. If the combat continues, roll initiative again and repeat.

Actions: Combat is very abstract. Each combat round lasts 10 seconds and includes a lot of jockeying for position, feints, etc. The “hit roll” determines if any damaging blows were delivered during the round. Everyone can do one thing each round; move, attack, cast a spell, etc. The GM may choose to allow some combined actions, like a charge attack, to be one thing. Drawing a weapon, speaking or similar activities are “free” and do not count as an action.

Opportunity Attacks: Anyone not surprised and with a ready weapon who is not already involved in a melee combat gets a free attack on opponents trying to move past them – this attack is in addition to their normal attack for the round. If the attack is successful, the opponents takes damage and can move no further that round.

Attack Rolls: Add attack bonus to d20 roll. A natural roll of 1 always misses, otherwise if the result is higher than your opponent's Armor Class (AC), it's a hit. A natural 20 that would otherwise hit is automatically a critical hit.

Melee attack bonus = STR bonus + Physical Combat Bonus
Missile attack bonus = DEX bonus + Physical Combat Bonus
Magic attack bonus = MIND bonus + Magical Combat Bonus

Armor Class (AC) = 10 + DEX bonus + Armor bonus. Basic Armor Bonuses: Light Armor (e.g. leather) +2, Medium Armor (e.g. Chainmail) +4, Heavy Armor (e.g. Plate) +6; a shield adds +1; a large shield adds +2.

Critical Hits: A natural 20 that would otherwise hit is automatically a critical hit doing maximum damage and doing a number of body points damage equal to the number of damage dice rolled (normally 1). Most monsters do not have body points, so a critical hit will do maximum damage plus a normal damage roll to them and cause them to lose their next attack.

Light Weapons: Fighters and Rogues can use DEX bonus + Physical Combat Bonus as Melee attack bonus instead if wielding a light weapon. Fighters and Rogues can wield 2 light weapons and attack with both in a round (making one attack roll at -2). Rapiers count as light weapons, but you cannot wield two rapiers at the same time.

Range Penalties: If the target is relatively close, there is no penalty to hit for range. If it's mid-range for the weapon you're using, take a -2. If it's farther out than that, the GM will assign a -4 to -10 penalty to hit, depending on his judgment of how far away the target is.

Cover: Characters behind an object gain +2 to +10 to their AC against ranged attacks, depending on the extent of the cover (light cover = +2 to nearly complete = +10). In some situations, the GM may allow half this AC bonus to apply to saves.

Damage: Light weapons do 1d4 damage. Medium weapons do 1d6 damage. Heavy weapons do 1d8 damage. Add STR bonus and any class damage bonus to Melee damage (x2 for two-handed weapons). *Option:* Weapons do the damage listed for the specific weapon on the equipment table.

Shield Special: A character with a shield may choose to have it completely absorb all the damage from any attack (including a critical hit). A non-magical shield shatters when it does so. A magical shield permanently loses one point of its magical AC bonus when it does so, becoming a non-magical shield if its magical AC bonus is reduced to zero.

Morale: While a few monsters, such as mindless creatures, are fearless and will fight to the death, most monsters have a strong desire to survive and will not continue to fight when the battle is going against them. They will instead seek to retreat, to flee, or even to surrender. The GM decides when monsters abandon the battle and retreat, based on the situation and the monster's intelligence. Monsters in the Microlite20 NG monster List are assigned a Morale Rating (from 2 to 12, with 2 being a complete coward and 12 being totally fearless) to help the GM make these decisions. If the GM wishes, he may simply roll 2d6 and have the monsters break off combat if the number rolled is greater than the monster's Morale Rating.

Other Hazards

Falling: 1d6 damage per 10', half damage on Phys + DEX save. DC=depth fallen in feet

Spikes: add +1 point to falling damage per 10' fallen, max +10

Poison: Phys + STR save to avoid or for half, depending on poison. Effect varies with poison type.

Extreme Heat & Cold: If not wearing suitable protection, Phys + STR save once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed save.

Level Advancement

Encounter Level = Hit Dice of defeated monsters, or the given EL for the trap, situation, etc. Add +1 for each doubling of the number of foes. eg: 1 kobold = EL1. 2 kobolds = EL2. 4 kobolds = EL3, etc.

Add up the Encounter Levels (ELs) of every encounter you take part in. When the total = 10 x your current level, you've advanced to the next level. Reset the total to 0 after advancing.

Each level adds:
+1d6 to Hit Points
+1 to all attack rolls

If the level divides by 2 (i.e. 2, 4, 6, 8, etc.), gain one talent.

If the level divides by three (i.e. level 3,6,9, etc.) add 1 point to STR, DEX, MIND, or CHA

If the level divides by four (i.e. level 4, 8, 12, etc.) gain 1 background point (either added to a current background or to start a new background).

Fighters gain +1 to their attack and damage rolls at levels 5,10,15, etc.

Clerics and Magi gain access to new spell levels at levels 3,5,7,9, etc.

Example: The 1st level adventurers have just completed a dungeon adventure, and defeated 5 EL1 encounters, an EL2 trap and the EL3 leader. That's a total of EL10, so they all advance to level 2. They need to defeat another 20 Encounter Levels to reach Level 3.

Monsters

Name	Hit Dice	Armor Class	Attack
Animal (small) eg Badger	HD 1d8+2 (6 hp)	AC 15	Claw +4 (1d2-1)
Ankheg	HD 3d10+12 (28 hp)	AC 18	Bite +7 (2d6+7 plus 1d4 acid)
Bugbear	HD 3d8+3 (16 hp)	AC 17	Morningstar +5 (1d8+2) or javelin +3 (1d6+2)
Choker	HD 3d8+3 (16 hp)	AC 17	Tentacle +6 (1d3+3)
Deinonychous (Raptor)	HD 4d8+16 (34 hp)	AC 16	Talons +6 (2d6+4)
Dire Rat	HD 1d8+1 (5 hp)	AC 15	Bite +4 (1d4 plus disease)
Dragon (young Red)	HD 13d12+39 (123 hp)	AC 21	Bite +20 (2d6+7) or breath 10d10 DC24 phys+DEX to dodge for half
Dwarf	HD 1d8+2 (6 hp)	AC 16	Waraxe +3 (1d10+1) or shortbow +1 (1d6)
Earth Elemental (large)	HD 8d8+32 (68 hp)	AC 18	Slam +12 (2d8+7)
Elf	HD 1d8 (4 hp)	AC 15	Longsword +2 (1d8+1) or longbow +3 (1d8)
Gargoyle	HD 4d8+19 (37 hp)	AC 16	Claw +6 (1d4+2)
Goblin	HD 1d8+1 (5 hp)	AC 15	Morningstar +2 (1d6) or javelin +3 (1d4)
Griffon	HD 7d10+21 (59 hp)	AC 17	Bite +11 (2d6+4)
Halfling	HD 1d8+1 (5 hp)	AC 16	Shortsword +3 (1d6) or light crossbow +3 (1d6)
Hellhound	HD 4d8+4 (22 hp)	AC 16	Bite +5 (1d8+1 plus 1d6 fire)
Hill Giant	HD 12d8+48 (102 hp)	AC 20	Greatclub +16 (2d8+10) or rock +8 (2d6+7)
Hobgoblin	HD 1d8+2 (6 hp)	AC 15	Longsword +2 (1d8+1) or javelin +2 (1d6+1)
Human Commoner	HD 1d8+1 (5 hp)	AC 12	Dagger +1 (1d6+1) or sling +1 (1d4)
Insect (small) eg Spider	HD 1d8 (4 hp)	AC 14	Bite +4 (1d4-2 plus poison)
Kobold	HD 1d8 (4 hp)	AC 15	Spear +1 (1d6-1) or sling +3 (1d3)
Ogre	HD 4d8+11 (29 hp)	AC 16	Greatclub +8 (2d8+7) or javelin +1 (1d8+5)
Orc	HD 1d8+1 (5 hp)	AC 13	Falchion +4 (2d4+4) or javelin +1 (1d6+3)
Owlbear	HD 5d10+25 (52 hp)	AC 15	Claw +9 (1d6+5)
Rust Monster	HD 5d8+5 (27 hp)	AC 18	Antennae touch +3 (rust)
Shadow	HD 3d12 (19 hp)	AC 13	Incorporeal touch +3 (1d6 Str)
Skeleton Warrior	HD 1d12 (6 hp)	AC 15	Scimitar +1 (1d6+1) or claw +1 melee (1d4+1)
Stirge	HD 1d10 (5 hp)	AC 16	Touch +7 (attach)
Stone Golem	HD 14d10+30 (107 hp)	AC 26	Slam +18 (2d10+9)
Troll	HD 6d8+36 (63 hp)	AC 16	Claw +9 (1d6+6)
Werewolf (hybrid form)	HD 3d8+7 (20 hp)	AC 16	Claw +4 (1d4+2)
Wight	HD 4d12 (26 hp)	AC 15	Slam +3 (1d4+1 plus energy drain)
Wolf	HD 2d8+4 (13 hp)	AC 14	Bite +3 (1d6+1)
Wyvern	HD 7d12+14 (59 hp)	AC 18	Sting +10 (1d6+4 plus poison) or Talon +10 (2d6+4) or Bite +10 (2d8+4)
Zombie	HD 2d12+3 (16 hp)	AC 11	Slam +2 (1d6+1) or club +2 (1d6+1)

Monster Reactions: Some monsters (like skeletons guarding a tomb) may always attack. In cases where the reaction of the monsters to the party is not obvious, the GM may opt to make a reaction roll for the monsters by rolling 2d6 and adding the CHA bonus (and any other appropriate modifiers) to the roll and consulting this table.

Adjusted Reaction Roll	Result
------------------------	--------

2 or less	Very Unfavorable
3-6	Unfavorable
7	Neutral/Uncertain
8-11	Favorable
12 or more	Very Favorable

Interpretation of the results is left to the GM, however, these general principles may prove helpful. Very Unfavorable means the monsters will most likely attack unless the odds are overwhelmingly against them. They will not help the characters. Unfavorable means the monsters are hostile and might attack unless they are given a good reason not to. They will not help the characters. Neutral means the monsters are unsure of the party. They are not likely to attack immediately, but are not friendly or helpful. Favorable means the monsters are willing to listen and are open to negotiation. They might be willing to be slightly helpful. Very Favorable means the monsters like the characters and are willing to be somewhat helpful and are open to working with the party to mutual advantage.

Skills: All creatures have a bonus to all skills equal to their number of Hit Dice. If the creature is intelligent, add +3 to one skill. Add stat bonuses to suit and as logic dictates. This is intentionally kept open – if you need a sneaky bugbear, assign the +3 bonus to Subterfuge; if a warrior, give +3 to Physical; for a spell-caster assign the +3 to Knowledge or Communication and give levels of Mage or Cleric (see below).

Monster Advancement: To make a tougher monster, add more Hit Dice; each additional HD adds one to their skill and combat bonuses. For each doubling of the Hit Dice, increase the dice size for attacks (ie, d4->d6, d6->d8, etc). Alternatively, add class levels to intelligent monsters. Start with the base Hit Dice and add levels of Fighter, Rogue, Mage or Cleric as required.

Create Your Own: Assign Hit Dice (d8 for most things, d12 for Dragons and Undead). Attack bonus and skill level = number of Hit Dice. If it's an intelligent critter, +3 bonus to one skill. Add stat bonuses to suit.

Sample Characters

Morris, Human Rogue-1

STR 12 (+1), DEX 15 (+2), MIND 12 (+1)
hp 13, AC 15 (Studded Leather), Paired Short Swords, +0/+0, d6+1
Subterfuge +5, all others @ +2

Kendrick, Dwarf Fighter-1

STR 16 (+3), DEX 13 (+1), MIND 11 (+0)
hp 17, AC 17 (Chainmail + shield), Longsword +5, d8+4
Physical +4, all others @ +1

Cholmer, Elven Mage-1

STR 12 (+1), DEX 13 (+1), MIND 16 (+3)
hp 13, AC 11 (Robes), Quarterstaff +2, d6+1
Knowledge +4, all others @ +1
Spells: All 0 and 1st level arcane spells.

Barnabas, Halfling Cleric-1

STR 10 (+0), DEX 16 (+3), MIND 13 (+1)
hp 11, AC 18 (Chainmail), Morningstar +1, d8
Communication +4, all others @ +1
Spells: All 0 and 1st level divine spells.

Pathfinder **LITE**: Players Compendium

Based on the MicroLITE d20 core rules

Ability Scores: (Modifier = $\text{STAT} - 10 / 2$ (round down))

There are three core Ability Scores often called 'Stats'.

- Strength (STR)
- Dexterity (DEX)
- Mind (MND)

Skills: (Skill Rank = Level + Race Modifier + Class Modifier)

Skill Check: (Roll = $1d20 + \text{Skill Rank} + \text{Stat Bonus} + \text{Situational Modifier}$)

There are four general skills that all characters may use.

- Physical (Phys)
- Subterfuge (Sub)
- Knowledge (Know)
- Communication. (Com)

Standard Actions & Skill Checks: Suggested rolls for Standard Actions and typical Skill Checks. Any player may suggest a different roll than listed which may represent more accurately the action their character is attempting.

Appraise - com+MIND	Hunt / Forage sub+DEX	Ride - com+DEX
Balance - phys+DEX	Intimidate - com+STR	Search - (Perception)
Bluff - com+MIND	Jump (long) - phys+STR	Sense Motive - com+MIND
Climb - phys+STR	Jump (high) phys+DEX	Sleight of Hand - sub+DEX
Concentration - phys+MIND	Knowledge - know+MIND	Speak Language - (Linguistics)
Craft - know+DEX	Linguistics - comm+MIND	Sneak (hide & move silent) -sub+DEX
Decipher Script - (Linguistics)	Listen - (Perception)	Spellcraft - know+MIND
Decipher Language - (Linguistics)	Move Silently - (Stealth)	Spot - (Perception)
Diplomacy - com+MIND	Open Lock - (Disable Device)	Stealth - sub+DEX
Disable Device - sub+DEX	Perception -	Survival - phys+STR
Disguise - sub+MIND	Spot - phys+MIND	Swim - phys+STR
Escape Artist (slip free)- sub+DEX	Search - know+DEX	Tumble - phys+DEX
Escape Artist (break free) - sub+STR	Listen - sub+MIND	Use Magic Device - know+MIND
Forgery - (Linguistics)	Smell - phys+MIND	Use Rope - know+DEX
Gather Information - (Diplomacy)	Taste - know+MIND	
Handle Animal - com+MIND	Perform (act, sing, etc) - com+MIND	
Heal - know+MIND	Perform (instrument) - com+DEX	
Hide - (Stealth)	Profession - com+MIND	

Saves: There are three types of saves used to determine the outcome of actions forced upon an unwilling character.

- **Reflex:** (Save = Phys + DEX)
- **Fortitude:** (Save = Phys + STR)
- **Will:** (Save = MND + LVL)

Magic: To determine what spells are available to each class please refer to their class details.

Casting:

- **Spell Level:** (Caster Level / 2 (round up))
The spell level a magic user can cast is equal or below 1/2 their class level, rounded up. The spell caster may only cast spells of their current spell level or below.
- **Casting Cost:** (Cost = Spell Level * 2 + 1)
Casting a spell of any kind costs Hit Points. The cost is 1 + double the level of the spell being cast. This loss cannot be healed normally but is recovered after 8+ hours rest.
- **Signature Spells:** (Cost = Spell Level * 2)
Choose spells that suit your character. Select one 'signature' spell, per spell level, from 1st Spell Level upward that they prefer to use over any other. These spells are easier to cast due to familiarity, costing 1 less HP to use.
- **Difficulty Class:** (DC = 10 + Caster Level+MIND bonus)
Use this DC to check against for things like Reflex or Will saves vs. a spell's effects. When casting a spell on an unwilling target that target may get a Save which they will have to roll and check against your spell DC. Be sure to read a spells description to see what save, if any, your targets may get and what happens if they fail a Save.
- **Memorization:**
There is no need to memorize spells in advance; casting is spontaneous for all casting classes. The trade off for this benefit, and the superiority of magic in general, is the cost of Hit Points to cast spells.

Combat:

Hit Points: (HP = STR Stat + 1d6 per Level.)

Initiative: (Roll = 1d20 + DEX bonus)

Someone should write down every character's name, including opponents, and the Initiative number they rolled in the order of highest to lowest number. This is the Initiative Order for an encounter which dictates the order in which turns are taken.

All characters take a Turn in order of Initiative. After everyone has taken their Turn a new Round starts again at the top of the Initiative Order. Everyone can do one thing each turn; such as move, attack, perform a standard action, cast a spell, etc.

Attack Bonus: When a player declares their character attacks an opponent they make an Attack Roll using one of these bonuses.

- **Melee ATK:** (Bonus = STR modifier + Level)
- **Missile ATK:** (Bonus = DEX modifier + Level)
- **Magic ATK:** (Bonus = MND modifier + Level)

Attacking: (ATK Roll = 1d20 + ATK bonus vs. opponent's AC) Which attack bonus to use depends on the type of weapon you are using. Melee ATK for close combat weapons, Missile ATK for ranged / thrown weapons, and Magic ATK for spells that require a 'ranged touch attack' or other ATK roll (read a spells description to see if it requires an attack roll). A player will declare who their character is targeting for an attack, make an ATK Roll, and tell the GM what the total result is. The GM will check this number against the target's AC and announce if it was a 'hit' or 'miss'.

Armor Class: (AC = 10 + DEX bonus + Armor bonus)

Each type of armor has its own bonus designated; refer to your armor stats and description when calculating a player character's AC. Other modifiers can effect your Armor bonus so be sure to include things like shields, magic items, spell effects, and include all applicable modifiers in order to accurately total up a character's AC.

Critical Hit / Miss: A "Natural Roll" is a number rolled on the dice with no modifiers applied. Consult with your DM what happens when a critical hit or critical miss occurs. A typical result is double damage for a critical hit and a character harming themselves for a critical fumble. These **only** apply to ATK Rolls.

- Critical Hit: Natural 20
- Critical Miss: Natural 1

Multiple Attacks: If a character's total ATK bonus is +6 or more then a second ATK can be made that round at a -5 penalty. If a character's total ATK bonus is +11 or more then a third ATK can be made that round at a -10 penalty.

- **Example:** If the total bonus is +6; two attacks can be made with ATK Bonuses of +6/+1
- **Example:** If the total bonus is +12, three attacks can be made with ATK Bonuses of +12/+7/+2.

Combat Maneuver System: Attacker roll = 1d20 + CMB vs. Defender roll = 1d20 + CMB (higher number wins)

- **Combat Maneuver Bonus:** CMB = Melee ATK bonus + Phys skill bonus
- **Usage:** Executing a combat maneuver is a standard action. The defending opponent makes an opposed roll against the attacker; both roll 1d20+CMB and the higher number wins. Some combat maneuvers can be maintained over several rounds (grapple or bull rush); a defender may attempt to break free on their turn or an attacker may attempt to maintain the maneuver on their turn. Another opposed CMB check is rolled on the attacker's and defender's turn; if the attacker wins the maneuver is maintained but if the defender wins then the maneuver is broken.
- **Maneuvers:**
 - **Grapple:** You can attempt to grapple a foe, hindering their combat options. Once grappled you can attempt to move together, damage your opponent, or pin them down.
 - **Bull Rush:** A bull rush attempts to push an opponent straight back 5' without doing any harm.
 - **Trip:** You may attempt to trip an opponent and knock them prone.
 - **Disarm:** Attempt to disarm opponent. Success and they drop their weapon; failure and you drop yours.
 - **Overrun:** Attempt to overrun your target, moving through the space it occupies.
 - **Sunder:** You can attempt to sunder an item held or worn by your opponent using a weapon you wield. Succeed and the item is rendered useless until repaired.
 - **Charge:** Run up to twice your normal distance and make a single attack. Path to target must be straight and clear of obstacles.
 - **Aid Another:** Spend your turn aiding a nearby ally. The designated ally gains a +2 bonus on next roll.

Dual Wielding Weapons: Fighters, Rogues, and Rangers can wield 2 light weapons and attack with both in a round if they take a -2 penalty on **all** ATK Rolls that round. To determine if a weapon is a 'light weapon' please refer to the weapon's stats and description.

Damage: (DMG Roll = damage dice + modifiers) subtract result from opponents HP.

When an ATK Roll results in a hit then the player makes a DMG Roll. Each weapon will have designated dice types to roll for damage so refer to your weapon stats when rolling for damage. Spells indicate in their description what dice to roll.

- **Damage Bonus:** Add your character's STR modifier to Melee damage, multiply by 2 for 2-handed weapons. Other modifiers from spell effects, magic items, or other circumstances may apply so be sure to add everything.

Death: If a character's HP reaches 0; the character falls unconscious and is near death. Further damage directly reduces STR. If STR reaches 0 the player's character is dead. Once revived and conscious; a characters STR is restored while HP will have to be magically cured or healed with extended rest and care.

Races: These are the classic races. If you wish to play a different race please consult with your DM.

Dwarf

- **Dwarven Bravado:** While dwarves are both tough and wise they are also a bit gruff.
- **Modifiers:** +2 STR, -1 Comm
- **Languages:** Dwarven and Common

Elf

- **Elvish Domineer:** Elves are nimble, both body and mind, but tend to be rather frail.
- **Modifiers:** +2 MND, -1 Phys
- **Languages:** Elven and Common

Gnome

- **Gnomish Stature:** Although they tend to be physically weak they are quite hardy and their attitude makes them naturally agreeable... when they want to be!
- **Modifiers:** +1 DEX, +1 MIND, -1 Phys
- **Languages:** Gnomish, Sylvan, and Common

Half-Elf

- **Half-Elf Domineer:** Half-elven nature is a variance somewhere between Elven and Human.
- **Modifiers:** +1 MIND, +1 to all Skill Rolls, -1 STR
- **Mixed Blood:** They count as both Human and Elven for any effects that specify race.
- **Languages:** Elven and Common

Half-Orc

- **Half-Orc Bravado:** Physically strong and always on the look out for danger. Their orc stock does tend to limit their intelligence however.
- **Modifiers:** +2 STR, -1 Know
- **Mixed Blood:** They count as both Human and Orc for any effects that specify race.
- **Languages:** Orc and Common

Halfling

- **Halfling Stature:** Halflings are nimble and strong willed but their small stature makes them weaker than most races.
- **Modifiers:** +2 DEX, -1 Phys
- **Languages:** Halfling and Common

Human

- **Human Domineer:** Humans have a variable nature; no two are alike. They are also very adaptable; learning or adapting to almost.
- **Modifiers:** +1 to any STAT, +1 to all Skill Rolls, -1 to any STAT
- **Languages:** Common

Classes:

For details on each class please refer to individual class's document. These are just basic descriptions to help you decide which class best suits your character concept.

- **Barbarians** may use light or medium armor and light shields. They received a +3 bonus to Physical skill. Barbarians use their Rage to release special abilities.
- **Bards** wear light armor and may use light shields. They gain a +2 bonus to Communication, Subterfuge, and Knowledge. Bards use their Performance to manifest their special abilities.
- **Clerics** wear light or medium armor and may use light shields. They cast divine spells and gain a +3 bonus to Communication skill. A cleric can channel either Good or Evil divine energy based on their alignment to use special abilities (Neutral clerics make a permanent choice when character is created). Clerics may cast any divine spell in SRD.
- **Druids** wear any non-metal armor or shield. They gain +2 to Knowledge. Druids may use Duridic Magic and have the Wild Shape special ability. They have a Natural Bond with an animal companion.
- **Fighters** wear any kind of armor and any shield. They get a +3 bonus to Physical skill. Fighters use their Combat Prowess to execute special abilities.
- **Monks** do not wear armor or shields. They gain +2 to Physical and +1 to Knowledge skills. A monk's Unarmed Strikes are considered light, magic weapons with damage increasing 1 die size every 5 levels (1d6, 1d8, 1d10, 1d12) These warrior-artists can use Ki to unleash special abilities.
- **Paladins** may wear any kind of armor and use shields. They have a +1 bonus to Physical and a +2 bonus to Communication. Paladins use Righteous Favor for special abilities and Holy Magic to cast some divine spells. A character must be of Lawful Good alignment to be a Paladin
- **Rangers** use light or medium armor and can use light shields. They may cast spells using Ranger Magic and gain special bonuses against their Favored Enemies. They eventually form a Hunter's Bond with an animal companion.
- **Rogues** use light armor but not shields. They have a +3 bonus to Subterfuge skill. Rogues use their Talents to perform special abilities.
- **Sorcerers** wear no armor or shields. They gain a +3 bonus to Knowledge skill. Sorcerers are able to cast any arcane spell in SRD and have a Familiar to aid them in their quests.
- **Wizards** wear no armor or shields. They gain a +3 bonus to Knowledge skill. Wizards are able to cast any arcane spell in SRD and utilize their Esoteric Object to facilitate their magic.

Character Creation:

Ability Scores (Stats):

Roll 4d6 and ignore lowest number. Add remaining three dice and write down this number. Repeat two more times.

Allocate the three numbers to your stats in any order. Calculate your stat Modifiers: (**Modifier = STAT – 10 / 2 (round down)**)

- **STR**
- **DEX**
- **MND**

Race:

Select one of the following races and apply modifiers directly to their associated Stat or Skill.

- **Humans:** +1 to any STAT, +1 to all Skills, -1 to any STAT
- **Elves:** +2 MND, -1 Phys
- **Dwarves:** +2 STR, -1 Comm
- **Halflings:** +2 DEX, -1 Phys
- **Gnomes:** +1 DEX, +1 MIND, -1 Phys
- **Half-orcs:** +2 STR, -1 Know
- **Half-elves:** +1 MIND, +1 to all Skills, -1 STR

Alignment:

Figure out your character's alignment based on their personality and background. Combine one item from the left with one from the right and this is your character's alignment. Alignment is your character's morale barometer which gages the typical behavior of your character. This is not a limitation or restriction of what your character can and can not do but rather how they behave most of the time. Alignment is also a great way to distinctly separate the Player from a Character and help the player role play their character. For more details on alignment refer to the SRD.

- | | |
|------------------|------------------|
| • Lawful | • Good |
| • Neutral | • Neutral |
| • Chaotic | • Evil |

Class:

Choose one of the following classes. For details on classes refer to the Class Descriptions. Players may multiclass a character but the Class Modifiers are only applied for the first class taken and not for multiclassing.

- **Barbarians**
- **Bards**
- **Clerics**
- **Druids**
- **Fighters**
- **Monks**
- **Paladins**
- **Rangers**
- **Rogues**
- **Sorcerers**
- **Wizards**

Skills:

Calculate your character's skill ranks with this equation: (**Skill Rank = Level + Race Modifier + Class Modifier**)

Note that the Class Modifiers are only applied for the first class a character takes and not for multiple classes.

- **Physical** (Phys)
- **Subterfuge** (Sub)
- **Knowledge** (Know)
- **Communication**. (Com)

Magic:

If your character can cast spells then calculate your spell Difficulty Class (DC) using this equation: (**Spell DC = 10 + Caster Level + MND bonus**). Choose your favored spell for each Spell Level starting at Spell Level 1; these spells costs 1 less HP to cast. All other spells cost: (**HP Cost = Spell Level * 2 + 1**).

Level Advancement:

First apply Base Advancement then apply Class Specific advancement for each class your character leveled up. If you are multiclassing a character then do not apply the Class Modifiers. Most characters start off at level one and achieve levels as their experience increases. However players may wish to start at a higher level but the same advancement rules apply; consult with your DM on what level play will begin at. Perhaps everyone decided on playing a specific adventure module that looked interesting but it's recommended for level 4 characters thus everyone may want to start playing with level 4 characters.

Experience: In order to gain levels characters must earn experience by achieving goals. While there is a great emphasis based on gaining experience through slaying opponents; that need not be the only way experience is gained. Your DM should award experience to characters based on their success at completing objectives; not just body counts. Outlined here are two methods of determining when a character will gain a level; consult with your DM on which method will be used.

Level by Encounter:

Encounter Level = Hit Dice of defeated monsters, or the given EL for the trap, objective, situation, etc. Add +1 for each doubling of the number of foes. eg: 1 kobold = EL1. 2 kobolds = EL2. 4 kobolds = EL3, etc.

Add up the Encounter Levels (ELs) of every encounter you take part in. When the total equals 10 x your current level, you've advanced to the next level. Reset the total to 0 after advancing.

Level by Adventure:

Every third adventure that a character survives they gain a level. If progress is too quick then the DM may opt for leveling every fifth adventure. An adventure is comprised of many encounters. An encounter is made up of several objectives. This method is much broader and assumes that a character who survives an entire adventure has obviously gained much experience and therefore after several adventures they have earned a level.

Base Advancement: All characters, regardless of class or race, gain these advancements upon leveling up.

- +1d6 HP
- +1 to all Attack modifiers (Melee, Ranged, & Magic)
- +1 to all Skill ranks (Phys, Comm, Know, Subt)
- +1 to all Save modifiers (Reflex, Fortitude, Will)
- If Character Level is divisible by three then +1 STR, DEX, or MND
 - Level 3, 6, 9 12, 15, 18, etc...

Class Specific Advancement: Characters advance upon leveling up based on their class as well. Refer to class details for more specific information on class features or special abilities and how they increase as a character gains levels.

Pathfinder **LITE**: Dungeon Master's Codex

Based on the MicroLITE d20 core rules

Synopsis: You, the DM, should have a full understanding of the rules laid out in the Player's Compendium. The rules, guidelines, and suggestions in the DM's Codex are used in conjunction with the compendium. Those new to table-top RPGs should start reading at the section titled Rules of Thumb as it will answer many questions. If at any point something is not clear enough or you wish it were more detailed then please refer to the Pathfinder System Reference Document (PFSRD) as it has more than enough rules to handle most any situation. Above all your duty as DM is to keep the game fun so please adjust, omit, add, or interpret things as necessary in order to keep the game fun!

Hazards:

- **Falling:** Here are some guidelines for when a character fails that climb check or gets bull rushed over a ledge!
 - DMG = 1d6 per 10' (20d6 max)
 - Other Hazards: Icy spikes, jagged rocks, thorny vines, outcroppings, etc..
 - +1 DMG per 10' fallen (max. +10)
 - Reflex save for half DMG
 - Save DC = depth fallen (in feet)
- **Extreme Weather:** The weather can be a great tool to persuade characters movement or keep them corralled with out being too heavy handed. Usually characters that are properly equipped or sheltered do not take damage from foul weather. However extreme weather conditions can be hazardous or even fatal if ignored.
 - Types: heat, cold, hail, sand storm, tornado, typhoon, earthquake, etc.
 - DMG = 1d6 per 10 minutes.
 - Other Hazards: Lighting & thunder, large hail, extreme winds, etc
 - Add DMG dice as needed based on the ferocity of the weather.
 - Fortitude save for half DMG
 - Save DC = time (in minutes) spent in the weather.
- **Swimming & Drowning:** This could involve water, quick sand, lava, or any other liquids and suspensions.
 - Swimming DCs
 - Calm & shallow = DC 10
 - Fast moving & deep = DC 15
 - Dangerous cascades, rocks, or other treacherous hazards DC 20
 - Swimming Check:
 - Failing a swim check forces the character to start holding their breath, begin sinking, and must succeed in another swim check in order to reach the surface to breath again.
 - Success means a character can swim at half their walking speed that round.
 - Hold Breath: Rounds = STR STAT + STR Modifier
 - Drowning:
 - After a character has ran out of breath they begin to drown. First round they fall unconscious (0 HP), second round they are dying (0 STR), and third round they have drown (dead).

Disease: Diseases have various symptoms and are spread through a number of ways. Several typical diseases, types, and how they are spread are summarized below.

A disease stat block contains the following: Name: Type, DC, incubation time, damage.

- **Type** lists the disease's method of delivery (contact, inhaled, or injury).
- **Save DC** lists the Fortitude save DC needed to prevent infection.
- **Incubation** lists the time before damage begins after failed save.
- **Damage** lists the ability damage the character takes after incubation and each day afterward until cured.
- **Pathogens:**
 - Virus
 - Bacteria
 - Fungus
 - Supernatural
 - Ingested / Digested (ate, drank, forced ingestion, etc)
- **Delivery Method:**
 - Contact (inhale, engulf, spit, etc)
 - Injury (bite, sting, slash, pierce, inject, etc)

- **Specific Diseases:**
 - Cackle Fever: Inhaled, DC 16, 1 day, -1d6 MIND.
 - Filth Fever: Injury, DC 12, 1d3 days, -1d3 DEX and 1d3 STR.
 - Mindfire: Inhaled, DC 12, 1 day, -1d4 MIND.
 - Red Ache: Injury, DC 15, 1d3 days, -1d6 STR.
- Shakes: Contact, DC 13, 1 day, -1d8 DEX.

Poison: Characters can possibly take damage from a weapon that has been poisoned, be attacked by a creature whose natural attacks feature poison, consume poison hidden in food or drink, or be poisoned in some other way. Several typical poisons are summarized below.

A poison stat block contains the following: Name: Type, DC, damage, price.

- **Name** of the poison:
- **Type** lists the poison's method of delivery (contact, ingested, inhaled, or injury).
- **Save DC** is the DC for a Fortitude save to resist the poison's effect.
- **Damage / Effect** is expressed as "xdx/xdx" and a descriptive effect name. The first number is the initial damage, taken immediately upon failing the Fortitude save against the poison. The second number is the secondary damage, taken one minute after exposure to the poison if a second save is failed.
- **Price** lists the cost for one dose of the poison. It can usually only be obtained through less-than-reputable sources, as the possession of poisons are commonly illegal.
- **Delivery Method:**
 - Contact (inhale, engulf, spit, etc)
 - Injury (bite, sting, slash, pierce, inject, etc)
 - Ingested / Digested (ate, drank, forced ingestion, etc)
- **Effects:**
 - Damage: Additional damage subtracted from HP.
 - Ability Drain: Damage subtracted from the stat listed. This effect is temporary unless marked with an asterisk *.
 - Unconsciousness: Some poisons actually render the victim unconscious.
- **Poison by Creature Size:** Here are some general guidelines for poison by the size of a creature. Most of the time poison stats are provided already so in those cases you may use what is provided. Use these as needed.
 - Tiny: Injury, DC 10, -1 STR/-1 STR, 50 gp.
 - Small: Injury, DC 12, -1d2 STR/- 1d2 STR, 85 gp.
 - Medium: Injury, DC 14, -1d4 STR/- 1d4 STR, 125 gp.
 - Large: Injury, DC 16, -1d6 STR/-1d6 STR, 200 gp.
 - Huge: Injury, DC 18, -1d8 STR/-1d8 STR, 400 gp.
- **Specific Poisons:**
 - Arsenic: Ingested, DC 13, -1 STR/-1d8 STR, 120 gp.
 - Blue Whinnis: Injury, DC 14, -1 STR/ unconsciousness 1d3 hours, 120 gp.
 - Burnt Othur Fumes: Inhaled, DC 18, -1 STR*/-3d6 STR, 2,100 gp.
 - Deathblade: Injury, DC 20, -1d6 STR/-2d6 STR, 1,800 gp.
 - Insanity Mist: Inhaled, DC 15, -1d4 MIND/-2d6 MIND, 1,500 gp.
 - Nitharit: Contact, DC 13, 0/-3d6 STR, 650 gp.
 - Oil of Taggit: Ingested, DC 15, 0/unconsciousness 1d3 hours, 90 gp.
 - Malys Root Paste: Contact, DC 16, -1 DEX/-2d4 DEX, 500 gp.
 - Sassone Leaf Residue: Contact, DC 16, -2d12 hp/-1d8 STR, 300 gp.
 - Sleep Poison: Injury, DC 13, unconsciousness 1d3 hours /unconsciousness for 2d4 hours, 75 gp.
 - Wyvern: Injury, DC 17, -2d6 STR/-2d6 STR, 3,000 gp.

Traps: Whether inside a dungeon or a nobleman's manor, adventurers can often be hurt, or even killed, without ever encountering a monster of any kind. Many dungeons are filled with debilitating or lethal traps set to keep wayward hands off of fantastic treasures. Several typical traps of varying Encounter Levels are summarized below.

A trap stat block includes the following: Name, attack & damage, Save DC, Search DC, Disable DC

- **Type** lists the trap used and the effect it has.
 - **Attack** shows the traps attack bonus or type of effect.
 - **Damage** shows the amount and type of damage the trap deals.
 - **Save DC** lists the Reflex save DC needed to either avoid the trap entirely, or to take only ½ the listed damage (if this is possible).
 - **Search DC** lists the DC for the Search check necessary to find the trap without triggering it.
 - **Disable DC** lists the DC for the Disable Device check necessary to disarm the trap safely.
-
- **EL1 Traps**
 - Basic Arrow Trap: Atk +10 (1d6, arrow); Search know+MIND DC 20, Disable sub+DEX DC 20.
 - Camouflaged Pit Trap: 10 ft. deep (1d6, fall); Save DC 15 to avoid; Search DC 24, Disable DC 20.
 - Poison Dart Trap: Atk +8 (1d4 plus poison, dart); Search DC 20, Disable DC 18.
 - **EL2 Traps**
 - Burning Hands Trap: spell effect (1d4, fire); Save DC 11 for ½ damage; Search DC 26, Disable DC 26.
 - Large Net Trap: Atk +5 (—); Save DC 14 to avoid; Search DC 20, Disable DC 25.
 - Pit Trap: 40 ft. deep (4d6, fall); Save DC 20 to avoid; Search DC 20, Disable DC 20.
 - **EL3 Traps**
 - Fire Trap: spell effect (1d4+3, fire); Save DC 13 for ½ damage; Search DC 27, Disable DC 27.
 - Pit Trap: 60 ft. deep (6d6, fall); Save DC 20 to avoid; Search DC 20, Disable DC 20.
 - Poisoned Arrow Trap: Atk +12 (1d8 plus poison, arrow); Search DC 19, Disable DC 15.
 - **EL4 Traps**
 - Lightning Bolt Trap: spell effect (5d6, electricity); Save DC 14 for ½ damage; Search DC 28, Disable DC 28.
 - Spiked Pit Trap: 60 ft. deep (6d6, fall), Atk +10 (1d4 each, 1d4 spikes); Save DC 20 to avoid; Search DC 20, Disable DC 20.
 - Wall Scythe Trap: Atk +20 (2d4+8, scythe); Search DC 21, Disable DC 18.
 - **EL5 Traps**
 - Falling Block Trap: Atk +15 (6d6, slam); Search DC 25, Disable DC 17.
 - Fireball Trap: spell effect (1d4+7, fire); Save DC 16 for ½ damage; Search DC 29, Disable DC 29.
 - Poisoned Wall Spikes: Atk +16 (1d8+4 plus poison, spikes); Search DC 17, Disable DC 21.
 - **EL6 Traps**
 - Compacting Room Trap: walls move together (12d6 crush); Search DC 20, Disable DC 22.
 - Lightning Bolt Trap: spell effect (10d6, electricity); Save DC 14 for ½ damage; Search DC 28, Disable DC 28.
 - Spiked Pit Trap: 100 ft. deep (10d6, fall), Atk +10 (1d4+5 each, 1d4 spikes); Save DC 20 to avoid; Search DC 20, Disable DC 20.
 - **EL7 Traps**
 - Black Tentacles Trap: spell effect (tentacles) Atk +7 (1d6+4 each, 1d4+7 tentacles); Search DC 29, Disable DC 29.
 - Chain Lightning Trap: spell effect (11d6 to nearest target +5d6 each to up to 11 secondary targets, electricity); Save DC 19 for ½ damage; Search DC 31, Disable DC 31.
 - Well-camouflaged Pit Trap: 70 ft. deep (7d6, fall); Save DC 25 to avoid; Search DC 27, Disable DC 18.
 - **EL8 Traps**
 - Destruction Trap: spell effect (death); Save DC 20

(phys+STR) for 10d6 damage; Search DC 32, Disable DC 32.

○ Power Word Stun Trap: spell effect (stun 2d4 rounds); Search DC 32, Disable DC 32.

○ Well-camouflaged Pit Trap: 100 ft. deep (10d6, fall); Save DC 20 to avoid; Search DC 27, Disable DC 18.

- EL9 Traps

- Dropping Ceiling: ceiling moves down (12d6, crush); Search DC 20, Disable DC 16.
- Incendiary Cloud Trap: spell effect (4d6/round for 15 rounds, fire); Save DC 22 for ½ damage; Search DC 33, Disable DC 33.
- Wide-mouthed Spiked Pit with Poisoned Spikes: 70 ft. deep (7d6, fall), Atk +10 (1d4+5 plus poison each, 1d4 spikes); Save DC 20 to avoid; Search DC 20, Disable DC 20.

- EL10 Traps

- Crushing Room: walls move together (16d6, crush); Search DC 22, Disable DC 20.
- Crushing Wall Trap: Atk automatic (18d6, crush); Search DC 20, Disable DC 25.
- Energy Drain Trap: Atk +8 (2d4 negative levels for 24 hours); Save DC 23 to avoid; Search DC 34, Disable DC 34.

Rules of Thumb:

Acronyms: Common acronyms or short hand that every DM should know.

- DM: Dungeon Master
- GM: Game Master
- EL: Encounter Level
- DC: Difficulty Class
- AC: Armor Class
- PC: Player Character
- NPC: Non-Player Character
- DMG: Damage
- STR: Strength (Usually refers to STR modifier)
- DEX: Dexterity (Usually refers to DEX modifier)
- MND: Mind (Usually refers to MND modifier)
- Ref: Reflex Save
- Fort: Fortitude Save
- Will: Will Save
- Phys: Physical Skill
- Comm: Communication Skill
- Subt: Subterfuge Skill
- Know: Knowledge Skill
- d20: 20 Sided Die (often used to refer to the d20 ruleset)
- d%: A Pair of Percentile Dice (usually one die has 00-90 and another has 0-9)
- SRD: System Reference Document for D&D 3.5
- PFSRD: Pathfinder System Reference Document
- AoO: Attack of Opportunity

Movement: Do not get bogged down with complex mechanics of movement; the world does not operate in 1" grid squares. The numbers below are guidelines and suggestions that should be adjusted as needed. You really only need to worry about these specific numbers during encounters where it truly matters how far someone can move on a turn.

- Scale
 - One real world inch equals five in-game feet (Scale: 1"=5')
- General Base Movement
 - Walk = 15' per turn (3")
 - Run = 30' per turn (6")
 - Sprint / Charge = 60' per turn (12")
- Movement Modifiers
 - Hampered Movement: A character may only move at half speed or cover half the normal distance.
Examples: Encumbered, slowed, difficult terrain, climbing, or anything that slows movement.
 - Accelerated Movement: A character may move further than general base movements.
Examples: Spell effects, falling, teleporting, or anything that speeds movement.
 - Size: Generally speaking; smaller creatures move slower than larger creatures.

Threatened vs. Unthreatened: Generally speaking; characters that are unthreatened are free to declare actions at will and most outcomes are predictable thus no dice rolling is necessary. However threatened characters have a higher risk associated to their actions; so time and movement need to play out with some amount of order.

- **Unthreatened:** When a character is not threatened by anything, under any sort of constraint, or a time limit.
 - **Rolls:** Assume the character takes enough time to complete the action correctly; rolling is unnecessary. All you need to do is describe the result or consequences of their actions and continue with the story. Sometimes a player will declare an action that is completely outrageous or impossible and you simply can not assume the character can take the time to achieve this order. In such a case you may wish to simply inform the player their character can not and does not succeed. Another way is to write down a DC that is impossible to achieve, ask the player to roll, and inform them that their character failed then proceed with the game.
 - **Movement:** The character takes enough time to move as desired. Usually movement rate isn't important.
 - **Time:** The flow of time is less important and not necessary to track in detail; things happen when they need to and time progresses as needed.
- **Threatened:** A character is threatened by an opponent, constrained in some manor, or when time is important.
 - **Rolls:** A player will declare their character's action on their turn and dice rolls ensue
 - **Movement:** This is when you may need to use Base Movement rates and when Scale becomes important.
 - **Time:** The flow of time now unfolds in the form of Turns & Rounds.
 - Turn:** Each character gets a turn and can declare one standard action. A Turn is approximately 6 seconds of in-game time.
 - Round:** After every character has had their turn a Round is complete and a new one begins. A Round is the total of all Turns. (Example: 10 Turns in a Round = 1 minute in-game)

Take 10 or Take 20: With regards to being Unthreatened we've outlined characters are very free take the time necessary to do as they please. Often times players may want to use this freedom to "take a 10" or "take a 20" on a skill check even on actions in an unthreatening scenario that still require a check. This assumes they spend a significant amount of time attempting their declared action and assumes they fail several times before finally getting a 10 or 20.

Searching an area is a great example. The DM knows there is an item in an area that requires a certain Search check DC to discover. The player's characters are under no threat of opposition and time is not overly important; say they could take all night to search the area but by daybreak they will be discovered by enemies! That being said you may not want to just let them discover this item because it's hidden really well; only a very thorough search by a perceptive person would actually turn it up. A player may declare they wish to "take a 20" and searches the area. What this means instead of rolling 1d20 they simply get a 20. Then they add bonuses to that 20, subtract any penalties to that total, and that's their "roll". The DM would then check that calculated number against the Search DC of the item to see if they actually find it.

Then why would anyone "take a 10" when they could just take a 20? Keep in mind time does elapse when characters are doing things. Taking a 20 to search means they are spending a significant amount of time to perform this action; often they are repeating it many times. Also, and this is quite important, taking a 10 or 20 assumes the character fails many times. It's just like if the player had rolled the dice enough times to come up with a 10 or 20.... they would have rolled many lower numbers before they finally got that 10 or 20. Referring back to the Search example; they have all night to search but taking a 20 consumes a lot of time; perhaps given the large area it would take all night! However if they took a 10 instead of a 20 it would only take half the night leaving them time to search as well as leave the area before they are discovered.

Lets try a different example; climbing. The characters are under no acute threat; there's no opponents and they have all day to scale a tall wall. However you wouldn't want to take a 20 because that would assume they made several failed attempts. Failed attempts in climbing a tall wall would result in damage or even death! Keep this in mind for any hazardous, yet unthreatening, scenario where players may try to take a 10 or 20.

When In Doubt: A player declares an action you are unprepared for! What do you do?! How do you resolve this with out stopping game-play? This can happen often but here are some things to help you through.

- **Set a DC and Roll:** Figure out a DC and ask the player to roll 1d20 plus whatever modifiers make sense.
 - **How To Makeup a DC:** Think of what Skill and Stat modifiers you will have the player apply to the d20 roll and add those up; then write down a number below the highest possible result. *Example:* Player declares an action that you are not prepared for. You decide it would be best to roll 1d20+Comm+MND. The character's Comm is +5 and MND is +3 so the highest possible result is 28. You write down a DC of 24 so it's difficult but achievable. Now you ask the player to roll 1d20+Comm+MND.
 - **How To Determine the Difficulty:** It depends on what modifiers are involved but here are some guidelines. Add up only the modifiers the player will be applying; any DC equal to or below that number is an automatic success since they don't even have to roll to achieve it. Now calculate the highest possible result by adding up all modifiers and add that to 20; any DC higher than that is impossible to achieve. You've now figured out your minimum and maximum. A DC set in the middle of your Min and Max would be relatively moderate in difficulty. Setting a DC between the middle and the minimum would be an easy DC and conversely a DC between the middle and the maximum would be hard to achieve.
- **The 50/50 Chance:** You can always roll 1d2 for an outcome. Now you're thinking... how do I roll 1d2?! Flip a coin and tell the player to call Heads or Tails. If the coin lands showing the side called then great success!
- **The % Chance:** You can also use a d% for a 50% chance or even things like a 25% chance. *Example:* You figure the character has about a 25% chance of success. Have the player roll their d% dice; anything 25% and below is a success and anything above 25% is a failure.

A DM's Right to Privacy: There are many things you will need to keep from the players; after all who wants' to hear a story if they already know all of the secrets and the likely outcome? This isn't "unfair" because you are not trying to "win" or "beat" the players. Most DMs have a screen or something to shield the prying eyes of the other players. This is where you keep things like important clues, information they haven't discovered yet, a map showing everything, numbers like DCs, and other information that would otherwise give away the story. Even your dice rolls can be made in private; although this you may wish to discuss with your players. They do have a legitimate point to ask that you make all of your dice rolls out in the open just as they should; this keeps everyone honest. Have a conversation with them about dice rolls and ask if they wish you to roll in the open, just as they do, or if it does not bother them that you roll in secret. Either way you still have the modifiers and DCs behind your screen so just because they see a dice roll doesn't mean they know the outcome. Again your goal isn't to "beat" them; I think you'll find it is much more fun for everyone when they believe you are on their side and trying to help them rather than purposefully lead them astray or kill their characters.

Hints & Foreshadowing: It's easy to forget that you know everything about the story. Players may easily be come bewildered, confused, or not sure what to do. Some things may seem blatantly obvious to you but they can not see for many reasons. At times you will need to give very specific, and even blatant, clues about situations so they can make decisions that lead them in the right direction so the game may progress with out frustration.

Actions: These are explained in the Players Compendium but here's a bit more guidance on the matter. Basically there are Free Actions, Standard Actions, and Move Actions. Players may sometimes want to exchange their Standard Action for another Move Action which you can certainly allow. However you shouldn't let them exchange a Move Action for two Standard Actions in one round because Standard Actions are too powerful. This would allow them to cast two spells or make an extra full attack.

Attacks of Opportunity: An interesting strategic scenario to use once you're ready to add a little more complexity to the battle field. When a character breaks away from melee combat with out defensively withdrawing then all adjacent opponents may make an Attack of Opportunity (AoO) against that character. Now this works both ways; Player Characters and Non-Player Characters are treated the same way here. For example three Player Characters are engaged in melee combat with a troll. The troll quickly realizes the situation is dire, panics, throws caution to the wind, and attempts to flee. All three Player Characters get to make an Attack of Opportunity against that troll. You may think "Why would anyone do that?!" There are a couple of reasons. One would be that, for this example, the troll panicked and disregarded caution at his own peril. Another more strategic reason is that you would have to spend a Standard Action to withdraw from combat defensively and only move 5 feet out of combat. Perhaps someone may want to risk the AoO in an effort to take a Standard Action and attempt to make an escape instead of only moving 5 feet because their enemy will simply close that 5 foot gap and still attack them the next round.

Barbarian

- **History:** For some, there is only rage. In the ways of their people, in the fury of their passion, in the howl of battle, conflict is all these brutal souls know. Savages, hired muscle, masters of vicious martial techniques, they are not soldiers or professional warriors—they are the battle possessed, creatures of slaughter and spirits of war. Known as barbarians, these warmongers know little of training, preparation, or the rules of warfare; for them, only the moment exists, with the foes that stand before them and the knowledge that the next moment might hold their death. They possess a sixth sense in regard to danger and the endurance to weather all that might entail. These brutal warriors might rise from all walks of life, both civilized and savage, though whole societies embracing such philosophies roam the wild places of the world. Within barbarians storms the primal spirit of battle, and woe to those who face their rage.
- **Description:** Barbarians may use light or medium armor and light shields. They received a +3 bonus to Physical skill.
- **Rage:** The raging storm within may be released in the form of special abilities.
 - **Amount:** Rage = 1 per Barbarian level.
 - **Usage:** Raging is a free action applied to the next action taken.

NAME	EFFECT	COST	DURATION
Guarded Stance:	+1 AC	per 1 Rage	1 round
Powerful Blow:	+1 DMG	per 1 Rage	1 round
Surprise Accuracy:	+1 ATK	per 1 Rage	1 round
Intimidating Glare:	+1 to Intimidation check	per 1 Rage	1 turn
Swift Foot:	Move an additional 5'	per 1 Rage	1 turn
Elemental Rage:	Melee energy ATK 1d6 (acid, cold, electric, fire)	2 Rage	1 turn
Animal Fury:	Bite ATK (1d6+STR DMG)	3 Rage	1 turn
Knockback:	Push target back 5'	4 Rage	1 turn
Clear Mind:	Reroll failed Will save; new result is final	5 Rage	Instant
Strength Surge:	Add Barbarian LVL as a bonus to STR check.	5 Rage	1 round
Renewed Vigor:	Heal 1d8 DMG on self.	5 Rage	Instant
Unexpected Strike:	One additional ATK this turn.	6 Rage	1 turn
Mighty Swing:	Automatic critical hit on next ATK	10 Rage	1 turn
Terrifying Howl:	Enemies within 30' who fail Will save are panicked for 1d4 rounds. (Will save DC = 10+Barb LVL)	14 Rage	Instant

- **Class Features:**
 - **Fast Movement:** (LVL 1) Barbarian's land speed is faster than the norm by 10' feet.
 - **Improved Uncanny Dodge:** (LVL 5) The barbarian can not be flanked.

Bard

- **History:** Untold wonders and secrets exist for those skillful enough to discover them. Through cleverness, talent, and magic, these cunning few unravel the wiles of the world, becoming adept in the arts of persuasion, manipulation, and inspiration. Typically masters of one or many forms of artistry, bards possess an uncanny ability to know more than they should and use what they learn to keep themselves and their allies ever one step ahead of danger. Bards are quick-witted and captivating, and their skills might lead them down many paths, be they gamblers or jacks-of-all-trades, scholars or performers, leaders or scoundrels, or even all of the above. For bards, every day brings its own opportunities, adventures, and challenges, and only by bucking the odds, knowing the most, and being the best might they claim the treasures of each.
- **Description:** Bards wear light armor and may use light shields. They gain a +2 bonus to Communication, Subterfuge, and Knowledge. Bards can use their Performance to unleash special abilities.
- **Performance:** A bard's Performance could be many things; singing, chanting, playing instruments, comedy, poetry, acting, dancing, or even a combination.

Will save DC = 10 + (Bard Level / 2) + MND (round down)

- **Amount:** 1 Performance per Bard Level which are recovered after 8 hours of rest.
- **Usage:** Performing is a standard action. Targets must be able to see, hear, and be within 30' of a performance to be effected. For every round that a performance is maintained the cost will be subtracted from their total performances for that day. Opponents receive a Will save to resist the effects of a bard's performance.

NAME	EFFECT	COST	DURATION
Muse	+1 bonus to all rolls for allies	+1 per Perf.	Concentration
Fascinate	(See Description)	1 Perf.	Concentration
Dirge of Doom	Opponents take -2 on all rolls	1 Perf.	Concentration
Inspire Greatness	+2 AC, +2 ATK, & +2 DMG for allies	2 Perf.	Concentration
Paralyzing Show	(See Description)	3 Perf.	Concentration
Inspire Heroics	(See Description)	3 Perf.	Concentration
Countersong	Nullify a sound based attack.	1 Perf.	Instant
Subliminal Ballad	(See Description)	3 Perf	Instant
Song of Freedom	Break an enchantment for one ally	8 Perf.	Instant
Soothing Performance	(See Description)	10 Perf.	Instant
Deadly Performance	(See Description)	18 Perf.	Instant

- **Fascination:** Cause any unthreatened target that fails their save to be [fascinated](#) and pay attention to the performance causing them to sit quietly and take no other actions until the performance is over or something threatens or distracts them. Able to fascinate total HD equal to Bard LVL.
 - **Paralyzing Show:** Opponents become [paralyzed](#), unable to take actions, unless they make their save.
 - **Inspire Heroics:** +4 bonus to all saves and +4 dodge bonus to AC for allies
 - **Subliminal Ballad:** Make a [suggestion](#) to one target already Fascinated unless they make their save.
 - **Soothing Performance:** Creates an effect equivalent to [mass cure light wounds](#) and removes fatigued, sickened, and shaken effects from all allies
 - **Deadly Performance:** One target in range of this performance will die of pure joy or sorrow unless they make their save; in which case they are [stunned](#) for 1d4 rounds
- **Class Features:**
 - **Lore Master:** (LVL 1) Bards may "take a 10" on any knowledge check if they choose to.
 - **Instrument:** (LVL 1) Begin play with one masterwork instrument of your choice.
 - **Bard Magic:** (LVL 1) Able to cast bard spells so long as long as they are able to cast a spell's Spell Level and have the HP to spend. Spell Level and HP cost are calculated as noted in the core rules for Magic.
 - **Name:** The name of a spell.
 - **Description:** Brief description of how it works and area of effect.
 - **Range:** Maximum distance from you that the spell's effect can occur, as well as the maximum distance at which you can designate the spell's point of origin. Separate from the area of effect.
 - Personal: Affects only yourself.
 - Touch: Caster must be able to touch the target.
 - Close: 25' + 5' per two Caster Levels
 - Medium: 100' + 10' per Caster Level
 - Long: 400' + 40 per Caster Level
 - **Duration:** How long the spell lasts once cast or triggered.

0-Level Bard Spells			
NAME	DESCRIPTON	RANGE	DURATION
Dancing Lights:	Creates up to four dim lights within a 10-ft.-radius area.	Medium	10 rounds
Daze:	Humanoid creature of 4 HD or less loses next action.	Close	1 round
Flare:	Dazzles one creature (–1 on attack rolls).	Close	10 rounds
Ghost Sound:	Create and manipulate figment sounds.	Close	1 round/LVL
Message:	Whisper conversation at distance of 100'	Medium	1 encounter
Prestidigitation:	Performs minor tricks.	10'	1 encounter
Summon Instrument:	Summons one musical instrument to appear in hand.	0'	10 rounds/LVL

1st-Level Bard Spells			
NAME	DESCRIPTON	RANGE	DURATION
Animate Rope:	Makes a rope move at your command.	Medium	1 round/LVL
Cause Fear:	One creature of 5 HD or less flees.	Close	1d4 rounds
Confusion, Lesser:	One creature is confused	Medium	1 round
Cure Light Wounds:	Cures 1d8 damage + 1/level (max +5).	Touch	Instant
Disguise Self:	Changes your appearance.	Personal	1 encounter
Expeditious Retreat:	Your base land speed increases by 30 ft.	Personal	10 rounds/LVL
Hideous Laughter:	Subject loses actions for 1 round/ level.	Close	1 round/LVL
Identify:	Gives +10 bonus to identify magic items.	60'	Instant
Magic Mouth:	Object speaks once when triggered.	Close	Instant
Silent Image:	Creates minor illusion of your design within 10' cube area per LVL.	Long	Concentration
Sleep:	Puts 4 HD of creatures into magical slumber.	Medium	10 rounds/LVL
Ventriloquism:	Throws voice or sound you normally make vocally.	Close	10 round/LVL

2nd-Level Bard Spells			
NAME	DESCRIPTON	RANGE	DURATION
Alter Self:	Assume form of a Small or Medium humanoid.	Personal	1 encounter
Blindness/Deafness:	Makes subject blind or deaf.	Medium	Permanent
Blur:	Attacks miss subject 20% of the time.	Touch	10 round/LVL
Calm Emotions:	Calms creatures, negating emotion effects, within 20' area.	Medium	Concentration
Cure Moderate Wounds:	Cures 2d8 damage + 1/level (max +10).	Touch	Instant
Daze Monster:	Living creature of 6 HD or less loses next action.	Medium	1 round
Enthrall:	If you have the attention of a group, you can hold them enthralled	Medium	Concentration
Glitterdust:	Blinds creatures, outlines invisible creatures, within 10' area.	Medium	1 round/LVL
Heroism:	Gives +2 on attack rolls, saves, skill checks.	Touch	1 encounter
Hypnotic Pattern:	Fascinates (2d4 + level) HD of creatures.	Medium	Concentration
Minor Image:	As silent image, plus some sound.	Long	Concentration
Pyrotechnics:	Turns fire into blinding light or choking smoke.	Long	1d4 rounds
Scare:	Panics creatures of less than 6 HD.	Medium	1 round/LVL
Shatter:	Sonic vibration damages objects or crystalline creatures.	Close	Instant
Silence:	Negates sound in 20-ft. radius.	Long	10 rounds/LVL
Sound Burst:	Deals 1d8 sonic damage and may stun subjects within 10' area.	Close	Instant
Tongues:	Speak and understand any language.	Touch	1 encounter

3rd-Level Bard Spells			
NAME	DESCRIPTON	RANGE	DURATION
Blink:	You randomly vanish and reappear	Personal	1 round/LVL

Clairaudience/Clairvoyance:	Hear or see at a distance	Long	10 round/LVL
Confusion:	Creatures within 15' area behave oddly	Medium	1 round/LVL
Cure Serious Wounds:	Cures 3d8 damage + 1/level (max +15).	Touch	
Daylight:	60-ft. radius of bright light.	Touch	1 encounter
Deep Slumber:	Puts 10 HD of creatures to sleep.	Close	10 rounds/LVL
Displacement:	Attacks miss subject 50% of the time.	Touch	1 round/LVL
Fear:	Subjects within 30' cone area flee	30'	1 round/LVL
Glibness:	You gain +20 bonus on Bluff checks, and your lies can escape magical discernment.	Personal	1 encounter
Good Hope:	+2 on ATK rolls, DMG rolls, saves, and checks for 1 target per LVL.	Medium	10 rounds/LVL
Major Image:	As silent image, plus sound, smell, and thermal effects.	Long	Concentration
Sculpt Sound:	Creates new sounds or changes existing ones into new sounds.	Close	1 encounter

4th-Level Bard Spells

NAME	DESCRIPTON	RANGE	DURATION
Cure Critical Wounds:	Cures 4d8 damage + 1/level (max +20).	Touch	Instant
Hallucinatory Terrain:	Makes one type of terrain appear like another (field as forest, or the like) within 30' cube area per LVL.	Long	1 encounter
Locate Creature:	Indicates direction to known creature within 400' area.	Long	1 encounter
Rainbow Pattern:	Lights fascinate 24 HD of creatures.	Medium	Concentration
Repel Vermin:	Insects, spiders, and other vermin stay 10 ft. away.	10'	1 encounter
Shout:	Deafens all within 30' cone area and deals 5d6 sonic damage.	30'	Instant
Zone of Silence:	Keeps eavesdroppers from overhearing you within 5' area.	Personal	1 encounter

5th-Level Bard Spells

NAME	DESCRIPTON	RANGE	DURATION
Cure Lt. Wounds, Mass:	Cures 1d8 damage + 1/level, affects 1 subject/level.	Touch	Instant
Dream:	Sends message to anyone sleeping.	Unlimited	Concentration
False Vision:	Fools scrying with an illusion within 40' area.	Touch	Concentration
Heroism, Greater:	Gives +4 bonus on attack rolls, saves, skill checks; immunity to fear; temporary hp.	Touch	1 encounter
Mirage Arcana:	As hallucinatory terrain, plus structures, within 20' cube per LVL.	Long	Concentration
Mislead:	Turns you invisible and creates illusory double.	Close	1 round/LVL
Nightmare:	Sends vision dealing 1d10 damage, fatigue.	Unlimited	Instant
Persistent Image:	As major image, but no concentration required.	Long	10 rounds/LVL
Seeming:	Changes appearance of one person per two levels.	Close	1 day
Shadow Walk:	Step into shadow to travel rapidly.	Touch	1 encounter
Song of Discord:	Forces targets to attack each other within 20' area.	Medium	1 round/LVL

6th-Level Bard Spells

NAME	DESCRIPTON	RANGE	DURATION
Animate Objects:	Animate 1 small, nonmagical, object per LVL to attack target.	Medium	1 round/LVL
Cure Mod. Wounds, Mass:	Cures 2d8 damage + 1/level, affects 1 subject/level.	Touch	Instant
Find the Path:	Shows most direct way to a location.	Touch	1 encounter
Irresistible Dance:	Forces subject to dance.	Touch	1d4 rounds
Permanent Image:	Permanent illusion, includes sight, sound, smell, and thermal effects.	Long	Permanent
Programmed Image:	As major image, plus triggered by event. Permanent until triggered; then duration of 1round/LVL begins.	Long	1 round/LVL
Project Image:	Illusory double can talk and cast spells.	Medium	1 round/LVL
Shout, Greater:	Devastating yell deals 10d6 sonic damage within 60' cone area; stuns creatures.	30'	Instant

Sympathetic Vibration:	Deals 2d10 damage/round to freestanding structure.	Touch	1 round/LVL
Veil:	Changes appearance of group of creatures.	Long	1 encounter

Cleric

- **History:** In faith and the miracles of the divine, many find a greater purpose. Called to serve powers beyond most mortal understanding, all priests preach wonders and provide for the spiritual needs of their people. Clerics are more than mere priests, though; these emissaries of the divine work the will of their deities through strength of arms and the magic of their gods. Devoted to the tenets of the religions and philosophies that inspire them, these ecclesiastics quest to spread the knowledge and influence of their faith. Yet while they might share similar abilities, clerics prove as different from one another as the divinities they serve, with some offering healing and redemption, others judging law and truth, and still others spreading conflict and corruption. The ways of the cleric are varied, yet all who tread these paths walk with the mightiest of allies and bear the arms of the gods themselves.
- **Description:** Clerics wear light or medium armor and may use light shields. They cast divine spells and gain a +3 bonus to Communication skill. A cleric can channel either Good or Evil divine energy based on their alignment to use special abilities (Neutral clerics make a permanent choice when character is created). Clerics may cast any divine spell in SRD.
- **Channel Energy:**
 - **Amount:** 1 Energy per Cleric Level. Rejuvenated after a full nights rest in addition to worshipping their deity.
 - **Usage:** Channeling energy to use a special ability is a standard action.

Good Energy			
NAME	EFFECT	COST	DURATION
Turn Undead	(See description)	1 Energy	1 round
Healing Burst	Heal 1d6 HP to all living within 30'	1d6 per Energy	Instant
Afflict Undead	1d6 DMG to all undead within 30'	1d6 per Energy	Instant

Evil Energy			
NAME	EFFECT	COST	DURATION
Rebuke Undead	(See description)	1 Energy	1 round
Necromantic Burst	Heal 1d6 HP to all undead within 30'	1d6 per Energy	Instant
Afflict Living	1d6 DMG to all living within 30'	1d6 per Energy	Instant

- **Turn Undead:** A Cleric channeling good energy may Turn Undead with a successful Magic Attack. The DC is the current Hit Points of the Undead. If the DC is exceeded by 10 it is destroyed. Undead flee in the quickest method available or they will cower; either of which will last 10 rounds.
- **Rebuke Undead:** Clerics who channel evil energy may Rebuke Undead with a successful Magic Attack. The DC is the current Hit Points of the Undead. The cleric may give a simple, one word, command to the rebuked undead which will be carried out on the target's next turn.
- **Class Features:**
 - **Aura:** (LVL 1) Clerics radiate a strong aura corresponding to their alignment.
 - **Divine Magic:** (LVL 1) A cleric may cast any divine spell from the SRD as long as they can cast a spell's Spell Level and have the HP to spend.
 - **Bonus Language:** (LVL 1) Choose one of the following languages: Celestial (Good), Abyssal (Chaotic Evil), and Infernal (Lawful Evil).

Druid

- **History:** Within the purity of the elements and the order of the wilds lingers a power beyond the marvels of civilization. Furtive yet undeniable, these primal magics are guarded over by servants of philosophical balance known as druids. Allies to beasts and manipulators of nature, these often misunderstood protectors of the wild strive to shield their lands from all who would threaten them and prove the might of the wilds to those who lock themselves behind city walls. Rewarded for their devotion with incredible powers, druids gain unparalleled shape-shifting abilities, the companionship of mighty beasts, and the power to call upon nature's wrath. The mightiest temper powers akin to storms, earthquakes, and volcanoes with primeval wisdom long abandoned and forgotten by civilization.
- **Description:** Druids wear any non-metal armor or shield. They gain +2 to Knowledge. Druids may use Duridic Magic and have the Wild Shape special ability. They have a Natural Bond with an animal companion.
- **Wild Shape:** At LVL 4 a druid is able to start using the Wild Shape special ability. This allows a druid to change into any creature of the Animal type. Special Movement and Natural ATK types depend on the type of animal chosen. For example an eagle is a small bird that can fly and would use claw or bite ATKs. A boar would be a medium animal that would walk/run and use gore ATKs. While a shark would be a large fish that swims and uses bite ATKs.
 - **Amount:** 1 per day at 4th LVL. plus 1 every two levels up to a maximum of 8.
 - **Usage:** Shape shifting is a standard action.

Level	Per Day	Animal	Base Movement	Special Movement
4	1	Small	Walk, Run, Sprint	Climb, Swim, Fly, Burrow
6	2	Small, Med	Walk, Run, Sprint	Climb, Swim, Fly, Burrow
8	3	Small, Med, Large	Walk, Run, Sprint	Climb, Swim, Fly, Burrow
10	4	Small, Med, Large, Huge	Walk, Run, Sprint	Climb, Swim, Fly, Burrow
12	5	Small, Med, Large, Huge	Walk, Run, Sprint	Climb, Swim, Fly, Burrow
14	6	Small, Med, Large, Huge	Walk, Run, Sprint	Climb, Swim, Fly, Burrow
16	7	Small, Med, Large, Huge	Walk, Run, Sprint	Climb, Swim, Fly, Burrow
18	8	Small, Med, Large, Huge	Walk, Run, Sprint	Climb, Swim, Fly, Burrow
20	At Will	Small, Med, Large, Huge	Walk, Run, Sprint	Climb, Swim, Fly, Burrow

Size	AC	ATK	Natural ATK (DMG)	Extraordinary Ability
Small	+1	-1	Claw, Bite, Slam, Gore (1d4+1)	Darkvision 60', Scent , Speak with similar animal type
Med	+2	+1	Claw, Bite, Slam, Gore (1d6+2)	Darkvision 60', Scent , Speak with similar animal type
Large	+4	+4	Claw, Bite, Slam, Gore (1d8+3)	Darkvision 60', Scent , Speak with similar animal type
Huge	+6	+6	Claw, Bite, Slam, Gore (1d10+4)	Darkvision 60', Scent , Speak with similar animal type

- **Class Features:**
 - **Druidic Magic:** (LVL 1) Cast any druid spell in the SRD so long as long as they are able to cast a spell's Spell Level and have the HP to spend. Spell Level and HP cost are calculated as noted in the core rules for Magic.
 - **Natural Bond:** (LVL 1) Begin play with a loyal animal companion. If this creature is lost, killed, or destroyed the druid may obtain a new one but it takes 24 hours to form a new bond. This creature will obey simple two word commands to the best of its ability. The animal companion's Level, Hit Dice, Ability Scores, Skill Rank and any other stats are half of the druid's (round down). A companion has no Class Levels and thus none of the special qualities associated to a character class. They are considered to be a magical creature once bound to a master
 - **Share Spells:** Any spell the druid casts targeting themselves may also target the animal companion at the same time but the animal must be within 5' of its master.
 - **Bonus Languages:** (LVL 1)
 - Sylvan: Language of woodland creatures.
 - Druidic: A secret language known only to druids and forbidden to teach to non-Druids.
 - **Nature Sense:** (LVL 1) +4 to all Survival checks.
 - **Wild Shape:** (LVL 4) Druids gain the Wild Shape special ability.
 - **Venom Immunity:** (LVL 9) Immune to all poisons.
 - **Infinite Wild Shape:** (LVL 20) The druid's Wild Shape ability is no longer limited to an amount per day.

Fighter

- **History:** Some take up arms for glory, wealth, or revenge. Others do battle to prove themselves, to protect others, or because they know nothing else. Still others learn the ways of weaponcraft to hone their bodies in battle and prove their mettle in the forge of war. Lords of the battlefield, fighters are a disparate lot, training with many weapons or just one, perfecting the uses of armor, learning the fighting techniques of exotic masters, and studying the art of combat, all to shape themselves into living weapons. Far more than mere thugs, these skilled warriors reveal the true deadliness of their weapons, turning hunks of metal into arms capable of taming kingdoms, slaughtering monsters, and rousing the hearts of armies. Soldiers, knights, hunters, and artists of war, fighters are unparalleled champions, and woe to those who dare stand against them.
- **Description:** Fighters wear any kind of armor and any shield. They get a +3 bonus to Physical skill. Fighters use their Combat Prowess to execute special abilities.
- **Combat Prowess:** Allows a fighter to execute special abilities.
 - **Amount:** Combat Prowess = 1 per Fighter level which is replenished after 8 hours of rest.
 - **Usage:** Using Combat Prowess is a free action applied to a fighter's next action.

NAME	DESCRIPTION	COST	DURATION
Weapon Training	+1 ATK & +1 DMG.	1 per Prowess	1 turn
Bravery	+1 to Will saves.	1 per 2 Prowess	1 encounter
Martial Combat	+1 to any Combat Maneuver check. (Bull Rush, Grapple, Trip, Charge, Over Run, Sunder, etc...)	1 per 2 Prowess	1 turn
Change Weapons	Switch to easily accessible weapon as a free action.	2 Prowess	Instant
Front Line	+4 to Initiative rolls.	2 Prowess	1 encounter
Taunt	Target focuses next attack on you.	2 Prowess	Instant
Cleave	One extra ATK on one target adjacent to last target.	1 per 3 Prowess	1 turn
Precise Shot	Shoot into melee without penalties.	3 Prowess	1 turn
Team Tactics	+1 to all rolls for allies within 60'	5 Prowess	1 encounter
Pinpoint Target	Ignore target's armor and shield bonuses to AC.	10 Prowess	1 turn

- **Class Features:**
 - **Brawler:** (LVL 1) Improvised weapons deal 1d4 DMG and do not suffer attack penalties.
 - **Shield Bash:** (LVL 1) Fighters may make a melee ATK with their shield. Successful shield bashes deal 1d4 DMG or 1d4+2 DMG for spiked shields.
 - **Combat Experience:** (LVL 1) Every 5th level a fighter gains +1 ATK and +1 DMG (1,5,10,15,20)
 - **Battle Master:** (LVL 20) Subtract 5 from all DMG taken by melee or ranged weapons. Critical hit damage on opponents is multiplied x3.

Monk

- **History:** For the truly exemplary, martial skill transcends the battlefield—it is a lifestyle, a doctrine, a state of mind. These warrior-artists search out methods of battle beyond swords and shields, finding weapons within themselves just as capable of crippling or killing as any blade. Monks elevate their bodies to become weapons of war, from battle-minded ascetics to self-taught brawlers. They tread the path of discipline, and those with the will to endure that path discover within themselves not what they are, but what they are meant to be.
- **Description:** Monks do not wear armor or shields. They gain +2 to Physical and +1 to Knowledge skills. A monk's Unarmed Strikes are considered light, magic weapons with damage increasing 1 die size every 5 levels (1d6, 1d8, 1d10, 1d12) These warrior-artists can use Ki to unleash special abilities.
- **Ki:** A pool of supernatural energy a monk can manipulate, learn to control, and unleash to make their actions more powerful. It also makes a monk's natural weapons count as magic weapons; such as Unarmed Strikes with hands, feet, elbows, knees, head, or any other part of their body used as a weapon. .
 - **Amount:** Ki = 1 per Monk level. Ki is restored daily after a full nights rest plus meditation.
 - **Usage:** Ki is used as a free action that instantly applies to the next action being taken

NAME	EFFECT	COST	DURATION
Sprint	Run an additional 5'	5' per Ki	1 turn
Dodge	+1 dodge bonus to AC	1 per Ki	1 encounter
Leap	+1 to Jump check	1 per Ki	1 encounter
Spider Monkey	+1 to Climb check	1 per Ki	1 encounter
Wholeness of Body	Heal 1 HP	1 per Ki	instant
Ki Strike	+1 DMG to next successful ATK	1 per Ki	1 turn
Evasion	+1 Reflex save	1 per Ki	1 turn
Still Mind	+1 Will save	1 per Ki	1 turn
Flurry	1 additional Unarmed Strike at -1 ATK per Ki (see description)	1 per Ki	1 turn
Slow Fall	Half damage from falling	5 Ki	1 fall
Purity of Body	Cure self of any disease	7 Ki	instant
Improved Evasion	Half DMG on failed Reflex saves and 0 DMG on successful Reflex saves for 1 day.	9 Ki	1 day
Harmonize Body	Cure self of any poison	11 Ki	instant
Abundant Step	Magically slip between dimensions to arrive at a spot four times further away than if the monk had simply ran there for a single move action.	12 Ki	1 turn
Soul of Zen	Save bonus vs. any spell cast on a monk = Monk Level + 10 for 1 day.	13 Ki	1 day
Quivering Palm	Upon a successful quivering palm strike the target is infused with inharmonic Ki waves. If the target fails their Fort save they are killed. Fort DC = 10 + (Monk Level / 2) + MND.	15 Ki	1 turn
Tongue of Sun & Moon	Communicate with any living creature for 1 day	17 Ki	1 day
Empty Body	Assume an ethereal state for 10 rounds (1 minute) as if using the spell Etherealness .	19 Ki	10 rounds

- **Flurry:** 1 additional Unarmed Strike at -1 ATK per Ki. Flurry is cumulative; so if 3 Ki are spent on Flurry the monk could do 3 additional attacks all at -3 on ATK rolls. Now if 12 Ki are spent on Flurry they get 12 additional Unarmed Strikes but all of them are -12 on ATK rolls.
- **Class Features:**
 - **Perfect Self:** (LVL 20) until the end of their life the monk is considered a magical creature.

Paladin

- **History:** Through a select, worthy few shines the power of the divine. Called paladins, these noble souls dedicate their lives to the battle against evil. Knights, crusaders, and law-bringers, paladins seek not just to spread divine justice but to embody the teachings of the virtuous deities they serve. In pursuit of their lofty goals, they adhere to ironclad laws of morality and discipline. As rewards for their righteousness, these holy champions are bestowed with sublime blessings to aid them in their quests: powers to smite evil, heal the innocent, and inspire the faithful. Although their convictions might lead them into conflict with the very souls they would save, paladins weather endless challenges of faith and dark temptations, risking their lives to do right and fighting to bring about a brighter future.
- **Description:** These holy champions may wear any kind of armor and use shields. They have a +1 bonus to Physical and a +2 bonus to Communication. They are consecrated with Righteous Favor and Holy Magic. A character must be of Lawful Good alignment to be a Paladin
- **Righteous Favor:** The Paladin may draw upon this Righteous Favor to aid themselves and their allies.
 - **Amount:** Righteous Favor = 1 Favor per Paladin Level. Rejuvenated after a full nights rest in addition to worshipping their deity.
 - **Usage:** Favor is used as a free action applied to the next action being taken.

NAME	EFFECT	COST	DURATION
Smite Evil	+1 ATK & AC vs. Evil	per 1 Favor	1 encounter
Aura of Courage	+1 to Will saves for allies within 10'	per 1 Favor	1 encounter
Lay on Hands	Heal 1d6 HP on touched creature	per 2 Favor	Instant
Afflict Undead	1d6 DMG to touched undead	per 2 Favor	Instant
Aura of Righteousness	+2 to all saves for allies within 10'	per 4 Favor	1 encounter
Virtuous Armor	+4 AC armor bonus	6 Favor	1 encounter
Aura of Justice	Bestow "Smite Evil" upon allies within 10'	9 Favor	1 encounter
Crusade	2 additional attacks with no penalties	12 Favor	1 turn
Devotional Healing	Heal 150 HP and wipe away all negative afflictions	18 Favor	Instant

- **Class Features:**
 - **Detect Evil:** (LVL 1) At will a paladin may [Detect Evil](#); same as the spell.
 - **Divine Grace:** (LVL 1) +1 to all saving throws every 5th level (1,5,10,15,20)
 - **Immaculate Health:** (LVL 3) Immune to all diseases including supernatural and magical
 - **Holy Magic:** (LVL 4) Able to cast spells from paladin spell list. Casting costs for paladins are paid with Righteous Favor instead of Hit Points. The cost is Spell Level x 2.
 - **Name:** The name of a spell.
 - **Description:** Brief description of how it works and area of effect.
 - **Range:** Maximum distance from you that the spell's effect can occur, as well as the maximum distance at which you can designate the spell's point of origin. Separate from the area of effect.
 - Personal: Affects only yourself.
 - Touch: Caster must be able to touch the target.
 - Close: 25' + 5' per two Caster Levels
 - Medium: 100' + 10' per Caster Level
 - Long: 400' + 40 per Caster Level
 - **Duration:** How long the spell lasts once cast or triggered.
 - **Holy Champion:** (LVL 20) Now a conduit that the paladin's deity of which it channels its power through. Any weapons a paladin attacks with are treated as blessed with Holy with Holy Burst. Whenever using Lay on Hands or Afflict Undead; the maximum possible is healed or damaged.
 - **Holy Weapon:** +1d6 DMG vs Evil on successful attack.
 - **Holy Burst Weapon:** +1d10 DMG vs Evil on successful critical hit.

Ranger

- **History:** For those who relish the thrill of the hunt, there are only predators and prey. Be they scouts, trackers, or bounty hunters, rangers share much in common: unique mastery of specialized weapons, skill at stalking even the most elusive game, and the expertise to defeat a wide range of quarries. Knowledgeable, patient, and skilled hunters, these rangers hound man, beast, and monster alike, gaining insight into the way of the predator, skill in varied environments, and ever more lethal martial prowess. While some track man-eating creatures to protect the frontier, others pursue more cunning game—even fugitives among their own people.
- **Description:** Rangers use light or medium armor and can use light shields. They may cast spells using Ranger Magic and gain special bonuses against their Favored Enemies. They eventually form a Hunter's Bond with an animal companion.
- **Class Features:**
 - **Favored Enemy:** (LVL 1) Every 5th (1,5,10,15,20) LVL the ranger may choose a favored enemy and gains +2 on all rolls made against a favored enemy target.

Type (Subtype)		
Aberration	Humanoid (gnome)	Outsider (earth)
Animal	Humanoid (halfling)	Outsider (evil)
Construct	Humanoid (human)	Outsider (fire)
Dragon	Humanoid (orc)	Outsider (good)
Fey	Humanoid (reptilian)	Outsider (lawful)
Humanoid (aquatic)	Magical beast	Outsider (native)
Humanoid (dwarf)	Humanoid (other subtype)	Outsider (water)
Humanoid (elf)	Monstrous humanoid	Plant
Humanoid (giant)	Ooze	Undead
Humanoid (goblinoid)	Outsider (air)	Vermin
Humanoid (gnoll)	Outsider (chaotic)	

- **Survivor:** (LVL 1) +3 bonus to all Survival checks.
- **Wild Empathy:** (LVL 1) Natural diplomacy in order to improve the attitude of an animal within 30'
- **Combat Style:** (LVL 2) Make a permanent decision on which style to choose.
 - **Ranged:** +1 ATK & DMG with all ranged weapons.
 - **Dual Wield:** Dual wielding two light weapons only incurs a -1 penalty to all ATK rolls that round.
- **Hunter's Bond:** (LVL 4) A ranger may obtain a loyal animal companion. If this creature is lost, killed, or destroyed the ranger may obtain a new one but it takes 24 hours to form a new bond. This creature will obey simple two word commands to the best of its ability. The animal companion's Level, Hit Dice, Ability Scores, Skill Rank and any other stats are half of the ranger's (round down). A companion has no Class Levels and thus none of the special qualities that come with being any character class. They are considered to be a magical creature once bound to a master
 - **Share Spells:** Any spell the ranger casts targeting themselves may also target the animal companion at the same time but the animal must be within 5' of its master
- **Ranger Magic:** (LVL 4) Able to cast ranger spells so long as long as they are able to cast a spell's Spell Level and have the HP to spend. Spell Level and HP cost are calculated as noted in the core rules for Magic.
 - **Name:** The name of a spell.
 - **Description:** Brief description of how it works and area of effect.
 - **Range:** Maximum distance from you that the spell's effect can occur, as well as the maximum distance at which you can designate the spell's point of origin. Separate from the area of effect.
 - Personal: Affects only yourself.
 - Touch: Caster must be able to touch the target.
 - Close: 25' + 5' per two Caster Levels
 - Medium: 100' + 10' per Caster Level
 - Long: 400' + 40' per Caster Level
 - **Duration:** How long the spell lasts once cast or triggered.
- **Quarry:** (LVL 11) Denote a target within line of sight as your quarry. Target must be a favored enemy and no more than one quarry at a time. Additional +2 bonus to all rolls made against this target.
- **Improved Evasion:** (LVL 16) Half DMG on failed Reflex saves and 0 DMG on successful Reflex saves.
- **Master Hunter:** (LVL 20) After a successful attack against a favored enemy the ranger may choose one of two effects to afflict the target if they fail their Fortitude save (DC = Ranger LVL + MND)
 - Knock unconscious
 - Slain

1-Level Ranger Spells

Tree Stride	Step into 1 tree per LVL and teleport to another tree, of the same type, within 3,000'.	Personal	1 encounter

Rogue

- **History:** Life is an endless adventure for those who live by their wits. Ever just one step ahead of danger, rogues bank on their cunning, skill, and charm to bend fate to their favor. Never knowing what to expect, they prepare for everything, becoming masters of a wide variety of skills, training themselves to be adept manipulators, agile acrobats, shadowy stalkers, or masters of any of dozens of other professions or talents. Thieves and gamblers, fast talkers and diplomats, bandits and bounty hunters, and explorers and investigators all might be considered rogues, as well as countless other professions that rely upon wits, prowess, or luck. Although many rogues favor cities and the innumerable opportunities of civilization, some embrace lives on the road, journeying far, meeting exotic people, and facing fantastic danger in pursuit of equally fantastic riches. In the end, any who desire to shape their fates and live life on their own terms might come to be called rogues.
- **Description:** Rogues use light armor but not shields. They have a +3 bonus to Subterfuge skill. Rogues use their Talents to perform special abilities.
- **Talents:**
 - **Amount:** Talent = 1 point of Talent per Rogue Level. Rejuvenated after a full nights rest.
 - **Usage:** Talent is used as a free action applied to the next action being taken.

NAME	EFFECT	COST	DURATION
Bleeding Attack	Sneak ATK causes target to bleed 1 DMG for 1 round	1 per Talent	1 round
Fast Stealth	Sneaking does not slow down movement.	1 turn per Talent	1 turn
Acrobatics	+1 to next roll involving an acrobatic maneuver	+1 per Talent	1 turn
Cat Climb	+1 to Climb check.	+1 per 2 Talent	1 turn
Nimble Fingers	+1 to next Disable Device check.	+1 per 2 Talent	1 turn
Trap Dodge	+1 AC & +1 Reflex save vs. traps.	+1 per 3 Talent	1 round
Quick Disable	Disable Device in half the normal time.	4 Talent	1 turn
Magic Trick	Cast single 0-LVL arcane spell as spell like ability.	6 Talent	Instant
Opportunist	Make an Attack of Opportunity against an opponent who has just been struck for damage by an ally.	10 Talent	1 turn
Stunning Strike	Sneak ATK stuns target for 1d6 rounds.	12 Talent	1d6 rounds
Defensive Tumble	Take half DMG (round up) from opponents last ATK	14 Talent	Instant
Skill Mastery	Take 10 on next skill check even if threatened	16 Talent	1 turn

- **Class Features:**
 - **Sneak Attack:** (LVL 1) When a rogue successfully sneaks up on a foe they can add their Subterfuge skill rank to damage of their first attack. For a ranged weapon the target must be within 30'.
 - **Trapfinding:** (LVL 1) Rogues are able to detect & disarm any trap; to include magic traps. Add Rogue LVL / 2 (round up) to all perception checks made to search for traps and to disable devices.
 - **Improved Uncanny Dodge:** (LVL 8) Rogue can not be flanked.
 - **Improved Evasion:** (LVL 9) Half DMG on failed Reflex saves and 0 DMG on successful Reflex saves.
 - **Master Strike:** (LVL 20) After a successful sneak attack the rogue may choose 1 of 3 effects to afflict opponents who fail a Fortitude save (DC = Rogue LVL + MND)
 - Sleep 1d4 hours
 - Paralyzed 2d6 rounds
 - Slain

Sorcerer

- **History:** Scions of innately magical bloodlines, the chosen of deities, the spawn of monsters, pawns of fate and destiny, or simply flukes of fickle magic, sorcerers look within themselves for arcane prowess and draw forth might few mortals can imagine. Emboldened by lives ever threatening to be consumed by their innate powers, these magic-touched souls endlessly indulge in and refine their mysterious abilities, gradually learning how to harness their birthright and coax forth ever greater arcane feats. Just as varied as these innately powerful spellcasters' abilities and inspirations are the ways in which they choose to utilize their gifts. While some seek to control their abilities through meditation and discipline, becoming masters of their fantastic birthright, others give in to their magic, letting it rule their lives with often explosive results.
- **Description:** Sorcerers wear no armor or shields. They gain a +3 bonus to Knowledge skill. Sorcerers are able to cast any arcane spell in SRD and have a Familiar to aid them in their quests.
- **Class Features:**
 - **Arcane Magic:** (LVL 1) Sorcerers can cast any arcane spell in the SRD as long as they are able to cast a spell's Spell Level and have the HP to spend.
 - **Somatic Casting:** (LVL 1) A sorcerer's hands must be free in order to cast Arcane Magic.
 - **Familiar:** (LVL 1) Begin play with a tiny, loyal, creature. If this creature is lost, killed, or destroyed the sorcerer may obtain a new one but it takes 1 week to form a new bond. This creature will obey simple two word commands to the best of its ability. The familiars Level, Hit Dice, Ability Scores, Skill Rank and any other stats are half of the sorcerer's (round down). A familiar has no Class Levels and thus none of the special qualities that come with being any character class. They are considered to be a magical creature once bound to a master.
 - **Share Spells:** Any spell the sorcerer casts targeting themselves may also target the familiar at the same time but the familiar must be within 5' of its master.
 - **Deliver Touch Spell:** A sorcerer may cast a touch spell, touch their familiar, and then order the familiar to deliver the touch spell to a target. The familiar then makes a magic touch ATK vs. the target.
 - **Empathic Link:** The familiar and master share an empathic link which they use to communicate only general emotional content between one another.
 - **Symbiotic Bond:** Both sorcerer and familiar gain +1 to any skill check while bound to one another.
 - **Bloodline Magic:** (LVL 1) Sorcerers live and breathe that which wizards devote their lives to mastering and for them magic is more than a field of study; it is life itself. This derives from their lineage and can manifest from many different sources. Perhaps a celestial being has bestowed power upon your bloodline, an infernal beast has spread it's filth into your lineage, an ancestor made a pact with a supernatural creature, a relative became an undead abomination, or perhaps your arcane bloodline begins with you and your story.

Wizard

- **History:** Beyond the veil of the mundane hide the secrets of absolute power. The works of beings beyond mortals, the legends of realms where gods and spirits tread, the lore of creations both wondrous and terrible—such mysteries call to those with the ambition and the intellect to rise above the common folk to grasp true might. Such is the path of the wizard. These shrewd magic-users seek, collect, and covet esoteric knowledge, drawing on cultic arts to work wonders beyond the abilities of mere mortals. While some might choose a particular field of magical study and become masters of such powers, others embrace versatility, reveling in the unbounded wonders of all magic. In either case, wizards prove a cunning and potent lot, capable of smiting their foes, empowering their allies, and shaping the world to their every desire.
- **Description:** Wizards wear no armor or shields. They gain a +3 bonus to Knowledge skill. Wizards are able to cast any arcane spell in SRD and utilize their Esoteric Object to facilitate their magic.
- **Class Features:**
 - **Arcane Magic:** (LVL 1) Wizards can cast any arcane spell in the SRD as long as they are able to cast a spell's Spell Level and have the HP to spend.
 - **Esoteric Object:** (LVL 1) Begin play with one of the following masterwork items: amulet, ring, staff, wand, or weapon. If this object is lost or destroyed the wizard may obtain a new masterwork item to replace it but it takes 1 week to form a new bond. Once per day this object can be used to cast a spell which costs 0 HP but is otherwise cast the same way as if the wizard itself had cast it.
 - **Focus Casting:** (LVL 1) A wizard must have some object to focus upon in order to cast a spell. Either their esoteric object must be equipped or their spell book held.
 - **Study of Magic:** (LVL 1) Wizards are able to harness the power of magic through devoted study of the arcane arts. Their magical knowledge is recorded in a book of spells. A wizard spends time every day studying magic in some form. This could be reviewing their spell book, learning from someone, researching arcane lore, watching ritualistic performances, trying a new incantation or some other form of study.

Specific Traits: v1.5 by MorganM

Philosophy:

A character trait isn't just another kind of power you add on to your character—it's a way to quantify, and encourage, building a character background that fits what a player envisions or as a means to build a vision of a character. Think of character traits as "story seeds" for your background; after you pick your traits, you'll have points of inspiration from which to build your character's personality and history. Alternatively, if you've already thought of a background for your character, you can view picking traits as a way to quantify that background, just as picking race, class, and ability scores quantify a character's other strengths and weaknesses as well as shapes who that character is.

Traits grant a new type of bonus: a "trait" bonus. Trait bonuses do not stack with other trait bonuses—they're intended to put substance behind a character's background story and give you a slight edge over the non-PCs of the world, not a secret backdoor to focus all your traits on one type of bonus to gain an unseemly advantage over the rules. It's certainly possible that the benefits from different traits are similar, or even the same; you do not add together those bonuses but rather choose the better of the two or pick a different trait. The reason there are different trait names and descriptions with similar benefits is because the trait description should fit in with your character's story; not just a vehicle for more bonuses. So pick traits that suit your character based on the trait descriptions and not the trait bonuses. A lot of the descriptions have several meanings or choices so that they can suit more than one type of character; feel free to pick whichever choices or meanings fit best with your character or perhaps improvise something that better fits your character concept.

Traits are intended to model events that were formative in your character's development, either before they became an adventurer or events that happened while adventuring. Even if they become a hermit and abandon society, they'll still retain their knowledge and training of light weapons from the Swashbuckler trait. If you do not see any traits that fit your character concept then consult with your DM about creating a new one! Come up with a trait name and description you feel defines an important aspect of your character and together you can figure out the benefit or bonus. A quick rule of thumb to judge a trait's power is to think of it as a 'half feat'; so two traits are about the same power as a single feat.

DMs are also welcome to adjust any specific trait listed below as needed to fit their game; they may be adjusted or even removed as needed. The mechanics are also open to adjustments; for example the mechanics of earning traits or how racial traits are assigned.

Earning Traits:

Usually characters start with 1 Basic trait, 1 Learned Racial trait, and all Inherited Racial traits. Racial traits are chosen from the list of racial traits related to the race of your character. Typically a new trait is earned every 5th level (5,15,20). For a lower power game a DM may opt for earning traits every 10th level (10,20) or only allowing starting traits with no new ones being earned. However higher power games could allow characters to earn new traits every 4th level (4,8,12,16,20), maybe start with 3 or 4 traits, or all Inherited and Learned Racial traits could be assigned to new characters.

A DM may also choose a more free form method and award traits based on formidable experiences or epic encounters that characters are involved in thus working with players to evolve a character's persona as the story progresses while adding tangible results to those experiences.

Trait Types:

❖ Basic Traits

- [Combat Traits](#)
- [Faith Traits](#)
- [Magic Traits](#)
- [Social Traits](#)

❖ Racial Traits

- [Elf](#)
- [Dwarf](#)
- [Gnome](#)
- [Half-Elf](#)
- [Halfling](#)
- [Half-Orc](#)
- [Human](#)

Trait Examples:

Basic Traits

Combat

Anatomist

- ❖ **Description:** You have studied the workings of anatomy; either as a student at university, as an apprentice mortician or necromancer, or perhaps from your studies as a monk. You know where to aim your blows to strike vital organs.
- ❖ **Benefit:** +1d4 DMG on all critical hits.

Armor Expert

- ❖ **Description:** You have worn armor as long as you can remember, either as part of your training, life as an adventurer, or simply because you were seeking to emulate a hero. Your childhood or training armor wasn't the real thing as far as protection, but it did encumber you as much as real armor would have, and you've grown used to moving in such suits with relative grace.
- ❖ **Benefit:** +1 AC when wearing any armor.

Bullied

- ❖ **Description:** You were bullied often as a child, and you are now constantly ready to defend yourself with your fists.
- ❖ **Benefit:** +2 on attack rolls made with unarmed strikes.

Courageous

- ❖ **Description:** Your childhood was brutal, yet you persevered primarily through force of will and the hope that no matter how hard things might get, as long as you kept a level head you'd make it through.
- ❖ **Benefit:** +1 on Will saves.

Deft Dodger

- ❖ **Description:** Growing up in a rough neighborhood or a dangerous environment has honed your reaction time.
- ❖ **Benefit:** +1 on Reflex saves

Dirty Fighter

- ❖ **Description:** You wouldn't have lived so long without the aid of a sibling, friend, or companion on whom you could always count to distract your enemies long enough to do get a shot in. That companion may be another PC or an NPC (who may even be recently departed from your side).
- ❖ **Benefit:** +2 attack bonus to anyone you attack while flanking them.

Heavy Hitter

- ❖ **Description:** Bigger is better when it comes to weapons. That's the philosophy which has gotten you this far and seems to be working well.
- ❖ **Benefit:** +1 on attacks made with two-handed weapons.

Killer

- ❖ **Description:** You made your first kill at a very young age and found the task of war or murder to your liking. You either take particular pride in a well-placed blow, or vile pleasure in such a strike as you twist the blade to maximize the pain.
- ❖ **Benefit:** +1 DMG on all successful attacks.

Marksman

- ❖ **Description:** Countless hours over many years either shooting ranged weapons or using thrown weapons has given you an edge on accuracy.
- ❖ **Benefit:** +1 on attacks made with ranged weapons.

Reactionary

- ❖ **Description:** You were bullied often as a child, but never quite developed an offensive response. Instead, you became adept at anticipating sudden attacks and reacting to danger quickly.
- ❖ **Benefit:** +1 to Initiative checks.

Resilient

- ❖ **Description:** Growing up in the unforgiving wilds or in a run-down neighborhood often forced you to subsist on food and water from doubtful sources. You've built up your mettle as a result
- ❖ **Benefit:** +1 on Fortitude saves

Swashbuckler

- ❖ **Description:** You've trained long hours in your life with light weapons. Perhaps as a privateer on the high seas, taking lessons in the genteel art of fencing from tutors paid for by your parents or being taken under the wing of a disenfranchised adventurer who may (or may not) have turned to a life of crime.
- ❖ **Benefit:** +1 bonus on attacks made with light weapons.

Faith

Birthmark

- ❖ **Description:** You were born with a strange birthmark that looks very similar to the holy symbol of the god you chose to worship later in life. This birthmark can serve you as a divine focus for casting spells and as a physical manifestation of your faith which increases your devotion to your god.
- ❖ **Benefit:** +2 on all saving throws against divine spells.

Caretaker

- ❖ **Description:** As the child of an herbalist or an assistant in a temple infirmary, you often had to assist in tending to the sick and wounded.
- ❖ **Benefit:** +2 on Heal checks.

Child of the Temple

- ❖ **Description:** You have long served at a temple in a city, and not only did you pick up on many of the nobility's customs, you spent much time in the temple libraries studying your faith.
- ❖ **Benefit:** +1 to Knowledge skill.

Devotee of Nature

- ❖ **Description:** Your faith in the natural world or one of the gods of nature makes it easy for you to pick up on related concepts.
- ❖ **Benefit:** +2 on Survival checks.

Ease of Faith

- ❖ **Description:** Your mentor, the person who invested your faith in you from an early age, took steps to ensure that you understood that powers of your divine magic is no different than that which powers the magic of other religions. This philosophy makes it easier for you to interact with others who may not share your views.
- ❖ **Benefit:** +1 to Communication skill.

History of Heresy

- ❖ **Description:** You were raised with heretical views that have made it not only difficult for you to accept most religious beliefs, but you also have had to live with the fact that you or those you love were often treated as pariahs. As a result, you have turned your back on religious teachings.
- ❖ **Benefit:** +2 on all saving throws made against divine spells.

Indomitable Faith

- ❖ **Description:** You were born in a region where your faith was not popular, yet you never abandoned it. Your constant struggle to maintain your own faith has bolstered your drive.
- ❖ **Benefit:** +1 on Will saves.

Sacred Conduit

- ❖ **Description:** Your birth was particularly painful and difficult for your mother, who needed potent divine magic to ensure you survived; your mother may or may not have survived. In any event, the magic infused you from an early age, and you now channel divine energy with greater ease than most.
- ❖ **Benefit:** +2 on the Turn/Rebuke Undead check.

Sacred Touch

- ❖ **Description:** You were exposed to a potent source of positive energy as a child, perhaps by being born under the right cosmic sign, or maybe because one of your parents was a gifted healer.
- ❖ **Benefit:** +2 on Heal checks.

Scholar of the Great Beyond

- ❖ **Description:** Your great interests do not lie with current events or the mundane— you have always felt out of place, as if you were born in the wrong era. You take to philosophical discussions of the Great Beyond and of historical events with ease.
- ❖ **Benefit:** +1 to Knowledge skill.

Sacred Avenger

- ❖ **Description:** You have a special connection between you and your deity which enhances your ability to achieve vengeance.
- ❖ **Benefit:** +2 to attack against the last creature that attacked you.

Lapsed Faith

- ❖ **Description:** It's not that you have forsaken your religion but rather you've lost interest and no longer practice it. You still remember a few prayers from your past experience.
- ❖ **Benefit:** Once per day you may heal 1d4 DMG even if you are not a divine caster.

Magic

Classically Schooled

- ❖ **Description:** Your apprenticeship or early education was particularly focused on the direct application of magic.
- ❖ **Benefit:** +1 to magic attack bonus.

Dangerously Curious

- ❖ **Description:** You have always been intrigued by magic, possibly because you were the child of a magician or priest. You often snuck into your parent's laboratory or shrine to tinker with spell components and magic devices, and usually caused quite a bit of damage and headaches for your parents as a result.
- ❖ **Benefit:** +2 on Use Magic Device checks.

Focused Mind

- ❖ **Description:** Your childhood was either dominated by lessons of some sort (be they musical or academic) or by a horrible home life that encouraged your ability to block out distractions to focus on the immediate task at hand.
- ❖ **Benefit:** +2 on Concentration checks.

Gifted Adept

- ❖ **Description:** Your interest in magic was inspired by witnessing a spell being cast in a particularly dramatic method, perhaps even one that affected you physically or spiritually. This exposure to magic has made it easier for you to work similar magic on your own.
- ❖ **Benefit:** Pick one additional favored spell.

Hedge Magician

- ❖ **Description:** You apprenticed for a time to a craftsman who often built magic items, and he taught you many handy techniques and means to identify magic items.
- ❖ **Benefit:** Once a day you may identify a magical item's enhancements and special abilities.

Magical Knack

- ❖ **Description:** You were raised, either wholly or in part, by a magical creature, either after it found you abandoned in the wild or because your parents often left you in the care of a magical minion. This constant exposure to magic has made its mysteries

easy for you to understand, even when you turn your mind to other devotions and tasks.

- ❖ **Benefit:** Pick one 0-level spell from either arcane or divine magic. You may cast that spell even if you have no levels as a spell caster.

Magical Lineage

- ❖ **Description:** One of your parents was a gifted spellcaster who not only used metamagic often, but developed many magical items or perhaps even a new spell or two—and you have inherited a fragment of this greatness.
- ❖ **Benefit:** Your favored spell is considered 'enlarged' by metamagic and its range is doubled. Spells with out range are not effected so you should choose a favored spell with a specific range.

Magical Talent

- ❖ **Description:** Either from inborn talent, whimsy of the gods, or obsessive study of strange tomes; you have mastered the use of an orison or cantrip.
- ❖ **Benefit:** Choose a 0-level spell; either arcane or divine. You may cast that spell once per day as a spell-like ability even if you are not a spell caster.

Mathematical Prodigy

- ❖ **Description:** Mathematics has always come easily for you, and you have always been able to "see the math" in the physical and magical world.
- ❖ **Benefit:** +1 to Knowledge skill.

Skeptic

- ❖ **Description:** Growing up, you were always around magic practiced by inept wizards or con-artists to the extent that you realized that much of it was smoke and mirrors.
- ❖ **Benefit:** +2 on all saving throws against illusions.

Arcane Dabbler

- ❖ **Description:** Though your magical studies were decades ago, or perhaps you have never really pursued the arcane arts beyond initial training; you still remember your favorite little trick.
- ❖ **Benefit:** Choose a 0-level arcane spell. You may cast that spell once per day as a spell-like ability even if you aren't an arcane caster.

Social

Animal Affinity

- ❖ **Description:** A lot of animals just seem to be receptive to you; perhaps it's your aura or maybe you've spent a lot of time handling domesticated or trained animals.
- ❖ **Benefit:** +2 on Handle Animal checks.

Adopted

- ❖ **Description:** You were adopted and raised by someone not of your actual race, and raised in a society not your own. As a result, you picked up a Racial Trait from your adoptive parents and society.
- ❖ **Benefit:** Pick the race of your adoptive parents, different from yours, and select a Racial Trait from your adoptive parents' race.

Acrobat

- ❖ **Description:** Sometime in your life you've spent years working as an acrobat performing in a show; either a traveling band of vagabonds or perhaps a high society ballet performer.
- ❖ **Benefit:** +2 on Balance checks.

Athletic

- ❖ **Description:** All through your life you've been in sports activities or engaged in some athletic recreation. This has made you more adept at Tumbling, Jumping, Swimming, Climb or Balancing.
- ❖ **Benefit:** Pick one action: Tumble, Jump (high), Jump (long), Swim, Climb, or Balance. +2 bonus to checks on that action.

Big Ears

- ❖ **Description:** Although your big ears are always at the butt end of many jokes they do serve a purpose; your hearing is more acute than most.
- ❖ **Benefit:** +2 on Listen checks.

Bully

- ❖ **Description:** You grew up in an environment where the meek were ignored and you often had to resort to threats or violence to be heard.
- ❖ **Benefit:** +2 on Intimidate checks.

Canter

- ❖ **Description:** You grew up among thieves and scoundrels, and their unusual speech patterns and turns of phrase don't phase you in the slightest today as a result.
- ❖ **Benefit:** +2 on Sense Motive checks. +5 bonus to Bluff checks when sending or deciphering secret messages.

Charming

- ❖ **Description:** Blessed with good looks, you've come to depend on the fact that others find you attractive.
- ❖ **Benefit:** +2 on Diplomacy checks. +5 bonus to Diplomacy checks on a character that is (or could be) sexually attracted to you.

Child of the Streets

- ❖ **Description:** You grew up on the streets of a large city, and as a result you have developed a

knack of knowing where to go and who to talk to when you're looking for some information.

- ❖ **Benefit:** +2 on Gather Information checks.

Climber

- ❖ **Description:** Throughout your life you've had a knack for climbing; be it trees as a kid, rock climbing for fun as an adult, or part of some training.
- ❖ **Benefit:** +2 on Climb checks.

Defunct Scribe

- ❖ **Description:** When it was discovered that you were misusing your skills as a scribe for small time forgery con-jobs you were kicked out of the temple.
- ❖ **Benefit:** +2 on Forgery checks.

Deft Afoot

- ❖ **Description:** For some reason you just walk softer than most. It's not as though you've tried to be this way; it just comes natural.
- ❖ **Benefit:** +2 on Move Silent checks.

Equestrian

- ❖ **Description:** Calm and confident in the saddle; you have a knack for riding. This isn't limited to horses as there are many animals used for transportation.
- ❖ **Benefit:** +2 on Ride checks.

Farmhand

- ❖ **Description:** Either you grew up on a farm or worked for one as a farmhand. One important skill of anyone working on a farm is how to use a rope.
- ❖ **Benefit:** +2 on Use Rope checks.

Fast-Talker

- ❖ **Description:** You have a knack at getting yourself into trouble, and as a result developed a silver tongue.
- ❖ **Benefit:** +2 on Bluff checks.

Keen Sight

- ❖ **Description:** Your vision is above average and you're able to spot things easier and at a greater distance.
- ❖ **Benefit:** +2 on Spot checks.

Locksmith

- ❖ **Description:** Either you've worked as a locksmith by trade or apprenticed under one; perhaps in order to acquire the skill set to use for the misappropriation of other peoples things.
- ❖ **Benefit:** +2 on Open Lock checks

Makeup Artist

- ❖ **Description:** For a time you were a skilled makeup artist in support of theatrical performances. You're familiar with having to make people look like something different or altering appearances.
- ❖ **Benefit:** +2 on Disguise checks.

Musician

- ❖ **Description:** Music makes life worth living to you and you're rarely caught without your favorite

instrument. Dedication to practicing and perhaps even playing in performances has paid off.

- ❖ **Benefit:** +2 on Perform checks when using an instrument.

Natural-Born Leader

- ❖ **Description:** You've always found yourself in positions where others look up to you as a leader, and you can distinctly remember an event where you led several others to accomplish a goal that each of you individually could not.
- ❖ **Benefit:** All cohorts, followers, or summoned creatures under your leadership gain a +2 morale bonus on Will saves.

Observative

- ❖ **Description:** Attention to detail comes natural to you. Things that others might not catch seem obvious.
- ❖ **Benefit:** +2 on Search checks.

Out of Sight

- ❖ **Description:** Being the target of bullies all to often you found it best to just stay out of sight. Often you've had to duck for cover and make yourself not visible to those near by.
- ❖ **Benefit:** +2 on Hide checks.

Pick-Pocket

- ❖ **Description:** Over the years you've focused your dexterity toward nefarious actions.
- ❖ **Benefit:** +2 on Sleight of Hand checks.

Prostitute

- ❖ **Description:** You worked as a prostitute and you know how to flatter, please, and listen.
- ❖ **Benefit:** +2 Perform (act, sing, dance, etc) checks. +5 bonus to Diplomacy checks on a character that is (or could be) sexually attracted to you
- ❖ **Poverty-Stricken**
- ❖ **Description:** Your childhood was tough, and your parents had to make every copper piece count.

Hunger was your constant companion, and you often had to live off the land or sleep in the wild.

- ❖ **Benefit:** +2 on Survival checks.

Physician

- ❖ **Description:** There was a time where you were a doctor or perhaps you've apprenticed and studied the art of healing. In either event you understand the fundamentals of medicine.
- ❖ **Benefit:** +2 on Healing checks.

Rich Parents

- ❖ **Description:** You were born into a rich family, perhaps even nobility, and though you turned to a life of adventure anyway, you enjoyed a one-time benefit to your initial finances.
- ❖ **Benefit:** Multiply your level by 1000 and add that amount, in gold pieces, to your starting budget when your character is being created.

Sailor

- ❖ **Description:** Perhaps you've worked on the crew of a ship or maybe been a pirate sometime in your life. As a result your skills with using a rope are above average.
- ❖ **Benefit:** +2 on Use Rope checks.

Sportsman

- ❖ **Description:** Either for recreation or for survival you are skilled at catching game animals and rendering them into food.
- ❖ **Benefit:** +2 on Hunting checks.

Suspicious

- ❖ **Description:** You discovered that someone you trusted, perhaps a friend, parent, or other relative, had lied to you often about something you had taken for granted. This left you quick to question the claims of others.
- ❖ **Benefit:** +2 on Sense Motive checks.

Tinker

- ❖ **Description:** For some reason you could never leave well enough alone with regards to gadgets, contraptions, or devices. You find them easy to take apart but putting them back together is another matter.
- ❖ **Benefit:** +2 on Disable Device checks.

Racial Traits

Pick racial traits from those listed under the same race as your character. You may not choose racial traits from lists for races different than your character's race.

Elf

Inherited Traits:

Low-Light Vision:

- ❖ **Description:** Adapting to their surroundings often entails conditioning to seeing even when light is poor.
- ❖ **Benefit:** Elves can see twice as far as humans in conditions of poor illumination.

Keen Senses:

- ❖ **Description:** Apparently their pointed ears are for more than display!
- ❖ **Benefit:** +2 bonus on sight and sound based Perception checks.

Learned Traits:

Weapon Familiarity:

- ❖ **Description:** Given their slender stature; those elves who train with weapons find it easier to use certain ones.
- ❖ **Benefit:** +2 attack bonus when using longbows, longswords, rapiers, and shortbows.

Dwarf

Inherited Traits:

Darkvision 60 feet:

- ❖ **Description:** Generations of living deep within mountains has yielded the ability to see in the dark.
- ❖ **Benefit:** See in the dark up to 60 feet

Keen Senses

- ❖ **Description:** Their love of working with metal and stone naturally makes dwarves sense of touch more keen than others.
- ❖ **Benefit:** +2 bonus on taste and touch based Perception checks.

Learned Traits:

Stonecunning

- ❖ **Description:** Dwarves have a love for earth and stone, making them fine stonemasons and expert miners.
- ❖ **Benefit:** +2 bonus on Search checks to notice unusual stonework, such as traps and hidden doors located in stone walls or floors.

Greed

- ❖ **Description:** On the whole, they have a lust for treasure, especially precious metals and gems.
- ❖ **Benefit:** +2 bonus on Appraise checks.

Hatred

- ❖ **Description:** Received special training against these hated foes
- ❖ **Benefit:** +2 bonus on attack rolls against humanoid creatures of the orc and goblin subtypes

Elven Immunities:

- ❖ **Description:** Perhaps their similarity to fey is more than superficial?
- ❖ **Benefit:** Immune to magic sleep effects and get a +2 racial saving throw bonus against enchantment spells or effects.

Elven Magic:

- ❖ **Description:** Either by intelligent design, naturally derived ability, generations of study and education, or a mix of all; magic comes easy to most elves.
- ❖ **Benefit:** +2 bonus to Magic Attack.

Languages:

- ❖ **Description:** In addition to their traditional education of Elven and Common languages most learn at least one other language either through further education or association with other races.
- ❖ **Benefit:** Choose two of the following: Draconic, Gnomish, Goblin, Orc, and Sylvan.

Hearty

- ❖ **Description:** Dwarves are resilient folk, capable of taking a great deal of punishment, both physical and magical.
- ❖ **Benefit:** +2 racial bonus on saving throws against poison, spells, and spell-like abilities.

Stability

- ❖ **Description:** Standing about a foot shorter than most humans, they make up for it in overall bulk, for dwarves have wide shoulders and hips.
- ❖ **Benefit:** +4 bonus when resisting a bull rush or trip attempt.

Defensive Training

- ❖ **Description:** A race constantly at war with giants and goblinoids as they battle over mountain territory and its precious resources.
- ❖ **Benefit:** +4 dodge bonus to AC against monsters of the giant type.

Languages:

- ❖ **Description:** All dwarves learn at least Dwarven and Common but most also pick up another language; typically through association with neighbors both friend and foe.
- ❖ **Benefit:** Choose two of the following: Elemental, Giant, Gnome, Goblin, Orc, and Undercommon.

Human

Inherited Traits:

Adaptability:

- ❖ **Description:** Humans possess exceptional drive and great capacity to endure and expand. Humanity is perhaps the most heterogeneous of all the common races.
- ❖ **Benefit:** Choose a Learned Racial trait from any other race. (Excludes Inherited Racial traits)

Learned Traits:

Diplomatic:

- ❖ **Description:** Driven by a lust of power over another or to bring cohesion between others; Humans find diplomacy often yields what they desire.
- ❖ **Benefit:** +2 on Diplomacy checks.

Weapon Training:

- ❖ **Description:** Given the broad diversity of human culture, and their drive to ever expand it's reaches, they have adapted to the use of nearly any weapon.

Halfling

Inherited Traits:

Keen Senses:

- ❖ **Description:** Perhaps part of that 'halfling luck' the fact that they have keen hearing?
- ❖ **Benefit:** +2 bonus on sound-based Perception checks.

Sure-footed:

- ❖ **Description:** No stranger to narrow escapes; being able to tumble or climb your way out of a situation may save their life! That and their

Learned Traits:

Fearless:

- ❖ **Description:** Even in the jaws of catastrophe, a halfling almost never loses his sense of humor.
- ❖ **Benefit:** +2 racial bonus on all saving throws against fear.

Weapon Familiarity:

- ❖ **Description:** The small size of a handcrossbow makes it a natural fit for halflings and slinging rocks is a fun childhood pastime
- ❖ **Benefit:** +2 attack bonus with slings and hand crossbows.

Gnome

Inherited Traits:

Low-Light Vision:

- ❖ **Description:** Natural ability imbues them with the ability to see well in meek lighting.
- ❖ **Benefit:** Gnomes can see twice as far as humans in conditions of poor illumination.

Keen Senses:

Skilled:

- ❖ **Description:** Human curiosity and ambition often triumph over their predilection for a sedentary lifestyle
- ❖ **Benefit:** +1 to all skills at each level.

- ❖ **Benefit:** Choose a weapon - hence forth you gain +1 ATK when using that type of weapon.

Languages:

- ❖ **Description:** While they may only learn the common tongue most find it necessary to pick up other languages of races that live among them.
- ❖ **Benefit:** Choose any two languages you want.

oversized, hairy, leather soled feet may be a factor.

- ❖ **Benefit:** +2 bonus on Acrobatics and Climb checks.

Halfling Luck:

- ❖ **Description:** It's just uncanny the luck halflings have; is it supernatural, magical, or a combination of quick wits, keen hearing, and sure footing?
- ❖ **Benefit:** +1 bonus on all saving throws.

Languages:

- ❖ **Description:** Obviously taught Halfling and Common languages they also tend to pick up a couple more in their travels or from family members who have traveled abroad.
- ❖ **Benefit:** Choose two of the following: Abyssal, Dwarven, Elven, Gnome, and Goblin

- ❖ **Description:** A Gnome's hands are as busy as their minds; always fidgeting or tinkering with something.
- ❖ **Benefit:** +2 bonus on smell- and touch-based Perception checks.

Gnome Magic:

- ❖ **Description:** Given their heritage with the fey they will forever be a magical race.

- ❖ **Benefit:** Gain the following spell-like abilities: 1/day—dancing lights, ghost sound, prestidigitation, speak with animals.

Illusion Resistant:

Learned Traits:

Defensive Training:

- ❖ **Description:** Due to their size it's a common gnomish defense mechanism to just get out of the way of 'big folk'!
- ❖ **Benefit:** +4 dodge bonus to AC against monsters of the giant type.

Obsessive:

- ❖ **Description:** Often they pursue crafts, professions, or collections with a passion that borders zealotry.
- ❖ **Benefit:** +2 racial bonus on a Craft or Profession of their choice.

Weapon Familiarity:

- ❖ **Description:** Perhaps from constant shenanigans which often involve tossing or lobbing objects it's only natural they find it easy to throw darts or knives.

- ❖ **Description:** Gnomes are no stranger to the illusions of magic as they are often proponents of such tickery!

- ❖ **Benefit:** +2 saving throw bonus against illusion spells or effects.

- ❖ **Benefit:** +2 attack bonus with darts and throwing knives.

Hatred:

- ❖ **Description:** Goblins and reptiles are the arch enemies of Gnomes.
- ❖ **Benefit:** +1 bonus on attack rolls against humanoid creatures of the reptilian and goblin subtypes due to special training against these hated foes.

Languages:

- ❖ **Description:** Gnomes are born with the ability to communicate with each other and always learn Common through association but their vast traveling often results in learning another.
- ❖ **Benefit:** Choose two of the following: Draconic, Dwarven, Elven, Giant, Goblin, and Orc.

Half-Orc

Inherited Traits:

Darkvision 60 feet:

- ❖ **Description:** They have the eyes of their orc kin.
- ❖ **Benefit:** See in the dark up to 60 feet.

Intimidating Posture:

- ❖ **Description:** Given their prominent orcish features and that they are shunned by nearly every other race; most half-orcs are rather intimidating.
- ❖ **Benefit:** +2 on Intimidation checks.

Learned Traits:

Weapon Familiarity:

- ❖ **Description:** These bulky weapons, capable of rendering great pain, are a favorite even among half-blood orcs.
- ❖ **Benefit:** +2 attack bonus when using greataxes and falchions.

Exiled Heritage:

- ❖ **Description:** Unaccepted by Humans and Orcs alike, not to mention every other civilized race, a lot of orcs turn to nomadic lifestyle.
- ❖ **Benefit:** +2 on Survival Checks.

Languages:

- ❖ **Description:** Often through association a half-orc picks up other languages.
- ❖ **Benefit:** Choose two of the following: Draconic, Giant, Gnoll, Goblin, and Abyssal.

Half-Elf

Inherited Traits:

Low-Light Vision:

- ❖ **Description:** One benefit often brought by their half-elven blood.
- ❖ **Benefit:** Can see twice as far as humans in conditions of poor illumination.

Keen Senses:

- ❖ **Description:** Blessed with the sharp eyes and ears of their elven kin.
- ❖ **Benefit:** +2 bonus on sight- and sound-based Perception checks.

Elven Immunities:

- ❖ **Description:** Elven blood is strong and imbues half-elves with their magical immunities.
- ❖ **Benefit:** immune to magic sleep effects and get a +2 saving throw bonus against enchantment spells or effects.

Adaptability:

- ❖ **Description:** The lack of a unified culture forces half-elves to be versatile.
- ❖ **Benefit:** +1 to all skills at each level.

Learned Traits:

Languages:

- ❖ **Description:** Half-elves find themselves everywhere in the world and part of conforming is learning the local languages.
- ❖ **Benefit:** Choose two of any languages they want.

1. Definitions: (a) "Contributors" means the copyright and/or trademark owners who have contributed Open Game Content; (b) "Derivative Material" means copyrighted material including derivative works and translations (including into other computer languages), potation, modification, correction, addition, extension, upgrade, improvement, compilation, abridgment or other form in which an existing work may be recast, transformed or adapted; (c) "Distribute" means to reproduce, license, rent, lease, sell, broadcast, publicly display, transmit or otherwise distribute; (d) "Open Game Content" means the game mechanic and includes the methods, procedures, processes and routines to the extent such content does not embody the Product Identity and is an enhancement over the prior art and any additional content clearly identified as Open Game Content by the Contributor, and means any work covered by this License, including translations and derivative works under copyright law, but specifically excludes Product Identity; (e) "Product Identity" means product and product line names, logos and identifying marks including trade dress; artifacts, creatures, characters, stories, storylines, plots, thematic elements, dialogue, incidents, language, artwork, symbols, designs, depictions, likenesses, formats, poses, concepts, themes and graphic, photographic and other visual or audio representations; names and descriptions of characters, spells, enchantments, personalities, teams, personas, likenesses and special abilities; places, locations, environments, creatures, equipment, magical or supernatural abilities or effects, logos, symbols, or graphic designs; and any other trademark or registered trademark clearly identified as Product Identity by the owner of the Product Identity, and which specifically excludes the Open Game Content; (f) "Trademark" means the logos, names, mark, sign, motto, designs that are used by a Contributor to identify itself or its products or the associated products contributed to the Open Game License by the Contributor (g) "Use", "Used" or "Using" means to use, Distribute, copy, edit, format, modify, translate and otherwise create Derivative Material of Open Game Content. (h) "You" or "Your" means the licensee in terms of this agreement.
2. The License: This License applies to any Open Game Content that contains a notice indicating that the Open Game Content may only be Used under and in terms of this License. You must affix such a notice to any Open Game Content that you Use. No terms may be added to or subtracted from this License except as described by the License itself. No other terms or conditions may be applied to any Open Game Content distributed using this License.
3. Offer and Acceptance: By Using the Open Game Content You indicate Your acceptance of the terms of this License.
4. Grant and Consideration: In consideration for agreeing to use this License, the Contributors grant You a perpetual, worldwide, royalty-free, non-exclusive license with the exact terms of this License to Use, the Open Game Content.
5. Representation of Authority to Contribute: If You are contributing original material as Open Game Content, You represent that Your Contributions are Your original creation and/or You have sufficient rights to grant the rights conveyed by this License.
6. Notice of License Copyright: You must update the COPYRIGHT NOTICE portion of this License to include the exact text of the COPYRIGHT NOTICE of any Open Game Content You are copying, modifying or distributing, and You must add the title, the copyright date, and the copyright holder's name to the COPYRIGHT NOTICE of any original Open Game Content you Distribute.
7. Use of Product Identity: You agree not to Use any Product Identity, including as an indication as to compatibility, except as expressly licensed in another, independent Agreement with the owner of such Trademark or Registered Trademark. The use of any Product Identity in Open Game Content does not constitute a challenge to the ownership of that Product Identity. The owner of any Product Identity used in Open Game Content shall retain all rights, title and interest in and to that Product Identity.
8. Identification: If you distribute Open Game Content You must clearly indicate which portions of the work that you are distributing are Open Game Content.
9. Updating the License: Wizards or its designated Agents may publish updated versions of this License. You may use any authorized version of this License to copy, modify and distribute any Open Game Content originally distributed under any version of this License.
10. Copy of this License: You MUST include a copy of this License with every copy of the Open Game Content You distribute.
11. Use of Contributor Credits: You may not market or advertise the Open Game Content using the name of any Contributor unless You have written permission from the Contributor to do so.
12. Inability to Comply: If it is impossible for You to comply with any of the terms of this License with respect to some or all of the Open Game Content due to statute, judicial order, or governmental regulation then You may not Use any Open Game Material so affected.
13. Termination: This License will terminate automatically if You fail to comply with all terms herein and fail to cure such breach within 30 days of becoming aware of the breach. All sublicenses shall survive the termination of this License.
14. Reformation: If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable.

Free Form Traits:

Philosophy:

A character trait isn't just another kind of power you add on to your character—it's a way to quantify, and encourage, building a character background that fits what a player envisions or as a means to build a vision of a character. Think of character traits as “story seeds” for your background; after you figure out your character's traits, you'll have points of inspiration from which to build your character's personality and history. Alternatively, if you've already thought of a background for your character, you can view creating traits as a way to quantify that background, just as race, class, and ability scores quantify a character's other strengths and weaknesses as well as shape who that character is.

Many traits grant a new type of bonus: a “trait” bonus. Trait bonuses do not stack with other trait bonuses—they're intended to put substance behind a character's background story and give you a slight edge over the non-PCs of the world, not a secret backdoor to focus all your traits on one type of bonus to gain an unseemly advantage over the rules. It's certainly possible that the benefits from different traits are similar, or even the same; you do not add together those bonuses but rather choose the better of the two or pick a different trait. Traits should fit in with your character's story and should not be just a vehicle for more bonuses. So pick traits that suit your character based on the vision of what you want your character to be and not the bonuses a trait may grant.

Traits are intended to model events that were formative in your character's development, either before they became an adventurer or events that happened while adventuring. Even if they become a hermit and abandon society, they'll still retain their knowledge and training of light weapons from being a Swashbuckler. Consult with your DM about creating traits; how many traits a character starts with, what type they are, and come to an agreement on the specifics of the traits you come up with for your character. Write up a trait name and description you feel defines an important aspect of your character and together you can figure out the benefit or bonus. A quick rule of thumb to judge a trait's power is to think of it as a 'half feat'; so two traits are about the same power as a single feat. Keep that in mind as new traits are created and awarded.

DMs are also welcome to adjust any specific trait listed below as needed to fit their game; they may be adjusted or even removed as needed. The mechanics are also open to adjustments; for example the mechanics of earning traits or how racial traits are assigned.

Earning Traits:

Usually characters start with 1 Basic trait, 1 Learned Racial trait, and all Inherited Racial traits. Typically a new trait is earned every 5th level (5,15,20). For a lower power game a DM may opt for earning traits every 10th level (10,20) or only allowing starting traits with no new ones being earned. However higher power games could allow characters to earn new traits every 4th level (4,8,12,16,20), maybe even start with 3 or 4 traits, or all Inherited and Learned Racial traits. A DM may also choose a more free form method and award traits based on formidable experiences or epic encounters that characters are involved in thus working with players to evolve a character's persona as the story progresses while adding tangible results to those experiences.

Trait Types:

❖ Basic Traits

- Combat Traits
 - Traits related directly to combat actions, skills, maneuvers, etc.
- Faith Traits
 - Traits based on a character's faith to a deity, religion, or even lack of faith.
- Magic Traits
 - Traits related directly casting spells, magical abilities, magic attacks, etc.
- Social Traits
 - Traits associated with a character's social up-bringing, cultural associations, moral conduct, etc.

❖ Racial Traits

- Inherited Traits
 - Olfactory Traits
 - Natural or innate magical Traits
 - Traits based on bloodline or heredity.
- Learned Traits
 - Racial enemies

- Weapon familiarity
- Languages

Microlite20

Edición Némesis

El presente documento recoge y adapta los siguientes manuales y reglas de Microlite20: *Core Rules*, *Game Master's Guide*, *Expert Rules*, *Mass Combat Rules*, *Equipment List*, *Arcane & Divine Spell List* y *Monster List*. Todo el contenido es compatible con el SRD. Creado por y para el grupo de juego Némesis.

- Sistema de juego -

Características

+

Hay tres características: **Fuerza** (FUE), **Destreza** (DES) e **Inteligencia** (INT).

Lanza 4d6 y descarta el valor más bajo. Suma los tres dados restantes y anota el resultado.

Repite la operación 3 veces (una por cada característica) y asigna los valores resultantes a voluntad.

Personajes heroicos: Haz cuatro tiradas y deja sin asignar la puntuación más baja.

Modificadores: (Puntuación de la característica - 10) / 2, redondeado hacia abajo.

Escribe la puntuación en la casilla **Ordinaria**. Si hay algún cambio temporal o reversible anótalo en la casilla **Actual**.

Razas

+

Elfo: +2 INT.

Enano: +2 FUE.

Gnomo: +1 DES y +1 INT.

Halfling: +2 DES.

Humano: +1 a todas a las habilidades.

Hombre lagarto: +2 FUE, +2 DES y -2 INT.

Semielfo: +1 DES y +1 a dos habilidades.

Semiorco: +4 FUE y -2 INT.

Clases

+

Bardo. DG d6. Puede llevar armadura ligera y escudo. Obtiene +2 a Comunicación, Conocimiento y Subterfugio. Puede *Contrarrestar efectos basados en el sonido*, en un radio de 10 m., y usar su canción para *Quitar el miedo*, 3 veces por día. A partir de nivel 6 puede lanzar conjuros de la lista de Druida o Ilusionista, una clase a su elección, como si tuviese 5 niveles menos.

Clérigo. DG d8. Puede llevar armadura ligera o intermedia y lanzar conjuros de su lista. Obtiene +3 a Comunicación. Puede *Expulsar muertos vivientes* con una tirada de Ataque mágico con éxito con CD igual a los PG actuales del muerto viviente. Si la CD se supera por 10 el muerto viviente es destruido. La expulsión puede ser utilizada (2 + Nivel + INT) veces al día.

Druida. DG d8. Puede llevar cualquier armadura y escudo mientras no sea de metal y lanzar conjuros de su lista. Obtiene +2 a Conocimientos y Supervivencia. Es inmune a conjuros de hadas, duendes y similares. A partir de nivel 3 puede *Pasar sin dejar rastro*, a voluntad. A partir de nivel 5 puede asumir la forma de un animal pequeño o mediano 3 veces por día, recuperando 2 PG por nivel al volver a su forma humana.

Explorador. DG d8. Puede llevar armadura ligera o intermedia y escudo. Obtiene +3 a Supervivencia y +1 a ataque y daño con armas a distancia. Puede atacar con dos armas ligeras en el mismo asalto con un -1 a cada ataque (no se pueden blandir dos estoques a la vez).

Guerrero. DG d10. Puede llevar cualquier tipo de armadura y escudo. Obtiene +3 a Físicas y +1 a todas las tiradas de ataque y daño (+1 adicional cada 5 niveles). Puede utilizar DES + Nivel en vez de FUE en ataques cuerpo a cuerpo con armas ligeras. Puede atacar con dos armas ligeras en el mismo asalto con un -2 a cada ataque (no se pueden blandir dos estoques a la vez).

Mago. DG d4. No puede llevar armadura. Puede lanzar conjuros de su lista. Obtiene +3 a Conocimiento.

Paladín. DG d10. Puede llevar cualquier tipo de armadura y escudo. Obtiene +1 a Físicas, +2 a Comunicación y +1 a todas las TS (+1 adicional cada 5 niveles). Es inmune a enfermedades. Puede *Detectar el Mal* a 20 m., a voluntad. Puede curar 2 PG por nivel por *Imposición de manos*, una vez al día. Requisito: estricto *Código de conducta* (Legal Bueno).

+

Clase de Dificultad (CD):

Fácil	5
Normal	10
Difícil	15
Muy difícil	20

Ejemplos: Escalar (Físicas + FUE), Esquivar una roca (Físicas + DES), Encontrar una trampa (Subterfugio + INT), Desactivar una trampa (Subterfugio + DES).

+

+

Bonificador igual al nivel a la tirada de Ataque, Daño, Salvación, Habilidad o Conjuro. Limitado **una vez al día**.

+

Ataques:

Mágico: INT + Nivel.

Clase de Armadura (CA): 10 + DES + Armadura.

Tirada de ataque: Bonificador de ataque + 1d20. Si se supera la CA del oponente es un impacto. Un 20 natural es un crítico automático que hace el daño máximo. Un 1 natural es una pifia.

Daño cuerpo a cuerpo: Suma el modificador de FUE al daño con armas a una mano, x2 para armas a dos manos.

Ataques extra: Pueden realizarse ataques extra en un mismo turno aplicando un -5 al ataque básico y siempre que el modificador todavía sea positivo (mínimo +1).

Regla del 50%: Utilízala cuando no haya otra regla aplicable. Tira 1d20, de 1 a 10 es un fallo, de 11 a 20 un éxito. Pueden aplicarse modificadores de +2/-2.

Combate de masas

+

La Escala de combate (EC) es un mutiplicador que se asigna según el tamaño de cada unidad táctica que entra en combate, la cual ha de ser homogénea.

El combate de dos unidades de la misma EC se resuelve de como un combate individual entre un miembro de cada unidad.

Cuando combaten dos fuerzas de diferente EC multiplica del daño por la EC de quien lo hace y divide el resultado entre la EC de quien lo recibe. Los PG, la CA y otras estadísticas permanecen sin cambios.

Miembros de la unidad	EC
2-5	x3
6-10	x4
11-20	x5
21-40	x6
41-80	x7
81-160	x8
161-320	x9
321-640	x10

Durante la batalla reduce el tamaño de cada unidad de forma proporcional a los PG perdidos y vuelve a calcular la EC. Para ello puedes ayudarte de una regla de tres.

Magia

+

Listas de conjuros: Los personajes con aptitudes mágicas pueden lanzar conjuros de su lista que sean de un nivel igual o menor a la mitad de su nivel, redondeando hacia arriba. No hay que memorizar conjuros. Sólo porque un personaje pueda utilizar cualquier conjuro no quiere decir que deba usarlos todos, debe elegir conjuros acordes con el personaje.

Puntos de Magia (PM): Bonificador de INT + 1d6 por nivel. Lanzar un conjuro cuesta (nivel del conjuro x2) +1 PM. Los PM se recuperan tras 8 h. de descanso o fracción.

Modificar un hechizo: Cada modificación duplica el tiempo de lanzamiento del mismo.

Ampliar: Duplica el área de efecto del hechizo, cuesta 2 PM adicionales.

Extender: Duplica la duración del hechizo, cuesta 2 PM adicionales.

Potenciar: El hechizo hace un 50% más de daño, cuesta 4 PM adicionales.

CD a la TS contra conjuros: 10 + Nivel del lanzador + Modificador de INT del lanzador.

Enfermedades

+

Nombre de la enfermedad, Forma de contagio (Contacto, Herida, Inhalación), CD Salvación (TS de Fortaleza para evitar el contagio), Incubación (tiempo que tarda en comenzar el daño), Daño (tras la incubación y cada día después).

Dolor rojo, Herida, CD 15, 1d3 días, -1d6 FUE.

Fiebre hilarante, Inhalación, CD 16, 1 día, -1d6 INT.

Fiebre sucia, Herida, CD 12, 1d3 días, -1d3 DES y -1d3 FUE.

Fuego mental, Inhalación, CD 12, 1 día, -1d4 INT.

Temblores, Contacto, CD 13, 1 día, -1d8 DES.

Valor de Desafío

Tipo de trampa: Ataque (Daño), CD Salvación (TS Reflejos, si se pasa se recibe la mitad del daño, si procede), CD Buscar (Subterfugio + INT), CD Desactivar (Subterfugio + DES, si se falla se activa).

VD1

Trampa básica de flechas: +10 (1d6, flecha), Buscar CD 20, Desactivar CD 20.

Trampa de dardo envenenado: +8 (1d4 + veneno, dardo), Buscar CD 20, Desactivar CD 18.

Trampa de foso camuflado: 3 m. de profundidad (1d6, caída), Salvación CD 15, Buscar CD 24, Desactivar CD 20.

VD2

Trampa de manos ardientes: Hechizo (1d4, fuego), Salvación CD 11 (½ Daño), Buscar CD 26, Desactivar CD 26.

Trampa de pozo: 12 m. de profundidad (4d6, caída), Salvación CD 20; Buscar CD 20, Desactivar CD 20.

Trampa de red grande: +5 (-), Salvación CD 14, Buscar CD 20, Desactivar CD 25.

VD3

Trampa de flecha envenenada: +12 (1d8 + veneno, flecha), Buscar CD 19, Desactivar CD 15.

Trampa de fuego: Hechizo (1d4+3, fuego), Salvación CD 13 (½ Daño), Buscar CD 27, Desactivar CD 27.

Trampa de pozo: 18 m. de profundidad (6d6, caída), Salvación CD 20; Buscar CD 20, Desactivar CD 20.

VD4

Trampa de foso con pinchos: 18 m. de profundidad (6d6, caída), +10 (1d4 pinchos, 1d4 cada uno), Salvación CD 20, Buscar CD 20, Desactivar CD 20.

Trampa de guadaña de pared: +20 (2d4+8, guadaña), Buscar CD 21, Desactivar CD 18.

Trampa de rayo: Hechizo (5d6, electricidad), Salvación CD 14 (½ Daño), Buscar CD 28, Desactivar CD 28.

VD5

Trampa de bola de fuego: Hechizo (1d4+7, fuego), Salvación CD 16 (½ Daño), Buscar CD 29, Desactivar CD 29.

Trampa de caída de bloques: +15 (6d6, aplastamiento), Buscar CD 25, Desactivar CD 17.

Pinchos de pared envenenados: +16 (1d8+4 + veneno, pinchos), Buscar CD 17, Desactivar CD 21.

VD6

Trampa de compactación de habitación: Las paredes se mueven hasta juntarse (12d6, aplastar), Buscar CD 20, Desactivar CD 22.

Trampa de foso con pinchos: 30 m. de profundidad (10d6, caída), +10 (1d4 pinchos, 1d4+5 cada uno), Salvación CD 20, Buscar CD 20, Desactivar CD 20.

Trampa de rayo: Hechizo (10d6, electricidad), Salvación CD 14 (½ Daño), Buscar CD 28, Desactivar CD 28.

VD7

Trampa de foso bien camuflado: 21 m. de profundidad (7d6, caída), Salvación CD 25, Buscar CD 27, Desactivar CD 18.

Trampa de relámpago en cadena: Hechizo (11d6 al objetivo más cercano, 5d6 a cada uno de los siguientes hasta 11, electricidad), Salvación CD 19 (½ Daño), Buscar CD 31, Desactivar CD 31.

Trampa de tentáculos negros: Hechizo (tentáculos), +7 (1d4+7 tentáculos, 1d6+4 cada uno), Buscar CD 29, Desactivar CD 29.

VD8

Trampa de destrucción: Hechizo (muerte), Salvación CD 20 (Daño 10d6), Buscar CD 32, Desactivar CD 32.

Trampa de foso bien camuflado: 30 m. de profundidad (10d6, caída), Salvación CD 20, Buscar CD 27, Desactivar CD 18.

Trampa de palabra poderosa, Aturdir: Hechizo (aturdir 2d4 turnos), Buscar CD 32, Desactivar CD 32.

VD9

Foso ancho con pinchos envenenados: 21 m. de profundidad (7d6, caída), +10 (1d4 pinchos, 1d4+5 + veneno cada uno), Salvación CD 20, Buscar CD 20, Desactivar CD 20.

Techo que cae: El techo se mueve hacia abajo (12d6, aplastar), Buscar CD 20, Desactivar CD 16.

Trampa de nube incendiaria: Hechizo (4d6 por turno durante 15 turnos, fuego), Salvación CD 22 (½ Daño), Buscar CD 33, Desactivar CD 33.

VD10

Habitación aplastante: Las paredes se mueven hasta juntarse (16d6, aplastar), Buscar CD 22, Desactivar CD 20.

Trampa de drenar energía: +8 (-2d4 niveles durante 24 horas), Salvación CD 23, Buscar CD 34, Desactivar CD 34.

Trampa de pared aplastante: Ataque automático (18d6, aplastar), Buscar CD 20, Desactivar CD 25.

Venenos

+

Nombre del veneno, Tipo (Contacto, Herida, Ingestión, Inhalación), CD (TS Fortaleza para evitar el daño), Daño / Daño (el primero es el daño que se recibe en el momento de fallar la 1ª TS y el segundo tras un minuto de exposición si se falla una segunda TS), Precio (de una dosis). La pérdida es temporal a menos que se indique con un asterisco (*), en cuyo caso es permanente. La inconsciencia por envenenamiento dura 1d3 horas.

Aceite de taggit: Ingestión, CD 15, 0 / Inconsciencia, 90 m.p.

Araña monstruosa (diminuta): Herida, CD 10, -1d2 FUE / -1d2 FUE, 85 m.p.

Araña monstruosa (pequeña): Herida, CD 10, -1d3 FUE / -1d3 FUE, 125 m.p.

Araña monstruosa (grande): Herida, CD 13, -1d6 FUE / -1d6 FUE, 250 m.p.

Araña monstruosa (gigante): Herida, CD 16, -1d8 FUE / -1d8 FUE, 500 m.p.

Arsénico: Ingestión, CD 13, -1 FUE / -1d8 FUE, 120 m.p.

Brizna mortal: Herida, CD 20, -1d6 FUE / -2d6 FUE, 1.800 m.p.

Escorpión monstruoso (diminuto): Herida, CD 12, -1 FUE / -1 FUE, 50 m.p.

Escorpión monstruoso (pequeño): Herida, CD 12, -1d2 FUE / -1d2 FUE, 100 m.p.

Escorpión monstruoso (grande): Herida, CD 14, -1d4 FUE / -1d4 FUE, 200 m.p.

Escorpión monstruoso (gigante): Herida, CD 18, -1d6 FUE / -1d6 FUE, 400 m.p.

Hñito azul: Herida, CD 14, -1 FUE / Inconsciente, 120 m.p.

Incienso quemado de othur: Inhalación, CD 18, -1 FUE* / -3d6 FUE, 2.100 m.p.

Niebla de la locura: Inhalación, CD 15, -1d4 INT / -2d6 INT, 1.500 m.p.

Nitharit: Contacto, CD 13, 0 / -3d6 FUE, 650 m.p.

Pasta de raíz de malys: Contacto, CD 16, -1 DES / -2d4 DES, 500 m.p.

Residuo de hoja de sassone: Contacto, CD 16, -2d12 PG / -1d8 FUE, 300 m.p.

Serpiente (venenosa mediana): Herida, CD 11, -1d6 FUE / -1d6 FUE, 120 m.p.

Serpiente (venenosa grande): Herida, CD 12, -1d6 FUE / -1d6 FUE, 180 m.p.

Serpiente (venenosa enorme): Herida, CD 14, -1d6 FUE / -1d6 FUE, 250 m.p.

Veneno del sueño: Herida, CD 13, inconsciente/inconsciente 2d4 horas, 75 m.p.

Wyvern: Herida, CD 17, -2d6 FUE / -2d6 FUE, 3.000 m.p.

Caídas

+

Daño de 1d6 por cada 3 m, TS Reflejos ½ (CD: metros de caída x3). Sobre estacas o pinchos +3 al daño por cada metro de caída (máx. + 12).

Calor y frío extremos

+

Si no se lleva la protección adecuada se hará una TS Fortaleza cada 10 minutos (CD 15, +1 por cada tirada previa), recibiendo 1d6 de daño por cada fallo.

Experiencia

+

Valor de Desafío (VD): DG de los enemigos derrotados o el VD desafío asignado a una trampa, situación, etc. Suma uno al VD cada vez que se duplique el número de enemigos (1 Esqueleto: VD1; 2 Esqueletos: VD2; 4 Esqueletos: VD3, etc.).

Se sube de nivel cuando el total de los VD superados es igual al nivel actual x 10. Pon el contador a cero después de la subida.

Cada nivel ganado otorga:

+1 DG a los PG.

+1 a las tiradas de ataque.

+1 a todas las habilidades.

Si el nivel es múltiplo de tres (3, 6, 9, 12, etc.) suma +1 a FUE, DES o INT.

Guerreros: Ganan +1 a las tiradas de ataque y daño en los niveles múltiplos de 5 (5, 10, 15, etc.).

Lanzadores de conjuros: Ganan +1d6 PM cada nivel. Ganan acceso a nuevos niveles de conjuro en los niveles impares (3, 5, 7, 9, etc.).

- Equipo -

Equivalencias monetarias: Relación 1 a 10 según la escala siguiente.

Monedas de platino (m.pl.).

Monedas de oro (m.o.).

Monedas de plata (m.p.).

Monedas de cobre (m.p.).

Dinero inicial: Cada personaje de nivel 1 comienza con ropa básica y 100 m.o.

Precio: El coste de cada arma incluye los accesorios (vaina, carcaj, aceite de armas...).

Alcance: Rango en metros donde no se aplica penalizador. Se obtiene un -2 por cada incremento. Alcance máximo: 5 rangos (-8).

Discernir ubicación: Revela el sitio exacto donde se encuentre una criatura u objeto.

Tormenta de fuego: Hace 1d6 de daño por fuego por nivel.

Nivel 7

*

Curar heridas severas masivo: Cura 3d8 de daño +1 por nivel a 1 criatura por nivel.

Destrucción: Mata una criatura objetivo y destruye sus restos hasta que no queda nada.

Excursión etérea: El lanzador se vuelve etéreo durante 1 turno por nivel.

Regenerar: Los miembros amputados vuelven a crecer y cura 4d8 de daño +1 por nivel (máx. +35).

Restauración mayor: Como Restauración, pero recupera todos los niveles.

Resurrección: Resucita completamente un muerto con cualquier parte de su cuerpo, por pequeña que sea.

Nivel 9

*

Atar alma: Atrapa almas de recién muertos para prevenir su resurrección.

Etereidad: El lanzador y sus aliados viajan al plano etéreo durante 1 min. por nivel.

Implosión: Mata una criatura por asalto durante 4 asaltos o hasta que se rompe la concentración.

Portal: Conecta dos planos para viajar o invocar durante 1 turno por nivel.

Proyección astral: Proyecta al lanzador y sus aliados en otro Plano Astral.

Sanar masivo: Como Sanar, pero a 1 criatura por nivel.

- Conjuros de Druida -

Nivel 0

*

Crear agua: Crea 10 litros de agua pura por nivel.

Detectar magia: Detecta hechizos y objetos mágicos en 20 m. a la redonda durante 1 min. por nivel o hasta que se pierda la concentración.

Detectar veneno: Detecta veneno en una criatura u objeto.

Leer magia: Permite leer pergaminos y grimorios durante 10 min. por nivel.

Remendar: Realiza reparaciones menores en un objeto.

Resistencia: El lanzador obtiene un +1 a las TS durante un min.

Nivel 2

*

Calentar metal: Sube la temperatura de un metal hasta que causa daño.

Convocar enjambre: Llama a una cantidad considerable de murciélagos, ratas o arañas durante el tiempo que se permanezca concentrado +2 asaltos.

Deformar madera: Comba la madera en un radio de 3 m.

Forma arbórea: El aspecto del lanzador será el de un árbol durante 1 h. por nivel.

Piel robliza: +2 a la CA durante 10 min. por nivel.

Ráfaga de viento: Hace volar o derriba a criaturas pequeñas.

Nivel 1

*

Bayas buenas: 2d4 bayas curan 1 PG cada una (máx. 8 PG cada 24 horas).

Enmarañar: La vegetación circundante atrapa a todos en un radio de 12 m. durante 1 min. por nivel.

Flamear: Llamada arrojada o de toque de 1d6 de daño +1 adicional por nivel.

Fuego feérico: Delimita a los receptores con luz durante 1 min. por nivel, cancela contorno borroso, invisibilidad, etc.

Hablar con los animales: El lanzador puede comunicarse con los animales durante 1 min. por nivel.

Niebla de oscurecimiento: Una niebla oculta al lanzador durante 1 min. por nivel.

Nivel 3

*

Brotar de espinas: Durante 1 h. por nivel las criaturas en el área de efecto sufren 1d4 de daño si no reducen su velocidad a la mitad.

Fundirse con la piedra: El lanzador y su equipo se funden con la piedra.

Hablar con las plantas: El lanzador puede comunicarse con las plantas durante 1 min. por nivel.

Llamar al relámpago: Atrae rayos del cielo de 3d6 de daño una vez por asalto durante 1 min. por nivel.

Protección contra la energía: Absorbe 12 puntos de daño por nivel de un tipo de ataque basado en energía durante 10 min. por nivel.

Respiración acuática: Los receptores del conjuro pueden respirar bajo el agua durante 2 h. por el nivel, dividido entre el número de objetivos.

Nivel 4

*

Caminar por el aire: El receptor puede caminar por el aire durante 10 min. por nivel.

Caparazón antivegetal: Mantiene a raya a las plantas animadas durante 10 min. por nivel en un radio de 3 m.

Piedras puntiagudas: Durante 1 h. por nivel las criaturas en el área de efecto sufren 1d8 de daño si no reducen su velocidad a la mitad.

Reencarnar: Devuelve al receptor a la vida dentro de un cuerpo al azar.

Repeler sabandijas: Insectos, arañas y otros bichos se mantienen alejados a 3 m. de distancia durante 10 min. por nivel.

Tormenta de hielo: Granizo que inflinge 5d6 de daño en un cilindro de 12 m. de ancho.

Nivel 5

*

Dotar de consciencia: Un animal o planta adquiere intelecto humano.

Llamar a la tormenta de relámpagos: Como *Rayo relampagueante* pero haciendo 5d6 por rayo.

Muro de fuego: Hace 2d4 de daño por fuego a una distancia de 3 m. y 1d4 a 6 m., atravesarlo produce 2d6 de daño más 1 adicional por nivel.

Plaga de insectos: Hasta seis enjambres de langostas atacan a otras criaturas durante 1 min. por nivel.

Polimorfar funesto: Transforma al objetivo en un animal inofensivo.

Transmutar roca en barro: Transforma 6 m³ de roca en barro por nivel.

Nivel 6

*

Muro de piedra: Crea una pared de sillares a la que se puede dar forma.

Piedra parlante: Permite hablar con la piedra, natural o trabajada, durante 1 min. por nivel.

Remover la tierra: Cava zanjas y crea colinas en un área de 225 m² y 3 m. de profundidad.

Roble guardián: El árbol receptor se convierte en un árbol viviente guardián.

Semillas de fuego: Bellotas y bayas funcionan como bombas de mano (1d6 de daño por fuego por nivel dividido en 4 semillas) que explotan en un radio de 3 m. e inflaman materiales combustibles.

Viajar entre las plantas: El lanzador puede moverse instantáneamente entre dos plantas de la misma especie.

Nivel 7

*

Bastón cambiante: La vara del lanzador se convierte en un árbol viviente a su voluntad.

Caminar con el viento: El lanzador y sus aliados adoptan una forma vaporosa, pudiendo viajar a una velocidad de 100 km/h. durante 1 h. por nivel.

Controlar el clima: Cambia el clima en el área local.

Dedo de la muerte: Mata a una criatura objetivo.

Terremoto: Crea un intenso temblor de tierra en un radio de 40 m. que hace que se desplomen techos, paredes, aparezcan grietas, etc.

Tormenta de fuego: Llueven llamas que hacen 1d6 de daño por fuego por nivel en un área de 6 m³ por nivel.

- Conjuros de Ilusionista -

Nivel 0

*

Detectar ilusión: Detecta las ilusiones en un radio de 20 m. durante 1 min. por nivel.

Leer magia: Permite leer pergaminos y grimorios durante 10 min. por nivel.

Luces danzantes: Crea antorchas o luces similares durante 1 min.

Marca arcana: Inscribe una runa personal permanente (visible o invisible).

Prestidigitación: Pequeños trucos de manos (cartas, monedas, etc.) durante 1 hora.

Sonido fantasma: Ruidos imaginarios durante 1 turno por nivel.

Nivel 1

*

Disfrazarse: Cambia tu apariencia durante 10 min. por nivel.

Encantar persona: Hace que una persona sea tu amiga durante 1 min. por nivel.

Hipnotismo: Fascina a criaturas de 2d4 PG's durante 2d4 turnos.

Imagen silenciosa: Crea una ilusión menor diseñada por el lanzador.

Rociada de color: Incapacita criaturas en un cono de 5 m.

Ventriloquia: La voz de lanzador sale de otro lugar durante 1 min. por nivel.

Nivel 2

*

Contorno borroso: El lanzador gana +4 a la CA y no puede ser acechado durante 1 min. por nivel.

Forma hipnótica: Fascina a criaturas por valor de 2d4+nivel PG mientras dure la concentración +2 turnos.

Imagen menor: Como *Imagen silenciosa*, pero con algún sonido.

Imagen múltiple: Crea 1d4+1 dobles falsos del lanzador durante 1 min. por nivel.

Invisibilidad: El lanzador se vuelve invisible durante 1 min. por nivel o hasta que ataque.

Risa espantosa: El objetivo no puede hacer otra cosa durante 1 turno por nivel.

Nivel 3

*

Desplazar: Los ataques contra el lanzador fallan el 50% de las veces durante 1 turno/nivel.

Esfera de invisibilidad: Como *Invisibilidad* pero con radio de 3 m.

Imagen mayor: Es similar a *Imagen Menor*, añadiendo, olor y efectos térmicos.

Luz solar: Luz del día en un radio de 20 m. durante 10 min. por nivel.

Sueño profundo: Duerme a criaturas por valor de 10 PG durante 1 min. por nivel.

Sugestión: Obliga al objetivo a seguir el curso de acción indicado durante 1 hora por nivel o hasta que se complete la tarea.

Nivel 4

*

Asesino fantasma: Crea la peor ilusión peor ilusión para el objetivo, que muere o sufre 3d6 de daño.

Confusión: Los objetivos se comportan erráticamente durante 1 turno por nivel.

Creación menor: Crea un objeto de tela o de madera.

Hechizar monstruo: Hace que un monstruo se crea tu aliado durante 1 día por nivel.

Invisibilidad mayor: Como *Invisibilidad*, pero el lanzador puede atacar y permanecer invisible.

Pauta iridiscente: Luces que fascinan a criaturas de 24 PG durante la concentración más 1 turno por nivel.

Nivel 5

*

Apariencia: Cambia la apariencia de una persona durante 12 horas por cada 2 niveles.

Creación mayor: Crea un objeto de piedra o de metal.

Dominar persona: Controla al objetivo telepáticamente durante 1 día por nivel.

Envío: Manda un mensaje corto a cualquier parte, instantáneamente.

Imagen persistente: Como *Imagen mayor* durante 1 minuto por nivel, no requiere concentración.

Romper encantamiento: Libera al objetivo de encantamientos, alteraciones, maldiciones y petrificación.

Nivel 6

*

Engaño: Te vuelve invisible y crea un doble ilusorio.

Imagen permanente: Ilusión permanente controlada por la concentración que afecta a la vista, el oído y el tacto.

Imagen programada: Como *Imagen mayor*, pero disparada por un suceso concreto.

Paseo por las sombras: Permite desplazarse rápidamente a través de las sombras, a 80 km/h durante 1 hora por nivel.

Sugestión en masa: Como *Sugestión*, pero añadiendo un objetivo por nivel.

Visión verdadera: Permite ver las cosas como verdaderamente son.

Nivel 7

*

Aparición: Como *Asesino fantasma*, pero afecta en un radio de 10 m.

Invisibilidad en masa: Como *Invisibilidad*, pero afecta a todos los que se encuentren en el área.

Palabra poderosa, Cegar: Ciega a una criatura de 200 PG o menos.

Puerta en fase: Crea un paso invisible a través de la madera y la piedra.

Proyectar imagen: Crea un doble ilusorio que puede hablar y lanzar conjuros a la mitad del nivel, durante 1 turno por nivel.

Rociada prismática: Explosión de rayos en cono de 20 m. Lanza 1d8 por cada criatura en el área de efecto. 1 (Rojo): 20 Puntos de daño por fuego (TS Reflejos para ½). 2 (Naranja): 40 Puntos de daño por ácido (TS Reflejos para ½). 3 (Amarillo): 80 Puntos de daño por electricidad (TS Reflejos para ½). 4 (Verde): Veneno mortal (TS Fortaleza para -1d6 a CON). 5 (Azul): Petrificación (TS Fortaleza niega). 6 (Índigo): Locura (TS Voluntad niega).

- Conjuros de Mago -

Nivel 0

*

Detectar magia: Detecta hechizos y objetos mágicos en 20 m. a la redonda durante 1 min. por nivel o hasta que se pierda la concentración.

Leer magia: Permite leer pergaminos y grimorios durante 10 min. por nivel.

Luz: Hace que un objeto brille como una antorcha durante 10 min. por nivel.

Mano de mago: Telekinesis con hasta 2 kg. hasta que se rompa la concentración.

Marca arcana: Inscribe una runa personal permanente (visible o invisible).

Prestidigitación: Pequeños trucos de manos (cartas, monedas, etc.) durante 1 hora.

Sonido fantasma: Ruidos imaginarios durante 1 turno por nivel.

Nivel 2

*

Escalada de araña: El lanzador puede caminar por paredes y techos durante 10 min. por nivel.

Esfera llameante: 2d6 de daño por fuego durante 1 turno por nivel, se necesita concentración para dirigirla en cada turno.

Flecha ácida: Ataque a distancia (Ataque Mágico, ignora armadura) de 2d4 de daño durante 1 turno + 1 turno por cada 3 niveles; alcance de 100 m. +15 por nivel.

Invisibilidad: El lanzador es invisible durante 1 min. por nivel o hasta que ataque.

Levitar: El lanzador puede ascender o descender a durante 1 min. por nivel.

Llamar: Abre una cerradura o puertas cerradas normal o mágicamente.

Nivel 1

*

Armadura de mago: Otorga al lanzador +4 a la CA durante 1 h. por nivel.

Caída de pluma: Frena la caída de un objeto o criatura durante 1 turno por nivel o hasta aterrizar.

Contacto electrizante: Ataque de toque (ignora armadura) que hace 1d6 de daño eléctrico por nivel (máx. 5d6).

Disco flotante: Crea un disco horizontal de 1,5 m. de diámetro que puede soportar 50 kg. por nivel y dura 1 hora por nivel.

Dormir: Hace que duerman un número de criaturas igual a 4 DG durante 1 min. por nivel.

Proyectil mágico: Rayo de energía arcana de 1d4+1 de daño que impacta automáticamente; proyectil adicional a niveles 3, 5, 7 y 9 (máx. 5); alcance de 30 m. + 3 por nivel.

Nivel 3

*

Clarividencia/Clariaudiencia: El lanzador oye o escucha a distancia durante 1 min. por nivel.

Disipar magia: Cancela hechizos y efectos mágicos.

Bola de fuego: 1d6 de daño por fuego por nivel, 6 m. de radio.

Volar: El lanzador puede volar 20 m. por asalto durante 1 min. por nivel.

Relámpago: 1d6 de daño eléctrico por nivel.

Toque vampírico: Ataque de toque (ignora armadura) que drena 1d6 PG por cada 2 niveles.

Nivel 4 *

Animar muertos: Crea esqueletos o zombies con 2 DG por Nivel.

Ojo arcano: Ojo invisible flotante que se mueve a 10 m. por asalto durante 1 min. por nivel.

Tentáculos negros: Tentáculos que agarran todo en 6 m. de radio durante 1 turno por nivel.

Puerta dimensional: Teleportación a corta distancia.

Polimorfizar: Convierte al lanzador en otra criatura con los mismos DG que su nivel durante 1 min. por nivel, recupera todas las heridas al volver a su forma original.

Piel de piedra: Ignora 10 puntos de daño por ataque durante 10 min. nivel o hasta que haya absorbido su nivel x 10 de daño.

Nivel 5 *

Contactar otro plano: Permite hacer una pregunta a una entidad extraplanar hasta que cesa la concentración.

Debilidad mental: La INT del objetivo baja a 1, no puede hablar ni comunicarse, pensamiento básico.

Nube aniquiladora: Genera una masa gaseosa letal que durante 1 min. por nivel mata a las criaturas de 3 DG o menos, las de 4 a 6 DG deben hacer una TS o morir, las de más de 6 DG reciben daño de FUE.

Pasaje: Crea un pasaje a través de la madera o la piedra durante 1 h. por nivel.

Permanencia: Hace un hechizo permanente.

Teleportarse: Puede teleportar al lanzador a una distancia máxima de 160 km. por nivel.

Nivel 6 *

Campo antimágico: Niega la magia en 3 m. de radio durante 10 min. por nivel.

Contingencia: Coloca una condición para que se active un hechizo durante 1 día por nivel o hasta la activación.

Desintegrar: Ataque de toque de 2d6 de daño por nivel (máx. 40d6), si el objetivo llega 0 PG es desintegrado.

GEAS: Ordena a cualquier criatura entregarse a una tarea concreta durante 1 día por nivel o hasta que se realice.

Rayos en cadena: Ardientes rayos de 1d6 de daño por nivel que emanan de las manos del lanzador, 1 rayo secundario por nivel que hace la mitad de ese daño, alcance de 100 m. + 15 por nivel.

Visión verdadera: Permite ver las cosas como realmente son durante 1 min. por nivel.

Nivel 7 *

Bola de fuego retardada: 1d6 de daño por fuego por nivel, puede posponerse su explosión hasta 5 turnos.

Cambio planar: Permite viajar hasta a 8 personas a otro plano.

Dedo de la muerte: Apunta con el dedo a una criatura, que muere si no pasa una TS de Fortaleza.

Devolver hechizo: Refleja 1d4+6 niveles de hechizo a su lanzador durante 10 min. por nivel o hasta que se agote.

Excursión etérea: El lanzador se vuelve etéreo durante 1 turno por nivel.

Palabra poderosa, Cegar: Ciega a una criatura de menos de 200 PG durante 1d4+1 minutos, permanente si tiene menos de 50 PG.

Nivel 8 *

Atrapar el alma: Aprisiona el alma de la criatura objetivo dentro de una gema.

Clonar: Crea un duplicado que se despierta cuando el original muere.

Danza irresistible: Fuerza a un sujeto a bailar durante 1d4+1 turnos.

Marchitamiento horrible: Hace 1d6 de daño por nivel en un radio de 10 m.

Nube incendiaria: 4d6 de daño por fuego durante 1 turno por nivel.

Palabra poderosa, Aturdir: Aturde a una criatura con 150 PG o menos durante 2d4 turnos.

Nivel 9 *

Atar alma: Atrapa almas de recién muertos para prevenir su resurrección.

Eteridad: Permite viajar al Plano Etéreo al lanzador y sus aliados durante 1 min. por nivel.

Palabra poderosa, Matar: Mata a una criatura de 100 PG o menos.

Portal: Conecta dos planos para viajar o invocar durante 1 turno por nivel.

Proyección astral: Proyecta al lanzador y sus compañeros en otro Plano Astral.

Tormenta de meteoros: Llueven 4 esferas explosivas de 6d6 de daño por fuego.

- Monstruos -

Habilidades: Todas las criaturas tienen un bonificador a sus habilidades igual a sus DG. Si la criatura es inteligente añade +3 a una habilidad. Asigna modificadores por característica según creas conveniente. También se pueden añadir niveles de Clérigo o Mago para lanzadores de conjuros.

Avance de nivel: Para hacer monstruos más fuertes añádeles más DG. Por cada DG añade la mitad de su valor a los PG y un +1 a sus habilidades y estadísticas de Combate. Cada vez que se dupliquen los DG aumenta el dado de daño (d2 / d3 / d4 / d6 / d8 / d10 / d12 / d20). Adicionalmente, se pueden añadir niveles de clase a los monstruos inteligentes a partir de los DG previos.

Crea tus propios monstruos: Asigna una cantidad de DG (d8 para la mayoría, d12 para muertos vivientes y dragones). El bonificador de habilidades y combate es igual al número de DG. Si es una criatura inteligente añade +3 a una habilidad. Asigna bonificadores por característica según creas conveniente.

Alimañas

X

Araña monstruosa (minúscula): DG 1/2d8 (2 PG), CA 15, Mordisco +5 (1d3-4 + veneno).

Araña monstruosa (pequeña): DG 1d8(4 PG), CA 14, Mordisco +4 (1d4-2 + veneno).

Araña monstruosa (grande): DG 4d8+4 (22 PG), CA 14, Mordisco +4 (1d8+3 + veneno).

Araña monstruosa (gigante): DG 8d8+16 (52 PG), CA 16, Mordisco +9 (2d6+6 + veneno).

Escorpión monstruoso (minúsculo): DG 1/2d8+2 (4 PG), CA 14, Pinzas +2 (1d2-4) o Aguijón -3 (1d2-4, Veneno).

Escorpión monstruoso (pequeño): DG 1d8+2 (6 PG), CA 14, Pinzas +1 (1d3-1) o Aguijón -4 (1d3-1, Veneno).

Escorpión monstruoso (grande): DG 5d8+10 (32 PG), CA 16, Pinzas +6 (1d6+4) o Aguijón +1 (1d6+2 + veneno).

Escorpión monstruoso (gigante): DG 10d8+30 (75 PG), CA 20, Pinzas +11 (1d8+6) o Aguijón +6 (2d4+3 + veneno).

Animales

X

Águila: DG 1d8+1 (5 PG), CA 14, Garras +3 (1d4).

Bisonte: 5d8+15 (37 PG), CA 13, Cornada +8 (1d8+9).

Burro: DG 2d8 (11 PG), CA 13, Mordisco +1 (1d2).

Caballo (ligero): DG 3d8 + 6 (19 PG), CA 13, Coz -2 (1d4+1).

Caballo (pesado): DG 3d8+6 (19 PG), CA 13, Coz -1 (1d6+1).

Caballo de guerra (ligero): DG 3d8+9 (22 PG), CA 14, Coz +4 (1d4+3).

Caballo de guerra (pesado): DG 4d8+12 (30 PG), CA 14, Coz +6 (1d6+4).

Cocodrilo: DG 3d8+9 (22 PG), CA 16, Mordisco +6 (1d8+6) o Coletazo +6 (1d12+6).

Cocodrilo (gigante): DG 7d8+28 (59 PG), CA 16, Mordisco +11 (2d8+12) o Coletazo +11 (1d12+12).

Gato: DG 1/2d8 (2 PG), CA 14, Garras +4 (1d2-4).

Jabalí: DG 3d8+12 (25 PG), CA 16, Colmillos +4 (1d8+3).

Lobo: DG 2d8+4 (13 PG), CA 14, Mordisco +3 (1d6+1).

Mula: DG 3d8+9 (22 PG), CA 13, Coz +4 (1d4+3).

Oso negro: 3d8+6 (19 PG), CA 13, Garra +6 (1d4+4) o Mordisco +1 (1d6+2).

Oso pardo: DG 6d8+24 (51 PG), CA 15, Garras +11 (1d8+8) o Mordisco +6 (2d6+4).

Perro: DG 1d8+2 (6 PG), CA 15, Mordisco +2 (1d4+1).

Perro de guerra: DG 2d8+4 (13 PG), CA 16, Mordisco +3 (1d6+3).

Poní: DG 3d8+6 (19 PG), CA 13, Coz -1 (1d6+1).

Poní de guerra: DG 2d8+4 (13 PG), CA 13, Coz +3 (1d3+2).

Rata: DG 1d2 (1 PG), CA 14, Mordisco +4 (1).

Serpiente (constrictor): DG 3d8+6 (19 PG), CA 15, Mordiscos +5 (1d3+4), Constricción (1d3+4).

Serpiente (gigante constrictor): DG 11d8+14 (63 PG), CA 15, Mordisco +13 (1d8+10), Constricción (1d8+10).

Serpiente (pequeña venenosa): DG 1d8 (4 PG), CA 17, Mordisco +4 (1d2-2 + veneno).

Serpiente (mediana venenosa): DG 2d8 (9 PG), CA 16, Mordisco +4 (1d4-1 + veneno).

Serpiente (grande venenosa): DG 3d8+6 (19 PG), CA 15, Mordisco +4 (1d4 + veneno).

Serpiente (gigante venenosa): DG 6d8+6 (33 PG), CA 15, Mordisco +6 (1d6+4 + veneno).

Tejón: DG 1d8+2 (6 PG), CA 15, Garras +4 (1d2-1).

Animales terribles

x

Lobo terrible: DG 6d8+18 (45 PG), CA 14, Mordisco +11 (1d8+10).

Oso terrible: DG 12d8+51 (105 PG), CA 17, Garra 19 (2d4+10) o Mordisco +13 (2d8+5).

Rata terrible: DG 1d8+1 (5 PG), CA 15, Mordisco +4 (1d4 + enfermedad).

Dinosaurios

x

Megaraptor: DG 8d8+43 (79 PG), CA 16, Garras +9 (2d8+5) o Mordisco +4 (2d6+2).

Tiranosaurio: DG 18d8+99 (180 PG), CA 14, Mordisco +20 (3d6+13).

Triceratops: DG 16d8+124 (196 PG), CA 18, Cornada +20 (2d8+15).

Velociraptor: DG 4d8+16 (34 PG), CA 16, Garras +6 (2d6+4) o Mordisco +1 (2d4+2).

Dragones

X

Dragón dorado adulto: DG 23d12+115 (246 PG), CA 30, Mordisco +32 (2d8+11) o Aliento de fuego (12d10, Físicas+DES CD 26 salva mitad del daño).

Dragón plateado adulto joven: DG 19d12+79 (202 PG), CA 28, Mordisco +24 (2d6+6) o Aliento de hielo (10d8, Físicas+DES CD 23 salva mitad del daño).

Dragón rojo joven: DG 13d12+39 (123 PG), CA 21, Mordisco +20 (2d6+7) o Aliento de fuego (10d10, Físicas+DES CD 24 salva mitad del daño).

Dragón rojo muy viejo: DG 31d12+248 (449 PG), CA 36, Mordisco +40 (4d6+13) o Aliento de fuego (18d10, Físicas+DES CD 33 salva mitad del daño).

Humanoides

X

Elfo: DG 1d8 (4 PG), CA 15, Espada larga +2 (1d8+1) o Arco largo +3 (1d8).

Enano: DG 1d8+2 (6 PG), Hacha de guerra +3 (1d10+1) o Arco corto +1 (1d6).

Gnoll: DG 2d8+2 (11 PG), CA 15, Hacha de batalla +3 (1d8+2) o Arco corto +1 (1d6).

Goblin: DG 1d8+1 (5 PG), CA 15, Maza con pinchos +2 (1d6) o Jabalina +3 (1d4).

Halfling: DG 1d8+1 (5 PG), CA 16, Espada corta +3 (1d6) o Ballesta ligera +3 (1d6).

Hobgoblin: DG 1d8+2 (6 PG), CA 15, Espada larga +2 (1d8+1) o Jabalina +2 (1d6+1).

Hombre lagarto: DG 2d8+2 (11 PG), CA 15, Garra +2 (1d4+1) o Maza ligera +2 (1d6+1) o Jabalina +1 (1d6+1).

Hombre-Lobo (forma humana): DG 3d8+7 (20 PG), CA 17, Espada larga +3 (1d8+1) o Ballesta ligera +2 (1d8).

Hombre-Lobo (forma de lobo): DG 3d8+7 (20 PG), CA 16, Garras +5 (1d6+3).

Hombre-Lobo (forma híbrida): DG 3d8+7 (20 PG), CA 16, Garras +4 (1d4+2).

Hombre-Rata (forma humana): DG 2d8+3 (12 PG), CA 15, Rapier +2 (1d6+1) o Ballesta ligera +1 (1d8).

Hombre-Rata (forma de rata monstruosa): DG 2d8+3 (12 PG), CA 17, Mordisco +6 (1d4+1 + enfermedad).

Hombre-Rata (forma híbrida): DG 2d8+3 (12 PG), CA 16, Rapier +5 (1d6+1) o Ballesta ligera +4 (1d8).

Humano plebeyo: DG 1d8+1 (5 PG), CA 12, Daga +1 (1d6+1) u Honda +1 (1d4).

Kobold: DG 1d8 (4 PG), CA 15, Lanza +1 (1d6-1) u Honda +3 (1d3).

Orco: DG 1d8+1 (5 PG), CA 13, Alfanjón +4 (2d4+4) o Jabalina +1 (1d6+3).

Osgo: DG 3d8+3 (16 PG), CA 17, Maza con pinchos +5 (1d8+2) o Jabalina +3 (1d6+2).

Muertos vivientes

X

Esqueleto guerrero: DG 1d12 (6 PG), CA 15, Cimitarra +1 (1d6 +1) o Golpe +1 (1d4+1).

Fantasma: DG 5d12 (32 PG), CA 15, Toque incorpóreo +5 (1d4 y -1d6 FUE, CD 14 FUE para negar).

Gul: DG 2d12 (13 PG), CA 14, Mordisco +2 (1d6+1 + parálisis) o Garras +0 (1d3 + parálisis).

Sombra: DG 3d12 (19 PG), CA 13, Toque incorpóreo +3 (-1d6 FUE).

Vampiro engendro: DG 4d12+3 (29 PG), CA 15, Golpe +5 (1d6+4 y -1 nivel, CD 14 Físicas+FUE para negar) o drenado de sangre (-1d4 FUE).

Wight: DG 4d12 (26 PG), CA 15, Golpe +3 (1d4+1 + drenaje de energía).

Zombi: DG 2d12+3 (16 PG), CA 11, Golpe (1d6+1) o Maza +2 (1d6+1).

Ahogador: DG 3d8+3 (16 PG), CA 17, Tentáculo +6, 1d3+3.

Broza movediza: 8d8+24 (60 PG), CA 20, Golpe +11 (2d6+5), Constricción (2d6+7).

Cocatriz: DG 2d10 (27 PG), CA 14, Picotazo +9 (1d4-2 + petrificación, CD 12, TS Fortaleza niega).

Cubo gelatinoso: DG 4d10+32 (54 PG), CA 3, Golpe +1 (1d6 + ácido 1d6) más deglución (parálisis + ácido 1d6 por turno, TS Reflejos CD 13 niega).

Elemental de aire (grande): DG 8d8+32 (68 PG), CA 18, Golpe +12 (2d8+7).

Ent: DG 7d8+35 (66 PG), CA 20, Golpe +12 (2d6+9).

Estirge: DG 1d10 (5 PG), CA 16, Toque +7 (agarre -1d4 CON, hasta -4 CON).

Gárgola: DG 4d8+19 (37 PG), CA 16, Garra +6 (1d4+2).

Gigante de las colinas: DG 12d8+48 (102 PG), CA 20, Gran garrote +16 (2d8+10) o Roca +8 (2d6+7).

Grifo: DG 7d10+21 (59 PG), CA 17, Picotazo +11 (2d6+4).

Gólem de piedra: DG 14d10+30 (107 PG), CA 26, Golpe +18 (2d10+9).

Gusano carroñero: DG 3d8 (13 PG), CA 17, Mordisco +6/+6 (1d10 + parálisis).

Lamia: DG 9d10 + 9 (58 PG), CA 18, Toque +12 (1d4 Drenaje de INT), Daga +12 (1d6+4), Garras +7 (1d4+2).

Ninfa: DG 6d6+6 (27 PG), CA 17, Daga +6 (1d4) o Mirada (aturdido durante 2d4 turnos, TS Fortaleza CD 17 niega).

Ogro: DG 4d8+11 (29 PG), CA 16, Gran clava +8 (2d8+7) o Jabalina +1 (1d8+5).

Oso lechuza: DG 5d10+25 (52 PG), CA 15, Garras +9 (1d6+5).

Otyugh: DG 6d8+9 (36 PG), CA 17, Tentáculo +4 (1d6 + infección).

Oxidador: 5d8+5 (27 PG), CA 18, Antena +3 (Oxidación), Mordisco +3 (1d3).

Perro infernal: DG 4d8+4 (22 PG), CA 16, Mordisco +5 (1d8+1 + fuego 1d6).

Planta carnívora: DG 8d8+24 (60 PG), CA 20, Golpe +11 (2d6+5), Constricción (2d6+7).

Troll: DG 6d8+36 (63 PG), CA 16, Garras +9 (1d6+6).

Unicornio: DG 4d10+20 (42 PG), CA 18, Cuerno +11 (1d8+8) o Coz +3 (1d4+2).

Wyvern: DG 7d12+14 (59 PG), CA 18, Aguijón +10 (1d6+4 + veneno) o Garras +10 (2d6+4) o Mordisco +10 (2d8+4).

1. Definitions: (a) "Contributors" means the copyright and/or trademark owners who have contributed Open Game Content; (b) "Derivative Material" means copyrighted material including derivative works and translations (including into other computer languages), potation, modification, correction, addition, extension, upgrade, improvement, compilation, abridgment or other form in which an existing work may be recast, transformed or adapted; (c) "Distribute" means to reproduce, license, rent, lease, sell, broadcast, publicly display, transmit or otherwise distribute; (d) "Open Game Content" means the game mechanic and includes the methods, procedures, processes and routines to the extent such content does not embody the Product Identity and is an enhancement over the prior art and any additional content clearly identified as Open Game Content by the Contributor, and means any work covered by this License, including translations and derivative works under copyright law, but specifically excludes Product Identity. (e) "Product Identity" means product and product line names, logos and identifying marks including trade dress; artifacts; creatures characters; stories, storylines, plots, thematic elements, dialogue, incidents, language, artwork, symbols, designs, depictions, likenesses, formats, poses, concepts, themes and graphic, photographic and other visual or audio representations; names and descriptions of characters, spells, enchantments, personalities, teams, personas, likenesses and special abilities; places, locations, environments, creatures, equipment, magical or supernatural abilities or effects, logos, symbols, or graphic designs; and any other trademark or registered trademark clearly identified as Product identity by the owner of the Product Identity, and which specifically excludes the Open Game Content; (f) "Trademark" means the logos, names, mark, sign, motto, designs that are used by a Contributor to identify itself or its products or the associated products contributed to the Open Game License by the Contributor (g) "Use", "Used" or "Using" means to use, Distribute, copy, edit, format, modify, translate and otherwise create Derivative Material of Open Game Content. (h) "You" or "Your" means the licensee in terms of this agreement.

2. The License: This License applies to any Open Game Content that contains a notice indicating that the Open Game Content may only be Used under and in terms of this License. You must affix such a notice to any Open Game Content that you Use. No terms may be added to or subtracted from this License except as described by the License itself. No other terms or conditions may be applied to any Open Game Content distributed using this License.

3. Offer and Acceptance: By Using the Open Game Content You indicate Your acceptance of the terms of this License.

4. Grant and Consideration: In consideration for agreeing to use this License, the Contributors grant You a perpetual, worldwide, royalty-free, non-exclusive license with the exact terms of this License to Use, the Open Game Content.

5. Representation of Authority to Contribute: If You are contributing original material as Open Game Content, You represent that Your Contributions are Your original creation and/or You have sufficient rights to grant the rights conveyed by this License.

6. Notice of License Copyright: You must update the COPYRIGHT NOTICE portion of this License to include the exact text of the COPYRIGHT NOTICE of any Open Game Content You are copying, modifying or distributing, and You must add the title, the copyright date, and the copyright holder's name to the COPYRIGHT NOTICE of any original Open Game Content you Distribute.

7. Use of Product Identity: You agree not to Use any Product Identity, including as an indication as to compatibility, except as expressly licensed in another, independent Agreement with the owner of each element of that Product Identity. You agree not to indicate compatibility or co-adaptability with any Trademark or Registered Trademark in conjunction with a work containing Open Game Content except as expressly licensed in another, independent Agreement with the owner of such Trademark or Registered Trademark. The use of any Product Identity in Open Game Content does not constitute a challenge to the ownership of that Product Identity. The owner of any Product Identity used in Open Game Content shall retain all rights, title and interest in and to that Product Identity.

8. Identification: If you distribute Open Game Content You must clearly indicate which portions of the work that you are distributing are Open Game Content.

9. Updating the License: Wizards or its designated Agents may publish updated versions of this License. You may use any authorized version of this License to copy, modify and distribute any Open Game Content originally distributed under any version of this License.

10. Copy of this License: You MUST include a copy of this License with every copy of the Open Game Content You Distribute.

11. Use of Contributor Credits: You may not market or advertise the Open Game Content using the name of any Contributor unless You have written permission from the Contributor to do so.

12. Inability to Comply: If it is impossible for You to comply with any of the terms of this License with respect to some or all of the Open Game Content due to statute, judicial order, or governmental regulation then You may not Use any Open Game Material so affected.

13. Termination: This License will terminate automatically if You fail to comply with all terms herein and fail to cure such breach within 30 days of becoming aware of the breach. All sublicenses shall survive the termination of this License.

14. Reformation: If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable.

EXPERIENCIA

Frahl the Ogre King

An Adventure for Four 2nd-Level Player Characters

Hook

The Ogre King must be stopped before he completely terrorizes the country-side. The adventurers are asked to find this Frahl and stop his reign.

What's Really Going On

This was originally a pocket mod adventure I found on the Microlite site. I thought the map could use some cleaning up with a lot of the needless hallways condensed and/or removed. The original quest didn't come with any hooks or back plot so DMs can come up with their own hooks to their campaign or just run this as a one off adventure.

Monsters/NPC/Traps

- **Formian Worker:** HD 1d8+1, AC 17, Bite +3 (1d4+1), CR 1/2
- **Zombie, Human:** HD 2d12+3, AC 11, Slam + 2 (1d6+1), CR 1/2
- **Hobgoblin:** HD 1d8+2, AC 15, Longsword +1 (1d8) or Javelin +2 (1d6), CR 1/2
- **Ankheg:** HD 3d10+9, AC 18, Bite +6 (2d6+7), CR 3
- **Choker:** HD 3d8+3, AC 17, 2 tentacles +6 (1d3+3) and constrict (1d3+3), CR 2
- **Ghoul:** HD 2d12, AC 14, Bite +3 (1d8+1 & par) and 2 claws +0 (1d4 & par), paralysis (DC 14), CR 1
- **Ettercap:** HD 5d8+5, AC 14, Bite +3 (2d4+3 and poison) and 2 claws +1 (1d3), poison (DC15) or 1d6 Dex, CR 3
- **Dire Badger:** HD 3d8+15, AC 16, 2 Claws +4 (1d4+2) and Bite -1 (1d6+1), CR 2
- **Frahl (Ogre):** HD 5d8-5, AC 16, Greatclub +7 (1d10+5), CR 2
- **T'saazzk (Ogre):** HD 5d8+10, AC 15, Scythe +9 (2d4+7) CR 2
- **Pit Trap:** 20' deep, find/disable (DC 22), CR 1
- **Poison Needle Trap:** find/disable (DC 22), CR 2

Rooms/Encounters

1. Features: Horn, books, jar, anvil, dome oven and a pillar
2. Features: empty mug, dice, dead insects, flint and tender, loose masonry and a small idol. Door (East) wooden, strong, locked, door (North) wooden, good, locked
3. Features: paint, the corpse of an adventurer and a carving. Door (North) wooden, simple, locked
4. Monsters: 5 Formian Workers hp (8,3,6,8,7). Treasure: 80 gold coins
5. Features: Mysterious stain, scorch marks, iron maiden, fountain, loose masonry. Monsters: 6 Human Zombies hp (14,9,8,23,22,16). Treasure: 45 gold coins. Door (South) iron, locked.
6. Features: Frahl's throne room. Monsters: Frahl (hp 22) and T'saazzk (hp 32). Treasure: 900 gold pieces on Frahl and 4 gp on T'saazzk
7. Features: dead insects, branding iron, spices, moldy carpet. Monsters: 5 human zombies hp(19,20,7,17,19). Treasure: 100 gold pieces. Door (South,1 from west) wooden, simple, trapped(pit trap)
8. Monsters: 6 Hobgoblins hp(5,3,5,6,7,3). Treasure: 160 gold pieces. Door (south) concealed wooden, simple locked, behind tapestry
9. Features: Mysterious stain, small table, firepit, pedestal
10. Features: moldy pouch, flint and tinder, manacles
11. Features: sack, scorch marks, grinder, box, loose masonry.
12. Monsters: 1 Ankheg hp(34). Door (east) wooden, strong, trapped (poison needle trap)
13. Monsters: 1 Choker hp(9). Treasure: 54 gold pieces.
14. Monsters: 1 Ghoul hp(14). Treasure: 140 gold pieces, masterwork dagger (302 gp). Door (south) wooden, good, locked.
15. Features: torch stub, chute, chasm, well, dung heap. Monsters: 1 Ettercap hp(24). Treasure 240 gold pieces, a decorative ring(300 gp), a gold music box (1000gp) A rare book (500 gp). Door (East) wooden, strong, locked
16. Features: some twine, mud, rack, painting and a wall basin. Hidden Treasure Search (DC 22) 140 gp, 2 scrolls; silent image and summon monster II. Door (secret) side-sliding, pressure-plater trigger
17. Monsters: 3 Hobgoblins hp(6,5,4). Treasure: 250 gold pieces.
18. Monsters: 1 Dire Badger hp(24). Treasure: 80- gold pieces.

Outcomes

This adventure is pretty simplistic with very little added detail other than what was generated from the random dungeon generator. This should give you DMs plenty of room to do whatever you want to with this adventure to make it yours. Enjoy it!!

MICROLITE20

THE IRON SKULL

TINY DUNGEON FOR
CHARACTER LEVELS 1-3

BUNKERCLUB55

An Iron Skull is a construct that can take control over minds. All of them were made by an ancient race of sages for some purpose known only to them. This one controls a powerful outsider. When the PCs enter the dungeon it will do its best to kill them and eventually escape the dungeon with a new slave. The outsider is a Fepition, a slender humanoid race from outer planes, now controlled by the Skull.

General

Monsters' tactics: Some

Dungeon Walls: Masonry (Climb DC 15)

Dungeon Floor: Hewn Stone (Balance DC 10 to charge or run)

Temperature: Cold

Illumination: Dark

Room #1

West Entry: Unlocked Good Wooden Door (hard 5, 15 hp) Ceiling Pendulum: CR 3; mechanical; timed trigger; automatic reset; Atk +15 melee (1d12+8/x3, greataxe); Search DC 15; Disable Device DC 27.

The Fepition is hidden close to the west door, he will shoot at PCs as soon as they enter the room, and he will try to make them run towards him, in the middle of the room there is a large pit, every PC will fall in it if they chase him (2D6 damage, ST 15 VS DEX for half damage). After the PCs fall in the pit or if they are spending time avoiding it, he will back in room 2, activating the Pendulum trap (room1) and the needle trap (room 3).

The room is empty.

Room #2

This was a guard room, there are shelves, chairs, a table ...

Room #3

North Entry: Locked Good Wooden Door (Open Lock DC 20, break DC 18; hard 5, 15 hp)

Needle Trap: CR 2; mechanical; touch trigger; repair reset; lock bypass (Open Lock DC 30); Atk +17 melee (1 plus poison); poison DC 14 Fortitude save resists 1D6 Con); Search DC 22; Disable Device DC 17.

This room is empty.

Room #4

This room is a pit 20 ft. deep if the PCs don't pay attention (ST VS DEX DIFF 12) the first of them will fall for 2D6 + 1D6 for the spikes (ST 15 VS DEX for half damage). The fepition will wait invisible in room 6, aiming to the fallen one or to any other injured PC, he is using some furniture as cover and he gets +4 AC. He will shoot at them until they are half way in the room or until he's 50% of his HPs, then he flees in room 8. Walking in the pit causes 1D6 damage every round (it takes 2 rounds to cross the room) or no damage if they pay attention and cross the room in 4 rounds.

Room #5

This is the library, the fepition is waiting invisible, after the Animated daggers attack he backstabs one of the player and fights to the death. The Iron Skull is on a shelf,

there is a lot of other strange objects and books so none of the PCs notice it in the beginning. Now the DM should choose what to do. The first option is just fighting, the iron skull try to possess a PC, they can notice a strange light in the eyes of the skull after each try, they will be suspicious and hopefully they will try to shatter the skull ... or ... the skull lets the PCs kill all the monsters and pretends to be just a treasure since it's a valuable objects (and also magic, but the DM should not reveal the nature of its magic). It will be a silent companion for a while, waiting the opportunity to take control over a PC during a rest. Then only the DM knows what will happen.

Monsters: 1 Iron Skull, 1 Fetiption, 1D6+1 Animated Daggers

TREASURE:

- 20+ 5D20 books, every 10 books one is worth 100gp, the others only 10gp
- 2D6 scrolls of arcane magic level 1-2
- 3D6 mundane objects (3D10 gp each)
- 1 book with the description of the Iron Skulls (it will take a little before the players read it ...)
- a picture of Laura Antonelli in her 30' (50gp)
- 2D6 masterwork daggers (+1 to hit)
- 1 arcane scroll "Animate Dagger"
- the iron skull (500gp)
- the strange 2h sword of the feiption deals +1 extra damage (750gp)

Room #6

On the North wall there is the lever closing the pit in room 4. When the PCs are in the middle of the room a bunch of animated daggers will attack.

Monster: 1D6+1 Animated Daggers

Room #7

A kitchen ...

Room #8

The feiption waits hidden and protected by crates (+4 AC) in the W door shooting at PCs entering the room, then he flees in room 5 and uses the last invisibility.

MONSTERS

ANIMATED DAGGER (N)

HD1 (5 hp), AC15 Hardness 5, natural (!?) +2 (1D4)

Flying daggers. An arcane spell caster can create Animated Daggers with a 4th level spell. "Animate Dagger" creates a dagger that guards a place against intruders, it's permanent, a magi can have one animated dagger for each class level. The spell requires a masterwork dagger.

FETIPTION (NE)

HD3 (22hp), AC15, 2h sword +6 (2D6+3), Short Bow +4 (1D6)

Ruthless bounty hunters and assassins from other planes. They hunt in groups of 1D6+1 individuals. They can cast invisibility 2/day. They are smart hunters and torturers.

IRON SKULL (LE)

HD2 (15hp), AC10 Hardness 5, attacks none

Looks like a solid metal skull. It can cast at will charm (DC 16), if succeeded it can control the body as it was its own. The Mye can use any skill that the host creature knows. It can take control of 1 creature at time. The skull is specially made to be almost indestructible. They are cunning and very intelligent creatures (MIND 15-18). No one knows how to make new ones, stop asking.

ENDING

Was the Fetiption summoned or his band is still around?

Are there others Skulls?

What does the Skull want? Power? Build an iron body? Knowledge? Resurrect the sages?

Fetiption is generated with Greywulf's critters generator (only few changes), and the dungeon map is made with donjons' dungeon generator (with some changes).

The Temple of K'thu'uk

A Microlite20 adventure suitable for four 1st level adventurers.

Not so long ago the hill and environs was home to one of the stranger Kobold tribes of the realm. The entire area was deeply forested, and the Tribe of K'thu'uk held sway. These Verdant Kobolds called the tree branches their home, worshipping the bones of their Green Dragon ancestor in their whistling, chirping language.

Then the humans came. They tore down much of the woodland to build their farms and villages. The Tribe of K'thu'uk fought back as only they knew how, erecting ingenious traps along forest paths, luring hunters into deadly swampland and planting assassin vines and slumberspores where humans were likely to tread.

The humans grew to fear the Forest, and reacted in the way all Humans respond to things they fear. They destroyed it. Much of the forest was taken by fire leaving a vast tract of ash that has only become usable farmland in recent years. What remains of the the forest nestles atop the hill surrounded by a river – a fortunate defence against the flames, and the Verdant Kobold's saviour.

Hidden in the copse is a cave mouth underneath a rock outcropping shaped like a dragon's jaw. This is the entrance to the Temple of K'thu'uk, now the Verdant Kobold's home and holiest of holies.

You have been asked by the Sheriff of Ashton (the closest Human Village) to clear the Kobolds from the area once and for all. Behemial Shoreson, one of the villagers, was killed in the Trapped Copse just a week ago. Enough is enough.

You are promised 15gp for each Kobold head returned to the village square by midnight three days' hence. In addition, any treasure found in the Copse is yours to keep. Ashton is a small village with just one tavern (The Burning Oak) and a small shop that is able to supply anything up to 20gp in value from the **Microlite20**

Equipment List.

Entering the Trapped Copse

The copse is clearly visible and easily reached in just a few hours after leaving Ashton. There are a number of hunter's trails through the copse, though these are regularly trapped by the Kobolds. Roll 1d6 three times on the following table before the Temple entrance is reached:

1. A **Small Assassin Vine** lays across the path. Search DC15, otherwise it gets a free attack on one random character. **EL2**
2. **Slumberspores** block the way. They look like small round purple heather bushes, and are quite common. Touching them induces sleep and can cause a lung infection. **EL1**
3. **Pit trap**, 10' deep (1d6 fall), Avoid DC20, Search DC24, Disable DC20. **EL1**
4. **Net trap**, +5, Avoid DC20, Search DC24, Disable DC25. **EL2**
5. **Springback branch**, +5 (1d4), Avoid DC15, Search DC20, Disable DC20. **EL1**
6. **Poison dart trap**, +8 (1d4 +poison -1STR/-1d4STR), Search DC20, Disable DC18. **EL1**

Note that Avoid checks are (phys+DEX); Search/Spot checks are (know+MIND); Disable checks are (sub+DEX). To save vs. poison roll (phys+STR) against the DC for primary then again 1 minute later against secondary effects.

In addition, the characters will hear or spot (DC20) lizardlike creatures swinging from branch to branch in the foliage. By the time they have chance to react however, the Kobolds have disappeared.

The Temple Entrance

The entrance to the Temple is easily found; a stone outcropping shears out of the ground like a lunging dragon's maw. It is covered in a luminescent moss which gives it an eerie glow in the forested gloom. Beneath the outcropping is a small cavemouth barely 5' high.

It is not trapped in any way – but do not tell the players that! Let them search. This is intentional deception designed to inflict paranoia on unwelcome visitors. A stone tunnel leads downward to a battered wooden door. There is a grill set in the wood about 3' from the ground.

All doors are made of very old, almost rotten wood (12hp) and closed but not locked unless otherwise specified. The walls of this temple are covered in patches of phosphorescent moss giving gloomy lighting to a 10' radius. This is in itself a Kobold trap – roll (phys+STR) DC12 each hour or take 1 STR damage from spore inhalation. Anyone who takes more than 3 STR damage develops a noisy dry cough making hiding or moving silently difficult (-4 penalty). The Kobolds are immune to it's effects. This damage heals when out of the Temple at a rate of 1STR/week.

Random Encounters

While in the Temple, roll 1d6 per hour. On a 6, roll 1d6 on the following table. Assume these creatures arrive through the network of small tunnels (see Room 10)

- | | |
|-----|----------------------------------|
| 1-2 | 1 x Verdant Kobold - EL1 |
| 3-4 | 2 x Dire Rats - EL2 |
| 5 | 1 x Small Alligator - EL2 |
| 6 | Roll Twice |

Room 1 - EL3

Gnarled tree roots hang from the roof of this large chamber. On a

raised dais in the centre is a huge statue of a headless dragon; it appears carved from one solid lump of jade. The tree roots hang and loop around its neck and outstretched wings. Scattered on the floor of the chamber are tree saplings in pots, and pools of water gather in the corners.

Four **Kobolds** are tending the saplings; they have advance warning of the adventurers' approach and are hiding among the sapling with their spears and slings. The DC to Spot them is 16 each.

Exits: Two south, two north, one west

Treasure: Kobold equipment, jade dragon statue (worth over 600gp if it could be moved)

Room 2 - EL2

Overtaken barrels, tent canvas and chests mark this as a store room – and a very disorganised one at that. The mess from the east side of the room has been pushed aside to make room for a rough firepit and rags cover a seating area. There's a smouldering fire in the pit and the charred remains of some woodland creature.

Two **Kobolds** are fighting over the food and don't notice the PCs at all.

Exits: One north, one west (to a privy), two east

Treasure: sundry items – mainly canvas and travel goods

Room 3 - EL3

Rags adorn the floor, some covered in blood from – well, it's better not to know where the blood came from.

Four huddled **Kobolds** are sleeping off their night scouting the forest and will only notice the PCs when they're almost on top of them. Award no EL if the Kobolds are killed without a fight.

Exits: One north, one south, one east, one west

Treasure: Nothing of worth

Room 4 - EL4

Rough sketches of traps and maps of the forest cover the walls. A large table surrounded by chairs and upturned barrels is littered with parchment, lumps of charcoal and small models made of wood and twine.

Two **Kobold Elders** lurk in the shadows; these are the most

experienced trap setters in the tribe and have earned their position of leadership. Spot DC20; they are hidden behind barrels at opposite sides of the room and will fire at the backs of anyone who approaches their opposite number. Good luck smoking them out!

Exits: One west, one south

Treasure: The maps, sketches and models are worth about 200gp to cartographers, trapmakers and enemies of Kobolds everywhere

Room 5 - EL3

The floor is a morass of mud and still water. Small patches of plant life float on the foetid surface. Two **Small Alligators** twist as you enter and slide into the water and approach.

The water is only 4' deep, so can be waded with caution by anyone but the shortest halfling. If both Alligators manage to bite the same character they will try to pull their victim in – roll (phys+STR) DC20 to resist. Anyone in the water is at -2 to attack.

Exits: One south, one east

Treasure: Submerged a third of the way into the room is the skeleton of a dwarven cleric, still clutching his Masterwork Warhammer. A *Circlet of Protection* (+1 AC) adorns the skull.

Room 6 - EL3

A voice shouts as you open the door: "Stop, fiends and bow before the might of K'thu'uk , the Dragon Who Will Come Again!". A clearly crazed Kobold wielding a green spear and facepaint points to a tapestry depicting a Green Dragon being beheaded by an Elf. This is **Klaldyk**, High Priest of K'thu'uk. He begins to gesture wildly.....

Exits: One west (covered by the tapestry), one north

Room 7 – EL4

Just in front of the entrance to this room is a 15' pit trap. Avoid DC20, Search DC24, Disable DC20. Anyone falling in takes 1.5d6 damage. All the walls of the pit are covered in wooden spikes angled sharply downward; anyone trying to climb out will take 1d4 damage per round, (phys+DEX) DC20 for half.

In the centre of this room is a large raised dais, around which are six stone pillars carved in an intricate leaf pattern. Lit torches set in the walls lick patterns across the floor. Resting on the dais is a large dragon skull covered in moss.

As the players approach, the skull lifts from the ground, it's eye sockets glowing with a baleful green pulse. Words echo through the room: "You dare defile my Temple?! You shall die!". **K'thu'uk's Skull** lunges toward you, it's teeth dripping venom.....

Exits: One south, one east.

Treasure: At the end of the eastern corridor are three sacks. These contain the remains of K'thu'uk's treasure: 80gp, 600sp and three jade figurines (carved likenesses of the green dragon from Room 1) worth 120gp each. There are no traps.

Room 8

Warm mist laces the air, and plants fill the room.

Among the plantlife nestles 2 **Slumberspores** and a nearby **Assassin Vine**. Spot DC15 to notice each; (phys+DEX) DC20 to avoid contact with the Slumberspores. The Assassin Vine will attempt to constrict anyone who falls asleep.

Exits: Two north, one east

Room 9

Spilled soil and plant pots litter the ground. There is a distinct scent of plants and moisture in the air and a feeling of quiet solitude.

Exits: One east. Unlike the other rooms, this door is quite sturdy and can be latched shut from inside; stress that this room may be a safe place for the characters to rest. Roll no random encounters while they are here.

Room 10 – EL variable

There is no Room 10 displayed on the map; This is a network of tiny passageways that criss-cross around, above and underneath the other Temple rooms. These are inaccessible to any but the smallest adventurer (a halfling might *just* be able to pull themselves along on their knees and elbows). These tunnels are too small for Kobold Elders to enter, and Klaldyk (see Rooms 6 and 7) will not demean himself by using them. There are usually 1d10 Kobolds in the tunnels at any point in time.

Room 11 – EL3

The sound of scuffling alerts you to activity as you approach the room. Three **Dire Rats** are exploring the contents of this store room; most of the food and drink is spoiled though you might be able to salvage something.....

Exits: One south, one east

Treasure: 20' good rope, various gardening implements, a serviceable Leather tunic that will serve as armour (+2 AC) and, hidden in an old box (Search DC25) is a *Shortsword* +1 that has been used to make seed holes by the Kobolds.

Room 12 - EL4

Rough planting tables line the walls, stacked with pots, soil and sundry implements.

Hiding under the tables are two **Kobolds** and a **Kobold Elder**. They will stay there until Spotted (DC20) in which case they will use their slings and small crossbow to good effect.

Plot Twists & Options

1. The Verdant Kobolds did not cause the death of Behemial Shoreson. He was killed by the Sheriff, a wealthy landowner who wishes to expand his holdings into the Copse. The Kobolds just wish to be left alone while they attempt to resurrect their Dragon God
2. The Kobolds are under the sway of Symathrae, an evil river Nymph who almost died as a result of ash infecting her river. She wishes to lure more Humans to the copse in order to exact her revenge. K'thu'uk knows nothing of this.
3. K'thu'uk was a powerful druid in life; use the Druid spell list from the SRD for the skull's magic, maximum spell level 2. K'thu'uk's preferred spells are *Guidance*, *Produce Flame* and *Summon Nature's Ally II*.
4. K'thu'uk could be negotiated with. He wishes only to be left alone while the Kobolds work toward returning him to life. He was a Neutral Mage (or Druid) in life, working for the good of the forest with his Kobold assistants. His death occurred before the first human settler set foot on this land. Though the taint of Undeath has turned him toward Evil, it is targeted at the Warped Elves to the North; he believes some of his bones remain with that tribe. Find and return them to him and he swears humans will be safe from then onward in the Trapped Copse.
5. To increase the difficulty of this adventure: add **Winged Kobolds** and more **Kobold Elders**.
6. To decrease the difficulty: remove two **Kobold Elders** and one **Small Alligator**. Roll Random Encounters once every 2 hours.

Monsters

Verdant Kobold, HD1d8 (4hp), AC15, Spear +0 (1d6-1) or Sling +2 (1d4)

STR 8 DEX 12 MIND 12, subterfuge +4, all other skills +1

Winged Kobold, HD2d8 (8hp), AC15, Spear +1 (1d6) or Sling +2 (1d4). Able to fly.

STR 8 DEX 13 MIND 12, subterfuge +5, all other skills +2

Verdant Kobold Elder, HD3d8 (12hp), AC15, Spear +2 (1d8-1) or Small Crossbow +4 (1d8)

STR 9 DEX 13 MIND 13, subterfuge +6, all other skills +3

Klaldyk (Verdant Kobold Cleric-2), HD1d8+2d6 (10hp), AC15, Spear +2 (1d6-1).

Divine magic, max level 1. Preferred spells: *Guidance* and *Shield of Faith*.

STR 8 DEX 13 MIND 14, communication +6, all other skills +3

All Verdant Kobolds have a +4 bonus to Climb (Phys+DEX) checks.

K'thu'uk's Skull, HD4d6+11 (26hp), AC16, Bite +6 (1d8+2 plus acid, 1d4/round for 1d4 rounds, (phys+STR) DC20 for half).

Arcane Magic, max level 2. Preferred spells: *Guidance*, *Prestidigitation* and *Magic Missile*. Undead traits.

STR 14 DEX 16 MIND 16, communication +7, all other skills +4

Dire Rat, HD1d8+1 (5hp), AC15, Bite +4 (1d4 plus disease)

The Bounty of Valanunthe

The Laughing Dragon Inn

After finding Fonkin, the party returns back to Dale and the Laughing Dragon Inn. There they find the townsfolk gathered in celebration of the return of their beloved gnome. Its obvious Fonkin is uncomfortable with all the attention and is glad when the applause turns to the adventurers when they walk through the door. When things turn back to some semblance of order the group sees Fonkin head off to a more private area of the tavern and joins him there. It is here where they get the reason why they found Fonkin where they did.

Fonkin: A few days ago somebody broke into my home and stole a very valuable artifact from me. I knew right away it was missing and had a pretty good idea of who it was that stole it. I had an apprentice by the name of Valanunthe that had recently left my services and I believe she came back and stole this item. I cast a spell to locate the item and it led me to the ruins in the forest. When I got there I saw some footprints and I knew she had went in. I managed to keep out of sight while I did my best to track her in the dungeon but was unable to break the enchantment on the door in the room you found me in. I believe it heads down to an even lower level and I am hoping to find her there. However its obvious that I'm getting too old for this kind of work and I was hoping you would go and rescue this item for me and as much as it pains me, bring back Valanunthe, dead or alive. I will pay you a bounty of 800gp alive or 300 gp dead. I need to know what she knows so alive if possible.

Stolen Item: Amulet of the Mighty Fist +2 STR This item grants a +2 to the wearer Strength Stat while its worn.

During this time Johnne Wolfsbane will come into the room carrying a package. Its some of the adventuring gear that belonged to his wife and Axiel's mother. +2 Robes and the Orb of Light (30' of continuous light) that mounts on the end of a quarter staff. Fonkin will also present her (the Wizard) with a Scroll of Knock capable of opening the magically locked door to the second level (Will always open that lock, no DC required)

Room 1 (20' x 30') Encounter: EL 4

- **South Door:** Wooden, Simple Unlocked
- **Monsters**
 - 2 Troglodytes HP 13, 6 (HD 2), AC 15, Attack Longspear +1 Melee 1d8
- **Treasure**
 - 40 Gold Pieces
 - masterwork composite Mighty Crossbow +1 Str Bonus
- **Description:** You get the feeling that the two troglodytes in this room weren't here by chance, its possible Valanunthe is surrounding herself with some protection.

Room 2 (30' x 40')

- **West Door:** Wooden, Simple Locked
- **Description:** This room contains a large cupboard against the south wall and above it is a candelabra with candles that look recently used. Inside the cupboard is an empty pouch and what appears to be some sort of trophy.

Room 3 (20' x 30')

- **North Door:** Wooden, Simple Stuck
- **Description:** This room is completely empty although it looks to have been recently maintained, there is very little dust on the floor.

Room 4 (20' x 20') Encounter: EL 4

- **West Door:** Wooden, Simple Unlocked(free)
- **Monsters:**
 - 2 Duergar HP 10, 10(HD 2), AC 17, Attack Battleaxe +2 Melee 1d8 or Attack Crossbow (Light) +2 Ranged 1d8.
 - Attack: One Duergar will rush the door to engage the party while the other fires the crossbow. He will fire two rounds before closing to melee
- **Treasure:**
 - 30 Gold Pieces (on Duergar), Notice
- **Description**

This room looks like it was being set up as an impromptu rest area for the two duergar here. There are bedrolls in the corner and what looks to be dirty plates laying next to them. If the Durgar are searched, a notice will be found advertising for mercenaries, the note specifically says 'See Valanunthe at the Minstrel's Flask for details'.

Room 5 (30' x 40')

- **East Door:** Wooden, Strong Locked
- **Description**

It looks as if another adventurer made his untimely demise here in this room. It doesn't appear as if the body has been here that long. There is a sconce in the wall with the torch still lit and a small altar in the northwest corner.

Room 6 (40' x 40') Encounter: EL 2

- **South Door:** Wooden, Simple Stuck
- **Monster**
 - *Monstrous Centipede, Large 12 HP (2HD) Attack Bite +3 Melee (1d8+4 Plus Poison)*
- **Treasure**
 - *800cp among the refuse*
- **Description:** *The collapsed hole in the north corner gives away how this creature ended up in this room. There is some refuse against the walls and if it is searched will reveal 800 copper pieces.*

Room 7 (30' x 50') Encounter: EL 3

- **West Door:** Wooden, Simple Locked
- **Monster**
 - **Valanunthe:** 20 hp (3HD) , AC 15, Attack +4 Longsword(magic) (1d8 + 4), +1 Ranged Composite Longbow (1d8+2)
Attack: *Valanunthe will know you are coming. She will be in the SE corner and will get two ranged attacks on the first character through the door. She will then switch to Melee and close on the party (normal initiative applies). As she attacks she will whisper a word and touch the blade, causing it to faintly glow(+4 to attack and damage)*
- **Treasure**
 - *900 gold pieces (on Valanunthe)*
 - *The Amulet of the Mighty Fist (on Valanunthe)*
 - *Note [see appendix] (on Valanunthe)*
 - *64 gold pieces (in room)*
 - *gemstone worth 7gp (in room)*
- **Description**

This is the room that Valanunthe has set up as her own. There are several books scattered all over the floor, and a small cot against the east wall. There is also a weapons rack here but it is empty.

Room 8 (20' x 20') Encounter: EL 3 Trap: EL2

- **West Door:** Wooden, Simple Locked
- **Trap:** 40' Pit Trap at Door (CR2) Find DC 21, Disable DC 21, Avoid DC 20, 4d6 damage
- **Monster**
 - Bugbear 16 hp (3 HD), AC 17, Melee +5 Morningstar(1d8+2), Ranged +3 Javelin(1d6+2)
- **Treasure**
 - 170 gold pieces
- **Description:**

From the fight with the bugbear living here, you can understand why he was off on his own. The room is full of broken furniture, rags and an ancient iron maiden in the corner. The room is also slightly uneven, giving one side a sunken appearance.

Room 9 (50' x 40')

- **South Door:** Iron, Stuck
- **Description:**

It looks like something is living here but isn't at home. There is some fuel oil and pot in here as well as straw bedding with a crate next to it. The north wall has a small recess in it but it appears to be empty. You also notice a lever on the south wall in the up position.
- **9a Special:**

This lever opens up a secret door leading to Valanunthe's room. It also alerts Valanunthe that the door has been opened so she will be aware.(description: You hear a faint rumbling sound as if something large is sliding against the earth.)

Area 9b Trap: EL 1

- **DM Note:** This is the secret door that is opened from the lever in Room 9. This door cannot be detected and can only be opened by pulling the lever.
- **Trap:** Arrow Trap (CR1) Find DC20, Disable DC20, Atk +10 X 4 arrows (1d6 damage per arrow) a pressure plate in the hall immediately to the south of the door will set off the trap. Anybody in the line of site will have to roll against it to see if they are hit, +5 means they dodged the arrow and the person behind will also have to roll to see if they are struck.

Room 10 (50' x 30') Trap: EL 3

- **North Door(west):** Wooden, Simple Stuck (trapped)
- **North Door(east):** Wooden, Simple Unlocked
- **Trap:** Burning Hands (CR3) Find DC21, Disable DC21, Save DC11 (half damage), 5d4 damage
- **Description:**

This room looks like it recently had an occupant. There is a pair of boots on the floor and oddly a hat rack in one corner. There is also an odd stain on the floor near the west door.

Room 11 (30' x 40')

- **West Door:** Wooden, Strong Stuck
- **Description:** Empty. There is nothing in here.

Room 12 (40' x 40') Encounter: EL 5 Trap: EL 2

- **West Door:** Iron, Locked
- **Traps:** 40' Pit Trap at Door (CR2) Find DC 21, Disable DC 21, Avoid DC 20, 4d6 damage
- **Monsters**
 - 3 Kobolds 8,8,5 hp (HD1), AC 15, Melee + 1 Spear (1d6), Ranged +3 Sling (1d4)
 - 2 Kobold Champions 11,12 hp (HD2), AC 17, +3 Melee Short sword (1d6 + 3)
 - **Attack:** The smaller Kobolds will stay as far back as possible firing their slings while the two larger kobolds close to attack. They will not fight melee until the champions are dead.
- **Treasure**
 - 170 gp in a chest against the east wall
- **Description**

It appears that this group was hired as the master trap makers. There is various items for trapmaking in this room, although none of it looks like anything you could figure out. The kobolds have a chest against the east wall.

Encounter 1 (what are you doing here?) Encounter: EL 6

- **Monsters**
 - Hobgoblins(4): 8,10,10,9 hp (HD 2) AC 15
 - Attack Longsword +2 Melee (1d8+1)
 - Attack Javelin +2 Ranged (1d6+1)
- **Encounter Info:** It appears that you have surprised these hobgoblins as they were coming out of this door (+2 to initiative), they seem relaxed and are startled that your not somebody who should be here.

Encounter 2 (Ambush!) Encounter EL 3

- **Monsters**
 - Orcs (4): 4,3,9,4 hp (HD1), AC 13
 - Attack Greataxe +3 Melee (1d12 +3)
 - Orc Archers (2): 3,4 hp(HD1), AC 13
 - Attack Longbow +1 Ranged (1d8)
- **Encounter Info:** These orcs must have heard the noise from the room because this patrol knows your coming. (The two archers will get automatic initiative and will fire from behind the 4 orc fighters. Once the first volley is loosed, roll for initiative as usual).

Encounter 3 (Sappers) Encounter: EL 3

- **Monsters**
 - **Goblins (5): 5,4,5,8,7 hp (HD1), AC 15**
 - **Attack Morningstar +2 Melee (1d8)**
- **Encounter Info:** These goblins will be around the corner from the long hallway . When the party is within 60' feet they will hear loud pounding and other assorted sounds associated with construction. Because the goblins are actively working on expanding the dungeon they won't hear the party and the party gets +3 initiative. After the fight the party will find assorted digging tools.

Appendix

Note found in Valanunthe's possession

Valanunthe,

The ruins to the west of dale will make a fine staging area in our recruitment of mercenaries. Besides a few houseguests the place is all but empty and has the room to house a few 100 of our new found friends. I also have Girck rounding up as much goblinoid recruits as he can from the local countryside. There is a small abandoned keep to the east of you that will be soon be ours as well. However its taken Girck longer than I expected to send me word of the 'all clear'. Once you have a base established here, send scouts to the keep.

Zulfer t

Conclusions

If Valanunthe is brought in alive, she will be taken by the Commander of the Watch to the nearby garrison and Fonkin will pay you the full bounty as promised when you meet back with him at the Laughing Dragon Inn. When you go to return the Amulet of the Mighty Fist to him, he will smile and say that he truly feels that the party will make better use of it then he will and will 'lend' it to the party for as long as they have need of it. If the party searched Valanunthe and found the note in her possession they can ask Fonkin about Zulfert. If they did not find the note, the Commander will come bursting into the Inn right after the exchange about the amulet and will present Fonkin with the Note to see if he can make sense of it. Both exchanges will result in Fonkin offering this information about Zulfert.

Fonkin: Many years ago in the Dark Valley, a castle was built. It wasn't built to house a Lord or an Army, it was built as a place of learning for those interested in the Arcane Arts and it was called 'The Wizards Keep'. It was ran by a group of powerful wizards called the Triton who wanted to share what they knew with eager young minds. For years the school was a place of wonder, and people came from far and wide to learn what they could from these wise instructors. *In fact your mother (points to Axiel) was a student there for a few years, although she was a bit too wild for the likes of those stodgy old wizards (Fonkin smiles a sad smile to himself as if reliving an old memory before continuing the tale).* The school prospered under the wizards' tutelage until the year they took in a young apprentice named Zulfert. Rumor says he was proud and arrogant and felt there was more to learn then he was being taught. He chafed under the Tritons rules of what magic should and shouldn't do and secretly began reading the spells and scrolls the wizards kept locked away. I was told he was a charismatic fellow and soon he had a group of likeminded wizards following his every word. When the Triton found out that Zulfert had been reading the forbidden scrolls they decided enough was enough, it was time for him to leave. When he got wind that he was being expelled, he gathered his friends around him, thinking they had the power to take on their instructors and bring in a new order in the school. The ensuing battle was epic with wizards joining in on both sides of the fray while others found the quickest way out the door to escape the mystical battle within. In the end Zulfert and his minions were defeated but at tremendous cost. The Castle was devastated and untold lives had been taken on both sides. The wizards that formed the Triton were aghast at what had occurred and how their dream had turned into a nightmare. They left the Keep, never to return. It is said that Zulfert's remains were never found either and that some loyal henchmen of his had dragged the body away. Now it appears that maybe the wizards never finished the job and that he still exists out there. The question is what does he want with us and why now.

Unfortunately Valanunthe's capture does not lend more information. It seems she is under some powerful geas to remain silent about her plans and no spell can break it.

If Valanunthe is killed during the adventure, Fonkin will only pay the minimum he stated for the bounty. He will also be less inclined to give the Amulet of the Mighty Fist to the party because in some way he will be saddened by her death. (Base Rate is DC13 unless he can be bluffed). Since Valanunthe will have most likely been searched after her death, the adventurers will have the note and questioning Fonkin about Zulfert will have him recite the statement above.

MAP

The Bounty Of Valanunthe

The Kappa Scourge

Introduction

How the group hears about a fisherman murdered by turtle demons, a shortage of Hideo's Poultice which is used to protect the boats, and how is drawn into a fight between bandits, cultists, and monsters.

Kappa have attacked the fishermen in Nikko and hurt FUCHIDA Nori badly. He dies of his rotting wounds within hours of the attack. His body is cremated, a sacrifice is made to Kawa No Kami at the little shrine. His wife and two daughters cry all day, for not only has their loved one passed away, things being as they are, they will probably end their lives in poverty unless something is done.

Bonus points (1 EL) for players who find a creative solution for the FUCHIDA family to earn their livelihood. Escorting them to Hakone where FUCHIDA Ayame's sister TAKISHITA Hanae lives would be an option; offering to marry her would also be an option. (Although such a solution would imply that a certain amount of money be paid every month.)

The Village

On the way to Hakone, the party happens upon the remains of an assault. There are tracks to be followed that lead to the hide-out of Musashi, a newly arrived robber from Akaki. An evil agent tries to use the party to replace the notorious bandit.

The village has a little wharf with three boats used by fishermen. Behind the village is a small lake fed by three streams, the black, white, and purple Kako. The village itself is defended by a stream coming down from Gassan mountain, little Yukawa. It flows around the southern edge of the village, forming a natural barrier. A frail bridge leads across the Yukawa into Nikko itself. At the right side before crossing the bridge, there's a shrine to the river god Kawa-no-kami.

In all, the village consists of about ten houses housing about thirty males able to bear arms plus wives and children. There's a simple teahouse with two rooms on the upper floor and a raised corner for richer clients. At night, there will always be at least five or six men at the teahouse, drinking, talking, and gambling.

It turns out that there is not enough of Hideo's Poultice to go around for all three fishing boats anymore. The richo of Nikko, Jumonji Kazu, asks the party for their help: Get message to the richo of Hakone and ask for more poultice, then bring it back as fast as possible.

Help is Needed

The richo of Nikko is desperate. He needs help. The boats of fishermen, the local bridges, and the moorings are usually protected from the terrible rotting kappa touch by a secret poultice distributed by the provincial government. The supply has been dwindling, but a plea for help has been ignored by the neighbouring village of Hakone down river.

Would the party travel downstream along the Kako river to Hakone and ask for help, and hopefully bring back new supplies?

Unfortunately, using a raft would seem a dangerous idea in such troubled times.

On the River

Should the party choose to travel by raft, it will be attacked by a kappa who overturn and perhaps even smash their boat or raft.

The turtle demons believe that humans are encroaching on the rivers, lakes, and swamps that are rightfully theirs. The kappa will attack furiously, trying to take down as many humans as possible before escaping back into the water. If they are unhurt in the water, they'll attempt to grapple with their foes. If stunned opponents are not freed within four rounds, they drown.

HP 4d6+15, AC 17, Atk claw +4 (2d4+2 and save Phys+DEX vs. the attack roll or be stunned for 1d4 rounds; alternatively, no damage and save Phys+STR vs. DC 15 or be slowed for seven rounds). CR 3½.

On the Road

How the party reaches the site of a slaughter and finds the bandit's lair.

On the way to Hakone, the party happens upon the remains of an assault on people coming the other way. There's blood on the ground, two dead bodies, nothing of value left behind. It seems that there was quite a struggle, and that not all the victims were killed.

As the party searches the two remains, there's a reluctant "Help! Please!" to be heard. Behind some bushes lies Tori.

Tori

This traveller had joined a delegation from the richo of Hakone to travel to

Nikko and on to the Gassan shrine. On their way they were attacked by the notorious bandit Musashi who killed two soldiers and took away two others, the bureaucrat Sayuki and the young ONISHI retainer Koto.

If asked why he knew the bandit's name, he says he overheard them say it, and he knows that there was once a bandit of that name in the neighbouring province of Akaki, driven out by the warlord Taira no Hitoshi. He is said to rule the province with an iron fist en lieu of the provincial governor.

Tori will recover quickly from his wounds and wants to go and drive Musashi out of his new hideout. This would be the honorable thing to do, earning the gratitude of the richo in Hakone. He will also hint at the treasures Musashi must be guarding.

Following the bandit's trail to Musashi's lair is not too difficult, once you know what you are looking for.

Tori, cleric 3, STR 12/+1, DEX 12/+1, WILL 16/+3, Comm +6, others @ +3, HP 23, AC 11 (no armor), Atk +4 (1 unarmed), CR 3.

He claims to be the son of a priest from a southern town, able to wield a club but unschooled as a fighter. He will not use his spell where the party can see it until the very end. Preferred spells: Inflict Wounds (1d8 or 2d8 +3), Magic Stones (3x 1d6+1 using Atk +4), Bull's Strength (STR +4 for three rounds), Summon Spider II (HP 2d8+2, Init +3, AC 14, Atk +4 for 1d6 bite + poison DC 12 or loose 2x 1d4 STR).

This nasty fellow is an agent of evil, having convinced first the kappa and now the party to attack the bandits in order to weaken Musashi. His plan is to try and convince the bandits that they would do well to erect a shrine to Kayutsuchi, the god of fire. All he needs to do is to kill Musashi and take his place. At the same time he cannot allow the group to reach human settlements lest they call for help before his hold on the bandits has grown strong enough.

Tori will fight honorably with the party until Musashi is dead, if provided with weapon and armour. If the party does not help out, he'll tag along, trying to keep an eye on them, calling upon kappas to attack them if they are moving in the wrong direction. If the party is forced to flee from the kappa onslaught, he'll direct the party to the bandit's lair. If the party manages a peaceful agreement with Musashi against the kappa, Tori's next move will be the assassination of Musashi while the kappas attack.

When Musashi is dead, Tori will use his magical powers to convince the bandits that he's here to help, and he'll use them to attack the party, if possible.

Remember: In any combat, Tori will be in favor of taking prisoners instead of killing the bandits! He'll accept any surrender, planning to use these poor fellows

Rear Guard

If the party is very fast, or by the time the old Kaku castle ruins are reached, it

is possible to fight the rear guard. He has been delayed and will be unable to call for help. If he escapes and makes it to the bandit's camp, however, they will be warned and well prepared. This will mean that three of them will be hiding in the trees, shooting at the party with their yumi, while the others are hiding in the bushes, ready to sneak up and backstab any party members passing by.

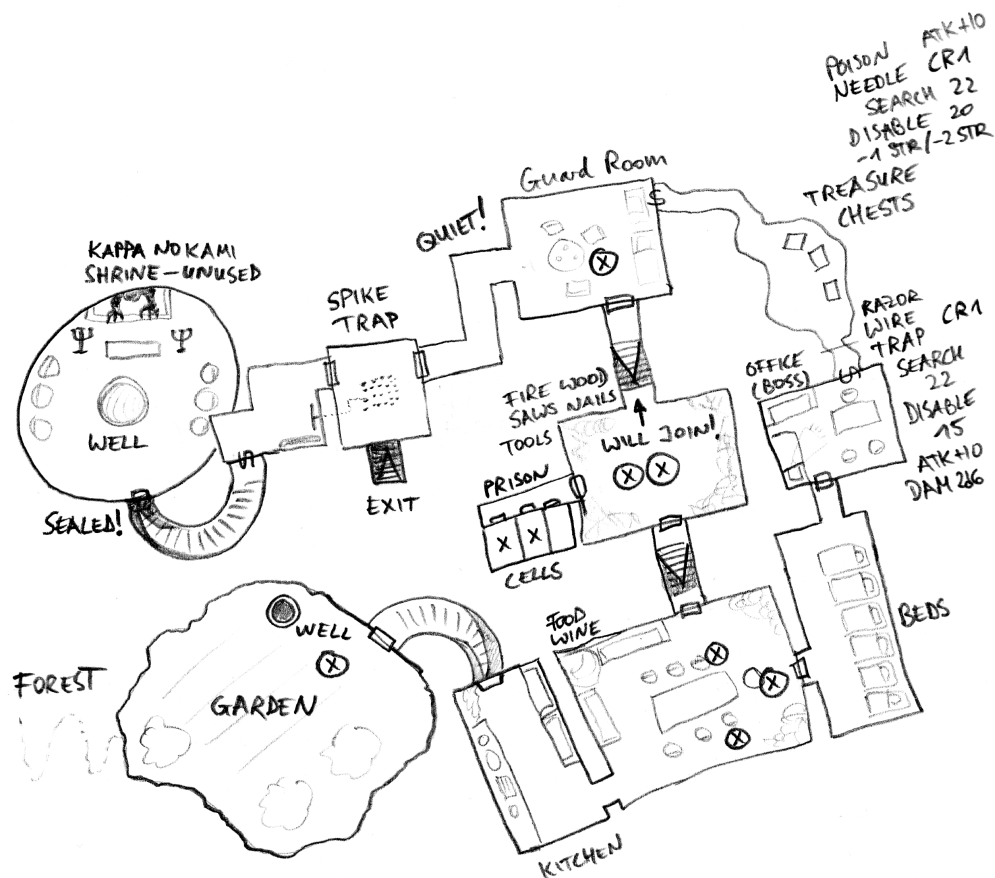

Shoichi, Fighter 1, STR 12/+1, DEX 10/0, WILL 8/-1, Phys +5, others @ +2, HP 16, AC 12 (Leather), Atk +2 (1d6 Mace), CR 1.

Musashi's Lair

How the party clears out the lair and finds a mysterious Kappa temple.

Currently Musashi employs six men only. They are preparing the ruins of the old Kako castle for the arrival of their comrades. Thus, there will be about two dozen bandits arriving in the next four weeks. Plenty of opportunity for revenge should anything happen to Musashi.

If a lot of time is spent observing the ruin and searching the environment, Jumonji and Kanada will be seen leaving the ruin and making towards the road. If attacked, they will try to flee back into the ruin, trying to use the spike trap in the entrance to their advantage, and warning Fujio in the guard room. See the Mess section for the stats of these two rogues.

Hooks for Future Sessions:

- Should the party feel like taking over, it should be possible to attract a small following up here, specially with all the rogues from Akaki still to come. Whom to trust, however...
- Further searching reveals the remains of a pyre; amongst the ashes there will be non-human bones and pieces of a kappa carapace. Further searching will reveal a hidden kappa lair near the bandit's camp housing several grown kappas and some young. Tori will be unwilling to follow this trail; should the party follow it anyway, Tori will make a getaway, because the kappa will recognize him: He nudged them on to the first failed attack on the bandit's camp! See Kappa Temple below.

Entrance

The main door is closed but unlocked, since they're expecting the rear guard, Shoichi.

Anybody carelessly entering the room will step on the trigger plates that will release sharp iron spikes from the floor using *Atk +10 (1d6)*, use *Sub+Know* vs. *DC 13* to find the trap and *Sub+Know* vs. *DC 22* to disarm it.

There are two doors leading further into the underground section of the former castle: The door to the right leads to the Guard room, the door to the left leads into the trap room where several turns of the wheel will reload the trap.

Check *Sub+MIND* vs. *DC 15* to find the door hidden behind lots of trash, firewood and an array of 4 very simple sankaku yari (the simplest spears). The door is locked and has not been opened in ages. Tori will suggest not to investigate and clear out the bandit lair first.

Kappa Temple

Old temple with a big statue of a black kappa god seemingly trying to reach out to the people in the round temple. There's a well, here, filled with water. The water is potable. The well is too deep to tell what lies beneath the water.

Hooks for Future Sessions:

- Let this be a secret water-filled tunnel to a kappa lair that has an exit towards the river. The lair itself is air-filled, so all that is required here is a dive 5m down into absolute darkness, 2m swim in a horizontal tube, and back up again. No problem for a trained diver, if he knows what to expect. On the other side, the pool is connected to the kappa lair via a tiny crack, small enough to allow the passage of a human without any armour, but not wide enough for a kappa's carapace to fit through. In an emergency, just improvise: Long tunnels, cold, a central chamber with beds, chests, a big altar for Kawa No Kami, the river dragon (chaotic neutral), acting as a *PR 2* shrine, some treasure (three jade turtle figurines, each worth 200gp, 120 silver coins), one kappa to be surprised

in the tunnel, five grown kappas and several children in the main chamber, two more outside the lair, scouting the area. Killing kappa children is bad for your prestige.

Guard

If the door from the entrance is just opened and nothing happens, the guard Fujio will call: "Hey, is that you, Shoichi? The boss wants to see you!"

If alerted by the noise of more than one person in the corridor, Fujio will try to flatten himself against the wall to sneak up on them (Sub+DEX vs. Sub+WILL of the first person entering the room) using Atk +6 (1d6+6 Mace).

Fujio, Rogue 1, STR 10/0, DEX 12/+1, WILL 8/-1, Sub +5, others @ +2, HP 13, AC 12 (Leather), Atk +1 (1d6+1 Mace), CR 1. Treasure: 5gp, 3sp, 12cp.

In the second round, Fujio will shout at the top of his lungs. This will alert Masamune and Kondo from the storage room. They will arrive in round five.

The room has a table, three stools, a cupboard, and a sleeping mat for the guard.

A secret tunnel starts behind the shelf, search DC 20. Only Musashi knows of this tunnel.

Storage

There are two guards in this room, talking to each other about the plans for the prisoners: Musashi will try to ask for money from Nikko for 50% of the poultice, keeping the rest to himself, and he'll send a ransom note to Hakone for the two prisoners.

Masamune, Fighter 1, STR 12/+1, DEX 10/0, WILL 8/-1, Phys +5, others @ +2, HP 16, AC 13 (leather do + kote), Atk +3 (1d8+2 heavy mace), CR 1. Treasure: 9gp, 9sp, 7cp.

Kondo, Fighter 1, STR 12/+1, DEX 10/0, WILL 8/-1, Phys +5, others @ +2, HP 17, AC 12 (leather do), Atk +3 (1d10+2 katana), CR 1. Treasure: The three prison cell keys, 7gp, 8sp, 3cp.

The room contains the armor and weapons of the two prisoners and the two soldiers killed, as well as lots of stuff used to rebuild the hide-out: 5 leather do (AC +2), 2 leather kote (AC +1), 3 leather sune-ate (+1), 1 katana, 3 yari, 1 yumi, 20 arrows in a quiver, 4 tantos, hammers, nails, saws, axes (for wood cutting), ropes, linen, pegs, tents, etc. This should suffice to build a hide-out for twenty to thirty people! There's also lots of other stuff such as an empty, portable apothecary's chest, crude chairs, tables, etc.

Prison

The three prison cells are all locked; two prisoners are kept here. Both are wounded from the fighting, but unharmed. They are brothers serving as guards in Hakone.

Eisuke, Fighter 1, STR 16/+3, DEX 5/-2, WILL 8/-1, Phys +5, others @ +2, HP 5/17 (badly hurt), AC 8 (none), Atk +5 (1+3 unarmed).

Kurusu, Fighter 1, STR 15/+2, DEX 11/0, WILL 8/-1, Phys +5, others @ +2, HP 7/18 (badly hurt), AC 10 (none), Atk +4 (1+2 unarmed).

If the bandit lair is not cleared, the prisoners would like to equip themselves, and leave as fast as possible, bury their two friends back on the road, and rush back to Hakone to inform the authorities and return with a larger force of men. If the party does not agree, they will propose to leave on their own. If the party agrees to that, authorities in Hakone will be forewarned.

If the bandit lair has been cleared, the prisoners would like to search for the poultice, and bring it to Nikko as fast as possible.

Two sets of armor (do, kote, and sune-ate for AC +4) and two yari (1d8) in the storage room belong to these two prisoners.

Hooks for Future Sessions:

- It is not at all clear that the authorities will be pleased with the party's meddling. After all, they are involved in a disturbance of the peace instead of letting the authorities handle it. Soon enough a group of Kouken-agensuto-Zaigou will be looking for the party on the road between Hakone and Nikko. They are Guardians against Sin, a branch of the province's Jingikan (Office of Deities), and not to be trusted.
- The MARIOKA family will be in the party's debt in times to come if the two brothers make it back to Hakone. Their father was a warrior in the service of the imperial army many years ago. Even though he's retired now, he's still an impressive man: Strong, tough, wily, a valuable ally.

Mess

This is where the bandits eat and drink. At the moment Musashi is sitting here with two of his team, explaining how one of them will travel to Nikko and the other to Hakone, how to deliver the ransome and extortion letters, how to retrieve the money, and so on.

Most probably, they haven't heard any noise from the storage area through two sturdy doors. And if the door is opened, Musashi will not immediately realize that strangers have entered the room and mistake them for Masamune and Kondo. He'll order them out of the room while he's talking to the messengers. This will allow the party to surprise the three, if they act decisively.

Jumonji, Rogue 1, STR 10/0, DEX 12/+1, WILL 8/-1, Sub +5, others @ +2, HP 13, AC 12 (leather do), Atk +1 (1d6 tamagusari), CR 1. Treasure: 12gp, 5sp, 3cp.

Kanada, Rogue 1, STR 10/0, DEX 12/+1, WILL 8/-1, Sub +5, others @ +2, HP 13, AC 12 (leather do), Atk +1 (1d6+1 mace), CR 1. Treasure: 4gp, 2sp, 13cp.

Musashi, Rogue 4, STR 14/+2, DEX 16/+3, WILL 13/+1, Sub +8, others @ +5, HP 35, AC 17 (leather do + kote + sune-ate), Atk +7 (1d6+2 nunchaku), CR 6. 3 smoke grenades to cover his retreat. Treasure: 14gp, 12sp, 15cp.

Musashi is an excellent fighter but no fool. If he's the last man standing, he'll run for the secret door in his office using the smoke grenades to cover his retreat.

Should the party have tarried outside for too long, Jumonji and Kanada will be gone on their mission, and Musashi will have retreated into his office. There, he should get enough advance warning through the open doors for him to make a disappearance through the secret door. That's what he'll try to do, hoping that the secret door and the razor wire trap behind will delay pursuit long enough for him to make it out of the ruin and hide in the the forest.

Kitchen

Ventilation shafts above the fireplace lead up to the garden. The two doors leading up to the garden are closed, but not locked.

Careful searching of the kitchen will reveal the tools necessary to poison weapons, but no poison itself. Needless to say, the possession of these tools is illegal. They could be transported in a portable apothecary's chest, however. And indeed, there's one such chest to be found in the storage room.

If questioned, the bandits will say that the kitchen was Masahiko's domain and they don't know the details. In fact, Musashi has used some of Masahiko's poisoned needles to secure his treasure chests. But nobody knows this, of course.

Garden

Masahiko is the bandit's cook. If he hears fighting in the kitchen, he'll hide in the garden. If the party has found the hidden entrance from the forest, he'll be busy with plants. If he hears about an imminent kappa attack, he'll lead the party inside, lock the door, and call for a bandit meeting in the mess.

He has two kamas (sickles) and a poisoned tanto. If he is surprised by the party, he'll greet the party as liberators if they look too strong for him to take down. He'll try to exploit a moment of weakness to sneak attack a character (2x Atk +5, 1d6+5 each)

Masahiko, Thief 2, STR 10/0, DEX 14/+2, WILL 12/+1, Sub +6, others @ +3, HP 13, AC 12 (Leather), Atk +4 (1d4 Tanto, with DC 14 -1 STR/unconscious poison), 2x Atk +2 (1d6 Kama, can disarm foes standing nearby who did not attack him), CR 2. Treasure: Keys to the doors leading

from the garden down to the kitchen, three more applications of the Blue Whinnis poison (120 gp each).

Masahiko could be persuaded to help in the murder of Musashi with some gold. He's a shinobi spy sent by another faction from Hakone and knows that there must be some treasure hidden here somewhere.

Hooks for Future Sessions:

- Depending on what happens to Masahiko, there will be a shinobi clan in Hakone with an attitude towards the party. Assuming that there is a contact man that Masahiko meets on a regular basis it will only be a few days until the clan learns what happened. If played well, the party could get involved in the destiny of this shinobi clan as incursions from TAKE-ODORIKO (Bamboo Dancer) shinobi from Akaki start to threaten endanger local shinobi activities. At first the clan will suspect the party to be part of an Akaki incursion, of course: Some newcomers killing other newcomers; that must look like an old story to local observers.

Quarters

Sleeping quarters. Beds. Smelly. Thorough searching will reveal 15 cp and 3 sp.

Office

A shelf, a clean bed, two carpets hanging at the wall (they don't look too clean), a table, three chairs, and no treasure. A secret tunnel starts behind one of the carpets, search DC 15. Only Musashi knows of this tunnel.

The poultice the bandits stole from the delegation on its way from Hakone to Nikko is on the shelf right here. The prisoners will be interested in bringing it to Nikko.

Secret Passage

The entrance from the office is protected by a razor wire. Atk +10 for 2d6, search DC 22, disable DC 15 (or just destroy it by cutting the wire).

Three little chests stand by the cave walls. The first chest contains 2 pp, 70 gp, 100 sp, 110 cp, the second chest contains 10 smoke grenades (50 gp), and the third chest contains a golden circlet with four aquamarines inlaid (4000 gp) plus a brass mug with a jade dragon winding its way around it (500gp). Chests 1 & 3 are protected by a poison needle trap: Atk +10, search DC 22, disable DC 20, poison -1/-2 STR, CR 1.

Arrival in Hakone

How the party finally reaches its destination.

Hakone is a small town lying in the crook of of the Kawa river. On the other side of a river, the west bank rises darkly into the Kuroiwa (Black Rock) mountains. They protect the north-western dark forest. Hakone itself overlooks the settled part of the valey towards the east. The road goes east before it splits into north (Nikko, Tobu) and south (turning west towards Kurobano).

There are about four dozen houses here, for a total of about 5000 people living in the area here. Nearly all the families in Nikko and Tobu have relatives here. With access to Mt Takenaga in the north endangered by the encroaching forest and Kurobano bearing the weight of the armed forces lodging there, Hakone has become the hub of the north-eastern economic activities. Here is where the loggers tie their huge rafts, where the north-eastern Toriyama dyes are produced, and bull market one the first Monday of every month.

Hooks for Future Sessions:

- The FUCHIDA family belongs to the Fukabayashi shinobi clan; the clan is known in Sairyuukoe province for its use of all sorts of spider poisons. Players interested in forming an alliance with this clan will be instructed to optain spider poison for the clan out in the wilderness.

Quest for the Abyssal Scepter

A Microlite20 adventure for 1st level characters.

A simple wooden stick... but with the power to control anyone? Known as the Abyssal Scepter it has been stolen from the Priests of Woodcliff by a horde of goblins, worse, behind this theft is a master plan to destroy the town of Woodcliff entirely.

The Quest for the Abyssal Scepter by Chad Rose

Cover artwork – by El Grimlock as found on Wikimedia Commons and per the license found there.

Maps – by Chad Rose and based off of Dyson Logos' Geomorph Maps and the Troll and Flame blog's isometric mapping style.

“...the adventures just begun!”

The Quest for the Abyssal Scepter...

A simple wooden stick... but with the power to control anyone? Known as the Abyssal Scepter it has been stolen from the Priests of Woodcliff by a horde of goblins, worse, behind this theft is a master plan to destroy the town of Woodcliff entirely.

The Quest for the Abyssal Scepter is an adventure for a party of four 1st level characters. Two strong combat-oriented characters and a Cleric are highly recommended. If the party consists of more or less characters simply alter the number of enemies as you see fit.

Before running the Quest for the Abyssal Scepter it would be a good idea to read through the entire adventure to get familiarized with it.

The Quest for the Abyssal Scepter may be played as a stand-alone adventure, as part of the War of Woodcliff story-arc, WW1-WW3 (Quest for the Abyssal Scepter WW1, Captives of the Lost Mountains WW2, Battle of the Blighted People WW3), or as part of your own campaign.

In this adventure characters will explore a dungeon complex and underground caverns, Maps #1 and #2. Areas in the complex and caverns are broken up into “Rooms” and given a number to reference where a description of the inhabitants and features of the room can be found.

Each “Room” will have a; Room # and name of room, Features, Monsters, Treasure, Entries and possibly Notes.

Room # and name of room corresponds to the Room # to reference and a general name for the type of room.

Features will be a simple list of the items present in the room. It's up to the GM as to how and where in the room these items are.

Monsters indicates any inhabitants in the room.

Treasure list any treasure present found on monsters or un-guarded.

Entries is a list of all the possible exits/entrances to a particular room and if the entrance is unlocked, locked, stuck, un-stuck, or trapped.

Notes cover anything unusual in or about the room.

If used as part of the War of Woodcliff story-arc the characters should return to town with the information found in the letters in Iuzami's room, the moving of the captives into the mountains and map to that location, and be asked by Woodcliff's town leaders to go into the mountains after any captives that may still be alive and the creatures responsible for the raids on the town.

Also, if used as part of the War on Woodcliff story-arc, it is recommended that characters only gain one level from the Quest for the Abyssal Scepter and then reset EL's back to zero to conform to the encounters in the next adventure.

The Dwarf Osk, found in the Room #8 Cell, will join the party if they desire and will be fully cooperative (compared to his more tight-mouthed stance in the

Goblin complex). Osk will be adamant on finding out what has become of his Dwarven brethren since seemingly Goblins have overtaken his clans home.

The story so far...

The small borderland town of Woodcliff has seen increasing attacks by hordes of wolf-mounted goblins. The goblins have been ransacking the town at night leaving behind burning buildings and missing towns-people.

The leaders of Woodcliff are hiring out bands of adventurers and mercenaries to investigate and end this threat.

The player's characters are one of these bands of heroes. They have been directed to the entrance of an old underground Dwarven complex and it is believed that the goblins now occupy this place.

As the party assembles and prepares to head out of town they are approached by the Priests of Woodcliff. In hushed tones they tell the adventurers dire news. A magical artifact was stolen in the last attack from the priesthood, a scepter of power in the hands of evil, the Abyssal Scepter. An unlikely looking item, a seemingly simple stick or branch from a small tree, this scepter has the power to control people by bending their will to that of the wielder of the scepter. The priesthood offers a sizable reward. (This reward and the town leader's offer are to be determined by the GM according to their campaign.)

#1	Guardroom
Features	Torches, relief (a crude stone picture of a giant goblin wielding a battleaxe (the god of the goblins MIND+KNOW DC15 to recognize), gauntlets, helms, figurine (crude, wooden, also of the Goblin God), tankards
Monsters	Goblin (4) CR1/3 AC15 HD 1d8+1 HP5 M6 Morningstar +2 melee (1d6) or javelin +3 ranged (1d4), +1 size, +1 DEX, +2 leather, +1 light shield, darkvision 60', S11 D13 M10 C6, humanoid
Treasure	3GP, 1SP, 2 CP each Goblin
Entries	West entry; Door, wooden, unlocked, unstuck South entry; Door, wooden, unlocked, unstuck

#2	Armory
Features	Torch, weapon rack, weapons (crude morningstars (4), crude javelins (4))
Monsters	-
Treasure	-
Entries	North entry; Door, wooden, unlocked, unstuck South entry; Door, wooden, unlocked, unstuck

#3	Barracks
Features	Bunks, pillows, stools, chamberpot, leggings, tunics, headband (worn, cloth)
Monsters	Goblin (4) CR1/3 AC15 HD 1d8+1 HP5 M6 Morningstar +2 melee (1d6) or javelin +3 ranged (1d4), +1 size, +1 DEX, +2 leather, +1 light shield, darkvision 60', S11 D13 M10 C6, humanoid
Treasure	2GP, 3SP, 1CP each Goblin
Entries	North entry; Door, wooden, unlocked, unstuck
Notes	The goblin's beds in the barracks are made from a hodge-podge of materials and are considered difficult terrain (+1 cost to Move if passing through a square with a Bed symbol.)

#4	Entry
Features	Sconces, desk, armchair, tapestry (depicting a Drow with red eyes), jug, armbands (worn, cloth)
Monsters	Goblin (1) CR1/3 AC15 HD 1d8+1 HP5 M6 Morningstar +2 melee (1d6) or javelin +3 ranged (1d4), +1 size, +1 DEX, +2 leather, +1 light shield, darkvision 60', S11 D13 M10 C6, humanoid
Treasure	2GP, 5SP
Entries	West entry; Door, wooden, locked (pick DC21, break DC16) South entry; Door, wooden, unlocked, unstuck
Notes	The goblin in this room greets visitors to the goblin complex. Visitors are given the armbands so the inhabitants of the complex know they are friendly to the goblins. The goblin will try to warn the two goblins in Room #5 if

	there are intruders.
#5	Waiting Room
Features	Statue (of the god of the goblins MIND+KNOW DC15 to recognize), animal trophy (stuffed Worg), stools, drum
Monsters	Goblin (2) CR1/3 AC15 HD 1d8+1 HP5 M6 Morningstar +2 melee (1d6) or javelin +3 ranged (1d4), +1 size, +1 DEX, +2 leather, +1 light shield, darkvision 60', S11 D13 M10 C6, humanoid
Treasure	1 SP, 3 CP each Goblin
Entries	North entry; Door, wooden, unlocked, unstuck East entry; Door, wooden, unlocked, unstuck
Notes	If the two goblins here are warned of intruders, or intruders arrive and are not wearing the armbands, one goblin will try to open the door leading to Room #6 while the other attempts to get to the drum to beat out a warning signal to the goblins in the complex. It will take each goblin one round to reach the door and drum, the next round the door will be opened and the drum will be sounded. If the drum is successfully sounded the goblins in the complex cannot be surprised.
#6	Great Hall
Features	Columns, balcony, railing, mosaic hanging under the balcony (depicting two, flaming eyes MIND+KNOW DC15 to recognize these as a symbol of the goblin god), tables, benches
Monsters	Goblin (4) CR1/3 AC15 HD 1d8+1 HP5 M6 Morningstar +2 melee (1d6) or javelin +3 ranged (1d4), +1 size, +1 DEX, +2 leather, +1 light shield, darkvision 60', S11 D13 M10 C6, humanoid
Treasure	3GP, 1SP, 4CP each Goblin
Entries	West entry; Door, unlocked, unstuck North entry; Stairs East entry; #1 Door; iron, locked (pick DC21, break DC28) (Room #7) #2 Door; iron, locked (pick DC21, break DC28) (Room #8) #3 Door; iron, locked (pick DC21, break DC28) (Room #9) #4 Door, wooden, unlocked, unstuck, trapped (if exiting to Room #14) South entry; #1 Door, wooden, locked (pick DC21, break DC16) South entry; #2 Door, wooden, unlocked, unstuck
Notes	There are four goblins in the Great Hall at any one time seated at the tables (roll randomly to determine what table). The goblin closest to Room #9 will attempt to free the wolves within to fight for the goblins as mounts or individually. If the drums were sounded the wolves will already have been released. There is a 1 in 6 chance, 1 on a d6, that Iuzami (from Room #20) will also be present at his table in the Balcony Room #12 and will send his skeletons (from Room #20A), located behind the curtain in Room #12, to fight alongside the goblins while Iuzami fights from the balcony railing overlooking the Great Hall.

#7	Cell
Features	Mattress, trough, straw, odor
Monsters	- (captives, see notes)
Treasure	-
Entries	North entry; Door, iron, locked (pick DC21, break DC28)
Notes	The captives here are human commoners, (4) AC10 HD1 HP3 M6 punch melee (1d3), taken from the town of Woodcliff on previous raids. They do not have any useful information about the goblin complex and will only fight to free themselves (not to pursue treasure, fame or more information about the goblin complex).

#8	Cell
Features	Mattress, trough, straw, odor
Monsters	- (captive, see notes)
Treasure	-
Entries	North entry; Door, iron, locked (pick DC21, break DC28)
Notes	Inside this cell is the Dwarf Osk, CR1/2 AC10 HD1d8+2 HP6 M4 S13 D11 M10 C8, from the Lost Mountains. Osk was sent years ago by the Dwarves of the Lost Mountains when they lost contact with their kin from this complex. He was overwhelmed by the goblins that are now in control of the place and imprisoned. In the lengthy time he has been here he has learned that the captives taken from Woodcliff are being moved from this place to another in the Lost Mountains, though he's unsure exactly where. Osk will gladly join the party mostly because he's worried that if someone besides the Dwarves reclaims the place they may lose it. He does know the goblin complex from previous visits but will only give away bits-and-pieces of information if a character can use diplomacy, charm, intimidate, etc. (DC 15) to nudge him into "remembering."

#9	Cell
Features	Mattress, trough, straw, odor
Monsters	Wolves (2) CR1 AC14 HD2d8+4 HP13 M10 bite +3 melee (1d6+1), animal
Treasure	-
Entries	North entry; Door, iron, locked (pick DC21, break DC28)
Notes	There are two wolves kept here by the goblins as mounts. The wolves are loyal to the goblins and will act as mounts or fight individually against any threat if released. If released by the goblins during an attack on Room #6 they may be used as mounts or attack individually.

#10	Pantry
Features	Barrels (grain), casks (wine), sacks (rotten fruit), broom
Monsters	-
Treasure	-
Entries	North entry; Door, wooden, locked (pick DC21, break DC16)

#11	Kitchen
Features	Furnace (ruined, now used as a firepit), table, large pot, bowls (wooden, crude), ladle, spoon, studded staff in pot (see treasure, used to stir pot and crusted with food), large wooden crate with a baby ogre in it
Monsters	Ogre (1) CR3 AC16 HD4d8+11 HP 29 M6 huge pan +8 melee (2d8+7), +5 natural, +3 hide armor, darkvision 60', low-light vision, S21 D8 M6 C7, giant
Treasure	Carved Wooden Staff Studded with Copper 200GP (in pot and used by the ogress to stir it) On Ogress; 60PP Potion of Reduce Person (250GP) Silver Pin Set with Blue Quartz (300GP)
Entries	North entry; Door, wooden, unlocked, unstuck
Notes	The ogress in this room was captured by Forn Lask and ordered to protect the goblins and Iuzami if the goblin complex was attacked or her infant baby ogre would be killed by the goblins. The ogress acts as the goblins cook and keeps her baby ogre in the kitchen with her in a large wooden crate. While she will attack anyone that threatens her or her child aggressively she will not venture out of the kitchen, even to protect the goblins or Iuzami.

#12	Balcony
Features	Great chair, large table, pennants (depicting two, flaming eyes (MIND+KNOW DC15 to recognize these as a symbol of the goblin god)), candles
Monsters	-
Treasure	-
Entries	East entry; Door, stuck (break DC16)
Notes	The Balcony overlooks Room #6 at the location of the railing.

#13	Storage
Features	Anvil, bellows (broken), statues (of dwarven make), urn
Monsters	-
Treasure	Lacquered Wooden Urn 300GP (Can be recognized as a "Nice looking Urn," or its worth realized with a MIND+KNOW DC12 check.
Entries	West entry; Door, stuck, (break DC16)
Notes	Items left over from the Dwarven clan that once lived here have been thrown into this room.

#14	Corridor to Caverns
Features	Dark
Monsters	-
Treasure	-
Entries	East entry; Stairs

	South entry; Door, locked (pick DC21, break DC16) West entry; unlocked, unstuck, trapped, Rolling Rock Trap (rock +10, 2 squares, D2d6, Find DC20 Disable DC22) The rock drops from the ceiling once the door closes landing in the first 10x10 area behind the door and rolls down the corridor into Room #17.
Notes	The corridors well-hewn rock changes at the end of this passage into rough caverns.

#15	Locked Passage
Features	Dark
Monsters	-
Treasure	-
Entries	North entry; Door, locked (pick DC21, break DC16) West entry; Door, trapped, Scything Blade Trap (blade +8 (D1d8) Find DC21 Disable DC20, first person through door)

#16	Loot Room
Features	Dark, barrels, crates, boxes
Monsters	-
Treasure	-
Entries	East entry; Door, trapped, Scything Blade Trap (blade +8 (D1d8) Find DC21 Disable DC20, first person through door)
Notes	The barrels, crates, boxes, etc. are filled with goods taken from raids on Woodcliff and contain items such as building materials, cloth, hides, etc.

#17	Signed Cavern
Features	Sign (wooden and jammed into the earthen floor and reads; “←EXIT! Chief Iuzami →”)
Monsters	-
Treasure	-
Entries	North entry; Passage West entry; Passage East entry; Passage, trapped, Camouflaged Pit Trap D1d6 (Find DC24 Disarm DC20 Save DEX+PHY DC20 avoid)
Notes	The sign points the characters left to “Exit,” which actually leads to another room and a group of goblins on a ledge waiting to ambush intruders, and right to “Chief Iuzami,” which leads to a pit trap and then the privy.

#18	Nexus
Features	Torches, ledges, ladder (on ledge at 18A)
Monsters	(18A) Goblin (4) CR1/3 AC15 HD 1d8+1 HP5 M6 Morningstar +2 melee (1d6) or javelin +3 ranged (1d4), +1 size, +1 DEX, +2 leather, +1 light shield, darkvision 60’, S11 D13 M10 C6, humanoid

Treasure	4GP, 7SP, 16CP each Goblin
Entries	Northwest entry; Passage Northeast entry; Passage Southeast entry; Passage Southwest entry; Passage
Notes	The goblins here (on the ledge 18A) will attempt to ambush any unsuspecting parties entering the Nexus with javelins. It's a DC15 Jump check, with at least a 10' foot start, to reach the ledge and pull oneself up. No further movement is allowed. A character on the ledge may assist (+2) others in scrambling up (DC15) with no further movement allowed.

#19	Privy
Features	Torches, sinkhole, (Dwarven crafted items tossed in here by the goblins; paintings, books, tapestries, etc.)
Monsters	-
Treasure	-
Entries	East entry; Passage, trapped, Camouflaged Pit Trap D1d6 (Find DC24 Disarm DC20 Save DEX+PHY DC20 avoid)
Notes	If the trap is triggered and the goblins from 18A have not been encountered yet they will attempt to pin the party in between themselves and the pit trap.

#20	Iuzami's Lair
Features	Torches (one is an Everburning Torch (110GP), carpets, desk, chair, bed, wardrobe, mirror, gown, hose, kerchief, tray, vials, loom
Monsters	Iuzami (E-you-zah-me) Drow CR2 AC16 (18) HD2d8 HP18 M6 Rapier +3 melee (1d6+1) or hand crossbow (6 bolts) +2 ranged (1d4+p), poison – unconscious 1 min./unconscious 2d4 hours (STR+PHY DC13 neg.) or Abyssal Scepter – provides <i>Protection from Good</i> as Cleric spell (+2 AC and saves, counter mind control, hedge out elementals and outsiders) and <i>Suggestion</i> as the Bard spell, spell-like abilities, <i>dancing lights</i> / <i>darkness</i> / <i>faerie fire</i> , +1 DEX, +4 chain shirt, +1 light shield, SR13, darkvision 120', S10 D13 M11 C11, humanoid)
Treasure	Found at 20A; Chest, locked DC20, un-trapped; 4000SP (300GP) Found at 20A; Trunk, locked DC20, trapped, Fusillade of Darts (Find DC14 Disable DC20 1d3 darts +10 (D1d4+1); Jasper (30GP), Rock Crystal (20GP), Sardonyx (50GP), Painted Glass Dice (60GP), Darkwood Shield, Buckler, (167GP), Potion of Cure Light Wounds (50GP). On Iuzami; Abyssal Scepter – provides <i>Protection from Good</i> as Cleric spell (+2 AC and saves, counter mind control, hedge out elementals and outsiders) when held and <i>Suggestion</i> spell as the Bard spell. Only usable by "Evil" individuals. There are 11 charges remaining in the Abyssal Scepter and the caster level is 2 nd . Dragonscale (Red Dragon) Hunter's Cap 900GP
Entries	South entry; Passage East entry; Passage

Notes

If Iuzami hears combat at Room #18 he will have his skeletons here otherwise if he is confronted by enemies he will summon his Skeletons ((4) CR1/3 AC15 HD1d12 HP6 M6 Scimitar +1 melee (1d6+1) or 2 claws +1 melee (1d4+1), +2 natural, +2 heavy steel shield, DR5/bludgeoning, darkvision 60', immune cold, undead traits, S13 D13 M0 C1, undead) from 20A. He will also use the Abyssal Scepter's *Protection from Good* S-LA and then either his hand crossbow or Scepter's *Suggestion* power (to have the strongest looking party members do seemingly reasonable things like leaving the fight to guard the entrance to the room so no further enemies sneak up on the party. Anything that would take a party member out of the fight within the *Suggestion* spells ability). Iuzami will try to flee if the fight goes poorly for him and his skeletons.

If the characters search Iuzami's room they will find on and in the desk letters regarding the captives and their movement to another location in the Lost Mountains. There is also a relatively well-drawn map to the location. If Osk is present or shown the letter he will cry out and exclaim that the location shown on the map is the same as that of his Dwarven clan, the very one he set out from all those years ago to come here, even though it seemingly cannot be. The letters are being sent to Iuzami from someone by the name of Forn Lask.

“...the adventure’s just begun.”

White Room – Level variable

Random Events (d20)

1. Add wall
2. Add room
3. Add door
4. Add trap
5. Add trap
6. Level-2 encounter
7. Level-1 encounter
8. Level-1 encounter
9. Level+0 encounter
10. Level+0 encounter
11. Level+0 encounter
12. Level+1 encounter
13. Level+1 encounter
14. Level+2 encounter
15. Level+3 encounter
16. Add treasure
17. Add NPC
18. Erase all room contents
19. Remove one item
20. Roll twice

Our Heroes awake to find themselves in a featureless white room surrounded by plain black walls. It is about 200' square with no apparent means of exit. There is no ceiling, only an unearthly white glow that illuminates the whole area. The walls are 12' high and 5' thick. They can be climbed with a difficult skill check. Encourage the players to work out other means of escape! Any forms of long-range teleport, or planar travel do not work.

From the top of the wall, the PCs can see a vast open white plain with deep black evenly spaced black furrows stretching into the distance. Between some of the furrows are other strange black markings. If the players don't work out what it is, an Insight check or equivalent reveals that this is writing on a huge scale.

As the players watch more markings appear, and a roar comes from beneath them inside the white room. One of the characters feels a tentacle curl around his leg and he is pulled inside by a huge Chaos Beast!

And so it continues with monsters, traps and walls being added to the white room as the heroes puzzle the mystery of this strange place. If one of the players tries writing something between the furrows, whatever they write appears in the white room. Other words also appear, seemingly at random. If you're feeling kind, suggest that the players write the word "ladder" to simplify entry and exit.

Conclusion: If any of the heroes write the words "The end" or "Home", the characters awake around a campfire in a forest clearing. Around them grows a faerie ring and they have the oddest feeling that they are nothing more than fictional characters in a game played by the gods.

Section 6:

Microlite74, Microlite78, and Microlite81

In 2008, Randall Stukey produced the first version of *Microlite74*. This was an attempt to convert the original 1974 edition of the world's most popular fantasy RPG to the *Microlite20* system. Randall expected the game to be used to introduce 3rd edition players to early "old school" editions and styles of play and if they decided they enjoyed such play, they would move on to the original games. Surprisingly, *Microlite74* itself became quite popular in and of itself. The game has been through several editions and has spawned a host of supplements, variants, and Microlite20 editions of other TSR editions (1e and B/X). This section includes some of these games:

- Microlite74 1.1 (the original version of the game and the only one that is truly "microlite")
- Microlite74 3.0 Basic
- Microlite74 3.0 Standard
- Microlite74 3.0 Extended
- Microlite78: First Edition Lite
- Microlite81
- Microlite81 Extended

Many supplements and games available as of the publication of this volume are not included because it seemed unfair to inflate the size of this already large collection with a lot of secondary material created and published by the compiler of this collection. Free copies of the following additional supplements, variants, and games can be obtained from the Microlite20 Download Library (<https://microlite20.org/forum/index.php?action=downloads>) or as "Pay What You Want" downloads on RPGNow:

Microlite74 Companion I: Optional Rules, Microlite74 Companion 2: Treasure, Microlite74 Companion III: More Optional Rules, Microlite74 Companion IV: Bestiary of Monsters, Microlite74 Companion V: First Edition Spells, Microlite74 Swords & Sorcery Edition, Microlite74 Light vs Dark, Microlite74 3d6 Edition, Microlite75 Basic, Microlite75 Standard, Microlite75 Extended, Microlite81 Complete, Microlite81 Advanced.

Microlite74, like its parent game, Microlite20, is a trimmed-down, sub-miniature version of the Primary Fantasy SRD rules (see license for more info) that has been designed to be quick and easy to play. The goal of Microlite74, however, is to recreate the style and feel of that very first ("Oe") fantasy roleplaying game published back in 1974.

Stats

There are 3 stats : Strength (STR), Dexterity (DEX) and Mind (MIND).

Roll 3d6, Total the 3 dice and allocate to one of the stats. Repeat for remaining stats.

Stat bonus = (STAT-10)/2, round down.

Races

Humans can be any class (suggested maximum level 12-14)

Dwarves can be Fighters, max level 6.

Special Abilities: +4 to magic resistance; note slanting passages, traps, shifting walls and new construction in underground settings (D20 + MIND bonus; DC 12 if carefully checking, DC 16 if just passing through area); speak languages of dwarves, gnomes, kobolds and goblins; can see in darkness half as well as in light.

Elves can be Fighters or Magic-Users, max level 8.

Special Abilities: Can switch between classes between adventures and can use magic armour and magic weapons when acting as a magic-user; +2 to hit and damage goblinoid monsters; note secret/hidden doors (D20 + MIND bonus; DC 12 if carefully checking, DC 16 if just passing through area); speak languages of elves, orcs, hobgoblins, and gnolls.

Halflings can be Fighters, max level 6.

Special Abilities: +4 to magic resistance; +2 to hit and damage with slings and light bows; can blend in background (D20 + DEX Bonus; DC 12 if outdoors, DC 16 if indoors – this is an extraordinary ability above and beyond simply hiding in available cover which anyone can try to do).

Classes

The classes are Fighter, Magic-User, Cleric. Characters begin at Level 1.

Fighters wear any kind of armour or weapon and may use shields. They add +1 to all attack and damage rolls. This increases by +1 at 5th level and every five levels thereafter.

Magic-Users wear no armour and can only use daggers or staves as weapons. They can cast arcane spells.

Clerics can wear light or medium armour and use shields, but cannot use edged weapons. They cast divine spells. A Cleric can Turn Undead with a successful Magic Attack. DC is the current Hit Points of the Undead. If the DC is exceeded, the undead flees; if exceeded by 10 it is destroyed. This can be used (2 + Level + MIND bonus) times per day.

Skills

There are no skills in Microlite74. Instead players are expected to think like adventurers, tell the GM what they are doing and the GM decides if it will succeed in the situation. If the GM decides a random success chance is truly needed, roll 1D20 + level if the character is attempting something directly related to their class, 1d20 + (level/2) otherwise. Roll higher than the GM assigned Difficulty Class to succeed.

Languages: All character races speak common. Other intelligent beings speak their own languages (20% chance of also speaking common). Beings with a MIND over 10 may speak one additional language per point of MIND over 10.

Saving Throws: Note that there are no separate "saving throws" in this game: use STR bonus + your level for Fortitude saves and use DEX bonus + your level for Reflex saves. Saving against magic (Will save) is usually MIND bonus + your level.

Magic

Magic-Users can cast any arcane spell from the Microlite74 list, and Clerics any divine spell from the Microlite74 list, with a spell level equal or below 1/2 their class level, rounded up. A Magic-User starts with three first level arcane spells in his spell book and can add more spells by finding (or buying) them on scrolls or books and copying them into his spell book. Clerics do not need spell books and automatically have access to all divine spells of a level they can cast (use of certain spells may be forbidden by the cleric's deity, however).

Casting a spell of any kind costs Hit Points. The cost is 1 + double the level of the spell being cast:

Spell Level	1	2	3	4	5	6
HP Cost	3	5	7	9	11	13

This loss **cannot** be healed normally but is recovered after 8 hours rest. There is no need to memorize spells in advance.

Just because a character can cast any spell, doesn't mean that they should. Choose spells that suit the character. Select one 'signature' spell per spell level from first upward that they prefer to use over any other. These spells are easier to cast due to familiarity, costing 1 less HP to use.

For purposes of things like dispelling, the Difficulty Class (DC) for all spells is: 10 + Caster Level + Caster's MIND bonus

Combat

Hit Points = STR Stat + 1d6/Level. If HP reach 0, the character is unconscious and near death. Further damage directly reduces STR. If that reaches 0, the character is dead.

Surprise: At the beginning of an encounter, roll 1d6 for each side. On a roll of 1-2 a side is surprised and may not act at all in the first round.

Initiative: Roll d20 + DEX bonus for initiative order. Everyone can do one thing each turn; move, attack, cast a spell, etc.

Melee attack bonus = STR bonus + Level
Missile attack bonus = DEX bonus + Level
Magic attack bonus = MIND bonus + Level

Add attack bonus to d20 roll. If higher than your opponent's Armour Class (AC), it's a hit. Natural 20 is automatically a critical doing maximum damage.

Fighters can use DEX bonus + Level as Melee attack bonus instead if wielding a light weapon. Fighters can wield 2 light weapons and attack with both in a round if they take a -2 penalty on all attack rolls that round. Rapiers count as light weapons, but you cannot wield two rapiers at the same time.

All weapons do 1d6 damage, add STR bonus to Melee damage. Fighters wielding two weapons roll 1d6 twice and use the higher roll.

Armour Class (AC) = 10 + DEX bonus + Armour bonus. Basic Armour Bonuses: Light Armour (e.g. leather) +2, Medium Armour (e.g. Chainmail) +4, Heavy Armour (e.g. Plate) +6; a shield adds +1.

Morale: While a few monsters, such as mindless creatures, are fearless and will fight to the death, most monsters have a strong desire to survive and will not continue to fight when the battle is going against them. They will instead seek to retreat, to flee, or even to surrender. The GM decides when monsters abandon the battle and retreat, based on the situation and the monster's intelligence.

Healing: All characters recover hit points lost due to wounds and damage at a rate equal to one-half their level (round up) in hit points per night of rest. (In addition, Magic-Users and Clerics recover all hit points lost due to spell casting with a night's rest.) If a character has lost strength due to wounds, no hit points are recovered, but the character regains lost strength at

the rate equal to their STR Bonus (minimum of 1 point regained) per full day of rest.

Energy Drain: Certain undead and demonic monsters can drain energy levels from characters. Each energy level drained reduces the character's level by one, the character may regain the level normally via experience. Optional: If the standard rule seems to harsh, try the following instead. Each energy level drained subtracts one from any roll to which the character would add his level (or his level/2). 1 point of energy drained is recovered every L days where L is equal to the hit dice of the monster that drained the energy level.

Hirelings

Players may find it useful to have their characters hire bearers to carry light sources into ruins and dungeons (and to carry treasure out) and men-at-arms to aid in combat. In some areas there may be a guild where such people may be found and hired, in other areas characters may have to advertise. Pay must be negotiated and what will be asked will depend on the situation the hirelings think they may get into and the reputation of the characters hiring them.

Bearers have 2 hit points and generally will only fight if cornered and there is no other choice – even then their effective level (used in attack rolls) is -2. They will carry light sources and baggage willing so long as they are paid, fed, treated well, and not exposed to much mortal danger. Minimum pay: 1 SP/day.

Men-at-Arms will fight but consider being used as a bearer (except of treasure they get a share of) to be beneath them. Green Men-At-Arms have 4 hit points, an effective combat level (used in attack rolls) of 0 and can use whatever armour and weapons their employers provide. Minimum pay: 5 SP/day plus 1/20 of a share of any non-magical treasure found. Veteran Men-at-Arms have 7 hit points, an effective combat level (used in attack rolls) of 1 and can use whatever armour and weapons their employers provide. Minimum pay: 1 GP/day and 1/10 a share of any non-magical treasure found. Men-at-Arms will serve willingly as long as they are fed, paid, treated well, and not asked to take unusual risks that their employers are not taking with them.

Monsters

See the Microlite74 Monster List. To create new monsters quickly, assign Hit Dice (d6 for most things, d8 for Dragons, Demons and Undead). Attack bonus = number of Hit Dice. Damage = hit die type + (number of hit dice/2, round down). If it is an intelligent monster, give it a +3 bonus to attack. Intelligent monsters may have classes at the GM's option. If needed, assign stats to suit. Equip and add abilities as required.

Other Hazards

Falling: 1d6 damage per 10', half damage on DEX save.
DC=depth fallen in feet
Spikes: add +1 point to falling damage per 10' fallen, max +10
Poison: STR save to avoid or for half, depending on poison.
Effect varies with poison type.
Extreme Heat & Cold: If not wearing suitable protection, STR save once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed save.

Level Advancement

Characters get Experience Points (XP) when their party defeats monsters. Experience Points (XP) = Hit Dice of defeated monsters. Add +1 for each doubling of the number of foes. e.g.: 1 kobold (a 1 hit die monster) = 1 XP. 2 kobolds = 2 XP. 4 kobolds = 3 XP, 8 kobolds = 4 XP etc.

Characters also earn a GM-assigned amount of experience points for defeating traps, solving puzzles, excellent roleplaying, and the like. The GM should assign XP depending on the situation (usually from 1 to 5 XP).

Individual characters can also earn experience points from spending money found in treasures (or taken from monsters) in totally frivolous ways (e.g. wine, women, song, donations to a temple without getting anything in return, etc.). A character earns 1 XP for each 100gp so spent.

Add up the Experience Points (XP) of every successful encounter you take part in plus any earned from GM specials and treasure spent. When the total = 20 x your current level, you've advanced to the next level. Reset the total XP to 0 after advancing.

Each level adds:
+1d6 to Hit Points
+1 to all attack rolls

(Note that both the above are already included in the attack and hit point formulas given in the rules.)

If the level divides by four (i.e. level 4, 8, 12, etc.) add 1 point to STR, DEX or MIND (player's choice).

Fighters gain +1 to their attack and damage rolls at levels 5,10,15,etc.

Clerics and Magic-Users gain access to new spell levels at levels 3, 5, 7, 9, and (Magic-User only) 11. When a Magic-User gains access to a new spell level he gets one spell of the new level added to his spell books. The player may select the spell subject to DM veto.

Example: Four newly minted second level adventurers have just completed a dungeon adventure. They each need 40 XP to reach third level. Their expedition was extremely successful. They defeated 22 XP worth of monsters and earned 7 XP from traps and other GM specials for a total of 29 XP each. The party's cleric earned 4 XP for great roleplaying while risking her life to save the party from an angry spirit. The party also found and recovered 2900gp in treasure from the dungeon. That's 725gp each. The cleric decides to donate the entire sum to her temple, and earn 7 more XP. This gives her 40 XP. She goes up to third level and her XP total is reset to 0. The other party members have 29 XP each.

Equipment

Suggested starting packs for new characters:

Pack A	Pack B	Pack C
backpack	backpack	backpack
bedroll	bedroll	bedroll
hooded lantern	10 torches	tent
10 oil flasks	10 oil flasks	10 torches
flint & steel	flint & steel	flint & steel
shovel	chalk	hammer
2 sets of caltrops	10 ft. pole	10 iron spikes
signal whistle	mirror	grappling hook
pen & paper	crowbar	50 ft. rope
waterskin	waterskin	waterskin
iron rations for four days	iron rations for four days	iron rations for four days

Finally, add the following, based on your Class:

Fighter: Vial of holy water, medium armour (AC +4), a one handed weapon + shield, or a two handed weapon, and 5 gold pieces

Magic-User: Spellbook with all spells known and 5 gold pieces

Cleric: Silver holy symbol, light armour (AC +2), a one handed weapon + shield, and 5 gold pieces

Encumbrance (Optional)

Characters can carry twelve (plus STR bonus) items in addition to armour, primary weapon, and possibly a shield; six items can be readily available dangling from a belt or slung over the shoulders, but everything else goes into the backpack. Small collections of things (10 flasks, 20 arrows, 50 gems, 100 gold pieces) count as a single item.

Microlite74 Spell Lists

Arcane (Magic-User) Spells

Unless stated otherwise in the spell description, spells have duration of level minutes and a range of level x 10 yards. (Level refers to the level of the caster.)

1st Level

Detect Magic: Detects spells and magic items within 60 feet.

Hold Portal: Holds door shut.

Read Magic: Read scrolls and spellbooks. Duration: one reading.

Read Languages: Read any written language. Duration: Level x 10 minutes.

Protection/Evil: +2 to AC and saves, counter mind control, hedge out elementals and enchanted monsters. Affects one target.

Light: object lights up all 30 ft radius, not full daylight.

Charm Person: Puts one living humanoid totally under your influence. Save again every level days or when asked to do something very obviously against the person's interest.

Sleep: Puts 4d6 HD of beings into magical slumber. Creatures with more than 4 hit dice are not affected. Duration: level x 10 minutes.

2nd Level

Detect Invisible: Detect invisible items and beings within 60 feet.

Levitate: Subject moves up and down at your direction. Speed: level yards per minute.

Phantasmal Forces: Vivid illusions of nearly anything the caster envisions, lasts as long as the caster concentrates. Damage caused is real if target believes illusion.

Locate Object: Senses direction toward an object (specific or type) Duration: level x 10 minutes. Range: level miles.

Invisibility: Subject is invisible until broken by caster, some outside force, or until it attacks

Wizard Lock: Locks door like Hold Portal. Permanent until dispelled. Knock opens without dispelling. Caster can pass through without lifting spell.

Detect Evil: Reveals evil thoughts/intent or evil items.

ESP: Allows Caster to read surfaces thoughts of target.

Continual Light: object lights circle with 120 ft radius until dispelled, not full daylight.

Knock: Opens locked or magically sealed door or other door-like barrier.

3rd Level

Fly: Subject can fly at a speed of 60 feet per minute

Hold Person: Paralyzes 1-4 targets for 1 minute/level. Cast at single target, save at -2 and double duration.

Dispel Magic: Cancels magic effects and spells. (Magic Attack vs Spell's DC for success) Duration: instant but effects permanent. Range: touch.

Clairvoyance: See at a distance for 1 minute/level.

Clairaudience: Hear at a distance for 1 minute/level.

Fire Ball: 1d6/level fire damage, 20 foot burst, range: 240 feet, duration: instant

Lightning Bolt: 1d6/level electrical damage, range: 240 feet, duration: instant

Protection from Evil, 10' radius: +2 to AC and saves, counter mind control, hedge out elementals and enchanted monsters to all within 10 foot circle around subject.

Invisibility, 10' radius: Subject and those within 10 feet of him are invisible until broken by caster, some outside force, or until one attacks

Infravision: See in the dark

Slow Spell: Subjects (up 24 beings in a 60x120 foot area) slowed by 50%. (Counters Haste)

Haste Spell: Subjects (up 24 beings in a 60x120 foot area) double in speed, taking two actions at a time. (Counters Slow)

Protection from Normal Missiles: Non-magical thrown and missile weapons automatically miss.

Water Breathing: Subject can breathe water for 10 minutes/level

4th Level

Polymorph Self: Change self to form of another being, does not get special powers but retains own intelligence. Lasts 60 + 10/level minutes.

Polymorph Others: Change another into another being. Change is complete and includes gaining special abilities and mind of creature. Lasts until dispelled.

Remove Curse: Frees subject from a curse. Duration: instant but effects permanent.

Wall of Fire: Deals 2d4 fire damage out to 10 ft. and 1d4 out to 20 ft. Passing through wall deals 2d6 damage +1/level. Wall lasts as long as caster concentrates on it.

Wall of Ice: Creates wall of ice with 15 hp +1/level. Wall lasts as long as caster concentrates on it.

Confusion: Subjects (up to 2d6 hit dice, only 4+ HD get save) behaves oddly and cannot act effectively for 6 + 1/level minutes.

Charm Monster: Makes one monster of 3+ hit dice (or 3d6 monsters of less than 3 hit dice) believe they are the caster's strong ally. Save again every level days or when asked to do something obviously against the being's interest.

Plant Growth: Plants in an area up to 30x30 yards become overgrown and nearly impassable. Lasts until dispelled or plants killed.

Dimension Door: Teleports subject a short distance (20 x level feet). Duration: instant.

Wizard Eye: Allows sending an invisible eye up to 250 feet away which relays all it sees to the caster. Moves up to 10 feet/level each minute. Duration: 5 minutes/level.

Massmorph: Makes large body of humanoids appear to be trees until dispelled or negated by caster. Creatures may move and still appear to be trees.

Hallucinatory Terrain: Makes one type of terrain appear like another type until dispelled or area entered by an opponent.

5th Level

Teleport: Instantly transports subject up to 100 miles/level.

Caster must know target location exactly.

Hold Monster: As Hold Person, but any creature.

Conjure Elemental: Conjures one elemental who will serve the caster for up to 10 minutes/level.

Telekinesis: Moves object by mental power. Up to level squared in pounds.

Transmute Rock-Mud: Transforms a 10 foot cube per level. Duration: permanent.

Wall of Stone: Creates a wall of stone in any shape. 100 square feet (2 feet thick) per level. Lasts until destroyed or dispelled.

Wall of Iron: creates a thin wall of iron, lasts 10 minutes/level.

Animate Dead: Create undead skeletons or zombies from dead bodies. 1 per level.

Magic Jar: Moves cast's spirit/mind to a fixed object from which caster can try to possess others. Magic Attack vs DC of (10 + MIND bonus + target level or hit dice). New save every level days. Duration: until dispelled or caster ends spell.

Contact Higher Plane: Lets Caster ask yes/no question of other planar entity, 1 question per level. Chance of correct answer 5% per level, maximum 95%.

Pass-Wall: Creates a passage up to 10 + 1/level feet long through a wood or stone wall.

Cloudkill: creates a moving, poisonous cloud of vapor which is deadly to all creatures with less than five hit dice. 30 feet in diameter. Moves with wind.

Feeblemind: Subject's MIND drops to 1.

Animal Growth: One animal per two levels grows to giant size. Lasts 1 minute/level.

6th Level

Stone-Flesh: Turns subject into a stone statue (or vice versa). Duration: permanent.

Reincarnation: Restores dead person to life in a random (usually humanoid) form.

Invisible Stalker: Summons an invisible stalker, an extra-dimensional monster, under the control of the Magic-User who may give it a single mission which it will carry out until it is finished.

Lower Water: Lowers bodies of water 50%.

Part Water: Parts bodies of water up to 5 feet/level deep.

Projected Image: Project an image of yourself that can sense and talk as if you were the image. Range: 240 feet. Lasts 10 minutes/level. Other spells cast come from the image.

Anti-Magic Shell: Negates magic within 10 ft.

Death Spell: Kills 2D8 beings with less than 7 hit dice with a 60 by 60 foot area. Duration: instant but effect permanent.

Geas: Force a creature to obey one long-term order. Duration: until order completed or level months pass, whichever comes first.

Disintegrate: Makes one creature or non-magical object vanish,

turning it to fine dust.

Move Earth: Move small hills, dig ditches and moats, etc.

Control Weather: Caster can adjust weather.

Divine (Cleric) Spells

Unless stated otherwise in the spell description, spells have a duration of level minutes and a range of level x 10 yards.

1st Level

Cure Light Wounds (Reversible): Cure 1d6+(1/level) hits of wounds. Duration: instant but effects permanent.

Purify Food & Water (Reversible): Purifies 1 cubic foot/level of food or water. Duration: instant but effects permanent.

Detect Magic: Detects spells and magic items within 60 ft.

Detect Evil (Reversible): Reveals evil thoughts/intent or evil items.

Protection from Evil (Reversible): +2 to AC and saves, counter mind control, hedge out elementals and enchanted monsters. Affects one target.

Light (Reversible): object lights circle with 30 ft radius, full daylight.

2nd Level

Find Traps: Notice traps within 5ft/level.

Hold Person: Paralyzes 1-4 targets for 2 minutes/level. Cast at single target, save at -2 and double duration.

Bless: Allies gain +1 on attack rolls, saves against fear, and morale checks.

Speak with Animals: Can understand and speak with animals.

3rd Level

Remove Curse (Reversible): Frees subject from a curse.

Duration: instant but effects permanent.

Cure Disease: Cures any disease. Duration: instant but effects permanent.

Locate Object: Senses direction toward object (specific or type)

Continual Light (Reversible): object lights circle with 120 ft radius until dispelled, full daylight.

4th Level

Neutralize Poison: Immunizes subject against poison (normal duration) OR detoxifies venom in or on subject (instant but effects permanent).

Cure Serious Wounds (Reversible): Cures 2d6+(2/level) hit points. Duration: instant but effects permanent.

Protection from Evil, 10' radius (Reversible): +2 to AC and saves, counter mind control, hedge out elementals and enchanted monsters to all within 10 foot circle around subject.

Turn Sticks to Snakes: Turns up to level sticks into venomous serpents. (bite: level points of damage. attack: as level/2 hit dice monster)

Speak with Plants: Can understand and speak with plants.

Create Water: Creates water, enough for up to 12 people and their horses for one day. Duration: instant but effects permanent.

5th Level

Dispel Evil (Reversible): Works like Dispel Magic, but affects any evil sending or evil spell. Duration: instant but effects permanent.

Raise Dead (Reversible): Restores life to subject who died as long as one day/level ago. Duration: instant but effects permanent.

Commune: Cleric's Deity truthfully answers one yes-or-no question/level.

Quest: Force a creature to obey one long-term order. Duration: until order completed or level months pass, whichever comes first.

Insect Plague: Locust swarms attack creatures.

Create Food: Creates food, enough for up to 12 people and their horses for one day. Duration: instant but effects permanent.

Monsters

ANT, GIANT: HD: 3d6 AC: 16 AT: Bite+3, 1D6 + poison

BADGER, GIANT: AC: 15 HD: 3d6 AT: 2 Claws+3 (1d3), bite+3 (1d6+7)

BANSHEE: AC: 20 HD: 7d8 AT: 1 claw+7 (1d6+3) S: Magic or silver to hit; magic resistance 50%; shriek of death; Immune to enchantments

BASILISK: AC: 15 HD: 6d6 AT: 1 bite+6 (1d6+3) S: Petrifying gaze

BEETLES, GIANT FIRE: AC: 15 HD: 1d6 AT: bite+1 (1d6)

BLACK PUDDING: AC: 13 HD: 10d6 AT: 1 attack+10 (1d6+5) S:

Acidic surface, immune to cold, divides when hit with lightning.

 WIGHT: AC: 14 HD: 3d8 AT: 1 claw+3 (1d3+1 + level drain) S: Drain one energy level, Hit only by magical or silver weapons, Undead
 WILL-O-THE-WISP: AC: 27 HD: 9d6 AT: 1 shock+9 (1d6+4)

WOLF: AC: 12 HD: 2d6 AT: 1 bite+2 (1d4+1)
 WORG: AC: 13 HD: 4d6 AT: 1 bite+4 (1d6+1)
 WRAITH: AC: 16 HD: 4d8 AT: 1 Touch+4 (1d6+2 + level drain) S: Drain 1 energy level, Undead
 WYVERN: AC: 16 HD: 8d8 AT: 1 bite+8 (1d6+4) or 1 sting+8 (1d4+4) S: Poison sting, Flies
 ZOMBIE: AC: 11 HD: 2d8 AT: 1 weapon+2 (1d6+2) S: Immune to sleep and charm

Designer's Notes

While Microlite74 is designed using tried and true "D20" systems filtered through the Microlite20 rules (<http://microlite20.net/>), it is designed for a completely different style of play than many players who started to play in the last 20 years or so may be used to. Microlite74 isn't primarily a game of killing things; it's a game of exploration and treasure hunting.

Combat is more dangerous than it seems in Microlite74, so good players have their characters avoid it whenever possible. Fortunately, one can earn a lot of experience by finding and spending treasure whether or not any monsters are killed in the process. You'll still kill monsters, but killing monsters is not the primary way to get ahead in the world.

Unlike most modern RPGs, there aren't any skills. Players are intended to have their characters act like adventurers. So don't search your character sheet for the perfect solution in Microlite74. Instead, you just tell the GM what your character is trying to do. If you need to keep a door open or shut, tell the GM your character is using a spike to keep the door open or closed. A ten foot pole is your friend for checking for traps. Searching a room means looking in and under objects, not rolling a skill check. While this may seem strange at first, you will quickly learn to appreciate the freedom it gives you. No longer are you limited to the skills and feats on your character sheet, you can try anything your character should be capable of trying. You might not succeed, but the rules generally will not stop you from trying.

For more information on the differences between "old" style and "new" style play, read *A Quick Primer for Old School Gaming* by Matthew J. Finch. It is available as a free 13 page pdf download from Lulu: <http://www.lulu.com/content/3019374>. The *Quick Primer* description reads: "This booklet is designed for the modern-style gamer who's planning on taking the old-style rules for a trial run -- because open-ended rules like 0e are USED very differently than rules are used in modern systems." It's well done and does a great job of explaining the "old" style of play.

Finally, remember that these rules are a tool for the GM. If something does not work right in your campaign, change it. The object is to have fun, not be a slave to rules or to players who think being a rules-lawyer is the way to get ahead. In many roleplaying games, the Rules As Written (RAW) are often considered sacrosanct or at least somehow better than those a GM can come up with himself. This is not true of Microlite74 so please change anything you do not like.

Retro-Game Notes

The OGL has allowed fans to recreate the rules of older, out of print editions of the world's most popular fantasy roleplaying game. If you find the "old school" style of play espoused by Microlite74 fun but would like a much more detailed set of game rules, consider the following "retro-games." All have free PDF versions and most have nicely bound printed copies available for a very reasonable price.

0e Retro-Games*Swords & Wizardry*

<http://www.swordsandwizardry.com/>

Swords & Wizardry is an OGL retro-clone of the 0e version from the mid-1970s, the same edition Microlite74 is loosely based on. *Sword & Wizardry* is handy for complex spell and monster descriptions for use with Microlite74 as well as a great game itself. There are two versions of this game. One uses just the material from the three LBB and the other uses selected material from the 0e supplements.

B/X Retro-Games*Basic Fantasy Role-Playing Game*

<http://www.basicfantasy.org/>

The *Basic Fantasy Role-Playing Game* is loosely based on the so-called B/X edition of the world's most popular fantasy roleplaying game from the early 1980s. There are a number of minor tweaks like ascending armour class and separation of races and classes.

Labyrinth Lord

<http://www.goblinoidgames.com/labyrinthlord.htm>

Labyrinth Lord is more closely based on the so-called B/X edition of the world's most popular fantasy roleplaying game from the early 1980s. While some minor changes have been made for compliance with the OGL and copyright law, many people have a hard time finding any truly major differences between *Labyrinth Lord* and the original.

1e Retro-Games*OSRIC*

<http://www.knights-n-knaves.com/osric/>

OSRIC (Old School Reference & Index Compilation) is an OGL version of the first "advanced" edition of the world's most popular fantasy roleplaying game from the late 1970s and early 1980s. The first edition of *OSRIC* was designed to be just something that would allow publishers to legally publish OGL materials compatible with 1e. This attitude is also responsible for the boring name. The second edition of *OSRIC* (due out any day as this is written) is much more complete and is written with both players and publishers in mind.

Microlite20 Notes

Microlite20 is a trimmed down sub-miniature version of the OGL 3.5 SRD. In its most basic form, Microlite20 has only two pages of rules but can be used with most fantasy OGL and D20 adventures and supplements with little or no conversion. Since M20 was published in 2006, many people who prefer rules-lite games have been using it for their D20 games and/or writing expansions, supplements and other material especially for M20. You can find out more about the original Microlite20 and find more variants like Microlite74 on the Microlite20 web site:

<http://microlite20.net/>

Retroroleplaying Web Site

The author of Microlite74 maintains a web site devoted to out of print and out of style tabletop roleplaying games. He is always willing to discuss and answer questions about Microlite74 in the Microlite74 board on the Retroroleplaying forum.

Web Site: <http://www.retroroleplaying.com/>

Forum: <http://www.retroroleplaying.com/forum.php>

Blog: <http://www.retroroleplaying.com/blog.php>

Version 1.1 (October 6, 2008)

*Microlite74 is dedicated to the memory of E. Gary Gyga
(July 27, 1938 to March 4, 2008)*

1. Definitions: (a) "Contributors" means the copyright and/or trademark owners who have contributed Open Game Content; (b) "Derivative Material" means copyrighted material including derivative works and translations (including into other computer languages), potation, modification, correction, addition, extension, upgrade, improvement, compilation, abridgment or other form in which an existing work may be recast, transformed or adapted; (c) "Distribute" means to reproduce, license, rent, lease, sell, broadcast, publicly display, transmit or otherwise distribute; "Open Game Content" means the game mechanic and includes the methods, procedures, processes and routines to the extent such content does not embody the Product Identity and is an enhancement over the prior art and any additional content clearly identified as Open Game Content by the Contributor, and means any work covered by this License, including translations and derivative works under copyright law, but specifically excludes Product Identity. (e) "Product Identity" means product and product line names, logos and identifying marks including trade dress; artifacts; creatures characters; stories, storylines, plots, thematic elements, dialogue, incidents, language, artwork, symbols, designs, depictions, likenesses, formats, poses, concepts, themes and graphic, photographic and other visual or audio representations; names and descriptions of characters, spells, enchantments, personalities, teams, personas, likenesses and special abilities; places, locations, environments, creatures, equipment, magical or supernatural abilities or effects, logos, symbols, or graphic designs; and any other trademark or registered trademark clearly identified as Product Identity by the owner of the Product Identity, and which specifically excludes the Open Game Content; (f) "Trademark" means the logos, names, mark, sign, motto, designs that are used by a Contributor to identify itself or its products or the associated products contributed to the Open Game License by the Contributor (g) "Use", "Used" or "Using" means to use, Distribute, copy, edit, format, modify, translate and otherwise create Derivative Material of Open Game Content. (h) "You" or "Your" means the licensee in terms of this agreement.
2. The License: This License applies to any Open Game Content that contains a notice indicating that the Open Game Content may only be Used under and in terms of this License. You must affix such a notice to any Open Game Content that you Use. No terms may be added to or subtracted from this License except as described by the License itself. No other terms or conditions may be applied to any Open Game Content distributed using this License.
3. Offer and Acceptance: By Using the Open Game Content You indicate Your acceptance of the terms of this License.
4. Grant and Consideration: In consideration for agreeing to use this License, the Contributors grant You a perpetual, worldwide, royalty-free, non-exclusive license with the exact terms of this License to Use, the Open Game Content.
5. Representation of Authority to Contribute: If You are contributing original material as Open Game Content, You represent that Your Contributions are Your original creation and/or You have sufficient rights to grant the rights conveyed by this License.
6. Notice of License Copyright: You must update the COPYRIGHT NOTICE portion of this License to include the exact text of the COPYRIGHT NOTICE of any Open Game Content You are copying, modifying or distributing, and You must add the title, the copyright date, and the copyright holder's name to the COPYRIGHT NOTICE of any original Open Game Content you Distribute.
7. Use of Product Identity: You agree not to Use any Product Identity, including as an indication as to compatibility, except as expressly licensed in another, independent Agreement with the owner of each element of that Product Identity. You agree not to indicate compatibility or co-adaptability with any Trademark or Registered Trademark in conjunction with a work containing Open Game Content except as expressly licensed in another, independent Agreement with the owner of such Trademark or Registered Trademark. The use of any Product Identity in Open Game Content does not constitute a challenge to the ownership of that Product Identity. The owner of any Product Identity used in Open Game Content shall retain all rights, title and interest in and to that Product Identity.
8. Identification: If you distribute Open Game Content You must clearly indicate which portions of the work that you are distributing are Open Game Content.
9. Updating the License: Wizards or its designated Agents may publish updated versions of this License. You may use any authorized version of this License to copy, modify and distribute any Open Game Content originally distributed under any version of this License.
10. Copy of this License: You MUST include a copy of this License with every copy of the Open Game Content You Distribute.
11. Use of Contributor Credits: You may not market or advertise the Open Game Content using the name of any Contributor unless You have written permission from the Contributor to do so.
12. Inability to Comply: If it is impossible for You to comply with any of the terms of this License with respect to some or all of the Open Game Content due to statute, judicial order, or governmental regulation then You may not Use any Open Game Material so affected.
13. Termination: This License will terminate automatically if You fail to comply with all terms herein and fail to cure such breach within 30 days of becoming aware of the breach. All sublicenses shall survive the termination of this License.
14. Reformation: If any provision of this License is held to be unenforceable, such provision shall be reformed only to the extent necessary to make it enforceable.

Microlite74

Basic Edition

Version 3.0 (Condensed Type Edition)

OGL20 Rules for Tabletop Fantasy Roleplaying Campaigns with Old School (0e) Flare

Microlite74 Basic

Version 3.0 (October 1, 2011)

Copyright © 2008, 2009, 2010, 2011 Randall S Stukey

Special Thanks to ADD Grogard, Lord Rocket, Kingstrum, Pete Ubu, and Zimzerveran
for proofreading. All art is in the public domain.

*Microlite74 is dedicated to the memory of those who gave us the first roleplaying games
and campaigns:*

Dave Arneson, E. Gary Gygax, David Hargrave, Bob Bledsaw

Microlite74 Basic, like its parent game, *Microlite20*, is a trimmed-down, sub-miniature version of the Primary Fantasy SRD rules (see license for more info) that has been designed to be quick and easy to play. The goal of *Microlite74* games, however, is to recreate the style and feel of that very first ("0e") fantasy roleplaying game published back in 1974.

The *Microlite74 Basic* rules are based on three little booklets found in the boxed set of the 1974 0e edition. The rules are not intended to be a clone of the 0e rules, but rather a conversion of them to a rules-lite D20-based system that encourages old-school play without strictly old-school rules. *Microlite74 Basic* is the third edition of the original *Microlite74* rules.

These rules assume a basic familiarity with tabletop role-playing games in general and with the basic principles of "D20" based rules. If you are completely new to tabletop role-playing games, you will want to start by playing with someone who is familiar with how they work.

The Rules

Stats

There are 3 stats: Strength (STR), Dexterity (DEX) and Mind (MIND).

Roll 3d6, Total the 3 dice and allocate to one of the stats. Repeat for remaining stats.

Stat bonus = (STAT-10)/4, round toward zero.

Races

Humans can be any class (suggested maximum level 12-14).

Dwarves can be Fighters, max level 6.

Special Abilities: +4 to magic saves; note slanting passages, traps, shifting walls and new construction in underground settings (d20 + MIND bonus; DC 12 if carefully checking, DC 16 if just passing through area); speak languages of dwarves, gnomes, kobolds and goblins; can see in darkness half as well as in light.

Elves can be Fighters or Magic-Users, max level 8.

Special Abilities: Can switch between classes between adventures and can use magic armor and magic weapons when acting as a Magic-User; +2 to hit and damage goblinoid monsters; note secret/hidden doors (d20 + MIND bonus; DC 12 if carefully checking, DC 16 if just passing through area); speak languages of elves, orcs, hobgoblins, and gnolls.

Halflings can be Fighters, max level 6.

Special Abilities: +4 to magic saves; +2 to hit and damage with slings and light bows; can blend in background (d20 + DEX Bonus; DC 12 if outdoors, DC 16 if indoors – this is an extraordinary ability above and beyond simply hiding in available cover which anyone can try to do).

Classes

The classes are Fighter, Magic-User, and Cleric. Characters normally begin at Level 1 (unless directed otherwise by the GM).

Fighters wear any kind of armor or weapon and may use shields. *Physical Combat Bonus* is level/2, round up. *Magical Combat Bonus* is level/4, round up. Experience Base is 20. They add +1 to all attack and damage rolls. This increases by +1 at 5th level and every five levels thereafter. Class Saving Throw Bonus is +3.

Magic-Users wear no armor and can only use daggers or staves as weapons. *Physical Combat Bonus* is level/4, round up. *Magical Combat Bonus* is level/2, round up. Experience Base is 20. They cast arcane spells. Class Saving Throw Bonus is +1.

Clerics can wear light or medium armor and use shields, but cannot use edged weapons. *Physical Combat Bonus* is level/3, round up. *Magical Combat Bonus* is level/2, round up. Experience Base is 20. They cast divine spells. A Cleric can Turn Undead with a successful Magic Attack. DC is 10 + twice the Hit Dice of the undead. One undead flees per point over the roll

needed. This can be used (2 + Level + MIND bonus) times per day. Class Saving Throw Bonus is +2.

Skills

There are no skills in *Microlite74*. Instead players are expected to think like adventurers, tell the GM what they are doing and the GM decides if it will succeed in the situation, taking into account the characters' classes. If the GM decides a random success chance is truly needed he may resolve the situation with a roll of his choice or he may call for one of the following rolls:

Primary Skill Roll: 1d20 + Stat Bonus + Class Level if the character is attempting something directly related to their class.

Secondary Skill Roll: 1d20 + Stat Bonus + (Class Level/2, round up) if the character is attempting something only loosely related to their class.

Minor Skill Roll: 1d20 + Stat Bonus + (Class Level/3, round down) if the character is attempting something not really related to their class.

When the GM calls for a skill roll, he will declare the type of skill roll, which stat the skill roll falls under, and any situational modifiers and the player will make a skill roll. (The GM should make the roll in secret if seeing the result would give the player more information than his character should have.)

Roll higher than the GM assigned Difficulty Class to succeed. Unless the GM rules otherwise, a natural roll of 20 always succeeds for a Primary Skill Roll. Suggested Difficulty Classes: Easy - 8, Normal - 12, Difficult - 16, Hard - 20, Very Hard - 24, Legendary - 28, Unbelievable - 32.

Basic Adventuring Skills: Unless a player specifies otherwise about a character at character creation, all characters are assumed to have basic practical adventuring skills such as maintaining weapons and armor, riding a horse, setting up a camp, swimming, climbing, cooking, first aid, etc., and have a rough idea of the value of common coins, trade goods, gems, and jewels. Success should simply be assumed unless there are unusual conditions.

Languages: All character races speak common. Other intelligent beings speak their own languages (20% chance of also speaking common). Beings with a MIND over 10 may speak one additional language per point of MIND over 10 (these are in addition to any languages known by race).

Saving Throws

When subject to an unusual or magical attack, characters generally get a saving throw to avoid or reduce the effect. To make a saving throw, roll 1d20, add modifiers based on the type of saving throw (and any circumstantial modifiers set by the GM). A natural roll of 1 automatically fails. A natural roll of 20 automatically succeeds. Otherwise, the saving throw is successful if the total of the roll and modifiers is 20 or greater. Standard Modifiers are the total character's Class Saving Throw Bonus, the character's Level/2 (round down), and a Stat/Class bonus based on the type of saving throw.

Types of Saving Throws: There are three types of saving rolls: Fortitude (FORT), Reflex (REF), and Will (WIL). *Fortitude:* These saves measure ability to stand up to physical punishment or attacks against vitality and health. Add STR bonus to Fortitude saving throws. *Reflex:* These saves test ability to dodge area attacks. Add DEX bonus to Reflex saving throws. *Will:* These saves reflect resistance to mental influence and many magical effects. Add MIND bonus to Will saving throws.

Magic

Magic-Users can cast any arcane spell from the *Microlite74* list, and Clerics any divine spell from the *Microlite74* list, with a spell level equal or below 1/2 their class level, rounded up. A Magic-User starts with three first level arcane spells in his spell book and can add more spells by finding (or buying) them on scrolls or books and copying them into his spell book. Clerics do not need spell books and automatically have access to all divine spells of a level they can cast (use of certain spells may be forbidden by the cleric's deity, however).

Casting a spell of any kind costs Hit Points. The cost is 1 + double the level of the spell being cast:

Spell Level	1	2	3	4	5	6
HP Cost	3	5	7	9	11	13

This loss **cannot** be healed magically but is recovered after 8 hours rest. There is no need to memorize spells in advance. Just because a character can cast any spell, doesn't mean that they should. Choose spells that suit the character.

Spell Difficulty Class: For purposes of things like dispelling, the Difficulty Class (DC) for all spells is: 10 + Caster Level + Caster's MIND bonus

Signature Spells: Select one 'signature' spell per spell level from first upward that they prefer to use over any other. These spells are easier to cast due to familiarity, costing 1 less HP to use.

Hit Points and Healing

Hit Points: Hit Points = 6 + 1d6/Level. If HP reach 0, the character is unconscious and near death. Further damage directly reduces STR. If that reaches 0, the character is dead.

Healing: All characters recover hit points lost due to wounds and damage at a rate equal to one-half their level (round up) in hit points per night of rest. (In addition, Magic-Users and Clerics recover all hit points lost due to spell casting with a night's rest.) If a character has lost strength due to wounds, no hit points are recovered, but the character regains lost strength at the rate equal to their STR Bonus (minimum of 1 point regained) per full day of rest.

Combat

Surprise: At the beginning of an encounter, roll 1d6 for each side. On a roll of 1-2 a side is surprised and may not act at all in the first round. If attacking from an undetected ambush, the ambush victims are surprised on a roll of 1-4. A side cannot be surprised if it is aware of the other.

Initiative: Roll d20 + DEX bonus for initiative order each combat round. Use Hit Dice/2 instead of DEX for monsters. Characters and monsters act in Initiative order, from high to low. Spell casters casting a spell must declare the spell being cast and its target before initiative is rolled.

Actions: Combat is very abstract. Each combat round lasts a minute and includes a lot of jockeying for position, feints, etc. The "hit roll" determines if any damaging blows were delivered during the round. Everyone can do one thing each round; move, attack, cast a spell, etc. The GM may choose to allow some combined actions, like a charge attack, to be one thing. A 5-foot step/shift, drawing a weapon, speaking or similar activities are "free" and do not count as an action.

Opportunity Attacks: Anyone not surprised and with a ready weapon who is not already involved in a melee combat gets a free attack on opponents trying to move past them – this attack is in addition to their normal attack for the round. If the attack is successful, the opponents takes damage and can move no further that round.

Attack Rolls: Add attack bonus to d20 roll. A natural roll of 1 always misses, otherwise if the result is higher than your opponent's Armor Class (AC), it's a hit. A natural 20 that would otherwise hit is automatically a critical hit doing maximum damage.

Melee attack bonus = STR bonus + Physical Combat Bonus
Missile attack bonus = DEX bonus + Physical Combat Bonus
Magic attack bonus = MIND bonus + Magical Combat Bonus

Armor Class (AC) = 10 + DEX bonus + Armor bonus. Basic Armor Bonuses: Light Armor (e.g. leather) +2, Medium Armor (e.g. Chainmail) +4, Heavy Armor (e.g. Plate) +6; a shield adds +1; a large shield adds +2.

All weapons do 1d6 damage, add STR bonus to Melee damage.

Fighting classes can use DEX bonus + Physical Combat Bonus as Melee attack bonus instead if wielding a light weapon. Fighting classes can wield 2 light weapons and attack with both in a round (making one attack roll at -2). Rapiers count as light weapons, but you cannot wield two rapiers at the same time.

Range Penalties: If the target is relatively close, there is no penalty to hit for range. If it's mid-range for the weapon you're using, take a -2. If it's farther out than that, the GM will assign a -4 to -10 penalty to hit, depending on his judgment of how far away the target is.

Combat Casting: In combat, if a character is hit and takes damage (or other effect that could interfere with spell casting like paralysis) before casting a spell, the spell fizzles. This costs the caster 1 HP per level of the spell he was attempting to cast and the caster loses his action for the round.

Morale: While a few monsters, such as mindless creatures, are fearless and will fight to the death, most monsters have a strong desire to survive and will not continue to fight when the battle is going against them. They will instead seek to retreat, to flee, or even to surrender. The GM decides when monsters abandon the battle and retreat, based on the situation and the monster's intelligence.

Energy Drain: Certain undead and demonic monsters can drain energy levels from characters. Each energy level drained reduces the character's level by one, the character may regain the level normally via experience.

Hirelings

Players may find it useful to have their characters hire bearers to carry light sources into ruins and dungeons (and to carry treasure out) and men-at-arms to aid in combat. In some areas there may be a guild where such people may be found and hired, in other areas characters may have to advertise. Pay must be negotiated and what will be asked will depend on the situation the hirelings think they may get into and the reputation of the characters hiring them.

Bearers have 2 hit points and generally will only fight if cornered and there is no other choice – even then their effective level (used in attack rolls) is -2. They will carry light sources and baggage willingly so long as they are paid, fed, treated well, and not exposed to much mortal danger. Minimum pay: 1 SP/day.

Men-at-Arms will fight but consider being used as a bearer (except of treasure they get a share of) to be beneath them. Green Men-At-Arms have 4 hit points, an effective combat level (used in attack rolls) of 0 and can use whatever armor and weapons their employers provide. Minimum pay: 5 SP/day plus 1/20 of a share of any non-magical treasure found. Veteran Men-at-Arms have 7 hit points, an effective combat level (used in attack rolls) of 1 and can use whatever armor and weapons their employers provide. Minimum pay: 1 GP/day and 1/10 a share of any non-magical treasure found. Men-at-Arms will serve willingly as long as they are fed, paid, treated well, and not asked to take unusual risks that their employers are not taking with them.

Monsters

See the Microlite74 Monster List or use the monster descriptions in any Oe game (substituting d6 for hit dice and damage if needed). To create new monsters quickly: Pick a name, assign a level, hit dice = level, hit points = 1d6 per level, magic save = 10 + level, all attack bonuses = level, damage = 1d6 for ordinary claws, bites, and weapons, 2d6 for large maws, giant clubs, 3d6 for dragon bites and the like, AC = armor equivalent; pick special abilities as the level increases. Special attacks act like magic attacks against an appropriate defense. Intelligent monsters may have classes at the GM's option. If needed, assign stats to suit. Equip and add abilities as required.

Mooks (optional): Sometimes a GM may want to use a large number of monsters but not want to carefully track each one.

Mooks are "cannon fodder" monsters that have 1 hit point per hit die, never make a saving throw, and always run away or surrender if the battle is obviously going against them. Any hit from a Fighting Class character will likely kill a mook. Mooks cannot be told at a glance from non-mook monsters. Mooks make excellent minions for powerful leaders as they are very effective against normal people even if they cannot stand long against PCs and NPCs with class levels.

Other Hazards

Falling: 1d6 damage per 10', half damage on REF save. DC=depth fallen in feet

Spikes: add +1 point to falling damage per 10' fallen, max +10

Poison: FORT save to avoid or for half damage, depending on poison. Effect varies with poison type.

Extreme Heat & Cold: If not wearing suitable protection, FORT save once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed save.

Starvation: Characters generally need 2 pounds of food per day. After 2 days without food, a character takes 1d6 damage per additional day without food and no longer heals lost HP.

Dehydration: Characters generally need 1 gallon of water per day. Each day after the first without water, a character loses 25% of his full HP in damage (and can no longer heal).

Level Advancement

Characters get Experience Points (XP) when their party defeats monsters. Experience Points (XP) = Hit Dice of defeated monsters. Add +1 for each doubling of the number of foes. e.g.: 1 kobold (a 1 hit die monster) = 1 XP. 2 kobolds = 2 XP. 4 kobolds = 3 XP, 8 kobolds = 4 XP etc. Add +1 or +2 XP (GM's discretion) if the foes have dangerous special abilities.

Characters also earn a GM-assigned amount of experience points for defeating traps, solving puzzles, excellent roleplaying, and the like. The GM should assign XP depending on the situation (usually from 1 to 5 XP).

Individual characters can also earn experience points from spending money found in treasures (or taken from monsters) in totally frivolous ways (e.g. wine, women, song, donations to a temple without getting anything in return, generic "training," etc.). A character earns 1 XP for each 100gp (round down) so spent.

Add up the Experience Points (XP) of every successful encounter you take part in plus any earned from GM specials and treasure spent. When the total is equal to your Experience Base x your current level, you've advanced to the next level. Reset the total XP to 0 after advancing.

Each level adds +1d6 to Hit Points and the character's Physical Combat Bonus is recalculated. (Note that both the above are already included in the attack and hit point formulas given in the rules.)

Fighters gain +1 to their attack and damage rolls at levels 5, 10, 15, etc.

Clerics and Magic-Users gain access to new spell levels at levels 3, 5, 7, 9, and (Magic-User only) 11. When a Magic-User gains access to a new spell level he gets one spell of the new level added to his spell books. The player may select the spell subject to GM veto.

Example: Four newly minted second level adventurers have just completed a dungeon adventure. They each need 40 XP to reach third level. Their expedition was extremely successful. They defeated 22 XP worth of monsters and earned 7 XP from traps and other GM specials for a total of 29 XP each. The party's cleric earned 4 XP for great roleplaying while risking her life to save the party from an angry spirit. The party also found and recovered 2900gp in treasure from the dungeon. That's 725gp each. The cleric decides to donate the entire sum to her temple, and earn 7 more XP. This gives her 40 XP. She goes up to third level and her XP total is reset to 0. The other party members have 29 XP each.

Equipment

Suggested starting packs for new characters:

Pack A

backpack
bedroll
hooded lantern
10 oil flasks
flint & steel
shovel
2 sets of caltrops
signal whistle
pen & paper
water skin
iron rations for four days

Pack B

backpack
bedroll
10 torches
10 oil flasks
flint & steel
chalk
10 ft. pole
mirror
crowbar
water skin
iron rations for four days

Pack C

backpack
bedroll
tent
10 torches
flint & steel
hammer
10 iron spikes
grappling hook
50 ft. rope
water skin
iron rations for four days

Finally, add the following, based on your Class:

Fighter: Vial of holy water, medium armor (AC +4), a one handed weapon + shield, or a two handed weapon, and 5 gold pieces

Magic-User: Spellbook with all spells known, a dagger, and 5 gold pieces

Cleric: Silver holy symbol, light armor (AC +2), a one handed weapon + shield, and 5 gold pieces

Optional Rules

The following rules are optional. The GM decides if they will be used.

Background: Characters may select, with the approval of the GM, a one or two-word background that represents a broad base of skills and knowledge, e.g. Farmer, Merchant, Desert Nomad, Noble, Shaman, Templar, Thyatian Mercenary, Ritualist, etc. Backgrounds need not be related to the PCs class, e.g. a player who creates a deeply religious fighter skilled in the arts of vision interpretation, divination and oration might pick 'Prophet' as a background. Backgrounds may not duplicate a class.

The GM will consider the character's background just as he would the character's class when deciding if a character will succeed with an action. For example, a character with an "Engineer" background should have a much better chance of damming a creek or building a bridge over it than a character with a "Courtier" background.

Demi-Human Restrictions: If you do not like the level and class restrictions, Demi-Humans can instead have a higher Experience Base than Humans. Halflings have a +3 to Experience Base, Dwarves have a +5 to Experience Base and Elves have a +7. Elves can no longer switch between Magic-User and Fighter classes, but retain the ability to use magic armor and all magic weapons no matter which class they select.

Encumbrance: Characters can carry twelve (plus STR bonus) items in addition to armor, primary weapon, and possibly a shield; six items can be readily available dangling from a belt or slung over the shoulders, but everything else goes into the backpack. Small collections of things (10 flasks, 20 arrows, 50 gems, 100 gold pieces) count as a single item.

Group Initiative: Each side rolls a d20 (reroll ties). High roll wins initiative. The combat order changes to the following: 1) Side that lost initiative declares actions. 2) Side that won initiative declares actions. 3) Side that won initiative acts. 4) Side that lost initiative acts. 5) Any bookkeeping is done.

Energy Drain: If the standard energy drain rule seems too harsh, try the following instead. Each energy level drained subtracts one from any roll to which the character would add his level (or his level/2). 1 point of energy drained is recovered every L days where L is equal to the hit dice of the monster that drained the energy level.

Supplement I Spells: Spells marked with an asterisk after their name in the spell lists are from the first supplement to Oe. GMs wanting to run a more pure Oe campaign may want to

disallow these spells.

Oe Conventions

Almost any material you come across for Oe or other early editions of the world's most popular roleplaying game can be used in Microlite74 with little modification. However, there are some descriptive conventions that Oe used that may need explanation.

Time Conventions: Oe talks about time in terms of rounds (combat rounds) and turns. A round was 1 minute and a turn was 10 minutes.

Movement/Distance Conventions: Oe gave distances in inches. When underground or in buildings or the like, one inch equaled 10 feet. When outdoors, however, one inch was 10 yards. Yes, this meant spell and weapon ranges were greater outdoors than indoors. Normal human movement (when carefully exploring) was 12" per move, with two moves per turn. Carrying too much weight cut this down to 9" or even 6". Running movement was double the above.

Descending Armor Class: Oe and other pre-SRD editions used a descending Armor Class system where an unarmored character was AC 9 (AC 10 in some editions) and better armor used lower numbers (e.g. AC 5 was Chain, AC 2 was plate). Magic armor could even have a negative armor class. Microlite74 uses the ascending Armor Class system used in the OGL SRD. If you have old adventures using the original descending AC system and wish to use them, it is easy to convert descending ACs to ascending ACs.

Unarmored AC is 9: If the adventure is for Oe (or other edition where the unarmored AC is 9), subtract the descending AC listed in the adventure from 19 to get the ascending AC used by Microlite74.

Unarmored AC is 10: If the adventure is for 1e or 2e (where the unarmored AC is 10), subtract the descending AC listed in the adventure from 20 to obtain the ascending AC used by Microlite74.

Dungeon Exploration Conventions

Light: Humans and many other races require a light source (or magical ability) to see in the dark. Torches, lanterns, etc. will produce limited areas of light (generally 20 feet of bright light and a further 10 feet of dim light), but they also make it easy for monsters to see the party coming, making surprise impossible. Torches can be blown out by strong gusts of wind (d6 roll: blown out on a 1 or 2). Most monsters living in a dungeon have infravision or some other means of seeing in the dark; however these methods do not work in the presence of a light source.

Seeing Monsters: Unless surprised, characters will see monsters when they are 2d4 x 10 feet apart. Surprise distance is 1d3 x 10 feet.

Wandering Monsters: The GM should roll 1d6 every 1d3 turns for wandering monsters (more often if the party is making a lot of noise or otherwise attracting attention). On a roll of 1, wandering monsters stumble across the party from a random direction and distance.

Avoiding Monsters: Unintelligent monsters normally automatically attack. Intelligent monsters may follow their orders, make a reaction check, automatically attack, etc. depending on circumstances. Unless surprised a party may try to flee to avoid a battle. Monsters will generally pursue if there is less than 120 feet between the two groups. Monsters will only pursue around a corner or through a door on roll of 1 or 2 on a d6 (1 if a secret door is used). Fire will deter many monsters. Food will distract many monsters: unintelligent monsters 90% of the time, semi-intelligent monsters 50% of the time, intelligent monsters 10% of the time. Treasure may also distract monsters: unintelligent monsters 10% of the time, semi-intelligent monsters 50% of the time, and intelligent monsters

90% of the time. All chances may be adjusted by the GM depending on circumstances.

Rest: One turn in six must be sent in rest or all characters suffer a -1 to all d20 rolls per rest missed. Time spent searching is not time spent resting.

Doors: Most dungeon doors must be forced open by strength; a character may make a FORT save to attempt to force a door open. Doors with locks must be picked or forced at a minus equal to the dungeon level. Most dungeon doors will automatically close unless held or spiked open (spikes slip 20% of the time). Dungeon doors usually open automatically for monsters unless held closed.

Characters may wish to listen at doors before opening them. Unless a character has special listening abilities, a roll of 1 on a d6 will allow the character to hear through the door – if there is anything to be heard.

Traps: A trap will usually spring on a d6 roll of 1 or 2 when a character passes over or by them or otherwise triggers them.

Secret Passages: Unless a character has racial abilities with secret passages, characters will detect secret doors/passages doors on a d20 + MIND bonus roll (normal DC 16). A 10 x 10 foot area may be searched in a turn by a single character.

Wilderness Exploration Conventions

Seeing Monsters: Unless surprised, characters will see monsters when they are 4d6 x 10 yards apart. Surprise distance is 1d3 x 10 yards.

Wandering Monsters: The GM should roll 1d6 every day of travel for wandering monsters. If the party is camping, an additional roll should be made at night. If a wandering monster is indicated (roll varies by terrain, see terrain table below), wandering monsters stumble across the party from a random direction and distance. At night, the GM should randomly determine which watch is on duty when the attack is made.

Avoiding Monsters: Unintelligent monsters normally automatically attack. Intelligent monsters may follow orders, make a reaction check, automatically attack, etc. depending on circumstances. Unless surprised a party may try to flee to avoid a battle. Monsters will generally pursue so long as the party can be detected, there is a 50% chance monsters faster than the party will catch it (30% chance for monsters about as fast as the party) in each hex traveled through. Woods or swamp reduce the chance of being caught by 25%. Monsters will pursue into another hex on the map 50% of the time. The chase continues until combat occurs or the monsters break off. The party must rest for one-half day for each hex travelled during a pursuit. All chances may be adjusted by the GM depending on circumstances.

Becoming Lost: A group travelling off a well-marked trail or road without an accurate map or a knowledgeable guide may become lost. The chance of becoming lost is rolled on a d6 and depends on the type of terrain the party is in (see table below). If lost, the party actually moves in a random direction but believes they have moved in the direction intended.

Terrain Chart

Terrain Type	Chance Lost	Chance of Encounter
Plains	1	1
Woods	1-2	1-2
Forest	1-3	1-2
River	1	1-2
Swamp	1-3	1-3
Hills	1	1-2
Mountains	1-2	1-3
Desert	1-3	1-2

Donate to the RetroRoleplaying Cancer Fund and Get Some PDF Goodies

Many Microlite74 gamers know that Randall Stukey, the author of Microlite74 and other M20-based old school games is trying to raise funds to pay the bills from [his wife's oral cancer](#) treatments and that he worked on the original Microlite74 as way to cope during her recovery from 6 weeks of radiation treatment in 2008. Randall and Donna are some of the 40 to 50 million people in the US who do not have health insurance nor did they qualify for government aid as they live in Texas and have no children. Donna (successful so far) cancer treatments have cost over \$110,000. While some of this has been absorbed by hospital foundations and the like, they still owe a lot of it. You can donate to the RetroRoleplaying Cancer Fund (via PayPal) and help them pay their bills.

Can You Help Pay the Cancer Bills?

Everyone who donates any amount at all get a password giving them access to a number of special downloads. *Some* of the currently available downloads include:

- Pdf copies of the two issues of The Grimoire Randall published in the late 1970s (which Randall blogged about here: The Grimoire #1 (<http://blog.retroroleplaying.com/2009/05/grimoire-1-spring-1978-d-fanzine.html>) and The Grimoire #2 (<http://blog.retroroleplaying.com/2009/05/grimoire-2-summer-1979-d-fanzine.html>))
- Pdf copy of The Second Grimoire of Pharesm the Bright-Eyed, a set of house rules for a BECMI campaign Randall ran at a game shop in the mid-1980s.
- A copy of the Player's Introduction to the Fourth Campaign Arn (from about 1984)
- Microlite74 2.0 Special Edition -- a 60-page PDF designed to be printed in booklet format from Adobe Acrobat. Artwork is by Håkan Ackegård. This Special Edition incorporates the rules from the first supplement. The text has been reformatted into a single column in a large enough font to easily read.

To get access to these downloads and access to a private donor forum where you can get advance information on upcoming Microlite74 releases, help Randall pay the cancer bills by sending a donation in any amount -- small or large -- to the RetroRoleplaying Cancer Fund via Paypal at this link:

Microlite74 Spell Lists

Arcane (Magic-User) Spells

For expanded spell descriptions see Oe or a Oe retro-clone. R: is range. D: is duration.

1st Level

Charm Person: Puts one living humanoid totally under your influence. R: 120 feet. D: until dispelled.

Detect Magic: Caster can perceive, in places, people, or things, the presence of a magical spell or enchantment. R: 60 feet. D: 20 minutes.

Hold Portal: Holds door/gate shut. R: 10 feet. D: 2d6 x 10 minutes.

Light: object lights circle with 30 ft. radius, not full daylight. R: 120 feet. D: 1 hour+10 min/level.

*Magic Missile**: Creates magic arrow which hits its target for 1d6 damage. An additional 2 missiles are created every 5 levels (e.g. total 3 at level 5, total 5 at level 10). R: 150 feet. D: instant.

Protection from Evil: +2 to AC and saves, counter mind control, hedge out elementals and enchanted monsters. R: shell around caster. D: 1 hour.

Read Languages: Read any written language. D: 1 or 2 readings.

Read Magic: Read scrolls, spellbooks, other magical writing. R: caster only. D: one reading (two scrolls or equivalent).

*Shield**: Improves caster's armor class to 17 versus missile attack and to 15 versus melee attacks. R: caster. D: 20 minutes.

Sleep: Puts 4d6 HD of beings into magical slumber. Creatures with more than 4 hit dice are not affected. Range: 240 feet. D: GM's discretion.

*Ventriloquism**: allows caster to "throw his voice" absolutely convincingly. R: 60 feet. D: 20 minutes.

2nd Level

Continual Light: object lights circle with 120 ft. radius until dispelled, not full daylight. R: 120 feet.

*Darkness, 15' Radius**: Magical darkness which even blocks infravision and darkvision. R: 120 feet. D: 1 hour.

Detect Evil: Reveals evil thoughts/intent or evil items. R: 60 feet. D: 20 minutes.

Detect Invisible: Detect invisible items and beings within 10 feet per caster level. D: 1 hour.

ESP: Allows Caster to read surface thoughts of target. R: 60 feet. D: 2 hours.

Invisibility: Subject is invisible until spell broken by caster, some outside force, or until it attacks. R: 240 feet.

Knock: Unlocks/unbars all locked or magically sealed doors or other door-like barriers. R: 60 feet. D: instant.

Levitate: Caster floats up and down as he desires. Speed: 6 feet/minute. R: 20 feet up/down per level. D: 10 minute/level.

Locate Object: Senses direction toward an object (specific or type) D: level minutes. R: 60 + 10/level feet.

*Magic Mouth**: Mouth appears on target object and delivers up to 30 word message when conditions set by caster are met. R: touch. D: permanent until triggered or dispelled.

*Mirror Image**: Creates 1d6-1 exact images of the caster, all moving exactly like original. Attackers cannot tell images from original. Images hit disappear. R: around caster. D: 1 hour.

Phantasmal Forces: Vivid illusions of nearly anything the caster envisions, lasts as long as the caster concentrates. Damage caused is real if target believes illusion. R: 240 feet.

*Pyrotechnics**: Caster creates either fireworks or blinding smoke from a normal fire. R: 240 feet. D: 1 hour.

*Strength**: Adds 1d6+1 to a single Fighter's Strength or 1d6-1 to a single Cleric's. Maximum Strength is 18. R: touch D: 8 hours.

*Web**: Sticky webs fill a 10x10x20 foot area. Burning through the webs takes 6+1d4 minutes. Large creatures push through in 14+1d6 minutes. Human-sized creatures take 20+3d6 minutes. R: 30 feet. D: 8 hours.

Wizard Lock: Locks door like Hold Portal. Permanent until dispelled. Knock opens without dispelling. Caster can pass through without lifting spell. R: 10 feet.

3rd Level

Clairaudience: Hear at a distance for 2 hours. R: 60 feet.

Clairvoyance: See at a distance for 2 hours. R: 60 feet.
Dispel Magic: Cancels magic effects and spells. (Magic Attack vs. Spell's DC for success) Duration: instant but effects permanent for spells or 10 minutes/level for items. Range: 120 feet.
Fire Ball: 1d6/level fire damage, 20 foot burst. R: 240 feet. D: instant.
Fly: Subject can fly at a speed of 120 feet per minute. R: Touch. D: 1d6 x 10 minutes plus 10 minutes/level. (GM rolls secretly.)
Haste Spell: Subjects (up to 24 beings in a 60 foot radius of target) double in speed, taking two actions at a time. (Counters Slow) R: 240 feet. D: 30 minutes.
Hold Person: Paralyzes 1-4 targets. Cast at single target, save at -2 and double duration. R: 120 feet. D: 1 hour plus 10 minutes/level.
Infravision: See in the dark. R: touch. D: 1 day. Sight Range: 30 + (1d3 x 10) feet.
Invisibility, 10' radius: Subject and those within 10 feet of him are invisible until spell broken by caster, some outside force, or until one attacks.
Lightning Bolt: 1d6/level electrical damage. R: 240 feet, bolt is 10 feet wide, 60 feet long. D: instant.
*Monster Summoning I**: Caster summons random monsters who appear 10 minutes after casting. They will then serve until slain or the spell duration is up. Sample monsters (1d6): 1-1d6 giant rats, 2-1d3 goblins, 3-1d3 hobgoblins, 4-1d6 kobolds, 5-1d3 orcs, 6-1d3 skeletons. D: 6 minutes.
Protection from Evil, 10' radius: +2 to AC and saves, counter mind control, hedge out elementals and enchanted monsters to all within 10 foot circle around subject. D: 2 hours.
Protection from Normal Missiles: Non-magical thrown and missile weapons automatically miss. R: 30 feet. D: 2 hours.
*Rope Trick**: Caster tosses rope into the air. It hangs there. Caster and up three others can climb rope into a hidden pocket dimension at top. Rope can be pulled up or left out. R: rope toss. D: 60 minutes + 10 minutes/level.
Slow Spell: Subjects (up to 24 beings in a 60 foot radius of target) slowed by 50%. (Counters Haste) R: 240 feet. D: 30 minutes.
*Suggestion**: Caster makes 1-2 sentence hypnotic suggestion to target. If save failed, target will carry out suggestion for up to duration. Only 1% chance target will obey suggestion that obviously would result in target's death/extreme injury. R: 30 feet. D: 1 week.
Water Breathing: Subject can breathe water. R: 30 feet. D: 2 hours.

4th Level

Charm Monster: Makes one monster of 3+ hit dice (or 3d6 monsters of less than 3 hit dice) believe they are the caster's strong ally. Save again every level days or when asked to do something obviously against the being's interest. R: 60 feet.
Confusion: Subjects (up to 2d6 hit dice, only 4+ HD get save) behave oddly/cannot act effectively. R: 120 feet. D: 2 hours.
Dimension Door: Teleports subject a short distance (up to 360 feet). D: instant. R: 10 feet.
*Fear**: 240 ft. long cone of fear (120 ft. width at far end) extends from caster. Creatures within must save or flee in fear/horror for 1 hour. R: as above. D: 1 hour of fear.
Hallucinatory Terrain: Makes one type of terrain appear like another type until dispelled or area entered by an opponent. R: 240 feet.
*Ice Storm**: 30 foot cubic vortex of ice, snow, and hail appears doing 5d6 damage to all within. R: 120 feet. D: 1 minute.
Massmorph: Makes up to 100 humanoids appear to be trees until dispelled or negated by caster. Creatures may move and still appear to be trees. R: 240 feet.
*Monster Summoning II**: Caster summons random monsters who appear 10 minutes after casting. They will then serve until slain or the spell duration is up. Sample monsters (1d6): 1-1d2 hobgoblins, 2-1d2 zombies, 3-1d2 gnolls, 4-1d2 bugbears, 5-1d6 orcs, 6-1d6 skeletons. D: 6 minutes.
Plant Growth: Plants in an area up to 30x30 yards become overgrown and nearly impassable. Lasts until dispelled or plants killed. R: 120 feet.
Polymorph Others: Change one humanoid (but not self) into the form of another being. Change is complete and includes gaining special abilities and mind of creature. R: 60 feet. D: until dispelled.
Polymorph Self: Change self to form of another being, does not

get special powers but retains own intelligence. R: caster only. D: 60 + 60/level minutes.
Remove Curse: Frees subject from a curse. R: touch. D: instant but effects permanent.
Wall of Fire: Deals 2d4 fire damage out to 10 ft. and 1d4 out to 20 ft. Passing through wall deals 2d6 damage +1/level. Wall lasts as long as caster concentrates on it. R: 60 feet.
Wall of Ice: Creates wall of ice with 15 hp +1/level. Wall lasts as long as caster concentrates on it. R: 60 feet.
Wizard Eye: Allows sending an invisible eye up to 240 feet away which relays all it sees to the caster. Moves up to 12 feet each minute. D: 1 hour.

5th Level

Animal Growth: 1d6 normal animals grow to giant size. R: 120 feet. D: 2 hours.
Animate Dead: Create undead skeletons or zombies under control of caster from dead bodies, 1d6 per level over 8. R: GM discretion. D: permanent.
Cloudkill: creates a moving, poisonous cloud of vapor which is deadly to all creatures with less than five hit dice. 30 feet in diameter, moves with wind or 6 feet per minute. D: 1 hour.
Conjure Elemental: Conjures one 16 HD elemental who will serve the caster until dispelled/dismissed/caster no longer concentrates. Caster can only summon one of each type in a day. R: 240 feet.
Contact Higher Plane: Lets Caster ask yes/no question of other planar entity, 1 question per level. Chance of correct answer 5% per level, maximum 95%.
Feeblemind: Subject's MIND drops to 1. R: 240 feet. D: until dispelled.
Hold Monster: As Hold Person, but any creature. R: 120 feet. D: 1 hour plus 10 minutes/level.
Magic Jar: Moves caster's spirit/mind to a fixed object from which caster can try to possess others. Magic Attack vs. DC of (10 + MIND bonus + target level or hit dice). New save every level days. Duration: until dispelled or caster ends spell.
*Monster Summoning III**: Caster summons random monsters who appear 10 minutes after casting. They will then serve until slain or the spell duration is up. Sample monsters (1d6): 1-1d4 bugbears, 2-1d2 harpies, 3-1d2 ochre jellies, 4-1d2 wererats, 5-1d2 wights, 6-1d2 wild boars. D: 6 minutes.
Pass-Wall: Creates a human-sized passage up to 10 feet long through a wood or stone wall. R: 30 feet. D: 30 minutes.
Rock-Mud: Transforms rock to mud or vice-versa, up to 300x300 foot area. R: 120 feet. D: 3d6 days.
Telekinesis: Moves object by mental power. Up to 20 pounds per level. R: 120 feet. D: 1 hour.
Teleport: Instantly transports subject up to 100 miles/level. Caster must know target location exactly.
Wall of Iron: creates a wall of iron in any shape. 1000 square feet (3 inches thick). R: 60 feet. D: 2 hours.
Wall of Stone: Creates a wall of stone in any shape. 1000 square feet (2 inches thick). R: 60 feet. D: until destroyed or dispelled.

6th Level

Anti-Magic Shell: Shell surrounds caster blocking magic both ways. R: caster. D: 2 hours.
Control Weather: Caster can adjust weather. D: GM decision.
Death Spell: Kills 2D8 beings with less than 7 hit dice with a 60 foot radius. R: 240 feet. D: instant but effect permanent.
Disintegrate: Makes one creature or non-magical object vanish, turning it to fine dust. R: 60 feet. D: permanent.
Geas: Force a creature to obey one long-term order. R: 30 feet. D: until order completed.
Invisible Stalker: Summons an invisible stalker, an extra-dimensional monster, under the control of the Magic-User who may give it a single mission which it will carry out until it is finished.
*Legend Lore**: A complex process taking 1d100 days allows caster to gain knowledge of a legendary person, place, or thing. Information is accurate but may be in a cryptic form. R: caster.
Lower Water: Lowers bodies of water 50%. R: 240 feet. D: 10 turns.
*Monster Summoning IV**: Caster summons random monsters who appear 10 minutes after casting. They will then serve until slain or the spell duration is up. Sample monsters (1d6): 1-1

gargoyle, 2-1 ogre, 3-1 owlbear, 4-1 shadow, 5-1 werewolf, 6-1 wraith. D: 6 minutes.

Move Earth: Move small hills, dig ditches and moats, other surface features, etc. Land moves at 6 feet per minute. R: 240 feet. D: permanent.

Part Water: Parts bodies of water up to 10 feet deep. R: 240 feet. D: 1 hour.

Projected Image: Project an image of yourself that can sense and talk as if you were the image. Other spells cast come from image. R: 240 feet. D: 1 hour.

Reincarnation: Restores dead person to life in a random (usually humanoid) form. R: touch. D: instant.

Repulsion:* Any being trying to move toward spell target finds itself moving away instead. R: 120 feet. D: 1 hour.

Stone-Flesh: Turns subject into a stone statue (or vice versa). R: 120 feet. D: permanent.

Divine (Cleric) Spells

For expanded spell descriptions see 0e or a 0e retro-clone. R: is range. D: is duration.

1st Level

Cure Light Wounds (Reversible): Cure 1d6+1 hit points of wounds. R: touch. D: instant but effects permanent.

Detect Evil (Reversible): Reveals evil thoughts/intent or evil items. R: 120 feet. D: 1 hour.

ELEMENTAL, FIRE: AC: 19 HD: 12d6 AT: slam +12 (2d6) S: ignite materials.

ELEMENTAL, WATER: AC: 19 HD: 12d6 AT: slam +12 (2d6) S: overturn boats, extra damage against swimming foes (1d6).

ELF: AC: 14 HD: 1d6+1 AT: sword or longbow (1d6) S: standard elf abilities.

EYE GLOBE: AC: 17 (Eye Stalks: 15) HD: Body 40 HP, Eye Stalk 10 HP each AT: 1d4 eyes S: floats about; large body eye generates anti-magic ray; 12 smaller eyes do: 1-charm person ray, 2-charm monster ray, 3-death ray, 4-2d6 damage ray, 5-sleep ray, 6-telekenesis ray, 7-slow ray, 8-fear ray, 9-stoning ray, 10-disintegration ray, 11-turn/control undead ray, 12-mind reading ray.

GARGOYLE: AC: 14 HD: 4d6 AT: claws or bite +4 (1d6), horns +4 (1d6) S: fly.

GELATINOUS CUBE: AC: 11 HD: 4d6 AT: slam +4 (2d6) S: touch paralyzes, immune to lightning and cold, surprise foes on a 1-4.

GHOUL: AC: 13 HD: 2d6 AT: claws or bite +2 (1d6) S: undead immunities touch paralyzes, humans slain by ghouls rise again as ghouls in 24 hours.

GIANT, CLOUD: AC: 17 HD: 13d6 AT: weapon +13 (3d6) or hurl rocks +13 (3d6) S: only surprised on a 1.

GIANT, FIRE: AC: 16 HD: 12d6 AT: weapon +12 (2d6) or hurl rocks +12 (2d6) S: immune to fire.

GIANT, FROST: AC: 15 HD: 11d6 AT: weapon +11 (2d6) or hurl

rocks/ice +11 (2d6) S: immune to cold.

GIANT, HILL: AC: 15 HD: 8d6 AT: weapon +8 (2d6) or hurl rocks +8 (2d6)

GIANT, STONE: AC: 20 HD: 9d6 AT: stone club +9 (2d6) or hurl rocks +9 (2d6)

GIANT, STORM: AC: 18 HD: 16d6 AT: weapon +16 (3d6) or hurl rocks +16 (3d6) S: control weather.

GNOLL: AC: 14 HD: 2d6 AT: weapon +2 (1d6)

GOBLIN: AC: 12 HD: 1d6-1 AT: weapon +1 (1d6) S: -1 to hit in sunlight.

GOLEM, FLESH: AC: 10 HD: 12d6 AT: fists +12 (1d6) S: Healed by lightning, hit only by magic weapons, slowed by fire and cold, immune to most magic.

GOLEM, IRON: AC: 16 HD: 13d6 AT: fists or weapon +13 (1d6) S: Poison gas, immune to all weapons +2 or less, slowed by lightning, healed by fire, immune to most magic.

GOLEM, STONE: AC: 14 HD: 16d6 AT: fist +15 (1d6) S:

Unaffected by +2 or lesser weapons, slowed by fire, healed/damaged by rock to mud, immune to most magic.

GORGON: AC: 17 HD: 8d6 AT: gore +8 (2d6) S: breathes petrifying gas.

GREEN SLIME: AC: n/a HD: n/a AT: organics and metal turn to green slime if touched S: killed by cold or fire. Cure Disease stops transformation to green slime.

GREY OOZE: AC: 12 HD: 3d6 AT: strike +3 (1d6) S: acid (destroys armor in one round, deals automatic damage after the first hit), immune to blunt/crushing attacks, spells, fire and cold.

GRIFFON: AC: 16 HD: 7d6 AT: 2 claws +7 (1d6), bite +7 (2d6) S: flies.

HARPY: AC: 12 HD: 3d6 AT: talons or weapon +3 (1d6) S: flies, siren-song (Charm person).

HELL HOUND: AC: 15 HD: 5d6 AT: bite +5 (1d6) S: breathe fire (10 HP damage)

HIPPOGRIF: AC: 14 HD: 3d6 AT: 2 claws +3 (1d6), bite +3 (1d6) S: flies.

HOBGOBLIN: AC: 14 HD: 1d6+1 AT: weapon +1 (1d6)

HORSE, RIDING: AC: 12 HD: 2d6 AT: bite or kick +2 (1d6)

HORSE, WAR: AC: 12 HD: 3d6 AT: bite +3 (1d6) or kick +3 (2d6)

HUMAN, BANDIT/SOLDIER: AC: 12 HD: 1d6 AT: weapon +1 (1d6)

HUMAN, BERSERKER: AC: 12 HD: 1d6+2 AT: weapon +1 (1d6) S: Berserking (+2 to hit)

HUMAN, COMMON MAN: AC: 11 HD: 1d6-2 AT: weapon +0 (1d6)

HUMAN, SERGEANT-AT-ARMS: AC: 14 HD: 3d6 AT: weapon +3 (1d6)

HYDRA: AC: 14 HD: 5-12d6 AT: 5-12 bites +HD (1d6) S: 1 HD per head, 20% chance fire-breathing or regenerating.

INVISIBLE STALKER: AC: 16 HD: 8d6 AT: 1 bite +8 (1d6) S: flies, invisible.

KOBOLD: AC: 13 HD: 1d3 AT: weapon +0 (1d6)

LEPRECHAUN: AC: 11 HD: 1d3 AT: theft, magic S: invisible, polymorph non-living objects, illusions and ventriloquism at will; steal small valuable item (75% successful, 25% chance if dropping per turn chased), 80% magic resistant, never surprised.

LICH: AC: 20 HD: 12-18d6 AT: touch +HD (1d6) S: undead immunities, touch causes paralysis (no save), cause fear in creatures under 4th level/HD, Magic-User or cleric level equals hit dice.

LIZARDMAN: AC: 14 HD: 2d6+1 AT: claws or weapon +2 (1d6) S: breathe underwater.

LURKER RAY: AC: 13 HD: 10d6 AT: wing smother +10 (1d6) S: those hit take 1d6 damage/turn and smother in 1d6 turns.

LYCANTHROPE, WEREBEAR: AC: 17 HD: 7d6 AT: 2 claws +7 (1d6), bite +7 (1d6) S: lycanthropy, extra 2d6 damage if both claws hit.

LYCANTHROPE, WEREBOAR: AC: 15 HD: 4d6 AT: tusks +6 (1d6) S: lycanthropy, attack +6 instead of +4 because of rage.

LYCANTHROPE, WERERAT: AC: 13 HD: 3d6 AT: bite or weapon +3 (1d6) S: lycanthropy, surprise foes on a 1-4.

LYCANTHROPE, WERETIGER: AC: 16 HD: 5d6 AT: 2 claws +5 (1d6), bite +5 (2d6) S: lycanthropy, surprise foes on a 1-4.
 LYCANTHROPE, WEREWOLF: AC: 14 HD: 4d6 AT: bite +4 (2d6) S: lycanthropy.
 MANTICORE: AC: 15 HD: 6d6 AT: claws +6 (1d6) or bite +6 (2d6) S: flies, six tail spikes +6 (1d6) per round, 24 spikes in total.
 MEDUSA: AC: 14 HD: 6d6 AT: weapon +6 (1d6) S: onlookers turn to stone (FORT save), hair attacks at +3 (poison bite), averting eyes reduces to hit by 4 and grants +2 to medusa attacks.
 MERMAN: AC: 13 HD: 1d6 AT: weapon +1 (1d6) S: breathe water, swim.

MINOTAUR: AC: 13 HD: 6d6 AT: weapon or Head gore +6 (1d6) S: never lost in mazes.
 MUMMY: AC: 16 HD: 6d6 AT: touch +6 (1d6) S: mummy rot curse if hit (no more healing), undead immunities, hit only by magic weapons (for half damage), spells, and fire.
 NAGA, GUARDIAN: AC: 14 HD: 12d6 AT: bite +12 (1d3 + poison), spit +12 (30 range, poison), constrict +12 (1d6/rd until freed) S: spells as 6th level Cleric.
 NAGA, SPIRIT: AC: 14 HD: 10d6 AT: bite +10 (1d3 + poison), S: spells as 6th level Cleric and 7th level Magic-User, gaze (permanent charm).
 NAGA, WATER: AC: 14 HD: 8d6 AT: bite +10 (1d3 + poison), S: spells as 5th level Magic-User (no fire or lightning).

NIXIE: AC: 12 HD: 1d6 AT: weapon +1 (1d6) S: swims, charm.
 OCHRE JELLY: AC: 11 HD: 6d6 AT: acid strike +6 (1d6) S: a hit destroys organic material, lightning divides jelly into three jellies, each doing +2 (1d6) damage.
 OGRE: AC: 14 HD: 4d6 AT: weapon +4 (1d6+2)
 OGRE MAGE: AC: 15 HD: 5d6 AT: weapon +5 (2d6) S: flies, magic use (turn invisible, darkness 10' radius, sleep, charm person, cone of frost).
 ORC: AC: 13 HD: 1d6 AT: weapon +1 (1d6)

OWLBEAR: AC: 14 HD: 5d6 AT: 2 claws or bite +5 (1d6) S: hug for additional 2d6 if both claws hit.
 PEGASUS: AC: 13 HD: 4d6 AT: hooves +4 (1d6) S: flies.
 PIXIE: AC: 12 HD: 1d6 AT: weapon +1 (1d6) S: flies, charm, naturally invisible.
 PURPLE WORM: AC: 13 HD: 15d6 AT: bite or sting +15 (1d6) S: poison sting (1d6 STR), swallows whole on roll 4 higher than needed to hit, swallowed creatures take 1d6 automatic damage every round.
 RAT, GIANT: AC: 12 HD: 1d6 AT: bite +1 (1d3) S: 1 in 20 chance of disease from bite.

RAT, MONSTROUS: AC: 13 HD: 3d6 AT: bite or claws +3 (1d6) S: 1 in 20 chance of disease from bite.
 ROC: AC: 15 HD: 12d6 AT: claws or bite +12 (3d6) S: flies
 RAKSHASA: AC: 23 HD: 7d6 AT: claws, bite or weapon +7 (d6) S: spells as 1d3 level Magic-User and 1st level cleric, immune to non-magic weapons, below +3 weapons do 50% damage, blessed crossbow bolt kill instantly.
 RUST MONSTER: AC: 17 HD: 5d6 AT: touch +5 (special) S: touch of (or touching) the rust monster causes metal items to turn to rust.
 SALAMANDER: AC: 15 HD: 7d6 AT: touch or constrict +8 (1d6) S: heat does 1d6 to nearby creatures, immune to fire.

SEA SERPENT: AC: 17 HD: 30d6 AT: bite +15 (4d6) S: swallows whole on roll 4 higher than needed to hit, swallowed creatures take 1d6 automatic damage every turn.
 SHADOW: AC: 12 HD: 3d6 AT: touch +3 (1d6) S: drains 1 STR per hit, hit only by magical weapons, immune to charm and sleep spells, surprise foes on a 1-5, creatures reduced to 0 STR will rise 24 hours later as a shadow.
 SKELETON: AC: 12 HD: 1d6 AT: weapon or strike +1 (1d6) S: undead immunities.
 SLUG, GIANT: AC: 11 HD: 12d6 AT: bite +12 (1d6) S: spits acid (2d6).
 SNAKE, CONSTRICTOR: AC: 14 HD: 2d6, AT: constriction (1d3) S: On successful attack, automatic 1d3 damage thereafter until dead.

SNAKE, GIANT CONSTRICTOR: AC: 14 HD: 6 AT: constriction +4 (1d6) S: On successful attack, automatic 1d6 damage thereafter until dead.
 SNAKE, GIANT VIPER: AC: 14 HD: 4d6 AT: bite +4 (1d3 + poison) S: Poison bite.
 SNAKE, VIPER: AC: 14 HD: 1d6 AT: bite +1 (1hp + poison) S: Poison bite.
 SPECTRE: AC: 17 HD: 7d6 AT: touch +7 (1d6) S: undead immunities, drains 2 levels per hit, creatures reduced to 0 levels will rise 24 hours later as a spectre.
 SPIDER, GIANT: AC: 13 HD: 2d6+2 AT: bite +2 (1d6) S: bite causes paralysis via poison, surprise on 1-5.

STIRGE: AC: 12 HD: 1d6 AT: sting +1 (1d6) S: attaches on a hit and will deal 1d6 automatically damage every round.
 TREANT: AC: 17 HD: 10d6 AT: strike +10 (3d6) S: Control trees and can make them move and attack.
 TICK, GIANT: AC: 15 HD: 3d6 AT: bite+3 (1d6) S: attaches on a hit and will deal 1d6 damage automatically every round.
 TITAN: AC: 22 HD: 16d6 AT: weapon+15 (2d6) S: Spells.
 TOAD, GIANT: AC: 12 HD: 2d6 AT: bite +2 (1d6) S: surprise foes on a 1-3, swallows small creatures whole on a natural 20, swallowed creatures take 1d6 automatic damage every round, long tongue.

TROLL: AC: 15 HD: 6d6 AT: claws +6 (1d6) S: regenerate 3 hp per round (except acid or fire damage).
 UNICORN: AC: 17 HD: 5d6 AT: hoofs or horn +5 (1d6) S: double damage for charge, 25% magic resistance, teleport, horn can cure damage or disease.
 VAMPIRE: AC: 17 HD: 9d6 AT: bite +9 (1d6) S: undead immunities, hit only by magical weapons, regenerate 3 hp per round, drains 2 levels per hit, gaseous form at will, shape change into bat, charm gaze, avoids garlic and mirrors, summons bats or wolves, immobilized and apparently dead if a stake is driven through its heart, drowns under water in one round, creatures reduced to 0 levels will rise 24 hours later as a vampire under the control of their creator.
 WAR DOG: AC: 12 HD: 2d6 AT: bite +2 (1d6)
 WIGHT: AC: 14 HD: 3d6 AT: claw +3 (1d6) S: undead immunities, hit only by magical or silver weapons, drains a level per hit, creatures reduced to 0 levels will rise 24 hours later as a wight.

WILL-O-THE-WISP: AC: 27 HD: 9d6 AT: shock +9 (1d6+4) S: flies.
 WOLF: AC: 12 HD: 2d6 AT: bite +2 (1d6)
 WORG: AC: 13 HD: 4d6 AT: bite +4 (2d6)
 WRAITH: AC: 16 HD: 4d6 AT: touch +4 (1d6) S: undead immunities, only hit by magic or silver weapons, arrows do a max 1 HP damage, drains a level per hit, creatures reduced to 0 levels will rise 24 hours later as a wraith.
 WYVERN: AC: 16 HD: 8d6 AT: bite or sting +8 (1d6) S: poison sting (1d6 STR), flies.

YELLOW MOLD: AC: n/a HD: n/a AT: 1d6 if touched S: if struck, 50% releases poisonous spore cloud, destroyed by fire.
 ZOMBIE: AC: 11 HD: 2d6 AT: weapon or strike +2 (1d6) S: undead immunities, always lose initiative.

Microlite74 Treasure

Here is a list of sample treasure items appropriate to a Microlite74 campaign. Maps to possible hoards of such treasures are also a common treasure item. Of course, any magic item you like from the SRD can be used, but higher powered items may be too powerful for most Microlite74 games.

Money: 1 gold piece (gp) = 10 silver pieces (sp); 1 silver piece = 5 copper pieces (cp).

Gems: Most range in value from 10gp to 1000gp, with 50% of gems being worth about 100gp.

Magic Weapons: Most range from +1 to +3, some +1 weapons have a greater plus versus specific types of monsters. Magic Swords sometimes have a special spell-like power or two. A few swords are intelligent and have a number of spell-like powers (some even talk). A few weapons are cursed and reduce one's

chance to hit.

Magic Armor: Most are plus +1, with a few +2 or +3. Magic shields exist with similar pluses.

Scrolls: Most hold one to six spells (all arcane or all divine). Some are protection against good/evil/one of the elements. A few place curses on the reader.

Potions: Common examples: Growth, Diminution, Giant Strength, Invisibility, Gas Form, Polymorph Drinker, Speed, Fly, Levitate, ESP, Healing, Clairvoyance, Clairaudience, Control (Animal, Demon, Dragon, Giant, Human, Plant, Undead, etc.), Invulnerability, Heroism, Resistance (Fire, Cold, Acid, etc.), Treasure Finding, Water Breathing, etc. Some potions are poison, cause disease, cause delusions, etc.

Rings: Common examples: Spell Storing, Spell Turning, X-Ray Vision, Telekinesis, Protection, Protection 5 foot radius, Invisibility, Control (Human, Mammal, Zombie, etc.), Resistance (Fire, Cold, Acid, etc.). Uncommon examples: Three Wishes, Regeneration, Djinn Summoning. Some rings are cursed with negative effects.

Wands and Staves: Common examples: Detection (Enemy, Metal, Secret Doors, Traps, Magic, etc.), Illusion, Fire Balls, Lightning Bolts, Cold, Polymorph, Healing, Commanding, Striking, etc. Uncommon examples might have several of the above powers. Wands operate as level 6 casters with 1d100 charges. Staves operate as level 8 casters with 1d200 charges.

Unusual Magic Items: Here are some ideas: Boots (Speed, Levitation, Travelling, Leaping, Elven), Cloak (Displacing, Elven, Flying, Protection), Crystal Ball, Flying Broom, Flying Carpet, Amulets (Protection, versus ESP, versus Charm, etc.), Helms (Read Magic, Read Languages, Telepathy, Teleportation, Good, Evil, etc.), Horn (Blasting, Summoning, etc.), Belts of Giant Strength, Efrete Bottle, Djinn Lamp, Mirror of Life Trapping, etc. Cursed items are possible as well.

Notes on "Old School" Play

While Microlite74 is designed using tried and true "D20" systems filtered through the Microlite20 rules, it is designed for a completely different style of play than many players who started to play in the last 20 years or so may be used to. This section will give a brief overview of "old school" play.

What is "Old School" Play?

There are two major styles of roleplaying games. The first (and older) style says "Here is the situation. Pretend you are there as your character, what do you want to do?" This style has been superseded over the years with a style that says "Here is the situation. Based on your character's stats, abilities, skills, etc. as listed on his character sheet and your knowledge of the many detailed rules of the game, what is the best way to use your character's skills and abilities and the rules to solve the situation?" Old school play strongly favors the first style and frowns on too much of the second.

Here are some major points where old school play is different:

Heroic, not Superheroic: Old school play, especially at low to mid levels, is about fairly normal people put in situations where they can be heroes, not about extraordinary people doing things that would make a four-color comic book superhero proud – and at first level yet. Just like in the real world, the more a character improves his abilities, the harder it is to improve them further, while new characters may advance rapidly, the higher their level the more effort and time (and XP) it takes to advance to the next level.

Achievement, not Advancement. Many modern games are often all about what special feats, extra classes and special game mechanics the players wish to obtain for their characters as they increase in level. In old school games, a character's abilities are generally predetermined by his character class, so old school games focus on the things that the characters wish to accomplish in the game world rather than on what game mechanics they want to acquire. Level advancement is often much slower than in modern fantasy RPGs which makes in campaign achievements even more important as a measure of

character success.

No Skills: Unlike in most modern RPGs, there aren't any skills in Microlite74 -- not even the streamlined four skills of Microlite20. Players are intended to have their characters act like adventurers. So don't search your character sheet or the rules for the perfect solution in Microlite74. Instead, you just tell the GM what your character is trying to do. Note that you are assumed to be competent with all common activities associated with your class and background. If you need to keep a door open or shut, you might tell the GM your character is using a spike to keep the door open or closed. A ten foot pole is your friend for checking for traps. Searching a room means looking in and under objects, not rolling a skill check. While this may seem strange at first, you will quickly learn to appreciate the freedom it gives you. No longer are you limited to the skills and feats on your character sheet, you can try anything your character should be capable of trying. You might not succeed, but the rules generally will not stop you from trying.

Limited Magic Items: Modern fantasy RPGs often assume that magic items are easy to buy and/or to create. In most old school campaigns, magic items are relatively rare and hard to create. Only potions and scrolls are generally relatively easy to create or purchase. Other magic items are seldom found for sale (and are very high priced when they are found for sale) and are usually very expensive in money and time to try to create – often requiring rare ingredients that the characters must quest to find. Therefore characters are usually limited to the magic items they find in treasures or take from defeated enemies on adventures.

No Assumption of "Game Balance": Old style game sessions aren't about carefully balanced characters (who are all able to shine equally at all times) who only run into situations carefully designed by the GM to be beatable by the characters presently in the party and to provide treasure that fits their current level. Instead, part of player skill is learning to evaluate situations so situations well over the party's current abilities or which will waste the party's resources for little gain can be avoided. Don't assume that you can beat every monster that you encounter, running away from monsters too tough to handle can mean the difference between character survival and character death. You can also get creative in how you defeat monsters. Perhaps those goblins you bypassed could be talked into (or tricked into) attacking that giant you know you can't beat, perhaps killing it for you or at least softening it up so your party has a chance of defeating it and living to tell the tale. Also remember that treasure can be turned into XP, even if you can't kill the monsters, perhaps you can still acquire some of their treasure. Part of the skill of playing "old school" style is coming up with creative solutions when a direct attack is likely to fail.

It's Not All About Combat: Many modern fantasy RPGs have made combat the star of the system, combats in these systems are time-consuming and very crunchy with rules for everything. Microlite20 avoids this by having a fast-playing abstract combat system. Microlite74 takes this one step further, combat isn't intended to be the main source of fun in the game. The game is as much about exploration and treasuring finding as it is about combat. Sure, you are going to have to fight things to explore and find treasure, but always remember that combat may not be the best or safest way to handle every situation. Think before you rush into combat. After all, it's not the only way to earn a good pile of experience – and monsters don't have to be killed to be defeated (and get XP for them).

Reality/Common Sense Trumps Rules: Old-school games use loose and simple rules that cover average cases and the GM and players are supposed to apply common sense and their knowledge of how reality works to cover the unusual and edge cases. "Reality/Common Sense" as interpreted by the GM always trumps the written rules if they conflict. For example, a character has a magic weapon and the rules for that weapon say it always causes its target to fall prone if hit. The character hits a gelatinous cube moving down the corridor toward them with the weapon. The rules say that the target should fall and be in a prone position. Reality, however, says otherwise. Gelatinous

cubes don't have a top and bottom (so prone penalties make no sense) and a 10 foot cube can't fall when it is moving through a 10 foot corridor. In some modern games, the rules would be applied anyway and the cube would suffer the effects of falling prone no matter how little sense that makes. In an old school game, the GM ignores the rule because it makes no sense in the specific situation.

Forget "Rules Mastery": As some of the above differences have hinted, player skill in "old school" style games isn't about mastering the game rules so you can solve any problem by knowing the right combination of rules from 20 different rule books. Microlite20 is designed to be rules light and Microlite74 tries to stress this even more by encouraging GMs to make rulings on the spot taking into account specific circumstances instead of trying to hunt up special cases in the SRD or a stack of optional rule books. This is faster and helps players immerse themselves in their character and the game world instead of in rule books. GM rulings will be based on specific circumstances and common sense, not just on the written rules and prior rulings. Just because it requires a certain roll to jump one 10 foot pit does not mean all 10 foot wide pits will require the same roll. After all, all sorts of variables can affect the roll (terrain, weather, lighting, pressure to jump quickly, etc.). Players need to remember that these rules are merely a tool for the GM. They are just guidelines for the GM, not something written in stone that the GM must obey. If something herein does not work right in your campaign (or the GM just does not like a rule), the GM is well within his right to change it. Microlite74 is not a game for rules lawyers or for those who believe that the game designer always knows what is best.

No Script Immunity: In most old school games, player characters do not have any form of script immunity. Player characters can die, lose equipment, suffer strange magical effects and other often unpleasant consequences if they are not careful or are just very unlucky. On the other hand, there are no rules limiting their success. If they take on an adult red dragon as first level characters and miraculously manage to win, there are no rules about level appropriate wealth or level appropriate magic items to interfere with their becoming rich and probably flush with magic items from the dragon's hoard.

Not Mentioned does not mean Prohibited: Many people seem to read RPG rules and come away with the idea that anything not specifically mentioned in the rules as allowed is prohibited. While this really doesn't make much sense given that no set of rules could ever cover everything that characters might attempt to do in an adventure, it seems to be a very common way to view RPG rules. In an old school game like Microlite74, this is specifically not true: the millions of possible activities not mentioned in the rules are not prohibited, they are up to the GM to allow or disallow based on his knowledge of how reality works and how his specific campaign world differs from reality. Unless the rules specifically prohibit some action, players should ask their GM instead of simply assuming it is prohibited because the rules do not mention it.

Styles of "Old School" Play

If you read some "old school" blogs, forums, and web sites, you might get the impression that there is only one "old school" style of play: a style with expendable player characters who spend all their time in dungeons designed in the style of the old "Tomb of Horrors" module where an adventuring party is only one slipup away from death. This style of play is often shown in early modules.

What most people forget is that these early modules were designed for tournament play where the party that lasted longest and made it deepest into the dungeon was the winner. While a few gaming groups did run their regular campaigns like this and enjoy it, most people did not enjoy such games and the GMs who ran them were often referred to as "Killer GMs" (who often found themselves without players). Instead most home campaigns were a mixture of the following four styles – some campaigns stressing one or two styles over the others.

Power-Gaming: Many players start out playing in this style. Most soon get bored with it and add more and more of other

styles. A power-gaming campaign is all about character power. Characters are known by their class, level, special items, and amazing powers and deeds. ("I killed the Demon King with my 15th Level Fighter/Magic-User/Druid. It only took two hits from Thor's Hammer to knock him out. Then I cut off his head with my vorpal blade.") There is often a lot of player competition for the most powerful character in campaigns that stress power-gaming. A lot of people look down on this style, but it can be a lot of fun to play a pure power-game in a group of players who all like the style.

Wargaming: This is probably the style old school rules were originally written for. The wargaming style of play is a competition between the player group and the GM. The GM sets up tactical battles, puzzles, and the like and the players solve them for treasure and experience. Fudging die rolls and ignoring rules (either for or against the players) is frowned upon as it detracts from the challenge and fun of the adventure. Characters in pure wargaming campaigns often were expendable and had little personality or goals (beyond staying live and getting rich) as a character with such might be tempted to do things dysfunctional to survival. Published tournament dungeons like Tomb of Horrors could be considered examples of extreme forms of this style. Once the RPG hobby became known outside of the minis and board wargaming community, pure forms of the wargaming style quickly became uncommon.

Role-Playing: A pure role-playing campaign is almost the opposite of a pure wargaming campaign. Player skill, tactics, and rules aren't really important. What is important is the player's character and that character's life in the game. In a pure role-playing campaign, players create the personality of their characters in great detail and players generally have a large emotional investments made in them and do not consider their characters expendable. Players tend to have their characters act within their personalities and within the beliefs they're supposed to hold – even when doing so is not the best thing to do at the time within the game. The object is to live your character's life in the campaign world. You "win" by having your character achieve his goals, goals which may or may not have anything to do with the game's goals of exploring and accumulating treasure and experience points. The modern computer game *The Sims* is an example of this style of play.

Story-Telling: While all campaigns tell a story after-the-fact (that is, you can tell a story based on the characters actions in the game), in a story-telling campaign, the GM has worked out a story in advance and the player characters are the protagonists. The campaign world usually has a detailed background and back story behind it. Knowing this background may be more important than knowing the rules. Some pure story telling campaigns are little more than single-line railroads where the characters play their almost pre-scripted parts in the story. In other cases, things are more free-form with story flow and events created by interactions between the GM's basic outline of story events and the actions of individual characters during the campaign. Some people consider the more pure forms of story-telling campaigns boring straight-jackets while others love the idea of being a major part of a real story.

These four major styles of play appeared early in the history of role-playing games. They were first mentioned in a general circulation publication in Glenn Blacow's article "Aspects of Adventure Gaming" in *Different Worlds* #10 (the October 1980 issue).

The important thing to take from this section isn't the four styles or their labels (as there are other systems for describing this with their own labels), but the idea that there were many different styles of "old school" play back in the "old school" days – not just the single style stressed in some "old school" blogs, forums, and web sites. Don't let those sites make you believe that you aren't playing old school right if your campaign isn't strongly in the wargaming camp. Most successful campaigns back in "old school" days were a mixture of all four major styles – and a heaping helping of minor styles.

Advice for the New Old School Game Master

If you are comfortable running a rules-light game like standard

Microlite20, you'll probably have no trouble running Microlite74 as you have already learned to run a game without having hundreds of pages of rules detailing how to handle every situation that might possibly arise in the game. You've learned to just make a ruling that you think fits the situation and keep the game moving.

Running a Game Without Skills

The greatest change between Microlite20 and Microlite75 is the removal of all character skills. If you are used to just allowing players to just say "I'm searching the room. What do I find?" and make search skill roll or just say "I'll try to persuade the baron to loan us a catapult." and make a persuade skill roll, running without skill rolls is going to require as much change to your thinking as it will to your players' thinking.

First, you need to get your players to tell you what their characters are actually doing in the campaign world, instead of talking in terms of what skill they are using. Then you need to learn to listen to what they say and decide if there description of what they are doing a) would most likely solve the problem, b) wouldn't have a chance of solving the problem, c) might not immediately solve the problem but would provide more info that would help solve the problem, or d) would not definitely solve the problem but has a fair chance of doing so. Only option d would require a die roll.

Let's take checking a chest for traps as an example. Get the players to describe in general terms how they are going to check the chest for traps. Note general terms are enough, the idea is to see what the characters are doing, not to require them to describe every single muscle and eye movement they make. Having to "click on one exact pixel on the screen" to succeed is boring and frustrating in a computer game, the verbal equivalent of it is even more frustrating in a tabletop game. Don't fall into the trap of doing it as it turns players off fast.

Let's say a player says "I'll look the chest quickly over for obvious traps, paying special to the keyhole, clasp, and anything that looks out of the ordinary. I'm not touching it yet."

If the chest had a poison needle near the clasp or some holes for poison gas or needles to shoot out of, this should be enough for the character to notice it without a roll, even if he isn't a Rogue or the like. However, if the chest is set to explode (or shoot daggers out of the opening when opened, such a search is not going to discover the trap – again no matter what the character's class or background as such a trap isn't visible from the outside. If you are feeling generous, you might have a Rogue make roll and if she makes it tell her player that while she doesn't see a trap, something still doesn't seem right about the chest.

If the character had said he was then poking the chest with a pole instead of rushing to open it, he might hear something strange if the chest had the above-mentioned dagger trap. Of course, unless he is a Rogue or has some strange background, chances are he would not associate the noise with a trap, but rather just that there was something loose in the chest. Again, you might give a Rogue a roll, especially an experienced Rogue.

As this example shows, it really isn't hard – unless you choose to make it hard. It's just different. After a few sessions both you and your players will find that it really isn't as hard as it looks.

Some players, however, really want die rolls. Because of previous bad experiences with poor GMs, they just can't trust the GM enough to handle some decisions being made without die rolls. If your players are like this, you can use "skill" rolls as a safety net. The players will still have to describe what their character does to solve the problem just as above. Once the player describes what his character is doing, the GM calls for a class/background based "skill" roll as described in the skills section of these rules. The results are determined by your opinion as GM of the action described and the skill roll. There are basically two situations:

In the first case, you feel that the player has a good plan that should likely succeed. Therefore it will succeed regardless of the result of the roll, but how well it succeeds is determined by the skill roll. A failed skill roll is a minimal success; the character succeeds, but just barely. A successful skill roll means the character's plan succeeds without any major hitches.

In the second case, either the player obviously knows less than his character does about the situation or just comes up with a bad idea that you feel is unlikely to work. You let the skill roll decide the result. A failed roll means the plan fails, while a successful roll means the plan somehow worked after all, but probably not perfectly.

Players who refuse to even try to come up with some type of rational statement about what their character is actually doing but just want to let the skill roll decide automatically fail.

Guidelines Not Rules

Finally, remember that these rules are a tool for the GM. If something herein does not work right in your campaign, change it. The object is to have fun, not be a slave to rules or to players who think being a rules-lawyer is the way to get ahead. In many roleplaying games, the Rules As Written (RAW) are often considered sacrosanct or at least somehow better than those a GM can come up with himself. This is not true of Microlite74 so please change anything you do not like.

Old School Games and Retro-Clones

Microlite74 is designed to be an introduction to "old school" gaming for players more familiar with the 3.x version of the world's most popular fantasy roleplaying game. While I've tried to design Microlite74 for long running campaigns, if you find the "old school" style of play espoused by Microlite74 fun you may want to move to one of the original games or one of their retro-clones.

What is a retro-clone? The OGL has allowed fans to recreate the rules of older, out of print editions of the world's most popular fantasy roleplaying game. These are usually called "retro-clones" because they are "clones" of the rules to older ("retro") editions of the world's most popular fantasy roleplaying game. Most retro-clones have free PDF versions and most have nicely bound printed copies available for a very reasonable price. Retro-clones allow play of an older, out-of-print game system without the trouble and expense of tracking down a copy of an out-of-print game. While no retro-clone is an exact copy of an earlier game, they generally are close to identical in play.

0e and Retro-Clones

0e: The Original Game

<http://www.retroroleplaying.com/book/original-dd>

The original 0e booklets and supplements can be found at auction on eBay or RPG Marketplace or at specialists like Noble Knight Games, but they are generally very expensive collectibles. Some excellent third party 0e adventures (and an excellent campaign setting) from the late 1970s are also available in PDF format. These adventures could easily be used with Microlite74 or a 0e retro-clone – and converted for use with any other early edition/retro-clone with only a little effort.

Original Edition Characters (for Labyrinth Lord)

<http://www.goblinoidgames.com/labyrinthlord.html>

Original Edition Characters is a supplement for *Labyrinth Lord* (see the B/X and Retro-clones section below). It modifies the *Labyrinth Lord* rules to emulate the 0e game.

Microlite74

<http://www.retroroleplaying.com/content/microlite74>

Microlite74 is a restatement of 0e using a very light version of the 3.x rules (Microlite20) as a base. You are holding the Basic Version in your hands. *Microlite74 Basic* covers the original 0e boxed set. *Microlite74 Standard* covers the original 0e boxed set and supplements. *Microlite74 Extended* adds a number of house rules and other material the author was using in the late 1970s to overs the original 0e boxed set and supplements. *Microlite74 Companion* volumes add optional rules, detailed spell, monster,

and treasure information, and other material which can generally be used with any version of Microlite74.

Swords & Wizardry

<http://www.swordsandwizardry.com/>

Swords & Wizardry is an OGL retro-clone of the 0e version from the mid-1970s, the same edition Microlite74 is loosely based on. *Sword & Wizardry* is handy for complex spell and monster descriptions for use with Microlite74 as well as a great game itself. The spell lists and monsters can be used as drop in replacements for those listed in Microlite74. There are three versions of this game. One uses just the material from the three LBB and the other two also use selected material from the 0e supplements.

B/X and Retro-Clones

B/X: The Original Game

<http://www.retroroleplaying.com/book/classical-dd>

The original B/X boxed sets and the revised version of this edition, the five box BECMI edition, can be found at auction on eBay or RPG Marketplace or at specialists like Noble Knight Games, as can a very large number of excellent adventure and campaign modules. Many of these modules could be used with Microlite74 or other B/X retro-clones with little modification -- and converted for use with any other early edition/retro-clone with only a little more effort.

Basic Fantasy Role-Playing Game

<http://www.basicfantasy.org/>

The *Basic Fantasy Role-Playing Game* is loosely based on the so-called B/X edition of the world's most popular fantasy roleplaying game from the early 1980s. There are a number of minor tweaks like ascending armor class and separation of races and classes.

Dark Dungeons

<http://darkdungeonsblog.wordpress.com/>

Dark Dungeons is based on the single volume RC version of the BECMI edition from the early 1990s. The rules are fairly close to the original but some changes have been made, especially where setting specific material is concerned.

Labyrinth Lord

<http://www.goblinoidgames.com/labyrinthlord.html>

Labyrinth Lord is more closely based on the so-called B/X edition of the world's most popular fantasy roleplaying game from the early 1980s. While some minor changes have been made for compliance with the OGL and copyright law, many people have a hard time finding any truly major differences between *Labyrinth Lord* and the original.

B/X Companion

<http://bxblackrazor.blogspot.com/2010/07/what-hell-is-bx-companion.html>

The *B/X Companion* is intended to be the mythical 3rd volume designed to complete the work begun with Tom Moldvay's Basic Rules and continued in the Dave Cook/Steve Marsh Expert Rules, both published in 1981. Both promised a "Companion" volume that would conclude the series. This is an attempt at producing the promised *B/X Companion*. (No free PDF version.)

Companion Expansion

<http://www.lulu.com/product/paperback/companion-expansion/6130494>

This is another attempt at producing the never published "third book" of the B/X version. "Presenting additional creatures and magical items for fantasy roleplaying games for basic- and expert-level players and gamemasters!"

1e and Retro-Clones

1e: The Original Game

<http://www.retroroleplaying.com/book/add-first-edition>

The original 1e rulebooks and adventures can be found at auction on eBay or RPG Marketplace or at specialists like Noble Knight Games -- often at good prices if you do not need collectible condition. Also, some excellent third party 1e adventures are available in PDF format. 1e adventures and campaign settings could be converted for use with Microlite74 or

any other early edition/retro-clone without much work.

Advanced Edition Companion (for Labyrinth Lord)

<http://www.goblinoidgames.com/labyrinthlord.html>

The *Advanced Edition Companion* is a supplement for *Labyrinth Lord* (see the B/X and Retro-clones section above). It modifies the *Labyrinth Lord* rules to emulate the 1e game -- or at least those parts of it that most players actually used.

OSRIC

<http://www.knights-n-knaves.com/osric/>

OSRIC (Old School Reference & Index Compilation) is an OGL version of the first "advanced" edition of the world's most popular fantasy roleplaying game from the late 1970s and early 1980s. The first edition of *OSRIC* was designed to be just something that would allow publishers to legally publish OGL materials compatible with 1e. This attitude is also responsible for the boring name. The second edition of *OSRIC* is much more complete and is written with both players and publishers in mind.

2e and Retro-Clones

2e: The Original Game

<http://www.retroroleplaying.com/book/add-2nd-edition>

The original 2e rulebooks and adventures can be found at auction on eBay or RPG Marketplace or at specialists like Noble Knight Games -- often at very good prices if you do not need collectible condition. Also, some excellent third party 2e adventures are available in PDF format. 2e adventures and campaign settings could be converted for use with Microlite74 or any other early edition/retro-clone without much work.

For Gold & Glory

http://feysquare.com/?page_id=3

For Gold & Glory is an attempt to create a close adaption of the 2e rules, or at least those in the three 2e core rulebooks.

Myth & Magic

http://www.newhavengames.com/?page_id=23

Myth & Magic is built from the core 2e rules. It retains the essence of classic fantasy role playing, while advancing the mechanics and providing more options, classes, spells, monsters, and more.

Other Fantasy Games

Adventurer Conqueror King System

<http://www.autarch.co/>

Adventurer Conqueror King takes the end game (ruling a domain) assuming in early editions of the world's most popular fantasy RPG and rebuilds the entire game around it, with special attention to a simple but functional economic system.

Adventures Dark and Deep

<http://www.adventuresdarkanddeep.com/>

This game is not a retro-clone, strictly speaking. Instead, it is an attempt to create an alternate universe version of 2e. 2e as it might have been if it had been written by the author of 0e and 1e.

Age of Shadows

<http://old.enworld.org/CrookedStaffProductions/page24.html>

A free old-school fantasy RPG based on the Openquest (D100 system) rules.

Barbarians of Lemuria

<http://www.1km1kt.net/rpg/barbarians-of-lemuria>

Non-traditional but still old school rules for fantasy games set on the lost continent of Lemuria -- loosely based on Lin Carter's novels. This is link to the free version. There is also a Legendary Edition from Beyond Belief Games.

The Big Brown Book

http://feysquare.com/?page_id=84

The *Big Brown Book* takes the rules of 0e and gives them a new spin -- What would the world's most popular fantasy role playing game look like had it continued its wargame roots?

Castles & Crusades

<http://www.trolllord.com/cnc/index.html>

Castles & Crusades is 1e reimaged using 3e rules. It's fairly compatible with adventures from all editions of the world's most popular fantasy RPG through 3.5.

Dangers and Dweomers

<http://artikid.altervista.org/?id=Games&detail=Dangers%20and%20dweomers>

Dangers and Dweomers is the designer's personal take on early editions: "As much as possible I streamlined the S&W system, filling what I found as gaps with material from the BFRPG and the SRD."

Dark Passages

<http://www3.telus.net/public/uncouths/Passages.pdf>

Dark Passages is a modernized and re-organized take on the 0e/1e era of rules.

Dragons at Dawn

<http://stores.lulu.com/boggswood>

This game is an attempt to recreate the rules of the original Blackmoor campaign from the early 1970s. "*Dragons at Dawn* is a retro tribute to the very first fantasy gaming system pioneered by Dave Arneson, the man who later went on to co-author the world's most popular roleplaying game. The result of years of careful historical research, *Dragons at Dawn* is entirely consistent with Arneson's original, largely forgotten methods of play developed roughly in the period 1970-1973." (No Free PDF version.)

Epées & Sorcellerie

<http://www.lulu.com/product/file-download/ep%C3%A9es-sorcellerie-%28english-translation%29/16178887>

Epées & Sorcellerie is a French RPG strongly inspired by 0e. An English translation is available.

Errant

<http://errantgame.blogspot.com/p/errant-rpg.html>

Errant RPG is a retro-clone that captures the basic play style of the classic game while introducing a variety of modern innovations to improve play.

Fire & Sword

<http://basicroleplaying.com/downloads.php?do=cat&id=12>

Fire & Sword was created by Raymond Turney, a co-creator of *RuneQuest*, and *Fire and Sword* is his evolution of the system. It thus has much in common with *BRP*, but contains many new interesting mechanisms.

Forward to Adventure!

<http://www.flyingmice.com/FTA.html>

This game is not a retro-clone, but a modern game that was designed with "old school" dungeon adventuring in mind. While not an "old school" game by any stretch of the imagination, it would be relatively easy to use FtA! to run a campaign in the old-school style. Unlike most modern RPG designs, there is little designed into FtA! that would interfere with this which makes it a system those who like the "old school" style of play but dislike the "old school" style of rules might wish to consider. (No free PDF version.)

Lamentations of the Flame Princess

<http://lotfp.blogspot.com/>

Lamentations of the Flame Princess is a 0e-like rules system with a stress on "weird fantasy." (Free PDF version of the "Grindhouse" rules available.)

Legends of the Ancient World

<http://www.darkcitygames.com/display.php?series=law>

Legends of the Ancient World is a rules-light clone of Megagaming's *The Fantasy Trip* -- complete in seven pages. The game is a free PDF, but the publisher sells solitaire adventures for it similar to the ones Megagaming produced for TFT.

Mazes & Minotaurs

<http://mazesandminotaurs.free.fr/>

Mazes & Minotaurs answers the question of what might 0e and 1e look like if their designers had been interested in classical

Greek fantasy rather than medieval fantasy. There are two versions of the game available: Original and Revised.

Old School Hack

<http://www.oldschoolhack.net/>

Sort of the old Red Box version reimaged through a somewhat new school lens. It's not really an old school game but it not really not an old school game either.

Pars Fortuna

<http://matt-landofnod.blogspot.com/p/pars-fortuna.html>

What if you took the *Swords and Wizardry* rules and threw out all the standard races, classes, spells, monsters and magic items and replace them with ones generated randomly via sites like Chaotic Shiny, Seventh Sanctum or Abulafia? You get *Pars Fortuna*. (No free PDF version, although a free basic version is available.)

Siege Perilous

<http://oldguyrpg.blogspot.com/2009/09/siege-perilous-ultima-rpg-playtest.html>

Siege Perilous is a 0e variant designed to emulate the first three games of a very popular computer roleplaying game from the early 1980s.

Spellcraft & Swordplay

<http://stores.lulu.com/elflairgames>

Spellcraft & Swordplay is an OGL redesign of the 0e version from the mid-1970s. The designer decided to rewrite 0e based on the original combat system (from the miniatures rules 0e grew out of) instead of 0e's "alternative combat system." The alternative combat system quickly became the standard combat system of the world's most popular fantasy roleplaying game. This is sort of a retroclone from an alternate universe where the original combat system was the most-used. (No free PDF version, although a free basic version PDF is available.)

Tombs & Terrors

<http://beyondbeliefgames.files.wordpress.com/2010/12/cq-tt1.pdf>

Tombs & Terrors is an unashamedly familiar role playing game of delving into subterranean crypts and looting the treasure -- compatible with sourcebooks and supplements that you already have.

ZeFRS

<http://www.midcoast.com/~ricekrwc/zeprs/>

David "Zeb" Cook's 1985 rules for the TSR Conan roleplaying game returns as a generic sword-and-sorcery RPG complete in one volume. Trample the jeweled kingdoms of your own world beneath your sandals!

Other Games

Mutant Future

<http://www.goblinoidgames.com/mutantfuture.html>

Mutant Future is a nuclear post-apocalyptic science fantasy game. It is created in the style of similar RPGs from the late 70s, but built around the core *Labyrinth Lord* rules so that these two games are fully compatible.

Stars Without Number

http://rpg.drivethrustuff.com/product_info.php?products_id=86467

Stars Without Number is a retro science fiction role playing game influenced by the Old School Renaissance and partially inspired by the great fantasy role-playing game editions written by Tom Moldvay and Frank Mentzer.

Weird West

http://rpg.drivethrustuff.com/product_info.php?products_id=91122&affiliate_id=163285

Weird West is a fast playing adventure roleplaying game with a very small set of rules for weird western worlds of cowboys, kung-fu, magic and otherworldly malevolence.

Adventures and Settings

There are a large number of adventures and campaign settings available for TSR editions of the world's most popular fantasy

RPG. Playing copies of most of original adventures from TSR can be found on eBay for very low prices. TSR era adventures can be used with any pre-WOTC edition or retroclone with only very minor conversion.

There are also a large number of free and low cost adventures available in PDF format on the web. A good play to start looking for free adventures is on the Dragonsfoot forum web site (see the link under Old School Internet Resources below.

The best settings and adventures, however, are those you create yourself for your campaign. They don't need to be nearly as elaborate as those produced for use by others, let alone as fancy as those written for professional publication. Many 0e GM adventure location keys (including those of the game's original designers) were nothing but room/location numbers with something like "8 hobgoblins, leader has 20gp, trapdoor in floor hides skeleton with silver dagger (animates if dagger touched)" or "Small village, 27 families, 10 orc slaves, Headman: Mongar the Brown (Ftr 4th lvl, +1 sword) Mongar's wife, Rose is a 3rd lvl Cleric of Odin)." You can do that.

Microlite20 Notes

Microlite20 is a trimmed down sub-miniature version of the OGL 3.5 SRD. In its most basic form, Microlite20 has only two pages of rules but can be used with most fantasy OGL and d20 adventures and supplements with little or no conversion. Since M20 was published in 2006, many people who prefer rules-lite games have been using it for their d20 games and/or writing expansions, supplements and other material especially for M20. You can find out more about the original Microlite20 and find more variants like Microlite74 on the Microlite20 web site:

<http://microlite20.net/>

Retroroleplaying Web Site

The author of Microlite74 maintains a web site devoted to out of print and out of style tabletop roleplaying games. He is always willing to discuss and answer questions about Microlite74 in the Microlite74 board on the RetroRoleplaying forum.

Web Site: <http://www.retroroleplaying.com/>

Forum: <http://www.retroroleplaying.com/forum/>

Blog: <http://blog.retroroleplaying.com/>

Old School Internet Resources

Old-School Blogs

There are a lot of old-school blogs. Even a selection of just the ones I currently read regularly would fill up a page or two and would likely be out of date quickly. Fortunately, there is a great place to find old school RPG blogs -- the RPG Blog Network, check the Legacy D&D category:

<http://www.rpgbloggers.com/>

Major Old-School Forums

Dragonsfoot

Very large forum discussing 1e and earlier, related games like retro-clones, Hackmaster, and Castles & Crusades. Many people who worked for TSR in the early days post here. Many free downloads including Footprints magazine and adventures.

<http://www.dragonsfoot.org/>

Knights & Knaves Alehouse

Discussions of 0e and 1e.

<http://knights-n-knaves.com/phpbb/>

Original D&D Discussion

Mainly discussions of 0e. Home of Fight On! Magazine.

<http://odd74.proboards76.com/>

The Piazza: Old D&D Campaign Worlds

Discussions of old published campaign worlds including many no longer officially supported.

<http://www.thepiazza.org.uk/bb/index.php>

Old School Product

A number of publishers are producing new material for old school games (using the OGL and retro-clones for compatibility).

Many of these products are available through Lulu's Old School Renaissance group. Some downloadable products are free.

<http://stores.lulu.com/oldschoolren>

Microlite74 Trademark License

You may use the Microlite74 trademarks in your own OGL products without obtaining prior permission from the trademark owner in two cases:

- 1) Adventures, campaign settings, and other supplements either designed specifically for Microlite74 or that are written for another 0e, B/X (BECMI) or 1e rules set may be labeled "Suitable for use with Microlite74" (or suitable for use with specific versions: Basic, Standard, and/or Extended).
- 2) Microlite74 may be mentioned by name in documents (or sections of a larger product) written to provide information on converting adventures and other materials between one game system and another.

In no case may the Microlite74 trademarks be used in any manner than indicates a product is endorsed or otherwise approved by the author of Microlite74. The terms "Microlite74 Companion" and "Microlite74 Supplement" may not be used in the title of a product without permission in writing.

All others uses of the "Microlite74" trademarks in products requires permission in writing from the trademark owner. This permission will generally be given, so don't be afraid to ask.

Microlite74 Basic
Version 3.0 (October 1, 2011)

Copyright © 2008, 2010, 2011 Randall S Stukey

Microlite74 is dedicated to the memory of those who gave us the first roleplaying games and campaigns:

Dave Arneson, E. Gary Gygax, David Hargrave, Bob Bledsaw

Microlite74 Basic

Microlite74 games are trimmed-down miniature versions of the Primary Fantasy SRD rules designed to be quick and easy to play, especially when compared to modern incarnations of the game. The goal of *Microlite74* games is to recreate the style and feel of that very first ("0e") fantasy roleplaying game published back in 1974 without giving up all of the clearer mechanics of modern D20-based versions.

The *Microlite74 Basic* rules are based on three little booklets found in the boxed set of the 1974 original edition of the world's most popular tabletop fantasy roleplaying game. The rules are not intended to be a clone of the 0e rules, but rather a conversion of them to a rules-lite D20-based system that encourages old-school play without strictly old-school rules. *Microlite74 Basic* is the third edition of the original *Microlite74* rules.

Although the *Microlite74 Basic* rules are complete, they are fairly basic. There are only three classes (Fighters, Magic-Users, and Clerics). Spells are limited and levels top out at 12 to 14. *Microlite74 Standard* includes many more classes and spells – all over those included in the original edition and its supplements. *Microlite74 Extended* includes all the material in the standard version extended with a number of house rules the author used in his 0e campaigns starting in the late 1970s. *Microlite74 Companion* volumes add even more options to the game.

These rules assume that the GM understands the basic concepts of roleplaying games, but provides information for both the GM and the players on the various "old school" styles of play. *Microlite74* games can easily use adventures and material from early editions of the world's most popular tabletop fantasy roleplaying game or modern clones.

*Microlite74 is dedicated to the memory of those who gave us the first roleplaying games and
campaigns:*

Dave Arneson, E. Gary Gygax, David Hargrave, Bob Bledsaw

Microlite74 Standard, like its parent game, *Microlite20*, is a trimmed-down, sub-miniature version of the Primary Fantasy SRD rules (see introduction for more info) that has been designed to be quick and easy to play. The goal of *Microlite74* games, however, is to recreate the style and feel of that very first ("0e") fantasy roleplaying game published back in 1974.

The *Microlite74 Standard* rules are based on three little booklets found in the boxed set of the 1974 0e edition, the four 0e supplements and material of the publisher's official magazine. The rules are not intended to be a clone of the 0e rules, but rather a conversion of them to a rules-lite D20-based system that encourages old-school play without strictly old-school rules. *Microlite74 Standard* is the third edition of the original *Microlite74* rules and includes the material originally in *Supplement 2: Wary's Grimoire*.

These rules assume a basic familiarity with tabletop role-playing games in general and with the basic principles of "D20" based rules. If you are completely new to tabletop role-playing games, you will want to start by playing with someone who is familiar with how they work.

The Rules

Stats

There are 3 stats: Strength (STR), Dexterity (DEX) and Mind (MIND).

Roll 3d6, Total the 3 dice and allocate to one of the stats. Repeat for remaining stats.

Stat bonus = (STAT-10)/4, round toward zero.

Races

Humans can be any class (suggested maximum level 18-20).

Dwarves can be Fighters (max level 8) or Thieves (max level as humans, 18-20).

Special Abilities: +4 to magic saves; note slanting passages, traps, shifting walls and new construction in underground settings (d20 + MIND bonus; DC 12 if carefully checking, DC 16 if just passing through area); speak languages of dwarves, gnomes, kobolds and goblins; can see in darkness half as well as in light.

Elves can be Bards, Fighters, Illusionists, Magic-Users (max level 10) or Thieves (max level as humans, 18-20).

Special Abilities: Can switch between classes between adventures and can use magic armor and magic weapons when acting as a Magic-User; +2 to hit and damage goblinoid monsters; note secret/hidden doors (d20 + MIND bonus; DC 12 if carefully checking, DC 16 if just passing through area); speak languages of elves, orcs, hobgoblins, and gnolls.

Halflings can be Fighters (max level 8) or Thieves (max level as humans, 18-20).

Special Abilities: +4 to magic saves; +2 to hit and damage with slings and light bows; can blend in background (d20 + DEX Bonus; DC 12 if outdoors, DC 16 if indoors – this is an extraordinary ability above and beyond simply hiding in available cover which anyone can try to do).

Half-Elves can be Bards, Fighters, Rangers, Illusionists, Magic-Users (max level 12) or Thieves (suggested max level as humans, 18-20).

Special Abilities: Can use elf-made magic armor and magic weapons even as a magic-user/illusionist; note secret/hidden doors (d20 + MIND bonus; DC 12 if carefully checking, DC 16 if just passing through area); speak languages of elves, orcs, hobgoblins, and gnolls.

Classes

Classes are divided into three groups: Fighting Classes (those who have a lot of training in combat), Arcane Classes (those who focus most of their training in magic), and Specialist Classes (whose training is focused on things other than combat or magic). Characters normally begin at Level 1 (unless directed otherwise by the GM).

Standard Classes

The standard classes are Fighter, Ranger, Paladin, Magic-User, Illusionist, Cleric, Druid, and Thief. They are common to most campaigns and may be used unless your GM says otherwise.

Fighters (Fighting Class) wear any kind of armor or weapon and may use shields. *Physical Combat Bonus* is level/2, round up. *Magical Combat Bonus* is level/4, round up. Experience Base is 20. Class Saving Throw Bonus is +4. They add +2 to FORT saves. They add +1 to all attack and damage rolls. This increases by +1 at 5th level and every five levels thereafter. After a fighter kills an opponent in melee combat, he may immediately make another attack against any still-standing foe in range. The maximum number of attacks he can make in one round is equal to his level.

Rangers (Fighting Class) can wear light or medium armor, may use shields, and can use any weapon. *Physical Combat Bonus* is level/2, round up. *Magical Combat Bonus* is level/4, round up. Experience Base is 25. They add +1 to FORT and REF saves. They add +1 to all attack and damage rolls. This increases by +1 at 5th level and every five levels thereafter. They are expert at wilderness tracking and survival and good at moving quietly and hiding in cover in the wilderness.

Paladins (Fighting Class) can wear any armor, may use shields, and can use any weapon. *Physical Combat Bonus* is level/2, round up. *Magical Combat Bonus* is level/4, round up. Experience Base is 25. They add +1 to FORT and WIL saves. They add +1 to all attack, damage and saving rolls. This increases by +1 at 5th level and every five levels thereafter. Paladins are immune to disease, detect evil within 60 feet by concentrating, and heal 2 HP per level per day by laying on hands. Paladins must be true to the tenets of the religion or philosophy they follow to gain experience.

Magic-Users (Arcane Class) wear no armor and can only use daggers or staves as weapons. *Physical Combat Bonus* is level/4, round up. *Magical Combat Bonus* is level/2, round up. Experience Base is 30. Class Saving Throw Bonus is +1. They add +2 to WIL saves. They cast arcane spells.

Illusionists (Arcane Class) wear no armor and can only use daggers, slings or staves as weapons. *Physical Combat Bonus* is level/4, round up. *Magical Combat Bonus* is level/2, round up. Experience Base is 30. Class Saving Throw Bonus is +1. They add +1 to REF and WIL saves. They cast illusionist spells.

Clerics (Specialist Class) can wear light or medium armor and use shields, but cannot use edged weapons. *Physical Combat Bonus* is level/3, round up. *Magical Combat Bonus* is level/2, round up. Experience Base is 20. Class Saving Throw Bonus is +2. They add +1 to FORT and WIL saves. They cast divine spells. A Cleric can Turn Undead with a successful Magic Attack. DC is 10 + twice the Hit Dice of the undead. One undead flees per point over the roll needed. This can be used (2 + Level + MIND bonus) times per day.

Druids (Specialist Class) can wear light or medium armor and use shield and can use any light weapon. *Physical Combat Bonus* is level/3, round up. *Magical Combat Bonus* is level/2, round up. Experience Base is 25. Class Saving Throw Bonus is +1. They add +1 to FORT and WIL saves. Druids can cast druid spells, have immunity to woodland fey, the ability to Pass Without Trace at 3rd Level, and can shapeshift to a small/medium animal up to 3 times per day at 7th Level. When shapeshifting back to their original form, the Druid can heal 2 HP per level of damage. They are good at wilderness survival.

Thieves (Specialist Class) can wear light armor, use shields, and use any light or medium weapon. *Physical Combat Bonus* is level/3, round up. *Magical Combat Bonus* is level/3, round up. Experience Base is 20. Class Saving Throw Bonus is +3. They add +2 to REF saves. They have the Sneak Attack special ability which adds the Thief's class level to the damage of his first attack, if he successfully sneaks up on a foe. They can use a spell from an arcane scroll successfully on a roll of 1d20 + MIND bonus + level/2 versus a DC of 10 + (2 x spell level). Spell

fades as if used on failure and backfires on a natural roll of the spell level or less. Thieves are experts at urban survival as well as picking pockets, hiding, sneaking, and other tasks associated with theft.

Optional Classes

The following classes are optional as they will not fit well in many campaigns. They may only be used with GM approval.

Assassins (Specialist Class) can wear light armor, use shields, and use any light or medium weapon. *Physical Combat Bonus* is level/3, round up. *Magical Combat Bonus* is level/4, rounded up. Experience Base is 20. Class Saving Throw Bonus is +2. They add +1 to FORT and REF saves. Assassins are experts at disguise, hiding, sneaking, and spying. Assassins automatically hit (and add their class level to the damage of that hit) with their first attack when attacking from a prearranged (and unsuspected) ambush.

Bards (Specialist Class) can wear light armor, use shields, and use any light or medium weapon. *Physical Combat Bonus* is level/3, round up. *Magical Combat Bonus* is level/2, rounded up. Experience Base is 30. Class Saving Throw Bonus is +1. They add +1 to REF and WIL saves. A Bard's musical abilities allow him to play songs with the effect of Druid or Illusionist spells (starting at 6th level as if he were 5 levels lower in the chosen class -- which cannot be changed once chosen), can counter sound-based effects within a 30 foot radius, and Charm Person or Remove Fear once per day (plus one additional time per day at 5th level and every five levels thereafter).

Monks (Fighting Class, also known as **Martial Artists**) cannot wear armor or use shields. While they can use light weapons, they are most effective with their bare hands and feet. *Physical Combat Bonus* is level/2, round up. *Magical Combat Bonus* is level/4, round up. Experience Base is 25. Class Saving Throw Bonus is +2. They add +2 to REF saves. They add +1 to all attack and damage rolls in unarmed combat. This increases by +1 at 4th level and every four levels thereafter. They cause 1d8 + STR bonus + class level/2 (round up) damage in unarmed combat. So long as they are able to move at all their armor class is 11 + class level/2 (round up) + one per point DEX is over 14. They are good at moving quietly and hiding in cover.

Skills

There are no skills in Microlite74. Instead players are expected to think like adventurers, tell the GM what they are doing and the GM decides if it will succeed in the situation, taking into account the characters' classes. If the GM decides a random success chance is truly needed he may resolve the situation with a roll of his choice or he may call for one of the following rolls:

Primary Skill Roll: 1d20 + Stat Bonus + Class Level if the character is attempting something directly related to their class.
Secondary Skill Roll: 1d20 + Stat Bonus + (Class Level/2, round up) if the character is attempting something only loosely related to their class.
Minor Skill Roll: 1d20 + Stat Bonus + (Class Level/3, round down) if the character is attempting something not really related to their class.

When the GM calls for a skill roll, he will declare the type of skill roll, which stat the skill roll falls under, and any situational modifiers and the player will make a skill roll. (The GM should make the roll in secret if seeing the result would give the player more information than his character should have.)

Roll higher than the GM assigned Difficulty Class to succeed. Unless the GM rules otherwise, a natural roll of 20 always succeeds for a Primary Skill Roll. Suggested Difficulty Classes: Easy - 8, Normal - 12, Difficult - 16, Hard - 20, Very Hard - 24, Legendary - 28, Unbelievable - 32.

Certain classes (Thieves and Rangers, for example) have abilities that members of those classes are good at -- or even expert at. The GM must be sure to take such strong abilities into consideration when deciding success or failure of a related action. If a roll is made, a "good at" is worth +2 and an "expert at" is worth +4.

Basic Adventuring Skills: Unless a player specifies otherwise about a character at character creation, all characters are assumed to have basic practical adventuring skills such as maintaining weapons and armor, riding a horse, setting up a camp, swimming, climbing, cooking, first aid, etc., and have a rough idea of the value of common coins, trade goods, gems, and jewels. Success should simply be assumed unless there are unusual conditions.

Languages: All character races speak common. Other intelligent beings speak their own languages (20% chance of also speaking common). Beings with a MIND over 10 may speak one additional language per point of MIND over 10 (these are in addition to any languages known by race).

Saving Throws

When subject to an unusual or magical attack, characters generally get a saving throw to avoid or reduce the effect. To make a saving throw, roll 1d20, add modifiers based on the type of saving throw (and any circumstantial modifiers set by the GM). A natural roll of 1 automatically fails. A natural roll of 20 automatically succeeds. Otherwise, the saving throw is successful if the total of the roll and modifiers is 20 or greater. Standard Modifiers are the total character's Class Saving Throw Bonus, the character's Level/2 (round down), and a Stat/Class bonus based on the type of saving throw.

Types of Saving Throws: There are three types of saving rolls: Fortitude (FORT), Reflex (REF), and Will (WIL). *Fortitude:* These saves measure ability to stand up to physical punishment or attacks against vitality and health. Add STR bonus to Fortitude saving throws. *Reflex:* These saves test ability to dodge area attacks. Add DEX bonus to Reflex saving throws. *Will:* These saves reflect resistance to mental influence and many magical effects. Add MIND bonus to Will saving throws.

Magic

Magic-Users can cast any arcane spell from the Microlite74 list, Clerics any divine spell from the Microlite74 list, Illusionists can cast any spell from the Illusionist spell list and Druids can cast any spell from the Druid spell list, as long as the spell level is equal or below 1/2 their class level, rounded up. A Magic-User starts with three first level arcane spells in his spell book and can add more spells by finding (or buying) them on scrolls or books and copying them into his spell book. Like a Magic-User, an Illusionist starts with three first level spells in his spell book. Clerics and Druids do not need spell books and automatically have access to all divine spells of a level they can cast (use of certain spells may be forbidden by the cleric's deity, however).

Casting Cost: Direct casting a spell of any kind costs Hit Points. The cost is 1 + double the level of the spell being cast:

Spell Level	1	2	3	4	5	6	7	8	9
HP Cost	3	5	7	9	11	13	15	17	19

This loss **cannot** be healed magically but is recovered after 8 hours rest. There is no need to memorize spells in advance. Just because a character can cast any spell, doesn't mean that they should. Choose spells that suit the character.

Spell Difficulty Class: For purposes of things like dispelling, the Difficulty Class (DC) for all spells is: 10 + Caster Level + Caster's MIND bonus

Signature Spells: Select one 'signature' spell per spell level from first upward that they prefer to use over any other. These spells are easier to cast due to familiarity, costing 1 less HP to use.

Hit Points and Healing

Hit Points (HP): Hit Points for Fighting Classes equal 8 + 1d8 per Level. Hit Points for other classes equal 6 + 1d6 per level. If HP reach 0, the character is unconscious and near death. Further damage directly reduces STR. If that reaches 0, the character is dead.

Healing: All characters recover hit points lost due to wounds and damage at a rate equal to one-half their level (round up) in

hit points per night of rest. (In addition, Magic-Users and Clerics recover all hit points lost due to spell casting with a night's rest.) If a character has lost strength due to wounds, no hit points are recovered, but the character regains lost strength at the rate equal to their STR Bonus (minimum of 1 point regained) per full day of rest.

Combat

Surprise: At the beginning of an encounter, roll 1d6 for each side. On a roll of 1-2 a side is surprised and may not act at all in the first round. If attacking from an undetected ambush, the ambush victims are surprised on a roll of 1-4. A side cannot be surprised if it is aware of the other.

Initiative: Roll d20 + DEX bonus for initiative order each combat round. Use Hit Dice/2 instead of DEX for monsters. Characters and monsters act in Initiative order, from high to low. Spell casters casting a spell must declare the spell being cast and its target before initiative is rolled.

Actions: Combat is very abstract. Each combat round lasts a minute and includes a lot of jockeying for position, feints, etc. The "hit roll" determines if any damaging blows were delivered during the round. Everyone can do one thing each round; move, attack, cast a spell, etc. The GM may choose to allow some combined actions, like a charge attack, to be one thing. A 5-foot step/shift, drawing a weapon, speaking or similar activities are "free" and do not count as an action.

Attack Rolls: Add attack bonus to d20 roll. A natural roll equal to or less the target's Natural Defense (which is 1 unless otherwise stated) always misses, otherwise if the result is higher than your opponent's Armor Class (AC), it's a hit. A natural 20 that would otherwise hit is automatically a critical hit doing maximum damage.

Melee attack bonus = STR bonus + Physical Combat Bonus
Missile attack bonus = DEX bonus + Physical Combat Bonus
Magic attack bonus = MIND bonus + Magical Combat Bonus

Armor Class (AC) = 10 + DEX bonus + Armor bonus. Basic Armor Bonuses: Light Armor (e.g. leather) +2, Medium Armor (e.g. Chainmail) +4, Heavy Armor (e.g. Plate) +6; a shield adds +1; a large shield adds +2.

Fighting classes can use DEX bonus + Physical Combat Bonus as Melee attack bonus instead if wielding a light weapon. Fighting classes can wield 2 light weapons and attack with both in a round (making one attack roll at -2). Rapiers count as light weapons, but you cannot wield two rapiers at the same time.

Range Penalties: If the target is relatively close, there is no penalty to hit for range. If it's mid-range for the weapon you're using, take a -2. If it's farther out than that, the GM will assign a -4 to -10 penalty to hit, depending on his judgment of how far away the target is.

Cover: Characters behind an object gain +2 to +10 to their AC against ranged attacks, depending on the extent of the cover (light cover = +2 to nearly complete = +10). In some situations, the GM may allow half this AC bonus to apply to saves.

Weapon Damage: Light weapons do 1d4 damage. Medium weapons do 1d6 damage. Heavy weapons do 1d8 damage. Add STR bonus and any class damage bonus to Melee damage (x2 for two-handed weapons).

Shield Special: A character with a shield may choose to have it completely absorb all the damage from any attack (including a critical hit). A non-magical shield shatters when it does so. A magical shield permanently loses one point of its magical AC bonus when it does so, becoming a non-magical shield if its magical AC bonus is reduced to zero.

Special Combat Situations:

Opportunity Attacks: Anyone not surprised and with a ready weapon who is not already involved in a melee combat gets a free attack on opponents trying to move past them – this attack

is in addition to their normal attack for the round. If the attack is successful, the opponent takes damage and can move no further that round.

Ranged Attack into Melee: Shooting or throwing into a crowded melee is not a good idea: there is a 50% chance you'll hit a friend instead of an opponent. Fighting classes may take -4 to hit to avoid hitting a friend.

Dodge: A character who is not making an Active or Full Attack may forgo his next attack at any time and dodge out of the way. Roll 1d20 + DEX bonus + Physical Combat Bonus (PCB). The total is the character's effective AC until his next attack. If it's lower than his real AC, well, the character zigged when he should've zagged. The GM may modify the roll by +2 or -2 (or more) to reflect the terrain and cover of the area.

Aid Another: A character who can make a melee attack on an opponent engaging an ally in melee combat can help that character attack or defend by distracting or interfering with an opponent. Make an attack roll against AC 10. If successful, the ally gains either a +2 (Fighter Bonus +1 for fighting classes) bonus on his next attack roll against that opponent or a +2 (Fighter Bonus +1 for fighting classes) bonus to AC against that opponent's next attack (aiding character's choice), as long as that attack comes before the beginning of the aiding character's next turn. Multiple characters can aid the same ally.

Grapple: A character can make a grapple attack on an adjacent target. A successful attack roll means they are then grappled with their target. When grappled, both the attacker and the defender's AC becomes 10 and neither can make move actions. When grappled, the defender can't make normal actions and must make opposed rolls (1d20 + PCB) against the attacker to attempt to break free. As long as the defender is grappled the attacker can make automatic unarmed attacks on the defender.

Knockout Blow: A character can attempt an armed melee attack against an adjacent creature to stun them. On a successful hit the target is stunned one minute for every point the attacker rolled higher than their defense. Rogues add their level in minutes to this time.

Combat Tricks/Stunts: Declare what the trick/stunt attack is going to do. It could be anything from knocking a weapon from your opponent's hand to blowing his hat off or extinguishing a lantern. Other possibilities could be stapling the target to the wall through his clothing with a thrown weapon, tying him up with a bola, tripping him and so on.

The attack roll is made at -8 (-6 for fighting classes). If the roll is successful and the target is alive and aware of the attack, the target makes a defense roll (a normal attack roll) against a DC equal to the adjusted attack roll (with the to hit penalty). If the defense roll fails, the target suffers the exact effect described. If the defense roll succeeds, then the attack is treated as a normal attack against the target's AC (with the penalty), which may result in normal damage. **Option:** The defense roll is automatically failed if the target has a combat stance of Active Attack or Full Attack.

Against an inanimate object, if the attack roll (with the penalty) is successful, the stunt works. No defense roll is needed.

Combat Casting: In combat, if a character is hit and takes damage (or other effect that could interfere with spell casting like paralysis) before casting a spell, the spell fizzles. This costs the caster 1 HP per level of the spell he was attempting to cast and the caster loses his action for the round.

Morale: While a few monsters, such as mindless creatures, are fearless and will fight to the death, most monsters have a strong desire to survive and will not continue to fight when the battle is going against them. They will instead seek to retreat, to flee, or even to surrender. The GM decides when monsters abandon the battle and retreat, based on the situation and the monster's intelligence. Monsters are assigned a Morale Rating (from 2 to 12, with 2 being a complete coward and 12 being totally

fearless) to help the GM make these decisions. If the GM wishes, he may simply roll 2d6 and have the monsters break off combat if the number rolled is greater than the monster's Morale Rating.

Energy Drain: Certain undead and demonic monsters can drain energy levels from characters. Each energy level drained reduces the character's level by one, the character may regain the level normally via experience.

Hirelings

Players may find it useful to have their characters hire bearers to carry light sources into ruins and dungeons (and to carry treasure out) and men-at-arms to aid in combat. In some areas there may be a guild where such people may be found and hired, in other areas characters may have to advertise. Pay must be negotiated and what will be asked will depend on the situation the hirelings think they may get into and the reputation of the characters hiring them.

Bearers have 2 hit points and generally will only fight if cornered and there is no other choice – even then their effective level (used in attack rolls) is -2. They will carry light sources and baggage willingly so long as they are paid, fed, treated well, and not exposed to much mortal danger. Minimum pay: 1 SP/day.

Men-at-Arms will fight but consider being used as a bearer (except of treasure they get a share of) to be beneath them. Green Men-At-Arms have 4 hit points, an effective combat level (used in attack rolls) of 0 and can use whatever armor and weapons their employers provide. Minimum pay: 5 SP/day plus 1/20 of a share of any non-magical treasure found. Veteran Men-at-Arms have 7 hit points, an effective combat level (used in attack rolls) of 1 and can use whatever armor and weapons their employers provide. Minimum pay: 1 GP/day and 1/10 a share of any non-magical treasure found. Men-at-Arms will serve willingly as long as they are fed, paid, treated well, and not asked to take unusual risks that their employers are not taking with them.

Monsters

See the Microlite74 Monster List or use the monster descriptions in any Oe game (substituting d8 for hit dice if needed). To create new monsters quickly: Pick a name, assign a level, hit dice = level, hit points = 1d8 per level, magic save = 10 + level, all attack bonuses = level, damage = 1d6 for ordinary claws, bites, and weapons, 2d6 for large maws, giant clubs, 3d6 for dragon bites and the like, AC = armor equivalent; pick special abilities as the level increases. Special attacks act like magic attacks against an appropriate defense. Intelligent monsters may have classes at the GM's option. If needed, assign stats to suit. Equip and add abilities as required.

Monster Reactions: Some monsters (like skeletons guarding a tomb) may always attack. In cases where the reaction of the monsters to the party is not obvious, the GM may opt to make a reaction roll for the monsters by rolling 2d6 and adding the MIND bonus (and any other appropriate modifiers) to the roll and consulting this table.

Adjusted Reaction Roll	Result
2 or less	Very Unfavorable
3-6	Unfavorable
7	Neutral/Uncertain
8-11	Favorable
12 or more	Very Favorable

Interpretation of the results is left to the GM, however, these general principles may prove helpful. Very Unfavorable means the monsters will most likely attack unless the odds are overwhelmingly against them. They will not help the characters. Unfavorable means the monsters are hostile and might attack unless they are given a good reason not to. They will not help the characters. Neutral means the monsters are unsure of the party. They are not likely to attack immediately, but are not friendly or helpful. Favorable means the monsters are willing to listen and are open to negotiation. They might be willing to be slightly helpful. Very Favorable means the monsters like the characters and are willing to be somewhat helpful and are open to working with the party to mutual advantage.

Mooks (optional): Sometimes a GM may want to use a large number of monsters but not want to carefully track each one. Mooks are "cannon fodder" monsters that have 1 hit point per hit die, never make a saving throw, and always run away or surrender if the battle is obviously going against them. Any hit from a Fighting Class character will likely kill a mook. Mooks cannot be told at a glance from non-mook monsters. Mooks make excellent minions for powerful leaders as they are very effective against normal people even if they cannot stand long against pcs and npcs with class levels.

Other Hazards

Falling: 1d6 damage per 10', half damage on REF save. DC=depth fallen in feet

Spikes: add +1 point to falling damage per 10' fallen, max +10

Poison: FORT save to avoid or for half damage, depending on poison. Effect varies with poison type.

Extreme Heat & Cold: If not wearing suitable protection, FORT save once every 10 minutes (DC 15, +1 per previous check), taking 1d6 damage on each failed save.

Starvation: Characters generally need 2 pounds of food per day. After 2 days without food, a character takes 1d6 damage per additional day without food and no longer heals lost HP.

Dehydration: Characters generally need 1 gallon of water per day. Each day after the first without water, a character loses 25% of his full HP in damage (and can no longer heal).

Level Advancement

Characters get Experience Points (XP) when their party defeats monsters. Experience Points (XP) = Hit Dice of defeated monsters. Add +1 for each doubling of the number of foes. e.g.: 1 kobold (a 1 hit die monster) = 1 XP. 2 kobolds = 2 XP. 4 kobolds = 3 XP, 8 kobolds = 4 XP etc. Add +1 or +2 XP (GM's discretion) if the foes have dangerous special abilities.

Characters also earn a GM-assigned amount of experience points for defeating traps, solving puzzles, excellent roleplaying, and the like. The GM should assign XP depending on the situation (usually from 1 to 5 XP).

Individual characters can also earn experience points from spending money found in treasures (or taken from monsters) in totally frivolous ways (e.g. wine, women, song, donations to a temple without getting anything in return, generic "training," etc.). A character earns 1 XP for each 100gp so spent.

Add up the Experience Points (XP) of every successful encounter you take part in plus any earned from GM specials and treasure spent. When the total is equal to your Experience Base x your current level, you've advanced to the next level. Reset the total XP to 0 after advancing.

Each level adds +1d6 (+1d8 for Fighting Classes) to Hit Points and the character's Physical and Magical Combat Bonuses are recalculated. (Note that the above are already included in the physical and magic attack and hit point formulas given in the rules.) Individual classes may also have abilities that change as a member of that class increases in level. When an arcane caster gains access to a new spell level he gets one spell of the new level added to his spell books. The player may select the spell subject to GM veto.

Example: Four newly minted second level adventurers have just completed a dungeon adventure. They each need 40 XP to reach third level. Their expedition was extremely successful. They defeated 22 XP worth of monsters and earned 7 XP from traps and other GM specials for a total of 29 XP each. The party's cleric earned 4 XP for great roleplaying while risking her life to save the party from an angry spirit. The party also found and recovered 2900gp in treasure from the dungeon. That's 725gp each. The cleric decides to donate the entire sum to her temple, and earn 7 more XP. This gives her 40 XP. She goes up to third level and her XP total is reset to 0. The other party members have 29 XP each.

Equipment

Suggested starting packs for new characters:

Pack A

Pack B

Pack C

backpack	backpack	backpack
bedroll	bedroll	bedroll
hooded lantern	10 torches	tent
10 oil flasks	10 oil flasks	10 torches
flint & steel	flint & steel	flint & steel
shovel	chalk	hammer
2 sets of caltrops	10 ft. pole	10 iron spikes
signal whistle	mirror	grappling hook
pen & paper	crowbar	50 ft. rope
water skin	water skin	water skin
iron rations for four days	iron rations for four days	iron rations for four days

Finally, add the following, based on your Class:

Fighter/Ranger/Paladin: Vial of holy water, medium armor (AC +4), a one handed weapon + shield, or a two handed weapon, and 5 gold pieces

Monk: Vial of holy water, two light weapons and 10 gold pieces.

Magic-User/Illusionist: Spellbook with all spells known, a dagger, and 5 gold pieces

Cleric/Druid: Silver holy symbol, light armor (AC +2), a one handed weapon + shield, and 5 gold pieces

Thief: lock picking tools, light armor (AC +2), light weapon, and 5 gold pieces.

Bard: musical instrument, light armor (AC +2), light weapon, and 5 gold pieces.

Optional Rules

The following rules are optional. The GM decides if they will be used.

Background: Characters may select, with the approval of the GM, a one or two-word background that represents a broad base of skills and knowledge, e.g. Farmer, Merchant, Desert Nomad, Noble, Shaman, Templar, Thyatian Mercenary, Ritualist, etc. Backgrounds need not be related to the PCs class, e.g. a player who creates a deeply religious fighter skilled in the arts of vision interpretation, divination and oration might pick 'Prophet' as a background. Backgrounds may not duplicate a class.

The GM will consider the character's background just as he would the character's class when deciding if a character will succeed with an action. For example, a character with an "Engineer" background should have a much better chance of damming a creek or building a bridge over it than a character with a "Courtier" background.

Demi-Human Restrictions: If you do not like the level and class restrictions, Demi-Humans can instead have a higher Experience Base than Humans. Halflings have a +3 to Experience Base, Dwarves have a +5 to Experience Base, and Elves (and Half-Elves) have a +7. Elves can no longer switch between Magic-User and Fighter classes, but retain the ability to use magic armor and all magic weapons no matter which class they select.

Encumbrance: Characters can carry twelve (plus STR bonus) items in addition to armor, primary weapon, and possibly a shield; six items can be readily available dangling from a belt or slung over the shoulders, but everything else goes into the backpack. Small collections of things (10 flasks, 20 arrows, 50 gems, 100 gold pieces) count as a single item.

Group Initiative: Each side rolls a d20 (reroll ties). High roll wins initiative. The combat order changes to the following: 1) Side that lost initiative declares actions. 2) Side that won initiative declares actions. 3) Side that won initiative acts. 4) Side that lost initiative acts. 5) Any bookkeeping is done.

Energy Drain: If the standard energy drain rule seems too harsh, try the following instead. Each energy level drained subtracts one from any roll to which the character would add his level (or his level/2). 1 point of energy drained is recovered every L days where L is equal to the hit dice of the monster that drained the energy level.

Oe Conventions

Almost any material you come across for Oe or other early

editions of the world's most popular roleplaying game can be used in Microlite74 with little modification. However, there are some descriptive conventions that Oe used that may need explanation.

Time Conventions: Oe talks about time in terms of rounds (combat rounds) and turns. A round was 1 minute and a turn was 10 minutes.

Movement/Distance Conventions: Oe gave distances in inches. When underground or in buildings or the like, one inch equaled 10 feet. When outdoors, however, one inch was 10 yards. Yes, this meant spell and weapon ranges were greater outdoors than indoors. Normal human movement (when carefully exploring) was 12" per move, with two moves per turn. Carrying too much weight cut this down to 9" or even 6". Running movement was double the above.

Descending Armor Class: Oe and other pre SRD editions used a descending Armor Class system where an unarmored character was AC 9 (AC 10 in some editions) and better armor used lower numbers (e.g. AC 5 was Chain, AC 2 was plate). Magic armor could even have a negative armor class. Microlite74 uses the ascending Armor Class system used in the OGL SRD. If you have old adventures using the original descending AC system and wish to use them, it is easy to convert descending ACs to ascending ACs.

Unarmored AC is 9: If the adventure is for Oe (or other edition where the unarmored AC is 9), subtract the descending AC listed in the adventure from 19 to get the ascending AC used by Microlite74.

Unarmored AC is 10: If the adventure is for 1e or 2e (where the unarmored AC is 10), subtract the descending AC listed in the adventure from 20 to obtain the ascending AC used by Microlite74.

Dungeon Exploration Conventions

Light: Humans and many other races require a light source (or magical ability) to see in the dark. Torches, lanterns, etc. will produce limited areas of light (generally 20 feet or bright light and a further 10 feet of dim light), but they also make it easy for monsters to see the party coming, making surprise impossible. Torches can be blown out by strong gusts of wind (d6 roll: blown out on a 1 or 2). Most monsters living in a dungeon have infravision or some other means of seeing in the dark, however these methods do not work in the presence of a light source.

Seeing Monsters: Unless surprised, characters will see monsters when they are 2d4 x 10 feet apart. Surprise distance is 1d3 x 10 feet.

Wandering Monsters: The GM should roll 1d6 every 1d3 turns for wandering monsters (more often if the party is making a lot of noise or otherwise attracting attention). On a roll of 1, wandering monsters stumble across the party from a random direction and distance.

Avoiding Monsters: Unintelligent monsters normally automatically attack. Intelligent monsters may follow their orders, make a reaction check, automatically attack, etc. depending on circumstances. Unless surprised a party may try to flee to avoid a battle. Monsters will generally pursue if there is less than 120 feet between the two groups. Monsters will only pursue around a corner or through a door on roll of 1 or 2 on a d6 (1 if a secret door is used). Fire will deter many monsters. Food will distract many monsters: unintelligent monsters 90% of the time, semi-intelligent monsters 50% of the time, intelligent monsters 10% of the time. Treasure may also distract monsters: unintelligent monsters 10% of the time, semi-intelligent monsters 50% of the time, and intelligent monsters 90% of the time. All chances may be adjusted by the GM depending on circumstances.

Rest: One Turn in six must be sent in rest or all characters

suffer a -1 to all d20 rolls per rest missed. Time spent searching is not time spent resting.

Doors: Most dungeon doors must be forced open by strength; a character may make a FORT save to attempt to force a door open. Doors with locks must be picked or forced at a minus equal to the dungeon level. Most dungeon doors will automatically close unless held or spiked open (spikes slip 20% of the time). Dungeon doors usually open automatically for monsters unless held closed.

Characters may wish to listen at doors before opening them. Unless a character has special listening abilities, a roll of 1 on a d6 will allow the character to hear through the door – if there is anything to be heard.

Traps: A trap will usually spring on a d6 roll of 1 or 2 when a character passes over or by them or otherwise triggers them

Secret Passages: Unless a character has racial abilities with secret passages, characters will detect secret doors/passages doors on a d20 + MIND bonus roll (normal DC 16). A 10 x 10 foot area may be searched in a turn by a single character.

Wilderness Exploration Conventions

Seeing Monsters: Unless surprised, characters will see monsters when they are 4d6 x 10 yards apart. Surprise distance is 1d3 x 10 yards.

Wandering Monsters: The GM should roll 1d6 every day of travel for wandering monsters. If the party is camping, an additional roll should be made night. If a wandering monster is indicated (roll varies by terrain, see terrain table below), wandering monsters stumble across the party from a random direction and distance. At night, the GM should randomly determine which watch is on duty when the attack is made.

Avoiding Monsters: Unintelligent monsters normally automatically attack. Intelligent monsters may follow orders, make a reaction check, automatically attack, etc. depending on circumstances. Unless surprised a party may try to flee to avoid a battle. Monsters will generally pursue so long as the party can be detected, there is a 50% chance monsters faster than the party will catch it (30% chance for monsters about as fast as the party) in each hex traveled through. Woods or swamp reduce the chance of being caught by 25%. Monsters will pursue into another hex on the map 50% of the time. The chase continues until combat occurs or the monsters break off. The party must rest for one-half day for each hex travelled during a pursuit. All chances may be adjusted by the GM depending on circumstances.

Becoming Lost: A group travelling off a well-marked trail or road without an accurate map or a knowledgeable guide may become lost. The chance of becoming lost is rolled on a d6 and depends on the type of terrain the party is in (see table below). If lost, the party actually moves in a random direction but believes they have moved in the direction intended.

Terrain Chart

Terrain Type	Chance Lost	Chance of Encounter
Plains	1	1
Woods	1-2	1-2
Forest	1-3	1-2
River	1	1-2
Swamp	1-3	1-3
Hills	1	1-2
Mountains	1-2	1-3
Desert	1-3	1-2

Donate to the RetroRoleplaying Cancer Fund and Get Some PDF Goodies

Many Microlite74 gamers know that Randall Stukeby, the author of Microlite74 and other M20-based old school games is trying to raise funds to pay the bills from [his wife's oral cancer](#) treatments and that he worked on the original Microlite74 as way to cope during her recovery from 6 weeks of radiation treatment in 2008. Randall and Donna are some of the 40 to 50 million people in the US who do not have health insurance nor did they qualify for government aid as they live in Texas and have no children. Donna (successful so far) cancer treatments have cost over \$110,000. While some of this has been absorbed by hospital foundations and the like, they still owe a lot of it. You can donate to the RetroRoleplaying Cancer Fund (via PayPal) and help them pay their bills.

Can You Help Pay the Cancer Bills?

Everyone who donates any amount at all get a password giving them access to a number of special downloads. *Some* of the currently available downloads include:

- Pdf copies of the two issues of The Grimoire Randall published in the late 1970s (which Randall blogged about here: The Grimoire #1 (<http://blog.retroroleplaying.com/2009/05/grimoire-1-spring-1978-d-fanzine.html>) and The Grimoire #2 (<http://blog.retroroleplaying.com/2009/05/grimoire-2-summer-1979-d-fanzine.html>)
- Pdf copy of The Second Grimoire of Pharesm the Bright-Eyed, a set of house rules for a BECMI campaign Randall ran at a game shop in the mid-1980s.
- A copy of the Player's Introduction to the Fourth Campaign Arn (from about 1984)
- Microlite74 2.0 Special Edition -- a 60-page PDF designed to be printed in booklet format from Adobe Acrobat. Artwork is by Håkan Ackegård. This Special Edition incorporates the rules from the first supplement. The text has been reformatted into a single column in a large enough font to easily read.

To get access to these downloads and access to a private donor forum where you can get advance information on upcoming Microlite74 releases, help Randall pay the cancer bills by sending a donation in any amount -- small or large -- to the RetroRoleplaying Cancer Fund via Paypal at this link:

Please donate if you can!**

Microlite74 Spell Lists

Arcane (Magic-User) Spells

For expanded spell descriptions see 0e or a 0e retro-clone. R: is range. D: is duration.

1st Level

Charm Person: Puts one living humanoid totally under your influence. R: 120 feet. D: until dispelled.

Detect Magic: Caster can perceive, in places, people, or things, the presence of a magical spell or enchantment. R: 60 feet. D: 20 minutes.

Hold Portal: Holds door/gate shut. R: 10 feet. D: 2d6 x 10 minutes.

Light: object lights circle with 30 ft. radius, not full daylight. R: 120 feet. D: 1 hour+10 min/level.

Magic Missile: Creates magic arrow which hits its target for 1d6 damage. An additional 2 missiles are created every 5 levels (e.g. total 3 at level 5, total 5 at level 10). R: 150 feet. D: instant.

Protection from Evil: +2 to AC and saves, counter mind control, hedge out elementals and enchanted monsters. R: shell around caster. D: 1 hour.

Read Languages: Read any written language. D: 1 or 2 readings.

Read Magic: Read scrolls, spellbooks, other magical writing. R: Caster Only. D: one reading (two scrolls or equivalent).

Shield: Improves caster's armor class to 17 versus missile attack and to 15 versus melee attacks. R: caster. D: 20 minutes.

Sleep: Puts 4d6 HD of beings into magical slumber. Creatures with more than 4 hit dice are not affected. Range: 240 feet. D: GM's discretion.

Ventriloquism: allows caster to "throw his voice" absolutely convincingly. R: 60 feet. D: 20 minutes.

2nd Level

Continual Light: object lights circle with 120 ft. radius until dispelled, not full daylight. R: 120 feet.

Darkness, 15' Radius: Magical darkness which even blocks infravision and darkvision. R: 120 feet. D: 1 hour.

Detect Evil: Reveals evil thoughts/intent or evil items. R: 60 feet. D: 20 minutes.

Detect Invisible: Detect invisible items and beings within 10 feet per caster level. D: 1 hour.

ESP: Allows Caster to read surface thoughts of target. R: 60 feet. D: 2 hours.

Invisibility: Subject is invisible until spell broken by caster, some outside force, or until it attacks. R: 240 feet.

Knock: Unlocks/Unbars all locked or magically sealed doors or other door-like barriers. R: 60 feet. D: instant.

Levitate: Caster floats up and down as he desires. Speed: 6 feet/minute. R: 20 feet up/down per level. D: 10 minute/level.

Locate Object: Senses direction toward an object (specific or type) D: level minutes. R: 60 + 10/level feet.

Magic Mouth: Mouth appears on target object and delivers up to 30 word message when conditions set by caster are met. R: touch. D: permanent until triggered or dispelled.

Mirror Image: Creates 1d6-1 exact images of the caster, all moving exactly like original. Attackers cannot tell images from original. Images hit disappear. R: around caster. D: 1 hour.

Phantasmal Forces: Vivid illusions of nearly anything the caster envisions, lasts as long as the caster concentrates. Damage caused is real if target believes illusion. R: 240 feet.

Pyrotechnics: Caster creates either fireworks or blinding smoke from a normal fire. R: 240 feet. D: 1 hour.

Strength: Adds 1d6+1 to a single Fighter's Strength or 1d6-1 to a single Cleric's. Maximum Strength is 18. R: touch. D: 8 hours.

Web: Sticky webs fill a 10x10x20 foot area. Burning through the webs takes 6+1d4 minutes. Large creatures push through in 14+1d6 minutes. Human-sized creatures take 20+3d6 minutes. R: 30 feet. D: 8 hours.

Wizard Lock: Locks door like Hold Portal. Permanent until dispelled. Knock opens without dispelling. Caster can pass through without lifting spell. R: 10 feet.

3rd Level

Clairaudience: Hear at a distance for 2 hours. R: 60 feet.

Clairvoyance: See at a distance for 2 hours. R: 60 feet.

Dispel Magic: Cancels magic effects and spells. (Magic Attack vs. Spell's DC for success) Duration: instant but effects permanent for spells or 10 minutes/level for items. Range: 120 feet.

Fire Ball: 1d6/level fire damage, 20 foot burst. R: 240 feet. D: instant.

Fly: Subject can fly at a speed of 120 feet per minute. R: Touch. D: 1d6 x 10 minutes plus 10 minutes/level. (GM rolls secretly.)

Haste Spell: Subjects (up 24 beings in a 60 foot radius of target) double in speed, taking two actions at a time. (Counters Slow) R: 240 feet. D: 30 minutes.

Hold Person: Paralyzes 1-4 targets. Cast at single target, save at -2 and double duration. R: 120 feet. D: 1 hour plus 10 minutes/level.

Infravision: See in the dark. R: touch. D: 1 day. Sight Range: 30 + (1d3 x 10) feet.

Invisibility, 10' radius: Subject and those within 10 feet of him are invisible until spell broken by caster, some outside force, or until one attacks.

Lightning Bolt: 1d6/level electrical damage. R: 240 feet, bolt is 10 feet wide, 60 feet long. D: instant.

Monster Summoning I: Caster summons random monsters who appear 10 minutes after casting. They will then serve until slain or the spell duration is up. Sample monsters (1d6): 1-1d6 giant rats, 2-1d3 goblins, 3-1d3 hobgoblins, 4-1d6 kobolds, 5-1d3 orcs, 6-1d3 skeletons. D: 6 minutes.

Protection from Evil, 10' radius: +2 to AC and saves, counter mind control, hedge out elementals and enchanted monsters to all within 10 foot circle around subject. D: 2 hours.

Protection from Normal Missiles: Non-magical thrown and missile weapons automatically miss. R: 30 feet. D: 2 hours.

Rope Trick: Caster tosses rope into the air. It hangs there.

Caster and up three others can climb rope into a hidden pocket dimension at top. Rope can be pulled up or left out. R: rope toss. D: 60 minutes + 10 minutes/level.

Slow Spell: Subjects (up 24 beings in a 60 foot radius of target) slowed by 50%. (Counters Haste) R: 240 feet. D: 30 minutes.

Suggestion: Caster makes 1-2 sentence hypnotic suggestion to target. If save failed, target will carry out suggestion for up to duration. Only 1% chance target will obey suggestion that obviously would result in target's death/extreme injury. R: 30 feet. D: 1 week.

Water Breathing: Subject can breathe water. R: 30 feet. D: 2 hours.

4th Level

Charm Monster: Makes one monster of 3+ hit dice (or 3d6 monsters of less than 3 hit dice) believe they are the caster's strong ally. Save again every level days or when asked to do something obviously against the being's interest. R: 60 feet.

Confusion: Subjects (up to 2d6 hit dice, only 4+ HD get save) behave oddly/cannot act effectively. R: 120 feet. D: 2 hours.

Dimension Door: Teleports subject a short distance (up to 360 feet). D: instant. R: 10 feet.

Fear: 240 ft. long cone of fear (120 ft. width at far end) extends from caster. Creatures within must save or flee in fear/horror for 1 hour. R: as above. D: 1 hour of fear.

Hallucinatory Terrain: Makes one type of terrain appear like another type until dispelled or area entered by an opponent. R: 240 feet.

Ice Storm: 30 foot cubic vortex of ice, snow, and hail appears doing 5d6 damage to all within. R: 120 feet. D: 1 minute.

Massmorph: Makes up to 100 humanoids appear to be trees until dispelled or negated by caster. Creatures may move and still appear to be trees. R: 240 feet.

Monster Summoning II: Caster summons random monsters who appear 10 minutes after casting. They will then serve until slain or the spell duration is up. Sample monsters (1d6): 1-1d2 hobgoblins, 2-1d2 zombies, 3-1d2 gnolls, 4-1d2 bugbears, 5-1d6 orcs, 6-1d6 skeletons. D: 6 minutes.

Plant Growth: Plants in an area up to 30x30 yards become overgrown and nearly impassable. Lasts until dispelled or plants killed. R: 120 feet.

Polymorph Others: Change another into another being. Change is complete and includes gaining special abilities and mind of creature. R: 60 feet. D: until dispelled.

Polymorph Self: Change self to form of another being, does not get special powers but retains own intelligence. R: caster only. D: 60 + 60/level minutes.

Remove Curse: Frees subject from a curse. R: touch. D: instant but effects permanent.

Wall of Fire: Deals 2d4 fire damage out to 10 ft. and 1d4 out to 20 ft. Passing through wall deals 2d6 damage +1/level. Wall lasts as long as caster concentrates on it. R: 60 feet.

Wall of Ice: Creates wall of ice with 15 hp +1/level. Wall lasts as long as caster concentrates on it. R: 60 feet.

Wizard Eye: Allows sending an invisible eye up to 240 feet away which relays all it sees to the caster. Moves up to 12 feet each minute. D: 1 hour.

5th Level

Animal Growth: 1d6 normal animals grow to giant size. R: 120 feet. D: 2 hours.

Animate Dead: Create undead skeletons or zombies under control of caster from dead bodies, 1d6 per level over 8. R: GM discretion. D: permanent.

Cloudkill: creates a moving, poisonous cloud of vapor which is deadly to all creatures with less than five hit dice. 30 feet in diameter, moves with wind or 6 feet per minute. D: 1 hour.

Conjure Elemental: Conjures one 16 HD elemental who will serve the caster until dispelled/dismissed/caster no longer concentrates. Caster can only summon one of each type in a day. R: 240 feet.

Contact Higher Plane: Lets Caster ask yes/no question of other planar entity, 1 question per level. Chance of correct answer 5% per level, maximum 95%.

Feeblemind: Subject's MIND drops to 1. R: 240 feet. D: until dispelled.

Hold Monster: As Hold Person, but any creature. R: 120 feet. D: 1 hour plus 10 minutes/level.

Magic Jar: Moves caster's spirit/mind to a fixed object from which caster can try to possess others. Magic Attack vs. DC of (10 + MIND bonus + target level or hit dice). R: 30 feet. D: until dispelled, the target makes his save (a new saving throw is allowed every caster level days), or the caster ends spell.

Monster Summoning III: Caster summons random monsters who appear 10 minutes after casting. They will then serve until slain or the spell duration is up. Sample monsters (1d6): 1-1d4 bugbears, 2-1d2 harpies, 3-1d2 ochre jellies, 4-1d2 wererats, 5-1d2 wights, 6-1d2 wild boars. D: 6 minutes.

Pass-Wall: Creates a human-sized passage up to 10 feet long through a wood or stone wall. R: 30 feet. D: 30 minutes.

Rock-Mud: Transforms rock to mud or vice-versa, up a 300x300 foot area. R: 120 feet. D: 3d6 days.

Telekinesis: Moves object by mental power. Up to 20 pounds per level. R: 120. feet D: 1 hour.

Teleport: Instantly transports subject up to 100 miles/level. Caster must know target location exactly.

Wall of Iron: creates a wall of iron in any shape. 1000 square feet (3 inches thick). R: 60 feet. D: 2 hours.

Wall of Stone: Creates a wall of stone in any shape. 1000 square feet (2 inches thick). R: 60 feet. D: until destroyed or dispelled.

6th Level

Anti-Magic Shell: Shell surrounds caster blocking magic both ways. R: caster. D: 2 hours.

Control Weather: Caster can adjust weather. D: GM decision.

Death Spell: Kills 2D8 beings with less than 7 hit dice with a 60 foot radius. R: 240 feet. D: instant but effect permanent.

Disintegrate: Makes one creature or non-magical object vanish, turning it to fine dust. R: 60 feet. D: permanent.

Geas: Force a creature to obey one long-term order. R: 30 feet. D: until order completed.

Invisible Stalker: Summons an invisible stalker, an extra-dimensional monster, under the control of the Magic-User who may give it a single mission which it will carry out until it is finished.

Legend Lore: A complex process taking 1d100 days allows caster to gain knowledge of a legendry person, place, or thing. Information is accurate but may be in a cryptic form. R: caster.

Lower Water: Lowers bodies of water 50%. R: 240 feet. D: 10 turns.

Monster Summoning IV: Caster summons random monsters who appear 10 minutes after casting. They will then serve until slain or the spell duration is up. Sample monsters (1d6): 1-1 gargoyle, 2-1 ogre, 3-1 owlbear, 4-1 shadow, 5-1 werewolf, 6-1

wraith. D: 6 minutes.

Move Earth: Move small hills, dig ditches and moats, other surface features, etc. Land moves at 6 feet per minute. R: 240 feet. D: permanent.

Part Water: Parts bodies of water up to 10 feet deep. R: 240 feet. D: 1 hour.

Projected Image: Project an image of yourself that can sense and talk as if you were the image. Other spells cast come from image. R: 240 feet. D: 1 hour.

Reincarnation: Restores dead person to life in a random (usually humanoid) form. R: touch. D: instant.

Repulsion: Any being trying to move toward spell target finds itself moving away instead. R: 120 feet. D: 1 hour.

Stone-Flesh: Turns subject into a stone statue (or vice versa). R: 120 feet. D: permanent.

7th Level

Cacodemon: Summons a demon or other fiend (such as a devil) from the lower planes of existence. The spell provides no protection against the summoned creature, so the magic user should use other spells or items of protection. As the summoned creature is not forced to aid or obey the caster, that is a matter of negotiations and threats between the caster and the fiend. This spell may only be cast as a ritual. R: 10 feet. D: variable.

Charm Plants: Charms the equivalent of: 1 large oak, 6 medium sized bushes, 12 small shrubs, or 24 little plants. These charmed plants will do anything the caster demands as long as it is within their ability to comply. R: 120 feet. D: until dispelled.

Delayed Blast Fireball: 1d6/caster level fire damage, 20 foot burst. The actual blast can be delayed for up to 10 minutes as set by the caster. R: 240 feet. D: instant.

Limited Wish: An extremely weak version of the "wish" spell. It is not even powerful enough to create or bring treasure to the caster, and under some circumstances only a part of the wish might actually be fulfilled. The spell does have the power to reach for a limited period of time into the past or future as well as the present. R: variable. D: variable.

Mass Invisibility: Up to 6 dragon-sized objects or 300 men and horses are invisible until spell broken by caster, some outside force, or until one attacks. R: 240 feet

Monster Summoning V: Caster summons random monsters who appear 10 minutes after casting. They will then serve until slain or the spell expires. Sample monsters (1d6) – 1: 1 Cockatrice, 2: 1 Manticore, 3: 1 Minotaur, 4: 1 Ogre Mage, 5: 1 Salamander, 6: 1 Troll. D: 6 minutes.

Phase Door: Creates an invisible door that can only be opened by the caster. Similar to a Passwall but invisible and only the caster can open the door. R: 10 feet. D: 7 uses

Power Word Stun: A single powerful word that stuns those hearing it for 2d6 10-minute turns if the creature has up to 35 hit points or for 1d6 10-minute turns if the creature has between 36 and 70 hit points. The word has no effect on creatures who are currently over 70 hit points. R: 120 feet.

Reverse Gravity: Within a 30 foot cube gravity reverses itself. Those within the area fall upwards with the force of a normal fall, and then fall again when the spell expires. R: 90 feet. D: 1 minute.

Simulacrum: Creates a duplicate of himself or some other person. The basic form is created from snow and ice, and must then be animated (Animate Dead will work). A Limited Wish (along with the actual simulacrum spell) is then used to imbue the animated form with intelligence and knowledge of the person being simulated. The simulacrum gains 1d4+2 times 10% of the simulated creature's knowledge and experience. The simulacrum follows its creator's orders. A simulacrum is not a perfect copy of the original. Side by side, the differences are obvious, and the simulacrum is detectable with a Detect Magic spell. If the original of the simulacrum dies, the simulacrum begins to gain the knowledge and experience of the dead individual at a rate of 1% per week (to a maximum of 90%).

8th Level

Clone: This spell allows a piece of flesh, taken from a living person, to grow into an exact duplicate of the person at the time the flesh was removed. If a clone is created while its parent-creature still lives, the clone will seek to kill its original. If it fails to achieve this goal, both the clone and the original will become insane. A full Wish will prevent this for 1 year.

Mass Charm: A Charm Person/Monster which affects up to 30 levels, i.e. 30 level 1 creatures, 15 level 2 creatures, 10 level 3 creatures, etc. in any combination. Saving throws are made -2. R: 120 feet. D: until dispelled.

Mind Blank: Makes the target immune to any form of detection by magic or psionics including ESP, Clairvoyance, Clairaudience, Crystal Ball gazing or any other form of scrying), Wishing, Commune, Contact Higher Plane, etc. R: 10 feet. D: 1 day.

Monster Summoning VI: Caster summons random monsters who appear 10 minutes after casting. They will then serve until slain or the spell expires. Sample monsters (1d6) – 1: 1 Black Dragon, 2: 1 Chimera, 3: 1 Efreet, 4: 1 Flesh Golem, 5: 1 Frost Giant, 6: 1 Mummy. D: 6 minutes.

Permanency: This spell makes the effect of another spell permanent -- unless a Magic-user of twice the caster's level dispels it. No more than one permanency is ordinarily possible on any one object, and no more than two upon a creature. GM discretion required: many spells should not be subject to being made permanent. R: 10 feet.

Polymorph Object: Spell allows any object to be turned into another object, animal, vegetable, or mineral. The degree of change will affect the spell's duration. Animal-to-animal changes, vegetable-to-vegetable changes, and mineral-to-mineral changes are all likely to remain permanent until dispelled. Thus, turning a human into an orc, or turning a wall into a pile of sand, would both result in a permanent change. On the other hand, turning a shrub into a thinking human being would last only a small number of turns. R: 240 feet. D: GM decides.

Power Word Blind: A single powerful word that blinds those hearing it for 2d4 days if the creature has up to 40 hit points or for 1d4 days if the creature has between 41 and 80 hit points. The word has no effect on creatures who are currently over 80 hit points. R: 120 feet.

Symbol: Creates a magical trap in the shape of an arcane rune. The rune's magic is activated when any person or creature hostile to the caster reads it, or passes over, under, or past it.

Various different runes are known, and others may be possible:

Symbol of Death: Deals 80 hit points of damage

Symbol of Discord: Causes all creatures in the hostile group to begin arguing, and possibly fighting amongst themselves with lethal intent.

Symbol of Fear: Casts a Fear spell.

Symbol of Insanity: Up to 100 HD of creatures are driven insane by a curse.

Symbol of Sleep: Casts a Sleep spell affecting double the normal number of creatures and with double the normal duration.

Symbol of Stunning: 150 hit dice (HD) of creatures are affected as by a Power Word, Stun.

9th Level

Astral Spell: The caster projects his astral form into other places; the astral form is invisible to all creatures but those also on the astral plane. If the caster's physical body is moved beyond the range of the spell from its original location while the astral form is away, the link is sundered and the caster's soul becomes lost in the beyond. The spell range has no other effect. The astral form is capable of casting spells, but there is a 5% chance per spell level that the spell will fail. Additionally, there is a 2% chance per spell level of the attempted spell that the astral spell itself will falter as a result of the spell casting, and the astral form will return to the physical body. When astral traveling above the ground, the astral form may travel as fast as 100 miles per hour per level above 18th. If the form is traveling underground, its top speed is 120 feet/10-minute turn. With special study, this spell can also be used to travel to other planes.

Gate: Creates an opening to another plane of existence that can either be used to travel through or can be used to summon a specified, tremendously powerful being from the other plane, including gods and demi-gods. The caster must know the name of the creature he is attempting to summon, or the spell will fail. There is a 5% chance that the wrong being may be summoned, and (regardless whether the summoned being is the right one or not) there is a 5% chance that it will lack interest in the situation and return through the gate. The summoned being is not necessarily friendly to the caster, and may be extremely

annoyed. R: 20 feet. D: 10 minutes.

Maze: This spell puts its victim in an extra-dimensional maze. After the determined time has elapsed the creature will reappear at the spot where it disappeared. Creatures with Mind of 12 or better will require 1d4 10 minute turns to escape, those with Mind under 6 will require from 1d4+8 10 minute turns to escape, others require 1d4+4 10 minute turns to escape. R: 60 feet.

Meteor Swarm: Either a group of four Fire Balls each doing 6D10 points of damage or a group of eight Fire Balls of one-half normal diameter and 5d6 points damage may be thrown. They may be thrown in whatever pattern the caster desires. R: 240 feet.

Monster Summoning VII: Caster summons random monsters who appear 10 minutes after casting. They will then serve until slain or the spell expires. Sample monsters (1d6) – 1: 1 Hydra (9 heads), 2: 1 Iron Golem, 3: 1 Lich, 4: 1 Purple Worm, 5: 1 Red Dragon, 6: 1 Storm Giant. D: 6 minutes.

Power Word Kill: A single powerful word that kills those creatures hearing it. The word has no effect on creatures who are currently over 50 hit points. R: 120 feet.

Prismatic Sphere: A sphere of seven colors whirls about the caster with a radius of ten feet. The glowing colors form a layered spectrum; to destroy the sphere, each layer must be destroyed in turn from Red to Orange, to Yellow, to Blue, to Indigo, and then to the innermost Violet layer. Any creature of 7 or fewer hit dice that looks upon the sphere will be blinded for 1d6 turns. Anything attempting to cross into the sphere suffers the effects of each color that has not been negated.

Red: Causes 12 points of damage to the touch. Stops any magic arrows or missiles (including the spell Magic Missile).

Negated by Ice Storm or other cold-based attack.

Orange: Causes 24 points of damage to the touch. Stops arrows and any other non-magical missile. Negated by Lightning Bolt or other electrical attack.

Yellow: Causes 48 points of damage to the touch. Blocks all breath weapons. Negated by Magic Missile spell or a magical arrow.

Green: Causes death (saving throw allowed) to the touch.

Blocks any scrying and detection-type spells from seeing within. Negated by Passwall spell or other earth-moving magic.

Blue: Turns flesh to stone when touched (saving throw allowed). Blocks all divine (Clerical/Druid) magic from passing through. Negated by Disintegrate spell/effect.

Indigo: Causes death and destroys the soul utterly when touched (saving throw allowed). Negated by Dispel Magic.

Violet: Causes permanent insanity when touched. Blocks all arcane (Magic-user) spells. Negated by Continual Light.

R: caster D: 1 hour.

Shape Change: Change self into the form of another being. Change is complete and includes gaining special abilities of the creature, but the caster retains his own intelligence and ability to cast magic. The caster may change form at will while the spell lasts. R: caster. D: (1d6 + 10 + caster's level) 10 minute turns

Time Stop: This spell freezes time in a 30 feet cubic area surrounding the caster. The user may move freely, but any other creatures within the area, or which subsequently enter it, will be stopped in time with respect to the caster. D: 1d4+1 minutes (GM rolls)

Wish: This spell grants a wish of limited scope (although much more powerful than a Limited Wish). The Referee's discretion will rule what sort of wishes are within the spell's power. After casting a wish spell, the Magic-user is too mentally drained to cast spells for a period of 1d4 days.

Arcane (Illusionist) Spells

For expanded spell descriptions see 0e or a 0e retro-clone. R: is range. D: is duration.

1st Level

Change Self: Illusion makes the caster appear to be a different creature. The illusionary guise must share the same general size and shape as the illusionist. R: caster. D: 10 x (1d6 + 10 + level) minutes.
